– Long.: 52° 04′ 30″ W.

RESTRICTIONS: According to the Brazilian legislation it is prohibited to spill oil or throw overboard any refuse on to the Port waters. The vessels that wish to de-ballast of throw overboard residues resulting from the washing or sweeping of holds should do so outside the Bar, in the circular area of 10 miles radius, with centre at the point 32° 00′ S. and 49° 00′ W., maintaining a course of 090° and speed of 10 knots. The Port Captaincy will grant permission to vessels that need to leave the Port and cross the Bar to do these operations.

MAX. SIZE: The deepest allowable draft in the approach channel to the Port is 40 ft. up to Portobras Wheat and Soyabean Terminal (TTS); from there inwards there is a variable and progressive reduction to the depth along the remaining part of the channel, ending with a depth of 10 m. alongside the New Port.

Bar Entrance: Max. draft 40 ft. (36 ft. 06 in. in 1984 due to heavy silting).

HEALTH:

(a) Vessels arriving from a foreign port of call must receive a visit from Port Health Authority. Each passenger (whether to land or in-transit) and crew members must be in possession of valid international vaccination certificates. Also see "General" before the first port.

(b) Maritime Health Declaration has to be made out and handed to the doctor at the time of visit. When all papers have been examined and found in order, the doctor will authorise lowering of the yellow flag and hand over Free Pratique.

(c) In case of death, suspected disease, serious accident, etc., on board, before vessel arrives in port, Master should radio Agent giving full particulars so that necessary steps may be taken with Health/Police Authorities.

RADIO: The Port of Rio Grande has a coastal station of the EMBRATEL network, "Juncao Radio", operating on the international call sign "PPJ", on a wavelength of 600 m. (500 kHz). There is telephone communication between radio station and shipping offices, so that, normally, messages are relayed without any appreciable delay. According to government regulations, EMBRATEL is to monitor/control all maritime traffic through its coastal stations, therefore only the tugs and launches used in the Port traffic are allowed to have VHF sets for manoeuvring, therefore all VHF traffic between Agent/ships is channelled through "PPJ" as Agents are not allowed to have their own VHF sets.

TUGS: The Port of Rio Grande has 11 tugs (250 h.p. – 2,100 h.p.) used in the normal port operations and in refloating vessels. In order to discipline the requisition and employment, the tugs are grouped in accordance with their power: Small, Medium and Large.

The tugs are normally requested by the Agents and placed at the disposal of the Pilot, who should use the tugs in accordance with the size and draft of the vessel, as follows:

1. For berthing/unberthing manoeuvres (vessels in d.w.t.):

up to 2,500	– optional
from 2,501 to 5,000	– 1 small tugboat
from 5,001 to 10,000	– 1 small and 1 medium
from 10,001 to 20,000	– 1 medium and 1 large
more than 20,000	– 2 large tugboats

2. To turn vessels or to come in/go out stern first (vessels in d.w.t.):

up to 2,500	– 2 small tugboats
from 2,501 to 5,000	– 3 tugboats (1 medium and 2 small)
from 5,001 to 10,000	– 3 tugboats (1 large and 2 small)

BERTHING: *Old Port:* Used by fishing boats and tugs.

New Port: Has 1,890 m. of continuous quay with 10 m. depth. Has three rows of sheds for general cargo, plus a series of terminals along its length, mechanically equipped to facilitate loading and unloading operations.

Container Terminal: Max. draft 40 ft. (depth 46 ft.).

BULK HANDLING FACILITIES: *Cesa Silo:* Terminal used for storage, loading and unloading of grain in bulk. Storage capacity of 60,000 tons. Equipped with two loading/unloading towers of the pneumatic suction type with a discharging rate of 100 t.p.h. each. Max. draft 29 ft.

Companhia Riograndense de Adubos: This terminal handles raw material used in the manufacturing of fertiliser. The discharging operation is processed through grids with rate of 2,500 to 3,000 tons per day. The discharged cargo is transported by tip-up trucks to the plant, that has a storage capacity of 30,000 tons. Max. draft 33 ft.

Samrig Terminal: Located on the fourth line of port warehouses. It is used for storage and loading of soyabean meal. It has a storage capacity of 35,000 tons and the loading is performed through a conveyor belt with a rate of 300 t.p.h. Max. draft 29 ft.

DNPVN Terminal: It has a receiving grid used both for trucks and railroad wagons. Storage capacity of 60,000 tons. It is mainly used for storage and loading of soyabeans, however, it can also be used for storage and loading of soyabean meal. Loading is done through a conveyor belt. Max. draft 29 ft.

Acos Finos Piratini: Terminal used for storage, loading and discharging of iron ore via conveyor belts. The discharging of vessels is performed at a rate of 600 – 800 t.p.h. and the loading of barges at a rate of 250 t.p.h. Storage capacity of 20,000 tons.

Fertilizantes do Sul S/A-Fertisul: Receives raw material (liquid and solid) used for manufacture of fertilisers. To receive solid fertiliser the conveyor belt of Acos Finos Piratini's installation is used, and, for liquid, there is a pipe-line running from Fertisul's tanks to the New Port's Southernmost part. This pipe-line is used for phosphoric and sulphuric acid, while ammonia is received through a pipe-line running from the Bunker Pier to Fertisul's special ammonia tank, located in the Super Port area.

Discharging rate (approx.) as follows:

Ammonia	400 t.p.h.
Phosphoric acid	1,000 t.p.h.
Sulphuric acid	600 t.p.h.
Solids	400 t.p.h.

Vegoil Terminal: Used for the receiving of, storage and loading of crude soyabean oil. Four tanks with storage capacity of 16,000 tons total. The oil is normally received from trucks or barges. Barges have a discharging rate of about 150/250 t.p.h. The loading is performed via a pipe-line running from the tanks to the New Port (Bomba Geral area) with a loading rate of 300 t.p.h. Max. draft 29 ft.

Bianchini Terminal: 1 warehouse with storage capacity of 40,000 tons. Loading rate of 500 t.p.h. Uses conveyor belt system. Max. draft 29 ft.

AGEF Grain Terminal: Storage of soyabean and soyabean meal. Belongs to the Federal Railroad Administration and is linked to the DNPVN Terminal loading installations. Storage capacity of 24,000 tons (2 sheds). Max. draft 29 ft.

Meat Reefer Warehouse: Has a total storage capacity of 8,200 tons.

Barge Terminal: Basically it is an installation linked to Bianchini, SAMRIG, DNPVN and AGEF Terminals, used for discharging of soyabean meal/soyabeans from barges. It uses cranes with grabs to discharge the barges. The cargo is transported by a conveyor belt to the Terminals.

The New Port has along its extension several cranes varying from 3 tons to 12 tons, used for operations with general cargo and containers.

Super Port: Port complex located at the 4th "Secao da Barra" on the West margin of the approach channel, with various terminals equipped with loading/discharging equipment conveniently suitable for the handling of bulk cargoes.

Luchsinger Madorin Fertiliser Terminal: Located South of the bunker pier, has a T-shaped pier, 180 m. in length and max. draft of 36 ft. It has facilities for discharging sulphuric acid, phosphoric acid, liquid anhydrous ammonia and two conveyor belts for discharging of raw material used in the manufacturing of fertiliser. The storage capacity of solid fertiliser is of 100,000 tons. On the inside part of the pier there are loading facilities for barges with a loading rate of 300 t.p.h.

Discharging rates are as folows:

Liquid ammonia	544 t.p.h.
Sulphuric acid	500 t.p.h.
Phosphoric acid	1,200 t.p.h.
Solid fertiliser	500 t.p.h.

Portobras Wheat & Soyabean Terminal: It is located South of Luchsinger Terminal with a solid pier 611 m. in length and draft of 47 ft., allowing for the berthing of vessels up to 412 m. LOA (85,000 d.w.t.). Loading rate of 3,000 t.p.h. and storage capacity of 130,000 tons. Can receive cargo simultaneously from trucks and railroad wagons, at a rate of 250 – 500 t.p.h. It is the biggest Grain Terminal in Latin America.

Cotrijui Grain Terminal: Located South of the new Portobras' Wheat & Soyabean Terminal, it has a "T"-shaped pier of 265 m. length and max. draft of 40 ft. It can receive vessels up to 60,000 d.w.t. It has 8 sheds with 25,000 tons soyabeans, 27,000 tons of wheat and 18,000 tons of soyabean meal capacity each and two tanks for storage of soyabean oil with capacity of 5,000 tons each. Loading rate as follows:

Soyabean	2,000 t.p.h.
Wheat	1,000 t.p.h.
Soyabean meal	600 t.p.h.
Soyabean oil	500 t.p.h.

Transhipment Dolphins: Located South of the Cotrijui Grain Terminal is used for transhipment of vessels over 180 m. LOA. Max. draft 40 ft.

Meat Terminal: Located South of the Transhipment Dolphins, has a solid quay of 300 m. in length and draft of 37 ft. It has a reefer warehouse with 4 cold chambers with a total storage capacity of 10,000 tons. The pier has 2 gantry cranes for the loading/unloading of containers.

EQUIPMENT:

32 Portal cranes on rails, capacity 3.2 tons – 40 tons.
2 Jib cranes, capacity 10 tons each.
2 Portainers, capacity 30 tons each.
1 Floating crane, capacity 100 tons.
70 Forklifts, capacity 2.5 tons – 15 tons.
4 Forklifts for containers, 3×20 tons and 1×37 tons capacity.
2 Floating elevators for transhipping, capacity 300 t.p.h. each.
1 Mobile crane, capacity 100 tons.
6 Tractors.
10 Trucks.
20 Trailers, capacity 10 tons – 50 tons.

TANKERS: *Bunker Pier:* Located approximately one mile North from the place called "Ponta da Mangueira"; it is a pier 228 m. in length and draft alongside of 33 ft. Primarily used for the receiving of crude oil and for the loading of bunker barges. There also are located the connections of the Fertisul Ammonia Terminal, Manah and CRA Phosphoric Acid Terminals.

STEVEDORES: *Working Hours:* Straight time, 0730-1130/1300-1700 (weekdays). During weekdays, labour for morning shift which commences at 0730 hrs., may be ordered up to 0715 hrs.; at 1245 hrs. extra gangs may, if necessary, be engaged for afternoon shift commencing at 1300 hrs. For night work, longshoremen (i.e. dock labourers distinct from stevedores) must be ordered before 1600 hrs.; stevedores, tally-clerks, etc., for night work may be engaged up to 1845 hrs. for shift that starts at 1900 hrs.

Sunday/holiday work must be ordered previous day, up to 1600 hrs.

MEDICAL: Two hospitals available which have adequate facilities to deal with a majority of cases.

FRESH WATER: Along the New Port quay there are 28 connections for fresh water that is delivered at a rate of about 30 t.p.h. – 60 t.p.h., or less, depending on the number of vessels being supplied. Also available at the Wheat and Soyabean Terminals and the Liquid Bulk Terminal. The terminals on the Super Port area lack those facilities apart from the Bunker Pier which has 6 connections with a rate of 20 t.p.h. For ships anchored at the Inner Roads fresh water can be supplied by a barge owned by the Port Administration, with a capacity of 300 cu.m. The barge requires the assistance of a tug to tow it.

FUEL: Can be supplied by truck (diesel), at the Bunker Pier (diesel and fuel) and ex-barges (diesel and fuel). Most commonly bunkers are supplied ex-barge. Suppliers are Petrobras, Shell, Elf, Exxon and Texaco. Stem has to be made previously abroad and price charged is the one in force on the day of delivery.

IDENTITY CARDS: Foreign crew members are not allowed to go ashore without presentation of identity card, on which there is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on disembarkation to the Federal Police, who will return it to the crew member on re-embarkation.

GANGWAY/DECK WATCHMEN: Compulsory for all sea-going vessels to have a port gangway watchman, normally requested by the ship's Agents, to the Watchman Syndicate. Apart from the gangway watchman, it is advisable to employ a crew member as deck watchman to look after the ship's safety.

OPENING/CLOSING HATCHES: Opening and closing of conventional hatches normally done by stevedores, without any extra cost, advisable, however, for steel hatches to be handled by crew.

CUSTOMS ALLOWANCES: Each crew member allowed one carton of cigarettes (or the equivalent in pipe tobacco) and one bottle of spirits, per week. Ships that remain in port over a week may request customs, through their Agent, to open bond for another weekly issue.

CONSULS/VICE-CONSULS:

Britain	Tel.	2.3303	Norway	Tel.	2.1611
Denmark	"	2.3011	Portugal	"	2.3978
Italy	"	2.2362	Spain	"	2.2621
Netherlands	"	2.3303	Uruguay	"	2.2953

REPAIRS: Two small repair shops equipped to carry out minor repairs. No dry docks. Radio, radar and gyro technicians available, but expensive.

REPATRIATION: Seamen being repatriated have to proceed to Porto Alegre, by bus, where arrangements can be made for embarkation by air.

TIME: GMT minus 3 hours.

HOLIDAYS: *National:* 1st January*, 21st April, 1st May*, 7th September, 12th October, 25th December*.
Municipal: 2nd February, 29th June.
Movable Feasts: Carnival (Monday and Tuesday), Ash Wednesday and Passion Friday.
Commemorative: 28th August (Bank Holiday), 28th October (Civil Servants' Day); 30th October (Commercial Employer's Day) and 1st November (All Souls' Day).
*No labour available.

POLICE/AMBULANCE/FIRE: Police 2.1695; Hospitals 2.3802; Ambulance 2.3801; Fire 2.1778.

TELEPHONES: There are no facilities for placing telephones on board.

GENERAL: *Light and Power:* The supply to the New Port is done by the State Company of Electric Energy (CEEE) with 13. 8 kV, 60 Hz. voltage that is lowered by 6 sub-stations along the quay, from 600 to 1,000 kVA to 380 to 220 V. Along the quay, every 25 m. there is a power plug to connect the power to the port cranes with 300 A. Those plugs can also connect the power to the vessels along the quay.

Flags to be flown.

(a) Brazilian flag at the top of the foremast.

(b) Yellow flag (to be hoisted until the doctor's clearance is given). Vessels arriving from a Brazilian port, with no disembarking passengers, must *not* hoist yellow flag unless there is sickness on board requiring presence of the Health Authorities.

(c) Pilot flag.

(d) Customs flag (to be hoisted after the vessel is cleared by Customs and flown during the vessel's stay in port).

SHIPMASTER'S REPORT: 1980.

Flags: The Brazilian flag when flown as a courtesy ensign should at no time be allowed to get tangled.

Identification Cards: Necessary but no photograph required.

Repatriation: Transport to Porto Alegre is possible by air taxi.

Garbage: Authorities are very strict with regard to throwing garbage overboard.

SHIPMASTER'S REPORT: February, 1982.

Pilotage: There are anchorages for three vessels between a position some 3 cables South of No. 12 Light Buoy to the vicinity of No. 14 Light Buoy. Here vessels can be in ample depth but, owing to the narrow channel, a Pilot must be retained aboard for, despite the current being outward the effect of the wind is critical. Despite the channel depth, there is a restriction to 38 ft. max. draft due to the inability of the dredging to guarantee more over the bar.

Documentation: At least 10 Crew Lists are required but otherwise few formalities.

Radio: This is one of the most efficient along the coast and both H/F and VHF are handled with commendable speed while W/T is equally available.

Tugs: Depending upon weather and current conditions, at least one tug is required to turn a vessel at the anchorage to sail outwards.

Fresh Water: The barge that delivered up to 400 tonnes is now condemned hence the only facility is a maximum of 45 tonnes from a tug, an expensive facility.

Fuel: There are at least two bunkering barges, one a minor coaster, but the speed of delivery is low e.g. 100 t.p.h. The depth of water at the tanker berth is 33 ft., hence loaded vessels ex-Argentine ports must remain in the stream.

Remarks: The Agencies and Pilots appear to be well geared to the prospect of a steady use of the port for bunkering, water and stores, while the radio station helps in expediting all communications. Suggestions have been made for three dolphin type berths in place of the anchorages, use being made of the Eastern side of the channel.

SHIPMASTER'S REPORT: November 1982.

My vessel is 39,026 tonnes SDWT and was ordered to load a full cargo of Soya Bean Oil for discharge in Iran:

Contained in my voyage orders was the instruction to inform Agents and suppliers of ETA at daily intervals 20/15/10/5/3/2/1 (My departure port was Bandar Abbas and routing was via Cape Agulhas).

Documentation as per "Guide to Port Entry". A "Nil" statement of drugs (excepting medical), firearms and ammunition in three copies is required.

Courtesy flag from foremast at all times.

My vessel loaded part cargo in Porto Novo (General Pumping Berth). The draft alongside was quoted to me as 29 ft. by my Agent but he stipulated actual draft was about 27 ft. with soft mud. The soft mud I do not dispute but my own sounding with the hand leadline indicated 26 ft. 4 in. and I did not load beyond 26 ft.

Loading rate never exceeded 250–300 tonnes per hour. After loading to 26 ft. draft I shifted ship to a pontoon berth (un-named) in position Lat. 32° 07.22′ S., Long. 52° 06.15′ W. (Farol da Barra Lt.H. 084.8°×1.34 miles). At this berth I again checked depth of water by hand leadline and got around 14 m. which presented no difficulties; my Summer draft being 11 m.

Loading at this pontoon berth was carried out by barge which varied in size from 3,000 tonnes to 1,500 tonnes; apparently they load in Porto Alegre and average turnaround time is about 5 days thus I anticipate a further week here before completing cargo as barges are not plentiful. Loading rate approx. 200–300 tonnes max.

Passes complete with photographs are required by all ship's staff.

At this pontoon berth launches are available to take crew members ashore but they are expensive and I would advise Masters to abstain from being too generous.

SHIPMASTER'S REPORT: October 1983.

Anchorages: The anchor was dropped in the Outer Roads off Rio Grande do Sul. The holding ground proved to be poor and the ship dragged anchor in a force 4 wind with less than a 2 knot tide, though anchored in 12 m. with 4 shackles in the water, i.e.: 9 times the depth. The nature of the bottom was mud with some shell, though marked gravel on the chart. While entering port the Pilot advised that ships frequently drag there, even with 8 shackles out.

Berthing: From the anchorage to the No. 1 (sea) buoy was 2 miles thence 3 miles more to the berth. There was about 17.6 m. depth at Cotrijui, reducing to 14 m. in the dredged approach channel.

The ship berthed at dolphins, in the first instance, port side to, just below the silo at Cotrijui. The village of Macaceo is just to the West of the dolphins. One floating elevator was then employed to start loading from a series of barges, pending the ship's turn at the faster, silo berth.

The gross rate of loading from the floating elevator (there are several on the river; this one was owned by Corymar) was 77 t.p.h. At 0415 hrs. 13th October, having completed loading 5,000 tonnes from 3 barges, the ship awaited the availability of the silo berth. At 1720 hrs. 18th October we left the dolphins to allow the next ship to berth there before dark and, after anchoring just upstream from the silo while the previous ship completed paperwork, berthed at Cotrijui silo, port side to, at 2124 hrs. 18th October.

The berth and equipment are very worn and in a poor state of repair. It is hard to keep the ship alongside in the strong tides due to the configuration of the river bottom. A dilapidated shore gangway is used; there is nowhere to land a ship's gangway. There ought to be another bollard and fender amidships to square the ship on to the wharf, and place an after fore spring properly. However, the shore personnel were very helpful and co-operative. As the hatches finished they were actually trimmed, without having to be requested, by men equipped with shovels. The loading spouts, working 2 holds at a time, are heavy and less manoeuvrable than most silos. Therefore the cargo cannot be thrown sideways into the wings and ends of the hatches with any force, leading to a poorer stow. The loading rate was 372 t.p.h. Ships longer than 250 m. have to have a tug pushing onto the wharf while loading, rather like some of the Mississippi berths. Cargo was completed at 0845 hrs. 21st October, after which there was a relatively large amount of documentation to be done. The ship sailed at 1249 hrs.

There is a more modern complex called Portobras Wheat and Soyabean Terminal. Unfortunately, after only about 6 months in operation, there was a fire there and the Terminal no longer works.

Fresh Water: Fresh water can be obtained from some berths but not Cotrijui silo or at the dolphins. It comes by dumb barge, capacity 250 tonnes.

REPORT: August 1985.

Copesul Terminal: Copesul's Terminal at Rio Grande is partially ready to operate with a total of 6 chemical products planned.

Shore installations and jetty were inaugurated 11th August, 1985, by vessel 173 m. LOA, 25,000 d.w.t.

Vessel loaded 2,000 tonnes Toluene and 2,000 tonnes Benzene.

Jetty: 140 m. long, equipped with 2 mooring dolphins. Distance between dolphins 200 m.

Capacity – 1 vessel max. 31,000 d.w.t.

No air draft restrictions.

Draft 29 ft. brackish water (intention is to bring draft up to 30 ft. brackish water).

Vessels LOA – Harbour Master authorised berthing up to maximum 200 m. LOA, although this in reality is impracticable as distance between dolphins is 200 m. and there would be no lead on head/stern lines.

Shore installations have a storage capacity of 32,000 cu.m.

At present operating with following liquid products:

1. Xylene.
2. Toluene.
3. Propylene.
4. Methanol.
5. Benzene.
6. Ethyl-Benzene.

The jetty is connected with shore installations by 6×8 in. lines which are connected to 6 manifolds of 6 in. each.

There are 7 pumps one connected to each line which have a loading capacity of 350 cu.m.p.h. each.

Depending on vessels conditions, Copesul is able to load up to 5 products simultaneously.

The storage tanker 'Aristoteles' for Ethylene storage, is still docked at a shipyard in Porto Alegre, carrying out final surveys/repairs. It is expected ready at Rio Grande for the end of September, for the meantime Ethylene loading continues by transhipment at Inner Roads by m.t. 'Tacosul' (capacity for 450 tonnes) or from another ship.

According to Harbour Master, intention is to stop transhipment vessel to vessel at Inner Roads (Area Echo) (presently being used to carry out transhipments, two vessels at a time), however, it will be de-activated only after the 'Aristoteles' arrives Rio Grande for the loading of Ethylene. According to Copesul, they intend to ask Harbour Master to also keep 'Area Echo' option to carry out any eventual transhipment which may be necessary in the future in case of congestion at their shore terminal.

AUTHORITY: Administracao do Porto de Rio Grande, Av. Honorio Bicalho S/No., P.O.Box 198, 96.200 Rio Grande – RS – Brazil. *Tel:* (0532) 32-3366, 32-3396. *Telex:* (0532) 423 Aprg. *Contact:* Eng. Newton Garcia.

SALVADOR (Bahia): 13.01 S. 38.35 W. (See Plan)

LOCATION: Lat. 13° 00′ 37″ S., Long. 38° 35′ W.

PORT LIMITS: The Port is limited by the line East/West which passes through the Santo Antonio Lighthouse, bridging the frontier coast of the Island of Itaparica, and from there turning to enter the bay through the same line East/West which connects the Continent and that towards the coast Northwards as far as parallel 12° 50′ and then from there going Eastwards towards the Continent.

DOCUMENTS: (See "General" before first port.)

Agent also fills out the "Entrada & Saida Capitania do porto" to be signed by Master. The particulars for this document are:

Name of Master – name of ship – flag – code signal letters – tonnage: gross and net – horsepower – engines: twin or single – type of ship, etc. – port of registry – tons of cargo to discharge – owners – Agents in port – last port of call – previous ports of call – next port of call – number of crew – number of disembarking passengers – number of transit passengers – speed of vessel – also specifications of nature and quantity of cargo in transit.

Documents to be Supplied to the Ship Before Departure:

1 "Clearing pass" from the Port Captain
1 „ „ „ „ Federal Police
1 „ „ „ „ Post Office
1 „ „ „ „ Custom House
1 Custom House negative cargo declaration for each following Brazilian port of call.

The Port Doctor will require the following information: Class, name and flag of ship – net register tonnage – name of Master and ship's Doctor – number of officers and crew – name of Agent – all ports called at during voyage – number of days from first to previous ports of call – number of passengers disembarking and in transit – tons of cargo to be discharged – whether any sick persons or deaths occurring on board.

The Customs will require the following information: Name of vessel – nationality – gross and net tonnage – H.P. of engines – name of Master – number of officers and crew – owner's name – name of Agent – all ports called at during voyage – ports of destination – days of voyage from first to previous ports of call – tons of cargo to be discharged – particulars of passengers.

The Federal Police require the following information: Vessel's name – nationality – gross and net tonnage – name of Master – number of officers and crew – name of Agent – port of departure and all ports of call – number of days from first and last ports of call – number of passengers disembarking and in transit – specification of embarking and disembarking ports of each transit passenger.

Ships calling at Salvador are normally boarded by the authorities at any time, day or night, when required. If there is no special urgency, however, the visit is effected the following morning at 0630 hrs.

The Inspection Area of the Port Health Authorities, Federal Receipt and Maritime Police is defined by a radius of 1 mile around the point of co-ordinates Lat. 12° 58′ 07″ S., Long. 38° 32′ 18″ W., the area around the point of co-ordinates Lat. 12° 55′ 56″ S., Long. 38° 31′ 37″ W., indicated in chart 1102 of the NHD.

Vessels may only come alongside after clearance by the Federal Receipt, Port Health Authorities and Federal Police. The free anchorage coincides with the pilotage waiting area and permitted anchorage (anchorage of Monte Serrat).

PILOTAGE: Compulsory for all vessels entering Salvador and berthing/unberthing at general docks or proceeding to other marine terminals. The following areas are considered as pilotage zones for vessels bound for the port: Monte Serrat Anchorage, the S.W. Anchorage to the Panela Bank and waiting and disembarking point for Pilots, shown on NHD chart 1102.

Also considered as pilotage area is all the internal area of the Bay of Todos os Santos (All Saints) to the North of the parallel passing through Monte Serrat. The area of the port of Salvador, inside the breakwater, is considered to be a compulsory pilotage area for vessels over 4,500 d.w.t.

Also considered to be an area of compulsory pilotage is all the zone North of parallel 12° 55′ 05″ S., which passes through Monte Serrat, for vessels over 3,000 d.w.t., bound for the terminal ports and their access channels inside the Bay of Todos os Santos. Request for Pilot can be made through the ship's Agent, 2 hours in advance, specifying the time of entry of the vessel and from which point pilotage will be required.

The Salvador Pilots' Association has VHF-FM radio, at their office and on board the pilot launch, operating on Channels 16 and 11, listening out on Channel 16.

The address of the Pilots' Association is: Rua da Grecia No. 8, Tel: 242-2221, Edificio Serra da Raiz, 5th Floor, Room 510.

Vessels should use the signal "Hotel" to call up the Pilot at the pilot station (Chart 1102) and may use an audible signal for this purpose.

The Amaralina (ERA) Radio Station maintains coastal communication, and can also be used to call the Pilot by vessels bound for Salvador. Amaralina Radio Station communicates with the Pilots by telephone.

APPROACHES: The port has 2 access channels. The first, called the Inner Channel is on the city side with a minimum depth of 8 m.

The second, called the Outer Channel is on the side of Itaparica Island and its depth varies from 13 m. to 55 m.

Action of Tides: Tidal amplitude in the port of Salvador is 2.5 m. on average, during the tides at the full moon. The flood tide in the port of Salvador runs for 5 hours to the N.N.E. and the ebb for 7 hours to the S.S.W., with a speed of 1.5 knots. During Spring tides, these tides can reach 2 to 3 knots.

During ebb tides, it is suggested that the approach to the quay be made by the South Entrance, between the two breakwaters, so that there will be no need for a yaw action in the manoeuvring bay formed by the breakwaters. The ebb tide may cause the vessel to swing to the South, in the entrance between the breakwaters.

Manoeuvring Area: The area intended for the manoeuvring of vessels for mooring or unmooring has a length of 100 m. along the whole extension of the quay, with a draft of 27 ft. at any state of tide. In this area, and also in the access channel the anchorage of any vessel is expressly prohibited, except with the prior permission of the Port Captaincy.

ANCHORAGES: There are 3 anchorages for waiting and inspection, see Chart 1102 of the NHD.

South: To the South of Panela Bank, in position Lat. 12° 58′ 00″ S., Long. 38° 32′ 33″ W. for waiting for the Pilot.

North: In the vicinity of position Lat. 12° 56′ 01″ S., Long. 38° 31′ 06″ W. In the vicinity of position Lat. 12° 57′ 01″ S., Long. 38° 41′ 01″ W.

There is a special anchorage for LASH vessels and for the operation of loading and unloading barges. It is located on the alignment of the North Light of the North Breakwater and the Monte Serrat Lighthouse, at a distance of 0.8 miles from this lighthouse, as shown on Chart 1102 of the NHD, in note (1).

Inside the breakwater and to the South of Fort Sao Marcelo there is an exclusive anchorage for the mooring of LASH vessel barges.

PROHIBITED ANCHORAGE: Locations prohibited for anchorage and movement of foreign and national pleasure craft. Mooring and anchorage locations:

a) Bahia Yacht Club (Chart 1102)
   Lat. 12° 59′ 49″ S., Long. 38° 32′ 00″ W.
b) Aratu Yacht Club (Chart 1103)
   Lat. 12° 48′ 36″ S., Long. 38° 28′ 49″ W.
c) Area of the Bay of Itapagipe (Chart 1110).
d) Section included between the prohibited anchorage area and the LASH barge anchorage (Chart 1102), unless duly authorised by the CPBA.

Areas where anchorage and navigation are prohibited.

a) All the area in front of Inema beach (Chart 1104).
b) Almirante Alves Camara Terminal (Chart 1105).
c) Manoeuvring bay for the quay at the port of Salvador (Chart 1102), port of Aratu (Chart 1103), Terminal of USIBA (Chart 1103), Dow Chemicals (Chart 1103), (only navigation prohibited.)
d) D. Joao Oilfield – location designation in Caution B of Chart 1110.

RESTRICTIONS: There is sufficient depth of water in the Outer Anchorage to accommodate the largest vessels afloat with safety, and the anchorage can, in addition, take a considerable number of vessels at any one time. The average depth of water in the channel leading to the dock warehouses is 33 ft. (10 m.) except opposite Shed No. 2 where 28 ft. (8.50 m.) is the max. depth. The dock quays are sheltered by two breakwaters, one running parallel with the shore for just over 0.5 miles. Because of the shallow draft opposite No. 2 Shed, all vessels entering or leaving the port with more than 28 ft. normally enter the Northern Channel.

MAX. SIZE: *Limit of Size of Vessels Navigating in the Channels:*

Access to Temadre: Length 250 m., draft 12.8 m., beam 40 m.; Access to Dow Chemicals: Length 170 m., beam 25 m., draft 10.3 m.; Access to USIBA: Length 170 m., beam 25 m., draft 10 m.; Access to the port of Salvador: Length 180 m., beam 30 m., draft 10 m.

Also see "Berthing" and "Tankers" and Port of Aratu.

ARRIVAL INFORMATION: Required before vessel's arrival:

(a) Vessel – ETA; deepest draft.
(b) Cargo – Quantity of cargo to be discharged and specification of hatch list.
(c) Passengers – Number of passengers disembarking.
(d) Bunkers – Quantity required.
(e) Water – Quantity required.
(f) Labour – Quantity required.
(g) Any other information – Number of mailbags to be landed, etc.

Specimen of telegram to be sent from previous port:

1. Vessel's name.
2. ETA Salvador.
3. Draft.
4. Number of passengers disembarking.
5. Number of mail bags to be landed.
6. Quantity of bunkers required.
7. Quantity of water required.
8. Number of gangs required.
9. Any other information.

FLAGS: On entering the port the vessel should fly the following flags:

1. Brazilian flag on fore mast top.
2. Quarantine flag when Salvador is first Brazilian port of call, or when there is a passenger for Salvador from a foreign port.
3. Customs flag (white star on blue background) after the vessel has been visited.
4. Flag "B" if dangerous cargo on board.
5. Pilot flag.

PRIORITY: Passenger vessels and wheat vessels have priority over cargo ships and the so-called "navios mixtos", i.e. cargo ships with a limited passenger accommodation. Passengers vessels are those that carry 60 or more passengers; except when loading 1,000 tons or over in which case they loose their priority.

HEALTH: The Doctor only boards the vessel when Salvador is first Brazilian port of call or when there are passengers from abroad to disembark, in which case Master should advise Agent who will then take the necessary steps required by Port Health. A yellow flag should be flown if Port Health Doctor is required on board.

RADIO: Master should always endeavour to contact Agent through Radio Amaralina Coastal Station, call sign ERA, and Agent will contact Master the same way. Since this station has a limited range, the Agent at Salvador may be contacted via Rio Radio when North-bound, or Olinda Radio/Fortaleza Radio when South-bound.

TUGS: Always used for berthing and unberthing. At other marine terminals tugs are supplied from Salvador. For container and cargo vessels berthing at 10 m. quay, a tug is usually supplied to help vessel moor and unmoor. When coming alongside tug joins vessel inside port. 8 tugs available 120-1,688 h.p.

Rules for Using Tugs:

I) At Temadre and Usiba.
All berthing and unberthing of vessels with tonnage between 2,000 g.r.t. and 10,000 g.r.t. must be with the aid of 2 tugs. Vessels with gross tonnage between 10,000 and 50,000 g.r.t. must be assisted by 2 tugs of power above 1,000 h.p. Vessels over 50,000 g.r.t. must be assisted by 3 tugs of power greater than 1,000 h.p.

II) In the port of Salvador and other marine terminals.
All manoeuvres of berthing and unberthing of vessels with gross tonnage between 2,000 and 10,000 g.r.t. must be assisted by 2 port tugs. All manoeuvres of vessels of gross tonnage above 10,000 g.r.t. must be aided by 3 port tugs. Vessels of tonnage less than 2,000 g.r.t., according to the Pilot's judgment, may use a port tug, in special situations.
In special situations, with winds from the East, according to the judgement of the Pilot, the use of tugs can be dispensed with for unberthing.

BERTHING: No restrictions, but if draft over 28 ft. berthing and unberthing take place from 1 hour before HW until 1 hour after HW. Anchor used for berthing. Container and cargo vessels at 10 m. quay may unberth at any time, but Pilots usually refuse to berth during hours of darkness because of the bad lighting on this length of quays.

The Port of Salvador is protected by 1 breakwater (Northern Breakwater) and 1 mole (South Mole). There are two channels for vessels entering and leaving. On the wharf there are 9 warehouses and between some of the sheds sheltered storage spaces.

Heavy lifts are left on the wharf until taken delivery, or discharged directly to trucks.

There are 4 quays in the port:

	Length (m.)	Depth (m.)		Max. draft. (ft.)
Coastal Vessel Quay	683	7 – 8	warehouse 5 & 6	23.5
Long Distance Quay	782	7 – 9	warehouse 7 & marine station	32.0
Connecting Quay	238	8 – 9		
10 Metre Quay	370	9 – 10		

All warehouses (excl. No. 9) are fitted with overhead internal cranes.

Explosives would be discharged into lighters at the proper anchorage for discharge of such cargo and taken to special deposits. Forewarning must be given for this cargo in order that arrangements may be made in advance.

One grain discharger × 150 t.p.h., and 2 wheeled suction plants × 60 t.p.h. each.

Grain silos – 20,500 tons (Salvador Mill), and 13,357 tons (Bahia Mill).

Industrial cold store of 2,300 cu.m. belonging to FRIUSA.

All other goods are loaded/discharged at the wharf.

Bulk Cargo Vessels: See "Aratu".

Containers: 1×30 ton crane for containers. 1×30 ton transtainer. 2×30 ton fork lifts. Roll-on/Roll-off facilities available. 22,000 sq.m. storage for containers and 10,000 sq.m. for containers ex-Roll-on/Roll-off.

Also see "Report" dated November 1982.

CRANES:

Jib Cranes:	1×30 tons (for containers)
	4×3 tons
	2×5 tons
	15×3.2 tons
	3×6.3 tons
	2×12.5 tons
Mobile Cranes:	1×13.5 tons
	1×75 tons
Floating Cranes:	1×100 tons

STEVEDORES: The Agents at Salvador act as stevedores.

The work at Salvador, especially loading, is considered amongst the best in Brazil, as a rule, sufficient gangs are available.

Masks, gloves are supplied by the stevedores. All other material such as slings, nets, etc., shall be supplied by the vessel.

The ordinary working hours are 0700 – 1100, 1300 – 1700 hrs., Mondays to Saturdays inclusive.

For overtime work notice must be given the previous day. As it would be difficult to obtain permission before each overtime period, a general permission covering ship's stay in port shall be obtained prior to arrival.

1100 – 1300 hrs. Special permission must be obtained from the Dock Company which is only given to passenger vessels, or for cargo vessels to finish the cargo, or under special circumstances.

1700 – 1900 hrs. Continuation period. Advice must be given to workmen at 1645 hrs.

1900 – 2300, 0000 – 0400 hrs. Considered as night work. Advice must be given to the Dock Company at 1645 hrs. and to the stevedores at 1700 hrs.

2300 – 2400 hrs. same as 1100 – 1300 period.

0400 – 0600 hrs. Continuation period. Advice must be given to workmen at 0345 hrs.

0600 – 0700 hrs. Second night continuation period. Can be worked under special circumstances to finish the cargo. Vessels discharging/loading bulk cargoes, or loading/discharging reefer cargo, are allowed to work round the clock.

To work on holidays, advice must be given to the Dock Co. before 1700 hrs. the previous working day. For Sunday work advice must be given before 1100 hrs. on Saturday. The same applies for stevedores/tally/coopers.

CARGO INFORMATION: Inward Cargo: When cargo is discharged from the vessel it is checked, weighed and weight noted by the shore tally-clerk (for account of the ship), by the Dock Company tally-clerk and by the Custom House. If there is a difference in weight, the ship is held responsible and has to pay double duty on same. Once the goods have been checked and weighed ship's responsibility ceases.

Goods are delivered to the consignees on presentation of the bill of lading to the Dock Warehouse.

Transhipment Cargo: Foreign cargo for transhipment at Salvador must be so declared on the manifest, and after it has been discharged the Agents have to obtain special Customs permission to tranship it to the port destination and also sign a guarantee that the goods are going to that port and that duty will be paid there. They will be held responsible for that duty until a declaration issued by the Custom House at the port of destination is received by them and handed over to the local Customs.

Transhipment charges vary considerably with the type of cargo and are very high compared with foreign freights.

Outward Cargo: Generally, cargo to be loaded is deposited in the dock shed prior to vessel's arrival.

Refrigerated Cargo: All reefer cargo is discharged directly to trucks, and vice versa.

Dangerous Cargo: Vessels with explosives and inflammables on board are not permitted to come alongside. All vessels carrying this kind of cargo must fly the "B" signal and remain at the proper anchorage. Advance notice must always be given of any vessel carrying explosives and inflammables. Under special circumstances it may be arranged for vessels to come alongside if they only have a minimum quantity of dangerous cargo on board, and the hatch in which it is stowed is not to be opened at Salvador.

When vessels are boarded by the Harbour Officials, the Master must hand to the Customs Officer and the Federal Police the Dangerous Cargo List.

Corpses as Cargo: Notice should be given to the Port Authorities of such cargo carried, if possible, before vessel's arrival.

Vegetable Oil in Bulk: Vegetable oil in bulk is loaded directly from lighters where the oil is deposited prior to vessel's arrival. Vessels are usually required to supply steam for pumping when they can.

Loading and Discharging Rate: The average rate for loading bagged and baled cargo is 16 – 20 tons per gang per hour. (Tobacco has been loaded at 28 tons and cocoa at 30 tons per gang hour). Discharging rate of general bagged cargo is about 10 tons per gang hour.

Heavy Lifts: For heavy lifts of more than 3 tons, a request shall be made to the Dock Co. to use the 80 ton capacity floating crane. Heavy lifts may also be discharged directly to the quay with the vessel's own gear when, due to a light draft (under 24 ft.), they can come directly alongside without the use of a pontoon. It is recommended that the Agent be consulted before booking any heavy lifts for Salvador as the heavy lift crane is sometimes out of working order.

Inflammables, Fuel and Diesel Oil, Etc., as Cargo: Bulk crude oil, diesel, fuel, inflammables, lubricants, etc., are discharged at the Madre de Deus Terminal, which belongs to the Government owned Petrobras.

Damaged Cargo: When cargo is discharged, damaged or pilfered, it is immediately checked and weighed by the Dock Co. and the Customs and separately stored.

The Insurance Co. makes a survey in the presence of the Dock Co. upon request of consignees.

Bulk wheat is discharged to two mills at Salvador, namely the "Moinho Salvador" and "Moinho da Bahia". Average discharging rates (23 hours work per day) are respectively 1,500 and 800 tons.

Handling of Mail: Timely notice should be given to the Agents in case there is mail to be landed, stating the number of bags.

As regards outgoing mail the Agents will be advised by the Post Office if there is any and issue the Post Office Pass. The bags shall be placed at the quayside, loading being for the account of the ship.

MEDICAL: When vessels arrive over week-ends or during holidays advisable that Master cable Agent giving advance notice of medical attention required if case is serious. For routine medical attention no previous advice required as ample medical and hospital facilities available.

TANKERS: All tankers loading/discharging inflammables, lubricants, etc., must do so at the Madre de Deus Terminal, which is privately owned by Petrobras, the Brazilian Government-run oil company.

The Madre de Deus Terminal is a T-fashioned quay situated within All Saint's Bay, 18 miles from Salvador. All vessels calling at Madre de Deus must be cleared at Salvador where Agent and authorities board the vessel before proceeding to Madre de Deus. This terminal is equipped only to handle tankers. Water, bunkers and deballasting facilities are available.

Max. drafts are 41 ft. for vessels loading and 37 ft. for discharging, and length 240 m.

Five berths are available, pipe-line is 12 in.

PP1. Max. size 65,000 d.w.t. Depth 13 m.
PP2. Max. size 53,000 d.w.t. Depth 13 m.
PP3. Max. size 16,000 d.w.t. Depth 13 m.

These 3 berths can load or discharge both Crudes, White oils and Products. They are all fitted with deballasting facilities.

PS1. Max. size 4,000 d.w.t. Depth 7.5 m.
PS2. Max. size 2,000 d.w.t. Depth 5 m.

Also see "Shipmaster's Report".

DENSITY: Salt water.

FRESH WATER: Advance information recommended. Rate 20 cu.m./h. If several vessels are in need of supply, pressure may not be enough to supply all at once. No water barges available in the port, and all vessels are replenished alongside.

FUEL: Diesel oil can be supplied alongside and at anchorage at Salvador, but fuel oil can only be supplied by Petrobras at the Madre de Deus Terminal, 18 miles up the bay.

Lubricants are supplied in drums. Also see "General" before first port.

GANGWAY/DECK WATCHMEN: All foreign vessels must employ a gangway watchman by law. Hold watchmen are optional, depending on request by Masters/Agents.

OPENING/CLOSING HATCHES: Normally carried out by stevedores.

CUSTOMS ALLOWANCES: Customs officials will place cigarettes and "souvenirs" belonging to crew members under lock and seal. Excepting the Master, each crew member may keep in his possession only 1 carton of cigarettes and 1 bottle of spirits with seal broken. The Customs will periodically renew the seals for vessels staying in the port for a lengthy period thus enabling new issues to crew.

LIGHTERS: Soc. Alvarengagem de Ilheus are operating 4 lighters in the port with a combined capacity for about 670 tons.

CONSULS:

Austria
Belgium
Denmark
France
Germany (F.R.)
Great Britain
Italy
Netherlands
Nicaragua
Norway
Portugal
Spain
Sweden
Switzerland
U.S.A.
Uruguay

REPAIRS: The Navy operates a dry dock at Aratu with the following capacity: 35,000 tons; length 230 m.; width 30 m.; depth 8.5 m. Various small vessels can be attended at the same time. There are a number of workshops in Bahia fitted for repairing vessels, but it is recommended that large repairs be effected at the Aratu dry dock. When time allows, repairs may be made whilst the vessel is alongside the wharf. There is no time-limit but, as a rule, a vessel is not supposed to remain idle at the wharf if the berth is needed for another vessel which has to load/discharge.

SURVEYORS: *Lloyd's Agent:* Expresso Mercantile Agencia Maritima Ltd., 340 Avenida Estados Unidos, Salvador. Tel: 242-7011.

Bureau Veritas: 3 Rua Visconde Rosario, Salvador. Tel: 243-8222.

American Bureau of Shipping: H. Taxman, 18 Avenida Estados Unidos. Tel. 242-0447.

REPATRIATION: Most crew changes are made via Rio de Janeiro but some are made via Recife and on direct flights Salvador/Lisbon.

AIRPORT: Dois de Julio Airport is 31 km. from centre of town (40 km. from the port). No direct flights to foreign countries but various daily connections available with Rio, S. Paulo, etc.

TIME: GMT minus 3 hours.

HOLIDAYS: *National:* 1st January; 21st April; 1st May; 7th September; 19th October; 15th November; 25th December.

Municipal: Movable: Good Friday; Corpus Christi. Fixed: 24th June (Saint John); 8th December (Our Lady of Conception).

Traditional: Movable: Carnival – Tuesday (Mardi Gras) and Ash Wednesday. Fixed: 2nd November (All Souls); 2nd July (Independence of Bahia).

POLICE/AMBULANCE/FIRE: Fire Tel: 193; Police Tel: 190.

TELEPHONES: Facilities available for placing telephones on board.

REGULATIONS: Rat-guards must be used at all times, as the Port Health make periodic inspections on the quay.

STORES: Ship chandler can supply meat, vegetables, tropical fruits, canned goods, etc., but no bonded stores for foreign goods available.

DEVELOPMENTS: A new gas terminal is in operation near the Tequimar Liquid Terminal.

Bulk terminal under construction.

SHIPMASTER'S REPORT: September 1981.

General: Salvador, capital of Bahia State is a large city combining the old with the modern. It is an important tourist resort for both Brazilian and overseas visitors.

The tanker terminal, owned and operated by 'Petrobras' at Madre De Deus Island, is some 14 miles N.N.W. of Salvador in Dos Santos Bay,.

The most unsettled weather occurs in March to May with heavy rain.

Approach: Salvador is easily picked up on radar at maximum range with its high rise buildings situated on an elevated point called Pt. De Sto Antonio.

Vivid flashing white lights from TV towers situated about 2 miles E.N.E. of Pta. De Sto Antonio can be seen long distances at night. BA. 540 and 546 refer to Salvador. For Madre De Deus the Brazilian chart 1105 is useful.

Although the entrance to Salvador Bay (Torros os Santos) has good depths strong currents are found on rising and falling tide setting N.N.E. and S.S.W. respectively.

Pilots: Pilots are embarked in the shelter of the Bay, 1 mile West of the Southern Breakwater. They use a small dark red launch. Pilots disembark in same position.

Pilotage time to Madre De Deus is about 1.25 hours.

VHF: Pilots: Call "Salvador Pilots" Channel 16, working 11, 13, 14. Range limited to about 6 miles South of Pt. Antonio.

Tugs: Channel 13.

Public Correspondence: 'Salvador Radio' Channel 16, working 24, 25, 26, 27 local and international (IDD) calls.

Arrival: Vessels proceeding to Madre De Deus Tanker Terminal will be required to anchor about 1.5 miles South of Pta. De Monte Serrat after embarking Pilot, for customs inspection, even if coming from another Brazilian port, generally takes about 1 hour.

If waiting for berth at Madre De Deus vessels anchor off Salvador.

Anchorage: South of Monte Serrat off Salvador in least depth of 13 m., plenty of sea room.

Madre De Deus Terminal: The large tanker terminal, operated by Petrobras, was completed 15 years ago to serve the refinery at Mateipe 4 miles to N.E. Maximum draft is 42 ft. (12.8 m.) and maximum size up to 85,000 d.w.t.

Least depth on approach to berth was found near Beacon No. 7. 2.5 miles S.E. of "P1" Berth of 11 m. Chart Datum. The terminal is set amongst wooded islands, the principal being Isla Do Frade which has an inviting sandy beach. By sea to Salvador takes about 1.5 hours by launch. The road which branches inland to join the main Rio De Janeiro Highway is about 50 miles in length and journey time of 1.25 hours. Tidal streams off the berth are very strong with a 3 m. range at times. Rates of 4 knots are common. Vessels calling regularly at Madre De Deus will find the Brazilian charts useful, plus Brazilian Tide Tables which list the Terminal and adjacent areas.

Berthing: Vessels are swung about 3 cables S.W. of the berths and use offshore anchor when berthing (about 3 shackles in water). At "P1" Berth Starboard anchor is used which is to assist in both berthing and unberthing. Also at "P1" Berth forward moorings go to a dolphin ahead of the Berth. At "P2" and "P3" Berths there is an off-lying dolphin astern of the berths (to West). Two powerful mooring launches are used, one each end. We used on "P1" Berth 4 head/stern lines, 2 breast and 2 springs each end. The forward breast lines to have any use should be brought down the deck to a lead about third of ship's length from forward.

There are 2 large flat sprung fenders proud of Jetty face.

Tugs: 2×1,200 h.p. permanently stationed at Terminal, 2×1,000 h.p. tugs come from Salvador as required.

For large vessels 3 tugs are used, generally pushing or tied up alongside with ship's lines.

Berths: Total of 5 berths on 2 jetties for sizes up to 85,000 d.w.t. and 42 ft. draft with following characteristics.

Berth No.	*Draft ft.*	*Size d.w.t.*	*Side to*	*Berthing*	*Product*
P1	42	85,000	Port	6 hrs. either side HW	Crude, Products, Refrig LPG
P2	42	33,000	Either depends on tide	Any time	Crude, Products
P3	36	33,000	Starboard	On flood tide	Crude, Products
S1/S2	24	15,000	Below 120 m. length any side to over 120 m. "S1" starboard side to and "S2" port side to.	Any time	Products, Heated LPG

Density: Density at "P1" Berth 1025 at all states of tide.

Discharge: Refrigerated LPG only at "P1" Berth.

2 chicksans – 10 in. vapour, 12 in. liquid, 150 ASA, both of Brazilian manufacture, similar to Santos. These are not now used due to leaks and discharge is by flexible hose to manifold on jetty. Shore will supply hose although we used our own for part of distance as they were already rigged with lower discharge pipe from Santos. Plenty of reducers available. As the vessel is off the quay face for about 5 m. due to fenders, approx. 20 m. of hose are used.

No vapour return line at present.

Discharge to tanks situated about 1.5 miles inland, varies from 200 t.p.h to 400 t.p.h. with back pressure around 6 Bar. Communication with shore is poor with operator on quay speaking no English.

3 refrigerated holding tanks of 1×10,000, 2×5,000 tonnes nominal capacity plus 4×3,000 pressure spheres. The product is either heated into spheres and then transhipped into small coastwise tankers on berths "S1"/"S2" or pumped another 2 miles to a road tanker terminal near the refinery. Surveyor, SGS, has little knowledge of LPG calculations. 5 chicksans to West of LPG arms are for products plus numerous flange connections with rubber pipes on jetty.

Facilities: Fresh Water: On each berth, couplings American type. About 15 t.p.h. dependent on how many vessels taking water.

Fuel: On each berth both H.O. and D.O. available.

Access: A roadway to each berth with weight restriction of 16 tonnes and permission to discharge stores etc., within 20 m. of ship's side.

Repatriation: Salvador Airport 1 hour from terminal. Local flight to Rio International Airport.

Taxi: Costs £26 for round trip to Salvador.

Repairs: Basic repairs possible from Salvador.

Doctor: From Salvador will come very promptly, organised through Agent.

Chandler: Principal chandler – Barbosa Costa, reasonable for basics.

Communications: Telex – International. Phone – Good Internal and International Direct Dialing (IDD). About £2 per minute to UK. There is a public call box in Jetty Operators Office which you can use to reverse charges overseas – very good and easy.

Consul: Salvador has an Honorary British Vice-Consul which comes under Rio de Janeiro and was very helpful.

Salvador: 241-3222.
Brasilia: 0612-25298, 252710, 252625.

Safety Equipment Certificate extended by 5 months through Brasilia and Salvador.

Lloyds: Non exclusive surveyor in Salvador – ABS, nearest exclusive is Rio de Janeiro.

Lifeboat: Can be lowered into water. A sandy beach on wooded island opposite terminal is popular with ships but watch tide – current rise and fall.

REPORT: Received November 1982.
Butane/Propane at Petrobras Terminal (Temadre): Capacity 20,000 tonnes at minus 45°C. Discharge rate up to 500 tonnes per hour but dependant on vessel pumping rate. For daylight berthing vessels up to 50,000 d.w.t., max. draft 40 ft., vessels up to 118,000 d.w.t. max. draft 38 ft. Max. LOA 240 m.

Butane/propane vessels with over 20,000 tons to discharge may transfer excess across the Terminal to smaller gas tankers, sometimes unrefrigerated.

Larger vessels than limits shown have gone in. We had vessel (55,173 d.w.t./39 ft. 6 in. draft) earlier this month, which berthed by special dispensation of Port Captain, under considerable pressure from Petrobras. Vessel had less than 50,000 tons on board but limitation is on registered d.w.t., not cargo. Port Captain's Office now studying possible increase d.w.t. limit for 40 ft. draft vessels but not confirmed yet, so if you are working vessel over present limits please advise soonest and details.

Remember vessels proceeding to Santos to complete discharge must arrive there with 28 ft. draft or less. Usually there is no difficulty here with transferring propane to butane tanks on board to correct trim.

REPORT: May 1983.
Refrigerated LPG Discharge: Pipe-line length 3,000 m., liquid line diameter 18 in., vapour line diameter 8 in. Discharge using 3 liquid hose lines with 8 in. diameter and 1×8 in. diameter vapour hose line.

AUTHORITY: Companhia Das Docas Do Estado Da Bahia (CODEBA), Estacao Maritima De Passageiros, Avenida Da Franca, S/N, CEP 40000, Salvador, Bahia, Brazil. *Tel:* (071) 243-5066, 243-5165, 243-5965, 243-5765. *Telex:* 071-1110.

SANTANA (Macapa): 00.03 S. 51.11 W. (See Plan)

DOCUMENTS: Also see "General" before first port.
6 Crew Lists.
3 Crew Personal Effects Lists.
7 Transit Passengers List or Negative Passengers List.
3 (each) Stores Lists (engine, deck and bonded).
5 Cargo Manifest or Ballast Declaration.
7 Disembarking Passengers List (if any).
3 Maritime Health Certificate.
3 Vaccination Lists.
Derat Certificate.
Maritime Police Pass (when proceeding from Brazilian Ports).
Clearance Certificate.

PILOTAGE: No Pilots available either for the North Channel entrance and/or for docking and casting off operations.

ANCHORAGE: In front of the port, protected anchorage between mainland and Santana Island, where vessels can safely anchor at any location. Bottom is mud.

RIVER NAVIGATION: Outer bar transit restricted to 32 ft. at LW and 37 ft. at HW. When loaded and outward bound, the Master should study carefully the tides and direction of currents.

RESTRICTIONS: Vessels can depart at any stage of tide. Night transit in North channel is at Master's discretion.

Channel transit restricted to 32 ft. in low water. Due to shifting of mud banks it is recommended that a set of up-to-date Brazilian nautical charts, covering from outer bar to Santana Port, should be used.

The Hydrographic Office of The Brazilian Navy, based on date furnished by the Brazilian National Astronomical Observatory, publishes an annual tide table for the majority of Brazilian ports, including Barra Norte do Rio Amazonas-Ilha do Brigue – Lat. 00° 55′ N. Long. 50° 05′ W. and Porto de Santana.

Nautical charts and tide tables are available through the vessel's Belem (Para) Agent.

Shipmaster's Report: The above is correct but we would advise you to add: "The charts and books are delivered by pilot launch off Salinopolis (the pilot station for the port of Belem), if ordered well in advance via Belem's Agent. The meeting point, anchorage, can easily be reached on B.A. Chart No. 520 and is described in South America Pilot Volume 1 (eleventh edition 1975), page 53, line R 41 – 45".

In certain periods, but mainly from April to August, there are large logs, trees, etc., drifting down river.

MAX. SIZE: On East side of floating ore pier, general cargo pier has a depth alongside of 29 ft. Along floating ore pier depth ranges from 35 ft. to 90 ft. (at LW). 35 ft. on East end of pier. Tidal range about 9 ft. to 11 ft. Tidal current at middle of river ranges from 2 to 3 knots, while close inshore along ore dock it runs approximately 1 – 1.5 knots. Amazon river water at Santana is fresh in spite of tides.

Port of Santana: Alongside the floating ore pier, the tidal current continues to run for 60 minutes beyond the time computed from the table. In mid-stream, the delay in the change of current is 90 minutes, depending on the river flow.

Report: September 1986.
Max. LOA 707 ft. 08 in.
Max. beam 95 ft. 02 in.
Max. air draft 40 ft.
Max. sailing draft 32 ft. LWOST. 37 ft. HWOST.

HEALTH: Health authorities visit vessel arriving from abroad. Authorities require regular ship's gangway to be lowered. Jacob's ladders not accepted. Also see "General" before first port.

RADIO: Vessels scheduled to load ore at Santana must radio Belem (Para) Agents (preferably via Chatham, Amagansett or Belem Radio) at least 48 hours prior to ETA North Channel. Other means of communication not satisfactory and result in delay.

TUGS: No tugs available.

BERTHING: *Private Floating Pier:* Length 247 m. Depth of water 10.6 m. A retractable loading arm loads Manganese at an effective average loading rate of 1,000 long tons per hour for each hatch loaded.

Also see "Shipmaster's Report".

Macapa Pierhead: Length 18 m. Depth of water 8.8 m. Fitted with a 65 ton crane, and used for general cargo handling.

Recommended that amidship hatches be used for Santana cargo. Vessels berth according to direction of tidal current. Berthing operations assisted by a motor craft to place lines on shore, East of pier. On West side, lines moored to the bitts on floating fender. Linesmen available to assist berthing and shifting. Ore carriers have preference when docking.

When berthing, use of the anchor must be avoided except in an emergency.

STEVEDORES: Stevedores are available at Macapa about 25 km. by road from the port. Rates and other pertinent details must be arranged through the ship's Agents. Conveyor belt for ore loading fixed, consequently vessels must be shifted by own winches to load various hatches. Effective average loading rate 1,000 t.p.h. Special caution must be taken not to pump all ship's ballast before loading starts, since the height of boom is 40 ft. above water level. Cargo belt trimmed only.

MEDICAL: Medical attention may be arranged at Macapa through ship's Agent.

TANKERS: Discharge at the Dolphins Pier, about 150 m. West of floating pier. Depth 8.0 m. Pipe-lines lead to tanks ashore (distance from pier 1,000 m.). Storage tanks have capacities for 35,000 barrels of diesel oil, 9,500 barrels of gasoline and 60,000 barrels of fuel oil. There are no shore facilities available at the terminal for receiving slops, dirty or contaminated ballast. Masters are cautioned that discharging of anything other than uncontaminated ballast will be subject to penalties as prescribed by Brazilian law.

(See Pollution Regulations in "General" before first port).

DENSITY: The Amazon river water at Santana Port is fresh water at any stage of tide. Checking density during load operations is recommended.

FRESH WATER: No drinking water available.

FUEL: There is no suitable installation for fuel supply. See "General" before first port.

GANGWAY/DECK WATCHMEN: Gangway watchman compulsory.

OPENING/CLOSING HATCHES: Ore carriers: service carried out by crew. General cargo vessels: service executed by stevedores.

CUSTOMS ALLOWANCES: Limited quantity for use during ship's stay.

CARGO GEAR: No additional requirements as to gear. A heavy-lift stiff leg derrick mounted on the pier. Boom: 60 ft., Mast: 37 ft. 6 in., Capacity: 65 tonnes. Mobile crane (maximum lift 40 tonnes) available for discharge of general cargo from small vessels.

IDENTITY CARDS: Foreign Crew members not permitted to go ashore without presentation of identity card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The identity card must be delivered on dis-embarkation to the Federal Police who will return it to the crew member on re-embarkation.

CONSULS: None. Documents which are to be visaed by a Consul must be sent to Belem.

REPAIRS: Only in cases of extreme emergency and then only minor repairs.

REPATRIATION: Effected by ship's Agent. No Immigration Authorities at Macapa.

AIRPORT: Macapa airport 25 km. from Santana near city of Macapa. Scheduled domestic flights from Belem to Macapa, a trip of 25 mins.

GENERAL:
Aids to Navigation – Radio Beacon – A radio beacon is installed at Ponta do Ceu, marking the entrance from the open sea to the river proper. It is operated by the Brazilian Hydrographic Office and the main details are:

Frequency – 290 kHz
Signal letter – EH
Working hours – Continuous
Geographical position – Lat. 00° 45′ 40″ N.
Long. 50° 06′ 58″ W.
Range – 300 miles.
Signal – A0 and A2 (1020 H2)
Character of signal – (EH.....) Twice in A0 during 10 secs.
and A2 (1020 H2) during 5 secs.

Vessels have reported that certain times the beam may stray as much as 15°/20°. This straying is most noticeable during early evening and at dawn, less so during the night, and least during the daytime hours.

Industria e Comercio de Minerios S.A. – ICOMI is not responsible for the location and operation of the various aids to navigation (lights, radio beacon, buoys, etc.).

COMMUNICATION: *Notices* – Vessels scheduled to load ore at Porto de Santana, must send radio to Belem (Para) Agents (preferably via Chatham, Amagansett or Belem Radio) at least 48 hours prior to their ETA North channel. Agents forward this information via telephone to their representative in Macapa who notify the shippers.

Telephone: Telephone communications between Porto de Santana and all Brazilian cities and also international calls, via Embratel (Brazilian Telecommunication Company) are possible every day, Sundays and holidays included.

Telegraph: There is a public telegraph service in Macapa, operated by the Brazilian Post Office and Telegraph Department.

Cable: International Cables are speeded by phoning them to the Agents in Belem (Para) who file them in the local cable offices there.

Mail: Ship's or crew's mail should be addressed in care of the ship Agents in Belem (Para). Mail should not be addressed to Macapa or to Santana.

TIME: GMT minus 3 hours.

HOLIDAYS: New Year's Day (January 1st); Tiradentes (April 21st); Martyr of Independence; Labour Day (May 1st); Independence Day (September 7th); All Saints' Day (November 2nd); Proclamation of the Republic (November 15th); Christmas Day (December 25th).

TELEPHONES: No facilities for placing telephones on board.

POLLUTION REGULATIONS: Brazilian Legislation contains several sanctions and penalties applicable to those who cause pollution of any kind. The prohibition against the execution of acts which cause pollution and the respective penalties, both administrative and pecuniary, are principally contained in The Federal Law No. 5318, dated 26/9/67, and in the National Policy for Sanitation, in the Decree No. 221, dated 20/2/67 – Fishing Code, in the Federal Decree 5798, dated 11/6/40, on Rulings for Maritime Traffic, and in the State Law (State of Rio de Janeiro) No. 6753, dated 10/12/71.

The sanctions and penalties can be applied cumulatively against infractors, and among those, special attention is called to the penalties foreseen in Federal Law No. 5357, 17/11/67, of which the first article reads:

> "Article 1 – Vessels or maritime or river terminals of any kind, foreign or national, which discharge debris or oil in waters which are within a strip of 6 (six) nautical miles from the Brazilian coast, or in rivers, lakes or other stretches of water, will be subject to the following penalties:
>
> (a) vessels, to the fine of 2% (two per cent) of the greatest minimum salary in force in the national territory, per gross register ton or fraction thereof:
>
> (b) maritime or river terminals, to a fine of 200 (two hundred) times the greatest minimum salary in force in the national territory.
>
> Sole paragraph – in the case of repetition the fine will be applicable in double".

In addition to the administrative and pecuniary penalties, under the new Brazilian Criminal Code, (Decree-Law No. 1004 of October 21, 1969, which was put in effect as of January 1, 1974, according to Law 5857/72, acts causing pollution constitute a violation punishable with imprisonment as follows:

> "Article 303 – Pollute lakes and rivers or, in inhabited places, the shores and the atmosphere, thus breaching provisions of federal laws or regulations:
>
> Penalty – Imprisonment up to 3 (three) years and payment of a 5 to 25 day fine.
>
> Sole paragraph – If the crime is not wilful the penalty shall be imprisonment from 2 months to 1 (one) year".

SHIPMASTER'S REPORT: July 1982.

The following concerns our recent visit to Santana to load bulk manganese ore, destined for Canada. The following should be read together with "The Pilot Book" and "Guide to Port Entry".

Communications: We were provided, by Charterers, with Agent's address, including cable address, in Santana. However cables sent here could not be delivered. All communications then sent to Agent in Belem. They responded with berthing instructions. Agent assured me that mail to Europe takes 5 to 6 days only. Incoming mail must be addressed to the Belem Agent and not direct to Santana. Agent has a VHF set but it is currently out of order. Contacted Macapa Radio on VHF Channel 16 when passing but they did not pass the message on to Santana.

D/F: When some 200 miles from the beacon at Pta. do Ceu, a clear sharp signal was obtained. However, when crossing the Barra Norte, the signal was poor with a spread of 10 to 12 degrees. Generally showing the correct bearing though and it is the only aid to navigation.

Pilots: There are no Pilots available for the passage from sea to Santana. A competent Pilot boarded at the anchorage and aided the berthing operation. This same Pilot should have aided the sailing but he arrived late and vessel was already leaving the pier. I understand that vessels proceeding further up the River Amazon embark Pilot at Santana. A mooring boat and line handlers are provided.

Charts: I found Admiralty charts adequate for the in-bound, light ship, passage. Purchased seven Brazilian charts from the Agent and these were invaluable for the outbound passage. Large important sections have been surveyed 1980. Similar detail to Admiralty charts but much better scale.

Navigational Marks: Found all buoys and beacons as charted inbound. They are well laid out and are about adequate. Outbound found Barra Norte No. 2 Buoy missing. This fact was reported to Belem Agent. Inbound and outbound passages were mostly in daylight so I cannot vouch for the lights.

Landfall: No. 2 Buoy was sighted at 14 miles on radar and visually at 10 miles. All buoys showed well on radar. Pta. do Guara Lighthouse well defined on radar at 24 miles. The coast line Northward of Rio Araguari was clearly visible on radar at 24 miles.

Tide Tables: Used Admiralty tables inbound. Predictions are based on Georgetown, Guyana. Crossing Barra Norte, inbound, could not make tidal streams conform with predictions. After berthing purchased Brazilian Tide Tables from Agent. The predictions for Santana were found to be similar in both sets of tables. However for Barra Norte found High Water some 4.5 hours and 2.2 m. difference between the tables. Sailed on basis of Brazilian predictions and found that tidal streams conformed much better. Inbound, light ship, the height of tide is not so important. Santana direction of tidal stream, which dictates berthing, is correct. Outbound use Brazilian tables and charts. The chart has a good tidal rose.

Santana Anchorage: As another vessel was already alongside I passed the berth and anchored about 1 mile above the berth in a deep pool at the confluence of three creeks. Stayed here for some 36 hours and noted that the flow of tide continues for some 60 to 90 minutes after the Admiralty predicted High and Low Waters.

Customs: Conscientious and efficient. A search of store rooms, cabins, lockers and cargo spaces was carried out. This took 1.5 hours and Agent assured me that this is normal. Two Customs Officers lived onboard throughout our stay. They come complete with spare seal should you wish to visit bonded stores.

Immigration: All matters taken care of by the Agent.

Port Health: Most thorough and meticulous. All medical books checked. The Brazilian Government is sponsoring a massive drive against Yellow Fever. Next morning Port Health Doctor returned to the vessel and vaccinated all who did not have proper documentation. International 10 year certificates issued.

Extended derat exemption for 6 months on proper form.

Watchman: A shore watchman was provided. Very useful for keeping the canoe people off the vessel. Also useful as a runner to the Agent.

Pier: The pier is 247 m. long, lies along 100°/280° and has a freeboard of about 4 ft. It floats on pontoons and is connected to the shore by 2 arms. It has a wood faced rubbing strip. Adequate rams horn bollards are provided. There are 2 mooring buoys at the Western end of the pier. See "Plan" for moorings and soundings.

Cargo: Vessel alongside for 48 hours and loaded 25,408.6 tonnes. Cargo pours out at a rate of some 800 tonnes per hour. Some time is lost shifting vessel up and down the quay to locate hatches under the chute. Our seven shifts accounted for 4.5 hours. When the tide is "kind" these shifts are easy enough, other times not so easy. Before the final pour into the last hatch operations were halted for 3 hours while samples were analysed. The belt weight was found to be accurate when compared to draft. There is no trimming. It lies where it falls.

Chute: The loading chute floats on a separate pontoon. The air draft is 40 ft. and of course is not affected by tide. The chute can be adjusted to pour across the ship thus taking care of vessels with varying beams.

Language: Few shore people had any knowledge of English. No personnel aboard could speak their particular brand of Portuguese. Final documentation all completed in perfect English.

Provisions: Fresh provisions were puchased and prices were reasonable. Used American dollars from Master's safe.

Fresh Water: Fresh water is not available. The loading rig has a system of pouring water to keep the belt wet, but this is just river water.

AUTHORITY: Companhia Docas do Para, Porto de Macapa, Av. Felinto Muller, Santana, PA, Brazil. *Contact:* Agostinho Raiol da Cunha, Manager.

SANTAREM: 02.25 S. 54.43 W. (See Plan)

LOCATION: Also see "General" before first port.

Santarem is located on the right bank of the Tapajos River which joins the Amazon River.

APPROACHES: *Bar:* Width 1,100 m. depth 17.0 m. – 25.0 m.

Access Channel: Length 2,590 m. width 1,500 m. minimum depth 15.0 m.

Manoeuvring Basin: Minimum width 1,500 m. minimum depth 15.0 m.

MAX. SIZE: Max. draft 10.0 m.

BERTHING: 520 m. of quay of which 380 m. is a pier, 2 warehouses with an area of 3,000 cu.m., open air area of 10,000 sq.m.; mechanical workshop, 60 ton weighbridge, administrative building, water tower and residence for the Port Administrator.

2 deep sea vessels or larger coasters can come alongside, with a minimum of 10 m. depth of water, and at the same time, 2 vessels of lesser draft can be berthed in the inner area where the depth is 6 m.

To handle river vessels, there is a marginal quay, with a minimum depth of 3 m.

There are at present 2×6.3 ton cranes, with plans to install a further 4.

1 mobile crane, capacity 9.1 tons

The principal export is meat which is delivered by road. A cold store is to be built.

FUEL: Fuel oil available at Petroleo Sabba private wharf. Also see "General" before first port.

AUTHORITY: Companhia Docas do Para, Avenida Presidente Vargas 41 – 20 Andar, Belem, Para, Brazil. *Tel:* 223-0056, 223-2066.

SANTOS: 23.56 S. 46.19 W. (See Plan)

PORT LIMITS: The port of Santos is situated in the centre of the State of Sao Paulo, and the port installations spread over an estuary bounded by the islands of Sao Vicente and Santo Amaro.

The port limits are:

(a) Parallel alignment of 24° 02.7′ S., in the limits Morro do Munduba (Munduba Hill) and Ponta do Itaipu (Itaipu Point).

(b) Mar pequeno.

(c) Channel of the port of Santos.

(d) Piacaguera Channel.

DOCUMENTS: The following documents, etc., are required to be presented to the Authorities upon ship's arrival.

Port Health Authorities: (Saude dos Portos – SAPORTOS):

1 Crew List
1 Free Pratique Certificate from the first Brazilian port of call, if any.
1 Maritime Declaration of Health (only at the first Brazilian port).
Derat Certificate.
1 Vaccination List.

To Custom House: (Delegalia da Receita Federal - D.R.F.):
3 Crew Lists.
3 Store Lists (Deck, Engines, Cabin, etc.)
3 Lists of Crew's Personal Effects.
1 Copy of each of the above Lists duly visaed by the Customs House of the previous Brazilian port of call, if any.
1 Copy each Cargo Manifest plus 1 copy of each Bill of Lading covering cargo loaded at foreign ports for Santos, duly signed/stamped by the Master.
1 Customs House Sailing Pass from the last Brazilian port of call (if any).
3 List (Master's Declaration) covering empty containers to be discharged at Santos (if any).

Maritime Police/Immigration Authorities: (Delegacia da Policia Federal – D.P.F.):
5 Crew Lists
3 Stowaway Lists, if any.
All valid Passports/Seamen's Books to be verified on vessel's arrival.
Immigration Sailing Pass from the last Brazilian port of call, if any.

Port Captaincy – (Capitania dos Portos do Estado de Sao Paulo):
Master must fill out an Arrival Declaration giving all data concerning his vessel as well as the number of crew, passengers on board, ports of call, cargo loaded at this port, Agents, etc., which will be supplied by the Agents on vessel's berthing.
The following Ship's Certificates must also be presented on vessel's berthing:
Certificate of Registry of the Vessel
Cargo Safety Equipment Certificate
Cargo Radio Safety Certificate
Cargo Ship Safety Construction Certificate
International Load Line Certificate
Derat Certificate
Port Captaincy Sailing Pass from the last Brazilian port of call, if any, must be presented on arrival.

PASSENGERS: Whenever there are passengers on board, the following additional documents are required:
(a) *Passengers in Transit:*
1 Passenger List (Port Health Authorities)
5 Passenger Lists together with the respective valid passport (Immigration)
3 Passenger Lists (Customs House)
1 Passenger List duly visaed by the Customs House of the previous Brazilian port of call, if any (Customs House).
(b) *Passengers Disembarking:*
5 Passenger Disembarking Lists to the Immigration Authorities
2 Copies of Luggage Declaration duly signed/stamped by Master for the Customs.
The valid passport to be verified on vessel's arrival by Immigration.
3 Copies of Passenger Disembarking Lists for the Customs House.

NOTE: All items missing from Stores Lists (deck, engine, radio, tools, etc.) and found during Customs inspection willl be confiscated.

PILOTAGE: Pilot Station for Santos District is at Avenida Saldanha da Gama 64, Santos. Tel: 36-8036. Cables: Praticagem – Santos. VHF Stand-by on Channel 16 (24 hours).

Pilotage is compulsory for all vessels carrying dangerous cargoes, all foreign vessels and Brazilian vessels of more than 500 g.r.t., when entering the Santos Fairway Area and Santos Port Inner Anchorage. Vessels shifting berth, changing anchorage and other special manoeuvres must have a Pilot on board. Local pilotage services include pilot boats for transporting the Pilots and mooring boats. Pilot boats are red and shall fly, exhibit, display, hoist and sound:

(a) By day the pilot flag, being a red flag with a black letter "P", displayed from the main top mast;

(b) By night the lights as prescribed by Rule 29 of the Regulations for Preventing Collisions at Sea in respect of mechanically propelled pilot vessels;

(c) During fog, mist, heavy rainstorms or any other weather conditions which in like manner causes visibility to deteriorate, the fog signal as prescribed by Rule 35 of the Regulations for Preventing Collisions at Sea in respect of mechanically propelled vessels.

Incoming Vessels: In order to avoid possible delay ships bound for Santos Port should act as follows: at least 2 hours in advance the inward vessel is to report by radio-telephony on VHF Channel 16, stating her ETA, draft and further information. Berthing instructions available at pilot station will be sent immediately after first contact.

Vessels on Arrival: Arriving vessels awaiting berth may enter within Outer Anchorage without pilot assistance, taking care not to cross the buoyed channel and keeping clear of leading line "A" (021.5° True bearing) and maintaining continuous listening watch on VHF Channel 16.

Port Pilotage: In general, Pilots shall be picked up and dropped abreast of Palmas Island (near Parallel 24° 00′ 33″ S.) about 0.6 miles off. Deep draft incoming vessels shall embark Pilot abreast of Ponta Grossa about 0.9 miles off or as advised by pilot station. When unfavourable weather conditions prevail in the Santos Fairway area preventing Pilot boarding, vessels shall remain at anchor. In case of emergency, however, vessels shall follow the pilot boat as far as conditions allow Pilot to be safely picked up. If the Pilot is unable to disembark from an outward bound vessel, he shall be landed at the nearest port.

Requesting a Pilot: According to the Brazilian Pilotage Agreement vessels requiring a Pilot shall make an application for a Pilot not less than 4 hours in advance by telephone, VHF or any other suitable means of communication (provided later confirmation in writing is furnished), also indicating the exact time the Pilot is wanted on board. Nevertheless, a prompt service can be provided under special arrangement.

Pilot Ladders: Vessels engaging pilot services shall comply with the requirements respecting pilot ladders pursuant to SOLAS Rule 17.

"H" Flag: Vessels carrying a Pilot on board shall hoist the international code signal "H" otherwise they will be subject to a fine by the Harbour Master.

Note to Masters: Pilot shall be supplied with meals when rendering services at their respective regular times. The Master shall give the Pilot all requested information concerning vessel's condition and characteristics and shall, on the completetion of the pilotage service, sign the Pilotage Certificate on the form submitted by the Pilot. Masters are advised to have the vessel's engines ready to work at their maximum output if necessary.

Dangerous Goods: Ships carrying explosives and other dangerous cargoes shall give notice at least 2 hours before arrival and 1 hour before departure via cable, telex or VHF to pilot station stating:

1. Name and call-sign.
2. Nationality.
3. Draft and gross tonnage.
4. Nature and quantity of dangerous cargo.
5. Berth.
6. ETA/ETD.
7. Agent.

APPROACHES: *Santos Approach:* Santos Approach Fairway is marked on Chart No. 1701 of the DHN (Hydrographic Office), displaying all necessary information concerning beacons, buoys (buoyage system IALA "B"), depths, leading lines.

As projected depths appearing in Chart No. 1701 are still not available in certain sections, vessels shall observe "Notice to Mariners" or call the pilot station for actual depth. Mean depth is 12 m. for Section A, 11.5 m. for Sections B and C and 12 m. for Piacaguera Channel (Section D). Along the general cargo quay depth does not exceed 36 ft. at HW and may get as low as 32 ft. at LW. (Also see "Developments").

ANCHORAGE: The following anchorages shall be observed in the Port of Santos area as indicated on Chart No. 1701 of DHN (Hydrographic Office) and permission to lie at anchor outside these areas shall be obtained in case of force majeure through the Harbour Master. Vessels are requested to note submarine cables near Anchorage Nos. 3 and 4 and ocean outfall near Anchorage No. 4.

(a) Anchorage No. 1 (Inner): Accessible for 3 vessels up to 180 m. LOA and with a maximum draft of 8.23 m. (27 ft.).
(b) Anchorage No. 2 (Inner): 50 m. off beach, accessible for small and pleasure crafts.
(c) Anchorage No. 3: For warships only.
(d) Anchorage No. 4: For vessels up to 100 m. LOA and maximum draft of 5.79 m. (19 ft.).
(e) Anchorage No. 5: For vessels up to 180 m. LOA and maximum draft of 9.75 m. (32 ft.).
(f) Anchorage No. 6: For vessels up to 180 m. LOA and maximum draft of 9.75 m. (32 ft.).
(g) Anchorage No. 7: For deep draft vessels.

Restrictions: Anchoring in Anchorage No. 1 is allowed only for 24 hours, but an extension of stay may be obtained from Harbour Master's Office in special cases. Due to strong Northwesterly winds, common in this area, Masters are advised to have vessel's engines and crew on standby.

Navigating and anchoring near military fortresses of Itaipu ("Itaipu") and Guaruja ("Andradas") is prohibited. All craft are requested to keep clear of the areas of Morro do Itaipu (Itaipu Hill) and Morro do Munduba (Munduba Hill) within a range of 100 m.

RESTRICTIONS/MAX. SIZE: Vessels drawing 36 ft. or more shall manoeuvre during HW by day light. Night manoeuvring in such cases are under study; meanwhile maximum draft at night is 34 ft. at HW for Sections B and C. (Note: Max. draft at Alemoa No. 2 is 35 ft. 6 in. and at Alemoa No. 1 it is 31 ft. 6 in.)

In the Piacaguera Channel (Section D) vessels shall observe following limitations due to same reduced width and basin dimensions according to the latest dredging (1984):

Maximum breadth	33 m.
Length overall	228 m. (day), 215 m. (night)
Maximum draft	35 ft. 6 in. (salt water) 36 ft. (fresh water)

(a) Berthing at outer side of Cosipa's Pier:

Length	228 m.
Breadth	33 m.
Draft	36 ft.

(b) Berthing at inner side of Cosipa's Pier:

Length	228 m.
Breadth	33 m.
Draft	36 ft.

(c) Berthing at Ultrafertil's Pier:

Length	200 m.
Breadth	33 m.
Draft	31 ft.

Note: Vessels negotiating the Piacaguera Channel shall employ 2 tugs, 1 at least to be made fast. But vessels drawing more than 36 ft. shall navigate only by daylight assisted by 4 tugs within Saboo/Alemoa area and 3 tugs within Alemoa/Cosipa area (only 1 vessel at a time can pass through this channel).

Tidal Information: Mean rise and fall is about 1.5 m.; spring tide stream may reach up to 1 knot at the flood and about 1.4 knots at the ebb. Exact figures are shown on the tide tables and tidal stream tables for the Port of Santos published by the DNH (Hydrographic Office).

Speed Regulations: The allowed maximum speed in the channel is 8 knots in order to secure safe navigation. Moored vessels must be passed in such a way that no hindrance or inconvenience from suction and backwash may be caused.

RADIO: Santos Coastal Station, VHF Channel 16. Working 24, 25, 26 and 27. S.S.B. facilities will be available at a later date.

VHF: *Ship Reporting System:* Compulsory system in effect for vessels over 20 g.r.t. Call sign: PWS 88. Channels: 16, 11, 12, 13, 14, 68, 69, 71 and 74.

Procedure:

1. Vessels should report:
   - (a) On anchoring.
   - (b) On leaving an anchorage.
   - (c) Abreast of Ilha das Palmas (inward-bound).
   - (d) Immediately before leaving berth (outward-bound).
2. Reports should include:
   - (i) Vessel's name.
   - (ii) Call sign.
   - (iii) Flag.
   - (iv) Port of departure (inward-bound). Destination (outward-bound).
   - (v) Type of vessel.
   - (vi) Anchorage or berth (inward-bound). Estimated date of arrival at destination (outward-bound).
   - (vii) Estimated date of departure (inward-bound). Cruising speed (outward-bound).

Vessels shifting anchorage or berth report vessel's name, call sign, and previous and present position.

3. Reports are to be Portuguese (request assistance in transmission from Pilot, pilot station or Santos (PPS) Channel 16, as necessary).

4. Vessels unable to contact the Control Post inform the Captaincy of the Ports of the State of Sao Paulo stating vessel's name, date, time (GMT) and reason for not reporting.

HEALTH: Port Health Authorities consisting of 1 doctor and 2 assistants will check all vaccination certificates (cholera and yellow fever) and issue a Free Pratique Pass, which shall remain on board for presentation at subsequent Brazilian ports of call. Masters can obtain Free Pratique by radio, which does not mean that the doctor will not come on board, but only that other Authorities can board the ship before his arrival.

Free Pratique by Radio: Master should radio to Agent (in Portuguese) as follows:

Quote:

Para Saportos Santos
c/o Agents (Cable Address)
Navio Bandeira (vessel's flag) (vessel's name)
Procedente (Last Port of Call) com (number of crew) tripulantes abordo stop Condicoes sanitarias abordo satisfatorias na conduzindo nenhuma pessoa com doenca infecto contagiosa stop

Unquote.

TUGS: 14 tugs available, equipped with radios (VHF Channels 10, 13 and 16) horse-power range from 1,010 h.p. – 2,360 h.p. 2 small tugs available, 505 h.p. – 545 h.p.

The use of 2 tugs or more is compulsory in the Piacaguera Channel – see "Approaches".

Vessels should dock, preferably against the tide.

The assistance of at least 2 tugs will be obligatory in the following places:

Saboo Quay – Points 1, 2 and 3.

Warehouses 13, 26 and 9, where the pneumatic wheat unloaders are located;

Piacaguera Channel: Cosipa, Alamoa, Ultrafertil and Dow Quimica Terminals and Barnabe Island.

Alemoa Terminal – For vessels of 7,000 to 15,000 d.w.t. a third tug boat should be used as pusher.

Outside the above mentioned areas, when employing tugs, the following minimum requisites should be observed:

Vessels up to 4,000 d.w.t.	optional
Vessels from 4,001 to 7,000 d.w.t.	1 tug up to 1,000 h.p.
Vessels from 7,001 to 10,000 d.w.t.	2 tugs of up to 1,000 h.p. each.
Vessels from 10,001 to 20,000 d.w.t.	2 tugs more than 1,000 h.p. each.
Vessels from 20,001 to 40,000 d.w.t.	2 tugs more than 1,500 h.p. each.
Vessels over 40,000 d.w.t.	3 tugs more than 1,500 h.p. each.

Note: Should no tug of the indicated power be available, tugs of immediately superior power should be requisitioned.

Vessels with bow-thrusters may employ 1 tug instead of 2 in certain operating areas. (Not those mentioned above).

Piacaguera Channel:

	Number of Tug Boats	
Ship's Gross Tonnage	*Minimum*	*Maximum*
Up to 4,000	Optional	
From 4,001 to 10,000	2 large	2 large
From 10,001 to 15,000	2 large	3 large
From 15,001 to 30,000	3 large	3 large
From 30,001 upwards	3 large	4 large

Until such time as a fresh dredging is carried out at the turning basin at Alemoa, in the passage or ships drawing over 34 ft., destined to or proceeding from Cosipa, 1 tug should be standing by in order to push, if necessary, vessels operating at Pier Nos. 1 and 2.

BERTHING: Berthing quays have 435 bollards with an average distance of 25 m. between them.

Port Administration: Linear quays 9,562 m. Dolphin berths and jetties: 1,918 m.

Private Berths: 717 m.

	Length (m.)	*Depth* (m.)
Continuous Quay:		
Single Use:		
General Cargo – ocean-going vessels	4,193	7 – 13
General Cargo – Coastal vessels	246	7
Bulk Solids	990	8 – 11
Bulk Liquids	631	10
Double Use:		
Bulk Solids and Liquids	200	10
Bulk Solids and General Cargo	2,267	7 – 13
General Cargo and Passengers	373	11
Diversified Use:		
Maritime Department	363	5 – 8
Lighters and small craft	159	
Terminals:		
Port Administration:		
Bulk Solids – Conceicaozinha	567	13.5
Bulk Liquids – Alemoa	841	7 – 12
Containers	510	13.5
Private:		
Bulk Solids – Cosipa	300	12
Bulk Solids – Ultrafertil	294	10
Bulk Liquids – Dow Quimica	253	10
Bulk Orange Juice – Cutrale	286	9

Wharves: Total length 6,013 m. Inner Harbour (Saboo New Quay) 800 m. (depth 11 m.). Barnabe Island Pier 300 m. (depth 10 m.).

Special Cargo Handling Facilities – Refrigerated Cargo: Refrigerated cargo after discharge is deposited in the cold storage (between Warehouses 23 and 25). The Receiver is usually responsible for cartage and storage arrangements as well as for the required temperature to be maintained in cold chambers.

Bulk Cargo – Grain Elevators: There are 3 elevators in Santos from which wheat can be discharged direct into freight cars, owned by: Cia. Docas (with external silos) between Sheds 25 and 26; Moinho Paulista between Sheds 12A and 13; Moinho Santista between Sheds 8 and 9.

Cosipa Terminal, depth 12 m.; Ultrafertil Terminal, depth 10 m.

Fertiliser, Sulphur, etc, in Bulk: Can be discharged at any point along the quay where 6 ton cranes equipped with automatic motor-driven grabs or shovels are in operation. Alternatively, cranes with ordinary hand-filled buckets are used. The usual place for handling this type of cargo is by the Saboo Bend.

Silos:

Cargo	*No.*	*Capacity (tons)*
Cereals	1	30,000
Soya/Maize	2	80,000
Salt	3	90,000
Fertilizer	6	180,000
Pellitised Veg. Products	7	128,573

Special/Valuable Cargo: Special or valuable cargo, objects of art, precious metals, etc., are discharged without special formalities and may be kept in Shed 12A, where there is a special safe.

CONTAINER HANDLING FACILITIES:

Container Terminal: On left bank of Santos Estuary, opened September 1981, with the following characteristics; 510 m. long wharf, depth 13 m., equipped with two portainers with the following main characteristics:

Hoist capacity below spreader: 35 ft

Rate (40 ft. containers): 20 containers per hour.

Size of containers to be handled (ISO): 20 ft., 30 ft. and 40 ft.

Handling capacity 140,000 per year.

2 transtainers on tyres for 30.5 tons, 2 transtainers on rails for 35 tons, and 9×37.5 ton forklifts.

BULK HANDLING FACILITIES: The Ultrafertil Terminal is situated East of the Cosipa Terminal and both make use of the same manoeuvring basin with depth of 10 m., connected with the Port of Santos by a dredged channel 8 km. long, 10 m. in depth and 60 m. in width.

Cosipa Terminal: Consists of a pier 150 m. in length and 22 m. in width, built on concrete tubing, with a depth of 10 m., allowing for the berthing of vessels of up to 22,000 d.w.t. Future plans foresee the lengthening of the pier to 250 m. and a depth of 13 m., enabling it to receive vessels of 45,000 d.w.t.

Equipment for the discharge of coal and ore is installed at the pier, capable of handling 600 t.p.h., as well as equipment for the loading of steel plates produced at the plant.

Ultrafertil Terminal: An open dock in the form of an "L" built on concrete tubing, 240 m. in length and 15 m. in width. At its main point, vessels of 23,000 d.w.t. and drawing 10 m. may berth. The secondary point permits the berthing of vessels of up to 3,000 d.w.t. (liquid gas carriers).

The terminal is especially equipped for the discharge of bulk solids at a rate of 500 t.p.h. and is likewise equipped with pumps and adequate pipes for the discharge of liquified gas.

Macuco Novo Quay: Export terminal for cereals. Length 280 m. Max. draft for vessels is 13 m. Storage capacity 60,000 tons. Loading rate 3,000 t.p.h.

Conveyor Belts:

(a) 2 conveyor belts for salt, in front Warehouse No. 23, receiving product from the ship by means of grabs and transporting it to the mill of SALMAC S/A with capacity for 500 t.p.h.

(b) 8 conveyor belts for fertilisers at Conceicaozinha Island with variable capacity from 500 to 2,000 t.p.h., depending on the product.

Pellets: Length of quay 280 m., depth 13 m. with 3 warehouses, capacity 105,000 tonnes. Connected by belts and loaders, capacity 3,000 t.p.h., with automatic weighing machines. 2 hoppers with capacity of 500 t.p.h. and 800 t.p.h. each, permit simultaneous receival from wagons and trucks.

Pellets and Fertilisers: Stretch of quay from Warehouse 17 to Warehouse 20. 5 loaders of capacity 1,850 t.p.h. Stocks held in Warehouses 19 and 20, and Warehouses V, VI, X, XV and XXIII.

Salt: Stretch of quay in front of Warehouses 22 and 23. Electric cranes and belts provide capacity of 1,000 t.p.h. Stocks discharged to Warehouses XII and XVII, and a special wooden warehouse.

Grain: 3 terminals with unloaders and conveyor belts.
- (i) 3 unloaders (270 t.p.h.) in front of Warehouse 9.
- (ii) 2 unloaders (420 t.p.h.) between Warehouses 12-A and 13. Discharge to Paulista Mill.
- (iii) 4 unloaders (540 t.p.h.) in front of Warehouse 26. Discharge to Codesp's silo.

Silo capacities: Codesp – 30,000 tonnes, Santista – 34,800 tonnes, Paulista – 20,000 tonnes.

Fertilisers: A quay, at Conceicaozinha, length 567 m. with 2 piers. Each pier is 283.5 m. long with a depth 13.5 m. minimum tide. Warehouse capacity 180,000 tonnes. 12 electric portico cranes, with grabs, and conveyor belts.

Coal: At Saboo, capacity 50,000 tonnes, serviced by electric cranes, grabs and conveyor belts. Rate 1,000 t.p.h.

Roll-on/Roll-off: 6 Ro/Ro berths in operation. For vessels with straight ramps – at Saboo Quay (Warehouse 29).

For vessels with angled or side ramps – at Saboo Quay (Warehouse 35).

Frozen Fruit Juice/Pellets: Terminal da Succocitrico Cutrale S.A., used for the shipment of frozen fruit juice and "pellets" in general, which entered into operation in 1985:

Depth of water: 13.3 m.
Length of quay: 195 m.
Length of quay including two dolphins: 257 m.
Length of quay, from axis to each dolphin: 250 m.
2 warehouses with capacity of 50,000 tons each, for storage of "pellets"
1 shiploader with a capacity of 1,000 t.p.h.
16 tanks for storage of concentrated juce with capacity of 11,000 tons each
Installation for loading juice on to vessels at rate of 500 t.p.h.

CRANES: *Heavy Lifts:* Cia Docas operates 2 floating cranes – 1×100 ton, and 1×150 ton. The 150 ton crane reaches 22 m. in height and can handle lifts within a radius of 10 m.

Type	*No.*	*Capacity*
Cranes		
Electric portico	179	1.5 to 30.0 tonnes
On tyres	44	4.5 to 250.0 tonnes
On belts	5	6.5 to 11.0 tonnes
Conveyors/Piling up of containers	3	30.0 tonnes
Portainers	2	20 units/hr.
Transtainer	1	20 units/hr.
Transtainers on tyres	2	30.5 tonnes

EQUIPMENT:

Forklifts		
Common	309	2.0 to 23.6 tonnes
For rolls of paper	18	1.2 to 2.0 tonnes
For containers	8	37.0 tonnes
For inside containers	22	1.8 tonnes
Floating cranes	2	150 and 250 tonnes
Water barges	2	30 and 450 tonnes

STEVEDORES: All longshoremen are in employ of Cia. Docas, which holds charter for general operations at Santos Docks. Their services can be requisitioned up to 1500 hrs. for vessels at berth/expected to berth next day. Stevedores ordered but not used shall be paid full day or night. Therefore, if the men should be kept standing by (inactive) at 0700 hrs., their period runs up to 1700 hrs., and at 1900 hrs., their period runs up to 0400 hrs.

Working Hours: 0700 – 1300, 1300 – 1900 and 1900 – 0100.

Overtime: Sundays, holidays and meal hours.

Port Workers: In Brazilian ports there are 2 categories of workers engaged in handling cargoes in loading and/or unloading ships, namely:

Longshoreman: In the employ of Dock Company, to work ashore operating the cargo from the ship's tackles to the warehouse or to waggons, lorries, etc. as well as in the reverse operation.

Stevedores: They are called "autonomous" because they have no ties of fixed employment and they are engaged by Shipowners or their Agents to work on board the ships in loading and/or unloading operations. They are professional and qualified workers grouped in their respective syndicates or trade union.

MEDICAL: Hospitals and Nursing Homes available.

TANKERS: Discharge terminals at Saboo Quay, Alemoa and Ilha Barnabe.

Alemoa Terminal: Allows simultaneous mooring of 2 tankers with capacity of up to 60,000 d.w.t. (80,000 tons displacement). Length of wharf 630 m. Depth of 12 m. at LW. Sixteen "Chiksan" arms available. Unloading rate 500 – 2,000 t.p.h. Distance between manifolds 180 – 260 in. Connections 6 in. and 8 in.

Report: May 1983 – Refrigerated LPG discharge is carried out through hydraulic arms, 1×16 in. diameter for liquid and 1×10 in. diameter for vapour. Pipeline length 1,000 m.

Also see "Shipmaster's Report" – dated September 1981.

Ilha do Barnabe: Length of dock 301 m., depth 10 m. The dock is used for loading, unloading and storage of liquid fuel.

Saboo Quay: Connections – 6 in., 8 in. and 12 in.

FRESH WATER: Adequate supply of fresh water is always available from hydrants (rate 40 t.p.h. – connections 7 threads per inch in 2 in. and 1.5 in.) along the quay (day and night) or from water-barges (440 tons). Water barges (3) cannot supply more than 2 ships per day, their capacity being only 250 tons, which can be pumped into the ship's tanks at the rate of 80 t.p.h. Cia. Docas should be advised 24 hours in advance, priority being given to passenger vessels.

FUEL: MFO, MDF, and gas oil can be supplied at Vallongo by Shed No. 1 or at the Saboo New Quay Extension, or by barge, if up to 300 tons. Applications for supplies should be made a few days in advance to avoid delay in delivery.

REPAIRS/DRY DOCKS:

Shipyards: Santos Dock Company, Wilson Sons S/A, and various others for small size craft.

Repair Shops: Santos Dock Company, Wilson Sons S/A and various others for maintenance services and marine repairs such as: mechanical, boiler, electrical, electronic and refrigeration.

Drydocks: Wilson Sons S/A. With capacity for vessels of 65 m. in length, 12 m. breadth and maximum drafts of 4.20 m. aft and 3.90 m. forward.

Slipways: Santos Dock Company, with two cradles and capacity up to 300 tons with a maximum of 45 m. in length and 11 m. breadth; there also exist innumerous slipways for small size craft.

Many other repair shops and slipways of lesser capacity are available.

All the main engine manufacturers (B & W, MAN, Sulzer, MaK, amongst others) have service representatives in Santos and many major repairs, including re-engining of ships, have been effected in this port.

Metalock do Brasil, S.A.: General voyage repairs, including all usual mechanical services, machining, foundry, engine repairs and electrical services.

Also specialised Metalock repairs, crank shaft *in situ* machining and chocking of engines and machinery.

SURVEYORS: Practically all the Classification Societies are represented in Santos. Hold and derrick inspections as well as cargo surveys, are executed expertly, among others, by Perimar Ltd. a surveying firm which also performs testing, sampling and technical research. Its address is: Rua Amador Bueno, No. 38, conj. 91, 9th Floor, P.O.B. 624, 11.100 Santos. Tel: 35.2677. Telex 013-1213. Cables: Perima Santos.

P & I Clubs: Most associations, British, Scandinavian, Polish, Japanese and Greek are represented by Pandibra Ltda. at the following address: Rua XV de Novembro 65, 8th Floor, P.O.B. 550, 11013 Santos. Telephone Exchange No: 34.7228. Telex: 013-1248. Cables: Pandibra Santos. Also Proinde Ltd., Rua Visconde Do Rio Branco 2, 11013 Santos. Tel: 33.1230.

WATCHMEN: It is compulsory to have 1 shore watchman at the gangway. 3 additional deck watchmen are recommended.

Cases of piracy (Master held at knife point) are becoming common, especially at Alemoa Terminal. Also cases of armed pirates boarding have occurred.

OPENING/CLOSING HATCHES: May be performed by ship's crew or by stevedores.

CONSULS: The following countries are represented in Santos:

Argentina
Belgium
Bolivia
Chile
Denmark
El Salvador
Finland
France
Germany (F.R.)
Greece
Italy
Netherlands
Norway
Panama
Paraguay
Portugal
Sweden
U.K.
Uruguay

AIRPORT: Situated at Sao Paulo, about 60 km. from Santos. Full international services.

TIME: GMT minus 3 hours.

HOLIDAYS: No work is accepted on the following days: Christmas Day; New Year's Day; Independence Day; Proclamation of the Republic Day; Easter; Good Friday; May 1st.

On Christmas Day, no work available except on passengers' luggage. Working overtime on holidays is possible provided application is made not later than 1500 hrs. on the preceding day. On Sundays work stops at 1900 hrs. for freighters, and is allowed to continue for passenger vessels when only handling luggage.

Local Holidays: January 26th (City Anniversary) and September 8th (City's Patron Saint) and Corpus Christi.

POLICE/AMBULANCE/FIRE: Emergency Tel: 2170. Police (Warehouses 1-7), Tel: 31.5544. Police (Warehouses 8-28), Tel: 32.5497. Police (Warehouses 29-43), Tel: 36.9979.

IDENTITY CARDS: I.D. cards not required.

TELEPHONES: Every vessel berthing between Sheds 1 to 39 will have a telephone on board, available only for local calls.

GENERAL: Flags to be shown by incoming/outgoing vessels: *(a)* National flag. *(b)* Brazilian flag. *(c)* Yellow flag – "Q" (whenever doctor's clearance is required and up to obtainment). *(d)* Customs flag (blue with a white star – to be flown 24 hours a day, after clearance is granted.)

The following circular letter was handed to a Master by his Agent (May 1980).

Re.: PORT REGULATIONS

We kindly request your attention to the following regulations in force at this port, to which you should strictly adhere, otherwise, it will result to heavy fines being imposed by the local Port Captaincy:

1. a) *Gala Flag:* The gala flag is obligatory on the following dates, considered as official national holidays:
   September 7th (Independence Day)
   November 15th (Proclamation of the Republic)

   b) *Half Gala Flag:* The half gala flag must be used on the following dates:
   January 1st (New Year's Day)
   April 21st (Tiradentes' Day)
   May 1st (Labour Day)
   December 25th (Christmas Day)

   c) *Mourning Flag:* On November 2nd (All Saints Day), the vessel should dress the flag in mourning.

   The regulations mentioned above should be followed whenever the dates are coincident.
2. *Brazilian Flag:* The Brazilian flag is to be hoisted by the vessels in port, daily at sunrise and accordingly lowered at sunset. It must be hoisted in the correct position and must be double-faced, i.e., not printed and not painted on one side only. The two sides of the flag must be absolutely identical.
3. *Pilot Flag:* The moment that a Pilot boards the vessel, his indicative flag must be hoisted immediately and should only be lowered at the time he leaves the vessel. The local Port Captaincy is imposing heavy fines on infringers.

4. *Pilot Rope:* Whenever the use of this equipment becomes necessary, same should be immediately removed as soon as the Pilot leaves the vessel, otherwise, the Port Captaincy will impose heavy fines.
5. *Gangway:* All vessels should arrange a net to be placed under the gangway in order to prevent accidents. Violators may be fined according to the Brazilian law, in the event a worker or a crew member falls from the gangway, for not having placed the said net as required.
6. *Bulbous Bow:* In accordance with the port regulations, during night time, from 1800 hrs. to 0600 hrs., a light should be placed at the bulbous bow, otherwise, the Port Captaincy will heavily fine the vessel.
7. *Refuse/Garbage:*

a) Vessels when berthed alongside the quay or at anchor in the areas foreseen in the "Norms for Traffic and Permanency at Ports" *must not leave* hanging from the sides of the vessel containers or any other type of recipient for collecting refuse or garbage.

b) Refuse/garbage originating from aboard the vessel during the ship's stay in port must be placed in containers or in drums or in any other type of collecting recipient, which must be kept with a lid or cover, on deck, until the time they are withdrawn from the ship.

c) The vessel not being in operation (loading or discharge), the deck must be clean and all dunnage wood should be properly stowed or lashed.

d) Refuse/garbage of any nature, specially in the case of solids which float, resulting from loading or unloading operations, must be discharged before the ship sails.

e) In order that the regulation in item (d) may be controlled, Masters of vessels should enter or record in their logbooks, item 26, the following:

(i) Dumping of oil or refuse/garbage into the sea, date, hour, position, distance from the coast or island/s where same occured, kind of polluting substance dumped, approximate quantity dumped and reason why the material was not transferred to shore; and

(ii) Register the transfer to terminals, barges alongside or lorries, with details of tugs, destination and approximate quantity which was transferred.

f) Refuse/garbage which are not polluting, as well as the results of the cleaning of reservoirs used for by-products of petroleum and holds where chemical products were used, *must not be dumped into the sea.*

The above-mentioned regulations should be observed and seriously noted, since the Port Captaincy keeps day and night watch on the sea and shore, photographs are taken as evidence, and heavy fines are imposed, reasons why we are asking for your kind co-operation.

Observation: In addition to regulations cited above, the Brazilian flag, as well as the flags signifying the "Call Sign" of the vessel – *properly and correctly hoisted* – must be flown on the arrival/entrance of the ship.

PORT CIRCULAR: (See "Shipmaster's Report" dated July 1983.)

1 – *Watch the Ship and the Cargo*

It is the duty of every ship's Master to look after the cargo and take the precautionary steps to ensure the full safety of the ship. The controlling of access to the vessel, as well as the activities performed on board should be exercised also by members of the crew under risk of infraction of article 141 of the RTM (Maritime Traffic Regulations), sections vii and ix.

2 – *Illuminate the Ship and its Sides*

Bad visibility makes difficult the controlling actions thus giving favourable chance to illicit activities. Keep your ship illuminated, particularly the side on the sea side all along the ship's length.

3 – *Establish Communications for External Support*

The Port Authorities maintain a permanent service for fighting criminality. Install, whenever possible, a telephone line within easy reach to the ship's watchman or ship's officer on duty. Ask for assistance over telephones 33-3238 and 33-3239 of the Federal Police Guard on duty.

Remember that the Santos Radio Station is permanently listening on Channel 16 (VHF) and it can also pass on your request for assistance.

4 – *Control the Access Leading to the Accommodation*

The cabins and other habitable compartments should be kept locked whenever their occupants are absent. Endeavour to also maintain locked the passage ways to the inner areas thus guaranteeing the entry and exit control of persons by the gangway watchman.

5 – *Maintain the Portholes Closed*

Open portholes may give easy access to undesirables.

Close the portholes with the clamps properly secured whenever leaving the cabin or any other habitable compartment.

6 – *Do not Leave Valuable Objects Exposed*

Valuable objects exposed invite robbery or "opportunity". Keep your valuable objects, money and jewellery, in a locked and safe place.

7 – *Maintain the Ladders Raised*

At the Inner Anchorage or at the Bar, make difficult the access to strangers by maintaining the accommodation and jacob's ladders raised.

In port leave only the accommodation ladder lowered.

8 – *In case of Assault Set in Motion the Alarms*

In cases of threat of assault, do not hesitate in setting in motion the ship's alarm signals. This measure, in addition to warning the ship's crew members will discourage the infractor in the felonious practice.

9 – *Maintain the Contracted Watchman Under Control of the Ship's Officer on Duty*

Demand a good service from the watchman. Make him identify every person entering or leaving the ship. Facilitate his task by recommending the ship's crew to cooperate in the controlling.

Do not permit the watchman to abandon the gangway, unless he is substituted by another watchman or crew member.

10 – *Advise the Ship's Agent Regarding any Occurrence Relative to Pilferage, Robbery or Assault*

Besides the measures taken for immediate support, the occurrences relative to robbery or assault both in respect to the cargo as well as to valuables and objects belonging to the ship or members of the crew should be reported to the ship's agents for divulgement to the competent authorities. The authorities will use such information in order to guide themselves in regard to the adoption of other steps which may contribute to guarantee the safety of the ship and crew.

SERVICES: Pollution control and tank cleaning services available.

REGULATIONS: Should vessel use any type of small craft for embarking or disembarking, the landing on shore should take place within a Customs area.

Vessels at anchor may not lower their accommodation ladder and vessels alongside may not lower the offshore gangway.

Whilst in port, at anchor or berthed alongside the quay, vessels should collect garbage in adequate containers fitted with covers whilst those lying in open spaces should be kept with their covers on.

Drainage of holds or tanks containing chemical products, oils or polluting substances which may affect the flora and fauna, is prohibited.

Painting and treatment of ship's sides and decks is authorised, the lowering of planks and craft for this purpose being permitted independently of licence from the Port Captaincy.

DEVELOPMENTS: Dredging operations being carried out in order that vessels up to 45,000 tons with a draft of 12.3 m. can come into the port and go alongside Conceicaozinha. As a second phase, this dredging will be extended to the estuary to attain a depth of about 14 m. From this locality up to the Cosipa Channel, the dredging should reach a depth of 12 m.

For the prolongation of the Macuco Quay, a depth of about 13 m. is contemplated. A section of another 375 m. with a depth of 11 m. and another of 230 m. with a depth of 13 m. will be made in an extension of 605 m.

The following development goals are for the medium and long term:

Enlargement from the Valongo Quay to Paqueta 1 and dredging to 11.0 m.

Enlargement of the Container Terminal (510 m). by 310 m. Container forklift of 37 tons on order.

Construction of a Terminal destined for Roll-on/Roll-off operations. (Construction to commence August 1986).

Pneumatic Discharger of 300 t.p.h. to be acquired for Warehouse 26.

Crane of 32 tons – 40 tons capacity to be acquired for handling containers and heavy goods at Warehouse 37.

SHIPMASTER'S REPORT: July 1980.

Officers and crew should be very alert with regard to stealing. It is not uncommon for armed robbery to take place at the anchorage. Cargo has at times been stolen from containers. Also crew's effects have been stolen and on occasions the Master's safe has been robbed.

Prior to departure, an inspection is made by the officer from the Harbour Master's Office. He will check the lashings of the deck cargo, the cleanliness of the deck and will ensure that the decks are clean with no garbage in bags, containers or cartons as it is feared that once the vessel is at sea the garbage will be dumped. There is a good garbage collection service in the port.

SHIPMASTER'S REPORT: September 1981

General: The Port Limits are a line from Ponta Itaipu in the West to Ponta Munduba in the East.

In terms of trade the largest port in South America and the principal port of Brazil handling most of the Coffee exports. Situated on the confluence of several small rivers which have been canalised. The total length, including the extension of Canal de Piacaguera to the industrial complex at its Northern end, is 10 miles.

General cargo wharves are continuous on the S.W. side for 5.5 miles. New container and dry bulk berths on N.E. side with recently completed rail link from Barnabe Island.

Petroleum berths at Barnabe Island 5.5 miles from the port entrance on N.E. side and at Alemoa on South bank 7 miles from entrance.

Brazilian Charts of Santos seem to be very difficult to obtain, after trying in Santos itself and Rio. B.A. 19 refers.

Arrival: Vessels up to 32 ft. can leave/arrive 24 hours a day any time. Over 32 ft. depends on tide. Generally arrive and berth 2 hours before HW.

Standard Quarantine message to be cabled through Agent 24 hours beforehand.

Anchorage: Outer: The general area is to East and West of Channel. The various designated areas on B.A. 19 seem to have little relevance and vessel's position depends on draft. The closer in, the more the ground swell is apparent. Large vessels seem to favour 1.5 miles South of Ponta Grossa, with plenty of cable.

Inner: Various river anchorages are used, all fairly to very full and require engines to keep clear of other vessels when swinging to tide. One anchor. Tugs used to swing vessel on heaving up.

Approach: The coast being hilly with cliffs provides good positions. Bottom is gently shelving to 50 ft. at Outer Buoy, 4.5 miles from port entrance.

Large ground swells are often encountered.

Pilot: Pilot joins and leaves from dull red cutter between Buoy Nos. 7 and 8, about 1.75 miles from Pt. Fortaleza the port entrance. He will not come outside as indicated on B.A. 19. Reasonable English spoken. About 1.5 hours from No. 7 Buoy (Pilot) to Alemoa Berths. Drafts quoted in feet and inches.

For night-time sailing/arrival Pilot must be ordered before 1730 hrs. to move up to 0700 hrs. next morning.

Channel: From No. 1 Buoy to No. 7 Buoy dredged to 48 ft. No. 1 to No. 6 Buoy sufficient water outside channel for all vessels liable to use port.

No. 6 Buoy inwards max. draft 36 ft. 6 in. to Industrial Complex at North end of Canal de Piacaguera. Not all berths of this depth.

Buoyage South of No. 7 to No. 1 very liable to shift position and have lights extinguished. Not to be relied on at all.

In Southerly winds the ground swell is very large and in deep draft vessels can make steering very difficult.

We entered at 34 ft., 2 hours before HW and to negotiate the channel to No. 8 Buoy was a bit difficult.

VHF: Pilot: Call "Santos Pilot", Channel 16. Works 10 and 11.

Bunkers: Call "Estrela", Channel 12.

Repairs: Work Channel 6.

Public Correspondence: "Santos Radio", call Channel 16, works Channels 25, 26 and 27. Local and international calls. Good and efficient. English good.

Tugs: 15 ship-handling tugs in port, with power from 505 – 2,236 h.p. Large vessels generally have 4. Two ships lines used. Most vessels proceeding above Itapema Point, at new container berth take tugs 1 ahead and astern 2 alongside. Down river tugs depart at Itapema Point.

Berth – Alemoa: Alemoa Berths about 7.5 miles from sea on South bank comprise 2 concrete pile jetties at end of pier. The berths are owned by the Port Authority and leased to 'Petrobras' the state oil company for product and LPG transfers.

Length of vessel depends on Turning Basin just off berths. Max. length is 300 m.

Max. draft is 34 ft. Although at LW there is only about 32 ft. alongside berth face. Very soft mud.

Large vessels berth portside to. Small coastwise vessels berth either way. Both berths capable of same product range.

Density 1011 to 1015.

Moorings – Alemoa: 3,3,2 each end. There is a small mooring launch which takes one line at a time.

Fenders: 3 large timber faced flat fenders on rubber shock absorbers.

Gangway: Difficult to land accommodation ladder. We used B.O.T. type which was very steep at completion, to after dolphin.

Lines – Alemoa: Each berth has 2 refrigerated chiksans, at the Western end, one vapour 10 in. and one liquid 12 in. (Western most), both 150 ASA couplings. Unfortunately both sets have severe leaks on all joints.

After trying liquid arms at both Berth Nos. 1 and 2 we ended up by using our low discharge pipe with both our flexible hoses plus 2 shore hoses giving approximately 24 m. length from ship side rail. The connection on shore main line (16 in.) to chiksan was uncoupled and flexible hoses with reducer coupled up to main line.

The Terminal say they are now going to construct a 'Tee' piece in line below chiksan to by-pass same and take flexible hoses.

At the Eastern end of both berths are liquid and vapour Butadiene chiksans (8 in. and 6 in. respectively). These will be converted for 'VCM' use next year (1982).

There are 2 sets of pressure/semi-refrigerated LPG chiksans (liquid 12 in. and 10 in., vapour 10 in. and 8 in.) situated between Butadiene and refrigerated chiksans.

Plus 4 'AVGAS' chiksans on each berth.

Max. air draft of LPG chiksans is 20 m. HW.

Discharge: Varies greatly from 100 t.p.h. to 600 t.p.h. depending on shore tank pressures. VRL always coupled to ship.

Terminal say fastest discharge has been 1,200 cm. per hour on butane. We were only second refrigerated ship with import cargo to berth at jetty.

Shore tank pressure problems seem to occur frequently and the VRL is often required for return to ship.

Two points to watch are incompatible product being returned and liquid in vapour line arm which occurs when liquid/vapour cross-over valve on quay does not seat properly. This is a small auto valve about 5 m. inboard of chiksan arms and should be checked before shore require VRL used.

Reasonable co-operation, if the Manager or Assistant Manager can be contacted they are very helpful.

On completion the terminal will blow hot vapour back.

General: Fresh Water: From meter on jetty – both piers. Port Authority connect/disconnect and arrange in advance. About 10 tonnes per hour at £1.50 per tonne (9/81).

Bunkers: By barge both heavy and diesel. Barges maximum capacity about 500 tonnes, pump at 150 t.p.h. Prices very competitive (9/81).

Repairs: Several repair firms in area covering most types of work. We used 'Metalock' for motors and pipework. Collected and returned by launch. Very quick and competitive service.

Lub. Oils: All obtainable but only by drums from barges at Alemoa. On dry cargo/non inflammable berths large quantities can be pumped from tank truck.

All international oil companies have to use 'Petrobras'.

Transport: Agent advises from Alemoa use mini-bus at night due to 'muggings' etc. We used a bus to town and everyone used their own taxi back.

Mini-bus 8 seater, £5.50 per trip.

Agent: All tankers have to use Petrobras Agent – 'L. Figeiredo' S.A. (cable 'Doralice'). Seemed very efficient and was extremely attentive and helpful.

Communications: Telex: International.

Phone: S.T.D. (and works) very clear to U.K.

Cables: Rio de Janeiro Radio, "PPR" – efficient.

Brazilian Flag: Very particular. Must be lowered at sunset and hoisted again at sunrise and be in good condition.

Pollution/Garbage: Very strict. Garbage drums to be inboard with lids on them. Nothing to go overboard. Collection service available.

Holidays: Difficult to get services on weekends and public holidays, so arrange well in advance.

Formalities: Shore Passes: Some form of identification is required when going ashore. For this purpose an Official Brazilian Shore Pass is obtainable which should have crew members photograph and particulars on it.

Personnel stopped by police and showing this pass seem to be in better position than those having no pass or foreign I.D. Card.

Forms: Have large quantity of following ready: Crew Lists, Personal Declaration, Store List, Ship Information, Bond List, Vaccination, Personnel for Repatriation and Effects. Sight Ships Certificates.

Generally no difficulties as long as everything ready. Bond will be visited.

Repatriation: Through Sao Paulo Airport – a 2 hour drive from Santos.

Customs have to check baggage on ship or baggage has to be landed before departure with full list of electronic equipment (Radios, etc. and cameras).

Agent requires details of flight and passport numbers 3 days prior to departure.

ALEMOA LPG STORAGE PLANT – SANTOS, BRAZIL

General: The plant was opened in 1979.

Basic design is by Technigaz of France and construction by a Brazilian company. Most of the equipment is of U.S. design made in Brazil under licence. This causes problems over maintenance and spares.

The plant is a shipping terminal drawing LPG from refineries in the South of the country and from around Sao Paulo and re-shipping it to localities up and down the coast.

Every so often there is a requirement for import feedstock, about 10,000 tonnes every 2 months to boost local supplies.

LPG can be pumped under pressure to Sao Paulo.

Tanks: 4×10,000 tonnes nominal capacity refrigerated LPG tanks with polystyrene insulation built by Chicago Bridge and Iron Co. in 1978.

2 for Butane and 2 for Propane.

2 pressure spheres of 2,500 tonnes nominal capacity.

4 semi-refrigerated spheres of 3,000 tonnes nominal capacity. These will be converted for use to V.C.M. in 1982 a fact which considerably worries the maintenance staff.

Plant: Each refrigerated tank has own Boil Off unit – total 4.

2 Flash Gas Units can be connected to any tank to back up Boil Off units.

3 units convert pressure LPG from spheres to fully refrigerated LPG each with an output of 80 t.p.h. of condensate.

The refrigerant used on all units is Propylene which is quite successful. Freon R22 used to be used but considerable losses were being experienced plus it was more expensive.

All units work on the cascade principle. The sea water cooling being derived from a pump house on the pier. 2 electric pumps backed up by 2 diesel driven pumps all designed by Worthington.

All compressors are of the piston type designed by Ingersoll Rand U.S.A. and constructed in Brazil under licence.

Heaters, etc.: For transfer of refrigerated LPG to pressure spheres, 3 sea water heaters are employed.

Two desicant drying towers are employed from spheres to refrigerated storage.

For refrigerated LPG transfer 8 Worthington deepwell pumps of 300 cu.m.p.h. are available.

All anti-freeze used in the plant is alcohol derived from sugar cane which Brazil has pioneered for use in car engines.

SHIPMASTER'S REPORT: July 1983.

Documents: As per "Guide to Port Entry".

Pilotage: Compulsory, Pilot usually boards at No. 3 Buoy, but boarded this vessel at No. 9. One hour's notice required, given through Agent.

Anchorages: As given on Chart, depths 10 m. – 13 m. To avoid pirates, anchor about 1 mile S.E. of Sea Buoy.

Restrictions: Berthing possible 24 hours a day, at any stage of tide.

Max. Size: Deepest draft with which vessels can safely enter port is 36 ft.

Health: Notice required by Quarantine is arranged by Agent.

Radio: Santos Pilots, telephone numbers 104 and 312988.

VHF: Pilots on Channels 16 and 11, Port Control on Channel 16.

Tugs: Available.

Berthing: Vessels berthed at Warehouse No. 37, Berth No. 2, 6 miles from entrance to port. Berthing possible 24 hours a day, at any stage of tide.

Depth of water in channel to berth 36 ft.

Nature of bottom at berth – mud.

Cranes: Ample on quay, varying from 3 tons to 16 tons SWL. Vessel used Salens equipment to handle palletised cargo.

3 floating cranes available – 1×90 tons, 1×120 tons, 1×250 tons.

Specialised Cargo Handling Facilities: 3 berths available for ro/ro vessels.

Facilities for handling and storage of 20 ft./40 ft. containers.

Stevedores: Ample union controlled labour. No private stevedores.

Fresh Water: Available.

Consuls: U.K. and others.

Repairs: Can be undertaken.

Dry Docks: None.

Surveyors: Lloyd's and salvage surveyors are available.

Gangway/Deck Watchmen: Pilfering was a very serious problem – suggest vessels take all precautions to prevent this.

Airport: At Sao Paulo.

General: Fresh provisions and ships' laundry service available.

AUTHORITY: Companhia Docas do Estado de Sao Paulo – CODESP – (Portobras), Conselheiro Rodrigues Alves Avenue, C.P. 27, Santos. (SP) – CEP 11015. *Tel:* 35-1611. *Contact:* Helio Nascimento, Director.

Capitania dos Portos do Estado de Sao Paulo, Avenida Conselheiro Nebias No. 448, Santos, CEP 11.100. *Contact:* Captain Sergio Henrique Werneck Machado, Captain of the Port.

SAO FRANCISCO DO SUL: 26.10 S. 48.34 W.

(See Plan)

(A) General Cargo Port.
(B) Oil Terminal (Tefran).

(A) GENERAL CARGO PORT.

DOCUMENTS: See "General" before first port.

PILOTAGE: Not compulsory. Pilots join vessel at the Island Ilha da Paz about 5 km. East of bar, Pilot comes from inside with boat. Cables informing ETA to Agent.

ANCHORAGES: Channel low tide 30 ft., high tide 35 ft. Port: low tide 20 ft., high tide 30 ft.

RESTRICTIONS: Bar draft: max. 30 ft. Bottom: bar, channel and port: sand and mud. Speed of current: channel LW 4 knots, HW 5 knots. Reports received in August 1976 indicate that the bar has now been dredged to a depth of 8.50 m.

HEALTH: Vessel must present Free Pratique issued at first call-port. Port's doctor will visit vessel.

RADIO: Call Agent. Sao Francisco do Sul, via Florianopolis Radio.

TUGS: Two tugboats for shifting ships and barges.

BERTHING:

Quay	*Length* (m.)	*Depth* (m.)
1	225	10
2	150	8
3	150	6
4	150	4/6

CRANES: 2 cranes × 7 tons.

(3)

Neither the Terminal Maritimo de Sao Francisco do Sul-Tefran – Nor Sao Francisco do Sul Port services operate ~~either~~ floating cranes, barges or lighters.

STEVEDORES: Sufficient working force available, working hours 0700 – 1100 hrs., 1300 – 1700 hrs. normal period; 1700 – 1900 hrs. days-overtime; 1900 – 2300 hrs., 2400 – 0400 hrs. night-working; 0400 – 0600 hrs. night-overtime.

MEDICAL: Medical attendance available, 2 hospitals, all medical care available.

FRESH WATER: 13 hydrants on Quays 1 and 2, American type thread 2 in., capable of supplying 14 to 30 t.p.h. Also a private water barge of 100 tons capacity.

FUEL: Oil for boilers, diesel engines, and gasoline are distributed by a private firm, Distribuidora Maritime Porto de Sao Francisco Ltda. by tanker trucks, coming from Itajai, where orders must be placed 12 hours in advance.

WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: By stevedores.

CUSTOMS ALLOWANCES: 1 package of 200 cigarettes, and 1 bottle of spirits each man.

CONSULS: Chile.

REPAIRS: Deck and engine repairs possible, workshop in town.

REPATRIATION: No facilities for changing crews.

AIRPORT: None, nearest in Joinville, with regular traffic, about 40 miles distant.

TIME: GMT minus 3 hours.

HOLIDAYS: 1st January; 15th April; 21st April; 1st May; 7th September; 15th September; 15th November; 25th December; Holy Friday; Corpus Christi; 8th September; 8th December.

TELEPHONES: Available at dock entrance.

DEVELOPMENTS: The bar is expected to be dredged to a depth of 9 m. ~~A new grain terminal is expected to be completed in the near future.~~

INSERT SMR.

AUTHORITY: Administracao do Porto de Sao Francisco do Sul, Avenida Engenheiro Leite Rebeiro 782, CEP-89230 San Francisco do Sul, Santa Catarina, Brazil. *Contact:* Clemintino Nascimento Moura, Superintendent.

(B) SAO FRANCISCO DO SUL OIL TERMINAL (TEFRAN)

LOCATION: Terminal Maritimo de Sao Francisco do Sul – TEFRAN, operated by Petroleo Brasileiro S/A – PETROBRAS, consists of an SBM whose body is 11 m. in diameter, weighing 143 tons and exhibits a light beacon Iso. Fl. Y. 3 sec. 6 m. 5 M. It is situated about 4 miles Eastward of Sao Francisco do Sul Island, its co-ordinates are: Lat. 26° 13′ 53″ S., Long. 48° 25′ 03″ W. Onshore base is located 18 km. from the town of Sao Francisco do Sul, which is 48 km. from Joinville City, both in Santa Catarina State. The main scope of TEFRAN is to receive, store and transfer oil to Refinaria Presidente Getulio Vargas – REPAR, a refinery in Araucaria, a town in the state of Parana.

DOCUMENTS: See "General" before first port.

Any and every document issued or otherwise related to ship's clearance at the last port of call is required for immediate inspection by the boarding officials.

Immigration and Maritime Police:
1 copy Crew List.
1 copy General List.
3 copies Passenger List.
3 copies Passengers in Transit List.

Health:
1 copy Vaccination List.
1 copy Certificate of Derat Exemption.
1 copy Maritime Health Declaration.
1 copy List of Drugs and Narcotics.
1 copy Passengers in Transit List.
1 copy Passengers List.

Customs:
3 copies Crew List.
3 copies Spare Parts List.
3 copies Stores List.
3 copies Provisions List.
3 copies Drugs and Narcotics List (if not included in the Stores List).
1 copy Cargo Manifest.
1 copy Bills of Lading.
2 copies Passengers List.
2 copies Passengers in Transit List.
3 copies Crew Personal Effects List.
3 copies Passengers Personal Effects List.

NOTE: Supplies, stores, cigarettes, cigars, tobacco, alcoholic beverages, arms, ammunition, souvenirs, playing cards, drugs and narcotics, medicines (not in use) etc., must be kept under lock and key; the doors of the storage rooms will be sealed by the Customs Officials and the seal must be kept unbroken throughout the vessel's stay in port.

Any goods or personal effects omitted from the list may be confiscated.

Extracts of Sea Protest drawn out from the Log Book must be submitted to the boarding Customs Officials in case of accident which has caused damage or loss of the cargo or part of it.

Leaving Clearance:

Masters must appoint their ship's Agent at Sao Francisco do Sul and have their International Safety Certificates in force. It is also necessary for vessels Leaving Clearance:

Leaving Permit from Customs.
Leaving Permit from the Captain of the Port.
Leaving Permit from the Maritime Police.
Leaving Permit from Brazil Mail (Passe da E.C.T.).

Anchorage for Clearance: The anchorage for Port Authorities clearance is the same as for vessels waiting for mooring. Port Authorities clearance is effected during office hours only.

Display of quarantine signals must be continuously maintained until Free Pratique is granted. These signals are: sunrise to sunset – quarantine flag "Quebec". Sunset to sunrise – signal light red over white light.

In addition to quarantine signals, the Brazilian Flag must be flown from foreign vessel's foremast throughout the vessel's stay in port.

Vessels arriving at anchorage sites 2 hours prior to sunset in clear weather can moor. If vessel arrives later berthing takes place the next morning.

PILOTAGE: Pilotage is not compulsory in the area of the SBM, either when making for it, mooring at it or clearing the SBM. TEFRAN provides a duly trained Mooring Master for assistance to Masters of vessels operating at SBM. His services are presently rendered without charge.

Mooring Master will advise vessel where to anchor.

For approaching manoeuvres, and after mooring to the SBM, the Master of the vessel will be assisted by the Mooring Master who boarded the vessel in the proper site and will help the Master of the vessel as far as the operational activities in the area are concerned, such as: mooring, hose connections, discharge, hose disconnection and unmooring, as well as control of small crafts which render assistance to the vessel.

It is the responsibility of the Master of the vessel to notify the Mooring Master of any special conditions, difficulties or peculiarities of the vessel such as defective navigational equipment, mooring lines, tackle, gear, helm, engine or boiler deficiencies or lack of necessary equipment which might impose hazards in connection with handling, mooring, unmooring and actually operating the vessel.

The Mooring Master must be immediately advised about any acts or facts which may jeopardise the safety of the vessel or the system, as well as operational events which may possibly alter the existing conditions.

The vessel must be moored to the entire satisfaction of both the Master and the Mooring Master.

The Mooring Master will remain on board the vessel throughout the vessel's stay at the SBM and will notify the Terminal Superintendent about any operational failures; and the vessel may be ordered off the SBM and refused to be accepted in future, unless corrective action by the ship is immediately taken.

The Mooring Master will notify the Master of the vessel, in writing, about disregard of the operational requirements established upon arrival of the ship.

For boarding the Berthing Master prefers a pilot ladder and on disembarkation a combination of pilot ladder and accommodation ladder.

APPROACHES: Refer to Brazilian Hydrographic Office Nautical Chart Nos. 1800, 1804 and 1830.

Vessels approaching the SBM from the North, will first sight Ilha da Paz Lighthouse (Fl. W. 20 sec. 84 m. 23 M.), Morro Joao Dias, Morro Pao de Acucar and Morro de Ubatuba which are hills inland. A conspicuous cross stands on Morro Pao de Acucar. Vessels approaching in night-time, when at less than 15 miles from shore, after loosing sight of Ponta Caioba Light (Fl. W. 5 secs. 15 M.) will sight Ilha da Paz Light which is the most prominent landmark for vessels bound for Sao Francisco do Sul Port and the TEFRAN SBM.

Vessels approaching the SBM from the East, will sight the same above mentioned landmarks when near Sao Francisco do Sul. In the night-time Ilha da Paz Light will be first seen since its range is 23 miles. Ilha da Paz Light is the only landmark at night-time, except for the glare of the town of Sao Francisco do Sul lights which can be seen from a distance of 30 miles.

Vessels approaching the SBM from the South, in the daytime, when less than 10 miles away from shore, may use Remedios and Tamboretes Islets as an indication of the nearness of the SBM; when nearer, will sight Morro Pao de Acucar, Morro Montao de Trigo, Morro Ubatuba and Morro Joao Dias, which are hills and can steer to Ilha da Paz Light. At night-time, after loosing sight of Ponta do Vigia Light (Fl. W. 6 sec. 50 m. 15 M.) near Itapocoroia, vessels will sight no long range lights until sighting Ilha da Paz Light. These vessels, in order to navigate safely, must keep away from Remedios and Tamboretes Islets which can be accomplished by keeping Eastward of the 20 m. line, 6 miles seaward. Eastward of this line there are no dangers.

It is safe to sail using the radar, since the coast affords quite well defined lines and good radio wave reflections. Radar systems, with 48 miles range or more, cover the area efficiently and make it possible to guide launches not provided with radar, when there is fog.

ANCHORAGE: For vessels waiting either for Port Authorities Clearance or mooring or under repair, the advisable anchorage site is 1.3 miles North of the SBM, in the following position: Lat. 26° 12′ 30″ S., Long. 48° 25′ 00″ W. The seabed is fine sand and mud. The depth is 22 m. Mooring Master will board arriving tankers in this position.

In no case must vessels drop anchor near the SBM (within a circle 1 mile in radius, centered on the SBM) within the area between the SBM and the coast or in the access channel to Sao Francisco do Sul River, due to existance of submarine pipe-lines and anchor chains on the seabed.

RESTRICTIONS: The buoy is designed for tankers up to 200,000 d.w.t. but due to the depths in the area, the maximum draft allowable is 18 m. (59 ft.). Sometimes, due to bad weather, tankers have to wait for favourable weather conditions, so that mooring may safely be started. Mooring should be undertaken at daylight only.

MAX. SIZE: 200,000 d.w.t. Draft 18.0 m.

HEALTH: Vessels bound for TEFRAN are inspected at the SBM by Health, Customs and Maritime Police Officials. Ship's Agent must apply beforehand for these visits.

RADIO: Vessels bound for Sao Francisco do Sul Terminal, should advise their ETA 72 hours prior to arrival directly to vessel's Agent through a Coastal Station. This arrival message will be passed by the Agent to the Terminal.

Tankers must have their VHF radios tuned to Channel 16 (VHF) or 4125 kHz (SSB), around the clock when nearing the anchorage position, and send updated ETA messages until Mooring Master boards. Weather forecast and/or Sinoptic charts, if available aboard, must be shown to the Mooring Master when he boards.

VHF: Vessels bound for TEFRAN must have their VHF radios tuned 24 hours per day on Channel 16 (Delta) with maximum gain when nearing the area of the SBM. TEFRAN Control Room will contact the arriving vessels and inform their Master about pertinent matters and emergencies. After contacting the Terminal on Channel 16, this contact must be maintained through Channel 14. During mooring and unmooring operations and ship's stay at the SBM, the launches will keep in touch with the Mooring Master through VHF transceivers.

TUGS: No tugs are available at the Terminal for assistance in mooring vessels.

Launches: Launches under direction of the Mooring Master will assist Terminal and the vessel when mooring, unmooring, connecting and disconnecting hoses. They will also assist in personnel transportation, that is to say, crew members, agents, Port Authorities, suppliers, and authorised persons.

BERTHING: The Terminal Maritimo de Sao Francisco do Sul (TEFRAN) consists of facilities for receiving, storage and transfer of oil.

Discharge System: The discharge system consists of an SBM connected to 2 parallel 20 in. diameter × 271 m. long (888.5 ft.) floating hoses.

At the ship's tail end of the hoses there are 2 special 16 in. hoses – "Tanker Tail Hoses" or "Ship Tail Hoses" – to be connected to the ship's manifold, provided with a butterfly valve and a blank flange (each flange is 16 in. in diameter Standard PSI-ANSI B.16.5).

Two 16 in. × 53 m. (173 ft.) in length nylon hawsers are fastened to the SBM turntable for mooring of the vessels.

On the upper part of the SBM there are 3 turning arms for securing the mooring hawsers and the hoses, as well as to balance the system.

From the bottom of the buoy start 2 submarine hoses 20 in. in diameter, connected to the underwater manifolds of the submarine pipe-lines.

Two × 11 km. long × 34 in. diameter submarine steel pipe-lines laid on the sea bottom following the general West-Easterly direction, connect the submarine manifold to the Terminal storage tanks.

Under normal conditions discharge system allows a 10,000 cu.m./h., 10 kg./cu.cm. (150 p.s.i.) pumping rate measured at the ship's gauge.

At the site where the pipe-lines reach the mainland there is a beacon showing an intermittent blue light indicating the general direction of the lines.

The above described discharge system is shown on the Brazilian Nautical Chart No. 1804 issued by the Diretoria de Hidrografia e Navegacao da Marinha do Brasil (Brazilian Navy Hydrographic Office-DHN).

Note: It is forbidden to navigate and to drop anchor within the area limited by two parallel lines 1 mile away from each side of the submarine pipe-lines, between the SBM and the mainland as well as within a circle 1 mile in radius centered on the SBM.

Storage System: The storage system consists of 7 tanks which are able to receive crude oil directly discharged from the tankers moored at the SBM.

The 5 tanks have the following main features:

Type: Cylindrical vertical (floating roof).
Diameter: 86.56 m.
Height: 14.63 m.
Nominal Volume: 86,114 cu.m.
Operational Volume: 77,000 cu.m.
Receiving Line: 36 in. diameter.

Two tanks have the following main features:

Type: Cylindrical vertical (floating roof).
Diameter: 45.72 m.
Height: 14.63 m.
Nominal Volume: 23,850 cu.m.
Operational Volume: 21,500 cu.m.
Receiving Line: 36 in. diameter.

The tanks are equipped with remote control valves and readings, monitored from the Operations Control Room.

Neither the tanks nor the lines are heated.

Ballast System: No conventional tank cleaning procedures are allowed. The SBM is not provided with ballast line.

Arrival: Arrival time is considered to be the time vessel reaches the anchorage site or the time the Mooring Master boards the vessel, whichever occurs first. However, Notice of Readiness will not be considered as the time of arrival unless the vessel is in all respects ready to discharge.

To avoid delays the following items must be observed by the tanker: keep the Terminal advised about any change in ETA; arrive with the port side derrick and an ordinary pilot ladder on lee side rigged, as well as the 2 manifold flanges to be used ready for connection of the hoses, i.e. without blind flanges, reducers fitted if necessary, etc.; 2 good eye-spliced (9 in. circumference at least) nylon ropes on forecastle head; anchor well at home and secured with stoppers and brakes. If the ship's manifold flanges are not standard 150 p.s.i., ANSI-B.16.5-16 in. in diameter, the vessel must advise Terminal through the Agent before arriving.

Mooring: Mooring Master will advise on the way of securing the ship. Tankers are moored by 2 bow nylon hawsers of 16 in. circumference and 53 m. in length. Vessel's messenger lines are shackled, one at a time, to the pick-up wires of the hawsers by the launch crew and hove in by the vessel's windlass until the lengths of the chafing chains are brought over the roller chocks/fairleads and shackled to the wire strops secured to the bollards.

Hoses Connection: The Mooring Master will direct the Terminal's working men in lifting, connecting and lowering the hoses. After the vessel is securely moored, the 16 in. floating hoses must be individually lifted to the rail by the ship's gear. Sundry hose securing and connecting equipment (strops, gaskets, nuts, bolts, wrenches, etc.) will be supplied by the Terminal and put aboard the tanker just after arriving. Hoses will be lifted by the ship's derrick on the PORT SIDE. Minimum lift of 8 tons capacity is required. Winds reaching about 8 Beaufort Scale and waves, 3.0 m. high, may determine the operation to be interrupted and the hoses disconnected, according to the Mooring Master's judgement.

Discharging: Pumping must not be started without permission of the Mooring Master. The maximum allowable pressure is 10 kg./sq.cm. (150 p.s.i.). While the vessel is moored, the vertical angle formed by the hawsers and the sea surface should not exceed 30° degrees, for safety of the SBM. If necessary the Terminal will require the ship to pump sea water through the hose lines in order to displace the remaining oil.

Ballasting: When necessary, due either to excessive pitching or by being trimmed too much by the stern, pumping of ballast must be concentrated in the fore tanks, even though interruption of discharging becomes mandatory.

As a rule, the vessel must be ballasted at the same time the discharge is being carried out. Vessels which fail to do so, will be notified in writing and will be held responsible for the extra time spent at the SBM after the disconnection of the hoses.

No dirty ballast or any oily residues must be pumped overboard, otherwise the vessel may incur a heavy fine from the Brazilian Authorities.

Terminal Personnel On Board: The vessel is required to give proper treatment to the Terminal personnel assigned to work on board, including lodging and meals. As a rule, 7 people (1 Mooring Master and 6 workmen) are assigned to duty onboard the vessel.

Machinery in Readiness: When moored at the SBM, vessels must keep engines and propulsion machinery in readiness to unmoor and proceed under full power at short notice or to prevent riding upon the SBM. An Officer must also be on duty on the bridge. Should the ship not comply with above stated requirements, she may be considered unsuitable for mooring at the SBM.

MEDICAL: Medical treatment and/or hospitalisation, if required, are provided at Sao Francisco do Sul or Joinville private hospitals. Serious illness will usually be treated in Joinville. Dental care is also available in Sao Francisco do Sul. For emergency cases (injury, etc.) TEFRAN first aid may be requested by the Master. As usual, Agent will make such arrangements.

FRESH WATER: Neither TEFRAN nor Sao Francisco do Sul are able to supply either drinking or boiler water to vessels either moored or at anchor.

FUEL: Neither TEFRAN nor Sao Francisco do Sul port can supply bunkers for vessels.

Lubricants: TEFRAN has no way of supplying lubricants to vessels, either moored or at anchor. Nevertheless in urgent cases, Agents must be contacted in order to place orders for lubricants, 15 days in advance. Even then, lubricants can only be supplied in very limited quantities, due to the natural difficulties of transportation to moored ships.

REPAIRS: Limited repairs may be effected by private workshops. Agents must be contacted 72 hours in advance in order to make the necessary arrangements to assist vessels needing repairs.

WATCHMEN: Port watchmen have to be compulsorily assigned to duty onboard all vessels coming from overseas throughout the vessel's stay in port.

CUSTOMS: Brazilian laws are strict with regard to smuggling and Masters are requested to instruct their crew not to retain cigarettes in carton lots, cigars, tobacco, alcoholic drinks, drugs, souvenirs, etc. These should be collected prior to arrival, listed with the items in the Customs Locker to be sealed by the Customs Officials and placed in the custody of the Master throughout the vessel's stay. No commercial transactions will be tolerated, be it among Terminal employees, crew members or anyone else.

TIME: Local time is GMT minus 3 hours.

CONSULS: Most maritime nations maintain consular representatives in Sao Francisco do Sul and Joinville.

GENERAL:

Charts/Publications: The Diretoria de Hidrografia e Navegacao da Marinha do Brasil (Brazilian Navy Hydrographic Office) has issued the following nautical charts of this area: DHN 1800, 1830, 1804, as well as Roteiro DH 1.8 (Brazil Pilot), Lista de Farois DH 2.11 (List of Lights) and Lista de Auxilio Radio DH 8.8 (Radio Aids List).

No charts or navigational publications are available at TEFRAN or Sao Francisco do Sul. When necessary, Masters must contact ship's Agent, in advance, for placing orders for such items in Rio de Janeiro.

Provisions and Stores: Orders for provisions and stores may be placed through the Agents or directly to shipchandlers. Most of the items are obtainable in Joinville but some may be found in Sao Francisco do Sul.

Tidal Amplitudes: The tides in the area of the SBM present the same characteristics as those of the port of Sao Francisco do Sul. (Please refer to the Tide Tables issued by Diretoria de Hidrografia e Navegacao da Marinha do Brasil – Brazilian Navy Hydrographic Office – DG – 16 – 15).

High and low tides occur nearly 40 minutes before they occur in the port of Sao Francisco do Sul and the tidal amplitude at the SBM area is a little below the ones of the said port.

Weather Conditions: As a rule, the conditions in the area of the SBM may be considered fair, as far as operating conditions for the vessels are concerned, except in the occurrence of gales from the South, which sometimes blow for more than 48 hours in winter time.

Winds: The strong winds recorded in the area originate from the South, caused by cold fronts or instability lines. One of the strongest recorded winds blew on May 18th, 1982, from N.W. reaching an intensity of 130 km. per hour, for a short period of time. It was observed that at the same time the isobathic wind at the sea, blew from the South with an intensity of 40 km. per hour.

Rain: The average annual rainfall is about 980 mm.

Visibility: The visibility in the area is generally fair all year round, except in Winter time when sometimes fog may occur.

Temperature: The local average temperature ranges from 8°C (46°F) in June, July and August, to 32°C (90°F) in January and February.

Humidity: The relative humidity of the air is nearly 80% in the region.

Currents: Currents in the area are not related to the local winds since the set, as well as swells result, as a rule, from deep sea winds which are not always in correspondence with local winds.

According to the variation of the intensity of the high sea winds, it is possible to forecast the variations of the intensity of the currents in the area of the SBM.

In the vicinity of the SBM, when there is no wind or there are only winds of low intensity, the currents of the area are strongly influenced by the tidal set of the bar of the port of Sao Francisco do Sul.

Waves: Southerly winds are originated, as a rule by cold fronts. The waves caused by them are very seldom higher than 3.5 m. (11.4 ft.).

The waves are, usually, 2.5 m. in height and have an 11 second period when Southerly winds blow during the Winter time, from June to October.

The maximum wave height allowable for operating vessels moored at the SBM is 3 m. (9.8 ft.), depending on the conditions of the mooring lines and the tensions over them.

AUTHORITY: Petroleo Brasileiro S.A.-PETROBRAS, Avenida Republica do Chile, 65-12° Andar, 20035 – Rio de Janeiro – RJ.
Contact: Jose Luiz de Oliveira Rodrigues, Chief of Operations Division.

SAO LUIS (Including Itaqui), Maranhao:
02.30 S. 44.07 W. **(See Plan)**

(5)

LOCATION: *Itaqui:* The Port of Itaqui is located in the bay of Sao Marcos, in the Municipality of Sao Luis, Capital of the State of Maranhao, almost at the edge of the N.E. region of Brazil, and 9 km. to the S.W. of the city, with which it is connected via a breakwater extending over the River Bacanga.

The location, fairly sheltered, encompasses Itaqui Point and extends to the North as far as Madeira Point, ~~where a Terminal is to be constructed for handling iron ore on behalf of Serra Dos Carajas,~~ and to the South, reaches close to the Island of Tauamirim: it is formed by a re-entrance into the coast where the contours (depths) of 0 m., 5 m., 10 m., and 15 m., are almost parallel and are between 30 and 40 m. apart. In front of Itaqui, at a distance of 400 m. from the quay, is the Island of Guarapira with maximum dimensions of 100 m. × 300 m. and stretching in a N.S. direction.

The Area of Administration of the "Maranhao Docks Company" includes the Bay of Sao Marcos and the Islands located within it, being limited by a line which joins Tatinga Point on the mainland, to Sao Marcos Point on the Island of Sao Luis.

(a) The Port of Itaqui is confined between the parallels of 02° 34′ S., and 02° 36′ S. and meridians 44° 21′ W. and 44° 24′ W.

(b) The "Administrative Area" is confined by the following co-ordinates:
Meridians of 44° 24′ W. and 44° 19′ W.
Parallels of 02° 37′ S. and 02° 29′ S.

(c) The Area of Jurisdiction encompasses the whole of the coast of the State of Maranhao, from the border with the State of Piaui as far as the frontier with the State of Para.

DOCUMENTS: See "General" before first port.

PILOTAGE: Approaching coast, the Master must inform Agent via Coast Station Sao Luis – PPB (VHF Channels 16, 24, 25, 26 and 27) or Radio Marinha de Sao Luis – PWM (HF). Pilot launch painted red and provided with conventional lights. Launch awaits at Ponta da Madeira or other places requested in limit by Brazilian Chart DHN–412.

Vessel to notify Pilot service of ETA 6 hours before arrival.

ANCHORAGE:

Sao Luis: The following areas are reserved for the anchorage of vessels awaiting to enter port.

(a) Location No. 1 for vessels of more than 2,000 g.r.t., up to 21 ft. draft and 135 m. overall (this is the nearest anchorage to the town).
Location No. 2 for vessels up to 18 ft. draft (and that which follows No. 2).
Location No. 3 for vessels up to 18 ft. draft (is the nearest to the bar).
These anchorages are situated between the parallels of 02° 30′ 5″ S. and 02° 31′ 5″ S.

(b) Vessels impounded or requiring extensive repairs:
Vessels up to 10 ft. – Lat. 02° 31′ 9″ S., Long. 44° 18′ 7″ W.
Larger vessels: Lat. 02° 30′ 0″ S., Long. 44° 20′ 0″ W.

(c) Anchorage for vessels of less than 2,000 g.r.t. To the South of the partly submerged hull of the *Maria Celeste* between the State Warehouse and the Customs Warehouse.

(d) Vessels in quarantine: Lat. 02° 29′ 5″ S., Long. 44° 20′ 5″ W.
Vessels may not anchor in the approach channel or the turning basin.

Itaqui: The following anchorage zones for vessels arriving at Itaqui:

(a) Vessels over 5,000 g.r.t.: Lat. 02° 35′ 5″ S., Long. 44° 22′ 4″ W.

(b) Vessels impounded or requiring extensive repairs:
Lat. 02° 35′ 1″ S., Long. 44° 22′ 3″ W.

(c) Vessels in quarantine: Lat. 02° 35′ 4″ S., Long. 44° 23′ 3″ W.

(d) Inspection anchorage: Lat. 02° 35′ 2″ S., Long. 44° 22′ 4″ W.

RESTRICTIONS:

Sao Luis: May only be entered during daylight hours and near HW.

Itaqui: Cargo vessels may moor any time during the day or night depending on the state of the tide. Vessels bound for the oil terminal may only berth on the rising tide during the day. Berthing should commence 1 hour before HW.

MAX. SIZE: For port of Itaqui, max. draft at LW is 34 ft. At HW, depth of 45 ft. to 48 ft. available depending on height of tide.

HEALTH: (See "General" before first port.) Health Authorities visit compulsory, due to disinfection by Yellow Fever Service.

Tankers bound for the oil terminal will be inspected at the terminal after mooring is completed.

Vessels awaiting berths will be inspected at the inspection anchorages.

RADIO: Radio Marinha, code PWM, may be used for any message to the Agent.

TUGS: *Sao Luis:* One tug 50 h.p. available.
Itaqui: None.

BERTHING: *Sao Luis:* See "Anchorage".

Itaqui:
Administration Quay – Length 164 m., depth 12 m.
Warehouse Quay – Length 164 m., depth 12 m.
North Quay – Length 164 m., depth 12 m.
South Quay – Length 164 m., depth 12 m.

The 80 m. quay will be provided with a ramp for car ferries. Also see "Ponta da Madeira".

CRANES: *Sao Luis:* 8 portal cranes (2×6 tons, 6×3 tons) 1×50 tons, 2×3 tons, 1×6 ton on order.

Itaqui:
6×3.2 ton (gantry), 2×6.3 ton (gantry)
3×2.5 ton (mobile), 1×4.0 ton (mobile).
1×9.1 ton (mobile), 2×4 ton (tracked mobile).

BARGES: *Sao Luis:* 11 barges of 60 tons, 5 barges of 80 tons and 1 barge of 150 tons capacity. There are also 5 oil barges with a total capacity of 1,090 tons.

BULK HANDLING FACILITIES: 2 mobile grain elevators at Warehouse Quay serving Maranhao Wheat Mill, rate 150 t.p.h. The Maranhao Wheat Mill has silos with 12 cells, capacity 6,000 tons. Additional silos with 2,000 tons capacity available. The rated capacity of the elevators will be doubled in the near future.

TANKERS: Discharge at port of Itaqui. *See Table below.*

Tank Capacities:

	Esso		*Sabba*		*Texaco*		*Petrobras*		*Gas Butano*	
Products	*No. of Tanks*	*Volume (cu.m.)*	*No. of Tanks*	*Volume (cu.m.)*	*No. of Tanks*	*Volume (cu.m.)*	*No. of Tanks*	*Volume (cu.m.)*	*No. of Tanks*	*Volume (cu.m.)*
Gasoline	2	4,003	2	4,800	1	4,000	1	9,135		
Kerosene	1	1,580	1	8,000	1	400	1	1,544		
Diesel Oil	1	3,200	2	5,500	1	3,200	1	9,135		
Jet Kerosene					2	1,600				
Liquefied Gas									6	704
B.P.F.							1	4,032		

STEVEDORES: On receipt of vessel's ETA Agent provides the necessary gangs. Master to mention in his ETA cable the distribution in cargo hold enabling Agent to arrange for number of gangs required. When loading or discharging bagged cargo an average of 4,000 bags per 8 hours work per gang handled.

MEDICAL: Advance notice by radio preferred, since medical assistance in S. Luiz is limited to 1 general clinic and 3 hospitals.

FRESH WATER: *Sao Luis:* Fresh water available by barge, rate 60 tons per day. There is also an outlet at warehouse No. 4 on the quay.

Itaqui: Available ex-wharf, rate 18 t.p.h.

FUEL: *Sao Luis:* Fuel oil available to vessels alongside, delivery by road tanker.

Itaqui: Diesel oil available to vessels alongside the Warehouse Quay and South Quay.

GANGWAY/DECK WATCHMEN: Normally done by the crew.

OPENING/CLOSING HATCHES: Done by stevedores.

CUSTOMS ALLOWANCES: No limit or restrictions.

IDENTITY CARDS: Foreign Crew members not permitted to go ashore without presentation of Identity Card, on which is a photograph of holder and personal details. These cards are provided by the Agent upon arrival. The Identity Card must be given on disembarkation to the Federal Police who will return it to the Crew member on re-embarkation.

CONSULS:

France	Tel. 1117	Spain	Tel. 2664
Portugal	„ 1689	Norway	„ 1888
Denmark	„ 1507	Bolivia, no telephone	

Italian Consul at Itaqui. Tel: 2-04-08.

REPAIRS: Shop for small repairs available.

REPATRIATION: Possible. Last Port Clearance and Crew List required by Maritime Police.

AIRPORT: 13 km. from centre of town (18 km. from Itaqui), with daily flights to North and South of country.

TIME: GMT minus 3 hours.

HOLIDAYS: January 1st; April 21st; May 1st; September 7th; November 15th; December 25th (National holidays). July 28th; September 8th, December 8th, June 29th (local holidays); Maundy Thursday; Good Friday (Church holidays). On all holidays, except Good Friday, work permitted.

POLICE/AMBULANCE/FIRE: Police Tel: 1150; First Aid Ambulance 1943; Fire Brigade 1753.

TELEPHONES: No facilities for placing telephones on board.

GENERAL: The Port of Itaqui is rail-connected with the whole of Brazil, with the exceptions of the States of Para (Belem) and Amazonas (Manaus).

DEVELOPMENTS: Wharf at Itaqui to be extended to 1,068 m. Depth will vary from 30 ft. to 40 ft.

The existing petroleum berth will be replaced by the final extension of the wharf, although plans indicate the intended construction of a new Petroleum Berth on Guapira Island.

New unloader for bauxite, coke and iron ore under construction, rate 1,500 tonnes per hour.

A 16,000 t.p.h. linear shiploader has been ordered for Itaqui.

Also see "Ponta da Madeira".

AUTHORITY: Companhia Docas do Maranhao, Rua da Paz 561, Sao Luis, Maranhao, Brazil. *Contact:* Washington de Oliveira Viegas, President.

SAO SEBASTIAO: 23.48 S. 45.24 W. (See Plan)

LOCATION: Terminal Maritimo Almirante Barroso (TEBAR) is located on the West edge of the Sao Sebastiao Channel. Safe access is made through the South Entrance. The approximate geographical position of berths is Lat. 23° 48′ 3″ S., Long. 45° 23′ 3″ W.

The port limits extend from Ponta do Araca-Ilha das Cabras to Pontal da Cruz-Pontal do Paquea.

DOCUMENTS: The visiting area of the Port Health Authorities, Federal Revenue and others, is designated by the alignment: Ponta do Araca-Ilha das Cabras (South) and South limit of the zone of submarine cables (North).

Inward clearance is effected on board immediately after docking by Government Port Officials and Agent's Representative. It is necessary that the following documents be ready on arrival.

Any document regarding outward clearance of the ship at last port of call.

5 copies Crew List.
2 copies Store List.
2 copies Personal Effects List.
3 copies Passenger List.
3 copies Cargo Manifest, (or more if available).
3 copies Bill of Lading, (or more if available).
2 copies Maritime Declaration of Health.
Notice of Readiness (Addressed to Petrobras)
List of vessel's particulars: call sign, n.r.t., g.r.t., d.w.t., speed, engine b.h.p., draft, total crew, officers, time of arrival, loading ports and dates of sailing, quantity of cargo for Sao Sebastiao, quantity of cargo in transit for other ports, etc.

PILOTAGE: Pilotage is compulsory between the intersection of the Sao Sebastiao Channel with the alignment of the co-ordinates: Lat. 23° 43′ 18″ S., Long. 45° 20′ 12″ W. and Lat. 23° 43′ S., Long 45° 21′ 18″ W. (North Bar – Chart DHN No. 1643) and the intersection of the Sao Sebastiao Channel with the alignment of the co-ordinates: Lat. 23° 53′ 36″ S., Long. 45° 28′ 50″ W. and Lat. 23° 52′ 42″ S. Long. 45° 29′ W. (South Bar – Chart DHN No. 1615), except for Brazilian vessels less than 10,000 d.w.t. and which do not call at the port itself (passing only).

Pilotage is compulsory in the port of Sao Sebastiao for:

(a) Foreign vessels, tanker vessels, gas vessels and all vessels of any g.r.t. transporting explosives.

(b) All types of vessels over 500 g.r.t. bound for the Tebar Terminal. Pilotage is optional for Brazilian vessels bound for Port of Sao Sebastiao except the above mentioned.

The request for Pilots for entering should be made through the ship's Agents 24 hours in advance via Santos Radio Station (PPS) or Sao Sebastiao Radio (PTS) when the vessel's ETA is given. The ETA should be confirmed 3 hours in advance through Channels 13 or 16 (VHF) to the Pilot's Association of the Port of Sao Sebastiao.

The positions for boarding and disembarking of the Pilot – are defined by the areas of the circles of 0.5 miles radius whose centres are the following coordinates (Chart DHN No. 1614):

(a) NORTH BAR: Lat. 23° 42′ S., Long. 45° 21′ W.
(b) SOUTH BAR: Lat. 23° 53′ 30″ S., Long. 45° 29′ 30″ W.

The Pilot's Association functions at Rua Manoel Ladislau de Mattos, 27, Suite 24. Tel: 52-1332 – Sao Sebastiao. The Pilot's Association also has a branch office in Santos at Rua General Camara 5, Suite 606. Tel: 38-1944, 36-8036, 36-8037 and 36-8038.

APPROACHES: *Approaching Channel:* The channel of the port of Sao Sebastiao is 12.3 miles long. The South Bar Channel, dredged to 25 m. is 300 m. wide at its narrowest part, allowing entrance and sailing of vessels drawing up to 23 m. The North Bar Channel sounded to 18 m. is 550 m. wide at its narrowest part, allowing entrance and sailing of vessels drawing up to 10 m.

Special attention should be paid by vessels drawing over 18 m. when navigating in the Sao Sebastiao Channel; Chart DHN Nos. 1614, 1615 and 1616 show several cautions with depths of 20 m. and less in the proximities of the limits of the channel. "Caution A" on chart DHN No. 1643 should be strictly observed: Existence of submarine cable. It is forbidden to anchor within the marked area.

Tidal Stream: The height of the tide in the port of Sao Sebastiao varies from (–) 0.2 m. at LW and 1.5 m. HW, having an average level of 0.66 m. The tide runs either Northerly into the channel or Southerly with characteristics of permanent flowing as if it was a river following the orientation as given by the channel. The current attains considerable speeds which might prejudice the manoeuvring of vessels in the channel, specially at times of entrance of a cold front when winds also attain a significant force.

Whistling: Vessels approaching the port, prior to coming to Araca Point, must give a long blast on the whistle as a warning.

ANCHORAGE: Anchorages for ships are identified on Charts DHN 1614 and 1643.

Position No. 1: For ships awaiting berths (delay less than 6 hours):
Lat. 26° 49′ 15″ S., Long. 45° 23′ 39″ W.

Position No. 2: For ships up to 150,000 d.w.t., length 300 m., draft 18 m.:
Lat. 23° 48′ 18″ S., Long. 45° 22′ 54″ W.
Lat. 23° 48′ 00″ S., Long. 45° 22′ 39″ W.
Lat. 23° 47′ 24″ S., Long. 45° 22′ 30″ W.

Position No. 3: For larger ships and/or lightering of tankers:
Lat. 23° 46′ 24″ S., Long. 45° 22′ 12″ W.
Lat. 23° 45′ 42″ S., Long. 45° 22′ 54″ W.
Lat. 23° 44′ 54″ S., Long. 45° 21′ 42″ W.
Lat. 23° 44′ 15″ S., Long. 45° 21′ 24″ W.

Position No. 4: For ships in special conditions (quarantine, load/unload of explosives, etc.):
Lat. 23° 49′ 51″ S., Long. 45° 24′ 21″ W.

In the area comprised by the alignments – North Pier end with Itaguacu Point and South Pier end with Pontinha Lighthouse, anchoring will be permitted only in exceptional conditions and with authorisation from Delegacy of Port Captaincy.

RESTRICTIONS: The terminal normally operates around the clock. Ships are moored and unmoored at any hour except when an unexpected event arises, such as breakdowns, gales, heavy squalls, and so on.

Safe draft for passing along the dredged channel is 23 m. (75.5 ft.), no matter what existing conditions are, such as day or night, current set and drift, wind, tide or swell. However, at the discretion of Pilot, according to the prevailing above conditions vessels can use the channel with drafts up 24 m. (78.7 ft.) These figures are not final as they may change in time without previous notice.

Remarks: The limitations mentioned above could result in rejection of the ship as being unsuitable for this terminal.

Speed: Max. speed in port limits is 8 knots.

MAX. SIZE:

Position 1 (External Berth, South Pier): 26 m. (85 ft.) depth, for tankers up to 300,000 d.w.t., with max. draft of 23 m. (75 ft. 05 in.).

Position 2 (Internal Berth, South Pier): 19 m. (62.32 ft.) depth, for tankers up to 155,000 d.w.t., with max. draft of 16.9 m. (55 ft. 06 in.).

Position 3 (External Berth, North Pier): 19 m. (62.32 ft.) depth, for tankers up to 150,000 d.w.t., max. draft of 16.9 m. (55 ft. 06 in.).

Position 4 (Internal Berth, North Pier): 13.7 m. (45 ft.) depth for tankers up to 65,000 d.w.t., max. draft 12.2 m. (40 ft.).

HEALTH: Port doctor visits all ships on arrival and requires Maritime Declaration of Health, Derat Certificate, 2 Crew Lists. Vessels from another Brazilian port automatically receive Free Pratique and should not fly Quarantine Flag. If suspected disease or fever on board it is advisable to cable Agent before arrival.

RADIO: Vessels bound for Sao Sebastiao should advise their ETA 48 hours prior to arrival to PPR (Rio Radio Government Coast Station). Confirmation or change of ETA should be cabled 24 hours before arrival. When within range, tankers may also call TEBAR or FRONAPE VHF radio-telephone stations for instructions. All ETA's should indicate whether it is local time or GMT.

English is generally understood by Pilots and terminal representatives. Weather forecast as well as Notice to Mariners are transmitted by PWZ and PPR radio stations. Radio equipment should not be used at the piers. Communication ship-to-shore will be by telephone.

TUGS: Mooring and unmooring is provided by 6 tugboats: 2×2,360 b.h.p., 2×3,170 b.h.p., 1×2,170 b.h.p. and 1×3,720 b.h.p. tugboats (twin motors-equipped with controlled-pitch propellers). While rendering such assistance, the tugboats act under orders of Harbour Pilot. These tugs are fitted with fire pumps and monitors (including mechanical foam to assist in fighting fires. The following ship's whistle signals code is used for tugs communications:

Calling:	
4 long blasts followed by 1 or 2 short blasts.	The number of short blasts will call 1 or 2 tugs respectively.
Before Towing Line is Made Fast:	
2 short blasts	Prepare to push on the bow or to pick up line from ship's bow.
3 short blasts	Prepare to push on the stern or to pick up line from ship's stern.
After Towing Line is Made Fast:	
1 long blast	Pull to starboard
2 short blasts	Pull to port
3 short blasts	Stop pulling
Manoeuvring Alongside Ship's Hull:	
1 short blast	To pull
2 short blasts	To push

Other ship's whistle signals are used for auxiliaries boats.

Calling:	
2 long blasts followed by 1 short blast	To call small craft or Pilot (launch)
1 long blast followed by 1 short blast	To call motor-boat (launch)

All orders received by tug will be acknowledged with a distinct short blast.

As tugboats are provided with VHF, manoeuvring orders may be given by radio.

Usually orders to fore tug are given by a mouth whistle and to aft tug by ship's whistle.

Tugs are fitted with flashing signal lamps.

Circular: Instructions for employment of tugs during pilotage operations at the "Almirante Barroso" Maritime Terminal (TEBAR):

1. To operate at "TEBAR" vessels over 15,000 d.w.t., should have tug of at least 15 tons bollard pull.
2. The employment of tugs with adequate power is compulsory as from the Manoeuvring Area, both when berthing and anchoring at the Waiting Area. In case the vessel is without propulsion, a minimum of 3 tugs should be employed, 2 forward and 1 aft, with tow line fast.
3. During the unberthing operations of vessels of any given tonnage, the employment of at least 2 tug boats of adequate power is compulsory.
4. During berthing operations under normal conditions, the number of tugs to be employed should be, at least, the number of tugs indicated in table and as many as may be necessary to meet the following minimum requisites of bollard pull.
5. When for the sake of safety the Pilot may consider necessary a number of tugs beyond the number mentioned, he may act accordingly, justifying same, shortly therafter, in writing to the Delegate of the Captaincy in Sao Sebastiao.
6. When the condition of the sea, intensity of the wind or the visibility stop operations, the Pilot's Association should officially inform the Delegacy in Sao Sebastiao, accordingly.
7. The Agents of the companies engaged in the services of tugs at "TEBAR" should submit to the Delegacy and the Pilot's Association in Sao Sebastiao copies of the static pull referring to each tug.

Deadweight Tons (× 1000)	*Static Traction in tons*	*Minimum number of Tugs*			
		Outer berths		*Inner berths*	
		P1	P3	P2	P4
up to 15	19	2	2	2	2

250 to 300	100	4*	—	—	—
300 on	130	4*	—	—	—

*Should extra tugs be available employment is recommended.

GENERAL CARGO WHARF: *Commercial Quay:* Length 150 m., depth 8.2 m. 6 bollards for berthing, spaced 30 m. apart. Fresh water available, 3 hydrants, capacity 10 cu.m.p.h. each. Fuel available by road tanker in small quantities.

Warehouses/Open Storage Areas: The covered storage area, available in the port area is 2,000 sq.m. and has a capacity of 12,000 cu.m. The open storage area for containers in the port area is 20,000 sq.m. and for heavy lifts 24,000 sq.m.

The storage area outside the port area, covered and open, is 10,000 sq.m. and belongs to the Companhia Nacional de Armazens Gerais Alfandegados (National Bonded General Warehousing Company).

There are no cold stores or silos on the port quay.

Cranes: 1×25 ton (private), 1×50 ton, 1×22 ton, 1×16 ton, 1×12 ton and 4×4.5 ton.

Stackers: 21×2 ton – 13.5 ton.

MEDICAL: Medical treatment and/or hospitalisation, if required, is provided in the private local hospital. Dentists are available in the area. For emergency cases (serious illness or injury) TEBAR first medical aid may be requested by the Master. Internal telephone number is 20. If patient does not speak Spanish or Portuguese, an interpreter should accompany him.

FRESH WATER: Fresh water can be supplied if necessary; however, supplies are limited to essential requirements (up to 400 tons). Rates: Minimum 91 t.p.h. Maximum 148 t.p.h.

TANKERS: The pier is located on the Western edge of the channel between the shore and Sao Sebastiao Island. Safe access for large tankers is possible through the South Entrance but smaller tanker of draft 35 ft. or less may enter through the North Entrance.

The head of the jetty which is "T" shaped is 1,690 m. (5,544 ft.) from the shore, in position Lat. 23° 48.2′ S., Long. 45° 23.3′ W.

The South Pier is 510 m. (1,673 ft.) length and the North Pier 380 m. (1,246 ft.).

Also see "Max. Size".

Loading Arms:

Position 1	4×16 in.	(cargo)
	2×12 in.	(diesel oil/fuel oil)
Position 2	3×16 in.	(cargo)
	2×12 in.	(diesel oil/fuel oil)
Position 3	2×12 in.	(cargo)
	2× 8 in.	(diesel oil/fuel oil)
Position 4	Same as Position 3	

Reducers are available. All shore hoses are chiksan type arms.

Maximum Height: Max. height of hoses above platform: Position 1: 21.5 m. (70 ft.); Position 2: 17.8 m. (58 ft.); Positions 3 and 4: 16 m. (52 ft.).

Pipe-lines: 2×34 in. diameter pipe-lines, 2,300 m. (7,500 ft.) link the South Pier to the shore tanks. 2×24 in. diameter pipe-lines, 2,000 m. (6,500 ft.) link the North Pier with the shore tanks.

LOADING: *Maximum Permissible Pressure:* Both piers 10 kg./sq.cm. (150 p.s.i.).

Pumping Rates: South Pier: 100,000 bbls.p.h. if using two 34 in. lines and 3 or 4 hoses; up to 50,000 bbls.p.h. if using one 34 in. line and 3 or 4 hoses.

North Pier: Up to 48,000 bbls.p.h. if using two 24 in. lines and 2 hoses; up to 24,000 bbls.p.h. if using one 24 in. line and 2 hoses.

BALLAST: Brazilian laws are very strict in regard to the pollution of harbour and coastal waters. Vessels should not discharge dirty ballast, ashes, refuse, etc., into the water. Heavy fines are imposed for violations. All overboard discharge valves from cargo tanks and bilges are to be secured before any loading or discharging commences. All deck scuppers should be plugged to avoid harbour contamination should an oil spill occur. To offenders, fines will be charged (besides resulting delays) according to the ship's tonnage. Facilities for receiving dirty ballast are available. However, amount is dependent on space in shore tanks at the time. Capacity of tanks 12,000 cu.m. (75,000 bbls).

The Terminal is particularly interested in having vessels complete the deballasting operation promptly in order to minimize time at berth. Simultaneous discharging/loading and deballasting/ballasting is encouraged on properly equipped vessels.

FUEL: The Terminal is equipped with blending valves and is able to deliver bunker "C", fuel oil, marine gas oil, marine diesel oil and intermediates of any grade – concurrently with working cargo at international prices.

The supply rates are about 300 t.p.h. for bunker "C", 180 t.p.h. for M.G.O. and 450 t.p.h. for intermediates.

Orders for bunkers should be placed, with a minimum of 48 hours notice to:

Divisao de Abastercimento a Navios – Departamento Comercial, Av. Republica do Chile 65, 19.° andar, Rio de Janeiro – Brazil. Telegraphic Address: Petrobrasecope. Telex: 031422 and 031423.

Lubricating Oils: Orders for marine lubricants should be placed at least 15 days in advance and subject to confirmation to: Petrobras Distributidora, Praca 22 de Abril, 36, 4.° andar, Rio de Janeiro – Brazil. Telegraphic address: Petroedipe Telex: 031422, 031423 and 031424. Tel: 242-9381 and 242-4901.

Simultaneous Bunkering and Discharging Operations: Considering that the loading/discharging hoses cannot be crossed with bunkering hoses, the simultaneous bunkering and discharging operations will depend on the position of the ship's bunkering manifold. If the ship has 2 bunkering manifolds – 1 on each side of cargo manifold – the bunkering and the discharging may be effected at the same time. However, if a tanker has only 1 bunkering manifold at each board (located to the aft part in relation to cargo manifolds), this simultaneous operation will only be possible if the ship, is berthed port side at position 3 or starboard side at positions 1, 2 and 4. Alternatively, upon completion of loading/discharging the ship will have to be shifted a few metres forward to receive bunkers.

GANGWAY/DECK WATCHMEN: Compulsory.

REPAIRS: Some repairs of minor nature can be effected in Sao Sebastiao. When alongside pier, vessels must maintain engines and propulsion machinery in readiness to leave the berth under full power on short notice. No repairs are permitted which would interfere with this requirement. The ship repairing firms usually have branch offices in Sao Sebastiao which are able to undertake many kinds of small repairs. If necessary they can avail themselves of personnel of Santos or Rio de Janeiro branches.

CUSTOMS ALLOWANCES: For each Crew member, 2 packets of cigarettes and 1 bottle of wine or spirits. While the vessel is in port, Brazilian Custom's Officials are assigned on board to ensure compliance with Customs Regulations. Meals must be supplied to these Officials during regular meal hours. Brazilian laws are strict in regard to smuggling and Masters are requested to instruct their crews not to take cigarettes or other articles ashore. Cigarettes in carton lots, cigars, tobacco, alcoholic drinks, souvenirs, etc., should be collected prior to arrival in port, listed with the items in the slop chest and placed in the custody of the Master for deposit in the slop chest or closet which will then be sealed for the duration of the vessel's stay in port. By no means will any commercial transactions be tolerated, be it either among terminal employees, crew members or anyone else. Cigarettes or other stores in bond are not obtainable in Sao Sebastiao.

POLICE/AMBULANCE/FIRE: Police Tel: 521-400, Fire (Petrobras) Tel: 522-711 or VHF Channel 16 to Tebar.

SURVEYORS: *Petroleum Inspectors:* None available in Sao Sebastiao. If required, arrangements should be made well in advance. A representative of Chas. Martin and Co. is based in Rio de Janeiro and E. W. Saybolt & Co. in Santos.

CONSULS: No consular representatives are reported to exist in the area.

REPATRIATION: Possible, but involves lengthy car ride to Sao Paulo or Rio de Janeiro.

AIRPORT: At Ubatuba and Sao Jose dos Campos.

TIME: Local time is GMT minus 3 hours.

HOLIDAYS: 20th January (Sao Sebastiao Day).

SHORE LEAVE: The access pier is 1,600 m. long. The crew can use it to get ashore, but special passes are required for this purpose. There is, however, a launch service provided by Agent.

TELEPHONES: No service at the Commercial Quay. At Tanker Terminal there are telephones in the control room.

GENERAL:

Brazilian Flag and Others: In accordance with international practice, quarantine signals must be displayed by vessels when approaching Brazilian ports. These signals shall be displayed continuously until Free Pratique is granted and are: sunrise to sunset – quarantine flag "Quebec"; sunset to sunrise-signal lights red over white.

Tankers will display the red flag "Bravo" during the day and a red light during the night throughout their stay in port indicating inflammable or explosive cargo.

In addition to quarantine signals which are to be shown until Free Pratique is granted, the Brazilian Flag must be flown from foreign vessel's foremast throughout the vessel's stay in port.

Vessels must provide themselves with this flag before arrival but if circumstances render this impossible, the flag may be supplied by ship's Agent.

The Brazilian Flag must be of proper size, according to the d.w.t. of the vessel.

National Holidays: By order of the local Port Authorities it is requested that all ships in port must be fully dressed on the following National Holidays: 7th September and 15th November.

Watches: An efficient watch must be maintained on board the ship, deck and engine room and a sufficient number of crew members should always remain on board to cope with emergency or port operation situations.

Ratguards: Ratguards must be placed on all mooring lines.

Visit of Authorities: In case the ship enters and berths directly, the official visit of Authorities together with the Agents will take place as soon as she is tied up and the gangway is lowered. However, if the ship is not berthed immediately upon arrival (e.g. in view of the pier being occupied, or any other reason), the visiting party will proceed to the ship by motorboat as soon as she drops anchor. If the ship arrives after 2100 hrs. it is possible that Authorities will decide to visit the ship next morning at 0800 hrs.; however, the ship is authorised to operate normally and crew members are allowed to go ashore.

Seamen Left Ashore: Ships are not permitted to sail until all crew members are on board. Should, however, a crew member definitely not be found, his passport (or seaman card) and his international vaccination certificates must be given to the Agents, together with a letter requesting him to be repatriated..

Weather and Tide Conditions: The weather at Sao Sebastiao is generally very favourable; however, strong winds and currents are frequent mostly during winter. 128 km.p.h. wind was registered last year. Swell is not observed in the channel. The winds are unpredictable for more than a few hours in advance; usually it blows from N.N.W. or S.S.W. As regards rain, the annual precipitation averages 2,000 mm. The visibility is mostly fair, although in Autumn and Winter it may become rather poor in the early morning. The temperature ranges from 15°C (59°F) in July to 39°C (104°F) in January. The relative humidity of the air is usually high, often exceeding 85%. The normal range of tides is around 1.2 m. (4 ft.). Although higher ranges of 2 m. (6.5 ft.) have been noticed during Spring. The currents are irregular but usually follow the direction of the wind; according to the intensity and the duration of the wind, the drift may range from 1 to 4 knots.

Safety Precautions in Case Imminent Bad Weather:

(a) Wind speed in excess of 30 knots and/or currents more than 3 knots.
  Permanent inspection of mooring system.
  Pilot, tugboats and longshoremen in readiness.
  1 tug to be alongside ship berthed in PP-1 and another alongside ship berthed PP-3.
  Engine room-ready.
  Steam fed to winches.
  Reduce surface exposed to wind.
  Discontinue unloading and disconnect loading arms.

(b) Wind speed in excess of 50 knots and current of more than 4 knots.
  Do not loosen winch brakes to try to run cables.
  Man manoeuvring station.
  Call Pilot, tugboats and longshoreman. Discontinue loading/unloading operation.
  Increase torque on brakes.
  Pass extra mooring lines.
  Disconnect loading arms.
  Remove gangways.

Derat Certificate: In case the Derat Certificate has expired and needs to be renewed, a radio message should be sent to the Agent a few days before arrival, so that they are able to make the necessary arrangements with the Sao Sebastiao Port Health Inspector.

Renewal of Vaccination Certificates: For the same reason mentioned above, the Master should send, beforehand, a radio message stating how many vaccinations of each kind will be required. The vaccinator has to come from Santos.

Passengers: Passengers will be permitted to disembark if in possession of the required visa and documents for identification.

Visitors: Only the personnel duly authorised by Port Authorities may come on board the ships; this excludes all visitors. Relatives of crew members may obtain from Port Authorities a licence to go on board.

Constant Readiness: During the time the ship is berthed alongside, her engine and propulsion machinery should be in readiness to leave the berth on short notice. No repairs are permitted which would interfere with this requirement.

Smoking: Smoking in open areas of the ship and on the pier, is strictly forbidden. The crew are not to throw lighted cigar or cigarette ends overboard.

Photography: The taking of photographs within the terminal is prohibited.

Emergency Towing Wires: 2 towing wire ropes should be always hanging to the water's surface so that the tugs can easily make fast should an emergency arise.

Gangways: All ships calling at Sao Sebastiao must provide a safe gangway. Authorities may refuse to board the ship if a safe gangway or accommodation ladder is not provided. At night, the pilot ladder must be adequately lit. The terminal is not equipped with platform ladder. The ship's ladder must be used.

Lifebuoy: A lifebuoy with 15 fathoms (27 m.) of rope should be kept nearby the gangway for use in case of emergency.

Ship's Fire-fighting Equipment: At least 2 fire hoses should be connected to hydrants on main deck: 1 forward and the other abaft the cargo valves manifolds. A third hose with an NPU nozzle and 2 mechanical foam containers should be kept nearby the pump-room. The ship's main fire-extinguishing system should be kept under constant pressure.

Minimum Draft for Safe Manoeuvring: Although the amount of ballast carried on vessels is at the Master's discretion, the table below is recommended as a guide:

Vessels of 30 – 40,000 d.w.t.	draft for'd 16 ft. aft 20 ft.
Vessels of 40 – 50,000 d.w.t.	draft for'd 18 ft. aft 24 ft.
Vessels of 50 – 70,000 d.w.t.	draft for'd 20 ft. aft 28 ft.
Vessels of 70 – 100,000 d.w.t.	draft for'd 24 ft. aft 32 ft.

Vessels over 100,000 tons should be ballasted to approximately one third of the vessel's deadweight.

Bond Wire: Before the connection of shore hoses, the bonding wire will be connected, by a terminal employee, to ensure a good grounding electric contact.

Boiler Tubes and Sparks: Whilst alongside the pier, no boiler soot blowers may be used. The use of derricks is also forbidden (excepting the poop derrick, when lifting stores, provisions, etc.). Likewise, the use of objects and/or tools which may cause sparks is also forbidden.

Fire Signal: Should fire break out in any part of the ship, the fire alarm should be given: a continuous sounding of 7 short blasts on the whistle, followed by a long one.

Transportation of Stores, etc., from Shore to Ship: The terminal does not permit the carriage of items through the jetty. Consequently, the ship has to use the services of a motorboat, or a tugboat or of a floating craft (which is towed to the ship's side). The motorboat or the tugboat may only approach the ship by the sea side. No derricks may be used, although the terminal has no objection to the use of the poop derrick or crane (sea side). Depending on the nature and the weight of items involved, they may be taken on board using the gangway (sea side).

Provisions and Stores: Provisions and stores are supplied by shipchandlers contracted directly by Owners or Masters or through the Agents. Usually they have to be brought from Santos, which requires a radio advance request, in view of the distance involved. It is hoped that in the near future provisions and stores in large quantities may be easily obtainable in Sao Sebastiao. Some items may be obtained in Caraguatatuba.

Radio Equipment: When the tanker is berthed, its main transmitting aerials should be earthed.

Laundry Facilities: Available at Sao Sebastiao.

Communications: Telex and telephone available at the Agencies and at the terminal.

Rubbish: Garbage bins are available at the Commercial Quay for berthed tankers and anchored vessels, garbage bins are available through boat acquired by Agent. Dry garbage facilities available for anchored and berthed vessels using boat acquired through Agent.

REGULATIONS:

Craft not directly engaged in the port's traffic should navigate at a minimum distance of 150 m. from the Maritime Terminal and from vessels alongside and at anchor.

Skin diving and underwater hunting are prohibited in the area assigned as being the port of Sao Sebastiao.

The line between Pontinha Lighthouse and the Cais Comercial (Commercial Quay) should be kept permanently clear due to the traffic of ferry boats.

The passage through the Sao Sebastiao Channel of foreign flag vessels other than those destined for the port itself is prohibited.

The maximum speed allowed between the limits of the port of Sao Sebastiao for vessels over 1,000 d.w.t. is 8 knots.

Craft and vessels berthed on the external side of the Cais Comercial (Commercial Quay) and Maritime Terminal, on both sides, should maintain vigilance and be manned.

All vessels which, for any given reason, may have to stay in the channel and port of Sao Sebastiao for more than 1 week, should communicate in writing to the Delegacy of the Port Captaincy the reason surrounding the fact and informing at the same time the expected time of stay.

SHIPMASTER'S REPORT:
Pilotage: Vessels normally sail and arrive by the Southern Entrance.
Anchorages: The holding ground for VLCCs is not very good, but appears good for smaller vessels. (We had 3 cases of ships dragging during our two and a half weeks stay, all VLCCs.) The current runs Northerly or Southerly depending on the wind.
Tugs: 5 tugs normally used for berthing and unberthing irrespective of vessel's size.
Medical: Dental and routine medical matters available. Specialists are available some miles away. For inoculations the doctor comes from Santos.
Fresh Water: Rates are dependent on number of vessels watering and can be as low as 10 t.p.h.
Customs Allowance: 2 cartons cigarettes per man. Customs no longer stay on board the vessel.
Repatriation: Is possible, but involves lengthy car ride to Santos or Rio de Janeiro. The best and nearest airport is outside Sao Paulo, where international flights are available. This is quicker than going to Rio.
Telephone: Available in jetty control rooms.
Shore Leave: When berthed the Agent can arrange a minibus service from the T-head of the jetty.
Port Regulations: Vessels throwing or discharging anything into Brazilian waters are subject to a fine equalling 2% of the minimum Brazilian basic wage multiplied by the vessel's gross tonnage. Garbage disposal is difficult to arrange and they will only accept dry garbage.
General: Communications are poor, no telex and messages have to be telephoned to Santos. Best method is to use ship's equipment when at anchor.

AUTHORITY: Petroleo Brasileiro S.A. – PETROBRAS.

Head Office: Av. Republica do Chile, 65, 23°, Andar, ZC-06, Caixa Postal 809, 20000 Rio De Janeiro – RJ, Brazil. *Tel:* 221-5577. *Telex:* 31.422.

Transportation Department: Av. Republica do Chile, 65, 12°, Andar, 20035 Rio De Janeiro – RJ.*Tel:* 221-5577 – Ramal 2401

SEPETIBA BAY, (Guaiba Island and Ilha Madeira): 23.00 S. 44.02 W. **(See Plan)**

See "General" before first port.
LOCATION: About 50 miles West of Rio de Janeiro, is the site of a bulk iron ore terminal located off the S.E. end of Ilha Guaiba about 7 miles due North of the bay entrance.
PILOTAGE: Compulsory for all ships entering the bay and berthing and unberthing at the ore facility. Pilots board in the vicinity of Lat. 23° 08′ 39″ S., Long. 44° 04′ 36″ W. A pilot ladder, boat rope, and gangway must be properly rigged with the landing platform of the gangway lowered to within 5 m. (16.5 ft.) of the water. Adequate lighting should be provided at night.
ARRIVAL INFORMATION: Vessels bound for Baia de Sepetiba should send an ETA to their Rio Agents, via Rio Radio, six days, 48 hours, and 24 hours prior to arrival. Any significant change in this ETA should be corrected as soon as possible but not less than 8 hours prior to arrival. Also see "VHF".
ANCHORAGE: In the vicinity of the Pilot boarding area. Ships should not proceed beyond this point unless a Pilot is aboard and instructions have been received from Sepetiba Marine Operations to proceed.
MAX. SIZE: *Ore:* Max. draft 21.98 m. (July 1983). Max. air draft 21.6 m. Max. beam 54 m.
HEALTH: Radio Pratique should be requested 72 hours prior to arrival by transmitting a quarantine message to the Port Health Authorities through the the ship's Agent. This message should contain the following information: name and nationality of vessel; last port of call; number of crew and passengers; general conditions of health on board. Also see "General" before first port.
VHF: Vessels are requested to contact Sepetiba Marine Operations directly when within VHF radio-telephone range. Channel 16 is the calling channel and 11, 12 and 13 are the working channels. Anchoring or berthing instructions should be requested 4 hours prior to arrival or when within VHF radio-telephone range.
TUGS: Tug assistance is compulsory for all manoeuvring in the vicinity of the pier and 3 powerful twin screw tugs are available for this purpose. All ships should be equipped with a wire cable tow line with a nylon pendant. Radio-telephone communication is maintained between the tugs and the Pilots on Channel 6.
BERTHING: Ore: Facilities consist of a deep-water pier located about 400 m. (1,312 ft.) South of the island. The South Berth has a depth of 24 m. (78.75 ft.) alongside and the North Berth has a depth of 19 m. (62 ft.). A mooring dolphin at the West end of the pier provides an overall mooring length of 470 m. (1,541 ft.) alongside the South Berth. Bollards are spaced along both pier faces and quick release hooks and capstans are fitted for breast, bow and stern lines.

Also see "Shipmaster's Report" – dated May 1980.

Coal: Terminal completed and fully operational.
Location: 23.01 S., 44.02 W.
Operator: Cia Docks do Rio.
Berth: Length 575 m. Depth 17 m. Max. draft 15 m.
Equipment: 2 grab unloaders × 1,500 tonnes per hour and 2 grab unloaders × 800 tonnes per hour.

Also see "Reports" – dated December 1980 and August 1984.

BULK HANDLING FACILITIES: Ore: One travelling shiploader serves both berths and has a boom clearance of 22 m. (72 ft.) at shipside and max. outreach of 29.9 m. from fender line. Travel of loader 250 m. Ore is stacked in a storage area and is delivered to the shiploader by conveyor belt which is loaded by either of 2 stackers having an average capacity of about 7,000 tonnes per hour each.
Coal: See "Berthing" and "Reports".

SHIPMASTER'S REPORT: Ore Berth: May 1980.
Agents:

(a) Mineracoes Brasileiras Reunidas, (the operators and loaders). Av. Graca Aranha, 26, 17th Floor, Rio de Janeiro. Tel: 222-5171. Cables: "Brasilore".

(b) Buarque & Cia, (ship's Agent appointed by the Solmer contract), Rua de Rosario, 113, P.O. Box 1542, Rio de Janeiro. Telex: 2121300 BUCL. Cable: "Joarce". Tel: 221-2210, 221-9961.

Arrival Telegrams: According to the charter party, telegraph "Brasilore" and "Joarce" when leaving the previous port of call, and repeat 72 hours and 24 hours prior to arrival. During the last 24 hours, a change of one hour or more in ETA must be reported.

Radio clearance is requested through the intermediary of BUARQUE to whom it is necessary to quote in the 72 hours telegram the following: last port of call, number of crew members, passengers, state of health, date of deratting certificate, name of Master.

BUARQUE replies to the first ETA telegram indicating the possibilities of direct entry or waiting. As MBR remains silent, it is advisable to ask BUARQUE to confirm the tonnage to be loaded and the quantity, more or less, of each type of ore involved. Olinda/PPO (Recife) and Rio/PPR stations are normally used. Good easy connections and no delay. Olinda is particularly well placed for communications with vessels approaching from the North.

If the crew members have no Brazilian pass (even if made out in another port) ask for a photographer.

General Information:

The port of Sepetiba, opened to of traffic in 1974, belongs to Mineracoes Brasileiras Reunidas (MBR). It is the maritime outlet for a group of mines located some 1,200 km. inland.

Situation: The terminal is located at the S.E. end of the island of Guaiba, in the East part of the bay of Ilha Grande (Large Island), some 50 miles to the West of Rio de Janeiro.

The island is connected to the mainland by a railway bridge which brings the ore for shipment.

The terminal administrative office is on Sai beach, 5 miles to the N.E. (and 120 km. from Rio by road).

Local Time: GMT minus 3 hours.

Pollution: Deballasting at sea only. The Authorities make pressing recommendations to avoid pollution, warning that fines are heavy and not alterable.

Monetary Exchange: Only at the Agency can cruzeiros be obtained, but dollars are much sought after on land, even by small traders. Advantageous exchange rate.

Navigation:

Charts: Brazilian – 1601, 1602, 1603, 1608, 1610.
British – 3970, 1683, 3970
American – HO 24155, 24164, 24160.

Landfall: No difficulties, using the mountains which are around the entrance: Ilha Grande to the West (1,037 m.) and Ilha de Marambaia to the East (620 m.).

Access: The approach channel, is in two straight parts, and is 7.6 miles long. Buoys are not very visible either by day or by night, but perfectly detectable on radar.

The width of the channel varies from 280 m. up to Buoy No. 7; 580 m. at Buoy No. 9 (bend); 330 m. up to Buoy No. 13; and then widens out into a manoeuvring basin 1.8 miles long and 0.5 miles wide.

Draft: The channel has been dredged to 22.5 m., and the manoeuvring basin to 24.5 m. Vessels drawing 21.5 m. have used it on sailing. The Pilots recommend drafts forward of 30 ft. and aft of 36 ft. for the entry for a vessel of the tonnage 122,000 d.w.t.

Currents: Along the coast, coming from the East, weak and counterclockwise. Inside, tidal currents may reach 1.5 knots.

Tides: Twice a day but not equal every day. Tidal rise about 1 m.

Times of entry and sailing: Night and day.

Maximum vessel dimensions: Within the limit of the practicable draft of 21.5 m. No length restriction.

Pilotage: Compulsory. The Pilot boards between 1 and 2 miles from the channel entrance. On sailing, he leaves the vessel between Buoy No. 8 and No. 6.

The pilot vessel has a white hull, a red roof and shows an alternating red light by night. Max. speed 9 knots.

Call up on VHF Channel 16, work on Channel 13.

For embarkation, lower the accommodation ladder to 5 m. above the water, and the pilot ladder to 1 m. above the water. On leaving the vessel, he only uses the pilot's ladder (if the vessel is fully loaded).

Anchoring: When awaiting the Pilot, vessels can anchor in 24 m. of water, 2 miles to the South or S.S.W. of the channel entrance (unmarked wreck, at a depth of 19 m. 1.5 miles to the S.E. of the entrance).

Whilst waiting to berth, the Pilot anchors the vessel, either to the North of the second part of the channel between Guaiba Island and Mangaratiba Lagoon, in 15 to 18 m. of water. (Four vessels of 150,000 tons would be able to lie there with ease). Or, to the East of Guaiba Island, outside the manoeuvring basin, in 25 to 30 m. of water.

Holding is good in all these anchorages, but vessel exposed to the swell.

Tugs: Three tugs of 4,000 h.p. available (MBR 1, 2 and 3).

The tugs are taken at the entrance near Buoy No. 11. They are released on sailing, before Buoy No. 13.

On entry and sailing, 1 tug forward and 1 astern, each taking 2 lines from the vessel. The third comes alongside amidships and passes 2 lines to the vessel. Communication with the Pilot is by walkie-talkie.

Berths: The pier is 400 m. long and orientated 238°/058°. It is connected to the Island by a bridge approximately 300 m. long carrying the conveyor belt. Vessels can come alongside on the inside (N.N.W.) but for large ships only the outside (S.S.E.) is used.

Berthing: Inside – starboard to quay
Outside – starboard to quay after manoeuvring, or portside to the quay (according to the current).

Fenders: Inside – two thicknesses of large tyres. Outside – metal panels fitted on thick rubber supports and shock absorbers. When heaving off, it is recommended not to slide against these fenders so as to avoid damaging them.

Mooring lines: A strong swell is experienced at the quay, therefore good moorings are necessary. 4 lines at the bow, 2 to 4 amidships and 2 astern. Two launches assist in passing lines. There are windlasses on the quay. The wire lines are positioned afterwards.

Height of Quay: 5 to 7 m. above the water, dependent upon the state of the tide.

Gangway: This is only used after the vessel is fairly well loaded.

Handling:

Equipment: A single conveyor belt, movable through 360°, 22 m. above water level. Personnel, installation and equipment belong to MBR.

Advance Arrangements: Come alongside the quay with holds clean and open. Opening of hatches can be carried out during the approach manoeuvre. Inspection of tanks and slops takes place as soon as the vessel is alongside, and a gas-free certificate is issued.

Working hours: 24 hours.

Holidays: None.

Capacity: The gear can supply 7,000 t.p.h. In reality, the net capacity, with stops deducted was 3,100 t.p.h., and more than 40 hours had to be worked, stops and weighing included, to ship 120,000 tons.

Weighing: As the weighbridge was not operating the only check therefore was reading the draft marks, fairly approximate as there was a swell, carried out by the Master and the draft surveyor (the latter issues the gas-free certificate). It appears that it is necessary to watch calculations closely, particularly as far as the incidence of sag on the deadweight (application on the MBR leaflets of the "Means of means" rule which is less favourable than the "two-thirds rule" generally applied elsewhere).

Formalities:

On arrival: The Agent comes on board with Customs, Health and Immigration. Whilst the photographer is working, and the inspector checks the holds, the following documents are handed over to the different authorities represented:

1 Manifest of Ballast.
9 Crew Lists.
2 Passenger Lists.
5 Stores Lists.
4 Individual Declarations.
1 Health Declaration.
4 Notices of Readiness.

Photographs for passes are brought back within 2 hours and the next morning where a night arrival is concerned. (May 1980 – done on the spot using a Polaroid).

Customs: Seals placed on alcohol and tobacco. No individual limitations.

On sailing the Agent delivers on board:

2 Gas-free Certificates
2 Visaed Notices of Readiness, ship's copy
2 Notices of Readiness, Agency copy
1 Sailing Pass
1 Embarkation Pass
2 Vessel Sailing Passes
1 Draft Survey Results
1 Weight Certificate per type of Ore Loaded
2 Cargo Manifests
2 Cargo Loading Statements
2 Cargo Distribution Plans.

Facilities:

Shore access: The nearest town is Mangaratiba (7,000 inhabitants). To reach it, show your pass at the gatekeeper's office on leaving the port, take a bus (a few minutes) to the landing stage at the foot of the bridge between the island and the mainland.

Take the launch (45 minutes) to Mangaratiba.

From there, another bus goes to Rio (the bus company is EVAL) which takes about 3 hours, leaving every 2 hours. The first bus is at 0800 hrs. Price 18 cruzeiros. Last departure from Rio at 1800 hrs. (Bus station at the corner of the port, at the end of Avenida Francisco Bicalho).

The Agent arranges the times of departure of the launches with vessels' officers.

Medical care: At Mangaratiba for urgent attention and minor treatment. More serious cases must be handled in Rio.

Repairs: Small repairs possible using local personnel. For repairs of some importance, it is necessary to call in Verolme at Angra dos Reis or a shipyard in Rio.

Stores: Some direct purchases possible in Mangaratiba. Limited choice. An order can be sent by telegram to the Agent who will make the necessary purchases in Rio, which will involve the cost of transport, and therefore high prices, particularly for small quantities.

Bunkers: None available.

Fresh Water: Available on the quay, but not drinkable. Output 60 t.p.h.

Telephones: Connection possible on request to the land network.

Lifeboat practice: After prior agreement of Port Captain.

REPORT: December 1980. Coal Berth.

Location: Madeira Island – District of Itaguai – Rio de Janeiro.

Geographical Coordinates:

Latitude: 22° 56′ 11″ South, Longitude: 43° 50′ 20″ West.

Access:

Railroad – Wide gauge linking the Port to Japeri.

Highway – Connecting BR-101 highway to the Northern and Southern highways.

Ocean – Deep channel with 15 m. in the initial phase with 18 m. later.

Infrastructure:

Electric Power – High tension line of 138 kva.

Water – Guandu system, with great capacity.

Available systems of communication: telephone, telex and radio.

Hand-labour – Specialised and semi-specialised, available in the area.

Supplies – Easily available in the area.

Stages of the Project:

1st Stage: The terminal has a capacity to transport 5.8 million tons of coal/year, added to the manoeuvring of 130,000 tons/year of alumina from Valesul. Termination expected in the 2nd half of 1981.

2nd Stage: To be developed soon after the termination of 1st stage. Will be constituted of installations for the exportation of 18 million tons/year of iron ore (2 berths); 4 million tons/year of steel products (3 berths) and a quay for the transport of natural gas, sulphur, fertilisers and containers.

Construction being executed:

Access channel – With 22 km. extension and 200 m. width. Manoeuvring basin of 11 m. depth where vessels will manoeuvre without cargo.

Berthing quay: With 540 m. length and 39.25 m. width, allowing the berthing of 2 vessels (one of 90,000 t.d.w. and another of 50,000 t.d.w., or 2 of 65,000 t.d.w.) at South face, and 2 of 45,000 t.d.w. at North face. It will have 2 conveyor belts for coal and one for alumina, being 3 m. wide reserved for the installation of equipment in the 2nd stage.

Access bridge: The access to the quay is by an "L" shaped bridge, 750 m. in length and 22.5 m. width.

Sea-wall: It covers the Southern part of Madeira Island with an extension of 4,000 m. It will also be utilized for the passage of coal conveyor belt lines, access roads, and in the 2nd stage, for the access of steel products and ore conveyor belt lines to the quay.

Stocking area: Parallelogram-shaped, it will have 2,500,000 sq.m. and a stocking capacity of 500,000 tons.

Rear stocking area:

Reserved for cargo (coal, ore, solid and liquid bulks, etc.)	5,050,000 sq.m.
Reserved for the administration, maintenance and services	1,200,000 sq.m.
Reserved for small industries associated with the port activities	800,000 sq.m.
	7,050,000 sq.m.

Operational equipment:

Quay equipments: Coal – 2 dischargers of 1,500 t.p.h. each
2 dischargers of 800 t.p.h. each
Alumina – 1 sucker of 300 t.p.h.

Transport equipment:

Coal – 2 conveyor belts of 4,500 t.p.h. each
Alumina – 1 conveyor belt of 300 t.p.h.

Piling equipment:

Coal – 2 fork-lifts of 4,500 t.p.h. each
2 recyclers of 3,000 t.p.h. each

Centralized Control: Equipment is controlled by an automated Main Control Centre which will supervise the operations.

Water supplying and fire fighting system: A 200 mm. duct, expected capacity of 200 litres/second. A reservoir of 1,500 cu.m. will supply the whole port including the fire line.

Sewage: A compact modular station has been initially planned, and subsequently an underwater pipe-line.

Buildings and auxiliary installations:

Buildings for the Administration and Operations.
Buildings for the Maintenance and Services.
For the Communications Room.

Expansion: So as to increase the capacity of the coal terminal to 2.8 million tons/year, making a total of 8.6 million tons/year, 2 more dischargers will be required, one (1) with a capacity of 1,500 t.p.h. and another with 800 t.p.h.

SHIP'S OFFICER'S REPORT: August 1984. Coal Berth.

Anchorage: There are 3 main anchorages used by vessels awaiting berthing at Ilha de Madeira Terminal, Sepetiba Bay.

The first is the main waiting anchorage which serves the Pta. do Leme Oil Terminal, Ilha Guaiba Ore Terminal and Sepetiba Bay. This is situated in the vicinity of Lat. 23° 08.8′ S., Long. 44° 04.5′ W. as marked on Chart No. 1683. Pilots will board here.

The second anchorage is that which the Pilots prefer you to use as the waiting anchorage and is situated in the vicinity of Lat. 23° 03.7′ S., Long. 44° 03.0′ W. This area is also the preferred boarding station for the Pilot as vessels proceeding to Sepetiba Bay do not have the draft to require them to use the approach channel to Ilha Guaiba Ore Terminal.

The third anchorage area is the main waiting area for vessels bound for Ilha de Madeira Terminal and lies to the South of Ilha Jurubaiba, North of the main channel, as marked on Brazilian Chart No. 1623, from the vicinity of No. 4 buoy to the vicinity of the corner to the North of No. 5 buoy Northwards to the Latitude of 22° 58.0′ S. (Approx.).

Pilotage: Pilotage is provided by the Rio de Janeiro Pilotage Authority who should be given the usual long-range ETA's etc., "Sepetiba Pilot" should be called on VHF Channel 16/13 from about 4 hours before arrival off Pta. de Castelhanos (Lat. 23° 10.2′ S., Long. 44° 05.5′ W.) for instructions. Pilots will not move vessels in Sepetiba Bay after dark and, if there is a ship on the berth at Ilha de Madeira ready to sail they prefer to make one operation of it by sailing the outward bound vessel before taking in the arriving vessel. Should they require an arriving vessel to anchor they prefer it to use the second anchorage mentioned above so that they may leave the outward vessel and transfer to the inward ship around that area. Pilotage is compulsory for all ships using the deep water channel in Sepetiba Bay.

Tugs: There are three powerful twin-screw tugs which serve the ports in and around Sepetiba Bay. They are "MBR I", "MBR II" and "MBR III". They are apparently based at Itacurca. At Ilha de Madeira Terminal they tie up one on the bow, one on the stern and the third assisting as required amidships, using ship's ropes.

Berthing: Ilha de Madeira Terminal is situated on Ilha de Madeira (Lat. 22° 56.15′ S., Long. 43° 50.2′ W.) and consists of a single long jetty lying approx. 086°/266° T. with a connected dolphin each end. The Eastern dolphin is also connected to the shore by a bridge in the direction 357° T. (approx.) which carries the coal and Bauxite belts, service lines and the approach roadway.

The main part of the jetty is 610 m. (approx.) long and can berth two ships on the outside which is protected by large pneumatic rubber fenders. These berths are served by 4 discharging gantries and two belts for the discharge of coal. At present only two of the gantries are operational but work proceeds on the other two and they should be ready in the near future. Ships berth port side at this jetty. There is a berth on the inboard side of the jetty at the Eastern end which handles Bauxite. The rest of the inboard side has bollards at the usual intervals but has no machinery serving it at present.

The jetty was opened for use in February 1983 and development continues. Further development of the port is projected.

The present limiting draft for arrival is considered to be 37 ft. with a limiting draft alongside of 41 ft. Further dredging etc. is projected to improve the approaches.

Stevedores: Stevedoring appears to be under the control of: Servicos Maritimos e Portuarios Ltda., Matriz: Rua de Quitanda 191-5e andar Rio de Janeiro – RJ. Tel: 253 8899 Geral. Telex. 21214915 SMP BR.

Repairs: All repair firms etc. are located in Rio de Janeiro, hence all major work must be done there. Minor work may be carried out in Sepetiba Bay. Divers, etc. would come from Rio if required.

Supplies: All fuel must be obtained at Rio de Janeiro. Fresh water is supposed to be available on the berth but the berth is most unwilling to supply and only then in very limited quantities. The available hydrant is well forward and the shore will provide only sufficient hose to reach the deck. This hose is in extremely poor condition.

Provisions are supplied by road from Rio and appear to be of good variety and quality. Bonded stores are available also.

Services: All services are supplied through or at Rio de Janeiro.

Communications: There is a good road to Rio de Janeiro and there is a rail link. The nearest airfield for international flights is at Rio de Janeiro.

AUTHORITY: Porto de Sepetiba, Cais do Porto, Itaquai, RJ Brazil.
Contact: Francisco X. Bastos do Amaral, Manager.

TRAMANDAI (Rio Grande Do Sul): 29.59 S. 50.08 W.

(See Plan)

LOCATION: *Almirante Soares Dutra Terminal:* Terminal Maritimo Almirante Soares Dutra – TEDUT, is located 6 km. from Tramandai, which is 120 km. from Porto Alegre, Capital of the state of Rio Grande do Sul. The Buoys (SBMs) are positioned 1.8 and 3.2 miles from the shore and their geographical co-ordinates are:

SBM No. 1 (West), Lat. 30° 00′ 40″ S., Long. 50° 05′ 42″ W.
SBM No. 2 (East), Lat. 30° 01′ 52″ S., Long. 50° 04′ 35″ W.

DOCUMENTS: Also see "General" before first port.

Cargo Manifest, Bill of Lading, Cargo's Quality Certificate, Time Sheet and Ullage Report from the Loading Port, Narcotics List, Crew List, Stores List, Crew's Baggage Declaration, Passenger's List.

PILOTAGE: Sea Pilot not required. On daylight arrivals the PETROBRAS launch will meet the ship 2 miles Northeastward from SBM No. 2, carrying the Mooring Master, Port Authorities, Terminal's workers, equipment for mooring and connection of hoses. All manoeuvres will be undertaken by the vessel's Master with the help of a TEDUT Mooring Master who will board the vessel in the anchorage area and advise the vessel's Master on all operations such as mooring, connecting hoses, unloading, unmooring, etc.

It is important to emphasise that the services of the Mooring Master are afforded without charge and upon the express undertaking and condition that PETROBRAS shall not be liable for any damage or injury resulting from any advice, assistance or actions given or made by such Mooring Master. In the event it becomes necessary to disregard the Mooring Master's advice, in order to ensure safety of the vessel, the Master must forward a full written report of the circumstances for delivery to the Captain of the Port through the Terminal. It is the responsibility of the Master to notify the Mooring Master of any special conditions or peculiarities such as defective navigation equipment, tackle, gear or lack of necessary equipment, which might impose hazards related to handling, mooring and unloading the vessel. Vessel must be moored to the entire satisfaction of the Mooring Master. Unsatisfactory conditions will be reported to Superintendent of the Terminal, who is empowered to reject the ship for future calls unless the reported difficulties have been remedied.

ANCHORAGE: The advisable anchorage sites are: For tankers with a draft of 15 m. (50 ft.) or less, the anchorage is in position Lat. 29° 59′ 00″ S., Long. 50° 04′ 30″ W., or with SBM No. 1 (West) bearing 213° at a distance of 1.5 miles to 2 miles, where depth is 20 m. (65 ft.)

For tankers with a draft of more than 15 m. (50 ft.), the anchorage is in position Lat. 30° 00′ 00″ S., Long. 50° 03′ 00″ W., or with SBM No. 2 (East) bearing 217° at a distance of 2 miles to 2.5 miles, where depth is 24 m. (79 ft.)

The seabed in the anchorage area is fine sand and mud. Mooring Masters will board arriving tankers in those areas.

APPROACHES: See Brazilian Chart No. 2010.

There are 3 conspicuous water towers named *Tourist, Agrimer* and *Tramandai.* There is also a meteorological watch steel tower nearby the pier in position Lat. 29° 58′ 32″ S., Long. 50° 07′ 21″ W. There is also, located side by side a lighthouse tower and a radio beacon steel tower, both at position Lat. 30° 00′ 27″ S., Long. 50° 08′ 05″ W. Characteristics of lighthouse: Flash (3) group – white 12 sec. – 25 m. 15 M. Characteristics of radio beacon: Code FB – FOX/BRAVO – continuous, frequency 300 kHz, range 300 miles.

SBMs' Light Characteristics:	Flash Colour:	Yellow
	Flash:	0.5 sec.
	Eclipse:	3.0 sec.
	Period:	3.5 sec.

RESTRICTIONS: Due to the peculiar conditions of the terminal, mooring undertaken only at daytime. Sometimes the leaving of launches seawards depends on the height of tide and the strength of the waves. Tankers may have to wait for favourable weather conditions so that mooring may safely be started.

MAX. SIZE: SBM No. 1 (West), designed for 105,000 d.w.t. tankers, max. draft 16 m. (52 ft.). SBM No. 2 (East), designed for 200,000 d.w.t. tankers, max. draft 19 m. (62 ft.). The distance between the vessel's bow and manifold must not be more than 100 m. for mooring to SBM No. 1 (West) or 150 m. for mooring to SBM No. 2 (East).

RADIO: Vessels bound for Tramandai should advise their ETA 48 hours prior to arrival direct to Fronape/Rio (through government coastal radio station) as well as to their Agents (through PPR – Porto Alegre Radio – government station). In turn these stations will send messages to the terminal. Confirmation or change of ETA should be cabled 24 hours before arrival. Vessels may also contact TEDUT's radio-telephony station either in AM or SSB on the following channels and frequencies:

VHF: Frequencies:

Channel 11 – 156.55 MHz.
Channel 12 – 156.60 MHz.
Channel 13 – 156.65 MHz.
Channel 14 – 156.70 MHz.
Channel 16 – 156.80 MHz.

SSB Frequencies:

Channel 3 – receives 4,125 kHz. transmits 4.125 kHz.
Channel 4 – receives 4,084.6 kHz. transmits 4,379.1 kHz.
Channel 5 – receives 8,216.7 kHz. transmits 8,740.7 kHz.

Permanent listening: VHF on Channel 14 and SSB on 4125 kHz.

When within range, vessels equipped with radio-telephone should call first on Channel 16/DELTA-156.8 MHz and then change to another agreed Channel, preferably 14/CHARLIE-156.7 MHz for mooring instruction. All ETA's should indicate whether it is local time or GMT. Weather forecasts as well as Notices to Mariners are transmitted by PWZ and PPR radio stations.

HEALTH: Display of quarantine signal – "Q" flag – on approach Tramandai must be maintained until Free Pratique is granted. The National Brazilian flag should remain hoisted throughout vessel's stay in the terminal. Port Doctor visits all ships on arrival and requires Maritime Declaration of Health, Derat Certificate, 2 Crew Lists. Vessels from another Brazilian port automatically receive Free Pratique and should not fly Quarantine Flag. If suspected disease or fever on board, it is advisable to cable Agent before arrival. Also see "General" before first port.

LAUNCHES: Mooring, unmooring and connection operations are assisted by the terminal's launches. While rendering such assistance the boats act under orders of the Mooring Master. Usually 2 service boats are at his disposition. Besides operational assistance they undertake transportation of Mooring Masters, personnel, Agents, ship chandlers and Port Authorities.

ARRIVAL: Arrival time is considered to be the time the vessel reaches the anchorage vicinity or the time the Mooring Master boards the vessel, whichever occurs first. However, Notice of Readiness will not be considered as the time of arrival unless the vessel is in all respects ready to discharge. In the event berthing is delayed by weather conditions, tankers will be unloaded in turn. If, however, the weather is so bad that the port is closed and vessels awaiting discharge have to go out to sea, TEDUT may discharge another vessel on reopening if it arrives before the return of other waiting vessels. More rarely, the Terminal Superintendent may grant priority to a particular vessel out of turn, in special circumstances only.

MOORING: The Mooring Master will advise on the method of securing the ship. Tankers are usually moored by two bow nylon hawsers of 15 in. circumference and 50 m. length. Vessel's nylon messenger lines are shackled – one at a time – to the pick-up wires of the chafing chains by the launch crew and hove in (through the vessel's windlass warping bollard) until the lengths of the chafing chains are brought over the vessel's roller chocks/fairleads. Ship's engines may help the lead-in ropes (vessel's messenger) in coming up to the SBM.

The following items must be observed: Anchors must be well at home and secured with stoppers and brakes. Windlass warping bollards must also be ready to lift chain stoppers, wire strops, shackles, senhouse slips, crowbar, hammer, spikes and other gear to be placed on board for mooring purpose (equipment supplied by TEDUT). Two good eye-spliced (9 in. at least) nylon hand-inlines must be be ready, at each side, on the fo'castle head, to be given to the launch, who in turn will shackle them to the hawser's pick-up wires (marked by little spar buoys).

HOSE CONNECTION: The Mooring Master will direct the Terminal's working men in lifting, connecting and lowering the hoses. After the vessel is securely moored, the 16 in. floating hoses must be individually lifted to the rail by the ship's gear. Sundry hose securing and connecting equipment (strops, gaskets, nuts, bolts, wrenches, etc.) will be supplied by the Terminal and put aboard the ship just after arrival. Hoses will be lifted by ship's derrick, always on the port side. Minimum lift of 5 tonnes capacity required. When wind force reaches about 8 Beaufort Scale and waves are 3.5 m. high, emergency disconnecting operation will take place, even at night time.

UNLOADING: Pumping must not be started without permission of the Mooring Master. The max. allowable pressure is 7.5 kg./sq.cm. (110 p.s.i.). While the vessel is moored, the vertical angle formed by the nylon hawsers and the sea level should not exceed 30°, for safety of the SBM's turntable. When necessary, due either to excessive pitching or by being trimmed too much by the stern, pumping of ballast must be concentrated in the fore-tanks, even if interruption of unloading becomes mandatory. So the Mooring Master may require cargo to be discharged, in certain stages, either from aft or for'd compartments.

As a rule, when unloading is over, the ship should have ballast on board at least 40% of her total d.w.t. tonnage. Besides the Mooring Master himself, some terminal workmen stay aboard ship. Therefore, room and meals for 1 officer and 6 crewmen should be supplied. Upon completion of discharge the Mooring Master will sometimes require the ship to pump sea water through the submarine pipe-lines to displace the remaining oil.

BALLAST: No slop facilities are available for dirty ballast. Brazilian laws are very strict with regard to the pollution of coastal waters. Vessels are not allowed to discharge dirty ballast into the water. Heavy fines are imposed for violations.

Tramandai is the largest Rio Grande do Sul seaside resort and any pollution of the sea in this area will cause damage to the beaches. Hence, no dirty ballast or any oily residues must be pumped overboard within a range of over 50 miles, if no safer alternative exists.

MEDICAL: Medical treatment and/or hospitalisation, if required, are provided at Tramandai or Osorio private hospitals. Serious illness will usually be treated in Porto Alegre. Dentists are also available in Tramandai. For emergency cases (injury, etc.) TEDUT first medical aid may be requested by the Master. As usual, Agent will make such arrangements.

FUEL: Not available.

FRESH WATER: Not available.

CONSTANT READINESS: Since moorings are in open roadstead, vessel's engines and gear must be ready with full power for immediate use through the period the vessel is moored and the ship must be able to clear the mooring immediately on the advice of the Mooring Master or Superintendent of the Terminal.

Whenever necessary, vessels may use their own power to prevent riding upon the SBM.

CUSTOMS REQUIREMENTS: Brazilian laws are strict with regard to smuggling and Masters are requested to instruct their crews not to retain cigarettes in carton lots, cigars, tobacco, alcoholic drinks, drugs, souvenirs, etc. These should be collected prior to arrival, listed with the items in the slop chest and placed in the custody of the Master for deposit in the chest or closet which will then be sealed for the duration of the vessel's stay at the mooring.

By no means will any commercial transactions be tolerated, be it either among terminal employees, crew members or anyone else.

CONSULATES: No consular representatives are reported to exist in the area; however, there are consulates of most maritime nations in Porto Alegre.

TIME: Local time is GMT minus 3 hours.

GENERAL: Lighters not available. Launch connection with shore is entirely dependent on weather conditions and must be considered unreliable.

SHORE LEAVE: Depends upon agreement between ship's Master and Agency.

AUTHORITY: Petroleo Brasileiro, S.A. – PETROBRAS, Terminal Maritimo Almirante Soares Dutra (TEDUT), Caixa Postal 19, 95590 Tramandai-RS. *Contact:* Nelson Nunes Toledo, Superintendent.

TUBARAO (Including Praia Mole): 20.17 S. 40.15 W.

(See Plan)

PILOTAGE: Pilotage is compulsory between the anchorage and the berth. Request for the Pilot is made by port operators (CVRD) 4 hours in advance (minimum). The vessel should indicate the time of arrival of the vessel at the entrance and from which point pilotage is required. Pilot may be contacted on the following VHF Channels: 16 for constant listening and 10, 12 and 14 for conversations.

Compulsory pilotage area is from the anchorage area where the Pilot embarks, the access channel, the manoeuvring basin and the existing piers in the port. After a Pilot receives advice of vessels arrival it takes 50 minutes for the Pilot to embark, this is done by a launch of the Vitoria Pilot Service. No difficulties are encountered when embarking except when the sea is very rough and there are strong winds.

Pilotage Area: The inner maritime area is limited by the circumference of 2.5 miles radius, centered on the Tubarao South Light in the sector included between 340° and the island Boi, as far as the berth.

APPROACHES: The access channel is 280 m. wide and dredged to 22.5 m. and runs in a 345°-165° direction. The beginning of the channel is marked by a red light buoy in position Lat. 20° 19′ 36″ S., Long. 40° 14′ 22.5″ W. and a white light buoy in position Lat. 20° 19′ 41.5″ S., Long. 40° 14′ 34.5″ W. (See NHD chart 1401).

Tides: Tidal variation is small, on average, there being 2 high tides and 2 low tides each day. The coastal current generally runs to the South with an average speed of 1 km./hour. The current is less constant in May and June. The maximum size waves, are 1.5 m. with wind coming from N.E. and 2.5 m. with S.W. wind.

Manoeuvring Area: The manoeuvring area for berthing and unberthing has a width of 150 m. along the whole length of the quay, the manoeuvring basin has a diameter of 500 m. and depth of 18.0 m. Anchoring is prohibited in the access channel and the manoeuvring area except with prior permission of the Port Captain.

Access Channel: Vessels destined for the Coal Terminal, located on the Northern edge of the access channel to the port of Tubarao, use this channel as far as slightly ahead of Buoy No. 5 (LF. ev. 3 secs.) turning to the N.E. to enter the terminal manoeuvring basin.

ANCHORAGE: The anchorage area for vessels awaiting berths is Lat. 20° 19.3′ S., Long. 40° 15.1′ W. Vessels in quarantine must anchor in an optional area indicated on chart 1401.

MAX. SIZE: See "Berthing" and "Tankers".

HEALTH: Free pratique may be obtained by radio, the message being sent to the ship's Agent by radio via "Saportos/Vitoria" at least 72 hours prior to the vessels arrival. Declaration of Health must be prepared and typed in order that it may be delivered to the doctor when he comes on board.

RADIO: Vitoria Radio Station PPV operates on the following frequencies: 2 MHz band on transmission frequencies 2086 and 2096.5 kHz and on emergency frequency of 2182 kHz.

4 MHz band – transmission frequencies 4403.9, 4382.2 and 4366.7 kHz., and on emergency frequency 4125, 4143.6 and 4072 kHz.

8 MHz band – on transmission frequencies 8802.6 and 8774.7 kHz, and reception on 8257 kHz.

TUGS: Two tugs of at least 1,500 h.p. are used when proceeding from the entrance to the manoeuvring area off the berth. When berthing 4 tugs and 1 launch assist.

Name	*H.P.*	*Bollard Pull*
Helio Ferrzaz	3,000	31.7
Tubarao	1,900	29
Itabira	1,530	16
Carajas	2,540	39.4
Trombetas	2,540	37.6
B. Horizonte	1,680	20
Guaiba	1,680	21.5
Titan	2,170	36.6
Arcturus	2,160	25
Servemar 10	1,070	7.5
Jamie	600	6
Affonso	1,640	16.4

BERTHING: Should a vessel be departing at the same time as another vessel is entering, the vessel which is leaving has priority and the vessel which is waiting to enter is to wait outside the entrance channel. Vessels are not permitted to pass each other in the channel or the manoeuvring basin. Should the weather conditions be poor, visibility restricted or too dark for the vessel to berth or unberth the decision to manoeuvre will be taken by the Pilot who may decide to change the operations to a more convenient time.

Vale Do Rio Doce Co.

Pier 1: Length 390 m. usable berthing length 350 m., depth on North Side and on South Side 16.0 m. Berthing is possible on both sides. Ship Loaders No. 1 and 2 can load vessels on both sides of the pier.

Ship Loader No. 1: Max. height of hatch coaming above sea level 12.50 m. Max. outreach of loading boom 24 m. Nominal capacity of loader 6,000 t.p.h. Vessels max. LOA 330 m. Max. sailing draft 15.20 m. plus height of tide (average 1.3 m.).

Ship Loader No. 2 (Seaward side of pier): Max. height of hatch coaming above sea level 17 m. Max. outreach of loading boom 33.50 m. Nominal capacity of loader 8,000 t.p.h. Max. length 330 m. Max. sailing draft 15.20 m. plus height of tide (average 1.3 m.).

Pier 2: Max. LOA permissible 350 m., depth alongside 24 m. There are 4 dolphins each with 2 hooks and 4 dolphins each with 3 hooks.

Storage Area: Old area 2 million tons, new area 4 million tons, factory area 1.7 million tons.

This is a new pier now completed parallel and inshore of the existing pier for vessels of 250,000 d.w.t. Max. sailing draft 20.0 m. plus tide (average 1.3 m.). Vessels berth at seaward side only to avoid ranging. 2 shiploaders, swivelling (20 m. airdraft). Load rate 12/16,000 t.p.h. No dirty ballast facilities. Heavy fines for pollution.

Should Pilot wish to berth a bulk carrier on Pier No.1, South side, (Vale Do Rio Doce Co.) and there is a vessel at the Petrobras Terminal, the vessel at Petrobras Terminal will be removed prior to berthing of the bulk carrier.

Praia Mole: The port is situated on the North side of the Bay of Espirito Santo in the approximate position Lat. 20° 17′ S., Long. 40° 14′ E., close to the port of Tubarao. It is 12 km. from the centre of the town of Vitoria, capital of the State of Espirito Santo, connected by an ashphalted road.

It is an artificial port in the open sea, functioning mainly to receive metallurigal and power generation coal and the shipment of metal products for export.

The port of Praia Mole consists of a terminal with coal receiving equipment and a terminal with equipment for export of metal products.

Coal Terminal: Built for the movement of 8 million tons/year in its first stage and 12 millions of tons/year in its second stage.

The pier is 730 m. long (operating on one side only) and the civil engineering work is finished. It should be able to receive vessels of 15,000 d.w.t. to 170,000 d.w.t. at Berth No. 1, depth 17.0 m. and vessels up to 250,000 d.w.t. at Berth No. 2 after dredging this berth to 21 m. Present depth 18.0 m. Berth No. 1 length 330 m. Berth No. 2 length 400 m. Manoeuvring basin – diameter 500 m. depth 18.0 m.

On the pier will be fitted 3 discharge units with a capacity of 1,800 t.p.h. each, two already having been fitted and operating, the third will start operations in January 1987. The discharged coal is transported via three lines of conveyor belts (1 line already functioning) for storage in the Coal Storage Area of the port or taken directly to CST or CVRD. The Coal Storage Area will have a capacity of 11 million tons, with 520,000 tons at present. In the Coal Storage Area, for stocking and recovery of coal are planned 3 stackers and 2 recovery units, with capacities per machine of 2,200 t.p.h. and 4,400 t.p.h. respectively. (Currently, 1 stacker is undergoing operational tests, 1 recovery unit is being installed.) The coal recovered from the area will be sent to the cellulos/cement industries for pelletisation by CVRD, to CST or for Usiminas/Acominas by means of a system of loading wagons on the railway system, with a capacity of 2,000 t.p.h. in the phase of current installation.

Metal Product Terminal: Built for moving 3 million tons/year in its first stage and 4.5 million tons/year in its second stage. It comprises a 638 m. long quay with depth of 14.5 m. for taking vessels from 15,000 d.w.t. to 70,000 d.w.t.

On the quay 4 loaders for metallurgical products for vessels with 40 tonnes capacity each. In the rear part of the quay will be formed an area for storage and handling products, with an area of 30,000 sq.m. in its first stage, and 100,000 sq.m. in its second stage (currently 60,000 sq.m. has been finished). This storage and handling area will have 10 rolling bridges with a capacity of 35 tons each and will be served by 5 railway lines along the quay. The railway lines are interconnecting CVRD to the quay.

TANKERS: *Petrobras Terminal:* The berth consists of 2 mooring dolphins which enable vessels of 160 m. LOA and draft of 7.9 m. to berth.

STEVEDORES: Services of stevedores not normally required. Crew open hatches.

MEDICAL: Four hospitals available.

FUEL: Diesel oil in quantities up to 100 tons can be supplied by Petrobras in road tankers at the berths, also vessels with Max. draft of 8 m. and Max. LOA 160 m. can berth at the Petrobras Oil Terminal inside the breakwater to take bunkers and diesel. Vessels at Praia Mole bunkered by barge.

Terminal Rates:

Diesel oil	– 100 t.p.h.
Fuel oil	– 150 t.p.h.
Mixture	– 80 t.p.h.
Crude oil	– 700 t.p.h.

FRESH WATER: Available at all quays of the terminal, maximum quantity per vessel 150 tons. Requests for water must be made by Ships Officers immediately on berthing. If quantity greater than 150 tons is required 48 hours notice must be given in order to establish whether or not the additional quantity is available.

POLICE/AMBULANCE/FIRE: Police Tel: 227-0057. Fire Tel: 228-5193.

REPAIRS: There is a naval repair shop in the area able to carry out normal repairs.

TELEPHONES: Not available for placing on board.

AIRPORT: 8 km. from the port with connections to other cities within the country.

HOLIDAYS: Confraternizacao dos Povos, January 1st; Passion Friday movable; Nossa Senhore da Penha, movable; Tiradentes, April 21st; Labour Day, May 1st; Independence of Brazil, September 7th; Our Lady of Vitoria, September 8th; All Saints, November 2nd; Proclamation of the Republic, November 15th; Christmas, December 25th.

BANKS: The following banks have correspondents in other countries:

Banco Frances e Brasileiro S/A: Credit Lionaise (France), Praca Presidente Vargas, 35 – Vitoria – ES. Telex: 2249.

Banco Sudameris Brasil S/A: Sudameris Paris; Comerciale Italiani; Banque de Paris et Pais Bas; Dresden Bank, Rua Treze de Maio, 48 – Vitoria – ES. Telex: 2265.

Banco Lar Brasileiro S/A: Chase Manhattan, Av. Governador Bley, 137-145. Telex: 2.2174.

Banco de Credito Nacional: Barclay's Bank – England; Av. Princesa Isabel, 53 – Vitoria – ES.

Bradesco-Banco Brasileiro de Descontos S/A (Correspondente): Av. Jeronimo Monteiro, 400 – Vitoria – ES. Telex: 132.

GENERAL:

Smoking: Smoking on tankers and OBO vessels may only take place in compartments specified and as indicated by the Master of the vessel.

Readiness: Vessels must be able to unmoor immediately in cases of emergency. Unmooring is done with the aid of tugs.

Repairs: No repairs undertaken to the vessels engines or any other repairs which may impeed emergency unmooring. Should any repairs at all be necessary these can only be done with the authority of the Terminal.

Deballasting: Discharge of dirty ballast is strictly prohibited. Failure to comply with this rule will result in fines.

Fire Fighting: The ship's fire fighting equipment must be kept in readiness at all times.

Rubbish: There is no collection service.

Deratting Service: Not available.

Stores: Specialising firms in the district, orders must be placed 24 hours in advance.

Degassing and Unloading:

a) All ore/oil and oil/bulk/ore vessels must have their holds and tanks gas free.

b) Ore/oil vessels carrying inert gas must have their holds inerted to receive ore cargo and be free of explosive gas and/or rendered inert.

c) The terminal Inspector must receive, prior to loading, a certificate stating that the vessel on berthing is free of explosive gases and has been rendered/or is inert.

d) The operation of gas freeing is not permitted when the vessel is berthed or in areas deemed to be dangerous by the Terminal authority.

AUTHORITY: Companhia Vale do Rio Doce, Superintendencia do Porto-Tubarao, C.P. 1078, Vitoria, Espirito Santo, CEP 29000, Brazil. *Tel:* (027) 238-5544, 238-5945. *Telex:* (027) 2517. *Contact:* Roberto W. Kenski, Port Superintendent.

UBU: 20.47 S. 40.35 W. (See Plan)

LOCATION: The port of Ponta do Ubu is located on the coast of the State of Espirito Santo, approximately 40 nautical miles South of Vitoria. Geographic position of the Ponta do Ubu Beacon:

Latitude: 20° 46′ 48″ S.
Longitude: 40° 34′ 40″ W.

DOCUMENTS: All ships are subject to routine arrival visits by the following port officials:

Health Officers
Customs Officers
Maritime Police Officers
Immigration Authorities
Also see "Shipmaster's Report".

PILOTAGE: Pilotage compulsory for all ships sailing through the channel, berthing and unberthing in Ubu. Pilots will board in the area of anchorage. Pilots attending the Ponta do Ubu area are members of the "Associacao dos Praticos do Porto e Barra do Espirito Santo".

All ships must provide an accommodation ladder and rope ladder, freeboard permitting. The landing platform of the accommodation ladder should be approximately 5.0 m. above the water. Boarding facilities should be adequately lighted.

Ships should request anchoring and/or berthing instructions from Ponta do Ubu Marine Operations 4 hours prior to arrival at the pilot boarding area, or when within VHF range.

Ships must not proceed beyond specified boarding area or anchorage unless so instructed by Ponta do Ubu Marine Operations.

APPROACHES: The Ponta do Ubu area is under the jurisdiction of Diretoria de Hidrografia e Navegacao (DHN), an agency of Brazil's Ministry of the Navy. Ponta do Ubu appears on DHN Charts Nos. 70, 1400 and 1402, and on Admiralty Chart No. 3972, U.S. Hydrographic Office Chart No. 24170 and Brazilian Coast Pilot (Roteiro)

Lights in the Vicinity:

Ilha Escalvada (Island)	Gp. Fl. (2)	6.0 sec.
	27 metres	9 miles
	Lat. 20° 42′ S.	Long. 40° 24′ W.
Ilha do Frances (Island)	Fl.	3.0 sec.
	48 metres	12 miles
	Lat. 20° 56′ S.	Long. 40° 45′ W.
Ilha Branca (Island)	Fl.	10.0 sec.
	5 metres	9 miles
	Lat. 21° 00′ S.	Long. 40° 48′ W.
Ponta do Ubu	Lat. 20° 46′ 48″ S.	Long. 40° 34′ 40″ W.

Channel: See DHN Chart No. 1402 as amended by Aviso aos Navegantes (Notice to Shipmasters) No. 141/77, 117/78 and 171/78. Maintained channel depth is 18.0 m. (59 ft.) referred to chart datum.

ANCHORAGE: Anchorage instructions must be requested from Ponta do Ubu Marine Operations. Anchorage area position is Lat. 20° 46′ 24″ S., Long. 40° 32′ 33″ W. Masters are advised to give due consideration to Brazilian antipollution regulations while in coastal waters.

Brazilian Government officials may board ships in anchorage for clearance formalities. Suitable and adequately secured accommodation ladder for this purpose must be provided soon after anchoring. Life ring with line with a minimum length of 50 m. should be on hand and adequate lighting provided.

MAX. SIZE: Ships arriving in ballast are requested to comply with the following recommended arrival drafts, keeping in mind indicated shiploading rates and shiploader clearance height limitations.

Deadweight	*Recommended Arrival Draft*	
Tons	*Metres*	*Feet*
30,000 to 40,000	6.1 6.7	20 – 22
40,000 to 60,000	6.7 – 7.3	22 – 24
60,000 to 75,000	7.3 – 7.9	24 – 26
75,000 to 100,000	7.9 – 9.1	26 – 30
100,000 to 150,000	9.1 – 11.0	30 – 36

Ships unable to meet these suggested drafts due to insufficient ballast capacity, anticipated deballasting problems, etc., should so advise in 48-hour ETA message, along with estimated deballasting time.

Max. Arrival Draft: 10.0 m. plus height of tide (0.6 m. – 1.6 m.) at moment of berthing.

Max. Departure Draft: 15.5 m. plus height of tide at moment of departure.

Report 1986:

Max. LOA	300 m.
Max. Beam	54 m.
Max. Airdraft	19.5 m.
Max. Sailing Draft	16.5 m.
Mean Depth Alongside	18.0 m.

HEALTH: Radio Pratique should be requested 72 hours prior to arrival, by forwarding quarantine message to Port Health Authorities through the ship's Agent. The information required is as follows:

Name and nationality of vessel; name of the last port of call; port of destination and name of Agent; nature of cargo, if any; date and place of last derating or exemption certificate; number of crew and passengers; health conditions of all on board; vaccination status of crew and passengers; ETA and any other information that may be required by the quarantine officers.

Radio Pratique does not constitute quarantine clearance, and the ship will require inspection upon arrival. Radio Pratique if granted, will enable ship to enter, berth, and commence loading prior to official quarantine clearance.

The following documents shall be submitted to the Port Health Authority boarding on arrival:

Maritime Declaration of Health, duly filled in as required by Sanitary Regulation No. 2 of the World Health Organization. Copy of up-to-date crew list. Vaccination Certificates of all Crew members as well as their seamen's books or passports.

Quarantine inspection will be carried out at the pier, or at anchorage if required, weather permitting.

Quarantine flag must be flown until Free Pratique is granted.

Masters are advised to have all vaccination certificates, derat certificate and clearance from last port ready for inspection.

RADIO: Rio de Janeiro Coast Radio Station, call sign "PPR" (Telex 491) operates on a 24 hr. basis on the following frequencies: 435 kHz, 8,634 kHz, 13,105 kHz.

The Master of an arriving vessel is required to cable his notice of ETA 15 days (or when departing prior port, if sailing distance is less than 15 days) then 5 days, 48 hours, and 24 hours prior to estimated time of arrival at Ponta do Ubu.

Five day message shall contain ETA, cargo tonnage required by hatch number and whether vessel is O.B.O. or ore/oil carrier.

48 hours message shall provide the following information: ETA, arrival draft, ballast tonnage on board and deballasting time.

24 hours message. Cable your ETA, indicate if vessel is fitted with an inerted system and if compartments will be under control of said system during loading. Also include type, manufacturer's name and the society that approved the classification of the inert system.

When within VHF range, Master is to contact the Marine Manager's office for additional information on docking schedule, anchorage arrangements and cargo information.

VHF: Ponta do Ubu Marine Operations is equipped with VHF radio monitored 24 hours a day.

Frequencies:

Calling Channel: 16 (156.800 MHz)

Working Channels: 156.375 MHz, 156.650 MHz, 156.700 MHz.

TUGS: Tug service is compulsory for all vessels at Ponta do Ubu. Tugs will operate in accordance with Brazilian regulations covering this matter.

Available tugs: 3×1,680 h.p., 20 ton bollard pull, tugs permanently based at the terminal. 1 tug on call.

All ships should be equipped with wire cable tow line with nylon pendant.

All communication between tugs and Pilots is via VHF.

Tugs will operate on the same Channel as the Marine Operations office.

BERTHING: Vessels are subject to the berthing/unberthing regulations exercised by Port Authority for night-time manoeuvres.

The port of Ponta do Ubu is owned and operated by Samarco Mineracao S.A., and is used solely for the purpose of handling and shipping iron ore.

The port consists of a breakwater protected pier, close to the shore with a dredged berth area and access channel.

Product stockpiling and transportation prior to loading: A bucket wheel stacker-reclaimer and a stacker operate in a 1,200 ft. long stockpile area. The stockpile has a total capacity of 550,000 metric tons of pellets and 385,000 metric tons of pellet feed.

During normal operations, pellets are stockpiled by the stacker-reclaimer, and pellet feed stockpiled by the stacker. Both pellet feed and pellets are reclaimed using the bucket wheel stacker-reclaimer. The reclaimed material is then conveyed to the shiploader for loading aboard bulk carriers, at rates of up to 8,000 metric t.p.h.

When reclaiming pellets, the output from the pellet plant is bypassed through the stacker-reclaimer and combined with the reclaimed pellets for shiploading. When reclaiming pellet feed, the output from the pellet plant is conveyed to the stacker, while the pellet feed output is conveyed to the stacker-reclaimer, bypassing the machine and combined with reclaimed pellet feed for shiploading.

A simple station is provided to monitor the quality of pellet feed or pellets being loaded into a given ship statistically. Samples are automatically cut from the shiploading conveyor system at preset intervals, without interrupting the loading operation. Each sample is then reduced in size, and subjected to a complete range of quality control tests.

Material reclaimed for shiploading by the stacker-reclaimer is conveyed to a rail-mounted travelling shiploader. The shiploader is designed to load vessels on either side of the pier. A loadout weigh scale located near the shiploader monitors the final product delivered for shipment.

Port facilities: Port facilities at Ponta do Ubu are located in the open sea near the apex of a shallow indentation in the coastline where currents have provided 20 m. deep water within 2 km. of the shore.

The existing depth of water in the dredged channel is minus 18 m. The main berth area was dredged initially to minus 19 m.

Berthing: The breakwater protected pier consists of a 313 m. long by 22 m. wide concrete deck, extending in a 022° 30' direction. It projects from the Eastern portion of the breakwater to a distance of 685 m. from the shore.

The pier has berths on both East and West sides.

Shiploading: The mobile rail mounted pier shiploader has a 41.6 m. fixed length boom, with a 280° turning angle and a 19.5 m. air draft. Its nominal loading capacity is 9,000 metric t.p.h.

Report 1986:

Tidal range: 0.3-1.6 m.

Max. outreach of boom from fender line: 29.0 m.

Clearance of loading at HWOST: 25.0 m.

Travel of loader: 294.0 m.

Working ranger of loader: 280°

Average loading rate: 6,000 t.p.h.

LOADING: Vessels will be generally loaded in turn, in their order of arrival, provided that:

(i) They are in all respects ready to receive cargo;
(ii) All the cargo is available at the terminal;
(iii) It is in accordance with the instructions of the charterer or his Agent.

Vessel shall present a detailed loading plan immediately on arrival, including hatch quantities, with loading sequence and quantity of ore to be reserved for fore and aft trimming by hatches.

Ships will leave berth immediately on completion of loading, unless specific permission to do otherwise has been granted by Marine Operations.

Loading hours, subject to change, are as follows: 24 hours operation, Sundays and holidays included.

All ships *must secure bilge systems* while at Ponta do Ubu.

Combination ore/oil and ore/bulk/oil carriers must ensure that ballast tanks and piping systems are free of oil contamination, prior to arrival. Gas-free condition of combination carriers must be confirmed prior to loading. Certification and inspection shall be arranged through the vessel's Agent. Vessels with inerted tanks shall be checked and monitored continuously during loading.

MEDICAL: The medical facilities nearest to Ponta do Ubu are located at Guarapari, 15 minutes away by car.

Vitoria has modern hospital facilities.

FRESH WATER: Not available.

FUEL: Not available.

TIME: Local time is GMT minus 3 hours.

AIRPORT: Guarapari (20 km.) for light aircraft (air taxi).

Vitoria (70 km.) Airport Eurico Sales, connection to other Brazilian towns.

POLICE/AMBULANCE/FIRE: Police (Guarapari) Tel. 261-0151.

SERVICES: There are supermarkets at Guarapari.

HOLIDAYS: *Local holidays:* Confraternizacao dos Povos – 1st January; Passion Friday – movable; Tiradentes – 21st April; Labour Day – 1st May; Sao Pedro – 29th June; Independence of Brazil – 7th September; All Saints – 2nd November; Proclamation of the Republic – 15th November; Day of the City and Day of Our Lady of the Conception – 8th December.

REPAIRS: No facilities.

TELEPHONES: No facilities for placing telephones onboard.

GENERAL: The Brazilian National flag shall be flown while in the Ponta do Ubu area.

Line-handling port personnel will be available for handling ship's lines during berthing and unberthing. All shipboard work necessary for berthing, loading and unberthing, including, but not limited to, handling and tending moorings, opening and closing hatches and normal deck cleanup, shall be performed by the ship's crew.

Ships must have main engines ready and maintain watch while alongside the pier, unless specific permission to do otherwise has been granted by Marine Operations.

The nearest town is Guarapari, 15 minutes to the North by car. Vitoria, capital of the State of Espirito Santo, is about 80 minutes by car to the North. Daily flights, operated by major Brazilian airlines, connect the state capital with the rest of the country.

Ships causing oil pollution, dumping of waste, refuse, etc., in coastal waters will be liable for all resulting fines and cleanup costs. All ships must secure bilge systems while in the Ponta do Ubu area, and combination ore/oil and ore/bulk/oil carriers must exercise all precautions necessary to insure that ballast tanks and/or piping systems are free of oil contamination prior to arrival. *Accidental and deliberate oil or oily mixture discharges in the area must be reported to Ponta do Ubu Marine Operations IMMEDIATELY.*

There are no shore facilities available at the terminal for receiving slops, and dirty or contaminated ballast. Masters are cautioned that discharging of anything other than uncontaminated ballast will be subject to penalties as prescribed by Brazilian law.

Solid garbage and refuse disposal ashore can be arranged through Marine Operations.

Weather conditions and temperatures are moderate with year-round average highs of 27°C (80°F) and year-round average lows of 19°C (66°F).

Winds recorded are less than 30 knots more than 95% of the time and prevailing winds are East to N.E. Local winds may have a significant effect on the tide.

There are no significant currents noticed in the turning basin.

For general information about currents in the Ponta do Ubu area, use South Atlantic Pilot Charts and Brazilian Coast Pilot (Roteiro).

Sea conditions are generally moderate.

Meteorological bulletins are available 24 hours a day through Rio de Janeiro coast radio station, Radio Arpoador, call sign PPR. 17,194 kHz.

SHIPMASTER'S REPORT: 1978.

Documents: Please refer to other Brazilian ports, vessel came from Rio de Janeiro so only the Agent and the Customs boarded and asked for 3 Crew Lists, 1 Custom Store List and 1 Personal Effect List. We were told that to go ashore every Crew member needed a pass with picture attached but crew went to the near town of Guarapari after showing passport or an identity card at the gate.

Pilotage: The Pilot boards about 2 to 3 miles outside the channel. He comes on board by Pilot boat based at Point Ubu and even though we were in very light condition wanted to use the pilot ladder. Pilots come from Tubarao and Vitoria.

Restrictions: Until now the maximum draft allowed on arrival at all times has been 11 m. while the maximum sailing draft is 16.5 m. at high water in fair weather. The Pilots Association have asked for buoys No. 13–11–9–7 to be removed from their actual position and only buoy No. 9 to be placed in front of the 9.8 m. patch. They say that numerous soundings over the patch always show 11 m. so 9.8 m. does not exist. The Pilot told me that these changes might take place around March/April 1978, but nothing certain.

Tugs: Three tugs are based at Point Ubu namely the "Scorpius", "Polaris" and "Aquidauana". The first 2 are good and operate respectively on the bow and stern of the ship with 2 ship's nylon ropes. If vessel over 200 m. in length the Port Captain orders a fourth tug that must come from Tubarao (about 3 hours) and it is very helpful and powerful.

VHF: Marine Operations answered us about 2 hours from berth (30 miles).

Bulk Cargo Facilities: We were the sixth ship to load in this port, the loading rate is around 4,000/5,000 t.p.h. at present.

Medical: Ship's Agent can arrange to send people to the doctor at any time or to the hospital in the near town of Guarapari.

Density: Checked over 3 days and always found to be 1026.

Loading: The Bill of Lading figures are taken from the weightometer which is believed to be extremely correct, but it showed a difference of 1,000 long tons over 37,000 long tons loaded on the ship. A surveyor carried out a draft survey on arrival and it was said that it was a check on the weightometer, being normal check that was carried out for these early loadings but the real figures are taken from the weightometer. 2,000 long tons before completion of loading we stopped for trimming and the scale showed about 1,000 long tons more loaded than the ship's figures. Because of this, the Terminal considered the ship's figures (survey) and to these figures they added according to the scale the quantity we requested to complete loading.

OPERATORS: Samarco Mineracao S.A.

Ponta do Ubu: Postal address: Caixa Postal 205, 29.200 Guarapari, .S. Brazil. Tel. 261–1344, 261–0448. Area code* 027. Telex 272204 (SASA BR). Contact: Ruben E. B. Brena, Manager.

Central Office: Avenida Carandai, 1115, 18th floor, 30.000 Belo Horizonte, MG, Brazil. Tel. 222-4022; Area code*; 031. P.O.Box: C.P. 1317. Cable address: Samarco. Telex 031-1474.

Rio de Janeiro office: Avenida Nilo Pecanha, 50, 5th floor, Suite 510, 20.000 Rio de Janeiro, Brazil. Tel. 222-9756, 224-8306, 224-3935. Area code*: 021.

*Code for Brazil: 0055.

AUTHORITY: Capimar – Vitoria, Praca do Trabalho 66, Centro-Vitoria. *Tel:* (027) 222-4622. *Telex:* 0272102. *Cables:* Capimar Vit. *Contact:* Captain Figueria.

VILA DO CONDE: 01.33 S. 48.45 W.

LOCATION: Situated on the right bank of the river Para, in the district known as Ponta Grossa, Municipality of Barcarena/Pa., about 40 km. from Belem. The port is an integral part of the industrial port complex built in the region of Barcarena, in conjuction with the two aluminium companies, Albras and Alunorte.

APPROACHES: The access channel to the port is the same as for the port of Belem, as far as the front of the Island of Mosqueiro from there onwards, vessels proceed to the port of Vila do Conde via the Bay of Marajo, no restrictions of depth in this stretch. They pass to the side of the islands of Cotijuba, Arapiranga and Carnapijo.

BERTHING: Length of pier 251 m. width 45 m.

The external berth for solid bulk cargo has a depth of 20.0 m. at low tide; the internal berth for general cargo has a depth of 20.0 m. at low tide. The quay can take vessels up to 45,000 d.w.t.

Equipment: 3 stackers and 1 mobile crane. Conveyor belt 4,500 m. long for moving aluminium, copra, pitch and bauxite. Suction plant with 2 tubes and a capacity of 250 t.p.h. per tube.

One covered warehouse measuring 50 m.×150 m.

AUTHORITY: Companhia Docas do Para, Avenida Presidente Vargas 41 - 20 Andar, Belem, Para, Brazil. *Tel:* 223-0056, 223-2066.

VITORIA: 20.19 S. 40.17 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory. Vessel approaching port should communicate with Agent through local radio station, giving date and hour of arrival at pilot station so that they can arrange for a Pilot to be at the roads on arrival. Communicate direct to Pilot Association through VHF Channel 16. Pilots maintain 24 hour watch.

ANCHORAGE: The official limits of the port are:

Arc of a circle of 1 mile radius, seaward, with centre at Santa Luzia Lighthouse. There is a 8.9 m. patch which will be removed in the near future.

Notice of Readiness is accepted as at time the Master radios advising vessel has anchored, SHINC, lay time starting 3 hours afterwards (subject to C/P).

No draft limitations at anchorages.

APPROACHES: Length of access channel 3.5 miles, width 120 m., depth 10.6 m. Maximum speed allowed 5 knots.

RESTRICTIONS: All sailings are to take place on a rising tide. Vessels of up to 205 m. can enter day or night.

Vessels from 205 m. to 240 m. can enter during daylight hours, weather permitting. Vessels of this length must be assisted by 3 tugs, 2 of which must be of at least 1,000 h.p. and the other of at least 400 h.p.

For turning in the manoeuvring basin, 2 tugs are required, 1 to be of at least 1,000 h.p. and the other of at least 400 h.p.

MAX. SIZE: 35 ft. draft at HW and 32 ft. at LW. Also see "Tankers" and "Developments".

HEALTH: Free Pratique obtained by radio to Agents, addressed for "Saportos Vitoria" followed by ship's name, last port, ETA, and the letters ZT (meaning "my replies to the 6 questions on the port health declaration are negative"), and ZS (meaning "the sanitary condition of my ship is satisfactory"). Pratique is granted when this message is delivered by Agent to the port doctor. Also see "General" before first port.

The Agent may send a reply containing the group ZY, meaning "you have Free Pratique". In any case the time of Pratique is registered as time that the ship's cable was received by the Health Authorities. This Pratique does not allow the crew to go ashore until after Customs clearance.

Crew vaccinations are done free.

The Port Doctor usually arrives onboard some time after the visit of Authorities and it is important to have the Health Declaration ready for handing to him by a responsible person (to avoid a fine).

RADIO: Local radio station, Vitoria Radio, call sign PPT. This radio station normally used by Agents when cabling vessels.

Operating Frequencies:

2 MHz band on transmission frequencies 2086 and 2096.5 kHz and on the emergency frequency of 2182 kHz.

4 MHz band – transmission frequency 4403.9, 4382.2 and 4366.7 kHz on the emergency frequency 4412.5 and 4143.6 kHz.

8 MHz band on the transmission frequencies of 8802.6 and 8774.7 kHz and reception 8278.7 kHz and 8250.8 kHz.

VHF: Request Pilot on Channel 16 and 12 one hour before arrival. Upon notice it then takes Pilot 40 minutes to reach vessel.

TUGS: Tugs join vessels at anchorage. Ship's lines used. Tugs have no lines on board. The lines given to tug-boats should be without wire as the swell usually prevailing causes severe sudden stresses on the tow lines.

2 tugs of 1,680 h.p., (20 tons) and 4 tugs of 1,600 h.p. (22 tons).

Vessels up to 2,000 g.r.t. require 1 tug, up to 10,000 g.r.t. require 2 tugs and over 10,000 g.r.t. require 3 tugs for berthing.

Vessels up to 2,000 g.r.t. require 1 tug and vessels over 2,000 g.r.t. require 2 tugs for unberthing.

BERTHING: Also see "Developments".

Commercial Quay: No restrictions for vessels berthing at Nos. 4 and 5 Warehouse, entrance and sailing at any stage of tide. Max. drafts are:

No. 5 Warehouse – 28 ft. 02 in., max. length 597 ft. 2 in.
No. 4 Warehouse – 27 ft. 06 in., max. length 597 ft. 2 in.
No. 3 Warehouse – 27 ft. 10 in., max. length 508 ft. 9 in.
No. 2 Warehouse – 13 ft. 01 in., max. length 393 ft. 8 in.
– 16 ft. 04 in., max. length 328 ft. 1 in.

Vessels at Nos. 2 and 3 restricted to sail on flood tide only.

Usiminas Quay – Coal Discharge: Max. draft 35 ft., max. length 853 ft. Limited to entry only at beginning of ebb tide; sailing at any stage of tide. Discharge by 3 mechanical grabs, daily unloading rate, 15,000 long tons.

Iron Ore Berths:

Atalaia Quay: Max. draft 31 ft. 2 in., max. length 787 ft. 5 in. Vessels berth and sail on flood tide. Entering and sailing during night or day; max. length 657 ft. 10 in. during the day only, 787 ft. 5 in.

Paul Quay: (Also see "Shipmaster's Report") Max. draft 29 ft. 10 in., length 524 ft. 11 in. There is one loading area with a capacity of 600/900 t.p.h. depending on type of ore. Max. reach beyond quay edge, 49 ft. Max. height extremity of hook at 18 in. elevation, 52 ft. at HW, 59 ft. at LW. Width of pontoon, 14 ft.

CRANES: Eleven electric gantry cranes 1.5 – 12.5 tons capacity, 3 mobile cranes 10 – 30 tons capacity and 1 heavy lift crane 200 ton capacity.

BRIDGES: Bridge under construction in position Lat. 20° 19′ S., Long. 40° 17′ W.

TANKERS: *Esso and Shell Terminal:* Berthing and unberthing can take place during day or night period, provided vessels draft does not exceed 22 ft. Max. length permitted 531 ft. 5 in. with max. draft of 27 ft. Vessels must enter on ebb tide and sail at high tide.

STEVEDORES: On ETA cable general cargo ships should include number of gangs required.

MEDICAL: No advance notice of required medical attention. Hospital facilities available.

DENSITY: Average density at Vitoria 1025. Somewhat lower during rainy season.

FRESH WATER: Fresh water available at Commercial Quay, Vitoria Iron Ore Berths, Usiminas Quay and Esso Terminal. Rate of delivery 30 t.p.h.

A barge with capacity of 50 tons may be adapted to carry water.

FUEL: *Esso Berth:* Bunkers can be taken here, supplied under gravity only.

Max. draft 27 ft., and length restricted to 162 m. Due to various factors, the taking of bunkers in Vitoria is not recommended, however, fuel is available by road tanker at the Commercial Quay. Rate 10,000 litres/hour.

Esso and Petrobras can supply Bunker "C", fuel oil and diesel oil, the last two being available by truck.

WATCHMEN: Compulsory at commercial quay in Vitoria. Not available at Vitoria Ore Terminals.

OPENING/CLOSING HATCHES: Normally done by stevedores except in cases of modern vessels using MacGregor hatch covers, when crew asked to close hatches.

CUSTOMS ALLOWANCES: Each Crew member allowed 200 cigarettes out of the bond. One bottle, wine or spirits opened, for each Crew member.

REPAIRS: Deck and engine repairs available.

REPATRIATION: There are 3 flights daily from Rio de Janeiro to Vitoria.

AIRPORT: Airport located 8 km. from centre of town and is served by 3 airlines with daily flights to Rio de Janeiro, Salvador, Recife.

TIME: Local time GMT minus 3 hours.

HOLIDAYS: January 1st; April 21st; May 1st; September 7th and 8th; November 2nd and 15th; December 25th; Good Friday; Nossa Senhora da Penha and Corpus Christi. Only holiday when no stevedore work is possible Good Friday; exception made to iron-ore loading.

IDENTIFICATION CARDS: Required with photographs to enable officers and Crew members to go ashcre. Agents supply forms.

CONSULS: The following countries have consular representatives in Vitoria:

Argentina
Belgium
Finland
France
Great Britain
Netherlands
Italy
Lebanon
Portugal
Uruguay
Germany (F.R.)

POLICE/AMBULANCE/FIRE: Police Tel: 190. Maritime Police Tel: 2230173. Radio Patrol Tel: 2270992. Ambulance Tel: 2224646. Emergency Hospital Tel: 2230203. Fire Brigade Tel: 193.

TELEPHONES: No facilities for placing telephones on board.

DEVELOPMENTS:

Capuaba Quay:

The Capuaba Quay is in its final stages of completion, with silos and refrigeration installations.

Cold Store: With capacity of 5,000 tons in its first phase, and 15,000 tons in its final capacity, intended for refrigerated storage of general (meat and juices).

Silo: With capacity of 30,000 tons in the initial stage and 90,000 tons in its final phase, it will be equipped with cleaning, drying, classification, weighing and bagging equipment.

It has an 84 m. tower, made of blocks of cells 35 m. high and 8.5 m. diameter. It can take cereals, (maize, soya, sorghum) at the rate of 600 t.p.h., and delivery at the rate of 1,200 t.p.h., and can, in the case of imported wheat, receive at the rate of 300 t.p.h. With 765 m. of quay, Capuaba will also deal with the exportation of industrial products, such as cellulose, metal products and general cargo. The installations include warehouses, for metals of 7,500 sq.m. and general cargo 4,000 sq.m., there is also open area storage of 82,000 sq.m. for containers.

Capuaba Quay: (Already installed).

Length of quay: 655 m.
Depth: Max. 11.5 m. Min 7.8 m.
General cargo warehouse: area of 4,000 sq.m.
Storage open area: area of 82,000 sq.m.
Road and rail access.
  Length of roadway: 3,120 m.
  Width of platform: 16 m.
  Length of bridge over River Aribiri: 126 m.
  Length of railway: 660 m.
Port Silo capacity: 30,000 tons in the first phase and 90,000 tons in the final phase.
Purpose: Export of cereals (soya, maize and sorghum) and importation of wheat.
Operational speed: 1st phase: 1,200 t.p.h.
  2nd phase: 1,800 t.p.h.
Cells: 8.5 m. diameter and 35 m. high.
Elevation tower: 84 m. high.
Belt transporter: 800 m.
Fresh Water: Available. Rate of delivery 50 t.p.h.
Cranes: Two electric gantry cranes 6.3 tons capacity, 2 electric gantry cranes 12.5 tons capacity, 1 electric gantry crane 32 – 40 tons capacity.

SHIPMASTER'S REPORT: February 1986.
Vessel: 40,000 d.w.t. Length 625 ft. 5-hold bulk carrier.
Berth: Paul Quay.
Cargo: Loading pig iron.

The following information was obtained during loading at Vitoria.

Question: What is the draft alongside the loading berth at low tide?
Answer: 32 ft. brackish water. This is not true all the way along the berth, as for a length of about 50 m., by way of where No. 2 hold was, there is a mound of mud, which is at a depth of 26 ft. at LW. This mud is very soft.

Question: What is the minimum air draft?
Answer: 39 ft. This also can be more as the loading arm can be raised a further 6 ft., but of course then will not over reach the centre of the hold. There is no need to have ballast in No. 3 hold.

Question: What is the loading rate per hour?
Answer: If the cargo is available and if the machinery does not break down 800 t.p.h. is possible.

Question: What is the water density at low and high tide?
Answer: Low tide 1010, high tide 1024.

Question: How is the quantity of the cargo determined?
Answer: The cargo arrives by train loads and the weight is known but there is no shore scale at the loading equipment and the weight is determined by draft survey.

Question: What is the storage factor of the pig iron?
Answer: 10.80 cu.ft. per long ton.

Question: Which side alongside?
Answer: Always starboard side alongside and ship's gangway used.

Question: Availabilty of fresh water?
Answer: Yes, available at the berth. The vessel must use its own hoses. Unlimited amount.

Question: When are draft surveys taken?
Answer: By Charterer's Surveyors, prior commencement of loading and on completion of loading. The Charterer's Surveyors must be advised prior to commencement of loading of the quantity of bunkers and fresh water that the vessel intends to load. Draft survey determines the Bill of Lading.

Question: What are the working hours?
Answer: 0600–2200 hrs. each and every day.

Question: How many loaders?
Answer: One which moves on rails to which ever hold is to be loaded into.
Details of the loader's dimensions.
  Height of loader arm from the jetty, 9.25 m.
  Height from the water level at LW to the quay 3.10 m. (Neap tides).
  Length of loader outreach 20.7 m. However, distance from loader on its rails to edge of the quay 6.25 m. and further deduction of 3.25 m. for thickness of fender.

Question: What are the facilities for bunkering?
Answer: All bunkers are supplied in Brazil by Petrobras and at Victoria are supplied when the vessel is alongside and are ex-barge. Bunkering can be carried out during loading.

Additional Information: Soundings taken on the starboard side of the vessel indicate an area of mud by way of No. 2 hold.

The vessel moors starboard side alongside and two floating pontoons are placed between the ship and the jetty. These pontoons are 5.0 m. long and 3.5 m. wide. As already stated there is 26 ft. of water only at low tide at No. 2 hold. Therefore once the loading has reached almost that stage, for the vessel to remain afloat, it is necessary to move the vessel further from the quay forward. The floating pontoons are placed one forward and one aft. If the vessel is hove in aft using the breast lines and the head lines slackened then the bow will come off the quay and an additional floating fender can be placed forward thus the vessel will lie against 2 fenders. There is then enough water to load to 9.75 m. forward at low tide.

Local information says that some ships just ignore the mud (it is very soft) and just load to 9.5 m. without placing the additional fender in place. Once the vessel is lying alongside 2 fenders forward the loader arm can still deposit the cargo into No. 2 hold in the centre of the hold but for No. 1 hold this would not be possible. Therefore, if possible, ensure that the cargo to be loaded into No. 1 hold is completed before moving the vessel off the quay and placing the second fender.

AUTHORITY: Companhia Docas do Espirito Santo, Empresa do Sistema Portobras, Av. Getulio Vargas No. 556, Vitoria, Espirito Santo, CEP 29000. *Tel:* (027) 222-1311. *Telex:* (027) 2118. *Contact:* Gerardus Maria Franciscus Zaeyen, Director-Presidente.

Brunei State

BANDAR SERI BEGAWAN: 04.53 N. 114.56 E.

Brunei State is an independent country governed by H.M. the Sultan with a Council of Ministers and Legislative Assembly. The capital town of Bandar Seri Begawan (formerly known as Brunei Town) is situated 16 miles upriver from Muara Harbour which is at the mouth of the Brunei River. Use of the town wharf at Bandar Seri Begawan is restricted to small wooden coastal vessels operating within the Brunei Bay area not exceeding 80 ft. in length overall and 50 tons gross registered tons. The port of Bandar Seri Begawan comprises a reinforced concrete wharf 730 ft. long with a wharf apron 76 ft. wide and a passenger pier 124 ft. long with a wharf apron 63 ft. wide. Three transit godowns are provided.

BANKS: The Hong Kong and Shanghai Banking Corporation, Bandar Seri Begawan, Brunei. Tel: 22305/22306.

The Chartered Bank, Bandar Seri Begawan, Brunei. Tel: 22386/22458.

The Bank of America, Bandar Seri Begawan, Brunei. Tel: 224911.

The Citibank, Bandar Seri Begawan, Brunei. Tel: 23983/23984.

EMERGENCY CO-ORDINATION CENTRE: The Duty Officer, Search and Rescue Co-ordination Centre, Royal Brunei Armed Forces, Emergency Tel: 32777 or 31111 extension 462.

SURVEYORS: Cargo surveyors and non-exclusive classification society surveyors are available.

SHIP SUPPLY SERVICE:

1. Brunei Shell Petroleum Co. Ltd., Seria, State of Brunei Darussalam.
2. O.I.L. Industrial Services Ltd., P.O.Box 2320, Bandar Seri Begawan, State of Brunei Darussalam.
3. Jackson Marine Mashoor Pte. Ltd., P.O.Box 980, Kuala Belait, State of Brunei Darussalam.
4. Marine Services Ltd., P.O.Box 489, Kuala Belait, State of Brunei Darussalam.

AUTHORITY: Jurisdiction for land based operations in the Ports of Brunei: Controller of Ports, Ports Department, Muara Port, Muara, Brunei. *Tel:* 72240/72220 *Cables:* Ports, Brunei.

Jurisdiction for water based operations in the Ports of Brunei: Director of Marine, Marine Department, H.M. Customs Building, Bandar Seri Begawan, Brunei. *Tel:* 22293/22294 *Cables:* Marine, Brunei.
Contact: I. G. Faraker, Director of Marine.

LUMUT: 04.43 N. 114.26 E. (See Plan)

DOCUMENTS: The Master will be required to provide 12 copies of the Crew List, Last Port Clearance and International Declaration of Health.

PILOTAGE: The Berthing/Loading Master will board incoming vessels approximately 2 miles North of the berth.

Masters are requested to provide a good lee for the launch to facilitate the boarding of the Berthing Master. The regulation pilot ladder should be rigged.

ANCHORAGE: Anchorage Area for vessels calling at Lumut (Anchorage "C") is located approximately 2 miles North of the loading platform, in the area contained within the following limits:

Latitudes: 4° 45′ N. and 4° 43.5′ N.
Longitudes: 114° 25′ E. and 114° 27′ E.

APPROACHES:

Approaches to the Berth: Mariners are warned that drilling rigs may be encountered when approaching the Brunei coast. Latest Notice to Mariners should be consulted.

RESTRICTIONS: Lumut is not an all weather berth. Sea and swell conditions could cause delays by preventing buoy work, or by causing unacceptable ship movements either during berthing or in berth.

Draft Calculations: There are three factors which are liable to limit the ship's draft:

(i) The approaches to the berth where rolling is likely to reduce the clearance under the keel.
(ii) The pitching movement of the ship in the berth, also likely to reduce the keel clearance.
(iii) The vertical limits within which the loading boom tie rod can be safely connected to the ship's pedestal.

Rolling in the Approaches to the Berth: The swept depth in the approach to the berth is 10.95 m. (36 ft.) below A.C.D.

An underkeel clearance of at least 0.60 m. (2 ft.) is to be maintained at all times after allowance has been made for roll.

The following calculation applies:

Depth of water below A.C.D.	10.95 m.
Allowance for roll	−2.00 m.
	8.95 m.
U.K.C. after allowing for roll	−0.60 m.
Maximum draft on arrival	8.35 m.

Pitching in the Berth: The swept depth in the Southern part of the berth is 10.95 m. (36 ft.) below A.C.D.

An underkeel clearance of at least 0.60 m. is to be maintained at all times after allowance has been made for pitching.

Depth of water in berth below A.C.D.	10.95 m.
Allowance for pitching	−1.00 m.
	9.95 m.
U.K.C. after allowing for pitching	−0.60 m.
Maximum draft	9.35 m.

Vertical Limits Under the Loading Boom: Levels on the Loading Boom are referred to Seria Datum which 28.23 m. below A.C.D. Clearance should be calculated on the following lines:

Distance from underside of keel to top of ship's tie rod pedestal	31.51 m.
Draft, say	−8.35 m.
Distance from waterline to top of ship's tie rod pedestal	23.16 m.
Height of tide, say	+1.00 m.
Distance of top of ship's tie rod pedestal above A.C.D.	24.16 m.
Correction, A.C.D. to Seria Datum	+28.23 m.
Height of ship's tie rod pedestal above Seria Datum	52.39 m.
Allowance for pitching in swell waves	±1.00 m.
Range of heights of ship's tie rod pedestal above Seria Datum	51.39 m. 53.39 m.

This range must lie within the safe vertical operating limits of the loading boom, which is 50.40 m. to 53.70 m. above Seria Datum.

When connecting the loading arms it is necessary to first haul down the boom rapidly in order to bring the base of the tie rod hood within the retarding section, i.e. to less than 55.90 m. above Seria Datum. A clearance of about 2.00 m. should then be maintained between the base of the tie rod hood and the top of the ship's pedestal before commencing the final stage of the haul down. In the example shown in this section the base of the hood would be brought down rapidly to a point about 55.5 m. above Seria Datum.

HEALTH: A detailed shipping report has to be completed for the Brunei Government Marine Department. Agent will provide the forms for completion.

If the vessel comes from an infected port or its state of health is suspect, the Medical Officer may board in order to inspect crew and relevant International Medical Certificates.

RADIO: *Arrival Advice:* Confirm ETA at least 48 hours in advance, also declaring Bill of Health and estimated cooldown time required. W/T traffic should be passed through Singapore Radio, and addressed to Crosfield Kualabelait.

When within range, vessels are requested to make direct W/T contact with Brunei Shell Petroleum Company (call sign BSP ONE) at the following local times (GMT plus 8 hours) 0945 hrs., 1345 hrs. and 1745 hrs. B.S.P. will transmit on 8558 kHz call sign BSP ONE and listen out on 8354 kHz to 8374 kHz.

When contact is made on this frequency a standard information cable will be transmitted to the ship.

VHF: A VHF station at Seria (call sign BSP ONE) maintains a continuous watch on Channel 16 with Channel 19 as a working channel.

A VHF Station (Port Control) at Lumut (call sign Lumut Control) maintains a watch from 12 hours before vessel's ETA, on Channels 9 and 73 as working channels.

TUGS: Available in an emergency only.

BERTHING: This is an open sea berth situated approximately 4.5 km. offshore from the coastline in the vicinity of Seria.

Two mooring boats assist running moorings. Normal berthing approach is made from Westward. As vessel enters berth confines, an anchor may be used underfoot to assist turning the ship.

Head wires and stern wires are run as required. Head buoys are each fitted with 2 quick release hooks to take the nylon tails of ship's mooring wires. Stern wires are made fast to quick release couplings fitted to the seaward end of the stern mooring nylons on the dolphins. After moorings have been passed, vessel is warped into position with the ship's stern loading platform directly under the loading arms on the gantry.

A loading platform, with loading gantry is situated approximately 2.6 miles offshore. A trestle supporting the loading lines runs from the platform to the shore in a direction 150°T. A branch trestle 380 ft. long runs 240°T from the main trestle, about 350 ft. inshore of the platform, to the Marine Flare. Ship moors stern to the loading platform, using 3 head buoys, and 4 stern dolphins. Heading in berth is 000°.

The loading platform is connected to the shore by a trestle which carries the gas pipe-line. No facilities other than LNG and gaseous nitrogen are provided at the platform.

Design Concept: This is not an all-weather berth.

It has been designed so that the berth may be safely used up to the following limiting conditions:

Swell moderate (significant height 1.86 m.)
Wind speed 30 knots
Current velocity 0.5 knots
or
Swell slight (significant height 0.60 m.)
Wind speed 45 knots
Current velocity 1.0 knots.

The higher swells are normally experienced from directions between N.E and N.W. and the limiting current conditions occur with the current setting across the line of the berth.

Loading Platform: The loading platform carries the crane. It is protected on its North, East and West faces by a heavy defence structure designed to prevent damage to the loading platform in the event of a mismanoeuvre or mooring failure onboard the ship. No moorings are run to the loading platform.

Ship's Moorings: Nylon tails: 5×200 ft.×120 mm. diameter nylon rope tails of plaited construction with a leathered eye at both ends are provided for use on the forward wires at the Lumut berth. These are only for use at Lumut and should be fitted before arrival and disconnected after sailing. Five Mandel type connectors are provided for attaching the nylon tails to the 48 mm. mooring wires forward.

Navigational Aids: The berth is designed for day or night mooring and unmooring. Navigational lights are provided on the mooring buoys and on the trestle head.

SAFETY: Emergency shut down and disconnection systems are provided to protect the loading system in the event of a mooring failure or if the manifold reaches the edge of the loading crane envelope due to the elongation of the stern ropes under load. Under the present state of knowledge, it must be recognised that mechanical or material failures can occasionally occur in mooring systems while, pending the results of further current observations, there may be a possibility of a current running across the berth at times at a rate exceeding 1 knot.

The primary consideration is to ensure that the ship does not contact the defence around the stern loading platform as a result of a failure in the head mooring system. For this reason, the head rope is to be doubled by using the forward 48 mm. wire from either the port or starboard mooring winch on the forward mooring deck. Two 48 mm. main moorings with nylon tails will thus be run to the head buoy.

Additionally, if there is any doubt as to the good condition of winch brakes or of a main mooring and if such defect cannot be corrected prior to berthing, it will then be for the decision of the Master in consultation with the Port Services Department, BSP, whether to:

(a) Delay the ship to effect repairs.
(b) Delay the ship until weather, current or swell conditions improve.
(c) Berth the ship with the added security of additional moorings.

In reaching this decision, account must be taken of weather forecasts, observed current, winds and waves and the local estimation as to likely changes in these conditions during the loading period.

Any defects in mooring equipment must be reported promptly to Port Services Department, BSP.

In that some uncertainty still exists as to whether currents in excess of 1 knot may be experienced at times running across the berth, the observed set and drift of the current should be checked with Port Services Department, BSP, prior to berthing. Unless there is clear evidence that the rate of the prevailing current can be expected to remain below 0.5 knots, additional breast lines should be put out to hold against the currrent.

Particular attention should be paid to the warning contained in Admiralty Sailing Directions No. 31 regarding the increase in rate of currents associated with tropical revolving storms.

The additional breast lines forward are obtained by using either the port or starboard wire from the after drums of the two forward mooring winches.

Winch Brakes: Once the ship is moored, winch brakes *must be fully applied* thus ensuring that the designated holding power is obtained from the winch throughout the time that the ship is in the berth.

Attention to Mooring Whilst in Berth: Moorings should not normally require attention during the time that the ship is in the berth other than the routine checking of winch brakes.

It is important, however, to ensure that individual moorings do not become slack for any reason and should this occur the mooring should be tightened up to provide the initial tensioning required.

The Berthing Master will indicate any change in tensioning in after moorings which could lead to a significant displacement of the ship's loading platform relative to the crane.

If it appears that the ship is in danger of moving out of the loading envelope very careful account must be taken of the prevailing wind, current and swell before taking any corrective action. Loading must be discontinued and the loading boom disconnected.

Attempts should not be made to adjust moorings against a high load which may approach the heaving power of the winch.

Preparation for Leaving Berth: This is not an all-weather berth and conditions will arise where it is necessary to vacate the moorings due to deteriorating wind, swell or current conditions. A careful check must be kept on conditions throughout the time that the ship is in the berth in conjunction with the Berthing Master and preparations made to leave the berth if the design limits for the moorings are being approached. It should also be realised that the mooring boat is limited to operating in sea conditions of about 6 ft. height and if this condition is exceeded, the boat may not be able to reach the head buoys and release the hooks.

Unberthing: Standard Manoeuvre: Having singled up fore and aft, the ship can then be released from the moorings and steam out between the head buoys on a suitable course.

LOADING: *Hoses:* Vessel loads through a special loading platform on the stern. The gantry supporting the loading arms is connected to the ship's loading platform by means of a tie rod. Loading/vapour/nitrogen arms and the tie rod are secured by quick release couplings.

Shore Line System: 2×18 in. LNG loading lines from shore to loading platform. LNG can be loaded through both lines, or circulated back to shore on one line. Shore lines lead to 2×16 in. liquid loading lines in loading arms. A further line leads vapour back from ship's manifold to Marine Flare, while a fourth line, the hybrid, may be used either for liquid/vapour return as required. A nitrogen supply line (shore to ship) is also included in the loading arm system.

Ship to shore communication during loading is by direct telephone.

During loading operations, an Emergency Shut Down System (ESDS) operates to stop cargo and disconnect loading arms safely in the event of an emergency.

Berthing/Loading Master stays on board during loading operations.

DENSITY: 1020 – 1025.

FRESH WATER: Not available.

FUEL: Not available. Bunkers can be obtained at Lutong (Miri).

REPAIRS: Small emergency repairs may be carried out in Brunei Shell Petroleum Company's workshops. Request for repairs should be made in advance by radio.

TIME: Local time is GMT plus 8 hours.

SHORE LEAVE: Not permitted.

GENERAL: *Special Regulations:* The Brunei national flag should be flown during hours of daylight.

The ship's main radio transmitters must not be used whilst the vessel is moored at Lumut.

Immobilisation of Engines: Vessels are not permitted to immobilise main engines whilst at the berth.

Stores and Laundry Facilities: Not available.

Tank Cleaning and Dirty Ballast Facilities: Not available.

AUTHORITY: Brunei Shell Petroleum Co. Bhd., Seria, Brunei. *Tel:* (673) (03) 78443. *Telex:* BU 3133. *Contact:* Captain P. Gill, Head of Marine Offshore Operations.

AGENCY: Agent for all Shell Owned and Chartered vessels calling at Lumut is Jasra Harrison, Jalan Sungei, P.O.Box 16, Kuala Belait, Brunei. *Cable Address:* Crosfield Kualabelait.

MUARA PORT: 05.01 N. 115.04 E. (See Plan)

PORT LIMITS: The sea area within Lat. 4° 58′ N. and 5° 05′ N. and Long. 115° 03′ E. and 115° 10′ E.

DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
2 Dangerous Goods Lists.
2 Manifests (plus 1 additional copy for Port Department).
1 Health Document.

PILOTAGE: Application for Pilot 24 hours in advance by telegraph through ship's Agents. Pilot boat awaits at Beacon No. 1, Lat. 5° 03′ 39.9″ N., Long. 115° 06′ 06.3″ E. Pilot boat painted white with green awning. If on arrival No. 1 Beacon pilot boat not visible then ships should call "Muara Harbour Radio" on VHF Channel 16. Pilotage compulsory and available daylight hours only. Vessel should anchor in vicinity of No. 1 Beacon when awaiting Pilot.

ANCHORAGES: Safe anchorages available vicinity No. 1 Beacon, S.E. of Tanjong Sapo Light (Lat. 4° 59.7′ N., Long. 115° 07.6′ E.) and in Muara Harbour 4 cables S.S.W. of the wharf.

RESTRICTIONS/MAX. SIZE: Entrance to Muara Harbour restricted to daylight hours only at present. Minimum depth in dredged channel 32 ft. ACD. Max. length of vessel 600 ft.

RADIO: See "Tanjong Salirong".

VHF: Ports Department VHF Channels 11, 12, 13, 14 and 16 in operation Mondays to Thursdays and Saturdays from 0745 to 1630 hrs. local time. Call sign "Muara Port".

RADAR: No port radar service available.

TUGS: A Government owned tug is available to assist with berthing and unberthing ships. The tug has a 20 ton bollard pull, firefighting equipment and oil pollution dispersal equipment.

BERTHING: Marginal wharf 1,400 ft. long with depth 32 ft. ACD alongside. Inner Berth 285 ft. long with depth 17 ft. ACD alongside. Mobile shore cranes available up to 30 tons capacity.

STEVEDORES: Provided by ship's Agents. Major commodities are general cargo and cement, oil well cement, tubulars, machinery and vehicles.

MEDICAL: Hospital available 16 miles from port. Port Health Clinic outside port main gate.

DENSITY: Salt water.

FRESH WATER: Readily available at wharf, cost Brunei $4 per 1,000 gallons.

FUEL: High speed diesel available in small quantities.

CONSULS: There are several Consulates, Embassies and High Commissions in Bandar Seri Begawan.

REPAIRS: Minor deck and engine room repairs possible.

DRY DOCKS: None.

SURVEYORS: Lloyd's and American Bureau are represented.

GANGWAY/DECK WATCHMEN: Not compulsory but available through Agents on request.

HATCHES: Opening and closing by crew or stevedores at ship's option.

CARGO GEAR: Loading/discharging normally effected by ship's gear but 30 tonne capacity mobile crane available from Ports Department on request. Slings, nets, tarpaulins, 30 ton capacity low loader and container platform trailer available from Ports Department.

REPATRIATION: There is no Shipping Office but ship's articles are countersigned by the Director of Marine on request.

AIRPORT: International airport 12 miles from port. Regular services to Singapore, Hong Kong, Manila, Kuala Lumpur, Bangkok, Sydney and direct flights once weekly to United Kingdom.

TIME: Local time is GMT plus 8 hours. No alterations in clocks throughout year.

POLICE/AMBULANCE/FIRE: Police 72333 and 22366. Ambulance 22366. Fire 72255.

TELEPHONES: Available onboard with prior arrangement with Telecoms Dept.

SERVICES: Diver available, cold store facilities available.

SHORE LEAVE/IDENTIFICATION CARDS: After clearance inwards Crew members are allowed ashore if in possession of discharge book, identity card or passport.

BANKS:

Bank of America NT & SA, Suri Building Jalan Tutong, P.O.Box 2280, Bandar Seri Begawan. Telex: BU 2235.

The Chartered Bank, 145 Jalan Chevalier, P.O.Box 186, Bandar Seri Begawan. Cable: Chartbank.

CitiBank N.A., 147 Jalan Chevalier, P.O.Box 2209, Bandar Seri Begawan. Telex: BU 2224.

EMERGENCY CO-ORDINATION CENTRE: S.A.R. Control Berakas, Telephone BSB-32777.

STORING: See "Prelims".

1. Yes.
2. Yes.
3. Yes.
4. Yes.
5. Import goods on arrival to be deposited in Customs Warehouse or depending on quantity and weight may be stored outside warehouse. Dangerous goods are not to be stored in warehouse except with Customs approval.

Export cargo to have Customs Declaration approved before storing onboard ship.

6. Yes, but requires supervision.

HOLIDAYS: Hari Raya Puasa, Hari Raya Haji, Chinese New Year (all dates moveable) Christmas Day. Work can usually be arranged on all holidays with exception of Chinese New Year when direct delivery to vehicles only available.

AUTHORITY: *Land Side:* Controller of Ports, Ports Department, Muara, Brunei. *Tel:* 72240, 72220. *Cables:* Ports Brunei.

Marine Side: Director of Marine, Marine Department, Bandar Seri Begawan, Brunei. *Tel:* 22294.

SERIA: 04.43 N. 114.19 E. (See Plan)

LOCATION: Seria is an open sea berth port. At present 2 SBM's are in operation located approximately 5.4 miles off the coast in the following positions:

SBM 1: Lat. 4° 42′ 51″ N. Long. 114° 18′ 53″ E.
SBM 2: Lat. 4° 42′ 50″ N. Long. 114° 19′ 44″ E.

WARNING: Masters are requested to give the numerous drilling structures in this area a wide berth.

FLAGS: The Brunei National Flag should be flown during hours of daylight.

DOCUMENTS: *Papers Required On Arrival:*

6 copies of the Crew List. If the vessel is stemmed for Japan, 6 extra copies are required from non Japanese flag vessels.
2 copies of International Maritime Declaration of Health.
2 Vaccination Lists on the first visit and subsequently a single updated List.
1 copy of Last Port Clearance.
2 copies of Ship's Stores Declaration.
2 copies Crews Effects Declaration.
2 copies Cargo Declaration.
2 copies Passenger List (if applicable).

The boarding clerk will supply and prepare the following documents for the Master's appraisal and signature:

Marine Shipping Report. The form will be completed by the boarding clerk who will need to see the ship's papers.
Quarantine Entry Declaration Form.
Inward Manifest.

Departure: Bills of Lading will be completed by the Berthing Master before the vessel sails.

PILOTAGE: The Berthing Master and Mooring Assistant board incoming vessels 2 miles North of the SBM.

Masters are requested to provide a good lee for the launch to facilitate the boarding and lifting of radio sets and mooring equipment.

The pilot ladder must be in good condition, fitted with spreaders, be properly rigged and secured, adequately lit at night and well clear of the ship's propellers. When the accommodation ladder is used it must be rigged well clear of the water with a pilot ladder below to gain access to the main ladder.

Crew members must be in attendance at the ladder head where a lifebuoy and clean heaving line should be sited.

The Pilot should be met at the ladder and escorted to the bridge. The Berthing Master and Mooring Assistant remain on board throughout and will require accommodation during the vessels stay.

APPROACHES: *Approaches to the Berth and Anchorages:* (See "Plan").

There are many oil field production structures off the coasts of Sarawak, Brunei and Sabah coupled with a large amount of exploration and drilling activity. These field structures both surface and subsurface pose a hazard to navigation and Masters are advised that they should give all these activities and fields a good wide berth.

ANCHORAGE: A tanker anchorage (B) (see "Plan") is located approximately 3 miles North of the SBM berths in the area contained within the following limits:

Lat. 4° 45′ N. and 4° 47′ N.
Long. 114° 17′ E. and 114° 19′ E.

Tankers should not anchor in any other locations due to the presence of many submarine pipe-lines throughout the oil field and adjoining areas.

RESTRICTIONS: No port restrictions.

MAX. SIZE: SBM 1: 313,000 d.w.t. max. draft: 58 ft.
length between bow and manifold max. 680 ft.
SBM 2: 200,000 d.w.t. max draft: 53 ft.
length between bow and manifold max. 540 ft.

An allowance may also be made for 'Loading over the tide', at the discretion of the Terminal and dependent upon prevailing weather conditions.

HEALTH: *Customs and Health Requirements:*

A detailed shipping report has to be completed for the Government Marine Department. Agent will provide the forms for completion.

If the vessel comes from an infected port or its state of health is suspect, the Medical Officer may board in order to inspect the crew and relevant International Medical Certificates. Customs Officers do not normally board incoming vessels but may do so with the Agent.

TUGS: Available in emergency only.

BERTHING: Berthing and unberthing is carried out night and day.

Mooring can usually be safely carried out in sea/swell heights of between 6 ft. and 8 ft., operations are normally suspended if heights are in excess of 8 ft. The operation however is governed by the mooring boat performance in the sea conditions prevailing at the time.

Wind speeds in excess of 20 knots make it difficult to prevent the "bow falling off" when on final approach. Berthing operations are as a rule suspended when wind speeds exceed 25 knots. Again this is governed by the mooring boat performance and the ships handling characteristics.

Tanker Moorings: Tanker moorings from the buoys comprise of two 12 in. circumference two-in-one braided nylon endless grommet type mooring ropes complete with floating sleeves. They have a soft eye to each end, both ropes being 150 ft. long and have a breaking load of 396 tons when new. Fairlead chafing chains with triangle connecting plates are attached to the tanker end of the moorings. Each chain is 25 ft. × 3 in. diameter stud link chain constructed of special quality U2 grade steel. Incorporated within the chain is a further connecting triangle plate for larger tankers.

A 10 in. circumference × 40 ft. polypropylene pick up rope is shackled to the end connecting triangle plate, the free eye of the rope being buoyed off for easy recovery by the mooring launch (See "Plan").

The buoy end of the 12 in. circumference nylon mooring ropes are pinned into a twin triangle plate which in turn is secured to lugs on the revolving turntable by short lengths of chain and connecting shackles.

Preference will be given to vessels complying with the O.C.I.M.F. Standards for Equipment Employed in the Mooring of Ships at Single Point Moorings.

Mooring Equipment: Two portable UHF radios for ship/shore communications during loading are passed to the tanker when the Berthing Master boards approximately 2 miles North of the buoy. If required, for vessels not complying with the O.C.I.M.F. Standards, mooring equipment consisting of 2×15 in. circumference two-in-one braided single type nylon snotters 80 ft. long, with forelock shackles for connecting to the triangle plates are lifted on board the tanker with the ship's derrick from the lee side. In good conditions the equipment is normally taken directly onto the forecastle from the mooring boat, a ship's mooring rope being lowered to the boat and the snotters shackled to the end of it.

The mooring equipment is set out on the forecastle head during the tanker's approach to the SBM.

The snotters must be so placed to be clear of any structure and other forecastle gear and equipment that may cut or damage them. (See "Plan").

LOADING: The starboard derrick should be rigged to lift a minimum of 7 tons and the crew ready forward with a ship's mooring rope to take the mooring equipment.

Load-on-Top: Unless the vessel has other instructions then the "Load-on-Top" system applies.

Slops *cannot* be accepted ashore.

Position of Hose Connections: Starboard side amidships.

Hose derrick should be rigged to lift at least 7 tons and the vessel to have the appropriate reducers fitted to take standard 16 in. manifold hoses 150 ASA. Hose connection and disconnection is carried out by the ship's crew.

Pipe-lines and Floating Hose Strings

Pipe-lines: 2 submarine sea lines are laid from the terminal to the buoys. A 32 in. line, 33,000 ft. long to SBM No. 1 and a 24 in. line 32,200 ft. long to SBM No. 2.

A 24 in. crossover line 5,500 ft. long joins the "T" piece connection situated 4,100 ft. from SBM No. 1 plem to the Western plem valve on No. 2 SBM. All lines are concrete coated and cathodically protected with aluminium anodes.

The main sea lines terminate at "T" piece manifold plems. 75 ft. and 66 ft. from the vertical axis of the buoy on SBM No. 1 and No. 2 respectively.

Two underwater hose strings in "Lazy 'S'" configuration connect the manifolds to the underbuoy flanges. No buoyancy tanks are fitted on these strings.

Connected to the buoy turntables are 2 floating hose strings of 885 ft. in length for SBM No. 1 and 785 ft. for SBM No. 2.

Floating hose strings are electrically continuous except the tail end hoses, which isolate the cathodic protection of the SBM from the tanker.

Spare hoses are held in stock to increase the length of the strings to accommodate VLCC tankers should these be programmed for Seria Terminal.

Either floating hose string can be isolated to allow loading through 1 hose, by closing the butterfly valves sited on the buoy turntable.

CARGO PARTICULARS: Crude Oil and BNGL Liquid only.

Approximate API and SG's at Loading Temperatures.

Seria light export blend	API 36 at 60°F	SG 0.8348 at 83°F.
Champion export	API 24 at 60°F	SG 0.9100 at 83°F.
BNGL	API 52 at 60°F	SG 0.7711 at 83°F.
BLSB	API 34 at 60°F	SG 0.8566 at 83°F.
BSB	API 43 at 60°F	
BC	API 67 at 60°F	

These figures are subject to change.

Approximate Loading Rates:

SBM I Champion export, SLEB and BLSB 5,000 cu.m./hr.
SBM II BC, BSB, SLEB, BNGL and CE 2,600 cu.m./hr.

Ships are required to load cargo as rapidly as possible in accordance with the terms in their Charter Parties. They are expected to load as fast as Seria Terminal can supply or they can safely receive. The question of how fast a ship may load is the responsibility of the Master having regard to his Owner's instructions and Charter Party and experience of his crew.

Loading is controlled by portable UHF radio sets taken on board with the Berthing Master. Incorporated in these sets is an emergency shut down button which when activated stops all the shore pumps. During loading, four hourly figure comparison checks in long tons are required to ensure no subsea leaks develop undetected.

DIRTY BALLAST: There are no tank cleaning or dirty ballast facilities. All ships must arrive with clean ballast, pumps and lines. Pollution in any form is strictly prohibited.

RADIO: *Information Required Prior to Arrival:*

Radio Advice: Confirm ETA at least 48 hours in advance also declaring state of Health, Master's name, number of crew, destination, and quantity of cargo required.

This data is used to obtain the vessel's "Seria Port Clearance," in advance.

W/T Traffic should be passed through Singapore Radio, and addressed to Crosfield, Kuala Belait or Borneo Kuala Belait (Agents) as appropriate.

The Agent will pass ETA's to the BSP Marine Department and to Seria Oil Terminal.

Vessels making their first call at Seria port will receive a comprehensive message from the Agent describing the location of the anchorage and information on pilotage, radio stations and papers required on arrival.

When within range, vessels are requested to make direct W/T contact with Brunei Shell Petroleum Company (Call sign "VSL-1" or Brunei Shell Radio) at the following local times (GMT + 8 hrs.) 0945 hrs. to 1020 hrs.; 1345 hrs. to 1420 hrs.; and 1725 hrs. to 1820 hrs.

BSP will transmit on 8558 kHz, call sign Brunei Shell Radio, and listen out on 8354 to 8374 kHz. When contact is made on this frequency a standard information cable describing necessary derrick and mooring arrangements will be transmitted to the ship by BRUNSHELL.

The ship's radio station must not be used whilst the tanker is moored to the SBM.

Agent:

The Agent's launch is equipped with a VHF radio and a single side band radio transmitting on 4400 kHz and 5923.5 kHz.

Agent boards arriving vessels from morning to about 2100 hrs.

VHF: A continuous watch on Channel 16 is maintained both by Brunei Shell Radio and by Seria Terminal. Vessels should contact either of these stations as soon as practicable, passing her latest ETA at Seria Pilot Station. While berthing, Channel 13 is normally used to communicate between bridge, mooring boat and forecastle.

Brunei Shell Radio uses Channel 19 as working Channel and can link the ship with the Agents through the Government telephone system.

MEDICAL: In cases where medical attention is required then the Agent will arrange for the patient to be taken by launch and car to the hospital. This journey involves a 40 minutes launch ride to an open sea landing stage which can only be used in fair weather. Otherwise the patient must be taken to Kuala Belait (1 hour 10 minutes by launch) where there is a possibility of delays due to tidal and weather restrictions. Unless absolutely necessary this option is not recommended.

In cases of emergency involving serious injury or illness the Berthing Master or Brunei Shell Radio can initiate Brunei Shell Petroleum Company "Medivac Procedure". Representation of the patients, remains with the Agent, who should be informed to immediately contact customs and immigration authorities.

DENSITY: Varies 1020 – 1025 depending on season and rainfall.

FRESH WATER: Not available.

FUEL: Bunkers are not available at Seria. They can however be obtained at Miri (Lutong).

REPAIRS: Small emergency repairs to Shell owned and chartered vessels only may be undertaken at the Brunei Shell Petroleum Company workshops. There is a small yard at Kuala Belait which also undertakes repairs.

AIRPORT: At Bandar Seri Begawan.

REPATRIATION/JOINING: Crew members leaving or joining vessels at Seria require a valid travel document for travelling through Brunei State from the airport to Kuala Belait or vice-versa. However, the Seaman's Book may be used in lieu of a Passport by all Nationalities that have ratified the ILO's (International Labour Organisation) Convention.

Crew to be repatriated from Seria have their travel documents endorsed in Kuala Belait before travelling to Bandar Seri Begawan International Airport. The Immigration Office in Kuala Belait is open during normal office hours on Monday to Thursday and Saturday. Crew arriving ashore on Friday and Sunday stay overnight in Kuala Belait. There are two morning flights daily and additional evening flights from Thursday to Sunday to Singapore for destinations worldwide.

Two flights a week are scheduled for Bangkok and Hongkong.

TIME: Brunei keeps local time of GMT + 8 hours.

SHORE LEAVE: No shore leave is allowed.

WEATHER: The area is affected by squalls associated with cumulonimbus and thunderstorms. These squalls, though not isolated can be very severe and peak gusts of 75 knots are not uncommon. This peak gust is brief and settles to between 25-40 knots. All squalls are accompanied by torrential rain.

SAFETY: *Safety Regulations:* As per International Oil Tanker and Terminal Safety Guide (IOTTSG).

Smoking is only permitted in places jointly approved by the Master and Berthing Master.

One man must be stationed on the forecastle to watch the buoy throughout the time the vessel is moored to ensure the vessel does not approach the SBM.

Engines must be kept available at all times.

Brunei Shell Petroleum Company Limited reserves the right in the event of flagrant and continued disregard of safety requirements by any ship to stop all operations and order the vessel off the berth for appropriate action to be taken by Charterers and/Owners concerned.

GENERAL: *Refuse:* No garbage, rubbish or refuse may be thrown overboard while the vessel is in Brunei Waters.

Stores and Laundry Facilities: None.

AUTHORITY: Brunei Shell Petroleum Co. Ltd., Seria, State of Brunei. *Tel:* (673) (03) 78443. *Telex:* Bu 3313. *Cables:* "Brunshell" Seria. *Contact:* Captain P. Gill, Head of Offshore Operations.

TANJONG SALIRONG: 04.53 N. 115.06 E.

The log-loading anchorage at Tanjong Salirong is situated 12 miles above the Outer Bar at the mouth of the Brunei River. Vessels of up to 21 ft. draft may cross the bar at HW.

DOCUMENTS: *(a)* To be produced on arrival:

Marine Department
Boarding Report.
1 Crew List.
1 Passenger List.

Customs Department
2 Inward Manifests.
1 Crew List.
1 Passenger List.
1 Port Clearance.
1 Stores List.
1 Arms List.

Agents
2 Inward Manifests.
1 Crew List.
1 Passenger List.
2 Hatch Lists.
1 Arms List.

(b) To be supplied before ship's departure:

Customs Department
1 Outward Manifest.
1 Passenger List.
1 Crew List.
1 Export Declaration.

Immigration Department
1 Passenger List.
2 Crew Lists.

Vessels
2 Outward Manifests.
Port Clearance.

PILOTAGE: *Bandar Seri Begawan:* Pilotage is not compulsory. If a Pilot is required by a vessel proceeding to Bandar Seri Begawan a written request must be made at least 24 hours before ship is scheduled to arrive. This must include position where Pilot is required to embark (i.e. at Outer Bar or Sapo Point).

Muara Harbour: Pilotage is compulsory. Application for a Pilot for entering Muara Harbour must be made by written request at least 24 hours before arrival. Pilots board vessels in Brunei Bay at the Northern end of the entrance channel through Pelompong Spit.

Tanjong Salirong: Pilotage is not compulsory. If a Pilot is required for vessels loading logs at Tanjong Salirong then application must be made 24 hours in advance of arrival stating position where it is required for Pilot to embark (i.e. at Outer Bar or Sapo Point). A Customs Officer and Agent's clerk will proceed to Tanjong Salirong from Muara Harbour or Bandar Seri Begawan and will remain on board whilst vessel is loading, accommodation and food provided by ship. Stevedores and tally clerks provide their own food.

ANCHORAGE: Vessels entering Muara Harbour without berthing space will be anchored 5 cables S.S.W. of wharf. If so desired ships may discharge perishable cargo at anchorage into lighters. Consignees must make arrangements with Agent to obtain permission from Customs, who will provide a Customs Officer to attend to discharge.

RADIO:

State of Brunei
Notice to Mariners No. 9 of 1984
Brunei, North West Coast
Establishment of Port and Harbour Radio Station

Date: With immediate effect.

Details: Mariners are advised that a Port and Harbour Radio Station, call sign "VSL3" and in plain language "Muara Harbour Radio" has been established in the Marine Department Signal Station located at the main entrance channel to Muara Harbour in position:

Lat. 05° 02′ 21″ North Long. 115° 05′ 20″ East

and has been put into operation for the convenience and safety of port and harbour users with immediate effect. Details of the radio equipment installed, hours of operation and operating procedures are as follows:

2. A listening watch is kept on VHF Hague Plan Channel 16, (156.8 MHz) radio telephone daily from 0745 hrs. until 1630 hrs., Brunei Time (GMT plus 8 hours). Working Channels are listed below:

International VHF Hague Plan Channel Number	*Channel Allocation*
Channel 16	Calling and Safety
Channel 11	Ship to Shore Working
Channel 12	Ship to Shore Working
Channel 13	Ship to Shore Working
Channel 14	Ship to Shore Working
Channel 8	Pilot and Tug Operations

3. A listening watch is kept on medium frequency radio telephone on 2182 kHz daily from 0745 hours until 1630 hours, Brunei Time.

Single Side Band radio telephone working frequencies are as follows:

Serial No.	*Frequency in kHz*	*Frequency Allocation*
1	2222	Shore to Ship Working
2	2767	Shore to Ship Working
3	4170	Shore to Ship Working
4	6445	Shore to Ship Working
5	8065	Shore to Ship Working
6	12016	Shore to Ship Working
7	16112	Shore to Ship Working

4. Additionally, the following equipment is available to assist ships in distress and with Search and Rescue operations:

4.1 Auto Alarm equipment guarding the wireless telegraphy distress frequency of 500 kHz which is triggered by the first 4 dashes of the International Distress Signal consisting of 12×4 second dashes with a 1 second interval between each dash.

4.2 Auto Alarm equipment guarding the radio telephone distress frequency of 2182 kHz which is triggered by the 2 tone alarm signal transmitted over a period of a least 30 seconds but not exceeding 1 minute.

4.3 A listening watch is kept on the radio telephone aircraft distress frequency of 121.5 MHz daily from 0745 hrs. to 1630 hrs., Brunei Time.

4.4 Radio Direction Finding equipment is available to automatically determine the bearing of a distress signal on wireless telegraphy 500 kHz, radio telephone 2182 kHz, VHF radio telephone Channel 16 (156.8 MHz) or VHF radio telephone 121.5 MHz.

Charts Affected: B.A. No. 2134 and 2109.
Authority: Director of Marine.
Reference: MB 35/200/83 (68).
Date: 11th February, 1984.

HEALTH: *(a)* Immigration: Immigration Officer will board vessel and clear her inward after pratique granted by Port Health Authority. Immigration will require 2 copies of passenger lists and 2 copies of crew list. Vessels inward are cleared up to 2000 hrs. only.

(b) Quarantine: For vessels coming from outside State of Brunei, Port Health Authority will board on arrival at wharf or anchorage. Port Health Authority requires complete copy of Entry Declaration of Health and copies of passenger and crew lists.

STEVEDORES: Stevedoring is in the hands of contractors who supply gangs as required. Working hours are 0730 hrs. to 1215 hrs., 1315 hrs. to 1600 hrs., 1900 to 2300 hrs. (overtime). Overtime is usually worked from 1900 to 2300 hrs., permission to work overtime is required from the Customs Department. No tally clerks available. All tallies to be made by ship's own tally clerks.

MEDICAL: Government General Hospital is situated in Bandar Seri Begawan 16 miles from Muara Harbour. General Hospital is well equipped with facilities to carry out normal surgery. Inoculations and vaccinations given free of charge.

FRESH WATER: Can be supplied from the wharf at Muara Harbour and Bandar Seri Begawan. No fresh water is supplied at Tanjong Salirong. No water-boat in State.

FIRE PRECAUTIONS: Fire-floats are stationed at Fire Brigade sub-station near Customs sub-station in Bandar Seri Begawan. A Government tug with fire fighting capabilities is stationed at Muara Harbour.

CONSULS: There are several Embassies, Consulates and High Commissions in Bandar Seri Begawan.

HOLIDAYS: The Brunei Government working days are Monday to Thursday and Saturday, Friday and Sunday being holidays. Application must be made to Customs for working on Friday and Sunday and other public holidays. Brunei, being a Muslim State, insists on strict observation of all Muslim rites such as The Sultan's Birthday, Har Raya Puasa, Hari Raya Haji, etc. Chinese New Year is also observed.

POLICE/AMBULANCE/FIRE: Emergency telephones numbers are:

From	*Fire*	*Ambulance*	*Police*
Bandar Seri Begawan	22555	22366	22333
Muara	72255	22366	72333

AUTHORITY: The Director of Marine, Marine Department, H.M. Customs Building, Bandar Seri Begawan, Brunei.

NOTES

Please also advise Shipping Guides Ltd.

Bulgaria

BOURGAS: 42.30 N. 27.29 E.

Well protected port at inner end of Bourgas Bay, with good roads, anchorage.

DOCUMENTS:

Master's Declaration.
Cargo Plan.
Custom's Manifest.
Charter Party.
Derat Certificate.
Health Condition Certificate for Crew Members.
Manifest and Consignment of Cargo.
Provision List.
Crew Lists.
Passenger List.
Crew Passports.

PILOTAGE: Pilotage in Inner Roads compulsory for vessels above 100 g.r.t. Application for Inner Roads Pilot must be made to Agents "Inflot" at least 2 hours prior to arrival (if incorrect ETA given – pilotage fee is doubled).

Outer Roads pilotage not compulsory. Vessels requiring Outer Roads pilotage must advise Agents "Inflot" at least 12 hours before time required and give position of required pick-up point.

Applications for Pilot should include Nationality and call letters; gross tonnage; date (2 figures); time (4 figures) when Pilot required; draft in metres (4 figures).

APPROACHES: Through fairway, depth of channel 29 ft. 6 in. LW.

ANCHORAGE: Outer Roads. Vessels anchored must keep close watch on Roads Signal Station for orders given by flag or signal lamp. Vessel ordered by Authorities to proceed to position Lat. 42° 39′ N., Long. 27° 56′ E., for clearance and Pilot.

RESTRICTIONS: Arrival and sailing from Western Port and Fish Port day and night.

RADIO/VHF: Bourgas 500 kHz and VHF Channels 16 and 28. Port Control VHF Channels 16 and 11. Pilots VHF Channel 14.

TUGS: Available and compulsory for vessels over 1,000 g.r.t. Tugs join vessels in the Roads. Tugs lines used.

BERTHING: Compulsory piloting for vessels over 50 g.r.t. Container handling facilities available. 2 berths available for bulk carriers, 11 berths for general cargo ships. No specialised berth for passenger vessels, conventional berth can be provided with 5 days notice.

CRANES: Berths are equipped with electrical portal cranes with capacity from 3 to 32 tons. 100 ton capacity floating crane available.

STEVEDORES: Available. Liner ships and chartered vessels on liner terms are obliged to use stevedore and tallyman service.

MEDICAL: All facilities available.

TANKERS: Oil port Drujba. Height of quay 2 m.

Berthing: At the S.W. corner of the Bay there are 2 "T" shaped berths, max. depth 40 ft. There are mooring dolphins for vessels length 250 m.

There is an additional tanker berth for vessels loading only, to the South of the "T" shaped berths, depth 30 ft.

Discharging: 2 × 8 in. hoses are connected to the pipe-line on the catwalk. Discharge rate 1,800 to 2,000 t.p.h. depending on the back pressure. The height limit of the hoses is about 54 ft. above sea level. The berth is protected from the prevailing N.E. wind.

Report received 1977 states that the max. draft is 39 ft. – no length limitation. Max. draft at the Product Berth (gas oil) is 23 ft.

DENSITY: 1012 – 1014.

FRESH WATER: Available through hose hydrants or ex-barge. 24 hours notice required.

FUEL: From VTO "Transimpex" Tel: 45751. 72 hours notice required, diesel and gas oil available, also Shell and Castrol lubricants.

FIRE PRECAUTIONS: Constant day and night duty, and direct telephone connection with port fire service.

GANGWAY/DECK WATCHMEN: Vessels in Roads not permitted to have gangways down. Vessels alongside quay with lowered gangway must have manropes, safety net, life-buoys with rope of at least 30 m. length attached, an Officer on duty at the gangway and must be lit at night.

OPENING/CLOSING HATCHES: According to charter party.

CERTIFICATES:

Construction
Safety Radio
Classification
Hull and Machinery
Load-line
Cargo gear

CUSTOMS ALLOWANCES: Tobacco – 2 packets per crew member per day. Wines/spirits – for Master, as required, for crew – 1 opened bottle. No limits on board, no seals, crew are allowed to take 1 or 2 packets of cigarettes ashore.

IDENTIFICATION CARDS: Required. Crew members are given shore passes.

CONSULS: Turkey.

REPAIRS: Small repairs only.

DRYDOCKS: Floating dock with capacity 3,000 d.w.t. available.

REPATRIATION: Can be fulfilled if necessary. Replacement of crew by Bulgarian nationals is possible.

AIRPORT: Internal and international flights.

SERVICES: Tank cleaning and removal of sludge.

TELEPHONES: Port Director Tel: 42293; Pilots Tel: 47168; Customs House Tel: 42301; Bulgarian Shipping Register Tel: 47132; Shipping Agency "Inflot" Tel: 45506.

SHORE LEAVE: Allowed.

REGULATIONS: Given to Master on arrival.

DELAYS: Possible while waiting for Pilot owing to bad weather or waiting turn for berth.

TIME: GMT plus 2 hours.

HOLIDAYS: New Year (1st January); May Day (1st/2nd May); Day of Slavonic written language (24th May); Day of Freedom (9th/10th September); October Revolution (7th November). Time from 1300 hrs. on day before Sundays and Holidays until 0800 hrs. day after is non-working time, but loading and discharging carried out at overtime rates.

SHIPMASTER'S REPORT: (Vessel 107,023 d.w.t.).

Danger Area: Minefield area 43.

Documents:

Bill of Health.
6 Crew Lists.
3 Stores Lists.
3 Personal effects Lists.
Ship's documents (Register, Certificates, etc.).
No money list required.

Upon arrival Master receives Port Regulations (re: watchmen, ratguards, stoppage of propeller, waste disposal, pollution, etc.).

Radio: Bourgas Radio, Port Control VHF Channels 16 and 10; Pilots VHF Channel 14.

Density: Average 1012.

Identification Cards: Crew members are given shore passes and are allowed ashore until midnight. Persons with long hair are refused passes.

Customs Allowances: No limits on board, no seals, crew are allowed to take 1 or 2 packets of cigarettes ashore.

Repatriation: No difficulties.

Airport: Daily flights to Sofia with connecting international flights.

Tugs: Seven available.

Anchorage: Vessel ordered by Authorities to proceed to position Lat. 42° 39′ N., Long. 27° 56′ E. for clearance and Pilot. After clearance vessel proceeded to Lat. 42° 40′ N., Long. 27° 49′ E. for lightening.

Lightening: Vessel required to be lightened to 39 ft. Tankers come alongside; they carry good rubber fenders and one 10 in. discharge hose. Discharge rate varies from 1,500 – 1,800 t.p.h. according to tanker's requirements.

Berthing: At the SW corner of the bay. There are two "T" shaped berths, max. depth 40 ft. Each berth consists of 3 platforms connected by a catwalk. Length of berth used was 125 m.There are mooring dolphins but the length of vessel is 259 m. so all lines were breast ropes and springs.

Discharging: Two 8 in. hoses are connected to the pipe-line on the catwalk. Discharge rate, 1,800 to 2,000 t.p.h. depending on the back pressure. The height limit of the hoses is about 54 ft. above sea-level. Vessels are required to ballast if necessary before reaching this level. The Berth is protected from the prevailing N.E. wind.

Dardanelles Entrance: (Canakkale, Turkey) Pilot station is at Seddulbahir. Call sign "Canakkale Pilot" VHF Channel 16. During Southerly gales Pilot boards close to Kanakkale Town.

Bosporus: North entrance, pilot station at Kavagi, Pilot boards off Dikilikaya Light. Call Pilot on VHF Channel 16.

SHIPMASTER'S REPORT: January 1984.

Arrival: Prior to arrival in Bougas Roads vessel may contact Port Control on Channel 16, shifting to Channel 11.

Anchorage: Port Control advise vessel that the anchorage limits are: Lat. 42° 28′ 18″ N. and Lat. 42° 27′ 30″ N. and Long. 27° 30′ 54″ E. and Long. 27° 29′ 48″ E.

Anchoring is not allowed North of this area.

The Agent, Doctor, Customs and Harbour Master come on board and clear the vessel at the anchorage.

Documents:

1 copy Health Declaration.
6 copies Crew List.
4 copies Personal Effects List.
4 copies Stores List
4 copies Money Declaration List of Crew.

Ship's documents (Register, Loadline, Safety Construction, Safety Equipment, Safety Radio. These documents are kept by the Harbour Master and returned before sailing).

VHF: Bourgas Port Control Channels 16 and 11; Pilot Channel 14, Bourgas Radio Channels 16 and 28.

Identification Cards: Shore passes are given to all crew members and any expired passport holders are not allowed to go ashore. Crew can stay ashore until 0400 hrs.

Customs Allowance: No limits and no seal made on board. Crew can take ashore 2 packets of cigarettes. If the vessel receives any Bulgarian money (Leva) from the Agent, the Money List must be handed to the Customs Office.

The doctor places under seal all meats from all countries, except chickens. Meats are not to be used during stay in port.

AUTHORITY: Shipping Corporation, 17 Panagyurishte Street, Varna, Bulgaria.

Bourgas Port Complex, 8000 Bourgas, Bulgaria. *Tel:* 42293 (Port Director), 43140 (Harbour Master). *Contact:* M. Manolov, Port Director.

AGENT: State Shipping Agency "Inflot". Cables: "Bolinflot", Telex: 083 509, Tel: 45506, 42879.

PORTS IN THE AREA OF PORT BOURGAS

Port Nessebar: Situated on 18 miles North-eastern of Bourgas in the Bourgas Bay. Available 2 berths for passenger and other small ships with draft up to 19 ft.

VARNA: 43.12 N. 27.57 E. (See Plan)

Well protected port at inner end of Varna Bay.

DOCUMENTS:

Master's Declaration.
Cargo Plan.
Customs Manifest.
Charter Party.
Derat Certificate.
Health Condition Certificate for Crew Members.
Manifest and Consignment of Cargo.
Provision List.
Crew List.
Passenger List.
Crew Passports.

PILOTAGE: Pilotage in Inner Roads compulsory, but not compulsory for Outer Roads. Vessels requiring pilotage at Outer Roads must radio Agents "Inflot" 24 and 12 hours prior to arrival giving position of required pick-up point, also: name of vessel; nationality and call letters; g.r.t.; length; draft in metres (4 figures); date (2 figures); time (4 figures).

Pilot comes from Inner Port of Varna. In bad weather impossible for pilot boat to reach Outer Roads and vessel will be so informed by Agents "Inflot" and instructed to proceed to anchorage in Varna Bay.

Pilot boat is a patrol boat with yellow funnel and letter "P" on a blue strip and carries international recognition signals by day and night.

APPROACHES: Through fairway, depth of channel 39 ft.

ANCHORAGES: Outer Roads in area East of meridian 27° 56′ E., beyond fairways. Vessels anchored must keep close watch on Roads Signal Station for orders given by flag or signal lamp.

RADIO: Radio Varna LZW 500 kHz. LZW 42 – 8532 kHz. VHF Channels 26 and 16. Port Control VHF Channels 16 and 11; Pilots VHF Channel 14.

TUGS: Available and compulsory for vessels over 1,000 g.r.t. Ship's lines used.

BERTHING: Compulsory piloting for vessels over 50 g.r.t. Depths at quays up to 31 ft. 10 berths available for general cargo vessels, 1 berth for containers and 3 berths for passenger ships.

CRANES: Berths are equipped with electrical portal cranes with capacity from 3 to 32 tons, also 100 ton floating cranes are available.

Container Terminal: Loading and discharging of 10 ft., 20 ft., and 40 ft. containers. The necessary specialized loading and discharging equipment is available.

BRIDGES: When proceeding to and from Varna Lake, vessels pass under the new Asparuhov Bridge (45 m. above the water level).

STEVEDORES: Available. Liner ships and chartered vessels on liner terms are obliged to use stevedore and tallyman service.

MEDICAL: All facilities available.

TANKERS: 2 berths, draft 30 ft. and 28 ft.

DENSITY: 1013.

FRESH WATER: Available through shore hydrants or ex-barge. 24 hours notice required.

FUEL: From VTO "Transimpex", Tel: 230475. No. 14 Chervenoar Meiski Bul. 72 hours' notice required. Bunker "C", diesel and gas oil available. Lubricants: Shell and Castrol – 48 hours notice required.

FIRE PRECAUTIONS: Constant day and night duty and direct telephone connection with port fire service.

GANGWAY/DECK WATCHMEN: Vessels in roads not permitted to have gangway down. Vessels alongside quay with lowered gangway must have manropes, safety-net, life-buoys with rope of at least 30 m. length attached, an officer duty at the gangway and must be lit at night.

OPENING/CLOSING HATCHES: In accordance with charter party.

CERTIFICATES:

Construction.	Hull and Machinery.
Safety Radio.	Load-line.
Classification.	Cargo Gear.

CUSTOMS ALLOWANCES: Tobacco: 2 packets per crew member per day. Wines/spirits: For Master, as required, for crew – 1 opened bottle. No limits on board, no seals, crew are allowed to take 1 or 2 packets of cigarettes ashore.

IDENTIFICATION CARDS: Required. Crew members are given shore passes.

CONSULS: U.S.S.R., D.D.R. Poland, Czechoslovakia, Cuba.

REPAIRS: All kinds of repairs possible in ship-repair yard.

DRY DOCKS: Suitable for vessels up to 30,000 d.w.t.

Floating Docks: 2 floating docks with lifting capacity of 4,500 tons and 12,500 tons respectively.

REPATRIATION: Can be fulfilled if necessary. Replacement of crew by Bulgarian nationals is not possible.

AIRPORT: Internal and International Flights.

SERVICES: Tank cleaning and removal of sludge. Compass adjusting.

TELEPHONES: Port Director 223479; Pilots 227023; Custom House 225532; Lloyd's representative 227167; Soviet Register 222651; Bulgarian Shipping Register 226122; State Shipping Agency "Inflot" 222669.

SHORE LEAVE: Allowed.

REGULATIONS: Given to Master on arrival.

DELAYS: Possible while waiting for Pilot owing to bad weather or waiting turn for berth.

TIME: GMT plus 2 hours (1st October – 1st April). GMT plus 3 hours (1st April – 1st October).

HOLIDAYS: New Year (1st January), May Day (1st/2nd May), Day of Slavonic written language (24th May), Day of Freedom (9th/10th September), October Revolution (7th November). Time from 1300 hrs. on day before Sundays and holidays until 0800 hrs. day after is non-working time, but loading and discharging carried out at overtime rates.

AUTHORITY: Shipping Corporation, 17 Panagyurishte Street, Varna, Bulgaria. *Tel:* 226316. *Telex:* 077424, 077524. *Cables:* OVT. *Contact:* N. Yovchev, Director-General.

AGENT: State Shipping Agency "Inflot". Cables: "Bolinflot". Telex: 077516. Tel: 222669, 222636, 225924.

PORTS IN THE AREA OF PORT VARNA:

Port Varna-West: Situated 14 nautical miles from Port Varna. 7 berths available for bulk carriers, 3 berths for containers and 5 berths for general cargo vessels. Ships of max. 33 ft. draft proceed in one direction only, through 2 deep channels with Varna Lake between them, with limitation in speed up to 6 knots. A container platform for loading and discharging of 20 ft. containers and specialized loading/discharging equipment available.

Ferry-boat Complex: Situated 13 nautical miles from Port Varna, next before Port Varna-West. Two specialised berths for ferries with max. draft 26 ft. available.

Port Balchik: Situated 18 nautical miles North of Port Varna, for ships with max. draft 24 ft. 1 berth for bulk carriers available. Entering and leaving the port with a Pilot commencing from the Outer Roads of Port Varna.

Drujba (Port Topolly): Specialised port for wood materials. Situated on the Northern part of Varna lake, 8 nautical miles from Port Varna. 3 berths for ships with max. draft 26 ft., 21 ft. and 15 ft. available.

Port of the Thermo-Electrical Station Varna: Specialized port for coal, situated on the West part of Varna Lake, 8.5 nautical miles from Port Varna. 2 berths for ships with max. draft 32 ft. available.

NOTES

Please also advise Shipping Guides Ltd.

Burma

RANGOON: 16.47 N. 96.15 E. (See Plan)

DOCUMENTS:

Ship's Register.
Crew and Passenger List.
Dangerous Cargo List, if any.
Customs Declaration for Crew and Ship.

PILOTAGE: Compulsory. The services of Assistant Harbour Masters are required to bring ships alongside.

Vessels bound for the port of Rangoon should make for the *Dagon* lightvessel (China Bakir) Lat. 15° 59.9′ N., Long. 96° 14.5′ E. and then proceed towards *Lanthaya* lightvessel. Vessels of 26 ft. draft and over should anchor off *Dagon* lightvessel due to insufficiency of depths at the pilot station at low water, and await instructions from the pilot vessel for embarking Pilot.

Vessels below 26 ft. draft may proceed direct to the pilot vessel for embarkation of Pilot.

The pilot vessel or its relief is normally cruising or anchored at Lat. 16° 11.0′ N., Long. 96° 19.6′ E. approximately 10 miles North of *Dagon* light vessel and approximately 2 miles East of Lanthaya Light Float and 42 miles from the Port of Rangoon.

ANCHORAGES: Specific areas of the port are reserved for special anchorages as follows:

(a) *Petroleum Anchorage* at Liffey Reach just below Syriam, accommodating two vessels.
(b) *Explosives Anchorage* below Admiralty Jetty near Chokey Point.
(c) *Small Craft Anchorage* at King's Bank accommodating 20 inland vessels and schooners, etc.

ETA: 48 hours advance notice of ETA required, confirmation to be made 24 hours later or one working day ahead of the ship's ETA to enable necessary arrangements to be made regarding Pilots. Information required in the advance notice are:

(a) ETA, *(b)* Fresh Water Draft, *(c)* Speed, *(d)* Gross tonnage, *(e)* LOA and LBP.

RESTRICTIONS: Generally on a flood tide between the time of LW water to HW at the pilot station, depending on ship's actual draft and speed in order to obtain sufficient depths at the Outer Bar.

Navigation day and night during river passage, but entry into Inner Harbour is normally restricted to daylight hours.

The Master Attendant regularly issues Draft Forecasts to all steamer Agents advising them of the drafts to be obtained within the next 2 months.

MAX. SIZE: The port is accessible to vessel of 540 ft. LOA, and draft up to 28 ft. at Spring tides. The draft of the vessel entering the river is controlled by the depth available at the Outer Bar, carrying 11 ft. depth at datum. Entry into the harbour is controlled by the Inner Bar off Monkey Point, carrying from 11 ft. to 12 ft. depth at datum. These depths are subject to seasonal variations and are least during the dry season from November to May.

HEALTH:

(a) Maritime Declaration of Health signed by the Master and also by a Ship's Surgeon if one is available.
(b) Valid Derat or Derat Exemption Certificate.
(c) Valid Vaccination Certificates against cholera of crew and passengers (if a certified list of date of expiry of these Certificates is available, the issue of Pratique will be expedited).
(d) Pratique is issued by the Medical Officer on duty, after examination of the crew and passengers of the ship. The Pratique is automatic if the vessel arrives after touching other ports in the country. NO RADIO PRATIQUE IS ISSUED.
(e) Quarantine Clearance on sailing is essential.

RADIO: International single operator watch period for zone "C". Assigned frequencies are 425, 454, 468, 512, 500 kHz and 2.8, 4.26 MHz, call sign XYCZ.

In cases of inability to contact the pilot vessel by wireless the Master should send cable to the Harbour Master "Portrust" via Rangoon Radio Station, call sign XYR.

Within harbour limits contact can be made with Port Tower by light visual signalling. VHF contact can also be made with Port Tower, call sign XYU, Channel 16 (calling frequency). The working frequencies are Channels 14, 12 and 6 (Hague Convention).

TUGS: Generally not used for mooring and berthing purposes, but available in emergency.

BERTHING: There are 11 wharf berths and 2 pontoon berths for seagoing vessels:

Rice Loading Berths:

(a) *Sule Pagoda Wharf,* Berth Nos. 1 & 2 accommodating two vessels of 450 ft. each. LWOST varies from 24 ft. to 28 ft. approx.
(b) *Ahlone Wharf,* length 440 ft. accommodating a vessel of 440 ft. LWOST varies from 26 ft. to 28 ft. approx.
(c) *Hteedan No. 1,* length 456 ft. accommodating a vessel of 460 ft. LWOST varies from 26 ft. to 30 ft. approx.

General Cargo Berths:

Sule Pagoda Wharf Berth Nos. 3, 4, 5, 6 and 7 accommodating five vessels ranging from 450 ft. to 520 ft. LWOST varies from 24 ft. to 30 ft. approx. Berth Nos. 3 and 4 are generally reserved for coastal vessels.

Timber Export Berths:

Brooking Street Wharf: Berth Nos. 1 and 2, accommodating two vessels of 450 ft. each. LWOST varies from 26 ft. to 29 ft. approx.

Passenger Berth:

The Port Health Station. A Pontoon Jetty equipped with a large floating pontoon 500 ft. length and accommodating vessels of 520 ft. to 595 ft. LWOST varies from 25 ft. to 28 ft.

Moorings:

The port is equipped with 13 swinging moorings and 2 sets of fixed moorings in the Inner Harbour; 3 swinging mooring buoys at Hastings, and 2 fixed moorings for Oil Tankers. In addition, a number of mooring buoys are provided for small sized seagoing vessels.

Mooring and Berthing Procedure:

While in port, ships lie alongside wharves or moorings. The procedure is as follows:

(a) *Single Buoy Mooring* – Vessels moored with ships own cable which is led through hawse pipe and shackled on to buoy cable. The shackle is provided by the Board.

(b) *Fixed Mooring* – Same procedure as above but the vessel is moored to 4 buoys.

(c) *Berthing* – Normal ship's ropes and wires are used for berthing at wharves. In addition wharves' mooring chains are also provided for securing to ship's bollards.

FUEL: Fuel, diesel and gas oil (HSD) from Myanma Oil Corporation. Fuel oil provided by barges of 150 tons to 180 tons capacity alongside vessel during daylight hours. Coal supplied by Government Trade Corporation No. 17.

FRESH WATER: Available either directly alongside the wharves or in midstream, delivered by water boats.

CARGO HANDLING EQUIPMENT: The heaviest lifting capacity of the port is a 40-ton crane at the Brooking Street Wharf.

Heavy packages may be landed or shipped by a vessel's own tackle at the wharves subject to prior notice being given to the Traffic Manager.

STEVEDORES: In two shifts of 0800 hrs. to 1600 hrs., and 2000 hrs. to 0400 hrs. Overtime work is arranged on special request from Agents. Stevedoring undertaken by Port Authority. To enable ship's Agents to order labour gangs in time, it is important to obtain in advance the accurate ETA of vessels. Latest time to order gangs is 1100 hrs. for booking for that night and the next day. For Sundays and Holidays bookings must be made before 1100 hrs. of the preceding working day.

GANGWAY/DECK WATCHMEN: Available on application to the Traffic Manager.

The working hours of a watchman are the same as the wharf working hours.

OPENING/CLOSING HATCHES: Undertaken by port labour.

REPAIRS: Deep-sea repairs are undertaken by Board's engineers. The "Setsan Dry Dock", a tidal dock owned by the Board, can take vessels up to 1,000 tons and 250 ft. in length.

The Sinmalaik Dry Dock can take vessels up to 2,000 tons and 300 ft. in length.

FIRE PRECAUTIONS: A special land-based Port Fire Brigade is maintained by the Port Authority supplemented by a fire-fighting vessel and tugs for emergencies in the river.

CONSULS: The following countries are represented by consulates or embassies at Rangoon:

Afghanistan
Algeria
Australia
Austria
Bangladesh
Belgium
Bulgaria
Ceylon
China
Cuba
Czechoslovakia
Denmark
Egypt
Finland
France
Fed. Rep. of Germany
German Dem. Rep.
Great Britain
Hungary
India
Indonesia
Israel
Japan
Kampuchea
Republic of Korea
Laos
Malaysia
Mongolia
Nepal
Netherlands
Nigeria
Norway
Pakistan
Philippines
Poland
Singapore
Thailand
U.S.A.
U.S.S.R.
Vietnam
Yugoslavia

POLICE/AMBULANCE/FIRE: Port Police 74520; Ambulance 008; Port Fire Brigade 78653.

TELEPHONES: Ship to shore telephones are available on request.

HOLIDAYS: Independence Day; Karen New Year; Union Day; Peasant's Day; Full moon of Tabaung; Resistance Day; Thingyan; Burmese New Year; Labour Day; Full moon of Kason; Full moon of Wazo; Martyr's Day; Thadingyut; Dewali; Tazaungdaing; National Day; Christmas.

Ships may work on Sundays and holidays on application to the Chief Traffic Manager and on payment of Sunday or holiday fees.

DEVELOPMENTS: Brooking Street Wharves No. 1 & 2 to be converted for container handling. Expected to be operational 1987. The facility will be able to store 1,350 TEU. Reefer points will be provided for 54 containers. Ship's gear will be used in the initial stages.

SHIPMASTER'S REPORT: July 1978.

Approaches: Approach was from the Malacca Strait, in generally overcast and rainy weather. The last reliable fix obtained prior to picking up the Dagon Light Ship at 1330 hrs. on 6/7/78 was at 0530 hrs. on 5/7/78. From 1330 hrs. on 5th, 2° were allowed for Easterly set, apart from a 2-hour period on the 6th, when only the Compass Error was allowed. This would seem to indicate that an Easterly set was experienced, but it is possible that what actually occurred was that the vessel was set to the Eastward by the tide, from about 0900 hrs. on the 6th until the Dagon Light Ship was picked up. We sighted the Dagon at about the time and on about the bearing we expected.

The tidal information provided on B.A. Chart 823, although depending on observations obtained during the dry season, was most helpful.

On clearing the Rangoon River, shortly after HW Elephant Point, there was a slight South-Westerly tidal set, as one would expect. The departure Pilot provided the following information, which we were not able to check:

B.A. Chart 823: "Thuriya" Light Buoy is in position Lat. 15° 19′ N., Long. 95° 01′ E., and not as charted. (Charted position: Lat. 15° 20′ N., Long. 95° 10.5′ E.).

The two dangerous wrecks about 38 and 40 miles South of Thante Light are no longer dangerous.

B.A. Chart 833: The dangerous wreck between Upper Western and Upper Middle Buoys is no longer dangerous. We passed between the buoys without any difficulty, drawing 19 ft. 03 in., fresh water. The following is from our own observations: Upper Spit Buoy is now in approximate position 290°(T) – 7 cables from its charted position. All buoys, from and including Upper Spit Buoy to the berth, with the sole exception of "C.M.B." Buoy, were unlit.

Naturally, vessels do not transit this portion of the river during the hours of darkness. With the exception of Upper Spit Buoy all buoys, light floats and the light ship appeared to be in their charted positions. When crossing the bars and during the river passage very close attention must be paid to the steering. With a top-class helmsman who is really concentrating, little difficulty would be experienced. In order to carry the tide up to Rangoon, it is important that a vessel should arrive at the pilot station not later than HW Elephant Point; we were in fact 10 minutes late, and would not have continued except that we were fortunate enough to have the most senior Pilot on board.

It was noticed on departure that an inbound vessel giving an ETA at the pilot station 30 minutes after HW Elephant Point, was directed to anchor.

Anchorages: Vessels may anchor in the vicinity of the pilot station shown on B.A. Chart 823 or in the petroleum or explosives anchorages shown on B.A. Chart 833.

Berthing: Vessel was originally placed at a buoy berth, the anchor cable down the hawsepipe and shackled on to the buoy.

As we have a short length of cable inboard of each anchor with a joining shackle, this operation presented little difficulty but took considerable time.

When we were placed at the buoy, it was dark by the time the operation was completed, but if we had gone straight alongside this could have been done under twilight conditions. Neither the Pilot nor I could understand why the vessel was not berthed on arrival, since our berth was then vacant. The explanation I received was that the shore lighting was poor and that, as a safety precaution, ships are only berthed in full daylight.

At 0625 hrs. the next morning, we commenced unshackling from the buoy and the vessel was secured alongside No. 1 Berth, Sule Pagoda Wharf at 0805 hrs. We berthed starboard side to, stemming the ebb tide and river outflow. The buoy anchor remained hung off until after berthing. When berthing, the offshore anchor is placed in a convenient position to assist in getting the vessel off again. When alongside and the cable slack, we had 4.5 shackles out on the port anchor. Moorings were as follows: Forward – 3 headlines, 1 ship's wire and a shore mooring chain, all leading ahead. No spring. The shore chain is brought on board and turned up on the ship's bitts. Aft – 1 breastrope, 2 sternlines and ship's wire leading aft. No spring.

Departure: The vessel leaves the berth on the last of the ebb and drops down the harbour stern first to a position North of the transit beacons on the South bank, where she anchors until there is sufficient water to cross the Inner Bar and proceed downstream.

Pilotage: Is compulsory. River Pilots take the vessel from the pilot station to the port or buoy and Docking Pilots do the berthing and unberthing, including dropping down to the temporary anchorage. The Docking Pilot remains on board while at anchor. River Pilots, when boarding and leaving, require pilot ladder, manropes and a boatrope. Ship comes under the stern, never ahead, of the cutter, with ladder rigged on the lee side. Docking Pilots board and leave by the gangway.

Tugs: There are tugs in the port, but I understand that they are never used for berthing.

Communications: Rangoon Radio, call sign XYR, keeps regular watch schedules on 6 HF frequencies. However from departure Lae on 24th June to 2nd July, nothing was heard of this station.

Two-way contact was established on 3rd July, but after the station had instructed the Radio Officer to change frequency, it ceased working.

It was not until 0500 hrs. GMT on 4th July that traffic could be cleared. Later that day it became possible to work XYR on MF. All calls were then answered promptly and an efficient service provided.

An advice of bad propogation conditions from Portishead Radio was in effect during the period covered by the above remarks. This may have had some bearing on the difficulties experienced. The vessel arrived at the pilot station at 0830 hrs. GMT, 6th July, 1978.

VHF: The Pilot cutter and the Harbour Master's Office are fitted with VHF Channel 16. This is efficiently operated.

Telephone: I spent many hours in the Agent's office, attempting to contact London. We were unsuccessful. The hours, local time, during which one may attempt to call London, are: via Hong Kong – 0900 to 1430 hrs.; via India – 1630 to 1800 hrs. These hours are nominated by the Port and Telecommunication Corporation.

Telex: There is a telex machine in the Agent's office, and the Operator's normal hours of duty are 0930 to 1630 hrs. It was possible to send an outward message only in these hours and so, on occasions, it was necessary to request that the Operator remain on duty until 2000 hrs. The reasons for the difficulty in sending outward messages is: Unless a special request is made otherwise, all outward messages are sent to a central transmitting point. Inward messages were received promptly.

Mail: Both to and from Europe and Australiasia, appeared to be reliable.

Agents: T.A.C. are a government corporation and handle every vessel that uses the port. All concerned are most charming, and very polite. All persons I came into contact with from T.A.C. spoke excellent English.

Documents: Required on arrival: 20 Crew Lists, 6 Crew Personal Effects Lists, 6 Ship's Declarations of Foreign Currency, 6 Crew Declarations of Foreign Currency, 1 International Health Declaration, 1 List of dates of Cholera Vaccinations.

Notes:

1. All on board must be in possession of valid Vaccination Certificate against cholera.
2. The Customs do an efficient rummage on arrival, and again on sailing. Their main concerns seem to be cigarettes, foreign currency and pornography.
3. It is most important that all paper money of any foreign country held either by the ship or by individuals is accurately declared and then placed in one or other of the ship's safes. The safes are then sealed and can only be opened with the approval of the resident Customs Officer. Time and trouble on arrival can be saved by collecting all foreign currency in advance. Some small amounts of foreign currency were found by rummagers, but a lenient attitude was taken and these sums were allowed to be placed under seal. The Penalties for attempting to evade the regulations with regard to foreign currency are severe.
4. All on board are required to be photographed, so that local shore passes may be issued. The passes are valid for 12 months from date of issue and cover subsequent calls at Rangoon or any other Burmese port. No shore leave is permitted until shore passes in quadruplicate have been processed. This happens quite swiftly and takes about 12 hours.
5. With the exception of the Health Declaration, there do not appear to be any pre-printed Burmese Forms, and the ship will have to make up her own.

Departure: At least 6 up-to-date Crew Lists are required. All shore passes must be collected prior to departure, they are stamped by Immigration and returned to the holders.

All 3 government departments involved with the vessel (Customs, Immigration and Quarantine) issue a clearance on departure. In addition, the Master is given a letter from the Burma Ports Corporation for the River Pilot, stating that all sailing documents have been produced and giving permission for the vessel to proceed to sea.

Register and supporting Certificates: (Load Line, Safety Equipment, etc.) are taken ashore by Agents on arrival, against a receipt, and returned immediately prior to departure.

Officials: Supervisors and Tally Clerks wear uniform with badges of rank. They must be provided with an office on board, and it is customary to provide these gentlemen with meals. Two Customs Officers live on board at all times and accompany vessel to anchorage or buoy berth. These Officers must be fed in the dining saloon and provided with accommodation. On arrival the Customs seal the bond and, if requested to do so, will also seal the dry stores, which is a wise precaution.

Beer is not put under seal. The Customs Officer will make an issue of bonded items daily if requested. The only thing to which restrictions are applied is cigarettes, where the daily issue is limited to 40 per man. Customs also exercise a tight control over all local currency drawn from the Agents and all must be accounted for prior to departure, even cash spent on Provisions.

Cargo Work: Two shifts of 8 hours are normally worked, that is, 0800 – 1600 hrs. and 2000 – 0400 hrs. Cargo can be worked at any time. Overtime hours being 1600 – 2000 hrs. and 0400 – 0800 hrs. Ship's gear was used for discharge. Two gangs were employed at each hatch, and rates of discharge were: No. 2 – 10.35 t.p.h. No. 3 – 14.46 t.p.h. The rate of discharge at No. 2 was remarkably good when one takes into consideration that No. 2 after crane, due to a winch breakdown, was not available after the first 1.5 days. Two gangs were employed throughout at this hatch. After the crane failure the after gang were employed in shifting cargo to where the forward crane could plumb it.

Weather permitting, discharge continued 24 hours a day. A total of 37 hours 40 minutes working time was lost due to rain. When one takes into consideration the many delays and the fact that the Watersiders were discharging a random stow, the rate of discharge was most creditable. Crane drivers and Watersiders were very satisfactory; Supervisors were helpful. Pilferage was nil, damage to cargo was slight and there was no damage to the ship.

Pratique: Granted on arrival. There are no facilities for Radio Pratique.

Provisions: Obtained through the Shipchandler. But very expensive. We purchased salad and bread at the local market at reasonable prices and of reasonable quality. This was done by the Purser/Catering Officer, going there with the Agent and paying cash. This is common practice and was condoned by our Customs Officer.

As we had no contact with the Official Shipchandler, we do not know what his prices were or what his product range is. Any future vessel calling at Rangoon should arrive with as much in the storerooms as possible.

Fresh Water: Obtainable either from water boats or the wharf. Give 2 days notice. It is expensive, 10 Kyats (about 79 pence) a ton. As a precaution, we treated what we took with chloride of lime.

Repairs: We employed some electricians from the machine shop of the Central Electric Service to assist in our investigations of the winch fault at No. 2 hatch. An Electrical Engineer and 3 Electricians were provided and appeared competent. Unfortunately, they did not trace the fault.

Currency: The unit of currency is the Kyat, worth approximately 12.69 to the Pound Sterling.

Weather: Hot and humid, with much rain, it being the season of the S.W. monsoon. Winds in the port were generally light. At the time of our stay, the river was just beginning to rise as a result of the monsoonal rains in the high country, but had not reached full flood. There was, however, a continuous outflow past the port at all states of the tide.

Health: Up to date Cholera Vaccination Certificates are required by the local Authorities and anti-malaria precautions should be taken. Mosquitoes and many other insects are numerous, especially in the wet weather.

General: Five watchmen were provided. When at anchor or at buoy berth, the ship must feed them. When alongside, they eat ashore. The security at the gate is very strict indeed and all local people leaving the port area are searched. No ship's gear or personal effects went missing. There is no garbage collection at Rangoon, so the ship must make her own arrangements for storing waste. Burmese people are unfailingly polite and courteous and naturally expect the same treatment in return. The vessel can work cargo on any day.

Repatriation: Possible but not recommended.

NOTES

Please also advise Shipping Guides Ltd.

Holidays: (1978). January 4th (Independence Day); January 9th (Karen New Year); February 12th (Union Day); March 2nd (Farmer's Day); March 23rd (Full Moon Day); March 27th Resistance Day (Armed Forces Day); April 13th – 16th Water Festival (Burmese New year); May 1st (May Day); June 20th (Full Moon); July 19th (Martyrs Day); August 18th (Full Moon); October 15th – 17th (Lighting Festival (Buddhist); November 13th – 15th Lighting Festival (Buddhist); November 24th (National Day); December 25th Christmas (There are a large number of Christians in Burma).

SHIPMASTER'S REPORT: August 1982.

Navigation: Dagon Light Vessel was showing Gp. Fl. (3) 20 sec. on the vessel's arrival, but was unlit on departure 10 days later. The Racon was not operating. The light vessel was in its charted position.

The pilot vessel "Thamada", call sign XYCZ, anchors around position Lat. 16° 13′ N., Long. 96° 18′ E. In August 1982 the pilot vessel's VHF was not operating, but they could be contacted by WT on 500 kHz and also by Aldis lamp. When picking up a Pilot the pilot vessel will be under way; boat rope, manropes and heaving line are required; the Pilot comes off by motor launch from the pilot vessel. If the anchorage is crowded extreme caution is advised while manoeuvring, due to very strong tides, estimated at 6 knots to 7 knots at Springs. Many collisions have taken place during embarkation of Pilots.

Lanthaya Light Float was observed to be 1.8′ N.N.E. of its charted position. It is small and inconspicuous. Northwards of Lanthaya, buoys and light floats are moved as conditions in the channel require, and their charted positions should not be relied upon.

There are no navigational aids available which are useful in approaching the pilot station; however, acceptable results were obtained by taking RDF bearings of the Burma Broadcasting Service broadcast station operating on 955 kHz with antennaes in position Lat. 16° 52′ N., Long. 96° 10′ E. (position from World Radio & TV Handbook 1982).

There is a Port Radio station at Rangoon Port, operating on VHF Channel 16, call sign "Port Tower".

Tugs: No tugs are available for berthing, however Pilots are very experienced and all were found to be excellent shiphandlers.

Formalities: Immigration require 4 photographs of each crew member and will issue shore passes; Agents can arrange a photographer to attend on board on arrival.

Customs Regulations are extremely strict, particularly with regard to foreign currency. All foreign currency must be declared and will be put under seal during the vessel's port stay. It has been reported that violations of currency regulations have resulted in severe prison sentences recently. Firearms and narcotics will also be placed under Customs seal. Shore-going crew must undergo Customs inspection at the Main Gate.

Derat is available.

Cargo: The vessel loaded a full cargo of 2,982 hoppus tons of Burmese round logs of mixed varieties; logs were very heavy, averaging out at 1.23 tonnes/cu.m. Cargo was brought alongside by trucks and loaded ex-wharf by ship's gear. Stevedores were inexperienced; stowage was poor and loading rate slow. Cargo was also found to be rat infested. Shippers originaly requested 600 (repeat six hundred) original B/L's, and when this request was dismissed they eventually agreed to 60, issued through Agents, covering 41 parcels of cargo.

Shippers also presented a proforma copy of "Burma Ports Corporation B/L Form" which they requested be issued instead of Owners' forms, stating that this was a standard Burmese B/L form. After studying the clauses contained in this B/L form it was rejected as being poorly written, badly printed, containing many misprints and having no provision for the inclusion of the "Clause Paramount". Masters are therefore advised to exercise caution in accepting a B/L for signature in this form, in order to safeguard Owners' interests.

General: There is a Philippine Embassy in Rangoon, where Filippino crew may renew or be issued with passports conveniently. Call Mrs. Rosario for appointment. Fresh water is available alongside or by barge. Bunkers are not available. Minor repairs can be undertaken, but are very expensive. Good medical facilities are available. Fresh provisions may be obtained at the local markets at very reasonable prices. The British Embassy is next door to the main post office. The Strand Hotel, near the British Embassy, provides good meals and adequate facilities at reasonable prices.

AUTHORITY: Burma Ports Corporation, P.O.Box No. 1, Rangoon, Burma. *Tel:* 83122. *Telex:* BM 21208, BM 21219. *Cables:* Portrust Rangoon. *Contact:* The Managing Director.

United Republic of Cameroon

DOUALA: 04.03 N. 09.42 E. **(See Plan)**
TIKO: 04.00 N. 09.24 E.
LIMBE (Formerly Victoria): 04.01 N. 09.13 E.
KRIBI: 02.56 N. 09.54 E.

DOCUMENTS:
5 Crew Lists.
5 Lists of Port of Call.
5 Passengers' Lists.
2 Crew Customs Declarations.
2 Declaration of Provisions on Board.
1 Arms and Ammunition.
2 Stores Lists
2 Manifests or Bills of Lading

PILOTAGE: (With the exception of Kribi and Limbe (formerly Victoria) where ships work cargo at anchorage); Compulsory at Douala and Tiko. Ship's arrival must be notified at least 24 hours in advance, together with draft (F.W.) forward and aft. This must be confirmed.

At Cape Limboh (Limbe) where ships can proceed alongside, pilotage is compulsory.

For Douala waiting anchorage at Base Buoy (Lat. 3° 54′ 12.3″ N., Long. 9° 32′ 19.8″ E.). Pilot called by VHF (16 – 14).

For entry of Tiko waiting is at Limbe Anchorage.

ANCHORAGE: Base Buoy for entry at Douala (see "Pilotage") 12 m. depth approx. For Limbe Anchorage on Roads in Bay Ambas about 9 m. depth. Anchorage for Tiko on the Bimbia. Kribi Anchorage by red conical buoy (Lat. 02° 56′ 36″ N., Long. 09° 53′ E.) depth 6.30 m. to 7 m.

RESTRICTIONS: Draft only, for ports of Douala and Tiko. Official level of Wouri Channel is 5.80 m.

MAX. SIZE: At Kribi and Limbe Anchorage, no restrictions.

Douala max. length 200 m., max. draft 8.0 m.

HEALTH: Free Pratique granted after compulsory checking of vaccination certificates against yellow fever. Health Officials hand the Master a special Health form to fill in.

RADIO: (See "Pilotage"). Douala Radio limited to broadcasting for private individuals. VHF Channels 16 and 14 and R/T 2182 kHz.

For vessels arriving at Douala, Masters should send a message to their Agent at least 48 hours prior to arrival, giving the following information:

(1) ETA at Base Buoy (given in local time).
(2) Cargo tonnage for discharge, and hatch distribution.
(3) Number of gangs required.
(4) Vessel's draft.
(5) Any other requirements, e.g. money, medical attendance, etc.

For vessels arriving on a Sunday or on a Public Holiday, Agents must be informed by 1100 hrs., the day before arrival. If overtime or night work is required by vessel, the Agent must be informed by 1700 hrs. the day before arrival. It is also possible to telex information from the last port of call as Douala Radio Station can sometimes be difficult to contact.

VHF: Channels 16 and 14.

RADAR: No radar.

TUGS: Two tugs 900 h.p. and 1,100 h.p. are available on request to Cameroon National Ports Authority, Operations Department. Towage is compulsory for ships of 600 d.w.t. and more, and subject to Pilot's advice.

A single tug is available at Cape Limboh obtainable from the National Ports Authority.

BERTHING: For Douala there are 14 berths equal to 2,330 m. approx. length on left bank. Two of these berths have priority berthing for mail, alumina carriers and occasionally tankers. Two others downstream from the port have priority berthing for container carriers. One of these berths has Ro/Ro accommodation with 2 dolphins 70 m. apart.

There is a berth consisting of 2 dolphins and 4 buoys used for oil discharging. Tankers moor with 3 head and stern lines to the other outer mooring buoys – 2 breast lines to the inner mooring buoys and spring lines on the dolphins.

At Douala, 9 berths have a depth of 9.50 m. approx. at LW. The tanker berths have a depth of 9.0 m. at LW (tidal range 2.20 m.).

At the right bank (Bonaberi): There are two berths equal to 350 m. in length. One is mainly used by banana carriers (700 tonnes per day) and butane tankers, length 150 m. The other is equipped with a Goliath crane used by mineral carriers. All these berths have a depth of 13 m. at LW.

Vessels have to shift alongside quay with their ropes almost every day after the Port Meeting which takes place at 1600 hrs. in order to use optimal quay length.

Limbe: At Cape Limboh (Limbe) one berth available admitting ships of 130 m. in length. Length of quay 150 m. and depth alongside at LW is 10 m. 3 quay cranes available. One mooring buoy (SBM) for ships loading Fuel Oil, max. draft 18 m. and max. tonnage is 90,000 tons. (Also see "Shipmaster's Report").

Kribi: One quay of 250 m. for export of timber, cocoa, coffee, flour, salt and palm products. One crane available.

CRANES: Loading and discharging is carried out by ship's gear. However, there are 2 cranes, one of 100 tons and the other 25 tons.

BULK CARGO FACILITIES: There is a rolling gantry at the right bank to transport cement to the cement site. Max. height of loading/discharging gear above HW is 2 m. Max. loading/discharging rates – 1,000 tons per day, length 200 m., depth 8.5 m.

No. 2 Berth at left bank is equipped with a rolling gantry to transport aluminium. Max. height of discharging gear above HW level is 2 m., length 280 m., depth 9.5 m.

SPECIALISED CARGO HANDLING FACILITIES: *Containers:* With the end of the extension works of Douala Port, a modern container and Ro/Ro terminal has been created. This terminal has a quay frontage of 500 m. dredged to −11.50 m. Facilities include 3 berths, the first 2 of which, with a total length of 400 m., are designed for full container ships and the last for Ro/Ro ships. Additional facilities comprise 2 dolphins and 2 Ro/Ro ramps. The adjacent yard has a surface area of 23 hectares and a width varying between 400 m. and 500 m.

At the back of this yard, there exists a stuffing and stripping container warehouse of 7,500 sq.m.

The annual capacity of the terminal is 1,500,000 tons. Plans are underway to extend it to 2,000,000 tons with the purchase of 2 gantry cranes.

Timber: The equipment includes:
– timber yard of 20 hectares served by road and rail,
– a water surface of 20 hectares with 3 m. draft in the area next to the quay and 9.50 m. in the rest of the dock. This dock is capable of receiving 4 ships,
– 150 m. quay frontage designed for the handling of floating timber.

The annual capacity of the timber port is 2,000,000 tons.

STEVEDORES: The number of stevedore gangs is requested from Charterer's Agents, taking into account size of cargo.

MEDICAL: An appropriate Medical Service can be provided on request in case of an emergency, such as an epidemic on board.

TANKERS: At Douala harbour, a berth of 153 m. can accommodate oil tankers of about 12,000 tons when the tanker berth has a breakdown. No slops discharge. The depth at LW is 8.00 m. The tanker berth in the river can accommodate tankers of less than 180 m.

At the tanker berth are found 3 connections of 8 in. for white products, discharge rate of about 250 t.p.h. to 300 t.p.h. Bunkers can be supplied but are not always available.

Sailing from the tanker berth: subject to draft, always on flood tide between 2 hours before HW and LW; sailing/mooring, day and night. 1 or 2 tugs (optional) assist in mooring and sailing proceedings. A permanent tug assists during discharging.

Also see "Berthing" and "Shipmaster's Report" – dated 1982.

DENSITY: 1012.

FRESH WATER: Available at berth; supplied by hoses at 50 t.p.h. Available at Cape Limboh (Limbe, formerly Victoria).

FUEL: Supplies arranged by Charterer's Agent who have their particular suppliers. Available at Cape Limboh (Limbe).

FIRE PRECAUTIONS: In addition to the usual measures, the quay station for oil tankers is isolated during discharging, and there is also a permanent watch by tugs.

REPAIRS: There is a ship repair unit having a 200 m. long quay for afloat repairs.

DRY DOCKS: Two floating docks of 1,000 and 500 tons handling capacities are available. A 10,000 ton floating dock is to be installed.

SURVEYORS: Lloyd's Register; Bureau Veritas; Germanischer Lloyd's; A.B.S. and Det Norske Veritas.

GANGWAY/DECK WATCHMEN: Ship's crew or arranged by Charterer's Agents at Master's option.

Piracy: Acts of piracy have taken place at the ports.

OPENING/CLOSING HATCHES: By ship's crew.

CERTIFICATES: Safety, Radio, Sea-worthiness, Freeboard, Derricks, etc.

CUSTOMS ALLOWANCES: 1,000 cigarettes per person, not more than 2 bottles of spirits per person in cabin.

CARGO GEAR: Loading and discharging affected by ship's gear.

CONSULS: At Douala.

3. Yes.
4. No jetty.
5. No Customs regulations in force.
6. Subject to arrangement.

SHIP SUPPLY SERVICE: For details contact: Syndicat des Compagnies de Navigation et Consignataires de Navires au Cameroun, B.P. 73, Douala.

DEVELOPMENTS: A project has been launched for improving the loading conditions of Berth Nos. 1 and 2 and also a second long term storage area. A new fruit terminal is to be built, length 200 m. It will be able to accept vessels with draft 9.5 m. A 200 m. container berth to be built. Completion of all work expected by late 1988.

SHIPMASTER'S REPORT: March 1982.

Sonara Refinery SBM at Cape Limboh Oil Terminal.

The new refinery is situated at Cape Limboh (Limboh Point). The exact position of the SBM is Lat. 03° 59′ 16″ N., Long. 09° 07′ 36″ E. (B.A. Chart 1455).

Type of Hose (Loading Hose): 16 in. ASA Serial 150 type barbell.

Manifold Derrick: Should be of minimum SWL 10 tons. Connection is made on port side.

VHF: Sonara Refinery keeps watch on Channel 14, make contact 2 hours before arrival.

Pilot: Pilot boards 1 mile South of SBM.

Pipe-line: Submarine line is always kept filled with crude oil therefore if loading fuel oil the vessel should be in position to receive about 1,500 cu.m. of line contents inside the ship's slop tanks and on completion of loading fuel oil the line contents must be pumped back into submarine line.

Depth: Depth of water at berth is 21 m.

SHIPMASTER'S REPORT: April 1984.

Banana Pier: At Bonaberi on West side of river above Douala Port. Always berth port side to stemming tide. One tug assisting. Buoys in river unreliable as regards position and lights. Max. draft in river at LW up to Base Buoy from entrance 6.5 m. having regard to swell at entrance.

Channel from Base Buoy to Douala Port minimum depth (dredged) 5.5 m. Pilot usually boards at HW at Base Buoy depending on outgoing traffic. Vessel sails on flood tide only and swings off the berth. Ship's watchman required, not compulsory to use shore watchman. Agents submit written request to feed 6 men twice a day during loading. Loading intermittent, from both rail trucks and lorries. Bananas good quality and cartons in good condition. At least 1 hour to be allowed for removal of loading equipment by ship's derricks. Side doors not used. Essential that shore supplied rain tents are well secured.

Provisions, etc., not recommended as prices high even for local fruit and vegetables. Slow loading rate at No. 4 Hatch (Aftermost) due to quay not being parallel. Douala Radio Station keeps irregular hours.

AUTHORITY: Cameroon National Ports Authority, 5 Boulevard Leclerc, B.P. 4020 – Douala, United Republic of Cameroon. *Tel:* 42.52.33, 42.15.22. *Telex:* 5270KN. *Contact:* Valentin Njoya, Director General.

AGENT: *Douala:* Socopao Cameroun, B.P. 215 Douala. Tel: 42.64.64. Telex: (Shipping) Freight 5319; (Direction) Freight 5252/5214. *Kribi:* Socopao Cameroun, B.P. 38 Kribi. Tel: 46.10.58. *Telex:* 5688 (in case of difficulties please contact Douala).

KOLE: 04.13 N. 08.33 E. (See Plan)

LOCATION: The loading point is located at Lat. 04° 13′ 20″ N., Long. 08° 33′ 30″ E. (approx. 285° – 26 miles from Cape Debuncha).

DOCUMENTS:

3 Copies Crew List.
3 Copies List of Ports of Call.
3 Copies Arms and Ammunitions List.
3 Copies Animals List.
3 Copies Store List.
3 Copies List of the Passengers Landing or in Transit.
Ships Manifest.

PILOTAGE: Compulsory. Piloting shall be carried out by the Pilots of the Port of Douala. Call signals for a Pilot are those provided for by the International Code. The Pilot may be contacted on VHF Channel 16 (156.8 MHz).

The Pilot will board 2 miles S.W. of the SBM in position Lat. 04° 12′ N., Long. 08° 32′ E.

ANCHORAGE: Vessels may anchor in 38 m., 2 miles S.W. of the loading point (position Lat. 04° 12′ N., Long. 08° 32′ E).

Anchoring less than 1 mile from the loading point or pipe-lines is prohibited.

Prohibited Area/Navigation Aids: Navigators shall keep outside the prohibited area (demarcated by the parallels 04° 19′ N., and 04° 13′ N. and the meridians 08° 22′ 36″ E., and 08° 36′ E.) sheltering the working oil equipment. They must not pass the limit of 1 mile from the loading point SBM without a Pilot.

Utility vessels and small craft of Elf Serepca are the only ones allowed to enter in the prohibited area.

This prohibited area is demarcated by sea buoys and spars of international cardinal system.

On the North of area:

Spar No. 1	Cardinal West	Lat. 4° 19′ N. Long. 8° 22′ 36″ E.
	Light	2 white flashes, range 5 nautical miles.
	Daymark	2 black cones points opposed.

On the South of area:

Buoy No. 1	Cardinal West	Lat. 4° 13′ N. Long. 8° 22′ 36″ E.
	Light	2 white occulting, range 5 nautical miles
	Daymark	2 black cones points together.
Buoy No. 2	Cardinal South	Lat. 4° 13′ N. Long. 8° 29′ E.
	Light	2 red occulting, range 5 nautical miles.
	Daymark	2 black cones superimposed points downwards.
Buoy No. 3	Cardinal East	Lat. 4° 13′ N. Long. 8° 36′ E.
	Light	Red quick flashing, range 5 nautical miles.
	Daymark	2 black cones bases together.

Every oil platform and the floating storage "Serepca 1" inside the prohibited area show a white light flashing the letter "U" every 15 secs.

The floating storage "Obernai" swinging around the position Lat. 4° 15′ N., Long. 8° 33′ E., carries the lights of vessel at anchor according to the international regulations.

The loading point buoy Lat. 4° 13′ 20″ N., Long. 8° 33′ 30″ E. of yellow colour shows a white light flashing the letter "U" every 15 secs., range 6 nautical miles and has a radar reflector.

The floating hose line which extends over a radius of 263 m. round the floating buoy is lit by small white intermittent lights.

Fog Signals Inside of the Prohibited Area:

Fog horns range 2 nautical miles sending out a sound signal "U" every 30 secs. are operating when the horizontal visibility is below 1 mile at the following positions:

Oil production platform "Ekoundou"	Lat. 4° 16′ 28″ N. Long. 8° 25′ 10″ E.
Oil production platform "Kole"	Lat. 4° 16′ 56″ N. Long. 8° 34′ 03″ E.
Floating storage "Serepca 1"	Lat. 4° 15′ 42″ N. Long. 8° 33′ 28″ E.
Loading buoy	Lat. 4° 13′ 20″ N. Long. 8° 33′ 30″ E.
The floating storage "Obernai"	Lat. 4° 15′ N. Long. 8° 33′ E.

Further platforms have been established in the following positions:

Lat. 4° 08.15′ N., Long. 8° 27.42′ E.
Lat. 4° 11.99′ N., Long. 8° 26.69′ E.
Lat. 4° 11.99′ N., Long. 8° 26.20′ E.
Lat. 4° 11.42′ N., Long. 8° 28.17′ E.
Lat. 4° 12.02′ N., Long. 8° 25.43′ E.
Lat. 4° 10.74′ N., Long. 8° 24.42′ E.

The above sound the signals of a vessel at anchor according to the International Regulations for Preventing Collisions at Sea.

Notice to Mariners No. 001/CP: Dated 10th September, 1984.

Origin: Captaincy of the Port of Douala (RC).

Subject: Extension of the Forbidden Navigation Area.

Text: Mariners are informed of extension works being carried out in the zone of the Oil Drilling Site at KOLE which is forbidden to navigation.

The co-ordinates of the new field limits are as follows:

(a) Lat. 4° 13′ 00.3″N., Long. 8° 22′ 36.6″ E.
(b) Lat. 4° 12′ 59.7″N., Long. 8° 36′ 00.5″ E.
(c) Lat. 4° 18′ 36.0″N., Long. 8° 41′ 36.0″ E.
(d) Lat. 4° 26′ 32.0″N., Long. 8° 34′ 35.0″ E.
(e) Lat. 4° 26′ 32.0″N., Long. 8° 25′ 23.0″ E.
(f) Lat. 4° 18′ 59.3″N., Long. 8° 22′ 36.5″ E.

A cardinal system of buoys will define this area.

Signed: Port Captain.

Prohibited Area: (AA) Lat. 4° 09′ 10″ N., Long. 8° 29′ 43″ E.
(BB) Lat. 4° 06′ 28″ N., Long. 8° 29′ 43″ E.
(CC) Lat. 4° 06′ 28″ N., Long. 8° 25′ 24″ E.
(DD) Lat. 4° 09′ 58″ N., Long. 8° 25′ 24″ E.

In the above area there is oil equipment of TEPCAM. Also see "Moudi Marine Terminal".

MAX. SIZE: Maximum permissible draft is 22 m. (72 ft.). However, Elf Serepca may reduce this draft should meteorological conditions be unfavourable.

Minimum underkeel clearance 4.5 m. (15 ft.).

HEALTH: Health inspection carried out by doctor or the Pilot. Master to have ready for inspection the following:

Maritime Declaration of Health
Derat Certificate
Vaccination Certificate of the Crew

In case of infectious disease on board, contact the Doctor in Chief or the Douala Border Health Police B.P. 1115 – Tel: 42.36.33, through the Harbour Master.

RADIO: The vessels should send their ETA to: Elf Serepca, B.P. 2214.

Tel: 42.13.66 Douala. Telex: 5299 Kn Elferap.

Via Coastal Station – Douala Radio.

Call signal: "TJC 5", "TJC 6" or "TJC 8".

The Coastal Station works on 500 kHz and 8718 kHz.

Transmitter Power: 1 kw.

Listening Hours: Permanent watch from 0500 – 2000 hrs. GMT on 500 kHz, 15 minutes transmission at 0600 – 0700 – 0800 – 0900 – 1100 – 1300 – 1500 – 1600 – 1700 – 1800 – 1900 hrs. GMT on the 8 MHz band.

Kole Terminal – 2 Floating Storage Vessels:

"Serepca 1" – Call sign: "TJAR". Power 750 w.

"Obernai" – Call sign "FNCJ". Watch on 500 kHz 0700 – 1100 hrs. GMT, 1500 – 1700 hrs. GMT and 1900 – 2100 hrs. GMT.

Watch maintained permanently on VHF Channels 11 and 74 and Channel 12 during daylight hours.

The above mentioned watch is ensured 3 days before the expected arrival of the vessel going to load at the Kole Terminal.

Arrival Advice: Advise "Elf Serepca" 72 hours and 24 hours before arrival, also advise any changes.

TUGS: A motor boat is provided to assist with mooring.

BERTHING: The loading point of Elf Serepca at Kole is of an SBM with single point mooring at the bow.

The vessel is moored by the bow on a buoy consisting essentially of a square, 9.10 m. in length/breadth and 4.50 m. high.

This buoy is moored by chains with 6 drilled piles. Mooring extends over a radius of 290 m. round the buoy.

A 36 in. sea-line connects the storage barge with the loading point; the buoy is connected to the sea-line by 2 lines of flexible hoses of 20 in. diameter. A floating hose line 24 in. with 2 lines of 16 in. at the end connects the buoy to the tanker.

The loading point is provided for the mooring and loading of tankers of approximately 50,000 d.w.t. to 250,000 d.w.t. The quantity loaded a Kole will be limited to approximately 120,000 tons

Depth of water at the buoy is 30 m.

Mooring: Mooring ropes shall be supplied by Elf Serepca. The vessel shall be ready to embark 2 mooring ropes, one on the starboard side, and the other on the port side. Each rope consists of 46 m. of nylon of 14 in. circumference and a 5 m. chain, diameter 64 mm. Each rope is equipped with a polypropylene inhaul of 10 in. circumference and 100 m. long for one and 70 m. for the other.

Messengers are passed to the vessel by a motor-boat. The vessel shall prepare 2 ropes at the bow for taking the messengers onboard.

Mooring and connecting can be carried out by day as well as by night, weather and sea permitting. However, the Pilot reserves the right to delay night mooring.

Sailing is carried out immediately after completion of loading, day and night.

The derrick shall be rigged before arrival on the port side with a minimum safe working load of 10 tons.

The ships manifold shall be prepared on the port side for connection with the 2×16 in. flexible hoses.

BALLAST/POLLUTION:

Ballast on Arrival: Ship must arrive with sufficient ballast and correct trim to be able to manoeuvre in complete safety:

The ballast must not be less than 30% of the deadweight. Deballasting will not be allowed without the agreement of the Pilot.

The storage installation is not equipped to receive dirty ballast. The vessel shall, therefore, arrive with clean ballast.

Any vessel approaching with dirty ballast may be forced to leave the loading point and delays arising therefrom shall be to the vessels account. Acceptance of Notice of Readiness would be rectified accordingly.

It is forbidden to throw into the sea any cinders, burning materials, objects and waste of any kind.

The ship's Master shall be responsible for any spills or pollution and any other difficulties which may involve discharge of oil. The terminal is equipped with an anti-pollution first aid device.

Scuppers shall be plugged during the whole loading time.

LOADING: *Notice:* Notice of Readiness shall be sent to Elf Serepca.

Connection of Flexible Hoses: Loading of the vessel shall be carried out through 1 line of 220 m. of 24 in. flexible floating hoses, terminating in 2×43 m. length of 16 in. flexible hose.

Connection with the ship's manifold shall be by 16 in. 150 ASA flanges. Elf Serepca can supply 10 in. and 12 in. reducers.

The tanker's derrick shall be rigged before mooring on the port side. The safe working load of the derrick hook shall be 10 tons minimum.

During connection and disconnection of the flexible hoses, assistance of the crew is essential, in particular for the working of winches and derricks. During the whole stay of the vessel at the loading point, the Pilot shall ensure that a safety watch is maintained onboard. The Elf Serepca representative carries out the duties of head of loading and remains in contact with the terminal.

The Elf Serepca service craft shall remain at the disposal of the Pilot and shall remain alongside the tanker or very nearby. A ladder must be kept permanently ready alongside the vessel so as to permit access by the team in charge of the flexible hoses.

Loading: Loading may be carried out with a maximum flow of 6,500 t.p.h. The maximum capacity of each part loading is approximately 120,000 tons.

Inspection of tanks after deballasting and ullages after loading shall be taken in the presence of the head of loading representing Elf Serepca.

The terminal shall place on board the vessel sealed samples of the cargo.

Twenty minutes before the end of loading, the vessel shall warn the terminal by VHF so that pumping may be stopped accordingly.

During Loading: All the hull valves shall be closed except those required for water circulation.

The scuppers of the main deck shall be plugged.

Two fire hoses shall be connected and placed, one at the bow, the other at the stern of the vessel. The fire pump shall be maintained under pressure.

In case of electrical storms, loading may be stopped if necessary.

In case of fire on board a vessel moored at the loading point the Master shall give the alarm by means of short whistle blasts at short intervals. He shall be responsible for the implementation of technical means of fire fighting, maintenance of stability and safety on his vessel. He shall take the required steps to leave should he be required to do so.

MEDICAL: Hospitals, clinics and doctors in Douala. Transportation carried out by Elf at vessels expense.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: There are well-equipped repair workshops at Douala.

TIME: GMT plus 1 hour.

CONSULS: At Douala:

French Consulate
Federal German Consulate
Netherlands Consulate
Danish Consulate
Norwegian Consulate
Swedish Consulate
Monaco Consulate
American Consulate
Lebanese Consulate

AIRPORT: 4 km. from Douala. 1 or 2 flights daily to Europe. Several flights weekly to U.S.A.

GENERAL: *Charts:* French Chart No. 5380 and British Chart No. 1860.

Safety: During the vessel's stay at the loading point the Master shall:

Maintain on board sufficient crew for handling of the vessel and moorings and fire fighting.

Maintain the engines ready for manoeuvring.

Ensure that the moorings function properly without any undue stress.

Ensure that the floating hoses do not wear out or rub thus causing deterioration.

Ensure that the vessel does not make contact with the buoy either by change in current or change in the direction of the wind or for any other reason.

Fire Fighting: It is forbidden to:

Smoke, utilise naked lights or tools liable to give rise to sparks outside the areas normally authorized on a tanker.

Leave the anchors outside the hawse pipe.

Make any repairs or carry out maintenance on deck.

Turn the propellers.

Utilise in the areas classified as dangerous any equipment or tools of a type not recognised for this use by a competent organization.

Elf Serepca reserves the right to take any steps it may deem necessary in case of danger and in particular stop loading.

Stores: Two ship chandlers at Douala can supply the vessel with any foodstuffs they need. But the distance between the Kole Terminal and Douala makes the process very difficult.

Elf Serepca can, in no way, be in charge of the orders and the transportation of foodstuffs.

Territorial Waters: The sovereignty of the United Republic of Cameroon extends to 50 nautical miles from the lowest sea watermark along the coast.

Currency: Legal currency is CFA Francs. 1 CFA Franc = 0.02 FF.

Meteorology: The rainy season (monsoon) extends from May to September. The dry season extends over a period of 2 to 3 months that is to say from December to February.

Air Temperature: The air temperature varies on an average from 22° C to 30° C.

Sea Temperature: On the surface, the sea temperature varies from 29° C at the beginning of the year to 25° C in July, August and September.

Visibility: Owing to the Harmattan, a hot wind blowing from the Sahara, visibility can be reduced to 1 or 2 miles from December to February. During the rainy season, and especially in June, July and September, visibility can be reduced to 0.5 miles due to rain.

Tides: The tides are of a semi-daily type and the Kole cycle is 15 minutes in advance compared with Bonny Town. Maximum amplitude is 2.30 m., mean amplitude is: Spring tides 1.80 m. Neap tides 0.90 m.

Wind: Generally South – less than 15 knots.

Strong winds last for a short period and blow from the East or the S.S.E. in connection with tornadoes.

Current: In the Kole area currents may be of a very changeable speed and direction. However, the ruling currents are the tidal currents.

Slack tide is S.S.E. and flood tide N.N.W. On the surface its speed can reach 3 knots.

Swell: The direction of the swell is S.S.W. (210°). The average height is 2.5 m., period 8 seconds. The waves generated by the local winds are scarcely higher than 2 m.

SHIPMASTER'S REPORT: 1979.

Pilotage: Compulsory. Contact via Kole Terminal on VHF. Pilot boards 2 miles South of SBM. Pilot remains on board throughout loading and carries out departure manoeuvring.

Anchorage: Good anchorage 2 miles South of SBM, good holding ground in heavy grey mud. Sheltered anchorages not available.

Radio: ETA's sent to "Elf Serepca Kole" via Douala Radio. 7 days, 3 days, 2 days and 1 days notice to be given. Kole Terminal keeps watch on VHF Channel 16 calling and Channel 12 working, 24 hours per day.

Radio Pratique: Not available.

Tugs: Not available.

Berth: One conventional SBM with 2×16 in. connections, usually on the port side but occasionally starboard side will be utilised. Mooring at the SBM is in the normal manner with the exception that the shore supplies all messengers and equipment. Pilot's assistant and 3 shore labourers assist ship's crew on the fo'castle. Hose connections carried out by shore labour and ship's crew together. Derrick capacity to be minimum of 10 tons SWL. Maximum draft of 16.0 m. (in good weather).

Cargo Operations: Cargo is loaded from a storage tanker at a maximum rate of 4,500 t.p.h. Maximum lifting is restricted by the deadweight of the storage tanker and is about 120,000 long tons. A Loading Master remains on board throughout cargo operations. He will inspect tanks and sign Dry Tank Certificate prior to loading. 20 minutes notice required for completion of loading to enable loading rate to be reduced.

Kole mixture crude oil API 33.91, loading temperature 100° F.

Cargo papers delivered very promptly on completion of loading during the disconnection of the hoses (calculation is by computer on storage tanker and quantities radioed to Loading Master).

Deballasting: Vessel to arrive with all clean ballast, no facilities for receiving ballast ashore.

Time: GMT plus 1 hour.

Repairs: Minor repairs may be carried out at well equipped workshops in Douala (expensive).

Provisions: Available from Douala but extremely expensive. Delivery problems and transportation make this service impractical.

Fresh Water: Not available.

Bunkers and Lube Oils: Not available.

Medical Services: Available at Douala. Elf Serepca will arrange transportation by helicopter, in emergencies, at vessel's expense.

Crew Change and Shore Leave: Possible.

Consulates at Douala: France, Germany F.R., Netherlands, Greece, Denmark, Norway, Sweden, U.S.A., Lebanon, Monaco.

Weather: Wind is generally from the South and less than 15 knots. The rainy season extends from May to September and during this time, especially in June, July and September, visibility can be reduced to half a mile because of heavy rain. From December to February mist may be experienced due to hot offshore winds.

Tides: Spring tides 1.80 m. Neap tides 0.90 m.

Current: Variable, mainly tidal. Maximum rate can reach 3 knots.

Authorities: 1 Customs Officer boards and remains onboard throughout the vessel's stay. He carries out all arrival formalities and requires the following forms, in triplicate:

Crew List
List of Ports of Call
Arms and Ammunitions List
Animals List
Stores List
Crews Effects List
Vaccination List (vaccination certificates for Cholera and Yellow Fever).
International Declaration of Health.

Agents do not attend vessel, agency work is handled by Loading Master. Accommodation must be supplied for 3 men, namely the Pilot, Loading Master and Customs Officer.

SHIPMASTER'S REPORT: 1980.

Kole Terminal can be reached on VHF by Channels 16 and 12. In this way, primary information concerning anchorages can be obtained. If possible, vessels should be anchored 4 nautical miles to the South of the Terminal, and listen out on VHF Channel 12.

With the Pilot, a Loading Master, a Customs Officer and 4 men arrive on board. The 4 men assist in making fast the vessel and positioning hoses, and then go back on the tug.

The Pilot, Loading Master and Customs Officer remain on board during the time in port, and accommodation and meals must be provided.

The Customs Officer completes the clearance inwards and outwards. The following documents are required:

1 Crew List
1 Passenger List
1 List of Ports of Call
1 Arms and Ammunition List
1 Birds and Animals lists
1 Stowaway List
1 Crew Effects Declaration List
1 Bonded Stores List

On average, only 8 to 9 vessels arrive for loading every month, all of them not being greater than 120,000 tons.

As in all other ports, vessels are moored using their own tackle.

Co-operation with the terminal personnel is first-class.

SHIPMASTER'S REPORT: March, 1981.

Maximum permissible draft is 22 m. (72 ft.). However Elf Serepca may reduce this draft should meteorological and tidal conditions be unfavourable. At the moment there are no reductions.

Minimum under keel clearance is 15 ft. Depth of water at buoy 30 m. The SBM is provided for the mooring and loading of tankers of 50,000 tons to 250,000 tons. Considering the useful capacity of storage the quantity loaded at Kole will thus be limited to about 120,000 tons. At this moment no cargo in excess of 120,000 metric tons is forthcoming.

Loading may be carried out with maximum flow 6,500 t.p.h. The maximum capacity of each part loading is about 120,000 tons.

AUTHORITY: Elf Serepca, B.P. 2214 and B.P. 2215, Douala, United Republic of Cameroon. *Tel:* 421366. *Telex:* 5299 Kn Elferap. *Contact:* Chef Terminal Marin.

AGENT: See "Douala".

MOUDI MARINE TERMINAL: 04.07 N. 08.29 E.

(See Plan)

LOCATION: The Moudi Field, of which Tepcam is the operator, is situated in the Gulf of Guinea about 50 nautical miles West of the town of Limbe (Victoria) in Cameroon, in depths of 50 m. to 58 m.

The Moudi Field comprises the following units:

2 well platforms: VA (Lat. 4° 08′ 11″ N., Long. 8° 27′ 24″ E.) and VB (Lat. 4° 09′ 22″ N., Long. 8° 25′ 55″ E.)
1 production platform; VT (Lat. 4° 08′ 09″ N., Long. 8° 27′ 25″ E.)
1 loading terminal consisting of: 1 floating storage unit (F.S.U.), the "Moudi" (Lat. 4° 08′ 09″ N. Long., 8° 28′ 49″ E.). 1 Single Point Mooring berth (S.P.M.) (Lat. 4° 07′ 00″ N., Long. 8° 29′ 11″ E.)

DOCUMENTS:

Maritime Declaration of Health.
Derat or Exemption Certificate.
Vaccination Certificates for crew and passengers.

After ship's arrival at Moudi Marine Terminal, the Tepcam Representative boards and the Master signs the following documents:

Notice of Readiness.
Acknowledgement of receipt by the Master of Terminal Regulations.
Safety check list before loading.

Following commercial documents are filled out by Terminal and presented to the Master:

Bill of Lading.
Certificate of Quality and Quantity.
Certificate of Origin.
Cargo Manifest.
Time Sheet and Loading Report.
Ullage Report.
Receipt for Samples.
Receipt for Documents.

The Tepcam Representatives on board the ship shall assist with the inspection of tanks after deballasting and ullage measurements after loading.

PILOTAGE: Pilotage is mandatory and carried out by the Pilots of the National Port Bureau of Cameroon.

The Pilot, the Head of Terminal, the Mooring Master, the Cargo Inspector and the Customs Officer must come on board the vessel before the vessel starts mooring to the buoy.

On board the ship, the Pilot acts as a nautical adviser to the Master for handling the ship at the entry and exit of the pilot zone or for movements within this zone.

His advice shall commit neither his responsibility nor that of Tepcam.

Any ship mooring to the loading buoy is required to take the Terminal Pilot on board in the pilot zone extending from anchorage zone to the S.P.M.

The Pilot call signals are those in the International Code. The Pilot may be contacted by VHF Channel 16.

Pilot Boat:

The assistance boat insures the pilotage functions (transport of Pilot and Tepcam employees, transport of equipment required for mooring and hose connections).

It is at the ship's disposal under Pilot's instruction during the whole stay of the ship at the loading buoy for:

Tug Assistance (pull: 22 T).
Approach/Mooring Assistance/Launching of an inflatable dinghy, clearance of hoses.

Exceptionally:

Fire-fighting (2 guns, total delivery 600 cu.m./hr.)
Anti pollution Assistance (Dispersant and Anti-pollution Spray-ramp, 30 cu.m./hr.)

During operations, the assistance boat monitors permanently the operating VHF frequency and Channel 16.

NAVIGATION AIDS:

Fixed Platforms: The 3 fixed platforms, VA, VB and VT are all equipped with the following:

4 white lights at the 4 corners, range 8 miles, flashing the letter U (· · —) operated by sun switch,
2 fixed white boat landing lights, range 3.5 miles.
2 foghorns, range 1.5 miles, emitting the letter "U", operated manually (visibility less than 1.5 miles).
1 identification panel fixed to the South side displaying "Victoria VA", "Victoria VB", "Victoria VT", respectively in black letters 1 m. high on a yellow background.

Platform VT is also equipped with a fixed red light on the crane, and fixed yellow and blue lights on the helideck.

VA/VT catwalks and flare are equipped with 3 and 4 fixed equidistant white lights respectively.

Floating Storage Unit (Moudi): The Moudi, a converted 220,000 ton tanker, carries the lights of a ship at anchor, 2×360° white lights, 1 in the bow and 1 in the stern. It is equipped with a foghorn, range 1.5 miles emitting the letter "U". It carries the inscription "Moudi" painted in white letters 1.5 m. high on the black hull at port and starboard in the bow and at the stern.

SPM (buoy/hoses): The buoy, painted orange, is equipped with the following:

1 fixed white light, range 5 miles, flashing the letter "U" every 15 secs,

a hand-operated foghorn, range 2 miles, emitting the letter "U" every 30 secs,

a radar reflector.

The floating hoses are equipped with 3 white winker lights (60 flashes per minute).

The ship shall provide adequate and safe means to take the Pilot on board on the most sheltered side.

Pilot Ladders:

1. In all ships where the distance from sea level to the point of access to, or from, the ship exceeds 5 m. (O.N.P.C. requirements), the ship must be provided to embark and disembark Pilots by means of the accommodation ladder in conjunction with a pilot ladder. The ship should carry an accommodation ladder on each side, unless such ladder is capable of being transferred.
2. The ladder should be sited leading aft. When in use, the lower end of the ladder should rest firmly against the ship's side within the parallel body length of the ship and within the mid-ship half section and clear of all discharges. Equally safe arrangements which might be more suitable for special types of ships should be acceptable.
3. The length of the accommodation ladder should be sufficient to ensure that its degree of slope does not exceed 55 degrees.
4. The lower platform of the accommodation ladder should be in a horizontal position when in use.
5. Intermediate platforms, if fitted, should be self-levelling. Treads and steps of the accommodation ladder should be so designed that an adequate and safe foothold is given at the operative angles.
6. The ladder and platforms should be equipped on both sides with stanchions and rigid handrails, but if handropes are used they should be tight and properly secured. The vertical space between the handrail or handrope and the stringers of the ladder should be securely fenced.
7. The pilot ladder should be rigged immediately adjacent to the lower platform of the accommodation ladder and the upper end should extend at least 2 metres above the lower platform.
8. Lighting should be provided at night such that the full length of the ladder is adequately lit.
9. If a trap door is fitted in lower platform to allow access from and to the pilot ladder, the aperture should be not less than 750×750 mm. In this case the after part of the lower platform should also be fenced as in paragraph 6, and the pilot ladder should extend above the lower platform to the height of the handrail.
10. The accommodation ladder(s), together with any suspension arrangements or attachments, fitted and intended for use in accordance with this Recommendation should be the satisfaction of the Administration.

ANCHORAGES: The anchorage zone is a circle 1 mile in radius centred about 2 miles E.N.E. from the SPM, at the point with coordinates: Lat. 4° 07′ 33″ N., Long. 8° 31′ 04″ E.

Approach to the anchorage should be made from the East. With the S.P.M. as the centre, vessels should steer a course of between 210° and 330°. (See "Plan".)

RESTRICTIONS: The danger zone in which routine navigation and fishing activities are prohibited is defined by the four points AA, BB, CC and DD, of which the coordinates are given below. The field installations are situated about half a mile inside the limits.

AA: Lat. 4° 09′ 10″ N., Long. 8° 29′ 43″ E.
BB: Lat. 4° 06′ 28″ N., Long. 8° 29′ 43″ E.
CC: Lat. 4° 06′ 28″ N., Long. 8° 25′ 24″ E.
DD: Lat. 4° 09′ 58″ N., Long. 8° 25′ 24″ E.

Ship moorings and connections take place from 0600 hrs. to 1800 hrs. weather and sea permitting. They may be performed by night, on Tepcam preliminary agreement conditions. Departures from berth take place day and night.

MAX. SIZE: The loading station is designed for the mooring and loading of ships from 50,000 to 280,000 d.w.t.

The water depth at the buoy is 57 m. to hydrographic zero.

HEALTH: Sanitary boarding is carried out by the Doctor in Chief of the Border Health Police. Pilots are entitled to carry out this inspection. In case of infectious disease on board, contact the Doctor in Chief of the Border Health Police through the Harbour Master before ship's arrival at the terminal. For the application of Health Regulations, the ship shall use the signals in the International Code of Signals.

RADIO: Ships shall announce their arrival by telegram sent 72 hours before their planned arrival. This telegram, addressed to Tepcam shall be sent via Douala Radio and shall announce its ETA in GMT, as well as all information concerning the planned loading:

Arrival ballast.
Deballasting time.
Max. loading rate.
Cargo quantity.
Derrick lifting capacity.
Dimensions of manifold flanges.
Forward anchoring system characteristics.
Sanitary conditions.

The ship shall repeat contact 48 hours and 24 hours before its arrival and correct its ETA if necessary.

Communications between ship and base through Douala Radio should be in decameter or hectometer wave.

Douala Radio works on frequencies 500 kHz, 8449 kHz and 13,069 kHz. Call sign TJC 5, TJC 6 and TJC 8.

During radio contacts preceding the arrival of the ship at the site, the ship shall receive instructions from the Terminal Superintendent for direct mooring or, on the contrary, standby anchorage in the zone defined.

VHF: When 60 miles from the Terminal, the ship shall make contact by VHF on Channels 16 or 13 and then switch to the operating frequencies as indicated below.

The ship shall then receive the instructions required for its mooring to the loading buoy.

Port regulations are communicated as soon as possible to the Master, who shall acknowledge receipt by letter.

Monitoring as well as safety frequency are provided on Channel 16. Also see "Pilotage".

Communications between the ship and the Terminal are provided on:
VHF Marine Total, Channel 69 (156.475 MHz)
VHF (land) between base and Douala headquarters:
Tx: 75.550 MHz Rx 80.550 MHz
Tx: 75.650 MHz Rx 80.650 MHz
Tx: 75.700 MHz Rx 80.700 MHz
VHF Total field communication:
Tx: 159.725 MHz Rx 155.125 MHz

TUGS: See "Pilotage – Pilot Boat".

BERTHING: The Moudi Loading Buoy is of the CALM type (Catenary Anchor Leg Mooring) with a single mooring point.

It consists essentially of a cylindrical body 12 m. in diameter and 4.7 m. high, equipped at the bottom with a skirt projecting 1.7 m., and with a turn-table. The buoy is anchored by means of 6 chains extending in a radius of 380 m. around it.

A 255 m. long line of 24 in. floating hoses terminates in 2×37 m. long extensions of 16 in. hoses equipped with 16 in. Camlock type quick couplings at the ends for buoy/ship connection.

A mooring line and its accessories are used to moor the ship to the turn-table.

The mooring personnel carrying out the polypropylene connection from the buoy to the "Messenger Line" of the ship are provided by the Terminal.

Head of Loading: Representative of Tepcam, he co-ordinates all the following operations:

Mooring
Connection
Loading.

He is responsible for ensuring compliance with Port Regulations at the Terminal. His instructions shall not be questioned or disputed and he will not check the Pilot's action, who is the Harbour Master's representative at the Terminal.

He may refuse or prohibit, after Pilot's advice, the entry of the ship in cases such as but not limited to:

unfavourable weather conditions,
ship insufficiently equipped or possessing defective equipment,
insufficient or dirty ballast.

He is in charge of obtaining the agreement to start loading. He makes sure of the correct application of safety instructions by the shipboard personnel and of the loading plan.

Once the ship is moored, he may ask the Pilot's advice for an early removal from berth of the ship or may suspend loading of the ship for reasons such as but not limited to:

safety
bad weather
non-compliance with instructions
insufficient drainage of cargo tanks
dumping of polluted water into the sea
incidents affecting the loading buoy or the pumping installation.

During loading operations he insures the radio co-ordination between the ship and the Terminal.

Mooring Master: He acts under the direction of the Head of Terminal. Mainly in charge of inspection of specifically marine equipment, he shall assist and inform the Pilot and the Head of Terminal during approach, mooring, connection/disconnection and loading phases.

Cargo Inspector: Nominated by the buyer, he is in charge of cargo control.

Customs Officer: The attendance of an Agent of the Administration of Customs is compulsory onboard of lifting vessels.

Mooring and Connection: The engines shall be in condition to deliver their maximum capacity if required. The ship's port derrick shall be rigged to project 1 m. over the ship's side and to lift a minimum load of 10 tons.

The Pilot shall instruct the Master of the ship of the standard manoeuvres for berthing and mooring.

Mooring and connection operations shall be performed by the ship's crew.

Once it is moored, the ship shall keep its engines ready to manoeuvre. No work reducing the ship's manoeuvring potential shall be undertaken without the approval of the Terminal Superintendent or his assistant.

The ship's Master shall ensure that the mooring lines guarantee a secure mooring at all times. He shall make sure that the mooring units operate to satisfactory conditions, in order to minimise wear and to prevent their breakage.

LOADING: When the ship is absolutely ready to perform loading operations, the ship's Master shall present the "Notice of Readiness". The "Notice of Readiness" shall not be accepted if the Terminal is closed.

Once the mooring and hose connections have been completed, the checklist shall be checked and signed jointly before the start of loading by the Tepcam Representative and the ship's Master.

The Terminal Superintendent shall issue the order to start pumping, after the ship has confirmed that she is ready to load and shall notify the ship of the progress of loading operations.

Radio connections shall be checked frequently. All information concerning flow rate, gas pressure, change in cargo tank, cumulative quantities, etc., shall be communicated between the ship and the control room.

30 minutes before the end of loading, the ship shall advise the Loading Master in order to stop pumping in due time.

In the case of a storm or leakage, loading shall be suspended.

Measurement of the ullages, temperatures and draft after loading, for control purposes, shall be performed in the presence of the Tepcam representative.

Throughout the loading period, the ship shall carry the following:

- by day, a red flag on the masthead ("B" flag of International Code),
- by night, a red light visible 360°.

This requirement shall also be valid for ships which are loaded, moored, or manoeuvring in the danger zone, and also for ships that are not declared "gas free".

The Terminal shall provide the ship with representative samples of the cargo.

Lookout: During the whole stay of the vessel at the SPM, the Pilot ensures watch of safety on board.

Permanent bow lookout: The Tepcam representative and the Pilot will demand permanent bow watch by a member of the ship's crew and shall be advised of the tanker's position in relation to the buoy.

Permanent lookout at manifold: As soon as connections are made, the Tepcam representative shall demand permanent manifold watch by a member of the ship's crew and shall be advised of the configuration of the tanker rail hoses and if any leaks in the manifold.

BALLAST: The Terminal is not provided with facilities for treating ballast water. Ships shall therefore arrive with clean ballast. The minimum arrival ballast shall be equal to about 30% of the ship's d.w.t., ensuring a draft consistent with safe manoeuvring, a reasonable trim and a propeller submerged, to the satisfaction of the Pilot.

Inspection of the ballast to be unloaded shall be made on arrival, and any ship arriving with dirty ballast may be required to leave the buoy, and to bear responsibility for any delay resulting from this. The acceptance of the "Notice of Readiness" shall be corrected to show this.

Deballasting operations shall only begin with the agreement of the Head of Terminal and the Pilot. As a rule, loading operations shall not begin until deballasting is completed, if the ship is not fitted out for simultaneous deballasting and loading operations. An inspection of tanks shall be carried out after deballasting in the presence of the Tepcam representative.

POLLUTION: It is prohibited to dump any objects or waste of any type into the sea.

It is also prohibited to dump into the sea any liquid liable to ignite or to pollute the water.

The ship's scuppers must be closed/plugged during the loading operations.

A system designed to collect any drips and leaks shall be placed under the hose/manifold connection.

In the case of water pollution caused by the ship, for any reason whatsoever, Tepcam declines any responsibility, and the ship shall be held responsible for the direct consequences of this pollution. In particular, the assistance costs incurred by Tepcam shall be passed on to the ship.

Tepcam also declines any responsibility concerning any infringement by the ship of international regulations or Port Regulations that could be ascertained by the Pilot or any Tepcam employee. Written reservations will be expressed and report will be drawn-up.

Objects falling into the sea: Any object falling into the sea shall be stated in a declaration to the Terminal Superintendent, who shall prescribe the measures to be taken for its recovery. Similarly, the recovery or removal of various objects or equipment stationed or deposited in the danger zone shall be carried out automatically, whenever the owner or operator of the said objects or equipment cannot or does not wish to perform this removal himself.

Recovery and removal shall be carried out at the cost, risk and perils of the parties concerned. For any object, (or person) that has fallen into the sea, a written report shall be addressed to the Harbour Master.

MEDICAL: Emergency cases are evacuated to Douala by Tepcam at ship's expense. Douala has a hospital, clinics and several specialist doctors.

FRESH WATER: Not available.

FUEL: Not available.

CONSULS: Consulates in Douala:

Denmark
France
Germany F.R.
Greece
Lebanon
Monaco
Norway
Sweden
United States of America

REPAIRS Not available at Moudi Terminal. However, well equipped repair facilities are available at Douala.

REPATRIATION: Not permitted.

AIRPORT: The nearest airport is 4 km. from Douala. 1 or 2 flights daily for Europe, several flights weekly for the U.S.A. (with changes in Europe).

TIME: GMT plus 1 hour.

STORING: Not possible at Limbe. 2 maritime victualling companies are established in Douala.

GENERAL: *Useful Publications:* Ships planning to call at the Moudi Marine Terminal shall refer to the following regulations and documents:

- Safety of Life at Sea,
- IALA "A" system for Navigation Aids,
- International Regulations for Preventing Collisions at Sea,
- Marine Charts Nos. 5633, 5602, 6076 and 5380, of the Service Hydrographique de la Marine (French Marine Hydrographic Service),
- Marine Chart No. 1860 from Hydrographic Office of the Navy,
- ISGOTT (International Safety Guide for Oil Tankers and Terminals (OCIMF/ICS Publication)).

Meteorology: The year is characterised by 2 seasons: Rainy season from June to September, variable season from October to May with low rain frequency.

The outdoor temperature varies on average from 22°C/72°F (July and August) to 30°C/86°F (February to April).

Water temperature at the surface varies from 25°C/77°F (June to September) to 29°C/84°F (February).

The prevailing winds are 4 knots to 10 knots from the S.W. sector throughout the year. The strongest winds, up to 45 knots, are rare and occur from February to May, in October, and in December. They may accompany tornadoes generally travelling from East to West.

Visibility is rarely very good and only rarely exceeds 11 nautical miles. It may be reduced to a half mile by rainfall, especially from June to September.

Tides, Currents, Waves: Tides at the Moudi site are of the semi-diurnal type 35 minutes in advance of those at Bonny (Admiralty Tide Table, Volume 2) or about 1.5 hours in advance of those of Limbe (Victoria) (Service Hydrographique de la Marine).

Surface currents, mainly influenced by the Guinea Currents, generally flow towards the S.W. and rarely exceed a speed of 1 knot.

The predominant direction of waves is S.S.W., with a trough from 0.6 m. to 1.2 m. from October to February, and a trough from 1.3 m. to 1.9 m. from February to September. Mean period 8 seconds to 10 seconds.

SAFETY: *Nautical Safety Rules:* Apart from export tankers using the loading buoy, entry into the "danger zone" is prohibited to all ships except ships of the Administration or those necessary for the development or production of the Moudi Field.

These vessels shall be equipped with fire-fighting facilities and shall not be left without surveillance.

Moreover, it is prohibited in the "danger zone" to establish anchorages, permanent or otherwise, and ships or floating equipment are prohibited from dropping their anchors.

Safety Rules Related to Weather Conditions: Throughout the presence of the ship at the loading buoy, the ship's Master shall ensure that the standard safety regulations are observed, and especially the following:

Keep in service a sufficient portion of the crew in order to guarantee trouble-free manoeuvring of the ship and operating the preliminary fire-fighting facilities.

Keep the engines ready to manoeuvre within a period specified by the Loading Master.

Have a steel wire safety towline, in mousing arrangement, placed starboard bow and stern, in such a manner that the eye can be secured easily by an assistance vessel if the latter is present on the site.

Fire-Fighting Rules: Any person who discovers a fire at the Terminal shall immediately sound the alarm.

If the fire breaks out on the ship, the latter shall transmit the distress signals specified in the international regulations.

Fire-Fighting: The ship's Master shall be responsible for the use of the technical fire-fighting facilities, and the maintenance of the ship's stability and safety.

Throughout the presence of the ship at the loading buoy, the following is prohibited:

Smoking, the use of naked flames or tools liable to generate sparks outside areas normally authorised on a tanker.

Repairs, handling operations or work liable to generate sparks.

The use, in zones classified as dangerous, of equipment or tools which are not of a type approved for this service by a competent agency.

Turning of the propellers, except for steam-ships.

Leaving open hatches and doors leading on to the main deck.

Firing shots.

As a rule, the ships shall comply with the safety requirements specified in the International Safety Guide for Oil Tankers and Terminals. In particular, it shall:

Position and connect 2 fire-hose nozzles in the bow and stern of the ship, ready for use.

Keep the fire-fighting system under pressure.

Position hand extinguishers of a suitable type near the manifold.

Tepcam reserves the right to take any measures that it deems effective in case of danger and, in particular the postponement or interruption of loading operations.

Emergency Measures: In the case of incidents/accidents which occur during loading, the Loading Master and the Pilot shall be notified immediately in order to take the measures imposed by the incident, promptly and in association with the Terminal Superintendent.

In all cases, the Master shall be capable of coping with these situations rapidly and effectively.

AUTHORITY: *Operator:* Total Exploration Production Cameroon (Tepcam), Avenue Ahmadou Ahidjo, BP 1225, Douala, Cameroon. *Tel:* 42-32-91. *Telex:* 5698 Kn, 5385 Kn. *Contact:* Mr. Desvoyes or Mr. Raimondeau, Operations Department.

Canada

GENERAL (See Plan)

PILOTAGE REGULATIONS: Vessels arriving from any point *East* of the Strait of Belle Isle, Cabot Strait or the Strait of Canso are required to give notice of ETA 24 hours in advance, second notice of ETA 12 hours in advance and Final notice confirming or correcting the ETA 4 hours in advance. With the first notice the following information should be supplied:

(a) in the case of the first arrival of the ship in the compulsory pilotage area in any calendar year,
  (1) the name, nationality, call sign and Agent of the ship,
  (2) the length, breadth, moulded depth, deepest draft, speed and the largest net registered tonnage of the ship, and
  (3) the immediate and the ultimate destinations of the ship within the compulsory pilotage area, and

(b) in the case of any subsequent arrival, movage or departure of the ship in the compulsory pilotage area in any calendar year,
  (1) the name, call sign, deepest draft, the speed of the ship and any changes in the information provided under paragraph *(a)*, and
  (2) the immediate and ultimate destinations of the ship within the compulsory pilotage area

The Laurentian Pilotage Authority advises that, where there is failure to give the required notices, without reasonable cause, the Authority is *not* required to provide the vessel with the services of a Pilot.

NOTICE: *Non-Canadian Ships Compliance Certificate:* In September, 1983, the Shipping Federation of Canada advised the following:

We have been informed by the Canadian Coast Guard that many tankers are being diverted unexpectedly in mid-Atlantic to Canadian ports. Some of these vessels have never been involved in Canadian trade before and as a result do not have a Non-Canadian Ships' Compliance Certificate and are therefore in breach of Canadian regulations. The regulations governing the issuance of the certificate apply to all non-Canadian oil tankers of 500 g.r.t. or more trading in waters South of the 60° parallel of North Latitude. The regulations hinge on the 1930 and 1966 Solas Conventions, the navigating appliances regulations, the oil pollution prevention regulations, the charts and publications, regulations, etc. The certificate is valid for two years and essentially indicates that the ship complies with other Canadian regulations.

The Coast Guard has recently permitted several of these vessels to enter Canadian waters and has diverted the offenders to the nearest suitable port where ship inspectors ensure that the vessels meet Canadian standards prior to issuing a certificate. We have been informed by the Canadian Coast Guard that tankers which contravene the regulations will not be permitted to enter the Gulf of St. Lawrence. This diversion to an inspection port creates a loss of time for the shipowner and efforts must be made to correct the situation.

In waters other than Canadian, an inspector of the government of the state in which the ship is registered and representatives of recognised classification societies are empowered to issue the non-Canadian ships' compliance certificate on behalf of the Canadian Coast Guard.

NOTICE TO MARINERS:

NOTICE No. 10: Transmission of Estimated Time of Arrival:
In the interest of marine safety Masters should give an early indication of the vessel's ETA to the appropriate Port Authority and in this respect comply with any published instructions relating to this requirement. At ports where instructions have not been published, the ETA should be radioed in sufficient time for Port Authorities to make arrangements for the arrival of the vessel, taking into account actual conditions such as tide, size and draft of the vessel and notice as necessary to alert Pilots and towing services.

Notice to Mariners Nos. 25 and 26 also provides information on reporting procedures for specific areas.

Authority: Department of Transport (CGSN).

NOTICE No. 23: Canada – Ice Information, Routing and Requests for Icebreaker Assistance

1 **HUDSON STRAIT AND CANADIAN ARCTIC**

Arctic Canada Traffic System (Nordreg Canada). Mariners should be aware of the existence of the Arctic Canada Traffic System (Nordreg Canada) and the advantages of reporting to this system which is a voluntary Vessel Traffic Service (VTS) covering the waters of Ungava Bay, Hudson Bay and James Bay South of the parallel of 60° North Latitude and the waters to which the Arctic Waters Pollution Prevention Act applies.

During the Arctic navigation season, a Nordreg office based at Frobisher Bay is staffed with an Ice Operations Officer who provides information on ice conditions and vessel routing in ice. Icebreaker assistance, when requested may be arranged through the Ice Operations Officer. For more detailed information on this VTS system, the definition of waters it covers and the requirements to make certain reports and obtain clearance, Mariners should refer to the current Annual Edition of Notices to Mariners.

(a) *For general information on ice conditions:*
Address: NORDREG CANADA,
Canadian Coast Guard,
Department of Transport,
P.O.Box 718,
Frobisher Bay, N.W.T.
X0A 0H0.
Telephone: 819-979-5724
Telex: 063-15529
Radiogram: Ice Frobisher.

2 **EAST COAST AND GULF OF ST. LAWRENCE**

During the Winter navigation season a similar service is provided to ships intending to transit or to operate in East Coast and Gulf of St. Lawrence waters. Access to this service can be obtained by contacting the Eastern Canada Traffic System (ECAREG CANADA). ECAREG communications procedures are specified in the current Annual Edition of Notices to Mariners.

(a) *For general information on ice conditions:*
Address: ECAREG CANADA,
Canadian Coast Guard Traffic Centre,
Maritimes Region, Canadian Coast Guard,
Department of Transport,
P.O.Box 1013,
Dartmouth, N.S.
B2Y 3Z7.
Telephone: (902) 426-6030 or (902) 426-6031
Telex: 019-22510
Radiogram: Ice Halifax.

(b) For general information on ice conditions and icebreaker assistance in Newfoundland waters, East of Cape Chidley and Long. 58° 00′ W., including Labrador Coast and Hamilton Inlet:
Address: ECAREG CANADA
Canadian Coast Guard,
Newfoundland Region,
Department of Transport,
P.O.Box 1300,
St. John's, Newfoundland.
A1C 5N5.
Telephone: (709) 772-2083 or 2084
Telex: 016-4530
Radiogram: Ice St. John's.

3 **ST. LAWRENCE RIVER**

In the St. Lawrence River West of Long. 66° 00′ W. to Montreal, ship movement is under the general control of the Vessel Traffic Services (VTS) system and ice information and advisory services are handled through this system as follows:

For general information on ice conditions:
Address: Canadian Coast Guard Regional Information Centre,
Wing 2, Ground Floor,
Port of Montreal Building,
Cite du Havre,
Montreal, Quebec,
H3C 3R5.
Telephone: (514) 866-1584, 1-800-371-7770
Telex: 055-60641.

4 **CANADIAN GREAT LAKES**

Vessels entering Canadian waters of the Great Lakes may obtain ice information, routing advice and request icebreaker assistance by contacting the following address:

Ice Operations Officer,
Canadian Coast Guard,
Department of Transport,
16th Foor, Toronto Star Building,
1 Yonge Street,
Toronto, Ontario, M5E 1E5.
Telephone: (416) 369-3918
Telex: 06-23317
Radiogram: Ice Toronto.

5 **GENERAL REMARKS**

A limited number of icebreakers are available for the support of shipping and these are heavily committed. It is emphasised, therefore, that it may not be possible to provide icebreaker support at short notice. In order to make the most efficient use of all available resources, it is important that the Canadian Coast Guard Traffic Centres be kept informed of the position and projected movements of vessels in Canadian waters.

Authority: Department of Transport (CGVO).

NOTICE No. 25: Vessel Traffic Services (VTS).
See Annual Canadian Notice No. 25 (not reproduced) and "Plans" for areas.

REPORT: February 1985.
Herewith is an outline of requirements for chemical tankers which are scheduled to call Vancouver/British Columbia ports.

1. Vessel must have on board a valid non-Canadian Ship's Compliance Certificate.
2. Certificate of Fitness and date.
3. Provide Agents with 7, 4, 2 and 1 day's notice prior to arrival.
4. Advise Agents of the last 2 cargoes.
5. Advise of any cargo in transit (quantity and type).
6. Vessel is required, in Vancouver, to have a clear passage while transiting the First and Second Narrows Bridge – with a minimum of 1 mile visibility. Vancouver Traffic Centre will advise vessel accordingly upon arrival.
7. Canadian Coast Guard will attend on board upon arrival for safety inspection.

In the case that a vessel arrives in Vancouver with ammonia on board, the vessel is permitted to load propane as a second cargo, providing they are fully segregated.

AMHERSTBURG, Ontario: 42.06 N. 83.08 W.

(See Plan)

PORT LIMITS: Southerly Port Limits commence at Buoys 43D and 44D and extend on the Canadian side of the International Boundary Line, Northerly to the Southerly limits of Windsor Harbour.
DOCUMENTS: Amherstburg is not a port of entry, but a Customs Officer is available upon notice 24 hours a day. Foreign Ships, on arrival, are required to present Canadian Customs Form A-6 inward and A-6 outwards.
PILOTAGE: Pilotage is compulsory as required by Seaway Regulations.
ANCHORAGES: Windsor Harbour is the only recognized anchorage in Detroit River.
RESTRICTIONS: Seaway draft is maintained in main channel and shallow draft channel of 21 ft. Water levels are affected by fluctuation of Lake Erie. A Low Water Warning is broadcast from Belle Isle on 2670 kHz and 156.6 MHz on the odd hour plus 55 minutes when the water level in the West end of Lake Erie falls 1 in. or more below the lower level of the Lake Survey Centre's predicted range of levels shown in bulletins issued the 5th and 20th of each month during navigation season. Water levels are broadcast on FM radio from Group Detroit.
MAX. SIZE: About 432 ft. long and 21 ft. draft is maximum for Allied Chemical Dock.
HEALTH: Pratique is not necessary as vessel has passed all health requirements before entering Canada.
RADIO: Messages may be sent and received via VBE Sarnia Radio.
VHF: None available for port movement, except as established between vessels in Harbour.
TUGS: Available, but not usually used.
BERTHING: There is no public wharf.

Canadian Coast Guard (C.C.G. Docks available on request for distress or emergency only. Contact by radio or telephone) has two docks: South – 250 ft. in length with approach depth 17 ft.; North – 291 ft., with approach depth 17 ft. North of this dock is McQueen's, 17 ft. draft. The old Town Coal Dock is converted into a public park.

Allied Chemical is a private dock which consists of 3 cement filled caissons protected with steel sheet piling. Import fuel oil and export liquid calcium. Vessels of 412 ft. length call here regularly, draft approach alongside 21 ft.
CRANES: Shore cranes are available for hire from private contractors, also floating barges with cranes, 100 ton capacity and 200 ft. boom if required.
BULK CARGO FACILITIES: Conditions of various wharves does not warrant any usage for bulk cargoes.
BRIDGES: No bridges within Amherstburg Harbour area.
STEVEDORES: Stevedoring is arranged through Agents in Windsor.
MEDICAL: Should medical attention be required it can be arranged through radio station VBE Sarnia by message to Canadian Coast Guard Base Amherstburg. Hospitals are available in Windsor with Ambulance service. Injured seaman can be taken off if necessary by Canadian Coast Guard in vicinity of Amherstburg, when notified via VBE Radio Sarnia.
TANKERS: Use private wharf of Allied Chemical Limited.
DENSITY: Fresh water only.
FRESH WATER: Fresh water could be supplied in an emergency by tank truck or contacting Public Utilities Commission.
FUEL: Not available on docks, except by truck.
FIRE PRECAUTIONS: Usual ship board fire precautions on board.
CONSULS: None.
REPAIRS: Small ship repairs can be carried out by local firms from Windsor.
DRY DOCK: None.
SURVEYORS: None stationed in port, but arrangements can be made to have an inspector when required.
GANGWAY/DECK WATCHMEN: No regulations requiring watchman.
CUSTOMS ALLOWANCES: Same as all Canadian Customs Regulations.
CARGO GEAR: Ship's gear, unless pallets are used.
REPATRIATION: Arrangements for crew change can be made.
TIME: Local time is GMT plus 5 hours and Summer time plus 4 hours.
HOLIDAYS: All Canadian Holidays, working time requires negotiating with local unions.
POLICE/AMBULANCE/FIRE: Police – 736-3622, Ambulance – 736-5411, Fire – 736-6500.
TELEPHONES: No telephone jacks available on any dock.
SERVICES: Laundry can be done, but takes considerable time. Food stuffs are available, including fresh produce.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Seaman's I.D. card is sufficient.
REGULATIONS: No unusual regulations.
DELAYS: Private owner's dock is only dock being used for cargo.
AUTHORITY: 1. Canadian Coast Guard, 370 Dalhousie Street, Amherstburg, Ontario. *Tel:* 519-736-5449. *Telex:* 064-77655. *Contact:* Steven D. Lear, Sub-District Manager.

2. Harbour Master – Mr. Len Duby, Amherstburg, Ontario.

3. Wharfinger – Mr. N. Faucher, 200 St. Arnard Street, Amherstburg. *Tel:* 736-5451.

AMHERST HARBOUR, Quebec: 47.14 N. 61.50 W.

LOCATION: Situated at the N.E. end of Amherst Is., which is part of the Magdalen Islands group.
DOCUMENTS: Amherst is not a port of entry, clearance obtained at previous Canadian port of call.
PILOTAGE: Not compulsory.
ANCHORAGES: Available inside the harbour, depths 4.88 m. to 5.5 m.
RESTRICTIONS: Navigation season from April 1st to December 15th. Channel depth 16 ft. at LWST.
RADIO: Grindstone (VCN).
TUGS: None.
BERTHING: Transport Canada Wharf: Length 183 m., depth alongside 5.18 m. at LW.
STEVEDORES: Available.
FRESH WATER: Available.
FUEL: Diesel available.
REPAIRS/DRY DOCK: Not available.
AIRPORT: Flights to Charlottetown and Quebec Province.
AUTHORITY: Transport Canada, Garde Cotiere Canadienne, Region des Laurentides, 104 Dalhousie, Suite 121, Quebec, P.Q., G1K 4B8. *Tel:* (418) 648-3680. *Telex:* 051-3051. *Contact:* Felix A. Boudreau, Harbour Master, Amherst.

BADDECK, N.S.: 46.06 N. 60.44 W.

(See Plan)

DOCUMENTS:

4 Crew Lists.
Customs Documents.
Harbour Dues Receipt.
Stores List.
Derat Certificate.
Safety Regulations.
Clearance from Last Port.

PILOTAGE: Compulsory. Pilot station at Table Head, see Canadian chart 4367.
ANCHORAGE: Good anchorage in lake. Depths 50 ft. to 500 ft.
RESTRICTIONS: Can be restricted by heavy fog, tide, ice.
Great Bras d'Or: (Entrance to lakes restricted at Seal Island Bridge to vessels less than 119 ft. high).

Entrance into the Bras d'Or Lakes via the Great Bras d'Or is from the Northward, through a 10 mile long fiord which varies in width from 0.5 to 1 mile wide and flanked by high rolling hills.
MAX. SIZE: Largest vessel to dock 497 ft. long, 66.7 ft. wide. Draft 28 ft.
HEALTH: Pratique obtained at Sydney, N.S.
RADIO: Sydney Radio
TUGS: None.
BERTHING: The dock is 330 ft. in length, with an approach way of 80 ft. length, making an "L" shape. Depth alongside at LW is 15 ft. at the inner end and 25 ft. at the outer end.
MEDICAL: No advance notice required. Hospital available.
DENSITY: In sea 35/1000. In lake 25/1000.
FRESH WATER: Supplied at 20 t.p.h.
FUEL: Diesel oil available by truck.
CERTIFICATES: Registry, Derat and Safety Certificates.
CUSTOMS ALLOWANCES: Tobacco, 100 cigarettes per week or 0.5 lb. tobacco. Wine/spirit: None.
CONSULS: None.
REPAIRS: Minor repairs only.
SURVEYORS: Lloyds, ABS and BV available from Halifax.
HATCHES: Normally opened and closed by crew.
AIRPORT: 55 miles. Served by regular airlines.
TIME: GMT minus 4 hours. Advance 1 hour in Summer.
HOLIDAYS: Sundays and Statutory holidays; New Year's Day; Good Friday; Easter Monday; Victoria Day; Canada Day; Labour Day; Thanksgiving Day; Remembrance Day; Christmas Day.
POLICE/AMBULANCE/FIRE: 295 2350, 292 2032, 295 2110.
TELEPHONES: None available for placing on board.
AUTHORITY: Transport Canada, P.O.Box 1013, Dartmouth N.S., B2Y 4K2. *Tel:* 426-6508. *Telex:* 019-22757. *Contact:* William Beck.

Local Authority: Transport Canada, Baddeck, Nova Scotia. Tel: 295-2502. Contact: Mr. MacRae, Harbour Master/Wharfinger.

BAIE COMEAU, Quebec: 49.15 N. 68.09 W.

PORT LIMITS: Starting from a point on the Southern limit of Baie Comeau at Pointe St. Gilles Lat. 49° 12′ 10″ N., Long. 68° 08′ 41″ W. Thence, North-Eastward to Pointe St. Pancrace, Lat. 49° 15′ 14″ N., Long. 68° 04′ 43″ W.

All waters inside of these points are understood to be part of Baie Comeau Harbour.

DOCUMENTS: Baie Comeau is a Port of Entry. Customs and Immigration facilities are located in the Town of Baie Comeau. All vessels arriving from Foreign Ports will be boarded by Customs and Immigration Officers.

The following forms are to be completed prior to arrival at the first Canadian Port:

3 copies Immigration Crew List, IMM-200
3 copies Crew Declaration, Y-14
3 copies Ship's Stores, E-1
3 copies Passenger List, IMM-264
2 copies Quarantine Service, *Q-S-1
*To be supplied by Quarantine Officer on arrival.

ETA: Advise Agent 72, 24 and 4 hours before arrival. Include fuel and stores requirements.

PILOTAGE: Not compulsory. The services of a qualified Docking Master are available through the facilities of Cargill Grain Company. Docking instructions will be given by radio after receiving vessel's ETA.

Normally the Docking Master boards from tug approximately 0.5 mile S.W. of Pointe St. Pancrace.

RESTRICTIONS: Port open for shipping all year round. Deep water approaches without restrictions for any vessel able to berth alongside.

ICE ADVISORY SERVICE: Ships inbound for Baie Comeau from seaward between December 15th and April 15th should advise the Ice Information Officer, Sydney, N.S., 36 hours prior to entering Cabot Strait stating their position, destination, whether loaded or in ballast. This procedure will facilitate the passing of ice information to the ship as necessary.

On request, ice information is also available from Marine Radio Stations at Halifax, Camperdown, Seven Islands, Twillingate and Grindstone. The Canadian Broadcasting Corporation Maritime network also broadcasts ice information daily during the Winter navigation season. Supplementary ice information may also be obtained from Canadian Marine Service icebreakers.

During the ice season, radio broadcasts of ice information are made twice daily from Marine Radio Stations as follows:

		Call Frequencies	
Cape Race, Nfld.	VCE	420	kHz CW
		2582	kHz RT
Fox River, Que.	VCG	434	kHz CW
		2582	kHz RT
Mont-Joli, Que.	VCF	446	kHz CW
		2582	kHz RT
North Sydney, N.S.	VCO	489	kHz CW
		2582	kHz RT
Halifax	CFH	115.3	kHz CW
		6949.5	kHz
		8662	
		12984	
		17218.4	

MAX. SIZE: Up to 40 ft. draft at Cargill at LW. Size limited only by berth depth.

RADIO: Mont-Joli Radio VCF 2582 kHz (VHF, CRM Co. Ltd., Wharf Office, base to ships on marine frequencies) (Channel 7A – 156.350 MHz and Channel 16 – 156.800 MHz, call XJS94).

HEALTH: Incoming vessels making Baie Comeau port of entry must obtain Pratique by wireless. Radio Pratique may be obtained between 0900 hrs. and 1700 hrs. the day preceding arrival. Address message "Quarantine Quebec": For the purpose of Radio Pratique, vessels are required to give the following information:

1. Name and nationality of vessel.
2. Ports called at during voyage.
3. Nature of cargo.
4. Number of crew.
5. Number of passengers.
6. Port of destination and name of Agent.
7. Number of persons without valid certificates.
8. Condition of health of all on board with details of any sickness or death which has occurred during the voyage.

Ships arriving in English Bay in Quarantine will be inspected by Health Officer at anchorage or on arrival alongside. Should Officer board vessel at anchorage, proper accommodation ladder must be provided.

TUGS: Available. Not compulsory except for Cargill Grain Terminal.

BERTHING:

Dock No. 1: Transport Canada: berth 456 ft. long, max. depth 27 ft.; berth 360 ft. long, max. depth 25 ft. North Shore Paper Company: 1,000 ft. wharf, max. depth 27 ft. Dock Pier: 2 berths, 422 ft. long, 20 ft. depth.

Dock No. 2: Canadian Reynolds Metals Co., Ltd. Wharves consist of breakwater and approach jetty called Berth No. 1, 450 ft. long. Berth Nos. 2 and 3 in slip, 587 ft. and 551 ft. long respectively. The docking area is dredged to 30 ft. at low water at Berth No. 1 and 31 ft. at Berth Nos. 2 and 3 and flares out to marker buoy (Fl. red Ev. 12 secs.) at Northern extremity and 1,000 ft. to its Southern extremity, where depth of water increases rapidly off shore from approximately 400 ft. East of breakwater. A port hand can buoy marks dredging out from S.E. corner of No. 1 Berth.

Dock No. 3: Cargill Grain Terminal, North Pier, 2 loading berths, length 585 ft., North side dredged to 40 ft., South side dredged to 38 ft. South Pier, 1 unloading berth, length 720 ft., North side only dredged to 29 ft.

Quebec-Hydro Dock: Depth alongside 27 ft. (25 ft. depth at berth used by Quebec North Shore Paper Co.).

CRANES: 100 ton stiff leg derrick at Canadian Reynolds Metal Co. Ltd., 5 ton level luffing crane at No. 2 Dock.

Mobile cranes available through local contractor.

CARGO HANDLING FACILITIES:

Canadian Reynolds Metal: 2 Pneumatic unloaders for Alumina and Coke, rate 140 t.p.h. each. at No. 3 Berth.

Cargill Grain Terminal: North Pier: 2 vessels can be loaded simultaneously at a combined average rate of 1,200 t.p.h. (long tons). South Pier: Discharging rate 1,100 t.p.h. (short tons).

STEVEDORES: Each terminal employs own stevedores.

MEDICAL: All facilities available. Local Hospital in Baie Comeau and Hotel-Dieu, Hauterive, 5 miles.

DENSITY: 1000 – 1025.

FRESH WATER: Delivered by pipe-line to the berths (April – October).

FUEL: Available by pipe-line to Cargill Grain Terminal. Diesel oil and gasoline delivered by truck (Imperial, Gulf, Texaco and Shell).

REPAIRS: Minor repairs may be effected through local contractors.

IDENTIFICATION CARDS: Gate passes are issued at the gate to all Crew members when going ashore for the purpose of identity on their return.

AIRPORT: Daily service to Quebec and Montreal.

CUSTOMS ALLOWANCES: 200 cigarettes for each man. Officers may be allowed 1 bottle wine/spirits, Master up to 5 bottles.

TIME: GMT minus 5 hours. Daylight Saving Time: GMT minus 4 hours, applied from last Saturday of April until last Saturday of October each year.

SHORE LEAVE: Crew members allowed ashore. No restrictions.

HOLIDAYS: New Year's Day; Epiphany; Good Friday; Ascension Day; St. John the Baptist Day; Labour Day; All Saints' Day; Christmas Day. No work performed on these holidays.

AUTHORITY: Transport Canada, Baie Comeau, Province Quebec. *Tel:* 418-296-6694. *Contact:* Yvon LeBranc, Harbour Master (Tel: (418) 296-4296).

BAY ROBERTS, Newfoundland: 47.36 N. 53.26 W.

(See Plan)

DOCUMENTS: Documents as per Standard Canadian Requirements.

PILOTAGE: Non-compulsory. Can be arranged by Coast Guard Traffic Management Centre, St. John's. Tel: (709) 772-2083.

ANCHORAGES: Good anchorage in outer area of Bay Roberts Harbour in depths of 5 to 6 fathoms.

RADIO: Ship to Shore through St. John's (VON).

BERTHING: Deep water approach, channel depth approximately 60 ft. Navigable year round.

Wharves: (1) Fisheries and Ocean's Wharf – Finger pier 181 ft. long (55 m.) and 40 ft. (12 m.) across the outer face. Depths alongside 20 ft. – 21 ft. LWOST. Concrete deck. Load limits 300 p.s.f., 15 tons concentrated load.

(2) Fish Plant Wharves – Two finger piers; East Wharf 160 ft. long and 26 ft. across the outer face (49 m.×8 m.), and West Wharf 197 ft. long and 26 ft. across the outer face (60 m.×8 m.). Depths alongside East Wharf 11 ft. to 13 ft. (3.4 m. to 4 m.) and West Wharf 13 ft. (4 m.) LWOST. Load limits unknown.

(3) Spencers Wholesale Wharf – Marginal wharf 263 ft. along the outer face (80 m.) with depths alongside 11 ft. to 14 ft. (3.4 m. to 4.3 m.) LWOST. Load limits unknown.

(4) Avalon Coal Salt and Oil Wharf – Marginal wharf 149 ft. long at the outer face (45 m.) with depths alongside 15 ft. to 19 ft. (4.6 m. to 5.8 m.) LWOST. Load limits unknown.

There are several smaller wharves and piers present.

CRANES: Small mobile cranes only.

STEVEDORES: Local labour; should be arranged by Agent.

MEDICAL: Local clinic. Full hospital facilities at Carbonear, 15 km. distant.

TANKERS: See "Berthing".

FRESH WATER: Available at Fish Plant Wharf.

FUEL: Available at Fish Plant Wharf.

REPAIRS: Limited welding can be arranged locally, nearest major repair shops at St. John's, 90 km. distant.

SURVEYORS: Lloyd's Register, P.O.Box 5044, St. John's, Newfoundland A1C 5V3. Tel: (709) 726-0543, (709) 368-2538 (residence).

GANGWAY/DECK WATCHMEN: Usually ship's crew. Ship's gangway used.

REPATRIATION: Can be arranged by Agent via St. John's airport.

AIRPORT: At St. John's, 90 km. distant.

POLICE/AMBULANCE/FIRE: R.C.M.P. Detachment at Harbour Grace, local fire station, ambulance service available.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard, Search & Rescue, St. John's, Newfoundland. Tel: (709) 772-5151.

GENERAL: Bay Roberts is covered by Chart No. 4572.

SHORE LEAVE: No restrictions.

BANKING: Services available.

AUTHORITY: Transport Canada, Harbours and Ports Directorate, P.O.Box 1300, St. John's, Newfoundland, A1C 6H8. *Tel:* 772-5154. *Telex:* 016-3369. *FAX:* 772-2193. *Contact:* D. A. Lester, Regional Manager.

BECANCOUR, Quebec: 46.24 N. 72.23 W. (See Plan)

PORT LIMITS: Normally vessel has "arrived" when first line on the bollard (subject to Charter-party terms).
DOCUMENTS: Crew Lists, Customs, Health, Manifests, Bills of Lading, Ship's Papers, Certificates, etc.

Customs, Health, Agents, Port Manager will board ship on arrival.
PILOTAGE: First Pilot boards at Les Escoumins Pilot Station. Exchanging Pilots off Quebec Pilot Station, on to berth in Becancour.
ANCHORAGES: Off berth or off main channel or, 5 miles (8 km.) West of harbour.
RESTRICTIONS: None.
Winter Navigation: From December 10th to April following, every year or as soon as the floating aids to navigation have been lifted a second Pilot is compulsory from Les Escoumins to Montreal.

Daylight navigation only between Quebec and Montreal.

Normal navigation resumes as soon as the aids are floated, normally between 15th March and 15th April.
MAX. SIZE: No restriction as to length, although 800 ft. (244 m.) is considered a respectable length. Chart datum depth 35 ft. (10.7 m.), average water level change 3 ft. (1 m.).
HEALTH: Pratique may be requested through any Canadian Coast Guard Radio Station or VHF traffic control stations.
TUGS: Not compulsory. Stationed in Trois-Rivieres and Quebec. Master's request.
BERTHING:

Berth No.	*Length m.*	*Depth (C.D.) m.*	*Remarks*
B–1	244	10.67	Outside by main channel.
B–2	150	10.67	Inside basin/Ro-Ro ramp (22 m.).
B–3	219	10.67	Inside basin
B–4	225	10.67	Inside basin
B–5	292	10.67	Smelter plant berth 1 suction system – 700 tonnes per hour.

Average water level 3 ft. (1 m.) above chart datum height. No reversing tide effects. Warehousing facilities, as required paved, lighted, open spaces 35 acres (14 hectares). Total stocking area 150 acres (61 hectares).
CRANES: Up to 200 tons capacity, rental or ship's gear.
STEVEDORES: Murray Bay Marine Terminal Inc. (exclusive to Becancour). Normal working hours 0800 – 1700 hrs. Overtime for night work, weekends and holidays can be arranged. Tel. 1-819-294-9911.
BULK HANDLING FACILITIES: Bulk is normally carried by self unloading vessels discharging at a rate of 2,000 t.p.h.

2 cranes on rails (suction type). 500 tons rate per crane.

Total stockpiling area: 150 acres (61 hectares).
SPECIALISED CARGO HANDLING FACILITIES: Ro/Ro ramp 70 ft. (21 m.) wide. Suction system – alumina/coke smelter plant.
MEDICAL: Nicolet, Trois-Rivieres, emergency ambulance standing-by.
DENSITY: Fresh water.
FUEL: Only by truck. Trois-Rivieres depot (35 tons truck). Rate: 20 to 30 t.p.h.
TANKERS: Special tankers are loading chemical products from trucks regularly.
FRESH WATER: From dock pipe-lines and hoses. Agent places order to Port Authority ($2.27 per 1,000 gallons plus labour).
CONSULS: At Montreal and Quebec.
REPAIRS: Piping and welding repairs, other limited ships repairs.
DRY DOCKS: Quebec, Sorel, Montreal.
SURVEYORS: ABS, Lloyd's, N.V., S.G.S. and private firms.
GANGWAY/DECK WATCHMEN: Recommended.
HATCHES: Opening and closing carried out by crew members.
CARGO GEAR: Ship's gear or shore gear. Heavy lift crane 200 tons (mobile).
REPATRIATION: Can be arranged without restrictions through Montreal International Airport by ship's Agent and Canadian Authorities.
AIRPORT: Inter-provincial airport in Trois-Rivieres. International airports in Montreal and Quebec (1.5 hours). Regular arrival to and from many parts of the world.
TIME: From last Saturday of March (every year) advance 1 hour to E.D.S.T.

From last Saturday of October (every year) minus 1 hour from E.S.T.
HOLIDAYS: Same as Quebec Province.
POLICE/FIRE/AMBULANCE: Gentilly, (area code: 819) 298-2211. Becancour (area code: 819) 298-2223
TELEPHONES: Offices on the docks (agency offices Tel. (819) 294-2212).
SERVICES: Commercial firms tank cleaning equipment facilities. Electronic aids to navigation repairs.
SHORE LEAVE: Allowed with permission of Master.
IDENTIFICATION CARD: Seaman's Book is sufficient.
REGULATIONS: Copy of the operational regulations will be handed to Master on ship's arrival by Port Authority.
DELAYS: Delays not experienced to date.
GENERAL: The port facilities are administered and operated by "La Societe du Parc Industriel du Centre du Quebec" a provincial Government Corporation under the Minister of Industry, Commerce Quebec.
DEVELOPMENTS: The marine facilities of Becancour are part of an industrial park located within the Municipality of Becancour, Quebec.

The port facilities are already expanding to meet the requirements of major industrial developments.

SHIPMASTER'S REPORT: June 1982. (Updated 1986).
Restrictions: Port open all year round. Mooring/unmooring possible anytime day or night.
Tides: Tidal difference 2 ft. – 3 ft. Current always running downstream.
Radar: Not available.
Tugs: Tugs are not compulsory. No tugs are stationed at Becancour, but can be obtained from Trois Rivieres, about 5 miles away or Quebec through "Marine Traffic Control".

Vessel was berthed at No. B-1 berth, and did not use any tugs berthing or unberthing.

The Pilots told me that tugs were advisable in some cases for berthing at B-2 and B-3 berths, depending of size of vessel, and prevailing weather conditions.
Berthing: Warehousing facilities include a 14,000 sq.ft. (1,300 sq.m.) transit shed on the wharves and a 40,000 sq.ft. bonded warehouse plus a 15 acre fenced-in outdoor storage area a short distance from wharves.
Cranes: Available. Ship's gear used.
Bulk Handling Facilities: Vessel berthed at "B-1". Average loading rate for bundled timber was 43 tonnes per gang hour. Stockpile area of 75,000 sq.ft.
Specialised Cargo Handling Facilities: Ro-Ro ramp at "B-2". Width of ramp 22 m.
Stevedores: Murray Bay Marine Terminal. Tel. 1-819-294-2212. Normal working hours: 0800 – 1200 and 1300 – 1700 hrs. Overtime can be arranged for night work and for work on Saturdays, Sundays and other holidays.
Density: Fresh water.
Fuel: Only by truck. (Vessel received 340 tonnes intermediate fuel oil and 30 tonnes diesel oil from Shell, Canada, Trois Rivieres depot. Each truck about 35 tonnes. Loading rate 20 – 30 minutes per truck.
Repairs: No facilities.
Surveyors: Available in Becancour, Montreal and Quebec.
Gangway/Deck Watchmen: By crew.
Hatches: Open/close by crew.
Customs Allowances: Same as for Trois Rivieres. (Becancour Port is attended to by Trois Rivieres Custom's officers.).
Repatriation: Can be arranged without restrictions from Montreal Airport (about 2.5 hours drive by car). The Agents are usually engaging a specially licensed company, who takes care of the transportation to the airport, and checking that crew members are actually leaving Canada.
Shore Leave: No restrictions.
Identificaton Cards: Passport or seaman's book recommended to be carried whenever leaving the vessel. There is no gate-control of persons entering of leaving the port area.
Developments: Future development of harbour will include additional stockpiling area for bulk material, containers and more warehousing capacity. The planned installations will cover a 200 acre area.

AUTHORITY: "La Societe du Parc Industriel du Centre du Quebec", 1000, Boul. Arthur-Sicard, Parc Industriel Portuaire, Becancour (Quebec), Canada G0X 1B0. *Tel:* (819) 294-6656. *Telex:* 05-837279 (spicq bccr). *Contact:* Captain Jean-Guy Chouinard, Port Director.

BELLEDUNE, N.B.: 47.55 N. 65.51 E.

A deep water harbour administered from Ottawa, Ontario and serving Belledune Fertilizers and other projects in the Bathurst area. This harbour is open to shipping all the year round.
DOCUMENTS: See "Saint John".
PILOTAGE: Pilotage is not compulsory, however, should a Pilot be required, the services of a local Berthing Master Mariner are available on request.

Regardless of pilotage, estimated times of arrival should be given to Belledune Fertilizers Ltd. 72, 48 and 24 hrs. before.
ANCHORAGE: Vessels wishing to anchor will find no difficulty in obtaining an anchorage in more than 10 fathoms, approximately 1 mile to the Northward of the Belledune Breakwater.
TUGS: None available. May be obtained from Halifax.
BERTHING: One berth, length 550 ft., depth at LW, 34 ft.
TIDES: Tides normally rise 6 ft. at springs and 3 ft. at neaps. Tidal current seldom exceeds 1 knot.
STEVEDORES: Bulk cargoes handled by Belledune Fertilizer Ltd., and general cargo by Longshoremen.
CRANES: Heavy-lift equipment available from private companies. Cranes up to 25 tons available.
MEDICAL: Hospital at Bathurst.
FRESH WATER: Available. Delivered by tank trucks upon arrangement with Belledune Fertilizer Ltd.
FUEL: None locally. Can be obtained and delivered by tank trucks.
CONSULS: None.
REPAIRS: Minor repair facilities at Belledune Fertilizer Ltd. machine shop.
STORES: All types of provisions as well as deck and engine stores can be obtained at Bathurst for delivery to Belledune.
AUTHORITY: Canada Ports Corporation, 320 Queen Street, Place de Ville, Ottawa, Ontario K1A ON6. *Tel:* 996-4230 (Area Code 613). *Telex:* 053-4127. *Contact:* Director, Port Operations.

Local Representative: Belledune Fertilizer Ltd. Local Operations Director: R. Boudreau.

BOTWOOD, Newfoundland: 49.09 N. 55.20 W.

(See Plan)

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
3 Crews Declaration (Can. Form Y14).
3 Stores Lists (Can. Form E.1).
Health Declaration (Can. Form QS. 2001).
3 Cargo Manifests.
3 Bills of Lading.

PILOTAGE: Compulsory. Pilot boards in position Lat. 49° 19′ 44″ N., Long. 55° 12′ 49″ W. day or night. Send ETA 12 hours and 4 hours in advance. Pilot station and boat equipped with VHF. Coastal pilotage service from St. John's to Botwood available on request.

ANCHORAGE: In Botwood Harbour, off the oil dock in depths of 10 – 20 fathoms.

RESTRICTIONS: Navigation season from mid-April to mid-January approximately. Ice-breaker assistance may be necessary in Winter months. Deep water approaches.

MAX. SIZE: Up to 32 ft. draft.

RADIO: Comfort Cove, St. John's, St. Lawrence or Corner Brook.

HEALTH: Health Officer boards on arrival.

TUGS: None available.

BERTHING: *Pier No. 1:* Owned by Price (Nfld.) Pulp & Paper Ltd., used exclusively for handling newsprint outward and caustic soda inward. Is 500 ft. long; min. depth alongside 32 ft., is adjacent to newsprint storage shed, capacity 20,000 tons (standard newsprint).

Pier No. 2: Berth unfit for use.

Pier No. 3: 600 ft., owned by Private Interests, used for shipping concentrates, and discharging Bunker "C" fuel and sulphur inward. Min. depth alongside 32 ft. Concentrates loaded by 1 fixed conveyor.

Ministry of Transport Finger Pier: Length 150 ft., min. depth alongside 35 ft. Face is 23 ft. – 25 ft. Is connected by pipe-line to bulk fuel storage tanks, owned by Golden Eagle Refining Co. Ltd., and is used primarily for discharging of clean fuels.

Ministry of Transport General Cargo Wharf and Shed: Wharf 269 ft. long, 103 ft. in breadth, cargo shed 200×70 ft., 20 ft. clear height below steel girders. Apron of wharf is 33 ft. wide with access driveway extending around each end of shed to main roadway. Rear cargo doors from shed open at truck level to facilitate mechanical handling. Front and end doors are wharf level.

MEDICAL: Doctors, hospital facilities available.

TANKERS: Finger Pier length 200 ft. with berthing face length 30 ft. Depth alongside 32 ft. Berth owned by Irving Oil Ltd. and used exclusively for discharging oil products.

FRESH WATER: Available at all berths.

FUEL: Only light diesel available by tank truck.

REPAIRS: Minor repair and diving services only.

SURVEYORS: All major classification societies available from St. John's.

CUSTOMS ALLOWANCES: 200 cigarettes for each man. Officers may be allowed 1 bottle wine/spirits, Master up to 5 bottles.

TIME: GMT minus 3.5 hours. Daylight Saving Time: GMT minus 2.5 hours, applied from last Sunday of April until last Sunday of October each year.

SHORE LEAVE: Allowed. No restrictions.

HOLIDAYS: Good Friday; Labour Day; Christmas Day and Boxing Day. No work performed on these holidays.

AIRPORT: Gander International Airport, 60 miles away.

BANKS: Bank of Montreal, 52 Water Street, Botwood, Newfoundland A0H 1EO. Tel: 709-257 2957

EMERGENCY CO-ORDINATING CENTRE: Canadian Coast Guard, St. John's. Telex: 016-4530. Tel: 709-737 2083/4.

AUTHORITY: Ministry of Transport.
Harbour Master H. Baldwin, Wireless Road, Botwood. *Tel:* 709-257 3288.

BRIDGEWATER, N.S.: 44.23 N. 64.31 W.

(See Plan)

DOCUMENTS: See "Halifax".

PILOTAGE: Not compulsory. Report ETA by radio-telephone or radio-telegraph to Superintendent of Pilots, Halifax, N.S. at least 12 hours before arrival at boarding station. ETA to be confirmed 3 hours before arrival. Pilot boards off Moshers Island Light.

ANCHORAGE: At Dayspring, 2 miles below Bridgewater.

RESTRICTIONS: Port is situated on La Have River, 10 miles from the sea. Channel path at LW, 20 ft.

MAX. SIZE: Length 325 ft. Draft 20 ft.

RADIO: Halifax Radio.

HEALTH: Pratique granted by Customs Officer who boards on arrival at the berth. Also see "Montreal".

BERTHING: Transport Canada Wharf, berthing length, 1,073 ft. Depth alongside 21 ft.

FRESH WATER: Available ex wharf only on West side of river.

FUEL: Diesel and gasoline from storage tanks in port.

MEDICAL: Hospital services available.

REPAIRS: Limited facilities for engine repairs.

STEVEDORES: Available.

HOLIDAYS: Dominion Legal holidays.

AIRPORT: Nearest approximately 90 miles away.

POLICE/AMBULANCE/FIRE: Police Tel: 543-2464. Dawson Memorial Hospital Tel: 543-4603.

BANKS: Bank of Montreal, Tel: 543-2415.
Royal Bank of Canada, Tel: 543-7161.
Bank of Nova Scotia, Tel: 543-8155.
Canadian Imperial Bank of Commerce, Tel: 543-2451.

AUTHORITY: Transport Canada, P.O.Box 1013, Dartmouth, N.S., B2Y 4K2. *Tel:* 426-6508. *Telex:* 019-22757. *Contact:* William Beck.
Local Authority: Transport Canada, Bridgewater, Nova Scotia. Tel: 543-8815. Contact: Glayden L. Conrad, Harbour Master.

CANAPORT, N.B.: 45.12 N. 65.59 W.

PILOTAGE: Compulsory. Ordered through "Fundy Traffic" VHF Channel 12.

ANCHORAGE: Anchorage area 'C', bottom is mud with good holding. Vessels permitted to anchor South of Latitude 45° 10′ N., without a Pilot.

RESTRICTIONS: Daylight berthing only. Vessels unberth day or night. Delays in berthing may be experienced due to strong Southerly winds and in periods of reduced visibility due to fog in the Summer and sea smoke in the Winter.

MAX. SIZE: 350,000 tons S.d.w.t. 400,000 tons may be accepted under favourable weather conditions. No restrictions on length.

RADIO: The terminal will usually request the following information prior to arrival:
a) ETA Canaport pilot station.
b) Distance from bow to centre cargo manifold.
c) Hose boom capacity.
d) Distance from cargo manifold to ship's rail.
e) Height of cargo manifold above deck.
f) Size of bow chock opening. Height and width.
g) Distance of bow chock opening to nearest bollard.
h) Distance of bow chock opening to mooring bracket (if fitted).
i) Number and diameter of cargo manifold connections.
j) Number and size of reducers.
k) Confirm vessel capable of maintaining 40% of d.w.t. capacity during discharge with segregated ballast and cargo tank ballast seperated from cargo by 2 valves.
l) Slops, quantity, location and type.
m) Can vessel accommodate 2 Berthing Masters and 6 Canaport crew, who will remain on board?

ETAs to be sent through Agent, 96, 72, 48 and 24 hours prior to arrival. Vessel to contact Canadian Coast Guard via Agents for permission to C.O.W. whilst discharging at Canaport. Canaport operations on VHF Channel 11.

TUGS: One tug used to assist vessel in berthing and unberthing. One tug towing astern throughout discharge to keep the vessel clear of the SBM. Tugs' lines throughout.

BERTH: SBM: Situated 4,100 ft. offshore from Mispec Point. Depth at LW 120 ft.

FUEL: Bunker and diesel fuel available by barge.

FRESH WATER: By tug.

BALLAST: Terminal requires that vessel maintain at any stage of the discharge sufficient cargo or ballast, or a combination of both, equal to *40% of S.d.w.t.* Vessels of less than 150,000 tons S.d.w.t. may at the discretion of the Senior Berthing Master, be allowed to reduce this percentage to 30% by taking into account the expected weather condition, vessel's construction and ballast arrangements. In addition, vessel to remain at a suitable trim compatible for safe manoeuvring and *not to exceed 18 ft.* by the stern.

Vessels required to ballast and discharge cargo concurrently maintaining two valve segregation.

GENERAL: *Arrival:* Prior to arrival vessels to have the port side cargo boom rigged and topped ready to lift mooring gear from the tug and to lift 2×16 in. hose tails weighing 8 tons. Starboard boom should be topped if receiving stores. Pilot ladders rigged port and starboard side and accommodation ladder rigged starboard side.

Mooring: Vessels secure to SBM with 2 nylon mooring hawsers and should have 2×3 in. messengers available to pass to the mooring launch. Hammers and crowbars should be available on foc'sle for use in securing chafing chains. Usually port line first.

Cargo Handling: 2 Berthing Masters and a Canaport crew of 6 persons remain on board throughout vessel discharge to moor vessel, connect and disconnect hoses, maintain foc'sle head lookout and co-ordinate the discharge. Vessel takes ballast part way through the discharge to maintain 40% of deadweight capacity whilst at the SBM. Vessel's engines must be ready for instant manoeuvring at all times.

Cold Weather Precautions: During January and February the average air temperature is −7.5°C but temperatures below −20°C may be experienced. Masters are advised in order to protect their interest and in order to expedite the discharge the following cold weather precautions should be taken prior to arrival to prevent freezing:
a) Any C.O.W. lines that contain, or suspected to contain water should be purged with crude oil.
b) Quality of anti-freeze or glycol in the deck IG pressure vacuum breakers should be checked.
c) Heat on-deck water seal.
d) Deck general service, fire and foam lines should be drained of water.
e) Steam powered deck machinery should be run continuously.
f) Deck hydraulics and machinery not fitted with 'Arctic' type hydraulic oil should be circulated continuously prior to arrival in order to be kept fluid.

SHORE LEAVE: By launch.

AUTHORITY: Canaport Ltd., P.O.Box 2055, Saint John, N.B., Canada. *Tel:* 506-633-3000. *Telex:* 014-47344.

AGENT: Kent Line Limited, 300 Union Street, P.O.Box 725, Saint John, N.B., Canada E2L 4B4. Tel: (506) 632-1666. Telex: 014-47304. Cables: Kent Line.

CHANDLER, Quebec: 48.22 N. 64.40 W.

LOCATION: Town on the Quebec shore entrance to Chaleur Bay, 10 miles N.E. of Point au Maquereau, 16 miles W. of Cape d'Espoir.
PILOTAGE: Controlled by Halifax Pilot Board Association.
RESTRICTIONS: *Navigation Season:* All year round, ice breakers sometimes accompany vessels.
HEALTH: Pratique is secured by radio through Quebec City.
RADIO: Grindstone (VCN) and Fox River.
TUGS: None available or required.
BERTHING: *Transport Canada Wharf:* East Side reserved for fishing vessels.

West Side: Length 600 ft. Depth at LW 32 ft.
STEVEDORES: Skilled labour available.
FRESH WATER: Available.
FUEL: Diesel oil available. Bunker 'C' can be brought in by rail.
REPAIRS: Machine shop available for minor repairs.
SURVEYORS: Lloyd's at Quebec City. ABS at Montreal.
SERVICES: Post office, bank, telephone, notary, telegraph, hospital.
AUTHORITY: Transport Canada. *Contact:* Victor Bujold, Harbour Master and Wharfinger, Tel: 689-6713.

CHARLOTTETOWN, P.E.I.: 46.14 N. 63.07 W.

(See Plan)

PORT LIMITS: A ship is considered to be "arrived" when it reaches Pilot Boarding Station at Lat. 46° 00′ N., Long. 63° 08′ W.
DOCUMENTS:

Port clearance from previous port.
3 Form QS.2001 Quarantine, if from other than U.S. port or St. Pierre et Miquelon.
3 Form HA.282 Garbage Disposal Warning.
2 Form IMM.200 Crew List, only Canadian documentation acceptable.
3 Form E1 List of Ship's Stores. May use own documentation.
3 Form 71 Crew's Declarations. May use own documentation.
2 Form A6 Report Inwards.

PILOTAGE: Pilotage is compulsory. One Pilot active with privately owned 40 ft. wooden boat, white hull, blue vertical strip midships. The pilot boarding station is in position Lat. 46° 00′ N., Long. 63° 08′ W. No alternate area in event of bad weather. To avoid a delay in obtaining a Pilot, he may be contacted on VHF Channel 16. Master should report ETA at least 12 hours before the ETA at the pilot boarding station. The ETA must be confirmed or corrected not more than 6 hours later. The Master of a vessel that is to depart or make a move within the compulsory pilotage area must report to "Pilots Charlottetown" 6 hours prior to estimated time of departure.
ANCHORAGES: Anchorage inside harbour at Three Tides – Lat. 46° 13′ N. Long. 63° 08′ W. Average depth of water 30 ft.
MAX. SIZE: Draft 32 ft.
HEALTH: Pratique procedure carried out by Customs Officers. (Form QS1).
RADIO: VCA Charlottetown, Canadian Coast Guard.
VHF: Canadian Coast Guard (VCA) Channels 16 and 26.
RADAR: Service not available.
TUGS: Not available.
BERTHING: (1) Railway Wharf: West side, berthing length 730 ft. with depth ranging from 32 ft. at outer end to 10 ft. at inner end at low water; East side, berthing length 500 ft. with depth of water ranging from 32 ft. at outer end to 10 ft. at inner end at low water. Outer end has a berthing length of 230 ft. with a depth of water of 32 ft. at low water. Wharf used for loading and discharging general cargo; equipped with railroad tracks, one – heated shed – 385 ft. long×50 ft. wide, one heated freight shed 385 ft.×60 ft. Electric light, water, oil and gasoline available. Mobile cranes available.

(2) Ministry of Transport wharf, 300 ft. wide, with a depth of 33 ft. alongside. Office and stores building, buoy test shop, etc. West side berth, 450 ft. long, with depth of 26 ft. for Coast Guard use only.

(3) Texaco Canada Ltd. wharf, 365 ft. long, with four large oil storage tanks. Mooring dolphins have been erected adjacent to the wharf and there is reported to be at least 28 ft. alongside at low water.

(4) Department of Public Works, berthing length 500 ft. with depth of 20 ft. at outer end, 19 ft. along outer part of West side, and 19.25 ft. on East side; equipped with electric light and water mains; used for Government marine purposes only.

(5) Irving Oil Co. Ltd. wharf, on edge of channel, about 600 ft. from Old Bridge Site. Use by Irving tankers only.

A railway line runs along inner end of wharves. All depths given are at low water.
CRANES: No shore cranes available, vessels are required to use own gear.
BULK CARGO FACILITIES: (1) Railway Wharf: West side, berthing length 500 ft. with depth ranging from 32 ft. at outer end to 10 ft. at inner end at low water; East side, berthing length 730 ft. with depth of water ranging from 32 ft. at outer end to 10 ft. at inner end at low water. Outer end has a berthing length of 230 ft. with a depth of water of 32 ft. at low water. Wharf used for loading and discharging general cargo; equipped with railroad tracks, one – heated shed 385 ft. long×50 ft. wide, one heated freight shed 385 ft.×60 ft. Electric light, water, oil and gasoline available. Mobile cranes available.
SPECIALISED CARGO FACILITIES: Berths not equipped for handling containers or roll-on/roll-off traffic.
BRIDGES: None.
STEVEDORES: Advise ETA before 1600 hrs. in order to commence 0800 hrs. next day.
MEDICAL: No advance notice required, ample hospital facilities available.
TANKERS: Railway Wharf: Outer end has a berthing length of 230 ft. with depth of water 32 ft., discharge lines 8 in., 10 in. and 12 in., no slop facilities.

Texaco Canada: Wharf 365 ft. long with four large oil storage tanks. Mooring dolphins have been erected adjacent to wharf. Draft 28 ft., discharge lines 8 in. no slop facilities.

Irving Oil Wharf: On edge of channel about 600 ft. from bridge. Discharge lines 8 in. and 10 in. Draft 32 ft., no slop facilities.
DENSITY: 1025 oz. per cu.ft.
FRESH WATER: Available at Railway Wharf. Order through Agent. Rate 12 t.p.h.
FUEL: Delivered by tank truck. Most grades of fuel and diesel as well as marine lubricants can be obtained through supplier.
GANGWAY/DECK WATCHMEN: Usually ship's crew.
OPENING/CLOSING HATCHES: Stevedores work hatches which are not mechanically operated.
CUSTOMS ALLOWANCES: 200 cigarettes or 2.0 lb. tobacco or 15 cigars per man per week. Wine and/or Spirit: 40 oz. of wine or spirits or 288 oz. of beer.
REPAIRS: Minor repairs only.
DRY DOCKS: Not available.
CARGO GEAR: Vessel required to use own gear for loading and unloading.
REPATRIATION: Crew changes and repatriation can be carried out with little difficulty.
AIRPORT: 4 miles distant with daily flights by Eastern Provincial Airways and Air Canada.
TIME: GMT minus 4 hours, May to October; GMT minus 5 hours, November to April.
HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Victoria Day; Canada Day; Labour Day; Thanksgiving Day; Remembrance Day; Christmas Day; Boxing Day. Work can be arranged on these days.
POLICE/AMBULANCE/FIRE: Police, 894–5513; Ambulance, 892-5311. Fire, 894–3113.
TELEPHONES: No hookup available.
BANKS:

(1) Royal Bank of Canada, Confederation Plaza, Charlottetown, PEI.
(2) Bank of Montreal, Confederation Plaza, Charlottetown, PEI.
(3) Bank of Nova Scotia, Confederation Plaza, Charlottetown, PEI.
(4) Toronto Dominion, 192 Queen Street, Charlottetown, PEI.
(5) Canadian Imperial Bank of Commerce, Queen Street, Charlottetown, PEI.

SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required unless disembarking. Crew members should then possess Seaman's Book and/or Passports.
DELAYS: If berth available, no delays in loading or unloading.
AUTHORITY: Transport Canada, Box 1202, Charlottetown, P.E.I. C1A 7M8. *Tel:* (902) 566-7974. *Telex:* 014-44130. *Contact:* Paul McGonnell, Port Manager.

PILOTAGE: Contact Agent for Pilot at least 12 hrs. in advance. Pilot boat, wooden hull, length 44 ft., grey, Pilot flag about 20 ft. above sea-level. From April 16th to December 9th Pilot taken aboard 2 miles North of Escuminac Breakwater. In event of very bad weather good anchorage Egmont Bay, PEI. Dec. 10th–April 15th Pilot boards at Eddy Point NS when inbound from East. In other cases Pilot boards at point of departure in Canada.
MAX. SIZE: Max. draft 7.62 m.
HEALTH: Pratique procedure carried out by Customs Officer (complete form QS 1).
RADIO: Use Grindstone (VCN) or Charlottetown Radio (VCA), or Escuminac Pilot (VHF Channel 16).
TUGS: Not required.
BERTHING: Approx. 3 hrs. from pilot station to Berth. 2 wharves available.
BRIDGES: Bridge at Chatham 35 m. clearance high tide. Hydro wires at Middle Island 41 m. at 60 degrees Fahrenheit at lowest point, channel wide at this point, able to get 55 m. clearance. Morrisey Bridge, max. span opening is 30 m. Overhead cables at Morrisey Bridge.
STEVEDORES: Notice at least 24 hours before arrival.
MEDICAL: Hotel Dieu Hospital, Chatham and Miramichi Hospital, Newcastle.
TANKERS: Hose connections 15 cm.; no slop discharge facilities.
FRESH WATER: Available only at Government wharves at Chatham and Newcastle.

FUEL: All types by tanker truck.
GANGWAY/DECK WATCHMEN: Not necessary.
CUSTOMS ALLOWANCES: 200 cigarettes/man/5 days. Spirits: 40oz./man/5 days.
CREW IDENTIFICATION CARDS: Not needed.
CONSULS: None.
REPAIRS: Light repairs by Miramichi Foundry and Arvin Speciality Machines.
SURVEYORS: Lloyd's Surveyor at Dalhousie. N.B., others at Halifax.
REPATRIATION: Facilities good.
AIRPORT: Chatham. Daily flight to Montreal.
TIME: Atlantic Standard, 4 hours difference GMT. Change from Standard to Daylight Saving last Sunday in April through last Sunday in October. (1 hour forward).
HOLIDAYS: No work Labour Day, Armistice Day, New Brunswick Day. Other holidays may be worked on overtime.

CHICOUTIMI, Quebec: 48.25 N. 71.02 W. (See Plan)

DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
3 Crews Declaration (Can. Form Y14).
3 Stores Lists (Can. Form E.1).
Health Declaration (Can. Form QS. 2001).
3 Cargo Manifests.
3 Bills of Lading.

PILOTAGE: Pilotage is compulsory. Pilots board vessels that are Westerly-bound at Anse-aux-Basques and Easterly-bound at Quebec City. The Master of every ship inward bound in the Gulf of St. Lawrence and destined for ports West of Anse-aux-Basques must report his ETA to Pilots Montreal via Marine Traffic Control on VHF radio Channel 14 (156.7 mHz) or by other means of communication to Seven Islands Radio Station VCK giving his ETA to Escoumains Pilotage Station and the net registered tonnage of his vessel.

A minimum notice of 12 hours must be given to ensure the availability of Pilots at Anse-aux-Basques for vessels proceeding from the Gulf to Chicoutimi.

This notice must be confirmed 3 hours prior to arrival at the pilot station by radio-telegraph or radio-telephone as mentioned above.

The pilot station for vessels upbound to Chicoutimi is located at Anse-aux-Basques, charted 2 miles S.W. of Les Escoumains Wharf on the North shore of the St. Lawrence River. Two pilot boats are constantly on service.

ANCHORAGE: At St. Fulgence, 6 miles before Chicoutimi.
RESTRICTIONS: Navigation season from mid-April to end November approximately. Channel depths 6 m. LW up to oil terminal and 4.88 m. LW above oil terminal.
MAX. SIZE: Up to 7.62 m. draft.
RADIO: Riviere du Loup Radio Station.
HEALTH: Pratique may be obtained by radio to Quarantine Quebec. Health Officer boards on arrival.
TUGS: None available.
BERTHING: Main Wharf, 792 m. berthing length, 9 m. depth alongside.
CRANES: Two cranes for bulk cargoes 5 tons capacity.
TANKERS: *Irving Oil:* Dock for unloading and bunkering. Products handled: Gasoline, furnace oil and bunker "C". Distance to storage tanks 152.0 m. Length of dock 96 m. Depth 10.6 m. Max. LOA 182.88 m.
Petro-Canada/Spur Oil/Texaco/Ultramar: Use oil berth at Point L'Ilet.

Dock	*Dock use*	*Cargo Handled*	*Distance from Dock to Storage Tanks*	*Length of Dock*	*Depth at Dock*	*Remarks*
Petro-Canada	Unloading	Gasoline	1066.81 m.	121.92 m.	8.23 m.	Max. LOA 152.4 m.
Spur Oil	Unloading	Gasoline Furnace Oil Diesel Oil	792.48 m.	121.92 m.	8.23 m.	Max. LOA 152.4 m.
Texaco Canada	Unloading	Furnace Oil Diesel Fuel	121.92 m.	121.92 m.	8.23 m.	Max. LOA 152.4 m.
Ultramar	Unloading	Gasoline Middle Distillates	900.00 m.	121.92 m.	8.23 m.	Max. LOA 152.4 m.

DENSITY: Fresh water.
MEDICAL: Doctors, hospital facilities available.
FRESH WATER: Available at all berths.
FUEL: Available at oil berth.
REPAIRS: Minor machine shop repairs only.
CUSTOMS ALLOWANCES: 200 cigarettes for each man. Officers may be allowed 1 bottle wine/spirits, Master up to 5 bottles.
TIME: GMT minus 5 hours. Daylight Saving Time: GMT minus 4 hours, applied from last Saturday of April until last Saturday of October each year.
SHORE LEAVE: Allowed. No restrictions.
HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Victoria Day; St. John the Baptist Day; Dominion Day; Labour Day; Thanksgiving Day; Remembrance Day; Christmas Day. No work performed on these holidays.
AUTHORITY: Port of Chicoutimi, C.P. 760, Avenue Lafontaine, Chicoutimi, Quebec G7H 5E1. *Tel:* (418)-543-0263. *Telex:* 051-36218. *Contact:* Guy Deseagne, Port Manager.

CHURCHILL, Man.: 58.47 N. 94.12 W. (See Plan)

DOCUMENTS:

3 Crew Lists.
3 Passenger Lists (if applicable).
3 Ships Stores Lists.
2 Quarantine Certificates.
1 Certificate for Harbour Master to be prepared after approval.
1 Certificate that Gyro Compass in order certified plus copy of manifest giving weight or measurement for each Bill of Lading. Certification by Local Collector of Customs.

Arctic Pollution Prevention Certificates: Ships have arrived in Churchill without such certificates and have thus contravened the Arctic Shipping Pollution Prevention Regulations. This certificate states that a vessel is in class, complies with SOLAS conventions, and has all of the equipment required by the regulations such as two radars, etc.

A certificate may be obtained from a surveyor employed by a major classification society named in the regulations. Ships unexpectedly diverted to Churchill should contact the Port Warden immediately on arrival at Churchill.

Ship Masters are cautioned to ensure that they comply with the Arctic Shipping Pollution Prevention Regulations.

PILOTAGE: Pilotage is not compulsory, but the pilotage fee is compulsory. Pilots board ships outside the harbour within a radius of 5 miles from Eskimo Point. The fee is $415 per ship inward and $415 per ship outward. Moving vessel within harbour is $290.

Vessels must advise their ETA at the port, and should also advise their time of arrival at Fairway Buoy.

Requests for Pilots should be submitted through the local marine radio. Pilots embark from vessels at the Fairway Buoy. The tug "Twolan" is used as pilot boat.

ANCHORAGES: Inside the harbour, there is anchorage room for one small vessel in 30 ft. of water about 0.75 miles N.W. of wharf. There is insufficient swinging room at this anchorage for large vessels. Large vessels anchor outside the harbour. The outside anchorage is exposed and vessels in a light condition may find it difficult to maintain their anchorage, particularly with a strong N.E. wind.

RESTRICTIONS: Vessels are usually brought in just before high tide, although vessels may enter any time.

MAX. SIZE: Max. length 600 ft. width 100 ft. and depth alongside wharf at zero tide is 31 ft. at three berths, 33 ft. at one berth, 22 ft. at Wolfe Berth and 20 ft. at the coastal Berth.

HEALTH: All vessels must fly yellow flag until cleared by authorities after docking.

RADIO: Department of Transport, Marine Aeradio Station call sign VAP, Channels to be used: 16 for calls and replies, 12 for harbour control, as well as Channel 26.

RADAR: Requirements as laid down by Arctic Pollution Prevention Regulations.

TUGS: Tugs usually join vessels inside the harbour. Two tugs available. Ship's lines used.

BERTHING: Max. allowable salt water draft at sulphur berth 32 ft., thereafter topping-up with the tide for a few more inches.

Loading capacity for bulk grain is 60,000 bushels/hour.

CRANES: 1×100 tons capacity and 1×35 tons capacity.

STEVEDORES: Gangs are available during whole of shipping season, no advance notice required.

MEDICAL: Fully staffed and equipped hospital available, approximately 1 mile from harbour.

TANKERS: Discharge pipes 4 in. diameter. One berth available with max. depth of 33 ft. at zero tide.

FRESH WATER: Fresh water available at all berths. Water pumped through 2.5 in. pipe connected directly to ship, discharged at rate of approximately 60 t.p.h.

FUEL: Bunker fuel requires 30 days advance notice. Arctic fuel available all times.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Carried out by ship's crew.

CUSTOMS ALLOWANCES: See "Montreal".

CONSULS: None.

REPAIRS: Most repair work. Fully equipped machine shop available.

DRY DOCKS: None.

SURVEYORS: By arrangement with Ship Safety at Thunder Bay.

CARGO GEAR: Ship's gear.

AIRPORT: Airport situated 5 miles from the harbour and served by Pacific Western Airlines and Calm Air International Ltd., with 2 flights going North and 3 flights South every week (Monday, Wednesday and Friday).

TIME: GMT minus 6 hours. Daylight Saving Time (1 hour forward starts first Sunday in May and ends last Sunday in October).

HOLIDAYS: New Year's Day (January 1st); Good Friday; Easter Monday; Victoria Day (May 24th); Dominion Day (July 1st); Civic Holiday (First Monday in August); Labour Day (First Monday in September); Thanksgiving Day (Second Monday in October); Remembrance Day (November 11th); Christmas Day (December 25th); Boxing Day (December 26th).

Arrangements normally made to have crews available for those days.

POLICE/AMBULANCE/FIRE: Police Tel: 675-2422; Ambulance Tel: 675-8881, Fire Tel: 675-2424.

TELEPHONES: No facilities.

SHORE LEAVE: Allowed, no restrictions.

BANKS: Royal Bank of Canada.

STORING: Vessels may be stored by truck, which may proceed alongside. No forklift trucks available. Riggers may be employed. Customs regulations in force.

DELAYS: Little delay.

AUTHORITY: Ports Canada, P.O.Box 217, Churchill, Manitoba, R0B 0E0. *Tel:* (204) 675-8823. *Telex:* 0766-6513. *Contact:* General Manager.

CLARENVILLE, Newfoundland: 48.08 N. 53.56 W.

DOCUMENTS:

Crew List, Form 200 in duplicate.
List of Ship's Stores, Form E1 in duplicate.
Crew Declarations, Form Y.14 in duplicate.
Manifests in triplicate.
Bills of Lading in duplicate.

PILOTAGE: Contact Pilot through St. John's Radio (VON). Pilot usually boards off St. John's.

ANCHORAGE: Good anchorages in Random Sound.

MAX. SIZE: Largest ship 644 ft. long, breadth 84 ft., draft 26 ft.

HEALTH: See "Montreal".

RADIO: St. John's Radio (VON).

TUGS: None available.

BERTHING: Newfoundland Hardwoods Wharf: Length 375 ft., depth at LW 28 ft.

STEVEDORES: Available. 48 hours notice required.

MEDICAL: Necessary for Agents to receive advance notice of medical attention required. Hospitals available at Come By Chance (30 minutes distance by road) and St. John's. Vaccination/Fever Certificates necessary for Pratique.

FRESH WATER: Limited supplies available.

FUEL: Light fuels only (no bunkers).

OPENING/CLOSING HATCHES: By crew.

CERTIFICATES: Load Line, Safety Equipment, Derat Certificates.

CUSTOMS ALLOWANCES: Tobacco 200 cigarettes allowed per crew member per week. Wine and/or Spirit, 1 bottle of spirit allowed per crew member on the first voyage in each year. Each subsequent voyage in one year, 1 bottle allowed only to officers.

IDENTIFICATION CARDS: Not required.

CONSULS: At St. John's.

REPAIRS: Minor repairs possible.

REPATRIATION: Only available by air.

AIRPORT: Gander International Airport located about 2 hours distance by road/served by regular airlines.

TIME: Eastern Standard Time GMT minus 5 hours. Daylight saving time from last week-end in April to last week-end in October, clocks advanced 1 hour.

HOLIDAYS: See "Montreal".

POLICE/AMBULANCE/FIRE: Police 466-3211; Fire 466-7777; Ambulance 466-2010.

TELEPHONES: No facilities for placing on board.

SERVICES: Only limited services available.

SHORE LEAVE: Allowed.

AUTHORITY: Transport Canada.

AGENT: Newfoundland Hardwoods Ltd.

COME BY CHANCE, Newfoundland:
47.48 N. 54.01 W. **(See Plan)**

LOCATION: The Come By Chance oil terminal owned by Petro-Canada is located in Placentia Bay, Lat. 47° 48′ 18″ N. Long. 54° 00′ 35″ W.

DOCUMENTS:

3 copies Crew Declaration (Form Y14).
3 copies Ship Stores List (Form E1).
3 copies Immigration Crew List (Form IMM 200) only Canadian form accepted.
2 copies of Bill of Lading or Manifest.

In addition, clearance from last port, Derat Certificate, extra copy of Crew List, Vaccination List, Ship's Register, Radio Equipment Certificate, Safety Equipment Certificate, Load Line Certificate and Non-Canadian Ship Compliance Certificate. Oil record log book should be up to date and readily available for inspection by Government steamship inspectors.

PILOTAGE: *Ship's Officer's Report:* Pilotage is compulsory. Pilots board off Argentia (position Lat. 47° 21.9′ N., Long. 54° 04.6′ W.) by prior arrangement with St. John's Pilotage. An ETA message (preferably in GMT) should be sent at least 12 hours before arrival to "Coast Guard Traffic Centre St. John's". The message should state the following:

Name of ship. Call letters. Draft. Gross tonnage. Length. Breadth. Moulded depth. Destination.

Confirmation or amendment of the ETA should be sent 6 hours prior to arrival.

VHF channels are allotted to various areas in Canadian waters but in the absence of this information contact can be established in the first instance on Channel 16. The most frequently used Channels are numbers 6, 11, 12 and 14. In general Channel 6 is used by tugs and Channel 11 by Pilots in pilotage waters.

It is anticipated that there will be no pilotage in Placentia Bay during the hours of darkness for a period of at least two years for vessels of over 50,000 d.w.t.

The pilotage routes used are as follows:

Latine Pt. (Argentia)	097°×4.6′	Co. 019°
to		
Margery Cove (N. of Red Is.)	291°×2.7′	Co. 021°
to		
Buffett Is. (E. of Long Is.)	275°×2.7′	Co. 350°
to		
Green Is. (Off Long Is.)	260°×2.8′	Co. 351°
to		
Cheese Is. – N. End (N. of Long Is.)	261°×1.6′	Co. 000°
to		
Grassy Pt.	090°×1.2′	Co. 022°

COAST GUARD TRAFFIC CENTRE: A vessel traffic management centre has been established at Argentia. Operation on a 24 hour basis; this centre will provide radar surveillance off Placentia Bay. Masters are required to establish communication with this station when in VHF range on Channel 16 (working on Channels 6, 12 and 14) in accordance with Notice to Mariners, in order to provide vessel's identification and obtain information regarding pilotage, buoyage, weather conditions, etc.

ANCHORAGE: Will be assigned by the Pilot in conjunction with the Department of Transport.

Ship's Officer's Report: The following areas have been designated as anchorages:

Area A	Lat. 47° 43′ 45″ N., Long. 54° 01′ 40″ W.
Area B	Lat. 47° 45′ 45″ N., Long. 54° 09′ 15″ W.
Area C	Lat. 47° 43′ 22″ N., Long. 54° 10′ 45″ W.

RESTRICTIONS: Will be dispatched by the Department of Transport to ship's Agent.

MAX. SIZE: Tankers of 327,000 d.w.t., can be accommodated.

Also see "Berthing".

HEALTH: Vessels arriving from a foreign port may obtain pratique by radio from "Quarantine St. John's" at least 12 hours before arrival. Information required by Quarantine Officer shall include:

Name and nationality of the vessel.
Last port of call.
Nature of cargo.
Number of crew and passengers.
Port of destination.
Name of Agent.
Conditions of health of all on board with details of any sickness or death incurred during the voyage.
Animals if any.

RADIO: The best radio stations to use en route to Come By Chance are:

St. John's Marine Radio – call sign VON.
Halifax Marine Radio – call sign VCS.
St. Lawrence Marine Radio – call sign VCP.

TUGS: Tugs available from Halifax on request.

BERTHING: The jetty extends 3,000 ft. from the shore. Berth No. 1 (outside) can accommodate 327,000 d.w.t. tankers. Depth of water alongside 100 ft. Berth No. 2 (inside) can accommodate tankers up to 67,000 d.w.t. Depth of water alongside 52 ft. This berth used mainly for refined products.

Ship's Officer's Report:

The quay is designed for the use of tankers. There are no provisions for general cargo ships. Tankers of up to 500,000 d.w.t. with a max. draft of 90 ft. can be accommodated on the West side, and on the East side ships of up to 60,000 d.w.t. with a max. draft of 48 ft.

The length of the quay is 1,520 ft. and the height was measured at HW and LW and found to be 19 ft. 6 in. and 25 ft. respectively. HW was taken to be half an hour later than the predictions at Argentia.

There are adequate fenders of the compression type.

A depth of 22 fathoms was recorded by echo sounder when alongside, the transmission unit being situated 52 ft. from the quayside.

MEDICAL: Masters are asked to notify their Agents at least 72 hours prior to arrival, advising the number of men to see the doctor and their complaint. The doctors work out of hospital which is about 10 miles from the berth.

TANKERS: No. 1 Berth: 4×16 in. arms which run into 42 in. lines. Bunkers 1×10 in. arm.

No. 2 Berth: 4×10 in. arms, bunkers 1×8 in. arm.

Dirty ballast facilities on either berth. All ballast must be pumped ashore.

FRESH WATER: Available. If for any reason there is no water available, vessels will be advised by their Agent. Rate approximately 20 t.p.h.

FUEL: Ship's bunkers are available. Bunker requirements, including quantities and specifications, should be made known in the 72 hour message.

FIRE PRECAUTIONS: Usual precautions for a refinery.

CONSULS: The following countries have consular offices in St. John's:

Brazil
Denmark
Dominican Republic
Germany F.R.
Netherlands
Norway
Portugal
Spain

REPAIRS: The Agent should receive early advice of requirements, as most repairs are only available at St. John's (Radio, radar, gyro, navigator and Loran, etc.). The technicians for such equipment work out of St. John's. The following brand names have representatives in St. John's: Decca, Marconi, Kelvin Hughes, Furono, Atlas and Sperry.

SURVEYORS: Stationed in St. John's, Lloyd's, N.V. and B.V.

GANGWAY/DECK WATCHMEN: Usually ship's crew.

CUSTOMS ALLOWANCES: Each man 200 cigarettes and one 40-oz. bottle of wine or spirits per week.

Ship's Officer's Report: There are no Customs and Immigration offices in the port at present. Officials will therefore come from St. John's and board the ship on arrival alongside.

REPATRIATION: No formal facilities, but with little difficulty crew changes and repatriation can be carried out. Prior notice to Agent is required.

AIRPORT: Nearest airports presently at St. John's, 94 miles away, and the Gander International Airport, 128 miles away.

Ship's Officer's Report: There is a good road to St. John's which is 86 miles from the port. A passenger bus service is available and also a railway for goods only.

The nearest airport is at St. John's although there is a helicopter landing area within the refinery grounds.

TIME: GMT minus 3.5 hours. Last Sunday in April clocks advanced 1 hour. First Sunday in October clocks retarded 1 hour.

SUPPLIES & LAUNDRY: Stores and provisions have to be obtained in St. John's. In order to avoid delays, Agents should be notified prior to arrival, of the vessels requirements. Stores and supplies will be delivered by barge, tug, or small boat. Laundry facilities are not available in Come By Chance, but if required will have to be sent to St. John's. Therefore, early notification is required.

TELEPHONES: Not available at present.

POLICE/AMBULANCE/FIRE: The Police are located in Clarenville – Tel. 466–7830. Ambulance is available on site – tel. 463–2458. Fire Department located in Clarenville – tel. 466–7777.

SHORE LEAVE: In order to comply with immigration regulations, crews should be carefully checked before sailing, and any missing seamen reported to Agent.

In case of seamen left ashore for any reason, Masters are requested to furnish a letter accepting responsibility for all expenses incurred, advances (if any) and also instructions for repatriation.

GENERAL: Masters are strongly advised to contact their Agent 72, 48, 36, 24, 12 and 6 hours with ETAs. On the 72 hour message Masters should advise all port requirements.

Gangway: Ship's gangway.

WEATHER: *Ship's Officer's Report:* The prevailing winds are from the S.W. in Summer and N.W. in Winter. Fog is experienced regularly in April, May, June and July, the latter two months being the worst. The fog is usually associated with a Southerly wind.

There is no shelter afforded on the North, East and South sides of the quay and only a nominal amount on the West side.

Local Pilots report that the range of tide is between 5.5 ft. and 8.5 ft. which can increase if the wind has been blowing from the South for any length of time.

AUTHORITY: Transport Canada, P.O. Box 1300, St. John's, Newfoundland A1C 6H8. *Tel:* (709) 772-5154. *Telex:* 016-3369. *FAX:* 016-2193. *Contact:* D. A. Lester, Regional Manager, Harbours and Ports.

In Port – VHF Channel 12, Call sign PLACENTIA TRAFFIC.

CONTRECOEUR, Quebec: 45.53 N. 73.12 W.

(See Plan)

LOCATION: The Contrecoeur Transfer Dock is located on the South shore of the St. Lawrence River, approximately 25 miles East and downstream from Montreal. (Canadian Chart 1339, Admiralty 422).

DOCUMENTS, HEALTH, RADIO, etc.: Refer to "Montreal" and "Quebec".

PILOTAGE: Compulsory. River Pilot docks and undocks vessels. Boarding at all hours.

ANCHORAGE: Available at Lanoraie 15 miles East of dock and Sorel 20 miles East of dock. Also at Contrecoeur, off the berth.

RESTRICTIONS: Hatch openings must not be less than 25 ft.×35 ft. Vessels will be required to vacate the berth immediately after completion of loading and/or discharging. Masters and/or Agents to advise ETA 36 hours, 24 hours and 12 hours. If any change after 12 hours notice, Terminal to be advised immediately, otherwise charges for waiting time will be assessed.

MAX. SIZE: 850 ft. length; 105 ft. beam; 35 ft. depth chart datum; fresh water, (subject river levels and recommended keel clearance, average river levels vary from +7 ft. above chart datum (April, May) to +3 ft. (Aug., Sept.) with extremes recorded of +10 ft. and +1.5 ft.).

TUGS: Tugs not normally required for vessels docking including vessels in 50,000 to 65,000 d.w.t. range. One tug sometimes used for vessels undocking.

RADIO: *Arrival Notice:* Cable address: CONORE, Montreal. Master or Agent to advise the Terminal of vessel's ETA 48 hours, 24 hours, 12 hours and 6 hours prior to vessel's arrival.

Also see "Restrictions".

BERTHING: Ships will be berthed in regular turn of vessels, providing they present with hatches open, ready for discharging and/or loading, based on the following reporting procedures;

i) Downbound vessel reported out Cote Ste Catherine Lock before upbound vessel passes Trois Rivieres Pilot Station will have precedence and vice versa.
ii) Downbound vessel reported clear of Montreal Wharf before upbound vessel passes Ile des Barques reporting station will have precedence and vice versa.
iii) In cases of two upbound vessels, the first passing Trois Rivieres Pilot Station will be first in turn.

Berthing Facilities: The dock is 1,500 ft. in length and is divided into two berths. Berth No. 1 is 750 ft. in length with dredged depth alongside of 35 ft. fresh water chart datum. It is fitted with two Wellman travelling towers equipped with 7.5 cu.yard grabs with outreach of 57 ft. from fenderline. The tower travel is 476 ft. centre to centre. Concrete pad measuring approx. 600 ft. × 140 ft. is located adjacent to Berth No. 1 and can accommodate approx. 75,000 tons of material stowing less than 20 cu.ft./ton.

Berth No. 2 is 485 ft. in length with dredged depth alongside of 22 ft. chart datum. It is fitted with a stationary boom shuttle for loading bulk materials into vessels. This shuttle is reversible for loading to trucks or rail cars. Bulk commodities can be handled:

a) Direct from vessel to vessel.
b) Direct from vessel to truck or rail cars.
c) Indirect from vessel to pad for stockpiling by truck or reloading to vessel.

Unlimited storage capacity is available for stockpiling bulk materials. Material is reclaimed from dead storage area and returned by trucks to pad for reloading aboard vessels or into rail cars.

The working capacity of discharging or loading free digging bulk materials with a stowage factor of less than 20 cu.ft./ton is as follows:

Transferring direct from vessel to vessel	1600 L/T per hour
Discharging from vessel to dock	1800 L/T per hour
Loading from dock to vessel	1800 L/T per hour
Transferring from vessel to rail cars	900 L/T per hour
Transferring from vessel to trucks	1200 L/T per hour

The railway siding on the dock property can accommodate 70 railway cars. Dock storage and dead storage areas are available by arrangement. Materials can be held in bond subject to Canadian Government Regulations.

STEVEDORES: Available at following times: Regular working periods are from 0800 to 1600 hrs. and from 1600 to 0000 hrs., Friday. Under special arrangement, work performed from 0000 to 0800 hrs., also on Saturdays, Sundays and legal holidays.

MEDICAL: Doctor and hospital available.

FRESH WATER: Available. Except in Winter months.

FUEL: Available.

TIME: GMT minus 4 hours.
HOLIDAYS: Legal holidays are as follows: Good Friday, St. Jean Baptiste Day, Dominion Day, Labour Day, Thanksgiving Day, Ascension Day, Victoria Day, Remembrance Day.
AGENCY: Contrecoeur Terminal does not handle ship agency. Shipowners or Charterers appoint their own Agents for attending ships' requirements.
AUTHORITY: Compagnie Miniere IOC, Iron Ore Company of Canada, 1920 Marie-Victorin, Contrecoeur, Canada J0L 1C0. *Tel:* 514-866-8805. *Telex:* 05-267556. *Cables:* Conore. *Contact:* M. R. Morin, Manager.

CORNER BROOK, Newfoundland: 48.57 N. 57.57 W.

DOCUMENTS:
3 Crew Lists – Form IMM.200.
3 Crew Declaration – Y.14.
3 Bonded Store List – E.1.
2 Maritime Declaration of Health – Form QS 2001. (Not required from USA port).
2 Manifests of Cargo (In Transit) and Manifest of cargo for discharge.
Required by Agent:
Vessel Expiry Dates for Canadian Customs:
Load Line Certificate
Radio Equipment Certificate
Safety Equipment Certificate
Derat Certificate
Safety Construction Certificate
Non-Canadian Compliance Certificate (Tankers only)
PILOTAGE: Pilot launch is called *Glenkim* fitted with radio telephone, receives on 2182, 2558, 2134 and 2582 kHz. Radar and VHF onboard. Pilot Station, Frenchman's Head. Pilotage compulsory, operated by Atlantic Pilotage Authority with head office in Halifax. During the ice season, Pilots will board from tug *Indian Lake* approximately 1 mile from Corner Brook Pulp and Paper Ltd. berths. The tug is also fitted with VHF. Also see "Radio".
APPROACHES: Corner Brook Harbour is approximately 20 miles inland from South Head. South Head commands the Southern entrance to the Bay of Islands. There are no off-lying shoals near the approaches.
ANCHORAGES: Good anchorages in Outer Bay. Most convenient is in Humber Arm off Petitpas Cove in 15 to 20 fathoms. Masters requested to contact local Pilots regarding anchorage as a submarine cable enters waters of Humber Arm at Wild Cove and continues out of the bay to Frenchman's Head.
HEALTH: Pratique is granted when all crew have been vaccinated and no suspected sickness on board. Pratique is automatic when from a quarantine port or non-quarantine port, provided Port Health Authorities have been established. Also see "Montreal".
MAX. SIZE: Max. size tankers handled – LOA 600 ft., max. draft 32 ft. at Corner Brook Pulp and Paper Ltd. No. 4 Berth.
RADIO: For short range: Stephenville Marine Radio operated by DOT. WT 500 and 416 kHz. RT call letters VOJ. Receives 2182, 2598, 2134, 2582 kHz. For long range: Via Halifax Marine Radio.
Advice of Arrival: (Vessels docking at premises of Corner Brook Pulp and Paper Ltd.) ETA messages should be sent (to cable address – "Krugship") in GMT, 72, 48, 24 and 12 hours notice recommended. All messages sent to Agents will be given local Pilots and Customs. Cash requirements and other items requiring immediate attention on arrival should be given in the 48 hours ETA.

It is also recommended that notices advise number of gangs vessel can work, also if there is cargo for discharge, quantity and holds stowed.
Other Port Users: Same as Corner Brook Pulp and Paper Ltd. except when destined for Western (1983) Ltd., send to cable address "Westerm".
VHF: Humber Arm Harbour Master on VHF Channels 16, 14, 12, 11, 19A, and 24. Corner Brook Pulp and Paper Ltd. shipping office on Channels 16, 14 and 24.
TUGS: Not available.
BRIDGES: None.
BERTHING: *Corner Brook Pulp and Paper Ltd. Wharves* located near centre of city waterfront. Consist of 4 berths, and are continuous. Run parallel with shore line. Total length 1,650 ft. Max. draft 28 ft. in No. 1 Berth, elsewhere 32 ft. in No. 2 & 3 and 26 ft. in No. 4 at low tide. Fresh water and electric power available.

Vessels loading normally dock port side to No. 2 Berth. Oil and caustic soda tankers discharge port side to No. 4 Berth. General cargo is normally discharged port side to No. 4 Berth.
Canadian National Railway Wharf: Steel and concrete structure. Length of wharf 600 ft. Depth alongside 32 ft. Storage shed is 240 ft. long by 35 ft. wide. Railway tracks on both sides of shed and accessible to ship's side.
North Star Cement Wharf: Annexed to small Government Wharf. Combined length is 400 ft. Depth of water 24 ft. at Western end and 17 ft. on inner end. Partly laden tankers of T-2 class discharge at this wharf.
Imperial Oil Ltd.: Discharging pier depth of 30 ft. minimum at low tide. Full laden tankers of the T-2 class can discharge.
Irving Oil Company Ltd.: Discharging pier with depth of water at Eastern end of 30 ft. and at Western end 26 ft. Tankers discharge with the forward draft restricted to 26 ft.
Gulf Oil Ltd.: Discharging pier has a depth at Eastern end of 28 ft. and at Western end 22 ft. T-2 tankers may discharge with restricted drafts accordingly.
Ultramar Canada Inc.: Discharge oil at North Star Cement Wharf.
Department of Transport Wharves: Length of wharf is 1,200 ft. Steel and concrete structure. Depth of water alongside is 32 ft. to 34 ft. Shed measures 500 ft. by 120 ft. by 20 ft. high, for a capacity of 1,200,000 cu.ft. Fresh water is available. General cargo is handled.
CRANES: Mobile crane available at Corner Brook Pulp and Paper Ltd. – capacity 11 tons from ship's hold, 18 tons from deck.

Other port users: From local rental Agent. Maximum 65 tons.
STEVEDORES: (Vessels at Corner Brook Pulp and Paper Ltd. premises)
Working Hours:
0800 to 1200 – 2 gangs
1200 to 1230 – Lunch break
1230 to 1630 – 2 gangs
1630 to 2030 – 2 gangs
2030 to 2100 – Meal break
2100 to 0100 – 2 gangs
Overtime: Can be worked Mondays to Saturdays (day gangs) 1630 to 2100 hrs. if requested.
MEDICAL: Hospital available. If ships' Crew members require emergency medical attention *on board immediately on arrival,* this should be stated in message to Agents, together with ETA. Otherwise, doctor appointments can be arranged during regular office hours.
TANKERS: It is recommended by local Pilots that oil tankers for North Star Cement Wharf arrive and sail in daylight, otherwise there are no special requirements except usual advance notice should be given to Agents in order to arrange linesmen. See "Berthing".
DENSITY: Average 1015.
High water, Easterly wind 1025.
High water, Westerly wind 1008.
Low water 1005.
FRESH WATER: Fresh water available at Corner Brook Pulp and Paper Ltd. berths – $1.00 per ton plus $40.00 service charge and Westerm (1983) Ltd. – $0.85 per ton plus $30.00 service charge. Fresh water also available at other docks.
FUEL: (Vessels at Corner Brook Pulp and Paper Ltd. premises). Gas oil and marine diesel available by truck delivery from local oil companies.

Other port users: Available at DOT docks by tanker trucks.
OPENING/CLOSING HATCHES: (Vessels at Corner Brook Pulp and Paper Ltd. premises). Opening and closing hatches is normally done by ship's crew. Rigging ship's gear is normally done by stevedores.
CUSTOMS ALLOWANCES: On arrival per crew member: 3 lb. tobacco or 300 cigarettes or 75 cigars. Two dozen beers or 60 oz. spirits. *Additional issue* will be made *after 7 days* in port. 2 lb. tobacco or 200 cigarettes or 50 cigars. 1.5 dozen beers or 40 oz. spirits.
IDENTITY CARDS: Every Crew member should be in possession of some form of identity card.
CONSULS: Nearest consuls are in St. John's approximately 450 miles.
Brazil
Denmark
Dominican Republic
France
Iceland
Netherlands
Norway
Portugal
Spain
Sweden
Germany F.R.
REPAIRS: Minor ship repairs carried out. No dry docks available. Radar and VHF repairs possible.
REPATRIATION: All necessary crew changes and repatriation facilities available.
AIRPORTS: International Airport, 222 miles from Corner Brook, at Gander. Stephenville Airport, Air Canada and CP, 50 miles from Corner Brook. Deer Lake Airport, CP service available, 30 miles from Corner Brook.
TIME: NST-GMT less 3.5 hours. Newfoundland Daylight Saving Time – GMT less 2.5 hours, last Sunday in April to last Sunday in October.
HOLIDAYS: Following applies to ships docking at premises of Corner Brook Pulp and Paper Ltd. Newsprint Manufacturers and Shippers.
January 1st – New Year's Day
July – Dominion Day (normally first Monday in July)
September – Labour Day (first Monday in September)
December 25th – Christmas Day. No work is performed after 1600 hrs. on Christmas Eve (December 24th), nor on New Year's Eve (December 31st).
Sunday – As per Union agreement. Work can be performed at time and a half rates as follows: *June, July and August* – a maximum of 3 consecutive Sundays. Remainder of the year – no restriction.

Other port users: Similar to Corner Brook Pulp and Paper Ltd.
POLICE/AMBULANCE/FIRE: *Police:* Alongside Corner Brook Pulp and Paper Ltd., Ext. 274, Mill Guards. Local Police. Area Code: (709) 637-4400.
Ambulance: Alongside Corner Brook Pulp and Paper Ltd., Ext. 274, Ambulance. City Area Code: (709) 634-5611.
Fire: Alongside Corner Brook Pulp and Paper Ltd. Ext. 274, Mill Brigade. City Area Code: (709) 634-4333.
Hospital: 634-5000.
TELEPHONES: (Vessels at Corner Brook Pulp and Paper Ltd. premises). None available on board ships, but phones are on the wharf in nearby offices.

Other port users: Can be available at installation and service costs.
GENERAL: Ice coverage can be expected between January 1st and April 15th. Shipmasters should contact "Ecareg Ice Halifax", Nova Scotia, Tel: (Area code 902) 526-5664 or 426-5665. Telex No. 019-22625 for routing and Icebreaker assistance. 36 hours ETA in Cabot Strait is required.
SERVICES: Compass adjuster can be engaged.
SHORE LEAVE: Discretion of Master. No port regulations.
AUTHORITY: Corner Brook Pulp and Paper Ltd., P.O.Box 2001, Corner Brook, Newfoundland, Canada A2H 6J4. *Contacts:* Mr. Ellison Butt, Harbour Master. Tel: (709) 637-4282 or Terminal Manager, Westerm (1983) Ltd., Tel: (709) 639 8961. Telex: 061-44193 (Westerm Cnbk). Cables: Westerm.

Mr. D. Kearley, Customs and Immigration, Tel: (709) 637 4494.

Mr. W. G. Hull, Shipping Superintendent, Corner Brook Pulp and Paper Ltd. Tel. (709) 634-2810 or 637-3291. Telex: 016-44278 (Krugship Cnbk.). Cables: Krugship.

COWICHAN BAY, B.C.: 48.45 N. 123.36 W. (See Plan)

LOCATION: Lat. 48° 44′ 50″ N., Long. 123° 36′ W. Cowichan Bay is entered from Satellite Channel Southward of Separation Point and extends 4.8 km. Westwards, terminating in a large mud flat that is the estuary of the Cowichan and Koksilah Rivers.

PILOTAGE: Compulsory, Pacific Pilotage Authority rates.

APPROACHES: The bay is deep and without danger. The deep sea berths at the S.W. corner of the bay on the edge of the mud flat have deep, open water approaches.

ANCHORAGE: Cowichan Bay Anchorage – 8 permanent anchorages in depths of approx. 40 m. – 50 m. on a line starting 700 m. S.S.W. of Skinner Point and ranging with 3 designated anchorage along the Northern side of Cowichan Bay to Separation Point and then on the Southern side of Satellite Channel with 5 designated anchorages from Separation Point to 1,000 m. North of Hatch Point. Anchorage can also be afforded to small vessels at Genoa Bay, in depths of 4.6 m. – 11 m. which has a rock marked by a beacon in the middle of its entrance, and two other rock hazards nearby.

MAX. SIZE: *Largest Vessel:* LOA 200.51 m., beam 30.89 m.

TUGS: Tug services at Cowichan Bay are provided by Falt Towing Ltd., 1805 Pritchard Road, Cowichan Bay, B.C. V0R 1N0. Tel: 748-8175. Falt Towing has one 500 h.p. and two 300 h.p. tugs operating from Cowichan Bay and can supply additional tugs as required with a minimum of 48 hours notice.

BERTHING: *Deep Sea Vessels:* The CNR Wharf is owned by Canadian National Railways and is operated by Westcan Terminals Ltd., P.O. Box 1442, 189 Dallas Road, Victoria, B.C. V8W 2X2. Tel: 386-1321. Telex: 049-7312. The deep sea wharf consists of two berths used mainly for loading forest products.

Berth No. 1 (South end) has a length of 155 m. and a depth alongside of 9.3 m.

Berth No. 2 (North end) has a length of 198 m. and a depth alongside of 8.3 m.

At a distance of 3 m. from the wharf face the minimum depth alongside for No. 1 is 9.9 m. and No. 2 is 9.7 m.

Log bundles can be made available to adjust the vessel's position alongside for draft considerations.

The South end of Berth No. 1 has a rail barge slip which connects to the rail car handling and loading facility at the terminal and the rail lines on Vancouver Island.

Note: Berth depths alongside CNR Wharf taken from depth survey by Canadian Hydrographic Service April and May 1980.

Small Vessels: There is a Government Wharf situated on the South shore for small vessels only, with depths of 5.2 m. – 6.1 m. alongside. A pile and timber breakwater protects several floats attached to the Eastern and Western sides of the wharf approach structure. The area inside the breakwater and East of the wharf has been dredged to a depth of 3.0 m. A number of privately owned wharves and floats are located Westward of the Government Wharf, along the Southern shore of the bay.

STEVEDORES: Westcan Terminals/Stevedores Ltd. offers 24 hour 7 day cargo handling services. Shifts: first 0100–0430, 0500–0800; second 0800–1200, 1300–1700; third 1700–2100, 2130–0100. Work ceases 1200 hrs. on Christmas Eve and New Year's Day.

FRESH WATER: Available at berth by local water tanker truck and at berth or at anchor by water barge from Vancouver.

FUEL: Diesel fuel, gasoline and other petroleum products are available in moderate quantities by tanker truck at berth. Heavy fuel and large amounts of bunkers available by bunker barge from Vancouver.

MEDICAL: Full medical facilities available at the Cowichan District Hospital in the town of Duncan, 10 km. away. Dental facilities also available in Duncan.

REPAIRS: See "Victoria", B.C. for information on the graving dock and ship repair facilities in Esquimalt, a suburb of Victoria 60 km. S.S.W. of Cowichan Bay.

SERVICES: The following general services are available in the Cowichan Bay/Duncan area or from Victoria, B.C.

Decca: Racal Decca Canada Inc., 353 Harbour Road, Victoria, B.C. V9A 3S2. Tel: 388-6257.

Fumigation: PCO Pied Piper, 3374 Burns Avenue, Victoria, B.C. V8Z 3P2. Tel: 388-9721.

International Garbage: C.W. Disposals Ltd., P.O.Box 279, Duncan, B.C. V9L 3X3. Tel: 746-4589.

Laundry: Chemainus Laundromat & Dry Cleaners, 9870 Croft Street, Chemainus, B.C. V0R 1K0. Tel: 246-9912.

Marconi: Canadian Marconi Co., 1 Burnside Road W., Victoria, B.C. V9A 1B2. Tel: 386-9414.

Surveyors: Argus Marine Ltd., 2924 Wilkinson Road, RR 2, Mill Bay, B.C. V0R 2P0. Tel: 743-3463. Hull and cargo.

Lloyd's Register of Shipping, non-exclusive surveyor for hull, machinery and cargo attached to Marine Design Associates below.

Marine Design Associates, 493B Garbally Road, Victoria, B.C. V8T 2J9. Tel: 384-4191. Telex: 049-7397. Hull, machinery and cargo.

Welding: Duncan Iron Works Ltd., P.O.Box 855, RR 3, Allenby Road, Duncan, B.C. V9L 3Y2. Tel: 746-5147.

AUTHORITY: Transport Canada, 6th Floor, 224 West Esplanade Avenue, North Vancouver, British Columbia V7M 3J7. *Tel:* 984-3800. *Telex:* 04-53235.

Contact: Captain D. M. Featherby, Harbour Master – Victoria, Esquimalt, Crofton and Cowichan Bay, Tel: 388-3578. Mr. W. H. Briscoe, Government Wharfinger, Tel: 746-5215.

DALHOUSIE, N.B.: 48.04 N. 66.22 W. (See Plan)

DOCUMENTS:

Ship's Register.
Load Line.
Safety Radio and Safety Equipment Certificates.
Stores List and Crew Declaration (E–17, Y–14), if from foreign port.
Pratique, if from a Foreign Port.
Immigration Clearance from last Canadian Port.
If from a Foreign Port, 2 copies of crew list.

For Shipping Master: Ship's Articles if British or Canadian Registry.

PILOTAGE: Telegram sent to Restigouche Pilots, Dalhousie, N.B., or to vessel's Agent. 6 hours minimum notice required except during Winter operations (January – April). Pilot vessel is a 40 ft. steel hull, black, grey superstructure, displays proper flag by day and proper lights by night. Pilots meet and board all inbound vessels in position Lat. 48° 03′ N., Long. 66° 15′ W. Pilots prefer pilot ladder for boarding.

ANCHORAGES: Safe anchorage 1.5 miles offshore due East of harbour entrance. Pilots will board vessels for anchorage in from 6 to 12 fathoms.

RESTRICTIONS: Tide restricted if vessel exceeds 28 ft. on arrival.

MAX. SIZE: Max. length 750 ft., beam 100 ft., draft 36 ft. at the Government Wharf including oil and bulk carriers. Vessels approaching these dimensions must berth at high water, port side to. Max. draft entering harbour and berthed starboard side to is 28 ft. because of restricted turning basin.

HEALTH: See "Montreal".

RADIO: ETA through Grindstone.

TUGS: Not necessary.

BERTHING: To berth starboard side to at any berth vessel is requested to arrive 3 hours before high water.

STEVEDORES: Contact Agents.

MEDICAL: Hospital and doctors available.

TANKERS: One 12 in. line with three 8 in. connections is laid to the Government Wharf. Depth alongside 34 ft. LWOST.

DENSITY: Average density 1008.

FRESH WATER: Available at all berths from hose lines on the dock. 50 t.p.h.

FUEL: Available by truck if necessary. Advance notice required.

GANGWAY/DECK WATCHMEN: Available if requested.

OPENING/CLOSING HATCHES: As in Charter Party.

IDENTIFICATION CARDS: Not needed.

CONSULS: None.

REPATRIATION: Facilities exist providing sufficient notice given.

AIRPORT: 1 flight daily from Montreal to Dalhousie and Chatham and return to Montreal.

TIME: Daylight Saving during Summer months. Atlantic Standard otherwise.

HOLIDAYS: Official Holidays: New Year's Day; Christmas Day; Dominion Day; Labour Day.

POLICE: Telephone 684–5551.

TELEPHONES: Made available upon prior arrangement.

SHORE LEAVE: Allowed.

AUTHORITY: Transport Canada, Harbours and Ports, P.O.Box 7730, Saint John, N.B. *Tel:* 648-4726. *Contact:* Ms. W. Colpitts.

Local Authority: Don Mealey, Harbour Master, Albertina Sullivan, Wharfinger.

DIGBY, N.S.: 44.38 N. 65.45 W. (See Plan)

DOCUMENTS: See "Montreal".

PILOTAGE: Usually contacted through St. John radio station by VHF. 12 hours notice required. Pilot usually meets ships at entrance to Digby. As long as adequate notice is given no waiting is experienced.

ANCHORAGE: Good Anchorage N.E. from town 15 to 25 fathoms.

MAX. SIZE: Length 400 ft. and 28 ft. depth at low water.

HEALTH: See "Montreal".

RADIO/VHF: St. John Radio call sign VAR.

TUGS: Not normally necessary, light towing available in case of necessity.

BERTHING: Transport Canada Spur Pier 115.0 m. long 'F' shaped pier, 12 m. wide, with 100.0 m. commercial berth with 6.7 m. depth alongside at normal low tide (rise in the tide 6.4 m. – 8.5 m.). Berthing at outer boat basin can provide 100 m. with 4.6 m. depth alongside.

FRESH WATER: Supplied by pipe-line under the wharf.

FUEL: Diesel oil available only.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Usually carried out by crew.

CUSTOMS ALLOWANCES: 200 cigarettes per man, per week; 40 oz. alcohol per man per week for crew.

IDENTIFICATION CARDS: Required or passport.

CONSULS: None.

REPAIRS: No major repair facilities available.

REPATRIATION: Can be arranged.

AIRPORT: Small local line based at St. John N.B. supplies service between St. John and Digby. Halifax International Airport 180 miles away.

TIME: GMT minus 4 hours.

HOLIDAYS: New Year's Day (Jan. 1st); Good Friday; Easter Monday; Victoria Day and Queen Elizabeth Day (May 19th) Canada Day (July 1st); Labour Day (Sept. 1st); Thanksgiving Day (Oct. 13th); Remembrance Day (Nov. 11th); Christmas Day (Dec. 25th).

POLICE/FIRE/AMBULANCE: Police 245–2579; Fire 245–2121; Ambulance 245–2205.

TELEPHONES: Available at cost of installation.

SHORE LEAVE: Allowed.

AUTHORITY: Transport Canada, Office of Harbours and Ports – Maritimes Region, P.O.Box 1013, Dartmouth, N.S. B2Y 4K2. *Contact:* The Regional Manager, Tel: (902) 426-2588.

FRASER PORT, B.C.: 49.12 N. 122.55 W. (See Plan)

DOCUMENTS, ANCHORAGE, and further information: Refer to "Vancouver, B.C.".
PILOTAGE: Compulsory from Fraser River Sands Heads. Contact Pilots through Vancouver Pilots. 12 hours notice required. Pilot boards 1 mile off Sandheads. Contact pilot launch on VHF Channel 74.
MAX. SIZE: Draft limited to 33 ft. on 12 ft. tide.
HEALTH: Pratique and quarantine at Victoria B.C.
TUGS: Available, normally join vessel on arrival.
BERTHING: (North and South side of river).
Fraser-Surrey Docks Ltd.: 5 general berths, total length 3,300 ft., 1 sawdust/woodpulp bulk cargo berth. Depth at low water 33 ft. Water, power and telephone connections at all berths. Cargoes handled include forest products, steel, heavy lifts, bulk and general cargo, as well as roll-on/roll-off cargoes and containers. Terminal well equipped with fork lifts, front-end loaders, cranes to 250 tons and 2×40 ton Paceco Portainers. Operators are Fraser Surrey Docks Ltd.
Fraser Wharves Ltd.: 1 berth, length 500 ft., width 45 ft. Berth for loading and unloading cars.
Annacias Auto Terminals.: 2 berths. No. 1 length 700 ft., width 200 ft. No. 2 length 565 ft., width 60 ft. Situated at East end of Annacis Island for discharging of cars.
Chatterton Petro-Chemicals Ltd.: 1 berth, length 610 ft., depth 27 ft. Berth connected to plant by 30 in. conveyor belt system for transfer of crude rock gypsum to the plant. Berth is upstream of the Patullo Bridge.
Crown Forest Industries Ltd.: 2 berths, total length 1,300 ft., depth at LW 30 ft. Berth is upstream of the Patullo Bridge.
MEDICAL: All services available.
DENSITY: Varies with location and season.
FRESH WATER: Available.
FUEL: All grades available.
CONSULS: At Vancouver.
REPAIRS: Engine repairs only.
AIRPORT: Nearest is Vancouver International.
TIME: Pacific Standard Time, GMT minus 8.
POLICE/AMBULANCE/FIRE: Ambulance 872-5151.
SHORE LEAVE: Allowed.
DEVELOPMENTS: Future developments call for 35 ft. draft and expanded berthing facilities.
AUTHORITY: Fraser River Harbour Commission, Suite 505, 713 Columbia Street, New Westminster, B.C., Canada V3M 1B2. *Tel:* (604) 524-6655. *Contact:* R. C. Pearce, Port Manager.

FROBISHER BAY, N.W.T.: 63.44 N. 68.32 W.

LOCATION: An expanding settlement at the head of Frobisher Bay, Baffin Island. Navigation season, mid-July to mid-October depending on ice conditions. Port of entry.
DOCUMENTS: See "Montreal".
PILOTAGE: No service as such but a senior port officer may assist vessels to moorings.
APPROACHES: Anchorage in depths of 38.4 m. to 40.2 m. Approximately 925 m. East of Monument Island settlement. Minimum depths in approaches, 9.8 m.
TIDES: Rise of Tide, 12.2 m., with strong tidal runs between islands. Low powered vessels generally navigate Pike Resor Channel at slack water, high or low tide if current unfavourable. This channel is mostly navigated during daylight hours.
HEALTH: Free Pratique, if health certificate is in order. In the event of suspected disease or fever on board, report to Frobisher Bay Telecommunications Branch call sign VFF R/T or W/T.
RADIO: Frobisher Bay R/S VFF. Coast Guard Radio.
TUGS: 2 landing craft (LCM's) each powered with two 130 h.p. diesel engines assist vessels in mooring, acting as tugs and running ship's stern lines to Innuit Head.
BERTHING: Tankers of 160 m. length, 17.68 m. breadth and draft of 9.1 m., discharge approximately 243.8 m. off Innuit Head. Method of mooring is to stream both anchors in anchorage area and stern lines to mooring bollards situated on Innuit Head for this purpose. General cargo ships up to 12,000 tons also moor in this position. Vessels should be prepared for a quick departure in event of storm warnings, especially hazardous from N. and S. winds. Maximum length, breadth and draft determined by Master and Owners or Charterers. Delays can be expected due to tidal conditions. All general cargo, machinery, vehicles, etc., transferred from ship to shore and vice-versa via landing craft as no pier exists; beach gradient is gradual. Frequently barges cannot be discharged and re-floated until next rising tide. Delays expected for cargo vessels anchoring off Monument Island and discharging or loading by lighters during high winds and rough seas.
STEVEDORES: Special arrangements are necessary for these services.
MEDICAL: Hospital facilities available.
DENSITY: From August 1st to September 15th mean approx. 1.024 increasing slightly as season advances.
FRESH WATER: Small quantity in emergency. Approximately 50 gallons per minute.
Note: Due to tidal conditions considerable delay could result in delivering fresh water.
FUEL: Only supplied in emergency, Arctic diesel Grade 1, viscosity quoted as minus 60. Arrangements to be made through Shell Canada.
OPENING/CLOSING HATCHES: According to agreements.
IDENTIFICATION CARDS: Required if arriving from a foreign country.
REPAIRS: Limited repairs, i.e. welding, R/T and radio.
REPATRIATION: Crew changes can be effected by air passage to or from Montreal.
AIRPORT: Distance approximately 0.8 km. from landing beach, 6 flights weekly to and from Montreal, weather permitting, via Nordair Ltd. of Montreal. 3 flights weekly to Ottawa via First Air.
TIME: GMT minus 4 hours.
POLICE/AMBULANCE/FIRE: RCMP 5202; Ambulance 979–5231; Fire 6666.
AUTHORITY: Transport Canada, Ottawa.
Transport Canada, c/o Beach Master, Frobisher Bay, Canada XOA OXO. *Tel:* (819) 797-6298 during season. *Telex:* 063-5529. Telegrams, c/o Canadian National Telegraph via VFF or VAW. *Contact:* Captain C. Cote.

GASPE, Quebec: 48.50 N. 64.29 W. (See Plan)

DOCUMENTS:
Immigration Documents:
Passenger Landing Cards (Tourist) 1 each passenger.
1 Crew List from Immigration.
2 Passenger Lists.
Customs Documents:
3 Inward Reports.
3 Outward Reports.
3 Ship Stores Lists (Form E.1).
3 Crew Declarations (Form Y.14).
National Health and Welfare:
2 QS.1 Maritime Declarations of Health.
Manifests required for cargo unloaded only.
PILOTAGE: Not compulsory but recommended. Pilots available. To obtain Pilot, arrange by radio phone through marine radio station VCG at Fox River, Gaspe PQ, on receipt of message either to Agent (Robert Lagace, see "Authority") or Port Authority, Pilot and other arrangements can be made.
MAX. SIZE: Vessels of 650 ft. and over have both docked and anchored. Tide has no effect as it is very sheltered. Government Wharf depth 35 ft. LW.
HEALTH: On arrival in Canadian waters Master applies for Radio Pratique by radio to Quarantine Officer at Quebec City. Master flies yellow flag on arrival and until Medical Officer decides it can be lowered or otherwise according to regulations. See also "Montreal".
RADIO: VCG Marine Station Fox River, Gaspe PQ.
TUGS: Not necessary, no tugs available unless called for in emergency. Line boats available for docking, by arrangement.
BERTHING: *Transport Canada (Sandy Beach) Wharf:* Wharf re-built in 1986. Berthing length 600 ft., depth alongside at LW 33 ft. to 35 ft. outer face and about 26 ft. inner side; railroad tracks on wharf, oil tanks, electric light and water.
STEVEDORES: Good stevedoring available at all times and hours.
MEDICAL: Hospital and ambulance service.
TANKERS: Oil lines on Transport Canada Wharf owned and used by Gulf Oil Canada, Irving Oil, Shell Canada Limited and Imperial Oil. These lines are privately owned.
FRESH WATER: Available, arranged through ship's Agent.
FUEL: Light and medium diesel available at all times. If bunker fuel required, on request it will be brought in by tanker car.
GANGWAY/DECK WATCHMEN: Recommended watchmen necessary, may be obtained.
OPENING/CLOSING HATCHES: Done by ship's crew.
CUSTOMS ALLOWANCES: On arrival officers and crew permitted 1 bottle and 200 cigarettes and 1 lb. of tobacco for period of 1 week, further allowances of tobacco given after 1 week, as well as spirits to Master only.
IDENTIFICATION CARDS: Not required.
CONSULS: None.
REPAIRS: Only minor repairs.
REPATRIATION: May be arranged by Agent subject to Immigration control.
AIRPORT: Situated about 7 miles from the dock. Twice daily service to Quebec and Montreal. Connections to all parts from Montreal. Charter passengers and freight flights also available.
TIME: GMT minus 5 hours all year.
HOLIDAYS: Saturday, New Year (January 1st); Good Friday; Victoria Day (May 19th); Confederation Day (July 1st); Labour Day (September 1st); Thanksgiving Day (about October 13th); Remembrance Day (November 11th); Christmas Day (December 25th). There are a few other R.C. Church days on which some men are not obtainable. On most of these holidays stevedores and men are available.
POLICE/AMBULANCE/FIRE: Police area 418 call 368–3337. Local RCMP area 418 call 368–2543. Ambulance Area 418 call 368–2835.
TELEPHONES: Possible arrangements may be made with local telephone company for installations to vessel.
SERVICES: Radar repairman available.
SHORE LEAVE: Crew allowed ashore.
AUTHORITY: Transport Canada, 179 Mgr. Leblanc, C.P. 890, Gaspe, Province Quebec, Canada 90C 1R0. *Tel:* (418) 368-3648. *Telex:* 01443220. *Contact:* Robert Lagace, Harbour Master.

GOOSE BAY, Labrador: 53.22 N. 60.22 W.

DOCUMENTS, HEALTH: See "Montreal".
PILOTAGE: Compulsory. 2 Pilots available; 12 hours notice of arrival required with confirmation 8 hours and 4 hours before arrival. Contact Pilot on radio-telephone 2182 kHz (working 2716 kHz), calling "Victor Gulf Whiskey". Pilot station at Rigolet (92 miles from Terrington Basin).
ANCHORAGE: Good anchorage, with excellent holding ground in 36 ft. (11 m.), mud, can be obtained in the central part of Terrington Basin. Ships carrying dangerous cargoes must use the designated Explosives Anchorage situated 2 miles N.E. of Groves Point.
RESTRICTIONS: Navigation season early June to end November depending on pack ice movements. Approach – Sandy Point Channel at entrance to Goose Bay and 15 miles from the dock has a width of 300 ft. Harbour Master advises draft of 31 ft. HWF. Groves Point Channel at entrance to Terrington Basin and 1.5 miles from Main Dock has depth of 32 ft. HWF and width of 300 ft.
Caution: When a tanker is seen to be leaving her berth in Terrington Basin or is in or approaching Terrington Narrows, she shall be granted the right of way, and other vessels must not be navigated into the narrows until the tanker is well clear of the channel.
Ice: The entry into Goose Bay Harbour is entirely dependent upon ice conditions at the seaward end of Hamilton Inlet. Ice begins to form in Terrington Basin between the latter part of October and mid November, with complete coverage occurring any time between early November and the beginning of December. During winter the ice attains a thickness of about 42 in. (1.1 m.). Break-up generally occurs between the third week of April and the first week of June.
MAX. SIZE: Max. draft at Government Wharf 19 ft. 06 in.
Also see "Berthing".
VHF: Pilot vessel on Channels 51 and 16.
TUGS: There are no tugs. 3 landing craft available to assist.
BERTHING: The main Government Wharf is situated 1.5 miles W.S.W. of Terrington Narrows; it has a berthing length of 810 ft. (247 m.) and was dredged to 30 ft. (9.1 m.) in 1971, but some silting has occurred and up-to-date depths should be obtained from the Harbour Master. There are 5 large storage sheds on the structure. The office of the Harbour Master is in a building on the main road leading from the wharf.
Another Government Wharf is situated 0.4 miles N.W. of the main Government Wharf; it has a depth of 21 ft. (6.4 m.) at the outer end. A freight shed is situated on this wharf.
STEVEDORES: A local stevedoring company can provide labour for handling cargo. There are no fixed cranes on the wharves, but mobile cranes can be hired locally.
TANKERS: There is a small oil wharf used for discharging petroleum products at the E.S.E. end of the main Government Wharf. It has a depth of 18 ft. (5.5 m.) at its outer end.
DENSITY: 1000, fresh water.
FUEL: Light diesel oil available by pipe-line at the main Government Wharf.
FRESH WATER: Available alongside berths.
REPAIRS: Only minor repairs may be effected in emergency.
AIRPORT: 1.5 miles distant.
HOLIDAYS: New Year's Day; Good Friday; July 1st; Labour Day; November 11th; Christmas Day; Boxing Day.
GENERAL:
Communications: Telephone. Canadian Coastguard Radio Station (see "Radio Aids to Marine Navigation").
Transportation: Airfield with frequent scheduled service by Eastern Provincial Airways to other Newfoundland centres and the mainland. Scheduled cargo and cargo/passenger services during the navigation season by Chimo Shipping Limited and CN Marine.
Mail: Post Office.
Accommodation: Several motels.
Medical: Hospital.
Banks: Royal Bank and Bank of Nova Scotia.
Police: RCMP detatchment.
Supplies: Hudson's Bay Company store and several smaller stores.
Customs: Port of Entry; the Customs Office is situated at Goose Airfield.
AUTHORITY: Harbours and Ports Directorate, P.O.Box 1300, St. John's, Newfoundland A1C 6H8, Canada. *Telex:* 016 4530. *Contact:* D. A. Lester.
Transport Canada, Goose Bay. *Contact:* Captain W. T. Haynes, Harbour Master. *Tel:* 709-896 2569.

GRAND BANK, Newfoundland: 47.06 N. 55.45 N. (See Plan)

PORT LIMITS: A line drawn from Grand Bank Head to L'Anse au Loup Pt. defines the port limits.
PILOTAGE: Pilotage is not compulsory, but recommended for those without local knowledge. A licensed Pilot can be arranged by giving 24 hours notice of requirement to Pilots, St. John's. The Pilot will board off St. John's in position Lat. 47° 33′ 42″ N., Long. 52° 37′ 54″ W. or off Grand Bank Harbour provided the vessel's local Agent arranges for a boat to embark the Pilot. The Atlantic Pilotage Authority pilot boat No. 2 is used at St. John's; this boat guards VHF Channels 16 and 11 (156.8 and 156.55 MHz.). Alternatively, Shipmaster's may arrange to use local persons in the town for pilotage purposes.
ANCHORAGES: Vessels may anchor in depths of 10 fathoms (18.3 m.) off Grand Bank, but the holding ground has been reported as poor.
BERTHING: The Western Breakwater (deck elevation 4.4 m.), about 600 ft. (183 m.) in length, affords protection to the harbour entrance between the Western Pier and the Eastern Breakwater. In 1977, there was a least depth of 15 ft. (4.6 m.) alongside the Western Pier. The CN Marine coastal vessels berth at this pier which is 240 ft. (73 m.) long. The deck of the wharf has an elevation of about 3.5 m. A shed, 60 ft. by 41 ft. (18 m. by 12 m.), is located adjacent to the pier. Least depth alongside 3.7 m.
A fish wharf 245 ft. (75 m.) in length, situated on the East side of the harbour, had a least depth of 16 ft. (4.9 m.) alongside in 1977. A fish-packing plant is situated on the wharf.
Marginal wharf length 1,140 ft., depth alongside 14 ft. – 18 ft. LWOST.
A government wharf is situated at the South end of the harbour. The harbour is open all year round.
CRANES: Small mobile cranes only.
MEDICAL: Cottage hospital within the town.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard, Search and Rescue, St. John's Tel: (709) 772-5151.
GANGWAY/DECK WATCHMEN: Usually ship's crew, ship's gangway used.
FRESH WATER: Available.
FUEL: Limited supplies of fuel and diesel oil available.
BANKING: Services available.
SHORE LEAVE: No restrictions.
GENERAL: Chart: 4611.
AUTHORITY: Transport Canada, P.O.Box 1300, St. John's, Newfoundland, A1C 6H8. *Tel:* 772-5154. *Telex:* 016-3369 *FAX:* 2193. *Contact:* D. A. Lester, Regional Manager.

HALIFAX, N.S.: 44.39 N. 63.34 W. (See Plan)

DOCUMENTS:
Port Doctor: Form QS1; Crew Vaccination Certificates; Derat Certificate.
Customs: Customs Clearance or Certificate From Last Port; Cargo List (if no cargo, words "In Ballast" entered); Bonded Stores List (Form E.1); Crew Declaration for each crew member (Form Y14). Ship's Register; Safety Radio, Load Line and Safety Equipment Certificates.
Immigration: Crew List (Form 200) in duplicate in English; all crew Passports (returned prior to sailing).
PILOTAGE: Compulsory. Essential send arrival notice by radio to avoid delay in waiting Pilot. 12 hour notice of ETA required and confirmed or corrected 3 hours before arrival. All times must be GMT. Radio messages should be addressed Marine Aid Centre, Chebucto Head. All pilotage messages subject to full tolls.
When possible, Pilots will board in vicinity of Inner Automatic Light and Whistle Buoy situated about 2 miles N.E. of Chebucto Head. In heavy weather not always possible for pilot vessel to take up station at above position, but will proceed as far seaward as feasible to embark or disembark Pilot.
In normal weather pilot vessel shall, in daytime, fly Pilot flag, and at night will show lights required by international regulations. In abnormal weather – fog, mist, snow, heavy rainstorms – when on station on pilotage duty, in addition to regular signals, will blow 4 long blasts at regular intervals. Vessel requiring Pilot should blow 4 short blasts on whistle at intervals until pilot boat sighted. Pilot boats equipped with radar and stand-by on radio telephone operating on frequency of 156.8 MHz or Channel 16 under international VHF designations.
ETA: For provisional clearance to enter the Halifax Marine Traffic Regulating Zone, vessels should supply the following information to "Halifax Traffic":

1. Position.
2. ETA Zone Limit (Zone boundary is approximately 16 miles radius from Chebucto Head).
3. Destination and last port.
4. Draft.
5. Description and weight of pollutants or any dirty cargo carried.
6. Deficiencies in ship's navigational equipment, engine's steering gear or anchors.
7. Any leakage of pollutants or any damage which may result in pollution.
8. Pilots must be advised ETA 12 hours and 3 hours prior arrival at the Pilots Boarding Station, using GMT, to "Pilots Halifax".

For final clearance to enter the Halifax Marine Traffic Regulation Zone:

1. Report to "Halifax Traffic" on VHF Channel 14 or 2182 kHz, when approaching the zone boundary.
2. Report to "Halifax Traffic" when approaching zone boundaries approximately 8 and 4 miles radius from Chebucto Head.

Vessels leaving Halifax are to report to "Halifax Traffic" when approaching zone boundaries.
ANCHORAGE: Vessels anchor in harbour in areas designated by Halifax Port Corporation..
RESTRICTIONS: Controlling depth in channels of approach 60 ft. in main harbour as far as the Narrows. Ice free all year. Ample turning room for the longest vessel.
MAX. SIZE: Length and breadth unlimited. Can berth ships up to 60 ft. draft. Channel depth 60 ft. Tide range 6 ft. to 9 ft. 110,000 ton tankers with drafts 50 ft. enter harbour regularly.
HEALTH: Quarantine – every vessel coming from port outside Canada shall be inspected by Quarantine Officer at a place specified by him. (Quarantine Station in Anchorage No. 1). Where sufficient information can be given by radio, Radio Pratique may be given between 0900 hrs. and 1700 hrs. local time (address "Quarantine Halifax") and message should include (i) name and nationality of vessel, (ii) ports of call during voyage, (iii) nature of cargo, (iv) number of crew and passengers, (v) statement of health, (vi) name of Agent, (vii) ETA pilot station in GMT. A coastwise vessel, free from disease and arriving from a disease-free coastwise port, may be exempted quarantine inspection.
TUGS: Join vessel inside harbour at Quarantine Anchorage. Tugs towing use vessel's lines. Tugs made fast alongside vessel for docking or undocking use their own lines at no extra charge.

RADIO: Halifax Marine Radio Station, Ketch Harbour. Radio-telephone and other services. Masters may contact Halifax Marine Radio on 500 or 2,182 kHz, VHF on 156.8, working Channel 26 (161.9 and 157.3 MHz).

RADAR: Marine Traffic Regulating Center at Chebucto Head. Working frequencies Sector One 156.7 MHz (Channel 14); Sector Two 156.6 MHz (Channel 12). Call sign "Halifax Traffic".

BRIDGES: There are two: Angus L. MacDonald Bridge (Halifax-Dartmouth) min. vertical clearance at HW 158 ft.; A. Murray MacKay Bridge (narrows) min. vertical clearance at HW 157.7 ft.
TANKERS: 110,000 ton tankers, 50 ft. draft, use port regularly. Terminals – 9 berths operated by 5 oil companies.

Imperial Oil, South Dartmouth, 3 piers, vessels up to 282 m.; max. draft 15.2 m., bunkering vessel also provides barge service.

Irving Oil Co. Ltd.: South Dartmouth, 3 berths, ocean vessels any length, max. draft 11.6 m.; located at Woodside.

Texaco Canada Ltd.: Eastern Passage, 2 berths (1 berth any length vessel) draft up to 10.1 m., barge service provided in harbour.

Gulf Oil Canada Ltd.: Bedford Basin; 109.8 m. wharf (no restriction vessel length) depth 9.7 m.; located Burnside, Halifax – Dartmouth Marine Terminal.

Also see "Berthing".
BULK HANDLING FACILITIES: *Grain Handling Facilities:* Halifax Port Corporation Elevator – Storage capacity 144,256 tonnes wheat equivalent.
Max. Capacity: Berth 28: 1,000 tonnes per hour. (Wheat equivalent) (loading). Berth 26: 800 tonnes per hour. (Wheat equivalent) (unloading)
MEDICAL: Sick Mariners' Service may be obtained for venereal disease only at the Federal Building, Suite 620, Bedford Row, Monday through Friday, Tel: 426-3998. Doctor always available either by telephone or telephone answering service. Information for emergency treatment outside these hours may be obtained from ship's Agent. Emergency hospitalisation can be obtained only at Camp Hill Hospital.
STEVEDORES: Available from several private companies.
DENSITY: Salt water all tides.
FRESH WATER: Dock side only. No water barges. 50 t.p.h. per hose.
FUEL: See "Tankers".
GANGWAY/DECK WATCHMEN: Can be provided.
OPENING/CLOSING HATCHES: Patent mechanical hatches by ship's crew. Wood and canvas hatch covers by stevedores.
CUSTOMS ALLOWANCES: Tobacco: 1 lb. per man per week; 200 cigarettes per man per week. Wine/spirit allowance: 40 oz. bottle per man per week.
CARGO GEAR: All ships liable to inspection by Government Inspectors. Gear Certificates to be produced, if required. Heavy-lift equipment: 59 pieces ranging in single lift capacity to 300 short tons. Normally available on a few hours notice, including floating cranes.
CONSULS: The following countries are represented in Halifax:

Austria
Belgium
Britain
Brazil
Denmark
Finland
Germany F.R.
Iceland
Italy
Japan
Netherlands
Norway
Peru
Portugal
Spain
Sweden
United States of America

REPAIRS: All types of repairs possible.
SURVEYORS: Surveyors and Cargo Inspectors available.
DRY DOCKS: Floating dock 182.9 m. by 30.5 m. by 9.45 m. deep; Lifting capacity 22,680 tons. Graving dock – 172.9 m. long, 24.4 m. wide at keel blocks; clearance at top is 31.2 m.; max. draft over the keel blocks is 7.9 m., capacity 13,610 tons. Two marine railway slips at Dartmouth capable of hauling vessels from 36 to 2,720 tons displacement. Complete machine shop and other repair facilities as well as Salvage equipment available.

New floating dock. Lifting capacity 36,000 tons. Dimensions 237 m. × 38 m. × 9 m. draft.
AIRPORT: Halifax International. Regular services to Canada, USA and Europe.
TIME: Standard Time GMT minus 4 hours. Daylight Saving Time from last week-end in April to last week-end in October, clocks advanced 1 hour.
HOLIDAYS: New Year's Day (January 1st); Good Friday; Queen's Birthday (May 20th); Dominion Day (July 1st); Labour Day (September 2nd); Thanksgiving Day (October 14th); Remembrance Day (November 11th); Christmas Day (December 25th). Cargo work can be arranged on all holidays except Labour Day, Christmas Day and New Year's Day.
POLICE/AMBULANCE/FIRE: Police Tel: 4105. Harbour Police (Ports Canada) Tel: 426-3629. Ambulance Tel: 429-5151. Fire Tel: 4103.
EMERGENCY CO-ORDINATION CENTRE: Coast Guard Halifax Tel: 426-6030. Halifax Traffic Centre Telex: 22502.
TELEPHONES: Service available at all berths.
GENERAL: Extensive rail and road services plus extensive transit sheds, cold storage with 1,719,000 cu.ft. storage space.
STORING: See "Prelims".

1. Yes.
2. Yes.
3. Yes.
4. Yes.
5. None for local stores.
6. Yes.

SERVICES: All services available including compass adjusting, tank cleaning, etc.
SHORE LEAVE: Crew allowed ashore.
AUTHORITY: Halifax Port Corporation, P.O.Box 336, Halifax, Nova Scotia, Canada B3J 2P6. *Tel:* (902) 426-3643. *Telex:* 019-23591. *Contact:* Captain C. L. Ball, Director of Operations and Harbour Master (Tel. (902) 426-3648). D. F. Bellefontaine, General Manager (Tel. (902) 426-3643).

HAMILTON, Ontario: 43.14 N. 79.41 W. (See Plan)

For important General Information refer to St. Lawrence Seaway.
DOCUMENTS:

Inward manifest 3 days prior to arrival of vessel.
1 Steamship company release covering inward shipment.
1 Loading list, 24 hours prior to vessel loading.
1 Customs report outwards (A.7).
3 Vessel's outward manifest within 3 days after departure of vessel.

PILOTAGE: See "St. Lawrence Seaway".
MAX. SIZE: LOA 730 ft. Max. draft 26 ft.
HEALTH: First port of entry. See "Montreal".
RADIO: VBG Toronto.
Vessels Inbound: Call Burlington Bridge on radio telephone (VHF or AM) for clearance. Call Harbour Master's office for information about docking orders (VHF or AM).
Vessels Outbound: Call Burlington Bridge for clearance. Call Harbour Master's office to advise next port of call.
General: Harbour Master's office keeps radio watch on AM and FM working channels. Tug or linesmen may be ordered through the Harbour Master's office or Agent.
TUGS: Join inside harbour entrance – ship's lines used.
BERTHING: Arrangements made with Harbour Master.
Berthing Capacities: The Port of Hamilton provides berthing facilities for all vessels capable of navigating the St. Lawrence Seaway which can handle maximum size vessels of 730 ft. length × 75 ft. beam with a draft of 26 ft. 6 in.

The Hamilton Harbour Commissioners provide 19,000 ft. of berthing and in addition 10,050 ft. of berthing is available for private docks i.e. – International Harvester, The Steel Company of Canada, Dominion Foundries & Steel.
Covered Storage Space: Total 638,000 sq.ft. from which the Hamilton Harbour Commissioners utilise 430,000 sq.ft. and leases to private operators:

108,000 sq.ft. to Canada Steamship Lines Limited — Pier No. 24
100,000 sq.ft. to Seaway Terminals — Pier No. 14

Outside Storage Space: Total – 2,980,200 sq.ft. Operated by The Hamilton Harbour Commissioners:

Centennial Terminal	400,000 sq.ft.
Wellington Street Terminal	200,000 sq.ft.
Pier 23	140,000 sq.ft.

Leased to Private Operators:

Pier 11	250,000 sq.ft.
Pier 12	600,000 sq.ft.
Pier 13	240,000 sq.ft.
Pier 14	1,000,200 sq.ft.
Pier 15	150,000 sq.ft.

BRIDGES: Lift bridge at harbour entrance can be raised any time.
STEVEDORES: Must be ordered prior to 1545 hrs. on previous day.
MEDICAL: Hospital services available and doctors can be arranged.
FRESH WATER: Available.
FUEL: All types available.
GANGWAY/DECK WATCHMEN: Not necessary.
OPENING/CLOSING HATCHES: Performed by stevedores.
CUSTOMS ALLOWANCES: See "Montreal".
IDENTIFICATION CARDS: Not required.
CONSULS: Consuls located in Toronto.
REPAIRS: Available.
AIRPORT: Hamilton CVC Airport (10 miles South), and Lester B. Pearson International Airport (30 miles East).
TIME: GMT minus 5 hours.
HOLIDAYS: Normal Canadian statutory holidays apply and labour can be arranged at extra cost. See "Montreal" for details.
POLICE/AMBULANCE/FIRE: Police 522-4925 or 911.
TELEPHONES: Can be arranged on board.
SHORE LEAVE: Crew allowed ashore.
DEVELOPMENTS: Pier No. 26 under construction.
AUTHORITY: The Hamilton Harbour Commissioners, 605 James St. N., Hamilton, Ontario L8L 1K1. *Tel:* 416 – 525-4330. *Telex:* 061-8638. *Contact:* R. R. Hennessy, Port Director. I. M. Noble, Harbour Master.

HANTSPORT, N.S.: 45.04 N. 64.10 W.

DOCUMENTS: See "Montreal".
PILOTAGE: Non-compulsory, but advisable. Rates by agreement.
MAX. SIZE: Tidal port and no shipping arrives or departs at low water. Draft of largest vessel that entered port was 24 ft. A draft of 25 ft. can be taken in and out.
HEALTH: Customs Officer acts as Quarantine Officer.
RADIO: Ship-to-shore communications; through St. John N.B. or Yarmouth N.S.
BERTHING: Berthing length 400 ft., no water at low tide, ships lie aground on mud alongside. There are railroad tracks on wharf, main and electric lights laid on.
FRESH WATER: From pipe-line on Government wharf.
FUEL: Oil by truck from various companies.
REPAIRS: Hull repairs can be made at low water with vessel high and dry.
SERVICES: Supplies: ship's stores can be secured in port.
AUTHORITY: Mr. John Harvie, Harbour Master/Wharfinger, P.O.Box 35, Hantsport, Nova Scotia. *Tel:* 684-3216.

HARBOUR GRACE, Newfoundland: 47.43 N. 53.08 W.

DOCUMENTS:

Crew Lists.
Names of passengers.
Clearance from Last Port of call.
Derat Certificate.
Inoculation List of all crew members and passengers.
Manifest of Cargo.
Copy Bills of Lading.
List of Bonded Goods.

PILOTAGE: Not compulsory, if required cable Agent.
ANCHORAGES: Pilot will instruct Master.
MAX. SIZE: Max. length 650 ft., max. draft 24 ft. low tide.
HEALTH: See "Montreal".
RADIO: Route cables and telephone calls through St. John's Newfoundland Radio.
VHF: Stand by on Channel 6.
TUGS: Not available.
BERTHING: Nothing specific, Pilot will have instructions; Agent should be given 24 hours arrival notice.
CRANE: Available on request.
STEVEDORES: Available. 24 hours notice required.
MEDICAL: Port doctors available; hospital facilities; advance notice would be helpful in providing ambulance services if needed.
TANKERS: Marine storage terminals for oil are served by Canadian tankers.
FRESH WATER: Available, pipe-line delivery at piers, rate of delivery as required.
FUEL: Diesel, gas oil, marine bunkering facilities in piers, available at any time, no notice required.
GANGWAY/DECK WATCHMEN: Not necessary, available if required.
OPENING/CLOSING HATCHES: By crew.
IDENTIFICATION CARDS: Not required.
CONSULS: Norway; Denmark; Spain; Portugal; France.
REPAIRS: Deck and engine repairs available.
AIRPORT: 1 hour 15 minutes drive, service by regular airlines making connection to all points in the world.
TIME: GMT minus 3.5 hours. Clocks advance 1 hour last Saturday of April each year and are put back 1 hour last Saturday October each year.
HOLIDAYS: New Year's Day; Good Friday; July 1st; November 11th; December 25th. Cargoes could be worked on these days with exception of Good Friday and Christmas Day.
POLICE/AMBULANCE/FIRE: One telephone number for all services 709-596-5014.
TELEPHONES: Available at pier.
CUSTOMS ALLOWANCES: Tobacco – each man 200 cigarettes per week. Wine and Spirit – each man 40 oz. wine or spirits per week.
SERVICES: Compass adjusting, radar repairs, RT repairs, gyro compass repairs, all types electronic equipment repaired. Divers available for surveys and underwater repairs.
REGULATIONS: Fishing vessels must advise of week-end arrival on Friday so that permit to take supplies can be obtained from Federal Dept. of Fisheries.
SHORE LEAVE: All crew members allowed ashore.

AGENT: Cyril Babb Ltd., P.O.Box 160, Harbour Grace, Newfoundland, Canada A0A 2M0. Tel: (709) 596-5041/3011, (709) 722-2966. Telex: 016-4153 Fishco Hrgc. FAX: (709) 596-7189. Contact: R. Lynch or R. Babb.

HAVRE ST. PIERRE, Quebec: 50.14 N. 63.35 W.

DOCUMENTS: Not a port of entry, clearance can be obtained at a previous port of call or by radio from Quebec.
PILOTAGE: Not compulsory.
ANCHORAGES: Safe anchorage in 42 ft. – 90 ft. to be found in Eskimo Harbour.
MAX. SIZE: Largest vessel; 10,000 tons, draft 28 ft. 6 in.
RADIO: Seven Islands – VCK.
TUGS: None.
BERTHING: Quebec Iron & Titanium Corp: Ore Loading Dock has 640 ft. of berthing space, depth alongside 30 ft. at LW.

Transport Canada Wharf: 400 ft. long, depths 26 ft. to 37 ft. alongside at LW.

Tidal variation from 4.75 ft. – 7.75 ft.

CRANES: 1 rail mounted crane available at the ore loading dock.
BULK CARGO FACILITIES: Conveyor and loading boom (40 ft. extension) at ore loading dock. Capacity 3,500 t.p.h.
MEDICAL: Hospital facilities available.
FRESH WATER: Available ex-town mains supply.
FUEL: Lubricants only.
REPAIRS: Welding repairs can be undertaken.
AIRPORT: Local airstrip with services.
AUTHORITY: Transport Canada, Garde Cotiere Canadienne, Region des Laurentides, 104 Dalhousie, Suite 121, Quebec, P.Q., G1K 4B8. *Tel:* (418) 648-3680. *Telex:* 051-3051. *Contact:* Gustave Sherrer, Harbour Master, Havre St. Pierre. Tel: 418-538-3142.

KINGSTON, Ontario: 44.12 N. 76.30 W.

For important General Information refer to St. Lawrence Seaway.
DOCUMENTS: See "Montreal".
PILOTAGE: Contact Pilotage Officer, in Cornwall, tel: 613-932-8740, USA Pilot Station, Cape Vincent 315-654-2900.
ANCHORAGE: Good anchorage off Penitentiary.
RESTRICTIONS: Channel Depths – Controlling depth at low lake levels 22 ft. until wharves in harbour approached. In upper harbour, controlling depth 17.5 ft. Depths vary from month to month.
Navigating Season April 15th – December 15th.
HEALTH: First port of entry. Quarantine at Quebec City for incoming ships from foreign ports.
TUGS: Available. Necessary for handling ships in rough weather at Elevator and other docks.
BERTHING: Docks extend West from North of bridge (La Salle Causeway) to Little Catariqui Bay – some 4 miles. Transport Canada 455 ft., depth alongside 17 ft. Portsmouth Olympic Harbour – Environment Canada, under construction. Also smaller docks for coastal vessels and private docks, including Canada Steamship Lines Elevator dock 700 ft. long on East side 25 ft. alongside, and 600 ft. on West side depth 22 ft. La Salle Causeway 1,000 ft., 19 ft. alongside, used for berthing in Winter. James Richardson Wharf: Berthing length 800 ft., depth alongside 19 ft.
BULK HANDLING FACILITIES: *Canada Steamship Lines Elevator Dock:* Large Upper Lake vessels are unloaded on East side by two travelling marine towers; canal-size vessels are loaded on the West side, 6 loading spouts. The elevator capacity is 2,500,000 bushels, marine towers 35,000 bushels per hour. Canadian National Railways tracks run to the elevator and cars can be loaded with grain. This dock is also open to general cargo.
MEDICAL: Hospitals, Kingston General and Hotel Dieu.
STEVEDORES: From Toronto.
FUEL: Bunker coal – normal stock 2,000 tons from lighters at wharf. Bunker "C" and diesel oil also available.
FIRE PRECAUTIONS: No unusual precautions.
CUSTOMS ALLOWANCES: See "Montreal".
REPAIRS: Most repairs possible.
DRY DOCK: Will take ships of length 210 ft., beam 44 ft. Depth on sill 13 ft.
TIME: Eastern Standard Time GMT minus 5 hours. Daylight Saving Time from last week-end in April to last week-end in October, clocks advanced 1 hour.
HOLIDAYS: See "Montreal". Port Officials always available.
TELEPHONES: Ship-to-shore phone communications through Kingston (VBH).
AUTHORITY: Transport Canada, P.O.Box 592, Kingston, Ontario K7L 4X1. *Tel:* (613) 546-3335. *Contact:* E. Phipps-Walker, Harbour Master.

KITIMAT, B.C.: 53.59 N. 128.46 W. (See Plan)

PORT LIMITS: All waters of Kitimat Arm and Kildala Arm bounded by the high water mark, North of a line drawn from Hilton Point (Lat. 53° 48′ 54″ N., Long. 128° 52′ 16″ W.) through Louis Point (Lat. 53° 49′ 08″ N., Long. 128° 45′ 38″ W.) on Coste Island to Steel Point (Lat. 53° 49′ 35″ N., Long. 128° 42′ 20″ W.) on the mainland. Canadian Chart 3743.
DOCUMENTS and General Information: Refer to "Vancouver".
PILOTAGE: Compulsory. Pilot boards at Cape Beale, West Coast, Vancouver Island, or Triple Island, off Prince Rupert. Pilotage Authority require 48 hours notice to allow Pilot to meet vessel at Triple Island or Cape Beale.
ANCHORAGE: No vessel shall anchor in the fairway or dredged Channel approaching the wharf or otherwise in a position to interfere with or obstruct the docking or undocking of any other vessel. Pilot will instruct Master. Usual anchorage South of Eurocan Terminal, East side of Kitimat Arm.
RESTRICTIONS: Approach to the port from the South is via Laredo Sound, Laredo Channel, Campania Sound, Whale or Squally Channels and thence via Douglas Channel. From the North via Brown Passage, Arthur Passage, Grenville Channel, Douglas Channel. The route from the South is approximately 120 miles, from the open sea and from the North approximately 130 miles. Entrance channel to Terminal Wharf No. 1 (red and black buoys with flashing light) is 732 m. long, dredged to a depth of 10.67 m. at low water, width varies from 244 m. at entrance to 183 m. In addition, a turning basin has been dredged to 10.67 m. at low water on the side of the channel opposite wharf, providing a turning basin 198 m. in width. The channel has mooring dolphins on West side, 264 m. South of wharf No. 1 to accommodate vessels up to 16,000 d.w.t. while awaiting berth.

Vessels may enter or depart any time of day or night.

MAX. SIZE: LOA, 207 m. beam 27.4 m., draft 11 m. Mean tide range 4.2 m. Depth alongside at zero tide 10.67 m.
HEALTH: (Radio Pratique Waived): Only in the event of suspected disease or fever on board – also request for Derat, contact the Quarantine Officer at Prince Rupert, B.C. Tel: (604) 627-1381.
RADIO: Prince Rupert Radio "VAJ" 500, 2182, 1630.
ETA: Notice of ETA must be given to Alcan Eurocan or Agent at Kitimat at least 24 hours and 12 hours before arrival. Alcan Eurocan or Agent may then assign a berth to the vessel but shall not be liable for any delay in providing berth or for failure to provide a berth. Vessels carrying bulk cargoes for discharge are instructed to request Alcan via radio or wireless telegraph through shore stations as to which hatches are to be opened on arrival alongside unloading berth to permit immediate entry of unloading devices.
TUGS: Tug services available. 3 tugs, 500 h.p., 750 h.p. and 1,000 h.p.

BERTHING: Alcan Terminal Wharf No. 1 (concrete caisson construction) is 229 m. long and has two pneumatic unloading towers discharging to a belt conveyor and a Kangaroo Crane for either bulk and general cargo duties. The wharf is connected by rail direct to Aluminum Co. of Canada smelter yard and to the Terrace – Kitimat spurline of CNR.

Rivtow Straits Ltd. operates a weekly Ro/Ro barge service for containers and palletised cargo to and from Vancouver from a barge loading ramp located south of Alcan's mooring dolphins.

Eurocan Terminal is located to the East of Ocelot Terminal and is 137 m. long with mooring dolphins at South end. To the North of the terminal is located a hydraulic barge loading ramp. Dredged alongside to 10.67 m. at LLW. Principle export cargoes are paper and packaged lumber.

No container or LPG carrier facilities available.

Ocelot Industries Ltd., terminal is located south and east of Alcan's facilities and is of concrete piles and consists of a loading platform with 2 pads on either side with mooring dolphins to the North and South. The distance between breasting pads is approximately 78 m. and the overall length between dolphins is approximately 300 m. The berth area is approximately 430 m. long and 90 m. wide and is dredged to 13 m. at LLW. At the entrance there is a Q.F. flashing red buoy in line with the berth and another at the North end. F. W. range lights bearing 001° are located to the North and have a range of 4 miles. Principal export cargo is methanol. As an extension to the methanol plant Ocelot is presently constructing a 500 tonne/day Ammonia plant. Completion date November 1986. Product will be shipped through existing wharf facilities. A separate pipe-line and loading arm are under construction.
STEVEDORES: ETA sent by cable 24 and 12 hours before arrival.
MEDICAL: Kitimat General Hospital – complete medical service provided.
DENSITY: Varies with state of tide, water depth and season of the year.
FRESH WATER: Available at Alcan's Terminal Wharf No. 1 and at other terminals by tank truck.
FUEL: Only diesel oil available.
GANGWAY/DECK WATCHMAN: Not necessary.
OPENING/CLOSING HATCHES: Normally done by crew on bulk discharge. On general cargo, stevedores open and close hatches.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 0.5 lb. tobacco. Liquor: 40 oz. per man, additional issue after 7 days.
CONSULS: Available at Vancouver, B.C.
REPAIRS: Minor repairs only; nearest shipyard facilities Esquimalt or Vancouver.
SURVEYORS: Cargo Inspectors: S.G.S. Supervision Service Inc. located at Kitimat. A.B.S., B.V. and Lloyd's Surveyor available from Vancouver.
REPATRIATION: Facilities convenient for crew changes.
AIRPORT: Three flights daily from Terrace to Vancouver International Airport. Limousine service from Kitimat to Terrace, distance 40 miles.
TIME: GMT minus 8 hours. Daylight saving time from last Saturday in April to last Saturday in October.
HOLIDAYS: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Christmas Day, and Boxing Day.
POLICE/AMBULANCE/FIRE: Police 632-7111; Ambulance/Fire 623-9111 or 639 9111.
EMERGENCY CO-ORDINATION CENTRE: Local fire chief, R.C.M.P. Kitimat. Tel: 632-7111 or Canadian Coast Guard, Prince Rupert. Tel: 624-9146.
STORING: Vessels can be stored by truck, which may proceed alongside the berth. Fork-lift trucks may be used to handle stores. Customs Regulations in force for bonded stores only. Riggers available to assist with storing.
TELEPHONE: Telephone available at dock offices.
SHORE LEAVE: Permitted.
AUTHORITY: Transport Canada, 224 West Esplanade Street, North Vancouver, B.C. V7M 3J7. *Tel:* 984-3800. *Telex:* 04-53235. *Contact:* Walter Koengeter, Harbour Master, P.O.Box 488, Ocelot Road, Kitimat, B.C. V8C 2R9. Tel: (604) 639-9400 (office), (604) 632-2937 (home).
AGENT: Kitimat Shipping Agencies Ltd., P.O.Box 488, Ocelot Road, Kitimat, B.C. V8C 2R9. Tel: (604) 639-9400. Telex: 047-84523. Cables: Kitship.

LES ESCOUMINS, Quebec: 48.20 N. 69.20 W.

LOCATION: Situated on the North shore of the St. Lawrence River, 25 miles East of the Saguenay River.
APPROACHES: Depth in channel is 17 ft. LW. Tidal variation is from 10.75 ft. – 17 ft.
MAX. SIZE: Largest vessel, draft 15.5 ft.
BERTHING: Transport Canada Wharf is 530 ft. long, with 15 ft. depth alongside at LW. There is a ferry berth, used from April 15th to December 15th, for the Les Escoumins – Trois Pistoles Ferry.
BULK CARGO FACILITIES: Pulpwood is loaded at Transport Canada Wharf by means of a conveyor (100,000 cords per season).
FRESH WATER: Available ex-town mains supply.
REPAIRS: Electronic repairs possible.
AUTHORITY: Transport Canada, Garde Cotiere Canadienne, Region des Laurentides, 4 Place Quebec, Suite 103, Quebec, P.Q., G1R 4X3. *Contact:* C. E. Boucher, Wharfinger, P.O.Box 278, Les Escoumins. *Tel:* 233-2739.

LISCOMB, Nova Scotia: 45.01 N. 61.59 W.

APPROACHES: Channel depth ranges from 3.6 m. to 9.1 m.
BERTHING: Government Wharf closed as in a state of disrepair.
CRANES: None available.
TANKERS: Facilities closed.
MEDICAL: Sheet Harbour Hospital, 30 km.
AIRPORT: Halifax International Airport, 225 km.
AUTHORITY: Department of Fisheries and Oceans, Small Craft Harbours Branch, 1721 Lower Water Street, 4th Floor, P.O. Box 550, Halifax, Nova Scotia B3J 2S7. *Tel:* (902) 426-8120. *Telex:* 019-21891.

LOUISBOURG, Nova Scotia: 45.55 N. 59.58 W.

LOCATION: On the North side of N.E. arm of Louisbourg Harbour, S.E. Coast of Cape Breton Island, Nova Scotia.
PILOTAGE: Compulsory. Pilot boards 5 miles to seaward.
ANCHORAGE: Safe anchorage anywhere clear of the ship channel leading to docks.
RESTRICTIONS: *Navigation Season:* Port open all year. No ice forms sufficiently to hinder shipping
Channel depth: Lowest depth at low tide in ship channels is 30 ft. Draft of largest vessel (8,000 g.r.t.) to enter port was 30 ft. 6 in. Tides rise 4 ft. to 5 ft.
HEALTH: Quarantine Station is in the South West harbour. Health officers board vessels at wharves.
RADIO: Sydney Radio (VCO).
BERTHING: (1) Small Craft Harbours Wharf: Berthing length 530 ft., depth alongside at LW 19 ft., used for general freight. The inner 181 ft. of the wharf is open faced creosoted timber cribwork. The next 217 ft. is of steel sheet pile encased creosoted timber pilework driven through remains of timber cribwork. The remaining outer stem portion and the "T" are of concrete crib construction. The limiting loads are 300 pounds per square foot on the timber cribwork section and 500 pounds per square foot on all other sections.
(2) Louisbourg Fisheries Wharf: 300 ft. long and 60 ft. wide, of concrete construction. Across the head of the wharf there is 20 ft. to 21 ft. of water alongside at LW. From the head of the wharf towards shore the depth decreases from 20 ft. to 15 ft. In addition, there are several smaller wharves in the harbour with 20 ft. and less depth alongside at LW. Administered by Small Craft Harbours.
MEDICAL: Hospital at Sydney.
FRESH WATER: Available.
FUEL: Fuel and diesel oils can be secured from tank wagons or in barrels – no ship storage in bulk. Light diesel oil on pipe-lines to wharves.
REPAIRS: No facilities available.
SURVEYORS: Lloyd's, Bureau Veritas and American Bureau at Halifax.
GENERAL: *Services:* Post Office, Telegraph, Telephone, Customs.
Trade: Exports: Fish. Imports: General Merchandise.
Charts: Canadian Charts No. 4375 and 4376.
Provisions: Available.
AUTHORITY: Department of Fisheries and Oceans, Small Craft Harbours Branch, P.O. Box 1085, Sydney, Nova Scotia B1P 6J7. *Tel:* (902) 564-7286. *Contact:* R. A. Young, Operations Manager.
Local Authority: C. G. Shaw, Transport Canada – Harbour Master and Fisheries and Oceans – Harbour Manager. *Tel:* 733-2280.

MATANE, Quebec: 48.51 N. 67.35 W.

SHIPMASTER'S REPORT: November, 1983.

PILOTAGE: Optional; advisable on first visit. Pilot can be requested by telephoning (418) 562-3201 or 4083, or by contacting the Harbour Master's Office during office hours.

Pilot boards vessel 1 mile off the entrance.
ANCHORAGE: In the river, 1 mile from the West breakwater, in depths of 9 m. – 18 m. Bottom mud.
MAX. SIZE: Up to 30,000 d.w.t., length 175 m. (575 ft.) and max. draft 8.5 m. (28 ft.).
HEALTH: Pratique is granted on arrival.
RADIO: Mont-Joli: VCF.
VHF: Harbour Authority has no VHF.
BERTHING: Matane is on St. Lawrence River South Shore, 36 miles above Cap Chat. The new harbour is 2 miles West of the town and open to traffic throughout the Winter.

Two breakwaters protect and form Matane harbour, which provides a commercial quay of 183 m. (600 ft.) with 8.2 m. (27 ft.) depth alongside.

An underwater oil pipe-line extends 600 m. seaward N.E. and parallel with the N.E. breakwater. The seaward end in 6 m. of water, is marked by a buoy.

Entry direct from the river. The 150 m. (500 ft.) wide entrance between the breakwater heads faces N.E. In the Autumn, strong N.E. winds send in a heavy sea.

Max. tidal rise is 4.4 m. (14 ft. 6 in.). The mean tidal rise: MHWS 3.4 m. (11 ft.), MHWN 2.7 m. (9 ft.) and MLWN 1.2 m. (4 ft.).
STEVEDORES: Good supply of labour available.
MEDICAL: Full range of medical services available.
DENSITY: 1013.

FRESH WATER: Laid on to berth. Has to be reconnected in Winter season, which makes it expensive.
FUEL: Light fuel and diesel oil available.
CUSTOMS: Matane is a port of entry.
AIRPORT: Daily flight to Montreal.
GENERAL: Port used mainly for Canadian timber exports.
AUTHORITY: Ministry of Transport. *Tel:* (418) 562-0042. *Contact:* Harbour Master.

MONT-LOUIS, Quebec: 49.12 N. 65.44 W.

LOCATION: Village on Mont-Louis Bay, Gaspe Coast, South shore of the St. Lawrence, 16 miles West of Cape Magdalen.
PILOTAGE: No Pilot available.
ANCHORAGE: In the Bay in 6 fathoms, mud bottom. There is not much room to work out from this anchorage.
RESTRICTIONS: Navigation season from April 15th. – December 1st.

Some Masters have found the port and certain berths in it hazardous during bad weather. Shipmasters are advised to take the advice of the local ships' Agents in this respect.

Channel: Depth not less than 19 ft. at LW. Tides rise 9.5 ft. at Springs and 7 ft. at Neaps.
RADIO: Fox River (VCG).
BERTHING: (1) Transport Canada Wharf on West shore of bay. All access at this wharf is prohibited, at present this wharf is falling into ruins.

(2) Transport Canada Wharf, located on the East side of the bay, 403 ft. long and 47 ft. wide at outer end, having a depth of 30 ft. at its outer end.
MEDICAL: Hospital at Ste. Anne des Monts, 39 miles to the West.
SURVEYORS: Lloyd's Surveyor at Quebec City. ABS at Montreal.
GENERAL: *Services:* Post Office, Telephone, Provisions.
Charts: Canadian Chart No. 1230 (Mont-Louis Bay Inset).
Transportation: Good highway connects with coastal villages and Quebec. No railroad.
AUTHORITY: Transport Canada, 104, Dalhousie, Quebec City, Quebec. *Tel:* (418) 648-3680.

Rene Marin, Wharfinger. *Tel:* (418) 797-2819.

MONTREAL, Quebec: 45.30 N. 73.33 W. **(See Plan)**

DOCUMENTS:
- 3 Crew Lists.
- 3 Passenger Lists.
- 3 sets Customs Documents.
- 3 sets Health Documents.
- 3 sets Manifests.
- 3 sets Bills of Lading.
- 3 sets Ship's Papers.

PILOTAGE: Compulsory. Pilots board inbound vessels at Anse-aux-Basques (near Les Escoumains) to bring ships as far as port of Quebec where Pilots are exchanged for the trip to Trois-Rivieres. Pilots are again exchanged at Trois-Rivieres before ships may proceed to Montreal.

For further information refer to "Quebec".
ICE ADVISORY SERVICE: Ships inbound from seaward between 15th December and 15th April should advise the Ice Information Officer, Sydney, N.S., 36 hours prior to entering Cabot Strait stating their position, destination, whether loaded or in ballast. This procedure will facilitate the passing of ice information to the ship as necessary.

On request, ice information is also available from Marine Radio Stations at Halifax, Camperdown, Seven Islands, Twillingate and Grindstone. The Canadian Broadcasting Corporation maritime network also broadcasts ice information daily during the Winter navigation season. Supplementary ice information may also be obtained from Canadian Marine Service ice breakers.

During the ice season, radio broadcasts of ice information are made twice daily from Coast Guard Radio Stations as follows:

		Call frequencies
Cape Race, Nfld.	VCE	420 kHz CW 2582 kHz RT
Fox River, Que.	VCG	434 kHz CW 2582 kHz RT
Mont-Joli, Que.	VCF	446 kHz CW 2582 kHz RT
North Sydney, N.S.	VCO	489 kHz CW 2582 kHz RT
Halifax, N.S.	CFH	115.3 kHz CW 6949.5 kHz 8662 kHz 12984 kHz 17218.4 kHz

ANCHORAGE: Available at Lanoraie, approx. 3 miles above Sorel harbour limits, and at Pointe-aux-Trembles anchorage below berth 110. Also opposite Versatile Vickers. Boatmen services are available to vessels at anchor.

Anchorages will be allocated by the Harbour Master (Montreal), through the Vessel Traffic Services Centre, Montreal.

MAX. SIZE: Entry only restricted by draft. Main channel depth is 10.67 m. Channel 243.8 m. wide at narrowest point.
HEALTH: Except in case of coastwise vessels free of disease and arriving in Canada from ports or areas that are not infected, every vessel coming from a port outside Canada is inspected by the Quarantine Officer, and shall not make customs entry until it has received pratique.

"Coastwise Vessel" means a vessel operating exclusively between Canada and the island of St. Pierre and Miquelon or between Canada and the United States, including Alaska. A "coastwise vessel" loses coastwise status and is subject to quarantine inspection on its next arrival at a Canadian port when at any time it touches a foreign port other than those mentioned above.

Where sufficient quarantine information can be given by wireless, Radio Pratique may be obtained between the hours of 0900 and 1700 the day preceding arrival:

(*a*) From "Quarantine Halifax" by vessels bound for Halifax, Nova Scotia.
(*b*) From "Quarantine Saint John" by vessels bound for Saint John, New Brunswick.
(*c*) From "Quarantine Quebec" by vessels approaching Canadian ports via the Saint Lawrence River.

For the purposes of Radio Pratique vessels are required to give the following information:

(*a*) Name and nationality of vessel.
(*b*) Ports called at during voyage.
(*c*) Date and place of last fumigation or Derat Exemption certificate.
(*d*) Nature of cargo.
(*e*) Number of crew.
(*f*) Number of passengers.
(*g*) Port of destination and name of Agent.
(*h*) Number of persons without valid vaccination certificates.
(*i*) Condition of health of all on board with details of any sickness or death which has occurred during the voyage.

Vessels proceeding directly into the Seaway may now receive quarantine inspection and clearance while at anchor awaiting entrance to the Seaway.
RADIO: All communications via Montreal Radio, call sign VFN. Vessel Traffic Services handle VHF traffic as follows: Between Yamachiche and Cap St. Michel, VHF Channel 9 (156.45 MHz.). From Cap St. Michel to Montreal, VHF Channel 10 (156.50 MHz.). Ship to ship communication, VHF Channel 6, (156.3 MHz.). Port radar service available.
TUGS: 8 tugs, 1,000 h.p. – 1,600 h.p.

FRESH WATER: Available by pipe-line at most berths.
FUEL: Oil – all grades can be delivered at oil companies' terminals; also by bunker barges to vessels lying anywhere in the harbour.
Coal – delivered direct to vessels at coal berths.

Dock and Location: Berth 94, East Montreal.
Operator: Montreal Petroleum Terminal (Scotcan/Motoco). Tel: 645-2241; 353-6821.
Type of Dock: Loading and unloading.
Type of Cargo Handled: Crude oil, gasoline, stove oil, marine fuel oil, marine diesel fuel, No. 2 fuel oil, No. 6 fuel oil.
Size of Pipe-lines: 16 in.; 12 in. and 10 in.; 10 in.; 12 in.; 12 in.; 12 in.; 12 in.
Storage Capacity (Barrels): 1,000,000; 430,000; 80,000; Production capacity: 15,000; 400,000; 300,000.
Distance from Dock to Storage Tanks: 3.5 miles; 1,500 ft.; 1,500 ft.; 3.5 miles.
Length of Dock: 238.05 m.
Depth at Dock: 10.67 m.

Dock and Location: Berth 101 and 102 E.
Operator: Imperial Oil Ltd., 10515 Notre-Dame E., Montreal East.
Type of Dock: Loading and unloading, bunkering.
Type of Cargo Handled: Crude oil, gasoline, stove oil, furnace oll, diesel fuel, bunker "C".
Size of Pipe-lines: 16 in.; 12 in.; and 8 in.; 10 in.; 12 in.; 12 in.; 16 in. and 12 in.
Storage Capacity (Barrels): 3,000,000. Total storage capacity rotated by products depending on seasonal demands.
Distance from Dock to Storage Tanks: 2,800 ft.
Length of Dock: Inside 97.5 m. Outside 385 m.
Depth at Dock: 4.6 m. and 10.7 m.

Dock and Location: Berth 103 S. & 103 N. Montreal East.
Operator: Shell Canada Ltd., 10501 Sherbrooke St. East, Pointe-aux-Trembles, Que. Tel. Marine Bunkers and Lubricants: 866-7571.
Type of Dock: Loading and unloading.
Type of Cargo Handled: Gasoline, stove oil, furnace oil, chemicals jet fuel, aviation fuel, marine diesel, bunker "C", thin fuels 200 secs./3,500 secs.
Size of Pipe-line: 2–10 in.; 2–12 in.; 20 in.
Storage Capacity (Barrels): 4,000,000.
Distance from Dock to Storage Tanks: 1.75 miles.
Length of Dock: 379 m.
Depth of Dock: 10.7 m. S., 9.1 m. N.

Dock and Location: Berth 104.
Operator: Sun Oil Co. Ltd., 11055 rue Victoria.
Type of Dock: Loading and unloading.
Type of Cargo Handled: Gasoline, No. 1 fuel oil, No. 2 fuel oil.
Storage Capacity (Barrels): 7 tanks of 50,000; 2 tanks of 25,000.
Distance from Dock to Storage Tanks: 500 m.
Length of Dock: 32 m. but can accommodate vessels up to 148 m.
Depth at Dock: 9.1 m.

Dock and Location: Berths 105 and 106.
Operator: Ultramar Canada Inc., 1155 Dorchester W., Montreal Tel: 871-9721.
Type of Dock: Loading and unloading.
Type of Cargo Handled: Crude oil; gasoline; light fuels; marine gasoil; marine diesel; medium fuels 200 secs/3,000 secs; bunker "C".
Size of Pipe-lines: 12 in. and 8 in.; 10 in.; 3–8 in.
Storage Capacity (Barrels): 6,300,000 total storage capacity rotated by products depending upon production requirements.
Distance from Dock to Storage Tanks: 1 mile.
Length of Dock: 232.5 m.
Depth at Dock: 9.1 m.

Dock and Location: Sections No. 109 and 110.
Operator: Petro-Canada, 11701 Sherbrooke Street East, Montreal. Tel: 252-5830.
Type of Dock: Loading and unloading.
Type of Cargo Handled: Gasoline; crude oil; No. 6 fuel oil; middle distilates.
Storage Capacity (Barrels): 650,000; 900,000; 300,000; 540,000.
Distance from Dock to Storage Tanks: 0.75 mile.
Length of Dock: 278.0 m.
Depth at Dock: 10.7 m.

GANGWAY/DECK WATCHMEN: Required.
OPENING/CLOSING HATCHES: Always done by stevedores.
CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes; 50 cigars; tobacco, 2 lb. per person over 16. Wine/Spirits, total of 40 oz. per person over age of 21.

Subsequent issues may be authorised to crew members of foreign vessels, but the max. quantity any crew member may hold at any one time must not exceed 300 cigarettes, 75 cigars, 3 lb. tobacco, and 60 oz. liquor.

3 copies Ship Stores E.1.
3 copies Crew Declarations Y.14.
1 Quarantine Certificate.
Manifest from previous Ports.
PILOTAGE: Compulsory. Pilots board off Williams Head, Victoria. Pacific Pilotage Authority – Tel: 666 6771.
ANCHORAGES: Off Harbour entrance and in Departure Bay.
RESTRICTIONS: No restrictions on Nanaimo Assembly Wharf or Duke Point. Harmac Wharf restricted from 2045 to 0700 hrs.
MAX. SIZE: Ships of any size can be taken into harbour with safety. Controlling depths are: Harbour entrance, 17.37 m. at HW and 13.41 m. at LW. Mean channel depth, 9.45 m. at LW. Mean rise of tide 3.96 m.

Largest vessel: Assembly Wharves 24,527 tonnes. Harmac Wharves 20,412 tonnes.

Deepest draft out: Harbour 10.36 m.; Harmac 10.69 m. Navigation season all year.

Also see "Developments".

HEALTH: Pratique granted at Victoria, B.C.
RADIO: Vancouver Radio and Nanaimo Radio VHF Channel 87.
VHF: Nanaimo Radio on Channel 16.
TUGS: Join vessel at Gallows Point, Protection Island. Ship's lines to be used. Available all hours in and out and as required by Pilot.
BERTHING: *Assembly Wharf:*
Berth "A" – 182.88 m. long, depth alongside 10.36 m.
Berth "B" – 182.88 m. long, depth alongside 10.36 m.
Berth "C" – 182.88 m. long, depth alongside 11.59 m.
Duke Point:
Berth "D" – 182.88 m. long, depth alongside 14.00 m.
Coastwise – 60.96 m. long, depth alongside 4.88 m.
Also see "Developments".
Private Wharves:
Two deep-sea wharves at Harmac Pulp Mill, each being 118.9 m. long with depth alongside of 11.28 m. at LW.
C.P.R. Wharf 106.68 m. long, depth alongside 7.62 m.
Imperial Oil Wharf 48.76 m. long, depth alongside 9.14 m.
British American Oil Wharf 33.53 m. long, depth alongside 4.88 m.
Standard Oil Wharf 12.19 m. long, depth alongside 2.44 m.
Bulk Cargo Facilities:
Imports: Machinery, forest products, salt cake.
Exports: Lumber, pulp and other related forest products.
STEVEDORES: Ordered by Agent, 16 hours minimum notice.
MEDICAL: No advance notice except in case of serious illness to be included in arrival cable. Ample hospital facilities available.
TANKERS: Tanker berths at private companies' wharves where own regulations on lines apply. See "Berthing".
DENSITY: September to May inclusive 1.0203 average. June to August inclusive 1.0171 average.
FRESH WATER: Available at all wharves.
FUEL: Bunkering is limited to delivery by tanker truck and barge.

FIRE PRECAUTIONS: No other specific precautions except during extreme heat when smoking may be prohibited on wharf adjacent to lumber.
GANGWAY/DECK WATCHMEN: Services not necessary but security guards are available.
OPENING/CLOSING HATCHES: Either crew or stevedores whichever to ship's advantage.
CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes per week or 0.5 lb. tobacco and 15 cigars. Wine and/or Spirit: Officers allowed 40 oz. liquor per week. Crew allowed beer only, any amount. *Note:* Beer is not bonded.
IDENTIFICATION CARDS: Not necessary.
CONSULS: None.
REPAIRS: Temporary repairs only.
DRYDOCKS: See "Vancouver".
SURVEYORS: See "Vancouver".
REPATRIATION: Facilities exist in Vancouver.
AIRPORT: Cassidy Airport, 10 miles South of Port. Seaplane service from Harbour to Vancouver or charter.
TIME: Pacific Standard Time, 8 hours behind GMT. Daylight Saving Time in effect from late April to late October.
HOLIDAYS:
(1) Sundays and Good Friday, Easter Monday, Victoria Day (24th May), Dominion Day (July 1st), Thanksgiving and Remembrance Day crews are available at overtime rates by arrangements.
(2) No cargo work on Christmas Day, Boxing Day and New Year's Day.
(3) Labour Day in case of emergencies only.
(4) Crews cease work at 1200 hrs. on December 24th until 0800 hrs. December 27th; also from 1200 hrs. December 31st until 0800 hrs. January 2nd.
POLICE/AMBULANCE/FIRE: Police 753-2345; Ambulance 758-8181; Fire 753-7311.
EMERGENCY CO-ORDINATION CENTRE: Nanaimo Emergency Co-ordination Centre: Tel: 758-6430.
Coast Guard (Rescue): Tel: (Vancouver) 732-4274 and (Gabriola Island) 247-8533.
TELEPHONES: Available for each vessel.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Not necessary.
REGULATIONS: None unusual.
DELAYS: Generally none.
DEVELOPMENTS: *Duke Point:* The Duke Point industrial project has been developed by the provincially owned British Columbia Development Corporation.

The 140 hectare (350 acre) site includes a 28 hectare (60 acre) shipping terminal facility with 1 deep sea berth owned and operated by the Nanaimo Harbour Commission.

The terminal will accommodate 210 m. (700 ft.) vessels of up to 13.5 m. (45 ft.) draft LW. Coastal and sea-going barges are handled at separate ro-ro facilities. The terminal will also include 10,800 sq.m. (120,000 sq. ft.) of warehouse space. One berth has been completed and is operating as Berth "D", serving the forest industry.

Doman Industries has completed an ultra-modern sawmill, and the company also has plans for a thermo-mechanical newsprint mill and specialty sawmill on adjoining sites.

Another site next to the shipping terminal has been reserved for a second thermo-mechanical pulpmill. An 8 hectare (20 acre) petroleum products tank farm and a 34 hectare (85 acre) industrial park are also planned.
AUTHORITY: Nanaimo Harbour Commission, P.O. Box 131, Nanaimo, British Columbia, Canada V9R 5K4. *Tel:* (604) 753-4146, (604) 754-7701. *Telex:* 044-6114. *Contact:* Port Manager (604-753-4146) or Operations Manager (604-754-7701).

NANISIVIK, N.W.T.: 73.04 N. 84.32 W. (See Plan)

DOCUMENTS: Standard Canadian documents, See "Montreal".
PILOTAGE: No pilotage.
ANCHORAGE: Anchorage can be obtained 15 miles within the entrance of Strathcona Sound, 8 cables off the South shore of the Sound in a berthing depth of 69 m. (228 ft.), clay. Good anchorage is reported to be available in English Bay in a depth of 15 m. (48 ft.).
RESTRICTIONS: Vessel must comply with Canadian Arctic Pollution Regulations which govern earliest and latest dates permitted within Arctic zones depending on vessel's ice classification, nature and quantity of cargo and fuel.
MAX. SIZE: Draft must not exceed approx. 40 ft. alongside dock. Mooring facilities feasible for vessels up to 50,000 tons gross but may prove awkward for those over 20,000 tons gross especially under S.E. wind conditions.
HEALTH: See "Frobisher Bay". Customs Officer (R.C.M.P.) acts as Quarantine Officer.
RADIO: Vessels bound North should pass messages through Frobisher Bay VFF until into Lancaster Sound where communications regarding ETA, etc. are relayed via Resolute Bay VFR.

Direct contact may be made with Nanisivik Mines Limited, Call Sign XNR 66, on frequency 6220.0 (6218.5) at 1300 GMT and 2000 GMT during the shipping season (1st July to 15th October). Vessels may transmit and receive on 6220.0 (6218.5).
VHF: Channel 16 monitored once arriving vessels have entered Strathcona Sound en route to port of Nanisivik. Channel 6 monitored as standby.
BERTHING: No special requirements. The dock consists of three parallel 70 ft. wide cells which are 55 ft. apart. The centre cell supports the shiploader. The right and left hand cells each have two bollards (see "plan") each with an additional bollard 150 ft. in from the dock face. To the East and West of the dock there are dolphins supporting single bollards. To connect to these the ship's bow and stern lines are towed ashore and attached to a 0.5 in. diameter × 600 ft. heaving line. Once ashore the lines are shackled to a 3.25 in. diameter × 380 ft. mooring line which is secured to the bollard. The lines are then taken up and made fast.
CRANES: The only shore cranes available are mobile units when they are not in service by the mine.
BULK CARGO FACILITIES: One fixed shiploading gantry capable of loading 100 tonnes per hour. The facilities are automatically shut down when winds exceed 50 m.p.h.
STEVEDORES: As per contract with Nanisivik Mines Limited.
MEDICAL: The community has a large modern nursing station with a full time nurse and occasionally a doctor. No advance notice required. Transportation provided by mine vehicles. For serious medical cases vessels should radio in advance so air transportation can be arranged to Frobisher Bay's hospital.
DENSITY: Density varied with ice conditions and tides. Note — When reading densities it has been found that different readings have been found at different depths due to ice melting.
FRESH WATER: Available by tank truck through Nanisivik Mines Limited.
FUEL: Not available.
REPAIRS: Minor repairs only i.e. welding, etc., by mine personnel.
SURVEYORS: Not available. Nearest availability is Montreal, Quebec.
GANGWAY/DECK WATCHMEN: Not obligatory but recommended due to sudden changes in wind and tide. Nanisivik Mines Ltd. provide gangway.
OPENING/CLOSING HATCHES: Carried out by crew.
CUSTOMS ALLOWANCES: Standard Canadian allowance except no beer or alcohol permitted ashore. This restriction strongly upheld by R.C.M.P.
REPATRIATION: Crew changes may be effected TWICE weekly, Mondays at 1700 hrs. local time and Thursdays at 1600 hrs. local time, to Montreal, Quebec via Nordair Boeing 737 jet service.

Mine requires 1 week's advance notice through Administration Superintendent's Office for lodging arrangements.
AIRPORT: Approx. 8 miles from dock, transportation provided courtesy of mine.
TIME: GMT minus 4 hours during Summer months (shipping season).
BANKS: None available.
EMERGENCY CO-ORDINATION CENTRE: Canadian Coast Guard, Ottawa, Ontario. Tel: (613) 996-9788, Telex: 053-3128.
STORING: See "Prelims". Items 1, 2, 5, 6 not applicable. Items 3 and 4: Trucks and forklift trucks can proceed alongside at the berth.
SHORE LEAVE: Permitted.
TELEPHONES: Not available on or near dock. Phone calls can be made from the mill offices or in the community.
AUTHORITY: Nanisivik Mines Limited, Nanisivik, N.W.T. *Contact:* Mr. Eric Rowan (Ship's Agent). *Tel:* (819) 436-7385.

Mr. Frank Pierce, Harbour Master, Arctic Bay, N.W.T. *Tel:* (819) 439-9917, (819) 439-9918.

NEW RICHMOND (Black Cape), Quebec: 48.08 N. 65.50 W. (See Plan)

LOCATION: On the North Shore of (Cascapedia Bay) Baie des Chaleurs in the municipality of New Richmond.
ANCHORAGE: Outside Black Cape Wharf. Masters are instructed not to anchor in the area of the effluent line to the West of the wharf (see "Plan").
RADIO: Ship to shore through Grindstone (VCN) or Fox River (VCG). Calling Frequency 2182 kHz.
Arrival Advice: 72, 48, 24 hours prior to arrival.
VHF: Bathurst Paper Ltd.
Frequencies: 156.500 kHz (Simplex)
Channel No.: 10 (Marine traffic control)
Station location: New Richmond, Quebec, Canada
Co-ordinates: Lat. 48° 09′ 24″ N., Long. 65° 50′ 06″ W.
Call Sign: X 00749
Operating range is about 20 miles.
TIME: Atlantic Standard Time. Daylight Saving time is not observed.
GENERAL:
Charts: B.A. Chart No. 1715.
Navigation Aid: Type DCB rotating beacon. White with a flash interval 0.2 seconds duration once every 5 seconds.
Tides: Atlantic Coast Tide and Current Tables.
Prevailing Winds: Southwest.
Port of Reference: Pointe St. Pierre.

SHIPMASTER'S REPORT: May 1979.
Approaches: Straightforward. We used Canadian Chart 4486 – Baie des Chaleurs. The light on the end of the pier is a rotating beacon type, which shows both Green and White on one rotation. The pier is a good Radar target, but is not conspicuous from seaward in daylight.
Anchorage: Vessels may anchor off the pier as convenient (See "Anchorage" above). We did not anchor, but we would imagine the holding ground to be good, as we found stiff clay in the vicinity of the pier.

Berthing: There are no tugs or Pilots at New Richmond. In good weather conditions, such as we experienced, berthing and unberthing present no difficulties. Caution should be exercised, since the tide and prevailing winds set across the pier.

An offshore anchor let go about 2 cables off the pier head, was found to be most useful arriving and leaving. We let the cable run to one shackle on deck. This is a little too much, for it was found necessary to slack away to 4 shackles in order to get the ship alongside. In good weather, the anchor just on the bottom should be sufficient. Line handlers should be arranged with Consolidated prior to arrival. There is no lineboat.

We berthed head in, starboard side to, on the West side of the New Wharf.

The 32 ft. depth is only available for a length of 400 ft., so vessels of greater length will find their stern overhanging. For plan of soundings taken at LW (see "Plan").

Departure: The vessel was backed easily down the pier, heaving in the cable at the same time and carrying down a bresting line to use as a check if necessary. One shackle of cable should be left out to assist with turning the vessel off the pierhead. This turn should be as short round as possible and care should be taken to keep as near as possible on the line of the axis of the pier while making it. We strayed a little to the Eastwards, but maintained a minimum depth of water of 11.5 m. while making the turn.

The pier is unlighted and it is not advisable to berth during the hours of darkness. Sailing in the dark presents no problem, as the ship's decklights proved adequate.

Density: 1016.

Agency: Matters were attended to by the Consolidated Warehouse Manager.

Documents: New Richmond was our second Canadian port and the only documents required were 2 copies of Crew List and clearance from previous port.

Officials: The only official person encountered was the local Customs Officer, who was pleasant and obliging.

Cargo Work: Normal hours of work are 0800 hrs. to 2200 hrs., with breaks from 1200 hrs. to 1300 hrs., 1500 hrs. to 1520 hrs. and from 1700 hrs. to 1720 hrs.

Vessel loaded 448 tonnes of Linerboard rolls, using 2 gangs and ship's gear. Rate of loading, nett time per gang-hour, was 27 tons. The stow was not of very good quality and a lot of chocking and securing was required on completion of loading.

The cargo is brought down to the pier by road transport and waits some time there before being loaded. On a wet day, many rolls will get wet, as Consolidated do not have sufficient covers for all trailers.

General: The pier is some miles from the town of New Richmond.

AUTHORITY: Consolidated – Bathurst Inc., New Richmond, Quebec GC 2B0. *Tel:* (418)-392-2133. *Telex:* 014-43111. *Contact:* J. Pierre Savard.

NORTH SYDNEY, N.S.: 46.16 N. 60.13 W. (See Plan)

DOCUMENTS:
3 Copies Crew List 1MM.200.
3 Copies Ships Stores E1.
3 Copies Crew Declarations Y14.
Required ship information.

PILOTAGE: Compulsory. Pilotage distance is approximately 12 miles and administered under the Atlantic Pilotage Authority. The area for Cape Breton Pilot embarkation is the Sydney Outer Buoy: Lat. 46° 22′ N., Long. 60° 08′ W. To avoid delay in obtaining a Pilot, Masters must report by message addressed to Pilots, through Sydney Radio VCO or any coast radio station 24, 12 and 6 hours before vessel's ETA.

ANCHORAGE: The land-locked harbour affords safe anchorage for a large number of any size vessels with depths ranging from 40 ft. – 60 ft.

RESTRICTIONS: Open year round. During Winter months January/March drift ice can be expected. However, vessels can be assisted by Canadian Coastguard (Ice Operations).

The controlling depth is 38 ft. at lowest normal tides with average rise and fall from 3 ft. – 5 ft.

MAX. SIZE: See "Berthing".

HEALTH: See "Sydney".

RADIO: Eddy Point Vessel Traffic Management Centre, Lat. 45° 31′ N., Long. 61° 15′ W. Call Canso Marine Radio (VAX) VHF, MF. and R/T.

TUGS: Tugs are not necessary to dock powered vessels.

BERTHING:

CN Marine Terminals: Private pier used for ferries carrying passengers and freight daily to Newfoundland. There is 1 transit shed and 2 ro/ro berths to handle passenger car, truck and rail car loadings. The depth of water varies from 20 ft. to 29 ft.

Transport Canada Wharf: The 30.5 m. wide pier is 145 m. long with a depth of 7.0 m.-9.0 m. on both sides. Pier accommodated with power, telephone, fresh water and night lighting. Paved open storage area and 640 sq.m. transit shed provides facilities for handling various commercial cargoes.

Private Freight and Fish Plant Wharves: Range up to 250 ft. in length and have a 12 ft. – 16 ft. depth at LW.

FRESH WATER: Available at all wharves.

FUEL: Fuel oil and diesel oil available. See "Sydney".

DRY DOCK: The North Sydney Marine Railway operates 5 repair cradles, the largest being 125 ft. long and 35 ft. wide at bilge. This can accommodate vessels with a draft of 12 ft. forward and 14 ft. 6 in. aft and a displacement of 550 tons. A connecting machine shop is capable of making major repairs in hulls, engines and other parts.

REPAIRS: Sydney Engineering & Dry Dock Co. Ltd., P.O.Box 100, Sydney, N.S. B1P 2G9. Tel: 902-564 4488.

Atlantic Spring & Machine Co. Ltd., 40 King's Road, Sydney, N.S. B1S 1A1. Tel: 902-564 5559.

North Sydney Marine Railway Co. Ltd., P.O.Box 400, Commercial Street, North Sydney, N.S. B2A 3M4. Tel: 902-794 4791.

SURVEYORS: SGS Supervision Services Ltd., Dominion St., P.O.Box 39, Whitney Pier, Sydney, N.S. B1N 3B1. Tel: 902-562 2344. Telex: 019-35219.

Ship Safety and Inspection: Suite 218, Cabot House, 500 King's Road, Sydney, N.S. B1S 1B1. Tel: 902-539 8530.

AIRPORT: Sydney. Regular service to Halifax and Montreal International Airports.

TIME: Atlantic Standard Time (GMT minus 4 hours).

SERVICES: Radio, Radar and Decca repairs possible. Ship chandlers available.

EMERGENCY CO-ORDINATION CENTRE: Canadian Coastguard: Oil spills and other emergencies from Sydney Harbour area (no charge) ask operator for Zenith 49000.

AUTHORITY: Transport Canada, P.O.Box 248, North Sydney, Nova Scotia B2A 3M3, Canada. *Tel:* 902-794 3425. *Contact:* Mr. E. Slade, Harbour Master and Wharfinger.

OCEAN FALLS, B.C.: 52.21 N. 127.41 W.

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
3 copies Inward Report (Customs A6).

PILOTAGE: Compulsory. Pilots may be taken at Vancouver or Victoria. ETA to be given to Pilots 6 hours before arrival through radio station VAK.

ANCHORAGE: In harbour, ample room for any size vessels.

RESTRICTIONS: Channel depth 25 fathoms.

MAX. SIZE: For berthing alongside, length 600 ft., draft 30 ft.

HEALTH: Ships from overseas are given Pratique at William Head.

RADIO: Vancouver Radio, VAK.

TUGS: Not usually considered necessary. Can be made available by prior arrangement.

BERTHING: Ocean Falls Corporation owns 4 wharves depth alongside 31 ft. at LW.

FRESH WATER: Available from wharves, free of charge.

CUSTOMS ALLOWANCES: 200 cigarettes or 2 lb. tobacco may be held out of bond per person, and 40 ounces of alcohol.

SHORE LEAVE: Crew members allowed ashore.

HOLIDAYS: Easter Monday; July 1st; Labour Day; Thanksgiving Day; Remembrance Day; Christmas and Boxing Day; New Year's Day.

POLICE/FIRE/AMBULANCE: Police Tel: 957-2388. Fire Tel: 289-3828.

GENERAL: Ocean Falls Corporation Paper Mill ceased operations in 1980 and it is very unlikely to resume in the near future. Ocean Falls Corporation is maintaining a caretaking operation (12 employees) until such a time that there is a decision made on the future of Ocean Falls.

AUTHORITY: Ocean Falls Corporation, P.O.Box 730, Ocean Falls, British Columbia V0T 1P0, Canada. *Tel:* 604-289 3355. *Contact:* F. A. MacDonald, Manager.

OSHAWA, Ontario: 43.52 N. 78.50 W. (See Plan)

PORT LIMITS: The limits of the Oshawa Harbour is defined as follows:

All the waters of Lake Ontario within the following limits: Commencing at the high water mark of Lake Ontario where it intercepts the Easterly limit of Lot 1 of the broken front concession of the Township of East Whitby.

Thence along the high water mark in a Westerly direction to a point where it intercepts the Westerly limit of Lot 17 of the broken front concession of the Township of East Whitby.

Thence in a Southerly direction 3,000 ft. into Lake Ontario on the extension of the said Westerly limit of Lot 17;

Thence on a straight line in an Easterly direction to a point on a Southerly extension of the said Easterly limit of Lot 1, 3,000 ft. from the high water mark.

Thence in a Northerly direction to the point of commencement.

And all water-front property, wharves, piers, docks, buildings, shores and beaches in or along the said waters.

DOCUMENTS: The matter of documentation is done through Hub Transportation Services Limited (Terminal Operator) in conjunction with the Customs Office located at the City of Oshawa.

ANCHORAGES: Off the entrance of Lake Ontario.

RESTRICTIONS: Draft 25.6 ft. at East Wharf and 22 ft. on West Wall.

MAX. SIZE: Applies to maximum size of vessels entering seaway.

HEALTH: Normal formalities are conducted at first port in Canada in the St. Lawrence Seaway or East Coast, and therefore the vessel is usually considered cleared prior to entering the Seaway system.

RADIO: Toronto VOR or by telephone: (416) 576-0400.

VHF: Not available.

RADAR: None.

TUGS: Tugs available at the harbour entrance.

BERTHING: East Wharf – 730 ft., draft 25.6 ft. West Wharf – 900 ft., draft 22 ft. Discharging: Ship's gear or shore equipment.

East Wharf – General Cargo, Petroleum, Sugar, Steel, Automobiles.
West Wharf – Gypsum, Salt, Petroleum Products, Coal, Steel.

CRANES: Mobile cranes having a capacity of up to 300 tons are available at all times. The largest crane in the Great Lakes is permanently stationed at Oshawa with a lifting capability of 326 tonnes.
BULK CARGO FACILITIES: Dry bulk cargoes with the exception of sugar, i.e. coal, salt and gypsum, are carried by self-underloaders and discharged by ship's gear. Sugar is discharged by mobile cranes using clam grabs at a rate of 225 – 250 t.p.h. Present discharging gear by high water level, specific details will be made available on request.
BRIDGES: None.
STEVEDORES: The port stevedore (Hub Transportation Services Limited) employs members of the I.L.A., Local 1997, and 4 gangs are available from this local.

The main commodities handled are unitised general cargo, containerised general cargo, import and export steel, and raw sugar.

The productivity rate is above average, with general cargo usually reaching a level of 20 tons plus, per gang. Depending on units, weights, runs somewhere in the region of 60 – 125 tons per gang hour. Bulk commodities are usually discharged at a rate of 250 t.p.h.
MEDICAL: A full range of medical services is available at the local Medical Clinic and Oshawa General Hospital.
FRESH WATER: Fresh water available at East Wharf only.
FUEL: Available on request.
FIRE PRECAUTIONS: Usual regulations.
CONSULS: All major consuls in Toronto, 29 miles away.
REPAIRS: Available on request.
DRY DOCKS: Contact: Hub Transportation Services Ltd.
SURVEYORS: Classification Societies are represented by Lloyd's, ABS and N.V. in Toronto.
GANGWAY/DECK WATCHMEN: Not required at the Port of Oshawa.
HATCHES: The opening and closing of hatches is normally carried out by ship's crew.
CUSTOMS ALLOWANCES: In accordance with Canadian standards.
CARGO GEAR: Wherever possible by shore crew.
REPATRIATION: Possible.
AIRPORT: Toronto International Airport. All major airlines, 45 miles West.
TIME: EST.
HOLIDAYS: Usual holidays with the exception that Ontario celebrate Civic Holiday which is the first weekend in August. Cargo work can be arranged.
POLICE/AMBULANCE/FIRE: Police Tel: 579-1234. Fire Department Tel: 725-6574. Ambulance Tel: 576-8711.
TELEPHONES: Arrangements can be made through Bell Canada for telephones to be placed on board. A cost of approximately $24.75 installation charge per line.
SERVICES: All services available on request to Terminal Operator.
SHORE LEAVE: Possible.
IDENTIFICATION CARDS: Seaman's book is sufficient.
AUTHORITY: Oshawa Harbour Commission, 1050 Farewell Avenue, Oshawa, Ontario L1H 6N6. *Tel:* (416)-576-0400. *Telex:* 06-981229. *Contact:* Peter H. Cash, Harbour Master. Donna Taylor, Chief Executive Officer.

PASPEBIAC, Quebec: 48.02 N. 65.15 W.

DOCUMENTS: See "Quebec".
ANCHORAGES: Vessels anchor in 36 ft. in Paspebiac Bay.
RESTRICTIONS: Navigation season May to December.
MAX. SIZE: See "Berthing".
HEALTH: Customs Officers deal with Pratique and quarantine formalities.
RADIO: Grindstone (VCN).
BERTHING: L-shaped wharf owned by Ministry of Transport provides 1,141 ft. of quayage, with depths from 10 ft. – 22 ft. alongside. Berthing not possible due to dangerous condition of wharf. There is a small wharf for fishing vessels.
FRESH WATER: Available.
FUEL: Fuel oil available.
REPAIRS/DRY DOCKS: There is a shipbuilding yard in the port for small to medium size vessels.
AUTHORITY: Transport Canada, Garde Cotiere Canadienne, 104 Dalhousie, Suite 121, Quebec, Que G1K 4B8. *Tel:* (418) 648-3680. *Telex:* 051-3051. *Contact:* Baptiste Parise, Wharfinger, Paspebiac. Tel: (418) 752-2145.

PICTOU, N.S.: 45.41 N. 62.43 W.

DOCUMENTS:
Customs Report Inwards, Form A6 in duplicate.
Clearance from last port.
Stores List, Form E1 in duplicate.
Crew Declarations, Form Y14 in duplicate.
Crew List, Immigration Form 200 in duplicate.
Quarantine Q25 in duplicate.
Fumigating and Derat Certificate.
Load Line Certificate.
Inspection Certificate.
Safety Equipment Certificate.
Radiotelegraphy Certificate.
Certificate of Register.

If Pictou is first port of call in Canada photostat copies of the ship's ocean bills of lading in duplicate to cover all goods for discharge in Canada.
PILOTAGE: Normally arranged through Halifax as there is no radio station in Pictou. Various pilot boats in use.
ANCHORAGE: Safe anchorage all over harbour in 40 ft.
RESTRICTIONS: No entry restrictions except draft over bar at entrance to harbour, which is 22 ft. low water.
MAX. SIZE: Government pier 720 ft. long with 27 ft. water on both sides.
HEALTH: Masters must complete Quarantine Form QS.25. Vessel may be quarantined by port doctor, if any disease on board.
RADIO/VHF: Halifax, call sign, VCS, Channels 26, 59, 79. Alternate Charlottetown call sign VCA, Channel 59.
TUGS: Not necessary for berthing.
BERTHING: No specific requirements; berths usually available at all times.
STEVEDORES: Usually 24 hours' notice required for stevedores.
MEDICAL: Hospital facilities available. Serious cases may be transferred to larger hospital at New Glasgow 8 miles distant, or to Halifax 100 miles distant.
FRESH WATER: Supplied by town through 4 in. line. Water pressure 110 p.s.i.
FUEL: Diesel fuel available in quantity. 24 hours' notice required for bunker fuel as it is only brought in on order.
GANGWAY/DECK WATCHMEN: Not usually required unless requested by ship.
OPENING/CLOSING HATCHES: Usually by crew.
CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per man. Issue may be made if ship is in port for long periods. Wine/Spirits: One bottle per man.
IDENTIFICATION CARDS: Not required. Customs and Immigration Officer should be notified if any crew member wants to travel any distance from port area.
CONSULS: None.
REPAIRS: Facilities to carry out all types of ship's repairs, including deck, engine, electrical and hull repairs.
DRY DOCKS: Largest dry dock, 2,000 ton capacity, 250 ft. long, 42 ft. beam.
REPATRIATION: Crewmen repatriated through Halifax.
AIRPORT: Closest airport is Halifax International Airport approximately 80 miles distant.
TIME: Eastern Standard Time GMT minus 5 hours. Daylight saving time from last week-end in April to last week-end in October, clocks advanced 1 hour.
HOLIDAYS: New Year's Day; Good Friday; Easter Monday; Queen's Birthday (May 19th); Dominion Day (July 1st); Labour Day (1st Monday in September); Thanksgiving Day (2nd Monday in October); Remembrance Day (November 11th); Christmas Day; Boxing Day. Cargo normally not worked on holidays. Would have to be arranged with stevedoring company.
POLICE/AMBULANCE/FIRE: Police 485-4363; Fire 485-4141; Ambulance 485-4381.
TELEPHONES: Facilities available for placing telephones on ships.
GENERAL: For larger and bulk cargoes stevedores should be notified well in advance. Rates vary according to the type of cargo.
AUTHORITY: Transport Canada – Harbour Master/Wharfinger, Pictou, Nova Scotia. *Tel:* 485-5170. *Contact:* Robert Ross, Harbour Master.

PORT ALBERNI, B.C.: 49.14 N. 124.50 W. (See Plan)

PORT LIMITS: A line drawn 320° through Pill Pt. extending across Trevor Channel and Junction Passage (See Canadian Chart No. 3672).
DOCUMENTS, HEALTH, CONSULS, ETC.: See "Vancouver".
PILOTAGE: Compulsory, contact through Vancouver Radio. Pilot boards at Cape Beale.
ANCHORAGE: Deep water anchorage available in harbour, depths up to 66 ft.
RESTRICTIONS: Depths in approaches 84 ft. MLLW.
MAX. SIZE: "Panamax" size vessels.
RADAR: There is no Port Control Radar.
VHF: Channel 74 (VTS Tofino); Channel 6, tugs and inter-harbour traffic.
TUGS: Available and required for berthing.
BERTHING: Pulp and paper wharf with two berths supplied directly from MacMillan Bloedel's pulp and paper mill. Berthing length has been increased to 700 ft. with 39 ft. depth on the West side using pile dolphins; on the East side berthing length remains at 500 ft. with 33 ft. depth. Storage sheds in the centre, with specialised equipment for loading pulp and rolls of paper. A smaller berth in the river is used for loading 7,200 ton cargoes on specially covered newsprint barges.

Port Alberni Terminals Berth 3: 600 ft. long with a depth alongside of 40 ft.

Port Alberni Terminals Berths 1 and 2: berthing length is 1,050 ft. with 50 ft. minimum depth at the South end of Berth No. 1 decreasing to 37 ft. minimum at the North end of Berth No. 2. Storage sheds and forklifts. 40 ft. container handling capability.
CRANES: 2 mobile cranes – 1×50 ton and 1×30 ton.
STEVEDORES: 15 Gangs available. Refer "Vancouver" for holidays, etc.
BRIDGES: There are no bridges.
MEDICAL: Doctors and hospital facilities available.
DENSITY: 1012, approximately.
FRESH WATER: Available at wharves.
FUEL: Supplies by barge from Vancouver or by truck to dockside.
TIME: Local time is GMT minus 8 hours (P.S.T.) or GMT minus 7 hours (P.D.S.T.) in Summer.
TELEPHONES: Service available at all berths.
CUSTOMS ALLOWANCES: See "Vancouver".

REPAIRS: Machine shop capable of major repairs. Also radar, radio, etc.
BANKS: Contact: Port Alberni Shipping Co. Ltd. Telex: Pasco Ttal 044-64553. Tel: (604) 723-7373.
EMERGENCY CO-ORDINATION CENTRE: V.T.S. Centre ("Tofino Traffic") Channel 74 (VHF) or Tel: (604) 726-7777.
STORING: Vessels may be stored by truck, for regulations check with Terminal Manager. Trucks may proceed alongside. For distances check with Terminal Manager.
SURVEYORS: Surveyors and Cargo Inspectors available from Nanaimo and Vancouver B.C.
POLICE/AMBULANCE/FIRE: R.C.M.P., Tel: 723-2424; Fire Hall, Tel: 723-1234; (Ambulance).
SERVICES: Garbage disposal and septic tank extraction by arrangement.

Ship chandlers available.
GENERAL: *Tides:* 12 ft. range at Springs, 8 ft. range at Neaps.
Loading: Carried out by ship's cranes or by mobile cranes if ship's equipment malfunctions.
DELAYS: No delays in berthing should be anticipated – one company scheduling – ice free port.
AUTHORITY: Port Alberni Harbour Commission, 2750 Harbour Road, P.O.Box 99, Port Alberni, B.C. V9Y 2G6. *Tel:* (604) 723-5312 or 723-5333. Port Alberni Terminals: 723-7922. *Contact:* Captain D. E. Brooks, Port Manager. Captain D. C. Drewe, Harbour Master. Mr. K. Fertuck, Terminal Manager.

PORT ALFRED (including Bagotville), Quebec: 48.20 N. 70.52 W. **(See Plan)**

LOCATION: Ha! Ha! Bay, Saguenay River, about 60 miles from junction of the Saguenay with the St. Lawrence.

Port Alfred, Ville de La Baie, is located within the limits of the National Harbours Board of Haut-Saguenay.
DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
3 Crew's Declaration (Can. Form Y.14).
3 Stores Lists (Can. Form E.1).
Quarantine (Can. Form QS.2001).
3 Cargo Manifests.
3 Bills of Lading.
2 Stowage Plans.
Harbour Master Dues receipt.
PILOTAGE: Pilotage is compulsory. A minimum notice of 24 hours must be given to ensure availability of Pilot. This notice to be confirmed 12 hours and 4 hours prior to arrival at pilot station. Reports stating ETA and Nett Reg. Tonnage of Vessel to be addressed to "Pilots Montreal" and passed by the Marine Traffic Control communication system on VHF Channel 14 (156.7 MHz), or by any coast radio station.

The Pilot station for vessels upbound to Baie des Ha! Ha! is located at Anse-aux-Basques, charted 2 miles S.W. of Les Escoumins Wharf on the North shore of the St. Lawrence river and for downbound vessel at Quebec City.
ANCHORAGE: Vessels awaiting berthing facilities anchor off Anse a Philippe (48.21 N., 70.73 W.).
RESTRICTIONS: None. Vessels may enter or depart at any time of day or night.
MAX. SIZE: Vessels of up to 39 ft. draft may berth at Duncan Wharf and 33 ft. and 36 ft. at Powell Wharf. Max. breadth 110 ft. LOA 800 ft. (243.8 m.).
MEDICAL: General hospital at Chicoutimi located 13 miles away, in addition to local hospital.
HEALTH: Pratique obtained by cable to Quarantine Quebec, and serves for duration of vessel's stay in Canada. See also "Montreal".
RADIO: Halifax Radio Station used by vessels while in Atlantic and Sept-Iles Radio Station while in Gulf of St. Lawrence.
VHF: VHF radio telephone Channel 9 (Escoumins Channel).
TUGS: 2 Voith-Schneider tug-boats available 2,400 h.p. and 3,000 h.p. Join vessel 1 mile off wharves at Port Alfred. Ship's lines used. Tugs are compulsory for all vessels over 3,000 g.r.t. docking or undocking at Duncan Wharf and for tankers above 5,000 g.r.t., docking at Powell Wharf. Also, tugs will be compulsory when judged necessary by the management.
TANKERS: 1×12 in. (Fuel Oil) and 1×12 in. (Caustic Soda) discharge hoses. ASA fittings. No slop discharge facilities. One berth available for tankers at 39 ft. draft. (No. 4 Powell Wharf).
Notice to Tankers: It is important for all vessels discharging fuel oil or caustic soda that the following specific limits be strictly adhered to:
Fuel Oil: Maximum temperatures 150°F, minimum 120°F, with maximum pressure of 115 p.s.i. to a minimum of 75 p.s.i.
Caustic Soda: Maximum temperatures 110°F, minimum 90°F, with maximum pressure of 110 p.s.i. to a minimum of 60 p.s.i.

The above specifications are for security purposes of pipe-lines, and official readings are those on charts on the dock.

Across outer end	215	36	
(2) Duncan Wharf			
South Side	1,265	39	For unloading bauxite and other bulk cargoes. Two electric gantry towers. 600 t.p.h. each, and one for general and bulk, 10 ton capacity. Also two electric towers 1,000 t.p.h. each.
(3) Consolidated Bathurst			
North Side	600	25	

STEVEDORES: ETA sent by cable 72, 24 and 12 hours prior to arrival is sufficient to arrange gangs.
Working hours: The regular working hours at Port Alfred are:
General commodities on Powell Wharf:
(a) From Monday to Friday: 0800 to 1600 hours
1600 to 2400 hours

(b) For hours worked outside of above hours and on Saturdays, Sundays and holidays, premium will apply.

At commencement of a working period (0800 or 1600 hrs.) a minimum of four (4) hours applies to any gang ordered as per procedure.

All operations cease from 0001 hrs. Sunday to 0800 hrs. Monday except in extreme circumstances such as to complete a vessel within a maximum of two (2) hours.
Rules: The following rules and regulations are now in effect for general commodities on Powell Wharf:

(a) All requests for labour must be done by telex or cable.

(b) In order to insure that gang(s) will be available, it is imperative that the telex message be in Alcan office by 1400 hours the day before the gang(s) is (are) required. Failing this, it will be beyond Alcan control to obtain gangs. Also note that this goes for every day of the week, including Sunday for Monday work. The following is an example of the type of information required on telex.
- ETA of vessel.
- Number of gangs required and number of carpenters.
- Tonnage of commodities to be loaded or unloaded per hatch.
- Instruction if machines (forklifts, etc.) can be used at the beginning of the operations.
- if overtime approved when applicable.

Nevertheless Alcanport reserves the rights as to the number of gangs to be placed on any vessel.
Bulk commodities on Duncan Wharf: From 0001 hours each Monday to 2400 hours each Saturday, the unloading towers will work three 8-hour shifts daily. Trimming gangs will be available at the regular working hours.
DENSITY: Varies, 1002 – 1015.
FRESH WATER: Available at most berths.
FUEL: A Shell Diesel oil station is located at 88 m. (288 ft.) from the Eastern end of No. 4 Powell Wharf, 2 oil pipes of 8 in. diameter
FIRE PRECAUTIONS: Alcanport have a trained fire-fighting crew and fire hydrants installed at all strategic points. No-smoking on all wharves and in ship's holds.
GANGWAY/DECK WATCHMEN: To be attended by ship's personnel.
OPENING/CLOSING HATCHES: Done by crew on bulk discharging. On general cargo, stevedores open and close hatches.
CUSTOMS ALLOWANCES: One carton (200) cigarettes allowed for each crew member. Wine and/or Spirits, one bottle for Officers and crew and 5-6 bottles to Master.
IDENTIFICATION CARDS: Not required.
CONSULS: France: Mr. A. Cano, 1500 Roussel, Chicoutimi, secteur Nord (Quebec), G7G 1T4. Tel: 543-8942.

Norway: Mr. A. Bouchard, 241 de la Fabrique, Bagotville, Ville de La Baie, G7B 2S7. Tel: 544-2714.
REPAIRS: Only minor deck and engine repairs.
SURVEYORS: Lloyd's at Quebec City. ABS and BV at Montreal.
REPATRIATION: Facilities convenient for crew charges.
AIRPORT: At Bagotville, 6 miles from dock, Daily service to Montreal, Quebec City, Sept-Iles and Baie Comeau.
TIME: Eastern daylight saving time will prevail from 26th April, 1981 to 25th October, 1981 (+4). The remaining part of the year is Eastern Standard time (+5).
HOLIDAYS: 1st & 2nd January, Easter Monday, St. Jean Baptiste Day (24th June), Confederation Day, 3rd Monday in July, 2nd Monday of August, Labour Day & 25th December.
POLICE/AMBULANCE/FIRE: Police 544-6804; Fire 544-6804; Ambulance 544-3335.
TELEPHONES: At the main office and public pay phone outside.
SHORE LEAVE: Crew members allowed ashore.

REPORTING: *Notice to Masters of vessels approaching Canadian waters during Winter months:*

Masters of vessels proceeding from sea inbound to Port Alfred (Ville de la Baie) Quebec must report, at least 24 hours before entering the Gulf of St. Lawrence, to the Canadian Coast Guard, through Halifax Radio Station, N.S. or through any other Canadian Coast Station giving all pertinent information, i.e. name of ship, d.w.t., b.h.p., date built, ice class or non-strengthened, approximate draft and time entering Cabot Strait, destination. Then the Coast Guard should acknowledge and give the vessel the recommended route. When a vessel is beset in ice, the Master must radio for ice-breaker assistance, and in the case where conditions improve and vessel makes progress, it must be reported soonest to the ice-breaker in the vicinity or the Coast Guard so that the breaker coming to the assistance is well informed of the new position.

GENERAL: *Conditions for use of Alcan dock facilities:*

1. Notice of ETA, description and tonnage of the commodity to be loaded or discharged and the number of passengers to be landed or embarked, must be given to Alcanport at least 48 hours and 24 hours before arrival. Alcanport may then assign a berth to the vessel but shall not be liable for any delay in providing a berth or for failure to provide a berth.

2. Vessels shall not berth at Alcanport's wharves before obtaining permission. Berthing instructions will be given on VHF Radio, Channel 9 (Channel Escoumins).

3. The normal berthing will be on a "First come, first served" basis but the port management reserves the right to change priority.

4. With a view of expediting the work of the port, Alcanport reserves the right, free of expense to itself, to order (a written three-hour notice) a vessel to vacate its berth or to shift from one berth to another at any time. If the vessel does not vacate its berth or does not shift in accordance with Alcanport's instructions, an additional dockage charge of $500.00 per hour or fraction thereof shall be payable in advance in cash to Alcanport, time to count three hours after notice to shift or vacate has been delivered in writing to the person in charge of the vessel. This clause shall not impair the right of Alcanport to compel removal of the vessel by any lawful means.

5. Any object landed from a vessel on Alcanport's property is to be accompanied by a written permit signed by the Master or Officer-in-charge of the vessel; the said permit is to be handed to Alcanport's gateman.

6. Persons wishing to visit vessels berthed alongside Alcanport's wharves are required to have written permission, signed by the Master of the vessel.

7. No person shall smoke or expose a naked light on any pier or wharf or in any shed or warehouse owned or operated by Alcanport, or in any railway car while on Alcanport's property, or in the hold of a vessel while berthed alongside Alcanport's wharves.

8. Tugs are available on call for service in accordance with the charges and the Standard Towing Conditions.

9. If an anchor is used during the berthing of a vessel at Port-Alfred, the Master of such vessel is hereby requested to heave in the anchor on completion of berthing operations.

The cost of any delay caused by any vessel due to not heaving in the anchor will be charged to the owner of such vessel.

Gangways:

10. Vessels berthed on Duncan Wharf or Powell Wharf are to provide safe and efficient gangways fitted with handrails and safety nets, (no ladders allowed). The bottom end of the gangway must rest on the wharf and be tied to the eyebolts of the rails on the wharf. Gangways are to be supervised by ship's personnel.

Note: The safety net must be so installed that it will catch anyone that might fall off when embarking or disembarking the vessel. Also a life buoy with a lifeline must be placed at the bottom end of the gangway and ready for use at all times. In addition, at the Duncan Wharf, such a gangway must be positioned longitudinally in line with the vessel so as to permit free movement to the discharging towers from one berth to another as necessary. In cases where the gangway cannot reach and rest on the wharf, a small union gangway with handrails must be so placed so as to permit safe and free passage from the wharf to the ship's gangway. In order to avoid delays, we urge that these gangways be as ready as possible to be set out quickly on docking of the vessels.

In addition there must be a free passage on ship's decks, free of hazards, so as to permit officials and stevedores to safely carry out their respective duties. Any failure to comply with the above rule may cause the shore personnel to refuse to board, and the cost for any delay incurred while the ship's crew rectify the situation will be charged against the vessel.

Further, during the coldest months, all accesses including hatch covers must be kept free of ice.

For vessels berthed on Powell Wharf only:

There is now an aluminium gangway available for rental at a minimal fee of $100.00 per 24 hours., or part thereof. It is to be noted that this gangway, as for vessels using their own, is to be under the responsibility and supervision of the ship's personnel at all times while in use by the vessel.

WARNING:

11. This is to advise vessels that Alcanport's wharves are equipped with underwater cathodic protection which prevents corrosion of the wharf structure.

Any debris on the river bed, and especially metallic objects such as wire rope, cans, etc., will adversely affect this expensive system. We request your co-operation to ensure that no refuse of any nature be thrown overboard from vessels. This will avoid damage to the cathodic protection and also claims which we would be compelled to make in the event of damage being caused by refuse from vessels.

It is unlawful to discharge or dispose of any ship's refuse at Port Alfred. (There is no incinerator in this region).

Any ship approaching or manoeuvring near the wharves at Alcanport must ensure that divers working on the cathodic protection system are not under water. When divers are at work, the International Divers' Flag is displayed at the east end of the wharf or wharves involved.

Sailing Directions: Canadian Hydrographic Service in Ottawa (Ontario). St. Lawrence Pilotage (below Quebec City). Canadian Charts Nos. 1202 and 1203.

Tide: Rise and fall 2.1 m. (7 ft.) to 6.7 m. (22 ft.).

Transfer of Funds: All transfers of funds to Alcan Smelters and Chemicals Ltd., Transport Division, or to vessels as cash advance or otherwise through Alcanport, must be sent to: The Royal Bank of Canada, Bagotville Branch, 375 rue Bagot, Ville de La Baie, (Québec) G7B 2N6. *Tel:* (418) 544-6836.

AUTHORITY: Alcan Smelter and Chemicals Ltd., P.O. Box 10, Ville de la Baie (Sector Port Alfred) P.Q. Canada, G7B 3R1. *Tel:* (418) 544-3311 and 544-3314. *Telex:* 051-36176. *Cables:* ALCANPORT.

Contact: F. Bebard, Port Captain. C. J. Tremblay, Agent. J. A. Cummings, Port Manager. A. Lavoie, Bulk Commodities. M. Bouchard, General Commodities.

PORT ALICE, B.C.: 50.22 N. 127.28 W. (See Plan)

PILOTAGE: Compulsory. Pilots can be secured off Cape Beale, Barkley Sound, South end of Vancouver Island. Master should advise "Pilots Victoria" via Radio Station VAK giving their ETA Cape Beale.

ANCHORAGE: Good anchorage within 0.5 miles of dock in 30 fathoms.

HEALTH: The nearest station is at Victoria, B.C. Ships coming from foreign other than U.S.A. ports and having duplicate pratique from same to British Columbia ports other than Victoria must obtain radio pratique through Victoria, B.C.

TUGS: 2 Small tug (335 h.p.) available to assist berthing and departure if required.

VHF: Ship to shore communications on Channel 6.

BERTHING: Controlling depth from entrance of Quatsino Sound to Port Alice dock 24 fathoms. A draft of 25 ft. can be handled alongside dock and a vessel 525 ft. in length can be berthed with safety.

Oil tankers with draft up to 35 ft. and 580 ft. in length can berth against berthing scow positioned between dock and oil tanker. (Width of scow 35 ft.).

Bulk Carriers with draft of 35 ft., 565 ft. in length are berthed approximately 16 ft. out from dock by means of log fenders. Gantry of monck cranes extending over apron of dock. Largest ship handled of this type, 29,500 d.w.t., draft 35 ft. 4 ins. (Cargo loaded – Units of woodpulp).

STEVEDORES: Working day of 12 hours.

MEDICAL: 12 bed hospital, physician in attendance.

FRESH WATER: Available.

FUEL: Limited quantity of diesel oil. Fuel oil only available in an emergency from gravity hose on dock, vessel must supply hoses.

CONSULS: None.

REPAIRS: Minor repairs can be made in the company workshop.

CUSTOMS: Customs board at Port Alice.

CARGO GEAR: No shore cranes, ships use own gear.

AIRPORT: 35 miles from Port Alice, daily service.

HOLIDAYS: All Dominion legal holidays.

GENERAL: Port Alice is a private port open to navigation all year round. Limited quantity of supplies available.

AUTHORITY: Western Pulp Limited Partnership, P.O.Box 2000, Port Alice, B.C. V0N 2N0. Canada. *Tel:* 284-3331. *Telex:* 610-975 7035. *Cables:* West Pulp Pa. *Contact:* P. Bazille.

PORT CARTIER, Quebec: 50.02 N. 66.47 W. (See Plan)

LOCATION: Port Cartier is located on the North shore of the St. Lawrence River, approximately 25 miles, in a Westerly direction from Sept-Iles (Seven Islands) at Lat. 50° 02′ N., Long. 66° 47′ W.

DOCUMENTS:

Immigration:

Crew List Form IMM.200 in triplicate or IMO No. 6.

Customs:

Report Inwards (A.6) in triplicate.
Crew Declaration (Y.14) in triplicate.
Ship's Stores List (E.1) in triplicate.
Ship's Register.

The above forms will be supplied by mail on request.

The Master shall also have ready for inspection by Customs:

Certificates of Registry, Safety Construction, Safety Equipment, Derat, Safety Radio, Load Line, Clearance from Last Port. Any spares, materials for repair, or materials for furtherance must be declared on Form A6A on arrival.

Also see "Health".

On Canadian or International Crew Lists, black pen or typewriter must be used. Blue is not acceptable because of copy reproduction difficulties.

Designation and dates of expiry of all major trading certificates are required for outward clearance.

Arrangements have been made so that loading can commence before Customs Entry has been completed, and Customs Outward papers will be completed so as not to interfere with immediate departure after completion of loading.

Also see "Shore Leave".

PILOTAGE: Pilotage is compulsory at Port Cartier for docking, sailing and, at Port Authority's discretion, for changing berths.

An exception is made in the case of Coasters or vessels less than 350 ft. LOA unless requested by the Master, or, if considered necessary by the Port Authority.

Pilot will board vessels from attending tug or harbour tender approximately 1 mile off the harbour entrance.

It is the responsibility of all vessels to ensure that the pilot ladder is in good condition and in a safe position for the boarding of the Pilot.

Frequencies for VHF communication with Pilot and Harbour Office. Calling 156.8 mHz. Receiving/transmitting 156.6 MHz. Internal harbour (tugs and Pilots) 156.35 MHz.

Vessels over 40,000 d.w.t. shall also provide accommodation ladder with rope ladder alongside. The landing platform of the accommodation ladder should be approximately 20 ft. above the water.

APPROACHES: The depth of water in the harbour is 50 ft. at MLW. A depth of 54.5 ft. at MLW is maintained in the channel for a width of 200 ft. on each side of the centre line of approach into the harbour. For a distance of 300 ft. on both sides of this channel a depth of 40 ft. at MLW is maintained.

AIDS TO NAVIGATION:

Fairway Buoy: A black and white vertically striped light and bell buoy "Mo (A)" (white light showing the morse code letter A) equipped with a radar reflector, marked "Port Cartier" is in position: Lat. 50° 00′ 12″ N., Long. 66° 47′ 45.7″ W. Removed during Winter season (mid November to mid April).

Rear Range Light: F.G. 255 ft. backed by 10 ft. square fire orange daymarker. Lat. 50° 02′ 25″ N., Long. 66° 46′ 45″ W.

Front Range Light: F.G. 151 ft. backed by 10 ft. square fire orange daymarker. Lat. 50° 02′ 10″ N., Long 66° 46′ 52″ W.

Radio Beacon: Lat. 50° 02′ 09″ N., Long. 66° 46′ 51″ W. Frequency 286 kHz. Power 50 watts. Range 30 miles. Signal "C" followed by Long Dash. Period continuous – 24 hours per day.

Fog Horn: Signal – Continuous short pulses during poor visibility and fog off Port Cartier on request from vessel. Lat. 50° 01′ 52″ N., Long. 66° 47′. W.

Caroussel Island Light: White Gp. Fl.2 ev. 18 secs. 190 ft. 20 miles radio beacon. Fog signal ev. 30 secs. Lat. 50° 05′ 20″ N., Long. 60° 22′ 44″ W.

Local Chart: Canadian Chart No. 1240 Port Cartier and Approaches.

N.B.: All aids to navigation subject to change. ALL VESSELS NOT UNDER PILOTAGE MUST GET PERMISSION FROM THE PORT AUTHORITY BEFORE ENTERING THE HARBOUR, AND MUST ALSO OBTAIN PERMISSION BEFORE LEAVING ANY DOCK WITHIN THE HARBOUR LIMITS.

ANCHORAGE: Anchorage areas have been established as follows:

Designation	*Position*
A.	Lat. 50° 00′ 57.0″ N., Long. 66° 46′ 36.2″ W.
B.	Lat. 50° 01′ 07.1″ N., Long. 66° 45′ 44.5″ W.
C.	Lat. 50° 01′ 16.4″ N., Long. 66° 44′ 53.2″ W.
D.	Lat. 50° 00′ 32.8″ N., Long. 66° 45′ 44.5″ W.
E.	Lat. 50° 00′ 22.7″ N., Long. 66° 46′ 35.0″ W.
F.	Lat. 49° 59′ 56.5″ N., Long. 66° 48′ 43.0″ W.
G.	Lat. 49° 59′ 44.0″ N., Long. 66° 49′ 32.8″ W.

Chart: 1240. Publication – Gulf and River St. Lawrence Sailing Directions, 1977, p.332.

MAX. SIZE: Vessels of 100,000 d.w.t. and over must have a draft not exceeding forward 33 ft. and aft 38 ft. on arrival. Also see "Berthing" and "General".

HEALTH: All vessels should 24 hours before arrival and during normal office hours, 0900 – 1700 hrs. (holidays and Sundays excepted) radio – "Quarantine Montreal, Quebec" for Radio Pratique. Ships trading between Canada and the United States continuously and touching no other foreign port, since last granted Canadian Pratique, comply with the above, only on first trip to Canada.

The information to be provided to the Quarantine Officer is:

(a) the name and nationality of the vessel;

(b) the ports called at during the voyage of the vessel;

(c) the nature of the cargo on board the vessel;

(d) the number of persons comprising the crew of the vessel;

(e) the number of passengers on board the vessel;

(f) the port of destination of the vessel and the name of the vessel's owner or, if the owner is not in Canada, the name of the vessel's Agent in Canada;

(g) the condition of all persons on board the vessel and details of any death or illness occurring during the voyage;

(h) whether the body of any person is being carried on the vessel;

(i) the estimated time of arrival of the vessel at the port of destination;

(j) the date and place of issuance of any Derat Certificate or Derat Exemption Certificate applicable to the vessel.

Vessels inspected by Port Health Officer soon as possible, in berth or not.

Masters shall have ready for inspection:

Maritime Declaration of Health Form Q.S.2001 in duplicate.

Derat Certificate.

RADIO: Cable Address "Cartier" Port Cartier.

Vessels entering the Gulf from the Atlantic should keep watch on Halifax Radio for all traffic. Information as to time of reports and frequencies will be found in International Radio Aids to Navigation Manual.

Traffic List	420 kHz	Even hours plus 50 GMT
	2582/161.9	Even hours plus 40 GMT

Weather, Ice Reports and Notice to Shipping.

Channel 21	Receiving Frequency	161.65 MHz	(59)
Channel 59	Receiving Frequency	2582 kHz	(59)
Channel 26 and CW	Receiving Frequency	161.9 MHz	(26)

When vessels are 36 hours from Port Cartier, they should keep W/T watch on VCK Seven Islands Radio for traffic from this Port.

VCK – Seven Islands: Tel: 418-968 3118.

	Channel	*Transmitting*	*Receiving*
W/T Frequency		500 kHz	500 kHz
R/T (HF)	Channel 51	2182 kHz	2182 kHz
	Channel 57	2514 kHz	2118 kHz
R/T (VHF)	Channel 16	156.8 MHz	156.8 MHz
	Channel 12	156.6 MHz	156.6 MHz
	Channel 24	161.8 MHz	157.2 MHz
	Channel 26	161.9 MHz	157.3 MHz
	Channel 21	161.55 MHz	157.05 MHz
Port Cartier Station			
R/T (VHF)	Channel 12	156.6 MHz	156.6 MHz
	Channel 7A	156.35 MHz	156.35 MHz
	(Internal tugs and Pilot)		
Traffic Escoumins			
RT (VHF)	Channel 14	156.70 MHz	156.70 MHz

The Port Office telephone number is 418-768 2485, and Telex number is 051-8-6422. It is also fitted with VHF on the frequencies mentioned above. The office is open to receive messages on a 24 hour basis. Radio and radio telephone traffic by a ship at anchor in the area off Port Cartier is permissible.

THE ST. LAWRENCE WATERWAY TRAFFIC REGULATIONS: The zone extends from Long. 66° 00′ W. to Montreal. In general, the regulations state that a ship must report to the Marine Traffic Regulator by contacting Channel Escoumins on 156.7 MHz, Channel 14 before entering Zone 1 (i.e. crossing Long. 66° 00′ W.). The port of Port Cartier is in Zone 1. Ships have to maintain a continuous radio watch on Channel 14, except when alongside. Authorisation to communicate on another Channel has to be requested from Channel Escoumins, unless the vessel is equipped with 2 radios. Clearance must be obtained from Channel Escoumins to move within the anchorage.

ARRIVAL ADVICE: Also see "General". ETAs – All vessels must advise ETA 72 hours, 48 hours and 24 hours before arrival. If any change in ETA of more than 1 hour occurs after transmission of the 24 hour ETA, the vessel must send a corrected ETA immediately. These ETAs shall be submitted in local time at Port Cartier.

In the 72 hours ETA vessels will advise: Tonnage of cargo required; grain fittings, if any; quantity orders for supplies; bunkers, water and cash advance requirements; and bonded stores.

In the 24 hours ETA vessels will advise the estimated time for pumping ballast after arrival alongside. However, if because of weather or any other cause the estimated pumping time should change, the Port Authority will be notified immediately.

All ships shall request docking instructions 2 hours before arrival.

TUGS: Compulsory, with the exception of coasters or vessels less than 380 ft. LOA unless requested by the Master, or, if considered necessary by the Port Authority. Meet vessel outside harbour under instructions from Pilot. Tug lines used at all times. Two tugs of 3,800 h.p. available.

BERTHING: Harbour and Terminal:

1. The North Dock is 2,600 ft. in length, the West 2,000 ft. being Berth Nos. 1 and 4 for ore loading and the East 600 ft. being Berth No. 4a for bentonite and limestone discharge. Facilities for oil receiving are located at Berth Nos. 1, 2, 3 and 4.

Coastal vessels may also use Berth Nos. 1, 2 and 3 when permitted to do so by the Port Authority.

2. The depth of water in the harbour is 50 ft. at MLT. A depth of 54.5 ft. at MLT is maintained in the channel for a width of 200 ft. on each side of the centre line of approach into the harbour. For a distance of 300 ft. on both sides of this channel a depth of 40 ft. at MLT is maintained.

3. Vessels of 100,000 d.w.t. and over must have a draft not exceeding forward, 33 ft. and aft, 38 ft. on arrival.

4. The harbour bottom is smooth rock and anchors are of little value, although Pilots may advise Masters as to the use of anchors under special circumstances.

5. The faces of all berths are fitted with rubber and tyre fenders.

6. Mooring bollards are positioned 75 ft. apart at Berth Nos. 1, 2 and 3. There are also hooks at every pier at Berth No. 4. All bollards except those at Berth Nos. 2 and 5 are 4 ft. in extreme diameter and all mooring ropes and wires should have eyes at least 8 ft. in diameter.

7. The East Breakwater Cells are cathodically protected. The cabling and anodes extend approximately 60 ft. from the cells, affording all round protection. The use of anchors, or equipment likely to damage this protection, is not permitted within these areas.

Bentonite and Limestone: The bentonite and limestone discharging facility has a rated capacity of 1,500 t.p.h., with the discharge hopper being in a fixed location on Berth No. 4.

MEDICAL: Hospital facilities are available at Port Cartier. All costs for medical and dental treatment required by seamen will be charged to the vessels in which the seamen are serving as crew members. All crew members requiring medical attention should be available upon the vessel's arrival alongside.

TANKERS: No facilities for slop discharge.

DENSITY: Has been known to vary slightly between 1025 and 1021, but is considered salt.

FRESH WATER: Available to all vessels at Berth Nos. 1, 2, 3, 4 and 5 with connections conveniently located. Rate of approximately 20 t.p.h. The fresh water line is 6 in. with 2.5 in. standard Quebec hose, male connection of 7 threads to the inch. Necessary connections and hoses are to be furnished and handled by vessel.

If required, fresh water can be supplied to vessels at anchor. Max. amount per trip 40 tons.

FUEL: Available at Berth Nos. 1, 2, 3 and 4 for Bunker "C", marine diesel and/or any specialised blend and connections are positioned for ready supply to all vessels. All bunker requirements are directly supplied by Gulf Oil Canada Limited, and proper credits should be established. Bunker "C" can be supplied at approximately 1,500 b.p.h. Marine diesel oil can be supplied at approximately 900 b.p.h., Bunker "C" line is 10 in. with 8 in. reducer flange connection. Marine diesel oil line is 8 in. with 4 in. reducer flange connection. There is no coal available at this port.

Vessels nominated for Port Cartier and required to anchor awaiting a berth, which in the meantime require bunkers, will be permitted to enter the harbour, if a berth is available with bunkering facilities, for the purpose of bunkering, and shall then return to anchor. The fee for this service shall be $3,600 (including second tug if used) plus applicable line handling charges.

GANGWAY/DECK WATCHMEN: Not necessary. Security guards obtainable on request.

OPENING/CLOSING HATCHES: Normally done by crew.

CUSTOMS ALLOWANCES: Canadian Customs Regulations allow each crew member to have in his possession for his personal consumption 200 cigarettes, 50 cigars, 2 lb. pipe tobacco and 40 oz. of spirits. All quantities must be declared on Crew Declaration Form Y-14 along with all personal effects such as radios, cameras, tape recorders, binoculars, souvenirs, etc., plus serial numbers of these items.

N.B.: Masters of vessels are advised that tobacco items and spirits in excess of these amounts in possession of crew members should be collected and placed in bonded stores prior to the vessel's arrival in order to speed up the clearance of the vessel.

Canadian seamen returning from voyages to American or other foreign ports are permitted $100 value of duty free merchandise every quarter for periods outside Canada of over 48 hours and $300 once a year for periods outside Canada of 7 days.

IDENTIFICATION CARDS: Not necessary.

REPAIRS: Minor repairs can be effected. They must be supervised by the vessel's personnel, and will be the responsibility of the vessel.

REPATRIATION: Crew changes and repatriation can be carried out.

AIRPORT: Nearest airport is Seven Islands about 40 miles by road. Services to Quebec City and Montreal, 4 flights daily.

TIME: Port Cartier is located in the Eastern Standard Time Zone (GMT minus 5 hours). Daylight Saving Time (GMT minus 4 hours) is observed from last Saturday in April to last Saturday in October.

HOLIDAYS: See "General".

POLICE/AMBULANCE/FIRE: Police Tel: 766 2233. Ambulance/Fire Tel: 768 2300.

TELEPHONES: No direct connections to vessels. Available on berths.

POLLUTION: The discharge of oil and garbage into the waters of Canada is prohibited by strictly enforced regulations which provide heavy penalties on summary conviction. Every precaution must be taken to prevent escape of oil from a vessel, but should such an escape occur, the regulations require that vessel immediately report it to the nearest Canadian Coastguard Officer or to the Chairman, Board of Steamship Inspection, Ministry of Transport, Ottawa.

SERVICES: Electronic repair services to navigational equipment. Should be requested in advance.

SHORE LEAVE: All ships arriving from a foreign port will be boarded by Customs and Immigration Officers. Ship's personnel are not allowed ashore until permission is granted by these Officers, nor shall crew members joining a vessel board without Customs permission.

DELAYS: Occasionally Easterly weather conditions may delay vessels berthing.

GENERAL: Vessels which have completed discharging of grain and are to load iron ore should have ratguards fitted to all mooring lines at all times.

Ore Concentrate and Pellet Vessels:

I. Advising Arrival: (See also "Arrival Advice") 1. Each vessel operator or its principal shall notify Quebec Cartier Mining at least 2 weeks prior to the expected arrival of each vessel at Port Cartier and Quebec Cartier Mining Company shall forthwith advise such vessel operator or principal whether it can accept the vessel at such time. An allowance of 3 days preceding and 3 days subsequent to the date so fixed will be made for the actual arrival of each vessel. If the vessel's actual arrival is not within such 3 day period preceding or subsequent to the date fixed for its arrival, Quebec Cartier Mining Company may fix another arrival date for such vessel that will not interfere with other scheduled loading. Quebec Cartier Mining Company shall be kept fully advised of all vessel nominations, substitutions, cancellations, delays, sailing dates at Port Cartier of all vessels designated to accept delivery of ore at this Port.

2. The submission of a Notice of Readiness by the vessel will constitute acceptance of all terms and conditions of this Advice to Vessels by the vessel, its Managers, Agents, Master, Operator or Charterer.

II. Loading Conditions: Ships will be loaded in regular turn of vessel's arrival off Port Cartier provided they present with hatches open and do not have ballast pumping time which will exceed minimum loading time. The 1 shiploader has a rated capacity of 9,000 tonnes/p.h. for concentrate and 7,200 tonnes/p.h. for pellets. A vessel which has berthed at the loading dock and is found to have a deballasting rate time which in the opinion of the Port Authority will not permit loading at maximum rate, may be ordered off the dock and moved to the standby berth or to anchorage until it is in a condition to accept its cargo at maximum loading speed.

The vessel will then be returned to the ore loading berth in turn, following re-submission of Notice of Readiness. All moves to be at vessel's expense. Quebec Cartier Mining Co., Port Authority will be final arbitrator in case of dispute.

III. Loading Minimum and Vessel Specifications: Each vessel designated to accept delivery of ore at Port Cartier, must conform in construction to the following specifications and conditions:

1. Not less than 4 ore hatches of at least 18 ft. square, except Great Lake Bulk Carriers where the minimum width of hatches shall be 9 ft., to accept ore cargo direct from loading tower at Port Cartier.

2. All vessels nominated must be suitable for the loading and the transportation of concentrates or pellets and capable of taking the entire cargo to be loaded in the lower holds without "peak-up" above the tween deck levels. The vessel shall load and stow cargo in accordance with the Canada Shipping Act and Regulations.

3. Hatch opening sufficiently clear of obstruction on deck to permit free and direct contact with loading tower.

4. Vessels may be loaded to a draft of 54 ft. if tides permit them to sail while maintaining a safe under keel clearance (at least 3 ft.) on a rising tide.

If a vessel requests to wait for a following higher tide in order to lift more cargo, and the Port Authority agrees, then this additional time is not to count and, if required by the current operational condition of the Port shifting is necessary, all additional shifting fees will be for the account of the vessel.

5. *Maximum Allowable Dimensions:* Maximum allowable dimensions of vessels at the ore berth.

LOA 995 ft.
Beam 174 ft. Moulded depth 92 ft. (to top of hatch cover).

Air draft under loader:
MHW 42 ft. water line to top of hatch covers.
MLW 52 ft. water line to top of hatch covers.

Draft of Vessel Loaded:
Draft at MLW 48 ft. loaded.
Draft at MHW 54 ft. loaded.

IV. Special Regulations: 1. Any vessel which discharges a cargo of grain and is to load a cargo of iron ore will be considered in turn for loading only after the vessel has completed discharging grain and is in all respects clean and ready to receive iron ore.

2. Loading plan should be available as soon as possible after arrival and must be presented to the ore loading foreman, in metric tons, on arrival at the berth.

3. All shipboard work necessary for docking and loading, including but not limited to line handling and tending, opening and closing hatches, and normal deck cleanup, shall be done by the vessel's crew.

4. Any Owner or Charterer with more than 1 vessel waiting turn to load may interchange his vessels, provided they are of comparable capacity (deadweight). Any interchange of turn must be arranged with and have the approval of Quebec Cartier Mining Company.

5. All weights shown on the Bill of Lading and/or Manifest will be the same as recorded on the weighing facilities of Quebec Cartier Mining Company.

6. The Port will be in operation 24 hours a day, 7 days a week; however, ore vessels will not be loaded on New Year's Day (January 1st), and on Christmas Day (December 25th), nor will they be loaded from 0800 hrs. Sunday to 1600 hrs. Sunday, nor during the same period on the following holidays: Good Friday; St. Jean Baptiste Day – June 24th; Dominion Day – July 1st; second Monday of July; first Monday of August; Labour Day – first Monday of September; Thanksgiving – second Monday of October; Boxing Day – December 26th.

7. Arrangements have been made so that loading operations will commence as soon as possible after the vessel's arrival at the loading berth.

8. Vessels usually dock port side to at Ore Berth.

V. General Instructions in Preparing Vessels' Holds to Accept Iron Ore Concentrate: Quebec Cartier's iron ore is a type of iron ore concentrate which weighs on the average 192 lb. per cu.ft., and stows at approximately 12/13 cu.ft. per gross ton.

The iron ore contains an average moisture content from 2.5% to 3.5%, and could sometimes in the Summer Season be shipped at as high as 5%. The character of this ore is self draining. It will retain moisture up to about 2.5%, but all moisture over and above this will drain on compaction of the material, and also, if the ore is left for long periods in stock-pile or in the hold of a vessel, this drainage of moisture will sometimes leave a considerable quantity of water in the hold of the vessel, and could cause some inconvenience when discharging the cargo. For this reason all bilge strums or wells should be sounded regularly and pumped out at regular intervals, so as to keep the bottom of the hold as dry as possible.

Quebec Cartier's iron ore is abrasive, and could cause damage to bilge pumps. Masters of vessels are advised to cover all bilge strums or wells with burlap in a similar manner as when receiving a grain cargo in bulk; so as to permit a free flow of the water and retain the iron ore in the hold of the vessel.

All holds for the acceptance of this cargo should be clean prior to the arrival of the vessel.

VI. Pellet Stowage Factor: Iron ore pellets will stow at about 17 – 18 cu.ft. per gross ton.

All holds for the acceptance of this cargo should be clean prior to the arrival of the vessel.

Grain Vessels: Berthing and use of the Elevator Dock Facilities: *Regulations, Terms and Conditions:*

(The term 'Tariff' refers to the Tariff issued periodically by the Elevator Company; the term 'Company' in this section refers to the Elevator Company).

1. Application for Berth: For all vessels desiring a berth at the Elevator there shall be filed an Application for a Loading Berth at the Elevator Office, between 0900 – 1700 hrs. Mondays through Fridays and from 0900 – 1200 hrs. on Saturdays, except on holidays. Application shall be made in writing on forms supplied by the Company. Whether or not such Application Form is signed, the Owner and Charterer of each vessel shall be deemed to agree in consideration of the Company permitting the vessel to berth at the Elevator for the purpose of loading or discharging bulk grain, to abide by all rates, rules and regulations stipulated in the Company's current Tariff, and to acknowledge having taken communication of same and, without restricting the generality of the foregoing, to undertake and agree that the berthing of the vessel at the Elevator will be free of risk and expense to the Company. Owners and Charterers also agree to indemnify the Company against and hold it harmless from any and all damages whatsoever and howsoever caused which may be occasioned to its facilities or any of them by the vessel and in like manner to indemnify the Company against and hold it harmless from any and all claims of any nature whatsoever arising from damages which may be sustained by the vessel while berthed or during berthing or unberthing. Owners and

Charterers shall in like manner be deemed to agree to make prompt payment of invoices as presented and *in the case of export grain to deliver to Les Silos Port Cartier signed written evidence of the receipt on board of the grain according to the Les Silos Port Cartier Description and Tally (i.e. "Mate's Receipts")*. All charges shall constitute a lien against the vessel until paid. The Application for Berth shall be dated and timed and shall constitute a contract between the Company and the Owners and Charterers of the vessel, such that the latter shall be bound by the terms thereof and, without restriction, to comply with all the charges, rules and regulations stipulated in the Company's current Tariff.

2. *Allocation of Loading Berth:* Except as otherwise provided in these regulations, vessels shall be assigned a loading berth in the chronological order in which they file with the Elevator Office the signed Application for Berth, accompanied at the time of filing by the following documents:

(a) Certificate issued by the Canadian Government Department of Agriculture and/or by the United States Department of Agriculture, Grain Division, as the case may be, that all cargo compartments are fit to load in compliance with the regulations of the respective departments.

(b) Certificate of Readiness in all compartments issued by the Port Warden.

(c) Evidence to the effect that the vessel has been entered at the Canadian Customs House.

(d) Evidence to the effect that the vessel has been tendered to and accepted by the Charterer.

Vessels are required to present alongside the Loading Berth with hatches open and gangway and gangway net ready.

3. *Allocation of Unloading Berth to Lake Vessels:* Subject to the exceptions contained herein, but at all times in accordance with the provisions of the Canada Grain Act and Canadian Grain Commission Regulations, Lake vessels shall be assigned to an unloading berth in the order in which they arrive in port and file application and required documents for berth with the Company with evidence of vessel's readiness to discharge.

(a) A hold of a vessel having been partially unloaded at another port shall not be accepted for unloading unless by prior express arrangement with the Company.

(b) A hold of a vessel having a separation between more than one grade or kind of grain shall not be accepted for unloading.

4. *Berthing Prior to Receipt by the Company of Appropriate Certification:*

(a) At the sole discretion of the Company, a vessel may be allowed to berth alongside the Elevator prior to having received all the above certificates. If subsequently, the vessel fails to deliver such certification, it must, immediately on order of the Company vacate the berth. Nothing contained in this rule shall be deemed a waiver of any of the provisions of Item 5 hereinafter.

(b) Any vessel, which has been allowed to berth at the Elevator having previously filed all the certificates enumerated in above item 2, and which subsequently is found by an Official Inspector unsuitable to receive grain for any reason, must, if required by the Company, immediately vacate the Elevator Berth. Nothing contained in this rule shall be deemed a waiver of any of the provisions of Item 5 hereinafter.

5. *Refusal or Failure to Vacate Berth:* Any vessel which fails or refuses to vacate the berth when required by the Company for any reason whatsoever including being under arrest, except as provided hereinafter, in Item 9, shall be liable, in addition to any other charges due hereunder, to pay to the Company a charge of $1,200.00 per hour, or any part thereof after vacating notice has been given in writing to the Owner, Manager, Agent, Master, Mate, Operator or Charterer of the vessel. This charge shall be paid promptly and it is accepted that it accurately represents a minimum estimate of damages to the Company because of refusal or failure of the vessel to vacate. This payment shall not constitute a waiver on the part of the Company to claim greater actual damages that may be sustained as a result of the vessel's failure to vacate.

The Company shall have the right, authority and privilege to compel the removal of the vessel, by any lawful means, at the vessel's own risk and expense and shall not be liable for any damages, delay or other expenses, including legal costs, arising from the act of removal of the vessel, by whomsoever incurred.

6. *Berth Operations:* The Company, in its sole discretion, may:

(a) Alter the turn of vessels whether in berth or not, when confronted by an urgent need to receive or ship a particular grade or kind of grain or when in its judgment

(i) This is necessary or desirable in order to facilitate elevator operation, or

(ii) Conditions within the Elevator or approaches thereto render this necessary or desirable.

(b) Require a vessel to load in overtime hours at vessel's own expense during all hours when labour can be available, continuously until loading is completed, or for any part of such hours as the Company may determine necessary. This rule may be applied whenever more vessels are in port than can be berthed at the Elevator, or in order to expedite the movement of vessels and/or grain, or to ensure the fullest possible use of the Elevator, or to eliminate any threat of actual or possible congestion of any other vessels. Any vessel unwilling to work overtime as directed in accordance with this rule shall vacate the berth without delay and the vacating vessel shall only be permitted to berth again at the Elevator after giving written agreement to load continuously until completed whether in regular or in overtime hours. Should any vessel refuse to vacate, it will be liable for damages described in above Item 5.

(c) If a strike or other labour disturbance involving a vessel at berth or waiting for berth (whether by vessel's crew or otherwise) or any other circumstance affecting a vessel and not attributable to the Company will, in the Company's judgment, tie up or impede operations at the dock, the Company may order such vessel out of berth or refuse to accept it at the berth. Should any vessel refuse to vacate, it will be liable for damages described in above Item 5.

7. *Vessel in Berth:* Any vessel in berth shall at all times maintain appropriate Officers and crew aboard to permit shifting of the vessel or reception or discharge of cargo at any time of day or night including Saturdays, Sundays and Holidays.

All vessels discharging or loading grain shall at all times have adequate rat guards on all mooring lines.

8. *Work Interruptions:* When work is interrupted on account of rainy or other weather conditions, a vessel at its own expense may be required, at the discretion of the Company, to retain on standby, according to local labour rules, stevedore and other labour necessary to the loading, up to a maximum of 4 hours in any stevedoring work period. Any vessel or its Agent failing to have such labour available, if so required, shall be, in addition to any other charges due hereunder, assessed a charge of $1,200.00 per hour for any period where work is subsequently ordered resumed by proper authority (after the weather interruption) but cannot be carried out for lack of labour.

If such interruption occurs during an overtime period or on Saturdays, Sundays or Holidays, the usual charges for overtime periods will still be fully assessable and due in addition to the above charge. This rule shall be applicable unless otherwise agreed by the Company in writing.

9. *Completion of Loading: Upon completion of loading, a vessel shall not occupy the loading berth at the Elevator longer than is necessary to close the hatches, but in any event for not longer than 1 hour.* Vessels requiring extra time to set booms and derricks before making ready for sea or for any other reason may, at the time of docking, request written permission from the Company to do this work at the Elevator Berth, but it shall be at the sole discretion of the Company whether such permission is granted or not. Any vessel not granted such permission must vacate the berth immediately as required by the Company. Most vessels requiring extra dock time will be ordered to a lay-by berth, if available, or to anchorage, at vessel's expense.

Failure to comply with this requirement will automatically cause the vessel or its Agents to be assessed an extra charge of $1,200.00 per hour or part thereof from the time that permission was refused. This charge shall not impair the right of the Company to compel removal of the vessel from the berth nor shall it constitute a waiver on the part of the Company to claim any greater damages that may be sustained as a result of vessel's failure to vacate. The Company shall have the right, authority and privilege to compel the removal of the vessel by any lawful means at the vessel's own risk and expense and the Company shall not be liable for any damages, delay or other expenses including legal costs, arising from the act of removal of the vessel, by whomsoever incurred.

Port Expenditure: In addition to the port charges, the following charges will be applicable:

1. Grain Inspection Fee.
2. Charges as stipulated in the Company's Current Tariff.
3. The Port Warden and D.O.A. and/or U.S./D.O.A. fees when applicable, charged at cost in accordance with the regulations.

Unloading and Loading Facilities: The grain unloading berth is adequate for the largest lakers known and is equipped with 2 marine towers able to unload grain at a peak rate of over 2,240 tonnes (80,000 bushels) per hour.

The loading berth can handle ocean vessels having up to the following maximum dimensions:

Length Overall	900 ft. (see "Note" below).
Beam	137 ft. for self-trimming bulk carriers.
	137 ft. for OBO-centre holds only.
	125 ft. for tankers, provided off-shore tank openings are a minimum of 15 ft. inside ship's side.
Draft	47 ft. at MLW, subject to slight increase depending on state of tide. Port Authorities require vessels to have 3 ft. under their bottoms at all times.
Air Draft	53 ft. at MLW, to top of hatch covers.
	45 ft. at MHW, to top of hatch covers.

Note: Vessels having in excess of 730 ft. LOA up to 900 ft. LOA, may be accepted at the Elevator, but only by prior arrangement with the Company, which reserves the right, at its sole discretion, to refuse to load any vessel over 730 ft. because of its length or other physical characteristics which makes it impracticable to load.

The Port Cartier harbour as well as the grain loading berth have a depth of water of 15.2 m. (50 ft.).

REGULATIONS: Also see "General".

1. Ships will leave the loading or discharging berth immediately on completion of loading or discharging. If any delays occur on documentation, crew members missing etc., ship will leave the dock and all matters will be handled from anchorage or another berth.

2. Vessels ordered to anchor, should do so in the recommended area, see "Anchorage". Failure to do so may result in delays to vessels from being boarded by Port and Government Authorities. *Vessels at anchorage must remain 0.25 miles clear of the Harbour Approach Channel.*

3. Vessels arriving in ballast should ensure they are in good trim for safe handling into the harbour, bearing in mind the loading rate, so as not to cause any delay in loading due to deballasting. However should a vessel not be sufficiently ballasted at the time of proceeding into the harbour, the Pilot may request further ballasting, depending on the prevailing weather conditions. If in doubt the Master should contact the Port Office by Radio Telephone.

4. Vessels should have main engines and deck machinery operable at all times when alongside the berth. Permission contrary to the above must be obtained from the Port Authority.

5. All O.B.O. vessels not in possession of a valid Gas Free Certificate by an independent chemist will advise accordingly in the 72 hour ETA, and arrangements will be made to have a chemist available on arrival at vessel's expense. Masters must present a valid Gas Free Certificate before Notice of Readiness may be tendered.

6. Normally, vessels will be permitted entry to the harbour, to their assigned berth in order of their arrival. However, the Port Authority may alter the order to assure in its sole opinion, efficient operation of the harbour. The Port Authorities shall be the final arbitrator in case of dispute.

7. The Port Authority may require a vessel to vacate an assigned berth, proceed to anchor or standby berth and return to the assigned berth to complete loading or discharging as soon as conditions permit.

8. Any vessel which fails or refuses to vacate the berth when required by the Company, shall be assessed, in addition to any other charges due hereunder, an automatic charge of $2000.00 per hour or any part thereof after vacating notice has been given in writing to the Owner, Manager, Agent, Master, Mate, Operator or Charterer of the vessel. This charge shall be paid promptly and it is accepted that it accurately represents a minimum estimate of damages to the Company because of refusal or failure of the vessel to vacate. This payment shall not constitute a waiver on the part of the Company to claim greater actual damages that may be sustained as a result of the vessel's failure to vacate.

The Company, through the Port Authority, shall have the right, authority and privilege to compel the removal of the vessel, by any lawful means, at the vessel's own risk and expense and shall not be liable for any damages, delay or other expenses, including legal costs, arising from the act of removal of the vessel, by whomsoever incurred.

9. A stand-by charge of $1500.00 per hour will be assessed against any vessel causing delay of ore loading alongside berth when such delay is caused by the vessel not complying with Port regulations and requirements.

AUTHORITY: Quebec Cartier Mining Company, Port Office, P.O.Box 188, Port Cartier, P.Q. G5B 2H3, Canada. *Tel:* 418-768 2400/768 2439/768 2485. *Telex:* 051-8-6422. *Contact:* L. S. McGee, Port Manager. A. Spence, Marine Supervisor.

PORT COLBORNE, Ontario: 42.52 N. 79.15 W.

Refer to "St. Lawrence Seaway" for important general information.

DOCUMENTS: All documentation carried out by Authorities in Montreal. Only when vessels have called at United States port after departing Montreal will any changes in documentation be necessary, which will consist of a United States Customs Clearance Certificate, to be available on board.

Immigration papers.
1 copy QS2 (Health Certificate).
3 Stores Lists.
Crew Personal Effects List.
Customs Clearance.

All of the above will have been stamped in Montreal.

PILOTAGE: Compulsory for ocean vessels over 250 tons gross. Pilots are available at Port Weller (upbound) and Sarnia (downbound). Supervisor of Pilots located in St. Catharines.

ANCHORAGE: In Lake Erie, beyond the 3-mile fairway buoy at entrance to Port Colborne Harbour.

No anchorage available outside those allocated by the St. Lawrence Seaway Authority, except those vessels waiting to unload at N.H.B. facilities only can moor temporarily on the inner breakwater West of the N.H.B. elevator with permission from the N.H.B. elevator manager.

RESTRICTIONS: Navigation season approximately from April 1st to December 31st. Channel depth 27 ft. dependent on Lake level.

Limiting depth in the channel from Port Colborne piers to Bridge 21 and 20 is 8.23 m. (27 ft.). From Bridge 21 and 20 North to Rameys Bend the limiting depth in the channel is 8.23 m. (27 ft.). The Welland Canal will accommodate vessels not exceeding 222.5 m. (730 ft.) in overall length and 23.16 m. (76 ft.) in extreme breadth. Permissible draft is 7.92 m. (26 ft.).

MAX. SIZE: 730 ft. length, 76 ft. beam, 26 ft. draft.

HEALTH: Pratique granted at Quebec City for incoming vessels from foreign ports.

TUGS: None available.

BERTHING:

Canada Starch Dock (Old Channel) Wharf No. 11:

Type	Grain Discharge into Hopper
Equipment	Ships' Equipment
Length	120 m. (390 ft.) between three dolphins
Depth	8.23 m. (27 ft.)

Rameys Bend, Wharf No. 12:

Type	Stone and Sand
Equipment	Tunnel and Belt Conveyor, Loading
Length	1,797 ft. (547.7 m.)
Depth	27 ft. (8.23 m.)
Operator	Port Colborne Quarries Ltd.

Robin Hood Dock, Wharf No. 13:

Type	Elevator – Grain and Grain Products
Length	1,000 ft. (304.8 m.)
Depth	25 ft. (7.62 m.)
Operator	Robin Hood Flour Mills Ltd.

R.E. Law Dock, Wharf No. 14:

Type	Vessel repairs
Length	700 ft. (213.4 m.)
Depth	25 ft. (7.62 m.)
Storage Capacity	13,500 tonnes stone.
Operator	Herb. Fraser & Assoc. Ltd.

Wharf No. 15:

Type	Sand
Equipment	Self-unloaders
Length	850 ft. (259.1 m.)
Depth	14 ft. (4.27 m.).
Operators	Beam Building & Supply Co. Ltd., and Underwater Gas Developers Ltd.

Wharf No. 16:

Type	Unloads and loads bulk cargoes, marine diesel oil and coal bunkers available.
Equipment	1 Belt Conveyor 7 in. – 8 in. Pipe-line
Length	1,480 ft. (451.1 m.)
Depth	27 ft. (8.2 m.)
Storage Capacity	27,000 tonnes above.
Operator	Rochester & Pittsburg Coal Co. (Canada) Ltd.

Fuelling Wharves:

Wharf No. 17:

Type	Unloads and loads bulk cargoes using ship's or mobile gear
Equipment	Mobile repair equipment
Length	1,120 ft. (341.4 m.)
Depth	27 ft. (8.2 m.)
Storage Capacity	225,000 tonnes.
Operator	Upper Lakes Shipping, Toronto

Imperial Oil – Shell Canada, Wharf No. 18:

Type	Marine Diesel Fuel, Bunker "C" and Coal
Length	1,650 ft. (502.9 m.)
Depth	27 ft. (8.2 m.)
Storage Capacity	170,000 Barrels

Maple Leaf Mills Ltd., Wharf No. 19:

Type	Grain Elevator
Length	1,650 ft. (502.9 m.)
Depth	27 ft. (8.2 m.)
Storage Capacity	63,000 tonnes

National Harbours Board, Wharf No. 20:

Type	Grain Elevator
Length	Holding Side 900 ft. (274.3 m.)
Depth:	Holding Side 19 ft. (5.79 m.)
Storage Capacity:	84,000 tonnes.

MEDICAL: Local hospital at Port Colborne. All assistance available.

DENSITY: Fresh water.

FRESH WATER: Available at West Side Wharf.

FUEL: Bunker and diesel fuel available.

REPAIRS: Lay-up berth at West Side Wharf, 9.5 ft. – 13.5 ft. alongside. Local repair shops for boiler, engine and above deck repairs.

DRYDOCK: At Port Weller.

SURVEYORS: ABS at Toronto. Lloyd's at St. Catharines.

AUTHORITY: St. Lawrence Seaway Authority, Western Region, P.O.Box 370, 508 Glendale Avenue, St. Catharines, Ontario L2R 6V8. *Tel:* (416) 641-1932. *Contact:* J. B. McLeod, Regional Vice-President.

PORT DALHOUSIE, Ontario: 43.12 N. 79.16 W.

(See Plan)

LOCATION: On the South shore of Lake Ontario 43 km. Southeast of Hamilton and 5 km. West of Port Weller, the Northern entrance of the Welland Canal. Port Dalhousie is now amalgamated with the City of St. Catharines.

APPROACHES: Access to the port is through 2 parallel entrance piers projecting out into Lake Ontario, which lead into a wide basin utilized by recreational vessels.

RESTRICTIONS: Navigation season: Usually April 1st to December 30th. Channel depth: Limiting depth in the channel between the entrance piers is approximately 21 ft. to 23 ft. below Chart Datum (Elev. 242.8 ft.) and gradually reduces in depth towards the basin.

RADIO: Ship-to-Shore communications: Through Toronto (VBG).

TUGS: No towing facilities.

BERTHING: The entrance to the harbour is between 2 parallel concrete piers 61.0 (200 ft.) apart. The East pier 701.1 m. (2,300 ft.) in length, extends out 457.3 m. (1,500 ft.) from the shore, 76.2 m. (250 ft.) beyond the outer end of the West Pier. Southward of the inner end of the entrance piers, the harbour widens out into a basin utilised by recreational vessels.

MEDICAL: General Hospital and Hotel Dieu at St. Catharines.

CUSTOMS: Officers available at St. Catharines at any hour by previous arrangement.

FUEL: Gasoline available.

SERVICES: Supplies available.

SURVEYORS: Lloyd's at St. Catharine, ABS at Toronto.

AUTHORITY: City of St. Catharines (Parks & Recreation Dept.), P.O.Box 845, 320 Geneva Street, St. Catharines, Ontario, L2R 6Z4. *Tel:* (416) 937 – 7210. *Contact:* Robert G. Christie, Harbour Master, or G. J. Shanahan.

PORT HAWKESBURY AND STRAIT OF CANSO, N.S. (See Plan)

PORT LIMITS: Port Hawkesbury and Mulgrave harbour limits are from a line joining Melford Point and Bear Head, and the Canso Causeway.

DOCUMENTS:

3 copies Crew Declaration, Form Y14 (IMO Form 5 acceptable).
3 copies Store List, Form E1.
3 copies Immigration Crew List, Form IMM 200.
3 copies Inward Report, Form A6.
2 copies Shipping Report, Form S1.
3 copies Outward Report, Form A6.
Completed Maritime Declaration of Health, Form QS 2001.
Valid Derating Certificate.
International Vaccination Certificates for crew members.
Complete copy of Manifest for Goods to be Discharged in Canada.
Clearance from Last Port.

Tankers must be in possession of Canadian Compliance Certificate, valid for 2 years, or have arrangements made to receive one.

ICE: Ice Advisory and Shipping Support Service is provided from mid-December to the end of the ice season. Information regarding ice conditions is broadcast regularly and special reports will be obtained on request from "Ice Halifax" through Halifax Radio (VCS).

Masters are cautioned that it may be necessary to remove certain buoys in Chedabucto Bay and the Strait of Canso during the ice season, and it is recommended that Masters request information on their deposition prior to entering.

PILOTAGE: Pilotage is compulsory. Pilotage boarding stations:

Strait of Canso, Northern Approach:	45° 42′ 42″ N. 61° 29′ 12″ W.
Strait of Canso, Southern Approach:	
(a) For vessels of 730 ft. and under:	45° 29′ 30″ N. 61° 11′ 06″ W.
(b) For vessels over 730 ft.:	45° 24′ 00″ N. 61° 01′ 00″ W.

Vessels must report by radio-telephone or radio-telegraph their ETA's 12 hours before the vessel's ETA. Time used must be GMT. ETA's must be confirmed or corrected not more than 8 hours later nor less than 4 hours prior to the new ETA.

Canso pilot boat guards Channel 14 whilst in the area of Chedabucto Bay approach and Channel 12 whilst in the area of St. George's Bay approach.

ANCHORAGES: In the interests of safe navigation, anchorage berths for vessels of 65 ft. registered length have been established.

Anchorages "A" to "F" are situated in Chedabucto Bay in water depths from 14 to 26 fathoms.

Anchorages "G" to "O" are situated in Inhabitants Bay in water depths from 5 to 8 fathoms.

HEALTH: Pratique will be granted on arrival at berth by boarding officers, but it is the Master's responsibility to report by radio all details of any sickness or death occurring during the voyage to "Quarantine Halifax".

RESTRICTIONS: Overhead power cable – clearance 178 ft.

MAX. SIZE: Tankers of 50,000 d.w.t. can be accommodated at the Gulf Canada Ltd., Ocean Terminal. See also "Berthing".

RADIO: Halifax (VCS) continuous year round. 500, A2; 2,182, A3; 156.8; F3 also 4, 6, 8, 12, 16, 22 MHz bands.

Sydney (VCO) continuous year round. 500, A2; 2,182 A3, 156.8, F3.

Canso (VAX) continuous year round. 2,182, A3; 156.8, F3.

Grindstone, Magdalien Island (VCN) continuous year round. 500, A2; 2,182, A3; 156.8 F3.

Canso Locks (VAZ3) continuous during navigation season. 2,182, A3; 156.8, F3.

TUGS: No tugs in the area.

BERTHING: *Gulf Canada Ltd., Ocean Terminal, Point Tupper:* Masters are required to establish communications with the terminal when within a distance of 35 miles of the terminal on VHF Channel 16, using call-sign "Gulf Control".

Situated at Wright Point and is a "T"-shaped structure providing one berth for tankers. Berth can accommodate vessels up to 50,000 d.w.t. with a least depth of 75 ft.

Berth is equipped with 6 hydraulically operated loading arms each fitted with a speed seal hydraulically operated manifold coupling.

Loading arm	Coupling	Purpose	Rate
1	8 in.	Vessel bunker	2,500 b.p.h.
2	12 in.	Cargo bunker	12,000 b.p.h.
3	12 in.	As No. 2	
4	10 in.	Premium gasoline	10,000 b.p.h.
		Regular gasoline	10,000 b.p.h.
5	10 in.	Stove oil	10,000 b.p.h.
		D-40	10,000 b.p.h.
		D-20X	10,000 b.p.h.
		D-25	10,000 b.p.h.
6	8 in.	Vessel bunker	2,500 b.p.h.

Product tanks are situated 3,920 ft. for bunker to 6,400 ft. for gasolines from the berth.

Vessels will be expected to berth with manifold blinds removed, sea valves sealed and locked, pumps and pipe-lines set ready to commence discharge of cargo or ballast immediately on connection of loading arms and on verification of the discharging/loading procedure between the Master or his delegate and the terminal's representative.

On termination of the cargo transfer, the vessel will be required to vacate the berth, if loading, on the completion of gauging, sampling and documentation; if discharging upon ballasting to a draft consistent with the weather conditions prevailing.

Suitably equipped vessels will be able to maintain VHF radio communication with the terminal control room during the cargo operation.

Fresh water and fuel are available for calling tankers.

Nova Scotia Forest Industries Wharf: Situated at Madden Point and serves the pulp and paper manufacturing facility, the wharf is 425 ft. long, with dolphins extending a farther 100 ft. from each end of the wharf, depth alongside 26 ft. at LW. Fresh water available, bunkers not available.

Georgia Pacific Corporation Terminal: Situated at Point Tupper, this gypsum loading facility consists of a series of dolphins capable of mooring a ship over 700 ft. in length and has a min. depth of 32 ft. LW. Conveyor system from plant to centre of dolphins. No fuel oil or fresh water available.

Port Hawkesbury Government Wharf: The 6.7 m. wide pier, 149.3 m. long. Provides a 80.0 m. commercial berth with 5.5 m. at LW. No fresh water or open storage area. Dockside power and telephone available.

Mulgrave Department of Transport Wharf: Berthing length 940 ft., depth of water 18 ft. to 25 ft. Used for wood pulp and general cargo loading/discharging rail tracks, fresh water available, fuel oil delivered by truck, No permanent hoists, mobile cranes upon request.

MEDICAL: Masters are required to give early advice to their Agent regarding medical and dental attention requirements, hospitalisation cases will be referred, Antigonish, 40 miles distant.

DENSITY: 1025. Influenced by Spring thaw run-off.

FRESH WATER: Available in limited quantities.

FUEL: Available at Gulf Canada Ocean Terminal for calling tankers only. Vessels requested to give 72 hours notice of requirement, quantity and specification.

CONSULS: See "Halifax".

REPAIRS: Breton Industrial and Marine perform hull and machinery repairs to vessels afloat. Radio and radar service is available locally, the vessel's Agent should receive early advice of repair requirements.

GANGWAY/DECK WATCHMEN: Usually ship's crew.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 50 cigars or 2 lb. tobacco per person per week. Wines/spirits: Total of 40 ounces per person over 21 years old.

Subsequent issues may be authorised to crew members of foreign vessels, but the max. quantity any crew member may hold at any time must not exceed 300 cigarettes, or 75 cigars, or 3 pounds of tobacco and 60 ounces wines/spirits.

Crew personal effects such as radios, tape recorders, binoculars, etc., should be declared on manifest.

REPATRIATION: Crew changes and repatriation permitted.

AIRPORT: Regular services by Air Canada from Halifax International Airport 150 miles distance, and from Sydney Airport 90 miles distant. Charter flights by small aircraft can be arranged from Port Hawkesbury Airport to Halifax and Sydney.

SUPPLIES: Provisions and bonded stores can be supplied locally but Masters are advised that to avoid delays, their Agent should be notified prior to arrival on their requirements, particularly for deck and engine stores as these may have to be obtained from Halifax.

Laundry facilities are available and in order to expedite the service, Masters should request their Agent to have a representative to attend on arrival.

Supplies of stores will have to be conveyed to tankers at Gulf's Ocean Terminal by stores boat or barge.

TIME: GMT minus 4 hours. Last Sunday in April, clocks advanced 1 hour, last Sunday in October, clocks retarded 1 hour.

POLICE/AMBULANCE/FIRE: Police 625-2220; Ambulance 625-2929 or 625-1911; Fire 625-2838.

SHORE LEAVE: Permitted.

CANSO CAUSEWAY CANAL: Max. vessel dimensions, length 715 ft., width 75 ft., draft 28 ft., vessels with draft greater than 28 ft. and not more than 30 ft. may proceed through with special permission of the Canal Superintendent. Depth of water on the North and South approach mooring berth is 32 ft. During the months December to April Masters should consult with Ice Operations, Halifax, whether lock in operation.

AUTHORITY: The Harbour Master, Port Hawkesbury, Nova Scotia, Canada.

Strait of Canso Industrial Development Authority, P.O.Box 610, Port Hawkesbury, Nova Scotia, Canada B0E 2V0. *Tel:* (902) 625-1631. *Telex:* 019-37532.

PORT HOPE, Ontario: 43.56 N. 78.17 W.

TUGS: None.

BERTHING: Two breakwaters form artificial harbour. Depth at entrance 7 ft. – 12 ft. Town docks have 650 ft. total berthing length with 9 ft. – 11 ft. alongside. Queen's Wharf is 1,200 ft. long with 8 ft. alongside.

FRESH WATER: Available at Queen's Wharf.

FUEL: Diesel fuel and gasoline available.

AUTHORITY: Port Hope Harbour Commission, 56 Queen Street (P.O.Box 117), Port Hope, Ontario L1A 3V9. *Tel:* (416) 885-4544. *Contact:* E. M. Creighton, Chairman.

PORT WELLER, Ontario: 43.14 N. 79.13 W.

LOCATION: On the South shore of Lake Ontario, West End. Port Weller is the Northern entrance of the Welland Canal and is 5 km. East of Port Dalhousie.

PILOTAGE: Master of ships requiring pilotage service in the Port Weller-Sarnia area should send a notice of their arrival by radiotelephone so as to avoid any delay in waiting for a Pilot. When Westbound, Master should order a Pilot 4 hours in advance of the ETA at Port Weller through Toronto Radio. When Eastbound, Masters should order a Pilot 4 hours in advance of their ETA at Port Huron light vessel or Rogers City. Both an accommodation ladder and a pilot ladder are required to assist Pilots boarding ships at Port Weller.

District Supervisor of Pilots: P. Hansell. P.O.Box 2008, Station B, St. Catharines, Ontario L2M 6P5. Tel: (416) 934-2921.

RESTRICTIONS: Channel depth: Limiting depth at entrance and through the Welland Ship Canal is 8.23 m. (27 ft.). Permissible draft is 7.92 m. (26 ft.). The locks will accommodate vessels not exceeding 222.5 m. (730 ft.) overall length and 23.16 m. (76 ft.) extreme breadth.

Navigation season: April 1st to December 30th.

HEALTH: Quarantine service at Quebec, P.Q., for incoming ships from foreign ports.

RADIO: Ship-to-shore communications: Through Toronto Coast Guard Station (VBG).

TUGS: Available from Port Weller Dry Docks Ltd.

BERTHING: See "St. Catharines".

MEDICAL: Hospitals at St. Catharines.

FUEL: Marine diesel fuel is available to vessels secured at the extreme North end of Wharf No. 2 through St. Catharines Fuels. Tel: 416 685-6511.

REPAIRS/DRY DOCKS: Port Weller Dry Docks, Ltd., 222.5 m. (730 ft.) building dock, gate width 24.38 m. (80 ft.); 228.6 m. (750 ft.) graving dock gate width 24.38 m. (80 ft.); depth over sill 9.15 m. (30 ft.). Also 365.8 m. (1,200 ft.) fitting out berth. Complete machine shop in connection; major conversion jobs and all kinds of hull and machinery repairs. Shipyard gantry crane, 45 tons capacity; shearlegs crane, 125 tons capacity; two self-propelled cranes, 15 tons and a 55 ton level luffing gantry crane extending 609.6 m. (2,000 ft.) from the shipbuilding berth to the fitting out berth. Forged finished shafting available from Canada Foundries & Forgings Ltd.

SURVEYORS: ABS at Toronto. Lloyd's at St. Catharines.

GENERAL: Transportation: All vessels entering the Welland Canal from Lake Ontario, or vessels from Lake Erie to Lake Ontario, via the canal, use this port but no steamship line makes it a regular port of call for discharging or loading freight. Highway connects with St. Catharines, 5.5 km.

Holidays: Officials of canal available at all times during navigation season.

AUTHORITY: St. Lawrence Seaway Authority, Western Region, P.O.Box 370, 508 Glendale Avenue, St. Catharines, Ontario L2R 6V8. *Tel:* 416-641-1932. *Contact:* J. B. McLeod, Regional Vice-President.

POWELL RIVER, B.C.: 49.52 N. 124.33 W. (See Plan)

DOCUMENTS:

- Customs Clearance from last port.
- Manifest for goods to be off-loaded and "In Transit" cargo tonnage.
- Duplicate Pratique for vessels arriving from ports other than U.S. ports.
- Canadian Immigration Crew List, (Imm. 200) required in triplicate.
- Passenger List in triplicate.
- Seamen's passports and I.D. cards should be available when arriving from sea.
- Ship's Certificates.

PILOTAGE: Payment compulsory. Incoming ships take Pilot at Race Rocks, near Victoria. Pilotage District of British Columbia.

ANCHORAGE: No suitable anchorage is available in Powell River area. Vessels usually anchor in English Bay (Vancouver) or various anchorages Vancouver Island.

MAX. SIZE: Up to 660 ft. LOA. 32 ft. draft. Tankers up to 615 ft. have berthed for discharging purposes (No. 2).

HEALTH: Duplicate pratique for first port of call. See also "Montreal".

RADAR/VHF: No radar. Pilots are in contact with tugs and mill office using VHF Channel 10.

TUGS: Two tugs available, to 500 h.p.

BERTHING: Berth No. 1 requires a tug when berthing only (Berth No. 1 reserved for company barges). Berth No. 2 Pilot's discretion. Accommodation: Channel depth 30 ft. – 35 ft. LW. Two private piers; pier A with Berth No. 1, 500 ft. long, depth alongside 30 ft. LW, Berth No. 2, 482 ft. long, accepts vessels up to 660 ft. length, depth alongside 30 ft. LW.

Three 10-ton elevators. Dock storage for 10,000 tons. The elevators are used for loading barges only.

STEVEDORES: None. Local longshoremen only. Supercargoes are sent from Vancouver to assist in loading vessels. Longshoremen are members of Papermakers' Union.

MEDICAL: Powell River General Hospital and port doctor available. Complete medical services provided.

TANKERS: Bunker oil supplied by company barges.

FRESH WATER: Unlimited supply, $25.00 connection charge.

FUEL: Fuel oil, diesel, and gasoline available.

GANGWAY/DECK WATCHMEN: On request.

OPENING/CLOSING HATCHES: By crew prior to arrival and departure.

CUSTOMS ALLOWANCES: 300 cigarettes, or 50 cigars, or 1 lb. tobacco on arrival. Issues every 7 days. 60 oz. or 2 cases beer on arrival. Issues every 7 days.

IDENTIFICATION CARDS: Keep available for inspection.

CONSULS: Available at Vancouver, B.C.

AIRPORT: 5 flights per day to Vancouver International Airport. 4 miles from docks. Charter flights available to Vancouver Island on request.

TIME: Pacific Standard Time.

HOLIDAYS: Union Contract. Usual holidays are New Year's Day, Easter Monday, Labour Day and Christmas Day, every second Sunday.

TELEPHONES: Ship's telephone available. No. 483-3326.

SERVICES: Arranged by Powell River Shipping Services.

SHORE LEAVE: Permitted.

STORING: No cargo or equipment to be lifted on or off ship except by mill crews.

AUTHORITY: MacMillan Bloedel Ltd., 6270 Yew Street, Powell River, British Columbia V8A 4Z7. *Tel:* (604) 483-3722. *Telex:* 044755. *FAX:* 483-4667. VHF: Channel 10 – 24 hours.

AGENT: Powell River Shipping Services Ltd., Box 74, Powell River B.C. V8 4Z5. Tel: (604) 483-4232. Telex: 044-767.

PRESCOTT, Ontario: 44.44 N. 75.31 W. (See Plan)

For important General Information refer to "St. Lawrence Seaway".

DOCUMENTS: See "Montreal".

PILOTAGE: Arranged through Agents – Montreal.

ANCHORAGE: Seaway Anchorage.

MAX. SIZE: Up to 8.23 m. draft.

HEALTH: See "Montreal".

RADIO: Seaway Stations.

BERTHING: *Ports Canada Facilities.*

Berth	*Length* (m.)	*Depth alongside* (m.)
Grain Unloading Berth	395.0	8.23
Grain Loading Berth	283.4	8.23
Shed Berth	441.9	8.23
Salt Dock Berth at Shed	441.9	8.23
Salt Dock Berth Up-stream Pier	189.0	8.23

Grain Facilities: Prescott Elevator, capacity 154,000 tonnes, 11 spouts available. Loading capacity 2,180 tonnes/hour, depending on type of vessel and conditions.

STEVEDORES: Stevedores arranged by Montreal Agents.

MEDICAL: Nearest hospital located at Brockville (20 km.). Ambulance service available at Prescott.

DENSITY: No tide – seaway density.

FRESH WATER: Available.

FUEL: Arranged with Montreal Agents.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Ship's crew.

CUSTOMS ALLOWANCES: Tobacco: No limit. Wine and/or Spirits: No limit.

IDENTIFICATION CARDS: Not required.

CONSULS: None.

REPAIRS: Small repairs available.

AIRPORT: 208 km. to Montreal – served by regular airlines.

TIME: Eastern Standard Time GMT minus 5 hours. Daylight saving time from last week-end in April to last week-end in October, clocks advanced 1 hour.

HOLIDAYS: See "Montreal". Work can be arranged on holidays.

POLICE/AMBULANCE: Prescott – Police 925-4252; Ambulance 925-2925.

TELEPHONES: Arrangements can be made to place telephones on board.

SHORE LEAVE: Allowed.

BANKS: Royal Bank of Canada, Toronto Dominion, Bank of Montreal.

SHIP SUPPLY SERVICE:

Canadian Coast Guard, Prescott Base, Transport Canada, Prescott, Ontario, K0E 1T0. Tel: (613) 925-2865. Two helicopters, several launches, medical services, 2 "medicboats".

Orraids Limited, River Road East, Prescott, Ontario, K0E 1T0. Tel: (613) 925-4329. Marine equipment and supply.

Port of Prescott, Ports Canada, Prescott, Ontario K0E 1T0. Tel: (613)925-4228. Anchorage for ships, small barge available for ship to shore crew member emergency, ambulance service 3 km. distance from port.

Prescott Machine and Welding Inc., River Road East, Prescott, Ontario K0E 1T0. Tel: (613) 925-4277. Ship repairs.

Simjac Marine Limited, North Channel Road, Prescott, Ontario K0E 1T0. Tel: (613) 925-2457. Tug service, marine contractors.

AUTHORITY: Ports Canada, P.O.Box 520, River Road East, Prescott, Ontario K0E 1T0. *Tel:* (613) 925-4228. *Telex:* 06636515. *Contact:* R. E. Bailey, Operations Manager.

PRINCE RUPERT, B.C.: 54.19 N. 130.19 W. (See Plan)

PORT LIMITS: Prince Rupert Harbour Limits are shown on Canadian Chart No. 3985 and described in British Columbia Coast Sailing Directions (Vol. II), published by the Canadian Hydrographic Service. Porpoise Harbour and Ridley Island are included within the Prince Rupert Harbour limits. Charter-party terms govern when laytime will commence and, as such there is generally no specific geographical point at which a vessel is considered to be an "arrived ship".

DOCUMENTS: If first Canadian port:

Crew List (Imm. 200) 3 copies.
List of Ship's Stores (E.1) 3 copies.
Personal Possession List (Crew Declaration Y.14) 3 copies.
Maritime Declaration of Health (QS 2001) 3 copies.
Calculation of stability for vessels loading bulk grain (82/0579).

Certificates:

Safety Construction.
Safety Equipment.
Derat.
Safety Radio.
Loadline.
Certificate of inspection for chain or wire lashings if timber deck cargo to be loaded.

PILOTAGE: Compulsory. Telegraphic address: "Pilots Vancouver", Tel: (604) 627-7788. Telex: 047-89133. 48 hours' notice required with confirmation of ETA pilot station at 24 hours and 12 hours. VHF Channels 17, 77 and 16. Pilot boat, "Pacific Pilot Four", 20 m. vessel with red hull and white house. Boarding station 1 mile radius from Triple Islands (Lat. 54° 18′ N., Long. 130° 53′ W.). Heavy weather – follow pilot boat into sheltered waters when advised by Pilot.

ANCHORAGES: Inside harbour limits – allocated by Harbour Master, Port of Prince Rupert.

A: McIntosh Rock Beacon bearing 243°(T) × 6.1 cables, 23 fathoms, mud bottom.
B: McIntosh Rock Beacon bearing 237.5°(T) × 12.1 cables, 19 fathoms, mud bottom.
C: Vigilante Island Peak bearing 048°(T) × 12.4 cables, 22 fathoms, mud bottom.
D: Vigilante Island Peak bearing 040.5°(T) × 6.3 cables, 23 fathoms, mud bottom.
E: Vigilante Island Peak bearing 254°(T) × 5.4 cables, 25 fathoms, rock/sand bottom.

Anchorages "A" – "E" have radii of 549 m. (1,800 ft.).

V: Vigilante Island Peak bearing 333.5°(T) × 3.1 cables, 24 fathoms.

Anchorage "V" has a radius of 396 m. (1,300 ft.) and is solely for log loading vessels not exceeding 170 m. LOA.

X: Greentop IT Light bearing 218° (T) × 15 cables, 31 fathoms, silt and clay bottom.
Y: Greentop IT Light bearing 316°(T) × 19.6 cables, 34 fathoms, silt and clay bottom.

Anchorages "X" and "Y" have radii of 5.0 cables.

Additional anchorages area available outside harbour limits in the vicinity of Prescott Island.

RESTRICTIONS: Nil on Prince Rupert Harbour. Porpoise Harbour, slack water and daylight. Swept to 23 ft, at LW.

MAX. SIZE: The coal berth at Ridley Terminals will accommodate vessels up to 250,000 d.w.t., 325m. LOA, 50 m. beam and 22 m. draft. Vessels of 247 m LOA have berthed at Fairview Terminal where there is 13.7 m. at low tide.

HEALTH: Master shall complete and furnish promptly at the first Port of arrival in Canada, a Declaration of Health in the prescribed form.

Advance radio notification to a quarantine station applies only if a condition of health irregularity occurs onboard.

Masters should acquaint themsleves with Section 12 of the Quarantine Regulations.

RADIO: Prince Rupert Coast Guard Radio 'VAJ' 500, 2182, 4125 and VHF 16.

VHF: Prince Rupert Vessel Traffic Services operate on VHF Channels 11 and 71. Vessels should establish communications with "Prince Rupert Traffic" on VHF Channel 11 when 50 nautical miles West of the Queen Charlotte Islands. Vessels proceeding to Prince Rupert via Vancouver or Tofino Traffic Zones will be advised when to change frequencies to VHF Channel 11.

Vessels wishing to communicate with the Port Authority may contact Prince Rupert Traffic for information.

TUGS: Join vessel off berth. Not all tugs have lines. No extra charge if tug's line used.

Mooring: Linesboat required at berths on Ridley Island. Linesmen available at all berths.

BERTHING: DEEP SEA BERTHS:

Fairview Terminal: (Forest Products, Mineral Concentrates, Grain By-products, Oilseed, Heavy Lifts and General).

Owner	Prince Rupert Port Corporation.
Length	427 m.
Depth	13.70 m.
Open Area	15 hectares
Covered Storage	4,583 sq.m.
Rail Siding	2,750 m.
Ro/Ro	130 ton ramp

Ocean Dock: (Passenger Vessels and Log Carriers).

Owner	Prince Rupert Port Corporation.
Length	151 m.
Depth	9.20 m.–13.11 m.
Open Area	5,754 sq.m.

Cruise Ship Lightering Dock:

Owner: Prince Rupert Port Corporation.

This facility is located 380 m. N.E. of Ocean Dock. It consists of a concrete pontoon 30 m. in length connected to the shore by a 30 m. steel ramp. Designed to handle passengers from cruise vessels too large to berth at Ocean Dock, the facility can handle two 12 m. tenders at any state of time. The length of the ramp allows easy access by passengers confined to wheelchairs even at low water.

PRG No. 1 – Inner Harbour: (Grain Elevator).

Owner	Prince Rupert Grain Ltd.
Length	305 m.
Depth	15 m.
Capacity	2,250,00 bushels.
Shippers	5×15,000 bushels per hour each

PRG No. 2 – Ridley Island: (Grain Elevator).

Owner: Prince Rupert Grain Ltd. Tel: (604) 627-8777.

Berth:

Type	Dolphin
Length	Berthing Dolphins 118 m. Mooring Dolphins 240 m.
Depth	14.5 m.
Bollard Pull	100 tonnes
Max. Berthing Speed	12.5 cu.m/sec.

Shiploaders:

Three - Tower Mounted – Spaced 50 m. apart. Slewing Boom.

Shipping Bins	8 at 750 tonnes (28,000 bu.)
Conveyor Routes	2 at 2,000 t.p.h.
Elevator to Ship	600 m.
Shoreline to Ship	200 m.

RTI, Ridley Island.: (Coal).

Owner: Ridley Terminals Inc. Tel: (604) 624-9511.

Type	Dolphin
Length	Berthing Dolphins 150 m. Mooring Dolphins 370 m.
Max. ship size	LOA 325 m. Breadth 50 m. Max. guaranteed draft 20 m. (in 1985 vessel sailed with 22 m. draft). Bollard pull 75 and 100 tonnes.

Shiploaders:

2 × 4,500 t.p.h. capacity each.
Quadrant type with elevating boom.
Air draft on berthing – unlimited.
Max. allowable working height 34 m. above LLW
Outreach 43.0 m.
Max. permissible combined hatch length 240 m.

Storage capacity: 1.2 million tonnes.
Stacker Reclaimer: 2 × 6,000 t.p.h. each.

Berthing/Unberthing: At Master's discretion.

Max. berthing speed: 15 cm./sec.
Max. design impact: 15 cm./sec. 250,000 d.w.t. 80% laden.

Tokyo Keiki approach velocity indicator is installed.

Westar Timber, Porpoise Harbour: (Woodpulp).
Tel: (604) 628-3671.

Length	360 m.
Depth	10.6 m.
Berthing	Daylight slack water only.

STEVEDORES: Gangs arranged through Agent.

Main Commodities for Export and Loading Rates:

Grain (Inner Harbour Elevator) – up to 13,500 tonnes per day.
Packaged Lumber – 40,000 to 75,000 fbm per gang hour*.
Logs – up to 20,000 scrib per gang hour*.
Pulp – 45 to 180 tonnes per gang hour*.
Mineral Concentrate – up to 300 tonnes per hour.
*Dependent on ship's gear.

Non-working Days:

Ridley Terminals Inc.: Christmas Day.
All other berths: Labour Day, Christmas Day, New Years Day.

MEDICAL: Hospital facilities available.

DENSITY: Variable, 1013 to 1025.

FRESH WATER: All major companies represented. No Bunker C available at present. Diesel oil available in limited quantities and supplied by truck or barge. Masters should radio fuel requirements in advance of arrival.

FUEL: All major companies represented. No Bunker C available at present. Diesel oil available in limited quantities and supplied by truck or barge. Masters should radio fuel requirements in advance of arrival.

GANGWAY/DECK WATCHMEN: Shore gangways available. Port Operating By-Law states that gangways shall be attended at all times by a watchman or other responsible person and clearly illuminated at night.

OPENING/CLOSING HATCHES: This work is carried out by stevedores except for specially constructed hatches such as McGregor.

CERTIFICATES:

Safety Equipment.
Cargo Ship Certificate.
Safety Radio.
Derat.
Load-line.
Cargo Gear Book and Certificates.

All subject to inspection on arrival.

CUSTOMS ALLOWANCES: Tobacco, 50 cigars and 200 cigarettes and 2 lb. of tobacco. Wine and Spirit, 1 bottle per officer, (40 oz.) and Beer 288 oz. or 24 pts.

CARGO GEAR: Cargo Gear Book to be ready for inspection.

IDENTIFICATION CARDS: Not required.

REPAIRS: Minor repairs deck and engine room.

DRY DOCKS: Two small slipways for 150 ft. vessels.

REPATRIATION: Crew changes and repatriation can be carried out with little difficulty. Connections for international flights are made at Vancouver.

AIRPORT: Two flights daily to Vancouver, B.C. Travelling time to airport about 1 hour.

SURVEYORS: SGS Supervision Services Ltd. P.O.Box 1082, Prince Rupert, B.C. V8J 4H6. Tel. (604) 624-9745.

Rupert Marine Surveyors Ltd., P.O.Box 292, Prince Rupert, B.C. V8J 3P6. Tel: (604) 624-5330.

Overseas Merchandise Inspection Co. Ltd., 1434 Sloan Avenue, Prince Rupert, B.C. V8J 3X7. Tel: (604) 624-5105.

Classification Societies are based in Vancouver and will attend a vessel in Prince Rupert upon request.

TIME: Zone plus 8 Pacific Standard Time. Last week in April to last week in October is Summer Time, clocks advanced 1 hour.

HOLIDAYS: New Year's Day (no work); Good Friday; Easter Monday; Queen's Birthday; Dominion Day; Labour Day (no work); Thanksgiving Day; Remembrance Day; Christmas Day and Boxing Day (no work).

POLICE/AMBULANCE/FIRE: Tel: 911.

EMERGENCY CO-ORDINATION: Within Port Limits call "Prince Rupert Traffic" on VHF Channel 71 or Tel: 624-4157.

TELEPHONE: Placed on board if required.

STORING: Stores are available without restrictions with handling equipment available.

SERVICES: Compasses adjusted. No tank cleaning equipment or facilities for discharge of tank washings. Radios and electronic navigational aids may be serviced by local technicians.

SHORE LEAVE: No restrictions.

SHIP SUPPLY SERVICE:

Tug Services: Minette Bay Marine Services Ltd., 941-8th Avenue East, Prince Rupert, B.C. V8J 2N2.

RivTow Straits Ltd., P.O.Box 65, Prince Rupert, B.C. V8J 3P4.

Launch Services: Prince Rupert Water Taxi, P.O.Box 685, Prince Rupert, B.C. V8J 3S1.

Minette Bay Marine Services Ltd., (see "Tug Services").

Helicopter Services: Rotortech Helicopters Ltd., P.O.Box 610, Prince Rupert, B.C. V8J 3R5.

Vancouver Island Helicopters Ltd., P.O.Box 115, Prince Rupert, B.C. V8J 3P4.

REGULATIONS: Vessels anchored in the harbour must have engines on stand-by and second anchor ready for letting go if wind speed attains 25 knots.

GENERAL: *Navigation Characteristics:* Large, deep, natural harbour with least depth of 27.4 m. at the entrance. Easy access and well lit with year round, ice-free navigation.

Charts: The Port of Prince Rupert and the approaches are covered by Canadian Charts 3985, 3701 and 3955. The Canadian Hydrographic Service is gradually replacing existing charts with metric versions. The first of these metric charts is 3955. Mariners should consult Canadian Notices to Mariners issued weekly for the publication dates of additional new charts.

Tidal Information: Type: Mixed, mainly semi-diurnal. Mean Tide: Range 4.9 m., HHW 6.1 m. LLW 1.2 m. Large Tide: Range 7.7 m., HHW 7.5 m., LLW −0.2 m.

Customs and Immigration: Officers board on arrival.

AUTHORITY: Prince Rupert Port Corporation, 110 Third Avenue West, Prince Rupert, B.C. Gray, Manager Operations/Harbour Master.

QUEBEC, P.Q.: 46.49 N. 71.12 W. (See Plan)

DOCUMENTS:

3 Crew Lists.
3 Passenger Lists (cargo vessels).
8 Passenger Lists (passenger vessels).
3 Ship's Stores Lists.
3 Crew Declarations.
1 Maritime Declaration of Health.
1 Complete Manifest of cargo to be discharged in all Canadian Ports.
5 Manifest for local cargo.

No bills of lading required to Local Authorities.

PILOTAGE: On arrival at Anse-aux-Basques, a ship takes on board a Pilot of the Laurentian Pilotage Authority to bring the ship to Quebec. Pilotage and payment of dues are compulsory. Pilots board inbound vessels at Anse-aux-Basques. The Master of every ship inward bound in the Gulf of the St. Lawrence and destined for ports West of Anse-aux-Basques must report ETA to Pilots Montreal, via Marine Traffic Control on VHF radio Channel 14 or by other means of communication to Seven Islands Radio Station, giving any information Control may require.

A minimum notice of 24 hours and 12 hours must be given. This notice must be confirmed 4 hours prior to arrival at the Pilot station.

Note: Pilot boats (2) and pilot station keep watches on 156.55 MHz. and have VHF facilities, which are only used for local instructions from one to the other.

Pilot boats (2) in operation: Pilot No. 9 Canada and Pilot No. 10 Canada. Hull painted blue, white superstructure. Pilot-jack welded on stack – all-steel vessels. Equipment: Radar – echo sounder – radio VHF/all frequencies. A.M. – all frequencies – electric whistle – loud hailer – searchlight.

Pilot station can either be raised by radiotelephone frequency 156.8 MHz., by morse lamp – semaphore – by just blowing the code letter "G" consecutively or displaying code flag "G". Exact location of pilot station Anse-aux-Basques, on North shore of St. Lawrence river. Lat. 48° 19.2′ N., Long. 69° 24.9′ W. Pilotage ground limits are rectangular distance of 2 miles from the station. In bad weather, pilot boats removed from station to more secure position and pilotage service held up until better conditions. Same procedure applies during severe ice conditions. Any changes regarding pilot boat service obtained through Marine Traffic Control.

Vessels using pilot boarding stations within St. Lawrence River – Seaway – Quebec Harbour – Lakehead, requested provide accommodation ladder. Landing platform of accommodation ladder should be 10 ft. above water.

Vessels arriving Anse-aux-Basques without having previously stated ETA pilot station 24 hours and 12 hours in advance, or during such time as pilotage service held up for any reason, vessels normally proceed to anchorage off Ile-aux-Basques on Southern side of river, where good anchorage ground can be found. Further instructions will be given to Vessel by Marine Traffic Control or pilot station on VHF or 156.55 MHz.

ANCHORAGE: See "Pilotage".

Due to submarine cables and other submarine installations, anchoring in the harbour is prohibited without permission of the Harbour Master. Permission for anchoring is to be obtained through Marine Traffic Control Centre. The official anchorage area extends Southwestward from the fixed blue light on Queen's Wharf Lat. 46° 48′ 34″ N., Long. 71° 12′ 12″ W.

RESTRICTIONS: Depth of water in 11 mile dredged channel is 40 ft. to which depth add height of tide which, at times, may give extra 15 ft.

MAX. SIZE: No limit in length and breadth. Draft limited to 46 ft. Winter and 50 ft. in Summer.

HEALTH: Radio pratique obtained through Seven Islands by wireless. In case of reported suspected disease instructions will be given by wireless. When pratique granted, vessel automatically cleared for *all Canadian Ports.*

TUGS: Tugs join vessels in stream and use ship's lines.

5 tugs available, each equipped with radio-telephone. Two tugs of 4,200 h.p.; one tug of 1,040 h.p. and one tug of 7,200 h.p.

RADIO: Seven Islands: Call sign VCK. Quebec: Call sign VCC, VHF Channel 16.

RADAR/VHF: Port radar service in operation. VHF Marine Traffic Control System in effect for area extending from meridian of Longitude passing through Sept-Iles to upper limits of Montreal Harbour.

In order to take advantage of the Traffic Control System and avoid unnecessary delays, all vessels approaching Sept-Iles from seaward should be fitted with VHF set.

Control of VHF Channels shall be immediately available on bridge, convenient to conning position and such installation shall conform to requirements laid down in Radio Regulations for equipment used in VHF International Maritime Mobile Radiotelephone Service and be capable of operation on Channels: 16, 14, 13, 12, 11, 10, 9 and 6.

For vessels not provided with VHF equipment, portable VHF sets will be taken on board by Pilot. Rental charge for this service. Vessels approaching meridian of Longitude passing through Sept-Iles from Eastwards should call Channel Quebec on 156.7 (Channel 14) for further instructions.

CRANES: 75 mobile cranes up to 440 tonnes capacity.

STEVEDORES: Dead-line for orders: 1100 – 1600 – 2200 hrs. for periods starting 0800 – 1300 – 1900 hrs.; 1 hour required before deadline to order gangs.

MEDICAL: No advance notice required for medical attention. Hospital facilities available.

TANKERS: Slop discharge facilities available. Eight tanker berths. Depths from 37 ft. to 50 ft. See "Berthing".

DENSITY: Fresh water.

FRESH WATER: Available to all berths, provided directly from the Corporation's hydrants and hoses to vessels. Rate: St. Charles River piers, 20 t.p.h. Anse-aux-Foulons 50 t.p.h. with 1 line, and 2 lines 100 t.p.h.

FUEL: Available any berth by truck and by barge with capacity 1,000 tons.

FIRE PRECAUTIONS: Only usual precautions; towing wire hanging overboard.

GANGWAY/DECK WATCHMEN: Watchmen at gangway not necessary, but could be obtained.

OPENING/CLOSING HATCHES: McGregor hatches must be opened by crew. All other cases recommended to be done by crew also, but stevedores would also under conditions specified in stevedoring contract.

SHIP'S CERTIFICATES: Load Line, Safety Equipment, Construction, Radio, Passengers, Cargo Gear, Derat.

CUSTOMS ALLOWANCES: Tobacco, 8 oz. tobacco for 8 days, cigarettes: 1 carton per 8 days. Wine and/or Spirits, 40 oz. only. Officers and Masters will have additional supply for entertainment daily on request to Customs.

All other consuls located in Montreal and send representatives to Quebec on request.

REPAIRS: Repairs of all types can be obtained.

BULK HANDLING FACILITIES:

Grain Elevators (see Table below):

Storage capacity – 8,000,000 bushels (240,000 short tons). Served by CN and CP railways.

A marine terminal facility on Piers 50, 51 and 52 which include 5 bridge towers with a loading capacity of 3,100 t.p.h., locomotive cranes to unload gondola cars, a track-mobile to shunt cars and other ground rolling stock to manipulate bulk material on paved pads, and two-way underground conveyor system to handle dry bulk cargoes at a present loading rate of 800 t.p.h. 2,000 ft. of dock frontage with a depth of at least 41 ft. at LT and leased from Port of Quebec Corporation over 1 million sq.ft. of land and operating 13,500 ft. of trackage on property connected to CNR. Storage capacity of 7 million imperial gallons for any liquid products serviced by 10 in. marine pipe-lines and a 4 in. loading rack.

Storage facilities: Total shed space of 62,000 sq. m.

DRY DOCKS: Department of Public Works located within Versatile Davie Inc. "Champlain" dry dock 1,150 ft. by 120 ft. at gate entrance. Can dock largest ships afloat. "Lorne" dry dock 624 ft. with floor width 73.5 ft. Also 3 outdoor berths and 1 covered berth.

SURVEYORS:

Classification Societies:

RIMOUSKI, Quebec: 48.25 N. 68.34 W.

DOCUMENTS: See "Quebec". Rimouski is a port of entry with Customs and Immigration Officers stationed at the port. It is also a quarantine sub-station.
PILOTAGE: Not compulsory. Pilots board at entrance to harbour.
APPROACHES: Rimouski is approached through a dredged channel depth 18 ft. Tidal variation is from 10 ft. – 14.5 ft.
ANCHORAGES: Vessels anchor in the roads or near the East end of Barnaby Island.
HEALTH: See "Documents".
RADIO: Mont – Joli (VCF).
BERTHING: There are 2 wharves, operated by Transport Canada.

1. L-shaped wharf, 2,330 ft. long, 243 ft. wide at head of L-shape. Depth alongside 24 ft.
2. Length 2,850 ft., depth 21 ft. alongside, which lies to the West of the L-shaped wharf.

CRANES: Mobile cranes from 7 – 100 tons available.
FRESH WATER: Available ex-wharf.
FUEL: Bunker "C" and diesel available.
REPAIRS: Minor repairs only.
BANKS: Bank Canadian National, 186 Ave. de la Cathedrale, Rimouski, G5L 5H9.
AUTHORITY: Transport Canada, Garde Cotiere Canadienne, Region des Laurentides, 104 Dalhousie, Suite 121, Quebec, Que G1K 4B8. *Tel:* (418) 648-3680. *Telex:* 051-3051. *Contact:* Jacques St. Laurent, Harbour Master, Rimouski. *Tel:* 418-723-6563.

ST. ANDREWS (Bayside), New Brunswick: 45.10 N. 67.08 W. (See Plan)

DOCUMENTS:
Clearance from Last Port.
3 Copies of Crew List.
Crew's Effects List.
Stores List.
2 Copies of Customs Entrance A-6 and Manifests.
Current Safety Radio Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Derat Certificate.

PILOTAGE: Not compulsory but strongly recommended. Pilot boards off East Quoddy Head, Campobello Island. Notice required 24 hours. The Pilot is a retired fisherman and he only gives advice on tide and weather.
ANCHORAGES: Areas are available a few hundred metres off of the wharf face, 3 miles from the Wharf just East of St. Andrews and in the vicinity of Campobello Island. All of the locations have over 70 ft. of water and good bottom. Those in the vicinity of Campobello can be reached by radio direction from the Pilot if shelter is needed and the Pilot cannot board.
RESTRICTIONS: None have been imposed but daylight berthing and departures are recommended.
HEALTH: Send advice to Saint John, New Brunswick at least 24 hours before arrival.
RADIO: Yarmouth, Nova Scotia.
VHF: Bay of Fundy Traffic Control Channel 14 (Tel: 506-648-4696); Pilot Channel 11 (Tel: 506-752-2283). Port Stevedores and line crews Channel 10 (Tel: 506-529-8866. Telex: 014 47321).
BERTHING: *Sand Point Wharf:* The wharf is located in position Lat. 45° 09′ 35″ N., Long. 67° 08′ 30″ W. The wharf is in the form of an "L" shape.

The outer face has a length of 300 ft. and draft at LWOST of 28 ft. The inner face has a length of 260 ft. and draft of 25 ft. Mean tidal range at berth is 26 ft. The ebb tide and river flow set onto the wharf, the flood tides sets off the pier.

The distance from the pilot station to the pier is 21 miles, with a minimum draft of 45 ft. There are navigation lights in the channel and the pier is lit at both ends.

SPECIAL CARGO HANDLING FACILITIES: Conveyors are available to load bagged cargoes (i.e. potatoes). This equipment requires ship's crew to be very diligent in tending lines.
CRANES: Shore cranes are available in the 25 to 35 ton range but the wharf space limits the number of usable cranes to two.
STEVEDORES: Normal working hours are 12 to 16 hours per day (varying by commodity), 7 days per week. Cargoes handled regularly are bulk and cartoned frozen fish, lumber, potatoes, unitised pulp, frozen orange juice concentrate in drums. Transhipping is also done at the pier both across the pier and directly from ship to ship.
MEDICAL: Doctor and hospital available.
DENSITY: 1017 (varies with tide).
FRESH WATER: Available.
FUEL: MDO and IFO are available. Delivery is by truck.
SURVEYORS: Located in Saint John.
GANGWAY/DECK WATCHMEN: Ship's crew. Ship's gangway used. Fixed accommodation ladders are only usable at or near high tide.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: Tobacco each man 200 cigarettes per week. Alcohol each man 40 oz. of wine or spirits per week.
AIRPORT: Nearest commercial airport at Saint John, New Brunswick, (45 miles), but a small public airstrip is located in St. Stephen, New Brunswick (16 miles).
TIME: GMT minus 4 hours. Last Sunday in April clocks advance 1 hour and last Sunday in October clocks retard 1 hour.
HOLIDAYS: New Year's Day; Easter Sunday; Thanksgiving Day; Christmas Day.
SHORE LEAVE: No restrictions.
GENERAL:
Services: Fresh provisions, ship's laundry service.
Chart: Use U.S. Chart (Calais to West Quoddy Head) No: 13328 for the pilot station to the pier and Canadian Chart No. 4011 for the entrance to Bay of Fundy and traffic control areas.
AUTHORITY: Transport Canada, Harbours and Ports, Champlain Industrial Park, Bayside, St. Andrews, New Brunswick E0G 2X0. *Tel:* (506) 529-8939 (office), (506) 529-3429 (Residence). *Contact:* Milton Cross, Harbour Master.

ST. CATHARINES, Ontario: 43.10 N. 79.16 W.

Refer to "St. Lawrence Seaway" for important general information.
DOCUMENTS: See "Montreal".
PILOTAGE: Commences in lower St. Lawrence River and is continuous from district throughout Great Lakes. See "Quebec".
ANCHORAGES: Good anchorage areas at both ends of the Welland Canal.
MAX. SIZE: Max. size of vessel permitted in Welland Canal is LOA 730 ft. (222.51 m.), beam 76 ft. (23.16 m.), draft 26 ft. (7.92 m.).
HEALTH: Pratique granted at Quebec City for incoming vessels from foreign ports.
RADIO: Toronto Radio (VBG), Buffalo Radio (WBL).
TUGS: Tugs may be obtained from Port Weller Dry Docks Ltd.
BRIDGES: Vessels are instructed by Traffic control on the transit of the Canal. Generally no delay for bridges.
BERTHING:

Port Weller Harbour East, Wharf No. 1:
Type – Various and Sundry Partial Cargoes
Equipment – Self Unloaders or Rented Cranes
Length – 638 ft. (194.5 m.)
Depth – 27 ft. (8.23 m.)
Operator – St. Lawrence Warehousing Ltd., Hamilton, Ontario

Port Weller Harbour West Wharf No. 2:
Type – Coal, Sand, Zircon Ore, Bulk Sugar
Equipment – Self Unloaders only
Length – 1,288 ft. (392.6 m.)
Depth – 27 ft. (8.23 m.)
Storage Capacity – 76,500 tons.
Operator – Seaway Terminals, Hamilton, Ontario Fourum Transport Ltd.

St. Catharines Wharf, Whart No. 3 (Homer Dock):
Type – General Cargo, Oil
Equipment – Ships' Gear and Rental Equipment as Required.
Length – 330 ft. (100.6 m.)
Depth – 25 ft. (7.62 m.)
Operator – St. Catharines Fuels (C.F.M.G.Inc.) Shell (Canada) Ltd., Port Colborne.

Wharf (No. 3) used for bunkering purposes only. Abreast of the wharf is a turning basin with a depth of 7.62 m. (25 ft.) for ships of 106.68 m. (350 ft.) in length.

MEDICAL: Medical and hospital facilities are available.
TANKERS: There are limited berths suitable for small domestic tankers.
DENSITY: Fresh water.
FRESH WATER: None available except in emergency by tank wagon.
FUEL: Bunker and diesel fuel oil available at the North end of Wharf No. 2 from St. Catharines Fuel Oils Ltd. and marine diesel oil and Bunker C from Champion Group. Tel: 416-685-6511.
GANGWAY/DECK WATCHMEN: At discretion of the Master.
CUSTOMS ALLOWANCES: See "Montreal".
IDENTIFICATION CARDS: Not needed.
CONSULS: No consuls.
REPAIRS: Deck and engine repairs are possible at Port Weller.
DRY DOCKS: Situated at Port Weller able to accommodate vessels, LOA 730 ft.
SURVEYORS: A.B.S. at Toronto. Senior Steamship Inspector, Mr. J. Aspin. Lloyd's at St. Catharines.
AIRPORT: International Airport at Toronto, 75 miles away.
TIME: GMT minus 5 hours. Daylight Saving Time when clocks advanced 1 hour usually 28th April and retarded 27th October.
POLICE/AMBULANCE/FIRE: St. Catharines – Fire 684-4311; Police 416-688-4111. Welland – Fire 734-4511; Police 416-735-7811. Port Colborne – Fire 834-4511.
SHORE LEAVE: Only when usual formalities are observed, e.g. Customs, Immigration, etc.
AUTHORITY: St. Lawrence Seaway Authority, Western Region, P.O. Box 370, 508, Glendale Avenue, St. Catharines, Ontario L2R 6V8. *Tel:* 416-641-1932. *Contact:* J. B. McLeod, Regional Vice-President.

SAINT JOHN, N.B.: 45.16 N. 66.03 W. (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived vessel" when it enters harbour limits.

Seaward limits of the Port are as follows:
From Cape Spencer Lighthouse (Lat. 45° 11′ 42″ N., Long. 65° 54′ 37″ W.) due South to position Lat. 45° 08′ 03″ N. thence due West to intersect with the HW mark on the mainland near the Easterly entrance to Little Musquash Cove (Lat. 66° 17′ 12″ W.).

DOCUMENTS:
- 2 Crew Lists.
- 2 Passenger Lists.
- 3 Sets Customs Documents.
- 3 Sets Health Documents.
- 6 Sets Cargo Manifests.
- 6 Sets Bills on Lading.
- 3 Sets Ship's Papers.

PILOTAGE: Compulsory. Pilot boarding station in vicinity of position: Lat. 45° 10′ 30″ N., Long. 66° 03′ 30″ W. Masters are reminded that it is essential to send ETA by radio directly to ship's Agent 24 hours prior to arrival, to avoid delay in waiting for Pilot. This ETA (in GMT or LMT and so stated) must be attended no later than 4 hours before arrival. Any material change in ETA must be corrected as soon as possible. A Pilot can also be ordered directly through VTM Fundy Traffic or any coastguard radio station at least 4 hours prior to arrival at pilot station (Tel: 648-4864).

Pilots can be contacted through Fundy Traffic on VHF Channel 12.

Vessels must report to the Coastguard Vessel Traffic Management System prior to entering the Bay of Fundy. VHF Channels 14 and 12 are monitored. Vessels must follow instructions from VTM regarding traffic control.

ANCHORAGE: See chart.

Also see "Plan".

RESTRICTIONS: Saint John is a tidal harbour experiencing 2 high and 2 low tides every 24 hours; most vessels being handled between 2-3 hours before to 2-3 hours after HW depending on berth.

During the Spring each year, due to thaw conditions, a strong downflow (freshet) is experienced in the main harbour from the Saint John River. Vessels entering or departing from Courtenay Bay may be restricted to 28 ft. maximum draft and daylight movements only depending on conditions at the time. Freshet conditions normally occur between March and June and their duration depends on seasonal conditions.

MAX. SIZE: Controlling depth in main channel is 30 ft. at LW. Vessels length and breadth unlimited. Also see "Tankers".

HEALTH: See "Montreal".

RADIO: VCS Halifax or VAU Yarmouth.

TUGS: Available and considered necessary for docking and undocking large ships unless such vessels are equipped with thrusters. 2 tugs usually needed, both in and out.

BERTHING: 27 berths. Dredging done each year to maintain depth. Due to rise and fall of tide, boatmen usually necessary for running lines and docking. All berths are tidal. Tidal range varies from 22 ft. – 28 ft. (HW) and from 0 ft. – 7 ft. (LW).

Port Canada Facilities:

Berth	*Wharf Length (m.)*	*Depth Low Tide (m.)*	*Remarks*
Navy Is. 1a-1b	377	10.4	2 sheds – forest products – 2 Ro/Ro facilities. 1 for axial ramps – 1 for starboard quarter ramps
2a – 2b	312	9.8	Forest products and general cargo (Ro/Ro ramp under construction).
3a – 3b	312	9.8	Grain and general cargo
Rodney A & B	295	12.2	Container Terminal – 3 cranes. 1 stuffing shed (No. 8 – 36,750 sq.ft.)

Long Wharf B & C	280	10.7	Heated shed
Pugsley North	—	—	Open Terminal
Pugsley A	390	10.4	511 sq.m.
Pugsley B	—	—	
Pugsley C	232	10.4	Heated shed
Lower Cove	245	11.0	Open terminal – Ro/Ro facility, (starboard quarter ramp vessels)
Broad St. A – B	274	6.7	Bunker oil – fitting out berth
Barrack Point	290	12.2	Bulk facility – potash

SPECIAL CARGO FACILITIES: *Forterm:* Forterm is the corporate trade name for Forest Products Terminal Corporation Ltd.

The terminal is located at Navy Island. Strategically situated for both rail and highway transport access the spacious 80 ft. wide pierside aprons and make shipside cargo loading easy. Berthing space of 1,235 ft. (376 m.) provides for 2 simultaneous loading operations at any given time. Loading records of up to 400 tonnes per hour, per hatch are recorded.

Maple Leaf Mills Ltd.: Maple Leaf Mills Ltd. (Grain Division), a subsidiary of Canadian Pacific Enterprises Ltd., operates elevator "H" with a capacity of 1.5 million bushels under an agency agreement with the National Harbours Board.

This facility has the capacity to receive 80 carloads of grain per 8 hour day through automatic car dumpers. It also has a potential to deliver 80,000 bushels of grain per hour to Berth No. 3.

Brunterm: Container terminal located at Rodney Terminal with 3×45 ton ship-to-shore cranes, 15 toplifters plus a wide array of additional terminal handling equipment. The 3×45 long ton capacity cranes each have an outreach of 115 ft. and a back reach of 60 ft.

Two of the cranes are designed with articulating rail trucks on each of their 4 legs, enabling them to operate on both berths at the 50 acre, L-shaped facility. Brunterm has a 2,000 ft. marginal berth and 1,200 ft. slip berth. Water depth (minimum) is 40 ft.

Brunterm provides a full range of terminal services, including a 33,788 sq.ft. on-site stuffing and de-stuffing shed and facilities for both electrical and cryogenic refrigerated containers.

CRANES: Mobile cranes available.

J. D. Irving, Limited, (Equipment Division), have available for rental mobile cranes with hydraulic boom from 8 tons to 75 tons, with conventional boom for 17.5 tons to 140 tons and crawler cranes with conventional boom from 25 tons to 300 tons.

The above (and other equipment) available on prior request only.

MEDICAL: Hospital available, also Seaman's Clinic.

STEVEDORES: Stevedores required in morning must be ordered by 1600 hrs. preceding day, and stevedores required in afternoon must be ordered by 1100 hrs. same day.

TANKERS: Controlling depth in channel to tanker wharves at Courtenay Bay is 18 ft. LW. Also see "Restrictions" and Canaport.

FRESH WATER: Available from pipe-lines throughout the docks.

FUEL: Fuel oil and diesel oil – ample stocks of fuel oil and diesel oil are always available. Diesel and bunker fuel can be delivered by pipe-line in Courtenay Bay (vessels restricted to navigation at HW). Irving Oil operates a bunkering barge service and also delivers to ships by pipe-line or by truck or tankwagon. Gulf, Crystal Oil Ltd. and Texaco Canada Ltd. also supply vessels by truck.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 50 cigars or 2 lb. tobacco per person over 16 years old.

Wines/Spirits: total of 40 ounces per person over 21 years old.

Subsequent issues may be authorised to Crew members of foreign vessels, but the max. quantity any Crew member may hold at any time must not exceed 300 cigarettes, 75 cigars, 3 lb. tobacco, and 60 ounces wines/spirits.

IDENTIFICATION CARDS: Not required.

CONSULS:

Belgian Consulate – Honorary Consul, Joz De Bedie, 6126 Regina Terrace, Halifax, N.S. Tel: (902) 425-6546.

Danish Consulate – Eric L. Teed, Q.C., Seawood Lane, West. Tel: 672-6856.

Dominican Republic – Honorary Vice-Consul, John A. Driscoll, 50 Broad Street. Tel: 693-1403.

Finland – Thomas L. McGloan Jr., Q.C., Harbour Building. Tel: 693-7268.

RIMOUSKI, Quebec: 48.25 N. 68.34 W.

DOCUMENTS: See "Quebec". Rimouski is a port of entry with Customs and Immigration Officers stationed at the port. It is also a quarantine sub-station.

PILOTAGE: Not compulsory. Pilots board at entrance to harbour.

APPROACHES: Rimouski is approached through a dredged channel depth 18 ft. Tidal variation is from 10 ft. – 14.5 ft.

ANCHORAGES: Vessels anchor in the roads or near the East end of Barnaby Island.

HEALTH: See "Documents".

RADIO: Mont – Joli (VCF).

BERTHING: There are 2 wharves, operated by Transport Canada.

1. L-shaped wharf, 2,330 ft. long, 243 ft. wide at head of L-shape. Depth alongside 24 ft.
2. Length 2,850 ft., depth 21 ft. alongside, which lies to the West of the L-shaped wharf.

CRANES: Mobile cranes from 7 – 100 tons available.

FRESH WATER: Available ex-wharf.

FUEL: Bunker "C" and diesel available.

REPAIRS: Minor repairs only.

BANKS: Bank Canadian National, 186 Ave. de la Cathedrale, Rimouski, G5L 5H9.

AUTHORITY: Transport Canada, Garde Cotiere Canadienne, Region des Laurentides, 104 Dalhousie, Suite 121, Quebec, Que G1K 4B8. *Tel:* (418) 648-3680. *Telex:* 051-3051. *Contact:* Jacques St. Laurent, Harbour Master, Rimouski. *Tel:* 418-723-6563.

ST. ANDREWS (Bayside), New Brunswick: 45.10 N. 67.08 W. (See Plan)

DOCUMENTS:

Clearance from Last Port.
3 Copies of Crew List.
Crew's Effects List.
Stores List.
2 Copies of Customs Entrance A-6 and Manifests.
Current Safety Radio Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Derat Certificate.

PILOTAGE: Not compulsory but strongly recommended. Pilot boards off East Quoddy Head, Campobello Island. Notice required 24 hours. The Pilot is a retired fisherman and he only gives advice on tide and weather.

ANCHORAGES: Areas are available a few hundred metres off of the wharf face, 3 miles from the Wharf just East of St. Andrews and in the vicinity of Campobello Island. All of the locations have over 70 ft. of water and good bottom. Those in the vicinity of Campobello can be reached by radio direction from the Pilot if shelter is needed and the Pilot cannot board.

RESTRICTIONS: None have been imposed but daylight berthing and departures are recommended.

HEALTH: Send advice to Saint John, New Brunswick at least 24 hours before arrival.

RADIO: Yarmouth, Nova Scotia.

VHF: Bay of Fundy Traffic Control Channel 14 (Tel: 506-648-4696); Pilot Channel 11 (Tel: 506-752-2283). Port Stevedores and line crews Channel 10 (Tel: 506-529-8866. Telex: 014 47321).

BERTHING: *Sand Point Wharf:* The wharf is located in position Lat. 45° 09′ 35″ N., Long. 67° 08′ 30″ W. The wharf is in the form of an "L" shape.

The outer face has a length of 300 ft. and draft at LWOST of 28 ft. The inner face has a length of 260 ft. and draft of 25 ft. Mean tidal range at berth is 26 ft. The ebb tide and river flow set onto the wharf, the flood tides sets off the pier.

The distance from the pilot station to the pier is 21 miles, with a minimum draft of 45 ft. There are navigation lights in the channel and the pier is lit at both ends.

SPECIAL CARGO HANDLING FACILITIES: Conveyors are available to load bagged cargoes (i.e. potatoes). This equipment requires ship's crew to be very diligent in tending lines.

CRANES: Shore cranes are available in the 25 to 35 ton range but the wharf space limits the number of usable cranes to two.

STEVEDORES: Normal working hours are 12 to 16 hours per day (varying by commodity), 7 days per week. Cargoes handled regularly are bulk and cartoned frozen fish, lumber, potatoes, unitised pulp, frozen orange juice concentrate in drums. Transhipping is also done at the pier both across the pier and directly from ship to ship.

MEDICAL: Doctor and hospital available.

DENSITY: 1017 (varies with tide).

FRESH WATER: Available.

FUEL: MDO and IFO are available. Delivery is by truck.

SURVEYORS: Located in Saint John.

GANGWAY/DECK WATCHMEN: Ship's crew. Ship's gangway used. Fixed accommodation ladders are only usable at or near high tide.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CUSTOMS ALLOWANCES: Tobacco each man 200 cigarettes per week. Alcohol each man 40 oz. of wine or spirits per week.

AIRPORT: Nearest commercial airport at Saint John, New Brunswick, (45 miles), but a small public airstrip is located in St. Stephen, New Brunswick (16 miles).

TIME: GMT minus 4 hours. Last Sunday in April clocks advance 1 hour and last Sunday in October clocks retard 1 hour.

HOLIDAYS: New Year's Day; Easter Sunday; Thanksgiving Day; Christmas Day.

SHORE LEAVE: No restrictions.

GENERAL:

Services: Fresh provisions, ship's laundry service.

Chart: Use U.S. Chart (Calais to West Quoddy Head) No: 13328 for the pilot station to the pier and Canadian Chart No. 4011 for the entrance to Bay of Fundy and traffic control areas.

AUTHORITY: Transport Canada, Harbours and Ports, Champlain Industrial Park, Bayside, St. Andrews, New Brunswick E0G 2X0. *Tel:* (506) 529-8939 (office), (506) 529-3429 (Residence). *Contact:* Milton Cross, Harbour Master.

ST. CATHARINES, Ontario: 43.10 N. 79.16 W.

Refer to "St. Lawrence Seaway" for important general information.

DOCUMENTS: See "Montreal".

PILOTAGE: Commences in lower St. Lawrence River and is continuous from district throughout Great Lakes. See "Quebec".

ANCHORAGES: Good anchorage areas at both ends of the Welland Canal.

MAX. SIZE: Max. size of vessel permitted in Welland Canal is LOA 730 ft. (222.51 m.), beam 76 ft. (23.16 m.), draft 26 ft. (7.92 m.).

HEALTH: Pratique granted at Quebec City for incoming vessels from foreign ports.

RADIO: Toronto Radio (VBG), Buffalo Radio (WBL).

TUGS: Tugs may be obtained from Port Weller Dry Docks Ltd.

BRIDGES: Vessels are instructed by Traffic control on the transit of the Canal. Generally no delay for bridges.

BERTHING:

Port Weller Harbour East, Wharf No. 1:

Type – Various and Sundry Partial Cargoes
Equipment – Self Unloaders or Rented Cranes
Length – 638 ft. (194.5 m.)
Depth – 27 ft. (8.23 m.)
Operator – St. Lawrence Warehousing Ltd., Hamilton, Ontario

Port Weller Harbour West Wharf No. 2:

Type – Coal, Sand, Zircon Ore, Bulk Sugar
Equipment – Self Unloaders only
Length – 1,288 ft. (392.6 m.)
Depth – 27 ft. (8.23 m.)
Storage Capacity – 76,500 tons.
Operator – Seaway Terminals, Hamilton, Ontario Fourum Transport Ltd.

St. Catharines Wharf, Wharf No. 3 (Homer Dock):

Type – General Cargo, Oil
Equipment – Ships' Gear and Rental Equipment as Required.
Length – 330 ft. (100.6 m.)
Depth – 25 ft. (7.62 m.)
Operator – St. Catharines Fuels (C.F.M.G.Inc.) Shell (Canada) Ltd., Port Colborne.

Wharf (No. 3) used for bunkering purposes only. Abreast of the wharf is a turning basin with a depth of 7.62 m. (25 ft.) for ships of 106.68 m. (350 ft.) in length.

MEDICAL: Medical and hospital facilities are available.

TANKERS: There are limited berths suitable for small domestic tankers.

DENSITY: Fresh water.

FRESH WATER: None available except in emergency by tank wagon.

FUEL: Bunker and diesel fuel oil available at the North end of Wharf No. 2 from St. Catharines Fuel Oils Ltd. and marine diesel oil and Bunker C from Champion Group. Tel: 416-685-6511.

GANGWAY/DECK WATCHMEN: At discretion of the Master.

CUSTOMS ALLOWANCES: See "Montreal".

IDENTIFICATION CARDS: Not needed.

CONSULS: No consuls.

REPAIRS: Deck and engine repairs are possible at Port Weller.

DRY DOCKS: Situated at Port Weller able to accommodate vessels, LOA 730 ft.

SURVEYORS: A.B.S. at Toronto. Senior Steamship Inspector, Mr. J. Aspin. Lloyd's at St. Catharines.

AIRPORT: International Airport at Toronto, 75 miles away.

TIME: GMT minus 5 hours. Daylight Saving Time when clocks advanced 1 hour usually 28th April and retarded 27th October.

POLICE/AMBULANCE/FIRE: St. Catharines – Fire 684-4311; Police 416-688-4111. Welland – Fire 734-4511; Police 416-735-7811. Port Colborne – Fire 834-4511.

SHORE LEAVE: Only when usual formalities are observed, e.g. Customs, Immigration, etc.

AUTHORITY: St. Lawrence Seaway Authority, Western Region, P.O. Box 370, 508, Glendale Avenue, St. Catharines, Ontario L2R 6V8. *Tel:* 416-641-1932. *Contact:* J. B. McLeod, Regional Vice-President.

SAINT JOHN, N.B.: 45.16 N. 66.03 W. (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived vessel" when it enters harbour limits.

Seaward limits of the Port are as follows:

From Cape Spencer Lighthouse (Lat. 45° 11′ 42″ N., Long. 65° 54′ 37″ W.) due South to position Lat. 45° 08′ 03″ N. thence due West to intersect with the HW mark on the mainland near the Easterly entrance to Little Musquash Cove (Lat. 66° 17′ 12″ W.).

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
3 Sets Customs Documents.
3 Sets Health Documents.
6 Sets Cargo Manifests.
6 Sets Bills on Lading.
3 Sets Ship's Papers.

PILOTAGE: Compulsory. Pilot boarding station in vicinity of position: Lat. 45° 10′ 30″ N., Long. 66° 03′ 30″ W. Masters are reminded that it is essential to send ETA by radio directly to ship's Agent 24 hours prior to arrival, to avoid delay in waiting for Pilot. This ETA (in GMT or LMT and so stated) must be attended no later than 4 hours before arrival. Any material change in ETA must be corrected as soon as possible. A Pilot can also be ordered directly through VTM Fundy Traffic or any coastguard radio station at least 4 hours prior to arrival at pilot station (Tel: 648-4864).

Pilots can be contacted through Fundy Traffic on VHF Channel 12.

Vessels must report to the Coastguard Vessel Traffic Management System prior to entering the Bay of Fundy. VHF Channels 14 and 12 are monitored. Vessels must follow instructions from VTM regarding traffic control.

ANCHORAGE: See chart.

Also see "Plan".

RESTRICTIONS: Saint John is a tidal harbour experiencing 2 high and 2 low tides every 24 hours; most vessels being handled between 2-3 hours before to 2-3 hours after HW depending on berth.

During the Spring each year, due to thaw conditions, a strong downflow (freshet) is experienced in the main harbour from the Saint John River. Vessels entering or departing from Courtenay Bay may be restricted to 28 ft. maximum draft and daylight movements only depending on conditions at the time. ST. ANDREWS (Bayside), New Brunswick: 45.10 N. 67.08 W. (See Plan)

DOCUMENTS:
Clearance from Last Port.
3 Copies of Crew List.
Crew's Effects List.
Stores List.
2 Copies of Customs Entrance A-6 and Manifests.
Current Safety Radio Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Load Line Certificate.
Derat Certificate.

PILOTAGE: Not compulsory but strongly recommended. Pilot boards off East Quoddy Head, Campobello Island. Notice required 24 hours. The Pilot is a retired fisherman and he only gives advice on tide and weather.
ANCHORAGES: Areas are available a few hundred metres off of the wharf face, 3 miles from the Wharf just East of St. Andrews and in the vicinity of Campobello Island. All of the locations have over 70 ft. of water and good bottom. Those in the vicinity of Campobello can be reached by radio direction from the Pilot if shelter is needed and the Pilot cannot board.
RESTRICTIONS: None have been imposed but daylight berthing and departures are recommended.
HEALTH: Send advice to Saint John, New Brunswick at least 24 hours before arrival.
RADIO: Yarmouth, Nova Scotia.
VHF: Bay of Fundy Traffic Control Channel 14 (Tel: 506-648-4696); Pilot Channel 11 (Tel: 506-752-2283). Port Stevedores and line crews Channel 10 (Tel: 506-529-8866. Telex: 014 47321).
BERTHING: *Sand Point Wharf:* The wharf is located in position Lat. 45° 09′ 35″ N., Long. 67° 08′ 30″ W. The wharf is in the form of an "L" shape.

The outer face has a length of 300 ft. and draft at LWOST of 28 ft. The inner face has a length of 260 ft. and draft of 25 ft. Mean tidal range at berth is 26 ft. The ebb tide and river flow set onto the wharf, the flood tides sets off the pier.

The distance from the pilot station to the pier is 21 miles, with a minimum draft of 45 ft. There are navigation lights in the channel and the pier is lit at both ends.

SPECIAL CARGO HANDLING FACILITIES: Conveyors are available to load bagged cargoes (i.e. potatoes). This equipment requires ship's crew to be very diligent in tending lines.
CRANES: Shore cranes are available in the 25 to 35 ton range but the wharf space limits the number of usable cranes to two.
STEVEDORES: Normal working hours are 12 to 16 hours per day (varying by commodity), 7 days per week. Cargoes handled regularly are bulk and cartoned frozen fish, lumber, potatoes, unitised pulp, frozen orange juice concentrate in drums. Transhipping is also done at the pier both across the pier and directly from ship to ship.
MEDICAL: Doctor and hospital available.
DENSITY: 1017 (varies with tide).
FRESH WATER: Available.
FUEL: MDO and IFO are available. Delivery is by truck.
SURVEYORS: Located in Saint John.
GANGWAY/DECK WATCHMEN: Ship's crew. Ship's gangway used. Fixed accommodation ladders are only usable at or near high tide.
OPENING/CLOSING HATCHES: Normally carried out by crew.
CUSTOMS ALLOWANCES: Tobacco each man 200 cigarettes per week. Alcohol each man 40 oz. of wine or spirits per week.
AIRPORT: Nearest commercial airport at Saint John, New Brunswick, (45 miles), but a small public airstrip is located in St. Stephen, New Brunswick (16 miles).
TIME: GMT minus 4 hours. Last Sunday in April clocks advance 1 hour and last Sunday in October clocks retard 1 hour.
HOLIDAYS: New Year's Day; Easter Sunday; Thanksgiving Day; Christmas Day.
SHORE LEAVE: No restrictions.
GENERAL:
Services: Fresh provisions, ship's laundry service.
Chart: Use U.S. Chart (Calais to West Quoddy Head) No: 13328 for the pilot station to the pier and Canadian Chart No. 4011 for the entrance to Bay of Fundy and traffic control areas.
AUTHORITY: Transport Canada, Harbours and Ports, Champlain Industrial Park, Bayside, St. Andrews, New Brunswick E0G 2X0. *Tel:* (506) 529-8939 (office), (506) 529-3429 (Residence). *Contact:* Milton Cross, Harbour Master.

ST. CATHARINES, Ontario: 43.10 N. 79.16 W.

Refer to "St. Lawrence Seaway" for important general information.
DOCUMENTS: See "Montreal".
PILOTAGE: Commences in lower St. Lawrence River and is continuous from district throughout Great Lakes. See "Quebec".
ANCHORAGES: Good anchorage areas at both ends of the Welland Canal.
MAX. SIZE: Max. size of vessel permitted in Welland Canal is LOA 730 ft. (222.51 m.), beam 76 ft. (23.16 m.), draft 26 ft. (7.92 m.).
HEALTH: Pratique granted at Quebec City for incoming vessels from foreign ports.
RADIO: Toronto Radio (VBG), Buffalo Radio (WBL).
TUGS: Tugs may be obtained from Port Weller Dry Docks Ltd.
BRIDGES: Vessels are instructed by Traffic control on the transit of the Canal. Generally no delay for bridges.
BERTHING:

Port Weller Harbour East, Wharf No. 1:
Type – Various and Sundry Partial Cargoes
Equipment – Self Unloaders or Rented Cranes
Length – 638 ft. (194.5 m.)
Depth – 27 ft. (8.23 m.)
Operator – St. Lawrence Warehousing Ltd., Hamilton, Ontario

Port Weller Harbour West Wharf No. 2:
Type – Coal, Sand, Zircon Ore, Bulk Sugar
Equipment – Self Unloaders only
Length – 1,288 ft. (392.6 m.)
Depth – 27 ft. (8.23 m.)
Storage Capacity – 76,500 tons.
Operator – Seaway Terminals, Hamilton, Ontario Fourum Transport Ltd.

St. Catharines Wharf, Wharf No. 3 (Homer Dock):
Type – General Cargo, Oil
Equipment – Ships' Gear and Rental Equipment as Required.
Length – 330 ft. (100.6 m.)
Depth – 25 ft. (7.62 m.)
Operator – St. Catharines Fuels (C.F.M.G.Inc.) Shell (Canada) Ltd., Port Colborne.

Wharf (No. 3) used for bunkering purposes only. Abreast of the wharf is a turning basin with a depth of 7.62 m. (25 ft.) for ships of 106.68 m. (350 ft.) in length.

MEDICAL: Medical and hospital facilities are available.
TANKERS: There are limited berths suitable for small domestic tankers.
DENSITY: Fresh water.
FRESH WATER: None available except in emergency by tank wagon.
FUEL: Bunker and diesel fuel oil available at the North end of Wharf No. 2 from St. Catharines Fuel Oils Ltd. and marine diesel oil and Bunker C from Champion Group. Tel: 416-685-6511.
GANGWAY/DECK WATCHMEN: At discretion of the Master.
CUSTOMS ALLOWANCES: See "Montreal".
IDENTIFICATION CARDS: Not needed.
CONSULS: No consuls.
REPAIRS: Deck and engine repairs are possible at Port Weller.
DRY DOCKS: Situated at Port Weller able to accommodate vessels, LOA 730 ft.
SURVEYORS: A.B.S. at Toronto. Senior Steamship Inspector, Mr. J. Aspin. Lloyd's at St. Catharines.
AIRPORT: International Airport at Toronto, 75 miles away.
TIME: GMT minus 5 hours. Daylight Saving Time when clocks advanced 1 hour usually 28th April and retarded 27th October.
POLICE/AMBULANCE/FIRE: St. Catharines – Fire 684-4311; Police 416-688-4111. Welland – Fire 734-4511; Police 416-735-7811. Port Colborne – Fire 834-4511.
SHORE LEAVE: Only when usual formalities are observed, e.g. Customs, Immigration, etc.
AUTHORITY: St. Lawrence Seaway Authority, Western Region, P.O. Box 370, 508, Glendale Avenue, St. Catharines, Ontario L2R 6V8. *Tel:* 416-641-1932. *Contact:* J. B. McLeod, Regional Vice-President.

SAINT JOHN, N.B.: 45.16 N. 66.03 W. (See Plan)

PORT LIMITS: A vessel is considered to be an "arrived vessel" when it enters harbour limits.

Seaward limits of the Port are as follows:
From Cape Spencer Lighthouse (Lat. 45° 11′ 42″ N., Long. 65° 54′ 37″ W.) due South to position Lat. 45° 08′ 03″ N. thence due West to intersect with the HW mark on the mainland near the Easterly entrance to Little Musquash Cove (Lat. 66° 17′ 12″ W.).

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
3 Sets Customs Documents.
3 Sets Health Documents.
6 Sets Cargo Manifests.
6 Sets Bills on Lading.
3 Sets Ship's Papers.

PILOTAGE: Compulsory. Pilot boarding station in vicinity of position: Lat. 45° 10′ 30″ N., Long. 66° 03′ 30″ W. Masters are reminded that it is essential to send ETA by radio directly to ship's Agent 24 hours prior to arrival, to avoid delay in waiting for Pilot. This ETA (in GMT or LMT and so stated) must be attended no later than 4 hours before arrival. Any material change in ETA must be corrected as soon as possible. A Pilot can also be ordered directly through VTM Fundy Traffic or any coastguard radio station at least 4 hours prior to arrival at pilot station (Tel: 648-4864).

Pilots can be contacted through Fundy Traffic on VHF Channel 12.

Vessels must report to the Coastguard Vessel Traffic Management System prior to entering the Bay of Fundy. VHF Channels 14 and 12 are monitored. Vessels must follow instructions from VTM regarding traffic control.

ANCHORAGE: See chart.

Also see "Plan".

RESTRICTIONS: Saint John is a tidal harbour experiencing 2 high and 2 low tides every 24 hours; most vessels being handled between 2-3 hours before to 2-3 hours after HW depending on berth.

During the Spring each year, due to thaw conditions, a strong downflow (freshet) is experienced in the main harbour from the Saint John River. Vessels entering or departing from Courtenay Bay may be restricted to 28 ft. maximum draft and daylight movements only depending on conditions at the time. Freshet conditions normally occur between March and June and their duration depends on seasonal conditions.

MAX. SIZE: Controlling depth in main channel is 30 ft. at LW. Vessels length and breadth unlimited. Also see "Tankers".

HEALTH: See "Montreal".

RADIO: VCS Halifax or VAU Yarmouth.

TUGS: Available and considered necessary for docking and undocking large ships unless such vessels are equipped with thrusters. 2 tugs usually needed, both in and out.

BERTHING: 27 berths. Dredging done each year to maintain depth. Due to rise and fall of tide, boatmen usually necessary for running lines and docking. All berths are tidal. Tidal range varies from 22 ft. – 28 ft. (HW) and from 0 ft. – 7 ft. (LW).

Port Canada Facilities:

Berth	*Wharf Length (m.)*	*Depth Low Tide (m.)*	*Remarks*
Navy Is. 1a-1b	377	10.4	2 sheds – forest products – 2 Ro/Ro facilities. 1 for axial ramps – 1 for starboard quarter ramps
2a – 2b	312	9.8	Forest products and general cargo (Ro/Ro ramp under construction).
3a – 3b	312	9.8	Grain and general cargo
Rodney A & B	295	12.2	Container Terminal – 3 cranes. 1 stuffing shed (No. 8 – 36,750 sq.ft.)
Rodney C & D	606	12.2	
11	134	9.1	
12a – 12b	265	9.1	
13a – 13b	244	9.1	Heated shed
14a – 14b	244	9.1	
Long Wharf A	189	9.1	
Long Wharf B & C	280	10.7	Heated shed
Pugsley North	—	—	Open Terminal
Pugsley A	390	10.4	511 sq.m.
Pugsley B	—	—	
Pugsley C	232	10.4	Heated shed
Lower Cove	245	11.0	Open terminal – Ro/Ro facility, (starboard quarter ramp vessels)
Broad St. A – B	274	6.7	Bunker oil – fitting out berth
Barrack Point	290	12.2	Bulk facility – potash

SPECIAL CARGO FACILITIES: *Forterm:* Forterm is the corporate trade name for Forest Products Terminal Corporation Ltd.

The terminal is located at Navy Island. Strategically situated for both rail and highway transport access the spacious 80 ft. wide pierside aprons and make shipside cargo loading easy. Berthing space of 1,235 ft. (376 m.) provides for 2 simultaneous loading operations at any given time. Loading records of up to 400 tonnes per hour, per hatch are recorded.

Maple Leaf Mills Ltd.: Maple Leaf Mills Ltd. (Grain Division), a subsidiary of Canadian Pacific Enterprises Ltd., operates elevator "H" with a capacity of 1.5 million bushels under an agency agreement with the National Harbours Board.

This facility has the capacity to receive 80 carloads of grain per 8 hour day through automatic car dumpers. It also has a potential to deliver 80,000 bushels of grain per hour to Berth No. 3.

Brunterm: Container terminal located at Rodney Terminal with 3×45 ton ship-to-shore cranes, 15 toplifters plus a wide array of additional terminal handling equipment. The 3×45 long ton capacity cranes each have an outreach of 115 ft. and a back reach of 60 ft.

Two of the cranes are designed with articulating rail trucks on each of their 4 legs, enabling them to operate on both berths at the 50 acre, L-shaped facility. Brunterm has a 2,000 ft. marginal berth and 1,200 ft. slip berth. Water depth (minimum) is 40 ft.

Brunterm provides a full range of terminal services, including a 33,788 sq.ft. on-site stuffing and de-stuffing shed and facilities for both electrical and cryogenic refrigerated containers.

CRANES: Mobile cranes available.

J. D. Irving, Limited, (Equipment Division), have available for rental mobile cranes with hydraulic boom from 8 tons to 75 tons, with conventional boom for 17.5 tons to 140 tons and crawler cranes with conventional boom from 25 tons to 300 tons.

The above (and other equipment) available on prior request only.

MEDICAL: Hospital available, also Seaman's Clinic.

STEVEDORES: Stevedores required in morning must be ordered by 1600 hrs. preceding day, and stevedores required in afternoon must be ordered by 1100 hrs. same day.

TANKERS: Controlling depth in channel to tanker wharves at Courtenay Bay is 18 ft. LW. Also see "Restrictions" and Canaport.

FRESH WATER: Available from pipe-lines throughout the docks.

FUEL: Fuel oil and diesel oil – ample stocks of fuel oil and diesel oil are always available. Diesel and bunker fuel can be delivered by pipe-line in Courtenay Bay (vessels restricted to navigation at HW). Irving Oil operates a bunkering barge service and also delivers to ships by pipe-line or by truck or tankwagon. Gulf, Crystal Oil Ltd. and Texaco Canada Ltd. also supply vessels by truck.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: Tobacco: 200 cigarettes or 50 cigars or 2 lb. tobacco per person over 16 years old.

Wines/Spirits: total of 40 ounces per person over 21 years old.

Subsequent issues may be authorised to Crew members of foreign vessels, but the max. quantity any Crew member may hold at any time must not exceed 300 cigarettes, 75 cigars, 3 lb. tobacco, and 60 ounces wines/spirits.

IDENTIFICATION CARDS: Not required.

CONSULS:

Belgian Consulate – Honorary Consul, Joz De Bedie, 6126 Regina Terrace, Halifax, N.S. Tel: (902) 425-6546.

Danish Consulate – Eric L. Teed, Q.C., Seawood Lane, West. Tel: 672-6856.

Krauter, General Manager. C. E. Pringle, Harbour Master and Director of Operations. Captain A. G. E. Soppitt, Assistant Harbour Master.

Harbour Master is available 24 hours per day through Fundy Traffic.

ST. JOHN'S, Newfoundland: 47.34 N. 52.41 W.

(See Plan)

DOCUMENTS:

Quarantine:
Completed Declaration of Health (QSI).
Valid Derat. Certificate.
International Vaccination Certificates.

Customs:
Crew Declarations (Y.14).
3 Ship's Stores (E.1).
Inward Report (A.6).
Complete copy of each Manifest for goods to be discharged in Canada.
Clearance from Last Port.

Immigration:
2 Immigration Crew Lists (200).
2 Tally Sheets (201).
3 Passenger Manifests for passengers not disembarking.
Immigration Control Cards for each person.

PILOTAGE: Compulsory. To avoid a delay in obtaining a Pilot, the Owner, Master, or Agent of a ship bound for St. John's must report via any coast station by R/T or W/T the vessel's ETA 12 hours in advance of ETA. ETA's must be confirmed or corrected not less than 3 hours prior to ETA. Time must be GMT. In message of ETA, the following information must be included.

(1) Name/call sign of vessel
(2) Nationality
(3) Length, draft, and gross registered tonnage.

Pilot Boarding Station: Lat. 47° 33′ 42″ N., Long. 52° 37′ 54″ W. (2 miles (3.22 km.) off entrance)

St. John's Traffic Centre stand by on: VHF Channel 16 (156.8 MHz); VHF Channel 11 (156.55 MHz); Telephone: 772-2083.

Berthing:

(a) Pilot – compulsory. Shifting or ETD requires a 4 hour advance notification to Coast Guard Traffic Centre.
(b) Berths arranged by Harbour Master in advance.
(c) Two small tugs available.
(d) Linesmen arranged through ship's local Agent.
(e) Boatmen – arranged through ship's local Agents.

ANCHORAGE: No anchorages near harbour. Safe anchorage in harbour.

MAX. SIZE: No restrictions except draft 35 ft. max.

HEALTH: Pratique, cable name and nationality of ship, ports of call during voyage, nature of cargo, number of crew and passengers, port of destination and Agent, condition of health of all on board with details of any sickness, and whether all vaccinated. Also see "Montreal".

RADIO: St. John's Coast Guard Radio, call sign VON duplex R/T on 2118 kHz, 2206 kHz, and 4110.8 kHz.

TUGS: As required by Pilots. Normally ship's lines used. 2 small tugs available.

Denmark	726–8000	Germany F.R.	722–1525
Sweden	726–8000	Iceland	722–4270

REPAIRS: Most deck and engine repairs possible.

SURVEYORS: Lloyd's Register, P.O.Box 5054, St. John's, NF, A1C 5V3. Tel: (709) 726–0543, (709) 368–2538 (Residence).

DRY DOCKS: St. John's Dry Dock (owned by C.N.R.). Length at coping head, 173.9 m.; at floor head, 173.2 m.; maximum length of keel blocks 167.1 m.; width at coping, 23.3 m.; depth of water over sill, 8.2 m.

Machine shop is equipped for major repairs to hulls machinery.

A modern synchrolift development project has been completed and now operational at the Newfoundland Dockyard. The synchrolift is a massive elevator designed to lift ships up to 3,640 tonnes out of the water for repairs.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Distance 4 miles served by Air Canada and Canadian Pacific.

TIME: GMT less 3.5 hours. Last Sunday in April clocks advanced 1 hour. Last Sunday October clocks retarded 1 hour.

POLICE/AMBULANCE/FIRE: Police 722-5111; Ambulance 726-3037; Fire 722-1234. Emergency No. 911. Ports Canada Police 772-4669.

EMERGENCY CO-ORDINATION CENTRE: Coast Guard, Search and Rescue (St. John's, Newfoundland). Tel: (709) 772–5151.

SERVICES: Compass adjusting, radar repairs, RT repairs, gyro compass repairs, all types electronic equipment repaired. Divers available for surveys and underwater repairs.

SHORE LEAVE: No Restrictions.

REGULATIONS: Fishing ships must advise of weekend arrival on Friday so that permit to take supplies can be obtained from Federal Dept. of Fisheries.

HOLIDAYS: New Year's Day; St. Patrick's Day; Good Friday; St. George's Day; Commonwealth Day; Discovery Day; Memorial Day; Orangemen's Day; Labour Day; Armistice Day; Christmas Day; Boxing Day.

Except for Easter and Christmas, the above holidays are normally taken on the nearest Monday to the festival date.

SHIP SUPPLY SERVICE: *Offshore Services:*

1. Seabase Limited, P.O.Box 5099, Suite 809, Atlantic Place, St. John's, Newfoundland A1C 5V3.
2. Harvey Offshore Services, P.O.Box 5128, St. John's, Newfoundland A1C 5V6.
3. Petro Canada Exploration Ltd., P.O.Box 5190, St. John's, Newfoundland A1C 5V5.
4. Mobil Oil Canada Ltd., Box 62, Atlantic Place, St. John's, Newfoundland A1C 6C9.
5. Husky Bow Valley, Box 79, Suite 810, Atlantic Place, St. John's, Newfoundland A1C 6C9.

Helicopter Services: Helicopter services are available from St. John's Airport just minutes from the St. John's waterfront. These are operated by private interests as follows:

1. Sealand Helicopters Ltd., P.O.Box 5188, St. John's, Newfoundland A1C 5V5.
2. Universal Helicopters, P.O.Box 9025, Station "B", St. John's, Newfoundland A1A 2X3.

AUTHORITY: St. John's Port Corporation, P.O.Box 6178, 3 Water Street, St. John's, NF, A1C 5X8. *Tel:* (709) 772-4664, 772-4665, 772-4666. *Telex:* 016-3343. *FAX:* (709) 772-4689. *Contact:* D. J. Fox, General Manager.

Captain H. Peden, Harbour Master. *Tel:* (709) 772-4667, 772-4668.

Lieut. J. S. Peckford, Director of Ports Canada Police Tel: (709) 772-4669.

SARNIA, Ontario: 42.59 N. 82.25 W.

Refer to "St. Lawrence Seaway" for important general information.

DOCUMENTS: All documentation carried out by Authorities in Montreal. Only when vessels have called at United States port after departing Montreal will any changes in documentation be necessary, which will consist of a United States Customs Clearance Certificate, to be available on board.
Immigration Papers.
1 copy QS2 (Health Certificate).
3 Stores Lists.
Crew Personal Effects List.
Customs Clearance.
All of the above will have been stamped in Montreal.

PILOTAGE: Notice of ETA should be given to Pilots at least 12 hours before arrival at Sarnia to avoid delays. Accommodation ladder and pilot ladder should be rigged in readiness.

RESTRICTIONS: Navigation season – ice forms about December 15th and breaks up about the middle of March. Vessels size restricted by Seaway locks.

MAX. SIZE: Length 730 ft., beam 75 ft. 6 in., draft 25 ft. 6 in.

RADIO: Sarnia Radio, call sign VBE, communicate on either AM or FM radio telephone.

HEALTH: Pratique granted at Montreal.

TUGS: Available. Tel: Sarnia 336-5588.

BERTHING: Over 2 miles of water front including main wharves listed below:

C.N.R. Dock, length 1,100 ft., depth alongside 23 ft.; Empire Hanna Coal Dock, length 900 ft., depth alongside 19 ft.; Elevator Dock, length 900 ft., depth alongside 27 ft.; Dept. of Transport Dock, length 1,045 ft., depth alongside 27 ft.; Reid Aggregate Dock, length 500 ft., depth alongside 26 ft.; Imperial Oil Docks – Upper Dock, length 592 ft., depth alongside 23 ft.; Fueling Dock, length 928 ft., depth alongside 26 ft.; Special Products Dock, length 284 ft., depth alongside 26 ft.; Lower Dock, length 720 ft., depth alongside 23 ft.; Polysar Corp. Dock, length 600 ft., depth alongside 26 ft.; Dow Chemical Dock, length 680 ft., depth alongside 26 ft.; Sun Oil Dock North Dock, length 600 ft., depth alongside 26 ft.; South Dock, length 500 ft., depth alongside 26 ft.; Shell Oil Dock North Dock, length 1,000 ft., depth alongside 26 ft.; Middle Dock, length 500 ft., depth alongside 26 ft.; South Dock, length 500 ft., depth alongside 26 ft.

DENSITY: Fresh water.

MEDICAL: Hospital facilities at Sarnia. All assistance available.

FRESH WATER: Available at all berths.

FUEL: All grades available from Imperial Oil and Shell Co. berths.

REPAIRS: Hull, boiler and engine repairs can be effected. No dry docks.

AUTHORITY: Transport Canada, P.O.Box 325, Sarnia, Ontario, Canada N7T 7J2. *Tel:* (519) 337-5121. *Contact:* W. D. McCart, Harbour Master.

SAULT STE. MARIE, Ontario: 46.28 N. 84.22 W. (See Plan)

Refer to "St. Lawrence Seaway" for important general information.

Note: The water depths quoted are at extreme low water, normally more water available.

DOCUMENTS: See "Montreal".

PILOTAGE: River or local Pilots available on 24 hours notice. U.S. Corps of Engineers, Sault area operate and control St. Mary's River Falls Canal and regulate traffic through all locks in both cities.

HEALTH: Board of Health Officers can make a call to the ship.

RADIO: Good ship-to-shore telecommunication available through Department of Transport Radio Station (UBB 800), Canadian Pacific Telecommunications and Canadian National Telecommunications. United States Coast Guard maintain fully equipped Coast Guard Base and have radio communication for all frequencies in entire St. Mary's River and Harbour area; they are available immediately for information pertaining to shipping in area and movement of ships in River.

TUGS: Harbour tugs available when required, but prefer advance notice order avoid delays. In Sault Ste. Marie, Ontario tugs available.

BERTHING: Transport Canada Dock, "L" shaped pier length 500 ft. on East side 18 ft. deep. On South side, the river side, it is 356 ft. long, 20 ft. deep. This dock is used for discharging general cargo. No crane facilities for loading and unloading, unless ship's gear is used, mobile cranes have to be brought in. No tug required to berth or unberth a ship at this dock under normal weather conditions.

Algoma Steel Corporation Dock. Situated above Canadian Canal with following berths available:

(a) Coal and ore dock with a combined length of 2800 ft.
(b) Commercial dock on West side of slip 400 ft. long.
(c) Limestone dock, "L"-shaped dock on West side 355 ft. long and on South side 450 ft. For loading finished steel.

All 3 Algoma Steel Corporation docks 21 ft. 6 in. deep. Only material consigned to or being shipped from Algoma Steel Corporation have access to these docks.

Parks Canada Pier: Northeast pier at Canadian Canal which could be used for berthing ships and also used occasionally to load or unload cargo into trucks. This pier approx. 500 ft. long and mobile lifting equipment could be utilised here if necessary. Depth of water 18 ft. Pier mostly used as tie-up for making minor repairs afloat, for medical purposes, or waiting for berth at Algoma Steel Corporation Dock. Berthing and unberthing carried out any time, Sundays and holidays with exception of extreme bad weather, high winds, or fog. Canal Hours 0700-2300.

STEVEDORES: Available for loading and unloading at any berths in Sault Ste. Marie area.

TANKERS: Gulf Oil Canada Ltd. Dock: Berthing length 400 ft. Depth 18.5 ft. The West side is the Government Dock, depth 22 ft. 12 tanks (capacity 12,000,000 gallons). For fuel oil and gasoline.

FRESH WATER: Available either by hose or by pumper truck at any dock.

FUEL: Diesel bunkers available at any berths via tank trucks. No bunker "C" facilities available at Sault St. Marie.

REPAIRS: Normal ship repairs are carried out on very short notice if required.

AUTHORITY: Transport Canada, Sault Ste. Marie, Ontario. *Tel:* (705) 256-8772. *Contact:* Gordon Graham, Harbour Master.

AGENT: The Algoma Steel Corporation Limited, Marine Division, P.O.Box 757, Sault Ste. Marie, Ontario, Canada P6A 5N3. Tel: (705) 945-3060. Telex: 067-77266.

SEPT ILES (Seven Islands), Quebec: 50.11 N. 66.23 W.

(See Plan)

LOCATION: The City of Sept-Iles is located on the N.E. side of the Baie des Sept-Iles, a sheltered circular basin screened to seaward by 7 small islands, on the North shore of the St. Lawrence River in Lat. 50° 11′ N. and Long. 66° 23′ W.

DOCUMENTS: The following inward papers are to be completed prior to arrival and presented to custom officer on boarding:

Health	QS-2001 Quarantine Form	in duplicate
Immigration	IMM-200 Crew List	in triplicate
Customs	A-6 Report Inward	in triplicate
Customs	Y-14 Crew Declaration	in triplicate
Customs	E-1 Ship's Stores	in triplicate
Clearance from last port		

The above forms will be supplied by mail on request.

Note: On Canadian or International Crew Lists, black pen or typewriter must be used. Blue is not acceptable because of copy reproduction difficulties.

Designation and dates of expiry of all major trading certificates is required for outward clearance.

Arrangements have been made so that loading can commence before customs entry has been completed, and customs outward papers will be completed so as not to interfere with immediate departure after completion of loading.

Tankers: Charterers or Operators nominating tankers for discharge at Canadian ports should ensure that the vessel is provided with a "Non-Canadian Ship's Compliance Certificate" prior to sailing for Canada. All major Classification Societies are authorised to issue such a certificate.

DOCKING MASTER: The use of a Docking Master is compulsory for vessels docking, shifting and leaving I.O.C. docks. When docking on arrival, Docking Master will board inside harbour limits in area of 50° 10′ N. and 66° 24′ W. Ships normally proceed to anchorage without assistance, which can be provided on request.

All vessels shall provide rope ladder for boarding Docking Master on arrival and disembarking Docking Master on departure. Ladder must be well secured by adequate lashings to rail or deck.

Power hoists, in good order and properly attended, are acceptable for boarding. In freezing temperatures however, they should not be used unless electrically powered.

Shipmaster's Report: August 1983: With all bridge and engine room equipment working well, we berthed in thick fog (visibility 50 yards – 100 yards). Pilot and tugs most efficient.

ANCHORAGE: Ships should anchor at least 1 mile off dock to facilitate ship movements in bay and should not proceed closer than 1 mile from dock while waiting for Docking Master to board. Vessels may be requested to shift anchorage if their position interferes with normal docking approaches.

MAX. SIZE: Iron Ore Co. Loading Dock (Old): length 850 ft., beam 130 ft., draft 43 ft. Iron Ore Co. Loading Dock (New): length 1,100 ft., beam 175 ft., draft 57 ft. Imperial Oil Dock: length 775 ft., draft 40 ft.

Vessels arriving in ballast to load at No. 2 Dock are requested to present in accordance with the following recommended arrival drafts to ensure safe handling procedures, keeping in mind indicated ship loading rates and ship loader clearances. These drafts are intended to mean minimum draft aft with normal vessel trim.

Summer Deadweight	*Recommended Arrival Drafts*
Under 30,000	4.0 m. to 4.6 m.
30,000 to 40,000	4.6 m. to 5.2 m.
40,000 to 60,000	4.9 m. to 5.8 m.
60,000 to 75,000	5.5 m. to 6.4 m.
75,000 to 100,000	6.1 m. to 7.3 m.
100,000 to 150,000	8.5 m. to 11.0 m.
150,000 to 200,000	11.0 m. to 13.0 m.
200,000 to 250,000	13.0 m. to 14.0 m.
250,000 and over	14 m. and over

Any vessels unable to meet these suggested drafts due to insufficient ballast capacity, anticipated deballasting problems, etc., should state this in 48 hours ETA, along with estimated deballasting time.

Usually ships berth port side to.

Note: Vessels have berthed with lesser draft than recommended when weather conditions permit.

TRAFFIC REGULATIONS: *Traffic regulations for the Gulf and River St. Lawrence:*

1. Eastern Canada Traffic Zone Regulations (ECAREG)
   The zone extends from outside of Belle Isle and Cabot Straits to 66° 00′ W.
   In general, it states that a ship crossing seaward boundary, either entering or leaving the zone, must report to ECAREG via any Canadian Coast Guard Radio Station. Clearance to move within the zone must be obtained from ECAREG and there are "calling-in-points" where a ship has to report.
   There are also additional reports to be made in case of any defects in machinery, navigational aids, accidents, stranding, pollution, etc.
2. The St. Lawrence Waterway Traffic Regulations.
   The zone extends from 66° 00′ W. to Montreal.
   In general, the regulations state that a ship must report to the marine traffic regulator by contacting Channel Escoumins on 156.7 MHz, Channel 14 before entering Zone 1. (i.e. crossing 66° 00′ W.) The port of Sept-Iles is in Zone 1.
   Ships have to maintain a continuous radio watch on Channel 14, except when alongside. Authorisation to communicate on another Channel has to be requested from Channel Escoumins, unless the vessel is equipped with two radios.
   Clearance must be obtained from Channel Escoumins to move within the harbour.

HEALTH:

1. Vessels calling at Canadian ports no longer require Radio Pratique unless:
   (i) there is a condition of health irregularity aboard or,
   (ii) if vessel has called at an infected port during this same voyage or,
   (iii) if Derat Certificate is no longer valid or will soon expire.
2. Only vessels to which any of the above conditions apply, should cable "Quarantine Quebec" giving name of vessel, last port of call and detail regarding health conditions aboard.

RADIO: Sept-Iles Radio, Canadian Coast Guard Station, Call sign "VCK", Tel: (418) 968-3118, operates 24 hours a day.

CW	Calling frequency	500	kHz	
	Working frequency	420	kHz	
RT	Calling frequency	2182	kHz	Ch. 51
RT (Working Frequency)	Transmitting	2514	kHz	Ch. 57
	Receiving	2118	kHz	Ch. 57
VHF	Calling Frequency	156.8	MHz	Ch. 16
VHF (Working Frequency)	Transmitting	161.9	MHz	Ch. 26
	Receiving	157.3	MHz	Ch. 26
	Transmitting	161.8	MHz	Ch. 24
	Receiving	157.2	MHz	Ch. 24
	Port Operations	156.6	MHz	Ch. 12

Traffic Lists 420 kHz – Odd hours plus 50 minutes GMT
2582/161.9 0240 UTC – Every 4 hours

Weather, Ice Reports and Notice to Shipping: A continuous marine broadcast is available on VHF Ch. 21, 161.65 MHz. and Channel 83B, 161.775 MHz. Recorded information is updated continuously as received 24 hours per day.

Extended VHF communications facilities are also available in MINGAN 50° 16′ 24″ N. 64° 07′ 56″ W. and Natashquan 50° 08′ 40″ N., 61° 48′ 00″ W.

Ore Carriers:

Advising Arrival: Cable address "Iroccan" Sept-Iles.

Please advise ETA 96 hours, 72 hours, 48 hours and 24 hours out, including in 96 hours ETA the amount of cargo required in metric tons.

Vessels sailing in ballast from Montreal, Sorel, Three Rivers or Quebec should send ETA on departure from these ports with corrected ETA later if necessary.

Advise with 24 hour ETA probable ballast pumping time required on arrival. If any change in ETA or in ballast situation should occur after 24 hour ETA, it should be advised as soon as possible.

The Marine Services office is equipped with VHF radio on 156.6 MHz Channel 12, and also 156.35 MHz, Channel 18A. Vessels calling at Sept-Iles should be fitted with these VHF Channels for efficient harbour communications.

Use of Channel 12 restricted to vessel movements only.

Docking Instructions: Ships are to request instructions 8 hours before arrival. These instructions will be given as promptly and concisely as conditions permit.

Marine Services is set up to receive radio messages on 24 hour basis. Radio traffic by ships at anchor is permissible in Sept-Iles harbour area.

TUGS: Tug service is compulsory at Iron Ore Company docks and Wabush Mines Docks. Two tugs of 5,400 h.p. available.

All communications between tugs and Pilots are by VHF. Tugs operate on 156.9 (Channel 18A).

All ships should be equipped with wire cable towing line with nylon pendant for tug use in undocking. Ships not so equipped will be provided with tug tow lines. Docking Master to determine adequacy of ship's tow lines.

BERTHING:
Ports Canada – Facilities

Berth Number (usual name)	*Wharf length (ft.)*	*Depth at Low Water (ft.)*	*Remarks*
Pointe-aux-Basques	600	27	Small open section at East end of Shed No. 1
Shed No. 1			General cargo shed
Shed No. 2			General cargo shed West and behind Shed No. 1
Mgr. Blanche Wharf	800	25	General cargo berth. Also has docking facilities at the end of the Finger Pier, approx. 180 ft. with a draft of 27 ft. Docking on the end and the West side of pier only. Small open berth at upper end of pier
Town Wharf*	546	—	Small coastal vessels Finger Pier also used for small cruising vessels and crafts
Pointe Noire Wharf	853	48	New wharf offering storage and transit area (30 acres), crane, Ro-Ro ramp and 655 acres of land for port orientated development

*This wharf has been transferred to Fisheries and Oceans Canada.

Private Facilities

Berth	Length (ft.)	Depth at Low Water (ft.)	Utilisation and general remarks
Wabush Dock	650	41	General cargo and mooring berth (East end). Total 1,600 ft. berthing
Terminal	950	41	Iron Ore loading berth (West end). Total 1,600 ft. berthing (Loading ore by means of 2 travelling boom conveyors. Total capacity 8,000 long t.p.h.)
Iron Ore Dock			
Terminal	800	38	Mooring and general cargo receiving berth (West)
Southeast Berth			
No. 1 Dock	800	38	Ore loading berth 2 travelling boom conveyors with a total average capacity of 6,400 long t.p.h. Total berthing length 1,600 ft.
No. 2 Dock	900	60	Total effective mooring length approx. 1,600 ft. 2 travelling shuttle boom loaders with 764 ft. of travel. Max. design capacity 7,500 long t.p.h. each
Imperial Oil Dock	300	38	Dolphins increase capacity for berthing. Max. size 60,000 g.r.t.

See also following information on The Ore Company berths. Vessels usually berth port-side alongside.

Number 1 Dock: 2,200 ft. (670 m.) dock divided into 3 berths. The S.E. or Loading Berth is 800 ft. (224 m.) in length and is fendered with large truck tyres mounted over the dock face. The adjoining 800 ft. (244 m.) mooring or waiting berth is also fendered with large truck tyres. The third and last section, 600 ft. (183 m.) in length, is a Government Berth used for general cargo.

Dredged depth at the loading berth is 38 ft. (11.6 m.) at MLW, 34 ft. (10.4 m.) at mooring berth. Designed depth at the Government Berth is 27 ft. (8.2 m.). At the loading berth, iron ore is loaded into vessels by means of 2 travelling boom conveyors (travel 183 m.) with a max. design capacity of 4,000 tonnes/p.h. each.

The distance from MLW to loaders in horizontal position is approx. 35 ft. (10.7 m.). Loaders can operate at an angle of up to 12° from the horizontal. Vessels should present for loading with a maximum distance of 40 ft. (12.2 m.) from waterline to hatch coaming. Number 1 Dock is fitted with bollards spaced at 50 ft. (15 m.) centres.

Number 2 Dock: Deepwater berth is located some 900 ft. (274 m.) S.E. of original dock and extends approx. 230 ft. (70 m.) further into bay. This single berth is open cell construction with 9 parallel cribs giving total berthing face of approx. 925 ft. (282 m.). A tenth transfer house crib, inset from dock face and a dolphin, both structures fitted with mooring winch and bollards, are located approx. 150 ft. (46 m.) and 350 ft. (107 m.) respectively from N.W. corner of dock face. Two additional dolphins, also fitted with mooring winch and bollards, are situated in a line approx. 150 ft. (46 m.) inside dock face and approx. 100 ft. (30 m.) and 400 ft. (122 m.) from S.E. corner of dock. Dolphins are joined to main dock structure by catwalks. Total effective mooring length is approx. 1,600 ft. (488 m.). Cribs are fendered to waterline with triple sets of extra large truck tyres. Dredged depth is 60 ft. (18.0 m.) MLW. Dock is fitted with 2 travelling shuttle boom loaders with 764 ft. (233 m.) of available shiploader travel, and a maximum design capacity of 7,600 tonnes/p.h. each. Number 2 Dock is fitted with bollards spaced at 100 ft. (30 m.) centres. Recommended maximum airdraft for this berth is 17.0 m.

Tidal characteristics		
	Neaps	1.68 m.
	Springs	3.05 m.

CRANES: Heavy-lift cranes available. Max. capacity 150 tons.

MEDICAL: Masters are requested to have ready for inspection ship's Derat Certificate.

All crew members requiring medical attention should be available upon ship's arrival. Sick Mariners dues no longer apply for treatment of seamen. Agent will provide form of application to be given to doctor for crew members requiring medical attention.

TANKERS: Berth at Imperial Oil Dock. (Max. draft 40 ft.) and Ports Canada facilities at Pointe-aux-Basques.

FRESH WATER: Can be supplied at the approx. rate of 35 t.p.h. Hose is available on the dock but ship's crew are required for connecting and disconnecting.

FUEL: Available on an emergency basis only and subject to inventory situation. All enquiries should be directed to BunkerEsso Montreal.

CUSTOMS ALLOWANCES: Each crew member is allowed to retain in his possession for his personal consumption 200 cigarettes, 40 ounces of spirits, 50 cigars or 2 pounds of pipe tobacco. All quantities must be declared on Crew Declaration form Y-14 along with all personal effects such as radios, cameras, tape recorders, binoculars, etc., plus serial numbers of each such item.

Canadian seamen returning from voyages to American or other foreign ports are permitted $50 value of duty free merchandise every quarter for periods outside Canada of over 48 hours and $150 once a year for periods outside Canada of 7 days.

REPAIRS: Minor repairs can be effected at Sept-Iles. Repairs to be conducted under the supervision of ships' personnel.

TIME: Sept-Iles maintains Eastern Standard Time (GMT minus 5) from last Sunday in October until last Sunday in April. Eastern daylight time (GMT minus 4) is maintained the balance of the year.

SHORE LEAVE: Crew not allowed ashore until permission granted by the authorities.

SAFETY: It is compulsory to have a net under the gangway.

GENERAL: *Customs of the Port:* Ships will be loaded in regular turn of vessels, subject to cargo availability and providing they present with starting hatches open and do not have ballast pumping which will exceed expected loading time. This loading time should be calculated at the rate of 6,600 metric tons/hr. at dock No. 1 and 10,000 metric tons/hr. at dock No. 2.

For establishing turn of vessels, a ship will be considered "arrived" at the time of crossing line between Pointe au Corbeau and Pointe aux Basques.

Loading plans should be presented to the loading foreman on arrival.

Ore-Oil and OBO vessels having discharged petroleum products at last port must advise this in first ETA. If gas-free certificate not already granted by independent chemist, arrangements will be made to have chemist attend. The arrangement for such service implies no liability whatsoever on the part of Iron Ore Co. of Canada Marine Services. Expense for ship's account.

Ships will leave the loading dock immediately upon completion of cargo and secure for sea in the bay. If any delays occur on documentation, crew members missing, etc., ship will leave the dock and all matters will be handled from anchorage.

Vessels must have main engine ready when alongside loading docks. Permission to perform work that would affect the readiness of the vessel to leave berth in case of emergency must be obtained from Iron Ore Co. Marine Services before proceeding with such work.

Services: Most supplies can be readily obtained at Sept-Iles. Quantity orders should be included in 48 hour ETA. Requests for bonded stores should be included in 96 hour ETA.

Launch service is available on request through Marine Services.

Walport film exchange available.

Ice Navigation in Canadian Waters: During the Winter, ECAREG CANADA (East of 66° 00′ W.) and the St. Lawrence River Vessel Traffic Management (VTM), West of 66° 00′ W. to Montreal, provide a service consisting of the promulgation of up-to-date information on ice conditions, routeing, the provision of icebreaker support where available and considered necessary, and organisation of convoys as required.

Masters requesting this service should address their request to ECAREG CANADA through any convenient Canadian Coast Guard radio station which will handle the message free of charge.

Basically, each system is under the surveillance of Canadian Coast Guard Traffic Centres which Masters may contact for advice and assistance. These centres have access to a complete and current picture of the ice conditions prevailing and the anticipated trend of conditions. The centres are therefore, well equipped to provide advice on the best route to follow. In order to obtain the maximum benefit from the service, it is essential that Masters report to the appropriate Canadian Coast Guard Traffic Centre before their ships enter waters where ice may be encountered.

Radio communications play a very important part in successful ice navigation. The Master relies upon the receipt of accurate ice information and advice upon which he can base his decisions as to his future course and progress.

Ships proceeding independently throughout the Gulf of St. Lawrence when ice is present should report their positions and progress to "Ice Halifax" at 0800 and 2000 A.S.T.

Radiogram: "Ice Halifax". Radio Station: Halifax, Call sign VCS.

Ships inbound from sea to a port in Zone B should report to "Ice Halifax" 36 hours before passing Cape Ray. Ships outbound should report to "Ice Halifax" 12 hours before departure.

DEVELOPMENTS: In 1983, the Government of Canada announced a new project development in the Pointe Noire sector.

The new project consists of building a 260 m. long wharf with an existing depth of 12 m. and more, the construction on an on-site access road including all services such as waterline of 400 mm., power and waste disposal services, embankments and dykes, as well as a 12 hectares storage area. These new marine infrastructures will also permit to give access to more than 265 hectares of land owned by Ports Canada.

General cargo as well as bulk commodities will be handled in this sector. The project started in September 1983 and will be completed late 1986.

AUTHORITY: Ports Canada – Port of Sept-isle, 421 Arnaud St., Room 202, P.O.Box 280, Sept-isle, Quebec Province G4R 4K5. *Tel:* (418) 968-1231. *Telex:* 051-8-4209. *Contact:* Jean-Maurice Gaudreau, General Manager.

Iron Ore Company of Canada, Marine Services, P.O.Box 900, Sept-isles, Quebec, Canada G4R 4L5. *Tel:* (418) 968-7540 *Telex:* 051-8-4186. *Cables:* Iroccan Sept-isles.

SHEET HARBOUR, N.S.: 44.50 N. 62.30 W. (See Plan)

DOCUMENTS: See "Montreal".

ICE: Open all year with aid of icebreaker during January, February and March. Ice forms about January 15th and breaks up between March 1st and 15th.

PILOTAGE: Compulsory. Pilot boards off Sheet Rock Light.

ANCHORAGE: Anywhere in harbour in depths up to 10 fathoms.

MAX. SIZE: See "Berthing".

RADIO: Ship-to-shore communications: through Halifax (VCS).

TUGS: None.

BERTHING: *Transport Canada Wharf:* Length 54.8 m. Depth at LW 6.4 m. No railroad or handling facilities on wharf. Open storage area alongside for handling general cargo.

STEVEDORES: Skilled labour available. Gangs consist of 20 men.

MEDICAL: Hospitals available.

FRESH WATER: Available by hose from mill.
FUEL: Available.
REPAIRS: No facilities available.
AIRPORT: Halifax 75 miles.
TIME: GMT minus 3 hours in Summer. GMT minus 4 hours Winter.
AUTHORITY: Transport Canada, Office of Harbours and Ports, Maritimes Region, P.O.Box 1013, Dartmouth, N.S., B2Y 4K2. *Contact:* The Regional Manager. *Tel:* (902) 426-2588.

SHIP HARBOUR, Nova Scotia: 44.49 N. 62.53 W.

ANCHORAGE: The best anchorage in the harbour is between Salmon Point and Whale Islet. 7.31 m. to 11.89 m. of water in mud bottom.
BERTHING: Government wharf no longer usable.
Tides: LWOST, 0.2 m. above chart datum. HWOST, 2.2 m. above chart datum.
MEDICAL: Hospital at Sheet Harbour, 20 km.
AIRPORT: Halifax International airport, 120 km.
AUTHORITY: Transport Canada, 73 Tacoma Drive. (P.O.Box 1013). Dartmouth, Nova Scotia, B2Y 3Z7. *Tel:* 426-2588. *Telex:* 01922757.

CARAQUET HARBOUR, N.B: 47.48 N. 64.56 W.

(See Plan)

DOCUMENTS: See "Montreal".
PILOTAGE: Approaching vessel hoists flag "G" and uses siren about 1 mile before reaching fairway buoy. Pilot boat motorised 45 ft. vessel, approaches on leeside. Approaching vessels wait for Pilot about 1 mile from Fairway Buoy.
ANCHORAGE: Good anchorage, usually by Fairway Buoy.
RESTRICTIONS: Entry possible night and day, good vision, lighted buoys and beacon lights.
MAX. SIZE: High tide: 23 ft. low tide: 17 ft. (Shippegan, max. tide: 20 ft.).
HEALTH: See "Montreal".
RADIO: VCN Grindstone Radio and VCG Fox River.
TUGS: Not required for these ports.
BERTHING: Caraquet Wharf, 28 ft., Shippegan 25 ft. alongside outer side and 3.2 m. alongside at normal low water along the inside face of wharf.
MEDICAL: No notice required, hospital available, as required when conditions warrant.
FRESH WATER: Available.
CUSTOMS ALLOWANCE: Tobacco, 200 cigarettes per week per man. Wine/Spirits, Spirits allowed to officers. Beer to crew.
REPAIRS: Minor ship repairs and all electrical repairs.
TIME: Atlantic Standard Time GMT minus 4 hours, Daylight saving time from last week-end in April to last week-end in October, clocks advanced 1 hour.
AIRPORT: Moncton, 150 miles, Chatham, 70 miles.
POLICE/AMBULANCE/FIRE: *Caraquet:* Police RCMP 727-2828; Police Town, 727-3167; Fire, 727-2928; Hospital, 727-3435. *Shippegan:* Police, RCMP, 336-2210, Town, 336-2351. Hospital: 344-2261.
AUTHORITY: Fisheries and Oceans Canada, Small Craft Harbours Branch, P.O.Box 717, Tracadie, N.B. E0C 2B0. *Contact:* Tilmon Hache, Harbour Manager (Shippegan). *Tel:* (506) 336-4010.
Rufin Doiron, Harbour Manager (Caraquet). *Tel:* (506) 727-6145.

SOREL, Quebec: 46.03 N. 73.09 W. (See Plan)

DOCUMENTS:
2 Crew Lists.
2 Passenger Lists.
3 Crew Declarations (Canadian Form Y14).
3 Store Lists (Canadian Form E.1).
Health Declaration (Canadian Form QS.2001).
3 Cargo Manifests.
3 Bills of Lading.
General Declaration.
PILOTAGE: Compulsory. Under the Montreal Pilotage Authority. Vessels coming in from sea secure Pilots at Escoumins, Quebec and Three Rivers.
ANCHORAGE: Safe and roomy anchorage is provided in the St. Lawrence River off Sorel in a basin 9 miles long by 0.5 miles wide with 30 ft. to 50 ft. water depth. There is no tidal influence at this point.
RESTRICTIONS: Speed limits not to exceed 8 knots in the Harbour of Sorel. Sections 8, 9 and 10 reserved for D.O.T. vessels.
MAX. SIZE: From St. Lawrence Ship Channel there is a clear approach for 10.67 m. draft vessels to Outer Dock No. 15 and from 6.10 m. to 9.14 m. to almost all other docks.
HEALTH: Pratique may be obtained by radio to Quarantine Quebec. Health Officer boards on arrival.

Sorel is also an organised quarantine sub-station. (See "Canadian Quarantine Requirements" for full particulars).
RADIO: St. Lawrence River Marine Traffic Control call sign VFN Sorel and VBK Three Rivers.
RADAR: Radar service may be obtained by VHF from Montreal (80 km.).
TUGS: Tugs are available all year round at Sorel. Their use is advisable for all berths in the Richelieu River, for berths in Lanctot Basin and at Section 5 for ships exceeding 250 ft. in length or having low manoeuvrability. They are also needed for large ships at Sections 15 and 21 when leaving with an Easterly destination.
BERTHING: Following depths are expressed in metres reduced to chart datum and must be used as guidance only. For up-to-date information refer to Canadian Marine Chart No. 1338 (Sorel Harbour).
Transport Canada Wharves:

Dock 5, berth 182.88 m. long, 9.14 m. depth. Dock 6, berth 106.68 m. long, 8.80 m. depth. Dock 7, berth 152.40 m. long, 8.53 m. depth. Dock 8, berth 160.02 m. long, 6.10 m. depth. Dock 9, berth 60.96 m. long, 6.10 m. depth. Dock 10, berth 160.02 m. long, 6.10 m. depth. Dock 16, berth 160.68 m. long, 4.88 m. depth. Dock 17, berth 213.36 m. long, 4.88 m. depth.
Les Elevateurs de Sorel Ltee Wharves: (Private Wharves).

Dock 11, berth 152.40 m. long, 7.32 m. depth. Dock 12, berth 106.68 m. long, 7.32 m. depth. Dock 13, berth 76.20 m. long, 7.32 m. depth. Dock 14, berth 187.45 m. long, 8.30 m. depth. Dock 15, berth 189.58 m. long, 10.67 m. depth.
Omnimar Inc. Wharf: (Private Wharf).

Dock 18, berth 167.74 m. long, 4.27 m. depth.
Marine Industries Ltd. Wharf: (Private Wharf).

Dock 19, berth 182.88 m. long, 6.10 m. depth.
Fer & Titane du Quebec Wharf: (Private Wharf).

Dock 20, berth 335.28 m. long, 9.14 m. depth. Dock 21, berth 335.28 m. long, 9.14 m. depth.
CRANES: Mobile cranes up to 150 tons capacity available from local firms.
BULK CARGO FACILITIES: (Public Wharves). Open storage space for approximately 20,000 tons available (75,000 sq.ft.)

(Private Wharves). Les Elevateurs de Sorel Ltee: Steel and concrete grain elevators 5,500,000 bushels capacity, loading rate 144,000 bushels/hr. Fer & Titane de Quebec: Electric mobile bridge capacity 900 t.p.h.
STEVEDORES: Available for loading and unloading at any berths.
MEDICAL: Doctors and hospitals facilities available.
DENSITY: Fresh water.
FRESH WATER: Available by pipe-line or tank-trucks at all berths.
FUEL: Available from major oil companies by tank-trucks. Can also be obtained by barges from Montreal (50 miles).
CONSULS: Almost all countries, nearest offices at Montreal.
REPAIRS/DRY DOCKS: Marine Industries Ltd. shops are equipped for steel shipbuilding, construction of engines and boilers and repair services of all kinds. The Company has two marine railways, one of which is the largest end-hauling marine railway in the world, capable of launching and dry-docking cargo ships up to 12,000 tons deadweight with transfer or building area admitting of the construction of 8 ships at the same time. Ships of 5,000 d.w.t or smaller can be launched on the second marine railway. The facilities include modern shops, gas and air plants, as required for the building and repairing of all types of hulls and machineries, while subsidiary and associated companies in the same vicinity for rolling mills, heavy and precision machinery, heavy forgings, all kinds of steel brass and metal castings, propellers, etc. Omnimar Ltd., has docking facilities for repairs afloat of equipment, engine and general ship repairs.
SURVEYORS: Lloyd's.
CUSTOMS: Sorel is a port of entry, customs board ships.
CUSTOMS ALLOWANCES: 200 cigarettes for each man, Officers may be allowed one bottle wine/spirit, Master up to five bottles.
REPATRIATION: Can be arranged through Department of Manpower and Immigration.
AIRPORT: Nearest at Montreal (Dorval) 70 miles.
TIME: GMT minus 5 hours. Daylight Saving Time: GMT minus 4 hours, applied from last Saturday of April until last Saturday of October each year.
HOLIDAYS: New Year's Day, Good Friday, Easter Monday, St. John the Baptist Day, Dominion Day, Labour Day, Queen's Birthday, Remembrance Day, Christmas Day, Boxing Day.
POLICE/AMBULANCE/FIRE: Police/Fire 742-5656; Ambulance 742-9441.
SERVICES: Ship's stores can be secured in Port. Tank cleaning equipment available.
SHORE LEAVE: Crew members allowed ashore. No restrictions.
REGULATIONS: Public Harbours Regulations.
AUTHORITY: Transport Canada, Ports and Harbours, 15 Prince Street, Sorel, Quebec J3P 4J4. *Tel:* (514) 743-7931. *Telex:* 055-60882. *Contact:* M. Peloquin, Port Manager.

SPRINGDALE, Newfoundland: 49.30 N. 56.05 W.

LOCATION: Springdale is in Hall's Bay, a deep narrow inlet situated at the S.W. part of Notre Dame Bay, North coast of Newfoundland.
RADIO: Comfort Cove (VOO).
BERTHING: (1) Transport Canada Wharf, 262 ft. long and 40 ft. wide, with a depth of 20 ft. at the face. Used for general freight. Oil pipe-lines on wharf. There is a red fixed electric light on outer end of wharf.

(2) George Warr Wharf, berthing length 65 ft., depth alongside at LW 28 ft. aft, 13 ft. forward. Shed 50 ft. × 30 ft. Used for general freight.

No crane, electric light or water main on the wharves. Large ships load pulpwood at West Bottom.
FRESH WATER: Not available.
SURVEYORS: Lloyd's at St. John's. ABS at Halifax.
GENERAL: *Services:* Post Office, Telegraph.
Trade: Sawn lumber and pulpwood is exported. General merchandise is imported.
Charts: Canadian Chart No. 4591. BA Chart No. 3223.
AUTHORITY: Transport Canada, P.O.Box 1300, St. Johns, Newfoundland A1C 6H8. *Tel:* (709) 772-2102. *Contact:* Harbour and Ports Department.

STEPHENVILLE, Newfoundland: 48.30 N. 58.33 W. (See Plan)

PORT LIMITS: Beginning at Indian Head (Lat. 48° 29′ 58″ N., Long. 58° 31′ 49″ W.); thence running true 210° for 1,700 yards; thence running true 320° for 6,000 yards; thence running true north for a distance of 2,100 yards more or less to the high water mark.
DOCUMENTS:
- Completed Declaration of Health
- Valid Derat Certificate
- 3 Crew Lists (Form 200)
- 3 Crew Declarations (Form Y14)
- 3 Ship's Stores (Form E–1)
- 3 Passenger Lists
- Manifests
- Clearance from Last Port

PILOTAGE: Compulsory. Pilot boards at Fairway Buoy. Pilot ordered by reporting via any coastal radio station by radiotelephone or radiotelegraph to Pilots, Stephenville. 48, 24 and 12 hour ETA required. Time used must be GMT. The Pilot at Stephenville guards Channel 16 (156.8 MHz.) and works Channel 11 (156.66 MHz.).
Harbour Pilot: Capt. Melbourne, Phone: 643-4056.
Stand by Pilots: Capt. W. Collins, Phone: 686-5046, Capt. D. Keeping, Phone: 686-5017.
ANCHORAGE: No sheltered anchorage in the harbour; vessels are exposed to prevailing westerly winds. Limited swinging room and poor holding ground.
RESTRICTIONS: Maximum recommended draft is 27 ft. Daylight sailings only. Channel has least width of 150 ft. with a length of 1.5 miles. Water depth at berth is 28 ft. with a tidal rise of 3 ft. – 4 ft. For any changes in depth restrictions, Mariners should obtain copies of the Canadian Hydrographic Services Sailing Directions for Newfoundland and Chart No. 4681 and contact the Harbour Master.
RADIO: Stephenville Marine Radio, call sign VOJ. Halifax Marine Radio is recommended for all messages.
BERTHING: 1 berth of 960 ft. Also dolphins used primarily for pulpwood discharge can accommodate vessels of over 600 ft. Max. draft at dolphins approximately 27 ft. (8.2 m.). Along docking face 27 ft. (8.2 m.). The largest vessel to enter port has been 640 ft. long and any anticipated larger vessels should be discussed with Port Officials.
STEVEDORES: Ordered by Agent.
MEDICAL: No advance notice required unless serious emergency. Hospital facilities available.
TANKERS: Tanker berth is the main government wharf (960 ft. long). Discharge lines are: 1×6 in., 1×8 in. and 2×10 in. The pipe-lines and nearby tanks are owned by Harmon Corporation and are leased to users.
DENSITY: Salt water.
FRESH WATER: Available from pipes on dock at $1.00 per ton. Water pipe is operated by the Town of Stephenville.
FUEL: Marine diesel available. Delivery by truck.
CONSULS: Nearest Consuls are situated in St. John's, which is approximately 500 miles away.
REPAIRS: Minor repairs are possible locally.
GANGWAY/DECK WATCHMEN: Usually crew.
OPENING/CLOSING HATCHES: Normally carried out by vessel's crew.
IDENTIFICATION CARDS: Not required.
REPATRIATION: Can be arranged.
AIRPORT: 5 miles from dock.
TIME: GMT less 3.5 hours. Clocks advanced 1 hour from last Sunday in April until first Sunday in October.
POLICE/FIRE/AMBULANCE: Police 643-2118, Fire 643-2176, Russell's Ambulance 643-2472, Hospital 643-5131
EMERGENCY CO-ORDINATION CENTRE: Coastguard, St. John's, Newfoundland. Tel: (709) 772-5151.
TELEPHONES: Can be arranged through Newfoundland Telephone Company Limited, Market Division, P.O.Box 98, Corner Brook, Nfld. Phone: 643-3197. Phone jack has already been installed on the dock.
SHORE LEAVE: No restrictions.
GENERAL: Ice is navigable throughout the Winter season. Extra information can be obtained from Ice Operations in St. John's – Newfoundland, Tel: 709-737-2083. Cables: Ice Operations – St. John's – Canadian Coast Guard.
AUTHORITY: Transport Canada, P.O.Box 1300, St. John's, Newfoundland A1C 6H8. *Tel:* (709) 772-5154. *Telex:* 016-3369. *FAX:* 2193. *Contact:* D. A. Lester, Regional Manager, Harbours and Ports.
Local Authority: G. R. McLaughlin, Area Manager, Harbours and Ports, Stephenville, Newfoundland. Tel: (709) 643-3632.
AGENT: At present, the Harmon Development Corporation is acting as Agent for the port. Any special arrangements can be made through the corporation, which is a Provincial Crown Corporation. Address: Harmon Development Corporation, P.O.Box 328, Stephenville, Newfoundland, Canada A0N 1T0; attention Mr. J. Cochrane, Harbour Master, Tel: 709-643 2363 or 709-643 3771. Telex: 016-48135.

SUMMERSIDE, P.E.I.: 46.23 N. 63.47 W. (See Plan)

DOCUMENTS:
- 2 IMM.200.
- 3 E.1.
- 1 Quarantine 2001.
- 2 Passenger Lists.
- 1 Customs Document A.6.

PILOTAGE: 24 hours notice of ETA to Agent who notifies Pilot. Pilot boards Fairway Buoy about 6 miles from wharf.
ANCHORAGE: At Fairway Buoy in depths of 30 ft. – 35 ft.
MAX. SIZE: 550 ft. length, 75 ft. beam, 24 ft. draft.
HEALTH: Vessels coming from U.S.A. accepted without Pratique. Vessel from other countries radio telephone for permission. See also "Montreal".
RADIO: Halifax N.S., Sydney N.S., Grindstone M.I., Charlottetown P.E.I.
TUGS: None available.
BERTHING: Transport Canada Wharf: Length (West side) 600 ft. Depth at LW 26 ft. East side, length 600 ft. Depth at LW 19 ft.
Additional Wharf: Length 300 ft., depth 17 ft.
Holman Wharf: Length 300 ft., depth at LW 8 ft.
Queens Wharf: "L" shaped wharf, head length 155 ft., depth 5 ft.
STEVEDORES: 24 hours notice required.
MEDICAL: Hospital facilities available. Current vaccination/fever certificates required.
FRESH WATER: Available 30 t.p.h.
FUEL: Limited quantities by road tanker.
OPENING/CLOSING HATCHES: Crew/Stevedores.
CUSTOMS ALLOWANCES: Tobacco: 1 carton per man per week. Wine/Spirits: Spirits 40 oz. per man per week. Further allowances made if Master requests.

SYDNEY, N.S.: 46.09 N. 60.12 W. (See Plan)

DOCUMENTS:
Crew's Declaration Y.14 in triplicate.
Ship's Stores E.1 in triplicate.
Crew Tally IMM.201 in duplicate.
Report Inward A.6 in triplicate.

PILOTAGE: Compulsory pilotage distance is approximately 12 miles and administered under the Atlantic Pilotage Authority. The area for Cape Breton Pilot embarkation is Sydney Outer Buoy: Lat. 46° 22′ N., Long. 60° 08′ W. To avoid delay in obtaining a Pilot, Masters must report by message addressed to Pilots, through Sydney Radio VCO or any Coast Radio Station 24, 12 and 6 hours before vessel's ETA.

ANCHORAGES: The land-locked harbour affords safe anchorage for a large number of any size vessels with depths ranging from 40 ft. to 60 ft.

RESTRICTIONS: Berthing allowed day or night. "Harbour Ice", January to March, "Drift Ice" April to May. Navigable with aid of ice breakers requested from Ice Control at Sydney.

MAX. SIZE: Max. draft 37 ft. Governed by least depth in channel of 38 ft. at the lowest normal tides (average rise and fall 3 ft. – 5 ft.).

HEALTH: Sydney is an official quarantine station. Radio Pratique obtained between 0900 and 1700 hrs. local time by radio message to "Quarantine Sydney". Information required from vessel is as follows:
Name and nationality of vessel.
Name of three previous ports called at during voyage.
Port of destination and name of Agent.
Nature of cargo.
Date and place of last deratting or exemption certificate.
Number of crew and passengers.
Condition of health of all on board with details of any sickness or death occurring during the voyage.
Vaccination status of crew and passengers.
The ETA and any other information that may be required by the Quarantine Officers.

The ship will require usual inspection on arrival. However, radio pratique will enable vessel to enter port, dock and commence loading or unloading operations prior to official quarantine clearance. Vessels which have not applied for radio pratique and all vessels with suspected infectious disease aboard will remain in quarantine until cleared.

RADIO:

Station	*Call Letters*	*Freq. kHz*
Sydney Radio	VCO	500
Grindstone Island	VCN	500
Canso Radio	VAX	500
Halifax Radio	VBO	530
Cape Race	VCE	500

TUGS: Not necessary for docking powered vessels.

BERTHING: *Syd-Port Industrial Park:*

Main Jetty: The outer face of the main jetty is 850 ft. long with a 36 ft. depth at LW. The inner face is 800 ft. with a 26 ft. LW depth.

Outer Quay: The length of the East face wall is 750 ft. with 20 ft. at LWOST. The North face wall is 600 ft. with a maximum LW depth of 20 ft. graduating to 10 ft. LWOST.

Inner Quay: The inner wall is 1,100 ft. long with 20 ft. LW depth.

Services: The services include fresh water, sewage, electric power, all weather paved roads joining the Trans Canada Highway network and 4,564 feet of rail sidings connecting to major Canadian and U.S. rail systems.

Sydney Steel Corporation Piers:

No. 1 Pier: Berthing length 425 ft. Depth at LW 28 ft. Now used primarily for the loading of coke oven by-products (light oil and coal tar). Equipped with railway connections and 4 in. pipe-line for fresh water.

No. 3 Pier: (Bulk Discharge Berth) Berthing length 700 ft. Depth at LW 41 ft. Equipped to handle bulk cargoes by self-unloading boom type vessels and bulker type vessels. Self-unloading discharge into hopper and main in-haul conveyor system designed to handle iron ore pellets at a rate of 3,000 t.p.h. and coal at a rate of 1,500 t.p.h. Bulkers are unloaded by one 8 ton capacity Mobile Grab-Type Unloading Tower at a rate of approximately 7,000 tons per day. Travel distance 328 ft. Pier is also equipped with a 6 in. pipe-line for water, 12 in. pipe-line for diesel fuel and a 16 in. pipe-line for bunker fuel.

No. 4 Pier: (Steel Loading Berth) Berthing length 715 ft. Depth at LW 41 ft. Equipped with one mobile portal type 45 ton capacity crane to handle the loading of finished and unfinished steel products (including 25 m. steel rails) and the discharging of scrap and other general cargoes. Crane equipped with a 120 ft. hinged boom with a 60 ft. back reach. Travel distance 430 ft. Pier equipped with three railway tracks under centre section of crane and one track on the water side. Fresh water is available along with pipe-line for marine diesel and bunker fuel.

Cape Breton Development Corporation Coal Piers:

Coal Pier No. 4 has a berthing length of 810 ft. with 30 ft. of water alongside at LW. There is a 15,000 short ton storage pocket for coal and coke with an additional 2,000 tons loaded car storage over full bin. A conveyor belt system carries product to the pier head where it is boom loaded into vessels at an average rate of 2,000 short tons per hour. This pier, the main of a series of three is connected with the CN railway system. Equipped with 4 in. line for fresh water.

Sydney Government Wharf:

The berthing length of the West face is 794 ft. with a 28 ft. LW depth. The South face is 300 ft. long sloping off to a 15 ft. LW depth. Facilities include a bonded warehouse (100 ft. × 200 ft.) and 100,000 square footage of bonded open storage with a rail spur line on the waterside with tailgate delivery in the rear. Fresh water and diesel bunkers also available.

STEVEDORES: Available by phoning Rowe Freight & Marine Service Ltd., (Tel: (902) 564-8452 Telex: 019-35275) 24 hours before ETA of vessel. Ships cargo gear is usually employed but mobile cranes up to 125 tonnes are available at short notice for extended hire.

MEDICAL: Two hospitals.

TANKERS:

Irving Oil Pier: Berthing length 24 ft. Depth alongside 23 ft. at LW. 2×8 in. pipe-lines.

Petrofina Wharf: "T" head pier. Berthing length 74 ft. Depth alongside 22 ft. 1×10 in. pipe-line.

DENSITY: Average 1023.

FRESH WATER: Available anytime, supplied through 2.5 in. hose at rate of 25 t.p.h., cost depending on tonnages, from $1.00 to 0.45 cents per ton, plus labour.

FUEL: Marine diesel, bunker fuel and galley fuels are obtainable by pipe-line at Pier Nos. 2, 3 and 4. Rate of bunkering approximately 100 t.p.h.

Suppliers: Northern Petroleum Ltd., 48 Fairview Street, Sydney, N.S. B1P 1P9. Tel: (902) 564-5152.

Gulf Canada, 2020 University Street, Montreal, P.Q. H3A 2L4. Tel: (514) 284-7837.

Petrofina Canada Inc., Marine Terminal, Sydney River, N.S. Tel: (902) 539-6446.

Irving Oil, Bulk Plant, Kings Rd., Sydney, N.S. Tel: (902) 564-5566.

GANGWAY/DECK WATCHMEN: Crew sufficient.

OPENING/CLOSING HATCHES: Crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 0.5 lb. tobacco or 15 cigars, each officer. 40 oz. of spirit per officer.

IDENTIFICATION CARDS: Seaman's identity cards.

CONSULS:
British and Canadian Shipping Master.
Portugal Vice-Consul 794-3515.
Honorary French Consular Agent, North Sydney 794-4800.
Norwegian Vice-Consul, Sydney 564-9288.

REPAIRS/DRY DOCKS: The Sydney Engineering and Drydocks consist of two wharfs (370 ft. and 425 ft. long) with marine rail slips of 3,000 and 1,200 ton capacity and a 45 ton wharf crane. They have 40,000 sq. ft. of production plants using skilled marine tradesmen. Also see "North Sydney".

SURVEYORS: See "North Sydney".

REPATRIATION: Can be arranged.

AIRPORT: Served by Air Canada, Air St. Pierre and Eastern Provincial Airways.

TIME: Sydney is on Atlantic Standard Time from the last Sunday in October to the last Sunday in April, and on Atlantic Daylight Time from the last Sunday in April to the last Sunday in October. GMT minus 4 hours on Atlantic Standard Time and GMT minus 3 hours on Atlantic Daylight Time.

HOLIDAYS: Christmas Day; New Year; Good Friday; Dominion Day; Thanksgiving Day; Labour Day. No work as a rule from 0800 to 0800 hrs. next day.

POLICE/AMBULANCE/FIRE: Police 564-4415; Ambulance 564-5507; Fire 539-3552.

EMERGENCY CO-ORDINATION CENTRE: Canadian Coast Guard: Oil spills and other emergencies from Sydney Harbour Area (no charge) ask operator for Zenith 49000.

SERVICES: Compass adjusting, tank cleaning.

SHORE LEAVE: Allowed.

GENERAL: *Loading Devco Coal:* The Canadian Coast Guard has issued instruction for Masters loading Devco coal at Sydney.

All Masters will receive the instructions before loading commences and Coast Guard surveyors will be in attendance prior to and during loading.

One of the important instructions is that the vessel must be equipped with a suitable surface ventilation system.

AUTHORITY: Transport Canada, P.O.Box 548, Sydney, Nova Scotia BIP 6H2. *Contact:* Donald W. Rowe, Harbour Master. Tel: (902) 564-8427.

ADD "DEV" AND "S.N.R"

TADOUSSAC, Quebec: 48.08 N. 69.43 W.

LOCATION: Situated on North shore of Saguenay River, about 5 miles North of junction with St. Lawrence River.

ANCHORAGES: Available in Tadoussac Bay with depths from 7 – 18 fathoms.

RESTRICTIONS: Navigation season, April 1st to November 30th.

MAX. SIZE: Max. draft alongside 20 ft.

RADIO: Mont-Joli (VCF).

TUGS: Available, not normally required.

BERTHING: Transport Canada Wharf, length 235 ft., depth alongside 28 ft. LW., situated in Tadoussac Bay

FRESH WATER: Available.

AUTHORITY: Transport Canada, Region Des Laurentides, 104 Dalhousie, Quebec. P.O.Box 2055, Quebec Terminus, Quebec G1K 7M9. *Tel:* 694-3680 *Telex:* 051-3051. *Contact:* Denis Pelletier, Operations and Properties Manager. Pierre Tremblay, Harbour Master, Tadoussac. *Tel:* 235-4209.

THOROLD, Ontario: 43.05 N. 79.10 W.

LOCATION: Town on Welland Canal, about 8 km. South of Port Weller and 32 km. North of Port Colborne, both ports being the entrances of the Canal linking Lake Ontario with Lake Erie.
RESTRICTIONS: Channel depth: Maximum permissible draft in the Welland Canal and approaches is 7.92 m. (26 ft.). Navigation season: April 1st to December 30th on the average.
HEALTH: Incoming vessels obtain clearance at Quebec City when coming from a foreign port.
RADIO: Ship-to-shore communications: Through Toronto Coast Guard (VBG) or Buffalo (WBL).
BERTHING:

Industrial Dock, Wharf No. 5:

Type:	Coal.
Equipment:	Self-unloaders.
Length:	152.4 m. (500 ft.)
Depth:	5.50 m. (18 ft.)
Operator:	Industrial Docks & Supplies Ltd.

Industrial Dock, Wharf No. 6:

Type:	Various Bulk and General Cargo Commodities.
Equipment:	1–2.7 ton Crawler Crane, 1–3.2 ton Crawler Crane.
Length:	Dock Wall 121.9 m. (400 ft.), Berth 342.9 m. (1,125 ft.)
Depth:	8.23 m. (27 ft.)
Capacity:	90,000 tonnes.
Operator:	Industrial Docks & Supplies Ltd.

Ontario Paper Pulpwood Dock, Wharf No. 7:

Type:	Unloads Pulp and Chemicals.
Equipment:	Ship's Gear
Length:	186 m. (610 ft.) plus 210 m. (690 ft.) between dolphins at East end.
Depth:	8.23 m. (27 ft.)
Capacity:	90,000 Cords Pulpwood.
Operator:	The Ontario Paper Company Ltd.

Ontario Paper Dock, Wharf No. 8:

Type:	Loads Newsprint.
Equipment:	2×2.7 ton Orton Crane Hoists.
Length:	132.3 m. (434 ft.)
Depth:	7.3 m. (24 ft.)
Capacity:	3,600 tonnes in Newsprint.
Operator:	The Ontario Paper Company Ltd.

Beaverboard Dock, Wharf No. 9:

Type:	General, Bulk and Fuel Oil
Equipment:	Self-unloaders or Rental Crane
Length:	306.3 m. (1,005 ft.)
Depth:	8.23 m. (27 ft.)
Operators:	Walker Bros. Quarries.; St. Catharines Fuels (CFMG INC.), St. Catharines; Industrial Docks & Supplies Ltd.

MEDICAL: Maplehurst Hospital, Thorold; St. Catharines General Hospital, and Hotel-Dieu Hospital, both in St. Catharines.
REPAIRS: Minor repairs possible.
DRYDOCKS: None.
SERVICES: Supplies available.
HOLIDAYS: Customs and Canal Officials always available during the season.
AUTHORITY: St. Lawrence Seaway Authority, Western Region, P.O.Box 370, 508 Glendale Avenue, St. Catharines, Ontario L2R 6V8. *Tel:* (416) 641-1932. *Contact:* J. B. McLeod, Regional Vice-President.

THUNDER BAY: 48.27 N. 89.13 W. (See Plan)

For important General Information refer to "St. Lawrence Seaway".
DOCUMENTS: As inland Port all documentation carried out by Authorities in Montreal, prior arriving. Only when vessels have called at United States Port after departing Montreal, and prior arriving at Thunder Bay, will any changes in documentation be necessary; which will consist of a United States Customs Clearance. Certificates to be available on board:

Immigration papers.
1 copy QS 2 (Health Certificate).
3 copies of Ships' Stores.
Crew Declaration.
Customs Clearance.

All of the above will have been stamped in Montreal.
PILOTAGE: Pilots are obtained by Agent at Master's request, at which time the location of boarding the ship will be stipulated. Ship's Masters are able to contact Agent by ship-shore duplex through VBA Marine Radio, Thunder Bay.
ANCHORAGE: Anchorage areas defined by Thunder Bay Harbour Commission but due to large area and number of entrances to Harbour, Masters are permitted considerable latitude in making own decisions. Usual areas are approximately 1 mile outside of Harbour breakwall, free of shipping lanes. However, Masters should be guided by the advice of Thunder Bay Harbour Commission Radio, VDX 30.
HEALTH: Pratique granted at Montreal.
RADIO: Two radio stations; VBA Thunder Bay, is Department of Transport station offering duplex services; VDX 30, Thunder Bay Harbour Commission is operated for the sole purpose of monitoring vessel arrivals and departures and as a safety advisor.

VBA and VDX 30 both operate 24 hours per day during shipping season on following frequencies:

VBA Canadian Coast Guard Radio Station, Federal Post Office Building, 244-33 South Court Street, Thunder Bay, Ontario P7B 5L2. Temp. Tel. (807) 345-8084.
(FM) Channels 12, 26, and 28
VDX 30
(FM) Channels 12, 16 and 14

VBA: Thunder Bay Coast Guard Radio
c/o Telecommunications Area Manager
Transport Canada
Thunder Bay Airport
(807) 577-2645

VDX 30: Thunder Bay Harbour Commission
P.O.Box 2266
Thunder Bay, Ontario
(807) 344-3594

TUGS: Arranged mutually by Shipmaster's and Agents on arrival in port. Ship lines used. Four tugs available.

Tug Service: Gravel & Lake Services
P.O.Box 2180
Thunder Bay, Ontario
(807) 345-7305
Western Engineering Services Ltd.
274 Kingston Street
Thunder Bay, Ontario
(807) 577-8411

BERTHING: *North Section* is protected by a breakwall. Refer to Canadian Hydrographic Chart No. 2314 for water depths.

The Keefer Terminal is the principal general cargo berth available at Thunder Bay. the ocean vessel shed is 121.9 m. long, has a dock 198.1 m. long with a maximum apron width of 19.8 m. All types of import and export general cargo can be handled at this Terminal. Rental mobile cranes are available for handling lifts up to 12 tons.

The CNR has a bulk dock with a berthing length of 731.5 m. It can accommodate 4 vessels at one time with 200 loading chutes available. The vertical height from water level to spout is 13.72 m.

South Section is comprised of the Kaministiquia River, Mission River. In general terms, for most vessels 2 tugs are required for safe river navigation.

There is one open storage bulk berth, Valley Camp Ltd. on the Mission River. This dock has 2 overhead gantry cranes, one with lift capacity 12 – 14 tons and the other 22 tons. The berth is 791 m. long. 3 berths.

Berthing Facilities:

Main Harbour North:

Abitibi-Price – Thunder Bay Mill	
Berthing length 160 m.	Forest Products
Berthing length 22 m.	Coal Wharf
Port Arthur Shipbuilding Co. (PASCOL)	
Dry dock 228 m.	Shipbuilding
Marginal dock 427 m.	and Repairs
United Grain Growers "A"	
Berthing length 320 m.	Grain
Saskatchewan Wheat Pool 4A and 4B	
Berthing length 320 m.	Grain
Richardson Terminals Ltd.	
Berthing length 396 m.	Grain
D.D.S. Salvage Ship Repairs Inc.	
Berthing length 250 m.	Docking only

Main Harbour Centre:

Saskatchewan Wheat Pool 6	
Berthing length 292 m.	Grain
CNR High Dock	
North side berthing length 463 m.	Dry Bulk Cargo
South side berthing length 463 m.	
Northern Wood Preservers	
Berthing length 189 m.	Forest Products
Manitoba Pool Elevator 3	
Berthing length 346 m.	Grain
Canada Malting Co. Ltd.	
Berthing length 305 m.	Grain
Saskatchewan Wheat Pool 7A	
Berthing length 500 m.	Grain
Saskatchewan Wheat Pool 7B	
Berthing length 510 m.	Grain
United Grain Growers "M"	
Berthing length 378 m.	Grain
Manitoba Wheat Pool	
Berthing length 436 m.	Grain
Parrish & Heimbecker	
Berthing length 350 m.	Grain

SYDNEY, N.S.: 46.09 N. 60.12 W. (See Plan)

DOCUMENTS:
Crew's Declaration Y.14 in triplicate.
Ship's Stores E.1 in triplicate.
Crew Tally IMM.201 in duplicate.
Report Inward A.6 in triplicate.

PILOTAGE: Compulsory pilotage distance is approximately 12 miles and administered under the Atlantic Pilotage Authority. The area for Cape Breton Pilot embarkation is Sydney Outer Buoy: Lat. 46° 22′ N., Long. 60° 08′ W. To avoid delay in obtaining a Pilot, Masters must report by message addressed to Pilots, through Sydney Radio VCO or any Coast Radio Station 24, 12 and 6 hours before vessel's ETA.

ANCHORAGES: The land-locked harbour affords safe anchorage for a large number of any size vessels with depths ranging from 40 ft. to 60 ft.

RESTRICTIONS: Berthing allowed day or night. "Harbour Ice", January to March, "Drift Ice" April to May. Navigable with aid of ice breakers requested from Ice Control at Sydney.

MAX. SIZE: Max. draft 37 ft. Governed by least depth in channel of 38 ft. at the lowest normal tides (average rise and fall 3 ft. – 5 ft.).

HEALTH: Sydney is an official quarantine station. Radio Pratique obtained between 0900 and 1700 hrs. local time by radio message to "Quarantine Sydney". Information required from vessel is as follows:
Name and nationality of vessel.
Name of three previous ports called at during voyage.
Port of destination and name of Agent.
Nature of cargo.
Date and place of last deratting or exemption certificate.
Number of crew and passengers.
Condition of health of all on board with details of any sickness or death occurring during the voyage.
Vaccination status of crew and passengers.
The ETA and any other information that may be required by the Quarantine Officers.

The ship will require usual inspection on arrival. However, radio pratique will enable vessel to enter port, dock and commence loading or unloading operations prior to official quarantine clearance. Vessels which have not applied for radio pratique and all vessels with suspected infectious disease aboard will remain in quarantine until cleared.

RADIO:

Station	*Call Letters*	*Freq. kHz*
Sydney Radio	VCO	500
Grindstone Island	VCN	500
Canso Radio	VAX	500
Halifax Radio	VBO	530
Cape Race	VCE	500

TUGS: Not necessary for docking powered vessels.

BERTHING: *Syd-Port Industrial Park:*

Main Jetty: The outer face of the main jetty is 850 ft. long with a 36 ft. depth at LW. The inner face is 800 ft. with a 26 ft. LW depth.

Outer Quay: The length of the East face wall is 750 ft. with 20 ft. at LWOST. The North face wall is 600 ft. with a maximum LW depth of 20 ft. graduating to 10 ft. LWOST.

Inner Quay: The inner wall is 1,100 ft. long with 20 ft. LW depth.

Services: The services include fresh water, sewage, electric power, all weather paved roads joining the Trans Canada Highway network and 4,564 feet of rail sidings connecting to major Canadian and U.S. rail systems.

Sydney Steel Corporation Piers:

No. 1 Pier: Berthing length 425 ft. Depth at LW 28 ft. Now used primarily for the loading of coke oven by-products (light oil and coal tar). Equipped with railway connections and 4 in. pipe-line for fresh water.

No. 3 Pier: (Bulk Discharge Berth) Berthing length 700 ft. Depth at LW 41 ft. Equipped to handle bulk cargoes by self-unloading boom type vessels and bulker type vessels. Self-unloading discharge into hopper and main in-haul conveyor system designed to handle iron ore pellets at a rate of 3,000 t.p.h. and coal at a rate of 1,500 t.p.h. Bulkers are unloaded by one 8 ton capacity Mobile Grab-Type Unloading Tower at a rate of approximately 7,000 tons per day. Travel distance 328 ft. Pier is also equipped with a 6 in. pipe-line for water, 12 in. pipe-line for diesel fuel and a 16 in. pipe-line for bunker fuel.

No. 4 Pier: (Steel Loading Berth) Berthing length 715 ft. Depth at LW 41 ft. Equipped with one mobile portal type 45 ton capacity crane to handle the loading of finished and unfinished steel products (including 25 m. steel rails) and the discharging of scrap and other general cargoes. Crane equipped with a 120 ft. hinged boom with a 60 ft. back reach. Travel distance 430 ft. Pier equipped with three railway tracks under centre section of crane and one track on the water side. Fresh water is available along with pipe-line for marine diesel and bunker fuel.

Cape Breton Development Corporation Coal Piers:

Coal Pier No. 4 has a berthing length of 810 ft. with 30 ft. of water alongside at LW. There is a 15,000 short ton storage pocket for coal and coke with an additional 2,000 tons loaded car storage over full bin. A conveyor belt system carries product to the pier head where it is boom loaded into vessels at an average rate of 2,000 short tons per hour. This pier, the main of a series of three is connected with the CN railway system. Equipped with 4 in. line for fresh water.

Sydney Government Wharf:

The berthing length of the West face is 794 ft. with a 28 ft. LW depth. The South face is 300 ft. long sloping off to a 15 ft. LW depth. Facilities include a bonded warehouse (100 ft. × 200 ft.) and 100,000 square footage of bonded open storage with a rail spur line on the waterside with tailgate delivery in the rear. Fresh water and diesel bunkers also available.

STEVEDORES: Available by phoning Rowe Freight & Marine Service Ltd., (Tel: (902) 564-8452 Telex: 019-35275) 24 hours before ETA of vessel. Ships cargo gear is usually employed but mobile cranes up to 125 tonnes are available at short notice for extended hire.

MEDICAL: Two hospitals.

TANKERS:

Irving Oil Pier: Berthing length 24 ft. Depth alongside 23 ft. at LW. 2×8 in. pipe-lines.

Petrofina Wharf: "T" head pier. Berthing length 74 ft. Depth alongside 22 ft. 1×10 in. pipe-line.

DENSITY: Average 1023.

FRESH WATER: Available anytime, supplied through 2.5 in. hose at rate of 25 t.p.h., cost depending on tonnages, from $1.00 to 0.45 cents per ton, plus labour.

FUEL: Marine diesel, bunker fuel and galley fuels are obtainable by pipe-line at Pier Nos. 2, 3 and 4. Rate of bunkering approximately 100 t.p.h.

Suppliers: Northern Petroleum Ltd., 48 Fairview Street, Sydney, N.S. B1P 1P9. Tel: (902) 564-5152.

Gulf Canada, 2020 University Street, Montreal, P.Q. H3A 2L4. Tel: (514) 284-7837.

Petrofina Canada Inc., Marine Terminal, Sydney River, N.S. Tel: (902) 539-6446.

Irving Oil, Bulk Plant, Kings Rd., Sydney, N.S. Tel: (902) 564-5566.

GANGWAY/DECK WATCHMEN: Crew sufficient.

OPENING/CLOSING HATCHES: Crew.

CUSTOMS ALLOWANCES: 200 cigarettes or 0.5 lb. tobacco or 15 cigars, each officer. 40 oz. of spirit per officer.

IDENTIFICATION CARDS: Seaman's identity cards.

CONSULS:
British and Canadian Shipping Master.
Portugal Vice-Consul 794-3515.
Honorary French Consular Agent, North Sydney 794-4800.
Norwegian Vice-Consul, Sydney 564-9288.

REPAIRS/DRY DOCKS: The Sydney Engineering and Drydocks consist of two wharfs (370 ft. and 425 ft. long) with marine rail slips of 3,000 and 1,200 ton capacity and a 45 ton wharf crane. They have 40,000 sq. ft. of production plants using skilled marine tradesmen. Also see "North Sydney".

SURVEYORS: See "North Sydney".

REPATRIATION: Can be arranged.

AIRPORT: Served by Air Canada, Air St. Pierre and Eastern Provincial Airways.

TIME: Sydney is on Atlantic Standard Time from the last Sunday in October to the last Sunday in April, and on Atlantic Daylight Time from the last Sunday in April to the last Sunday in October. GMT minus 4 hours on Atlantic Standard Time and GMT minus 3 hours on Atlantic Daylight Time.

HOLIDAYS: Christmas Day; New Year; Good Friday; Dominion Day; Thanksgiving Day; Labour Day. No work as a rule from 0800 to 0800 hrs. next day.

POLICE/AMBULANCE/FIRE: Police 564-4415; Ambulance 564-5507; Fire 539-3552.

EMERGENCY CO-ORDINATION CENTRE: Canadian Coast Guard: Oil spills and other emergencies from Sydney Harbour Area (no charge) ask operator for Zenith 49000.

SERVICES: Compass adjusting, tank cleaning.

SHORE LEAVE: Allowed.

GENERAL: *Loading Devco Coal:* The Canadian Coast Guard has issued instruction for Masters loading Devco coal at Sydney.

All Masters will receive the instructions before loading commences and Coast Guard surveyors will be in attendance prior to and during loading.

One of the important instructions is that the vessel must be equipped with a suitable surface ventilation system.

N.M. Paterson & Sons Berthing length 274 m.	Repair Dock
Dow Chemical Ltd. Berthing length 60 m.	Marginal Dock
Great Lakes Forest Products Ltd. Berthing length 350 m.	Forest Products
Gulf Canada Ltd. Berthing length 46 m.	Berthing for own Tankers
Valley Camp "A" Berthing length 223 m.	. Dry bulk transhipment facility
Valley Camp "B" Berthing length 389 m.	Dry bulk transhipment facility
Ontario Hydro Generating Station Berthing length 207 m.	Marginal Dock
Saskatchewan Wheat Pool 15 Berthing length 411 m.	Grain
Cargill Grain Ltd. Berthing length 518 m.	Grain
Abitibi-Price (Mission Mill) Berthing length 646 m.	Marginal Dock

BULK HANDLING FACILITIES:

Grain Elevators: Saskatchewan Pool 8, Cargill, Saskatchewan Co-op 15, Parrish & Heimbecker (Superior), Manitoba Pool 1, United Grain Growers "M", Saskatchewan Pool 7, Canada Malting, Manitoba Pool 3, Saskatchewan Pool 6, Richardson, Saskatchewan Pool 4A, Saskatchewan Pool 4B, United Grain Growers "A", Superior Grain By-products.

Capacity for over 85 million bushels.

CRANES: *Crane & Equipment Rentals:* Thunder Bay Harbour Improvements Ltd., P.O.Box 2119, Thunder Bay, Ontario. Tel: (807) 344-7294.

MEDICAL: All facilities available and may be arranged through Agent or by calling 623-7451.

DENSITY: Fresh water port. No tide.

FRESH WATER: Available. Contact: Keefer Terminal, P.O.Box 2266, Thunder Bay, Ontario. Tel: (807) 343-3594.

FUEL: Light diesel available by tank truck. Bunker "C" only in emergencies. Contact: Imperial Oil Limited, 1020 Pacific Avenue, P.O.Box 632, Thunder Bay, Ontario. Tel: (807) 623-1551.

GANGWAY/DECK WATCHMEN: May be arranged through Agent.

OPENING/CLOSING HATCHES: Normally done by crew.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes or 50 cigars every 7 days. Spirit/Wine: Officers: 1 bottle liquor each 7 days. Crew: Beer only, at Master's discretion.

CARGO GEAR: Normal safety certificate only required. No special port regulations.

CONSULS: Following countries are represented at Lakehead: Denmark, Finland, Greece, Italy, Netherlands and Norway.

REPAIRS: Full repairs available. Includes mobile equipment by both land and water conveyances.

Ship Repair and Building: PASCOL, P.O.Box 2690, Thunder Bay, Ontario. Tel: (807) 683-6261.

Fabmar Industrial & Marine Fabricators, 1019 Pacific Avenue, Thunder Bay, Ontario P7C 2S7. Tel: (807) 623-5212.

Western Engineering Services Ltd., 247 Kingston Street, Thunder Bay, Ontario. Tel: (807) 577-8411.

Shearmer Recycling Corporation Ltd., 700 Montreal Street, Thunder Bay, Ontario. Tel: (807) 577-8458.

SURVEYORS: *Surveyors & Weighers (Consulting):* SGS Supervision Services Inc., 203 Briar Bay, P.O.Box 1101, Thunder Bay, Ontario. Tel: (807) 577-5751.

Thunderbell Marine Consultants, 202-244 Camelot Street, P.O.Box 2116, Thunder Bay, Ontario. Tel: (807) 344-7442.

Steamship Inspection: Transport Canada, 325-33 S. Court Street, Thunder Bay, Ontario. Tel: (807) 345-6953.

DRY DOCKS: One available, length 227.69 m. by 29.87 m. Full service machine and welding shops on site.

AIRPORT: Served by regular airlines with connections to any destination.

TIME: Eastern Standard Time GMT minus 5 hours. Daylight saving time from last week-end in April to last week-end October, clocks advanced 1 hour.

HOLIDAYS: During shipping season from April to mid-December on which stevedores do not work: May 24th, July 1st, September 1st, and Thanksgiving Day (October). Work can be arranged at overtime rates.

POLICE/AMBULANCE/FIRE: Thunder Bay City Police Tel: 623-6471. Fire and Ambulance contacted most easily through "VBA" Thunder Bay or Tel: 623-5123 and 623-4542 respectively.

TELEPHONES: Telephones at Keefer Terminal only.

SERVICES:

Compass Repairs: Sperry Marine Systems, Thunder Bay Telecommunications, Thunder Bay, Ontario. Tel: (807) 623-1211.

Mr. Ron Thomson (setting only), 36 McKibbon Street, Thunder Bay, Ontario. Tel: (807) 344-6481.

Garbage Removal: Thunder Bay Marine Services Ltd., P.O.Box 2565, Thunder Bay, Ontario. Tel: (807) 344-9221.

Radio Repairs: Thunder Bay Communications, 1135-A Russell Street, Thunder Bay, Ontario. Tel: (807) 623-1211.

Miskelly's Electronics Limited, 60 Squire Street, Thunder Bay, Ontario. Tel: (807) 345-3641.

Missions to Seamen: Missons to Seamen, Keefer Terminal, P.O.Box 3192, Thunder Bay, Ontario. Tel: (807) 344-8241.

Ship Chandler: Frank's Locker Service, 142 S. Hardisty Street, Thunder Bay, Ontario. .Tel: (807) 623-4322.

Waste Removal: A-1 Sewage Services Ltd., R.R. No. 5, Highway 17, Thunder Bay, Ontario. Tel: (807) 939-2712.

Potter Plumbing Services Ltd., R.R. No. 1-2400 Rosslyn Road, Thunder Bay, Ontario. Tel: (807) 577-5221.

GENERAL: All vessels entering, moving in, or departing Port of Thunder Bay required to contact VDX 30 prior making such move. Initial contact must be made before entry from area designated as "Welcome Islands" giving particulars of destination within Harbour and routes to be traversed.

SHIPMASTER'S REPORT: June 1980 (Updated 1986).

Port Limits: Consist of the area surrounded by the chain of islands of which "The Sleeping Giant" is the largest.

Documentation: Generally dealt with at Montreal but Customs, Immigration may board. The bond can be opened after Montreal and sealed again at Thunder Bay.

Pilotage: Arranged in advance by Agent in collaboration with Seaway Authority.

Anchorages: As indicated on Chart 2314. 1 mile of breakwater at the Northern end. Care should be taken to avoid blocking any of the entrances.

Max. Size: Loading draft limited by Seaway Authority at 26 ft. 00 in. on arrival at Lock 8, Welland Canal. Size of vessel limited by Seaway Authority.

Pratique: Through Montreal, where vessel anchors prior to seaway passage.

VHF: Communication through Channels 16, 9, 6, 14, "Thunder Bay Harbour Commission Advisory Radio" or "Pilot".

Tugs: Two of 800 h.p. each. Use ship's lines for securing.

Bridges: Minimum bridge height 130 ft. above water level.

Medical: Seven hospitals.

Density: Fresh water.

Fuel: None except in emergency.

Consuls: None.

Repairs: Minor repairs can be undertaken.

Gangway/Deck Watchman: Unnecessary.

Hatches: Opening and closing by ship's crew.

Customs: Allowance consistent with Montreal (i.e. 1 bottle of spirits and 300 cigarettes).

Cargo Gear: Discharge by ship's gear or mobile crane (expensive).

Airport: Locally with service to all major airports in Canada.

Repatriation: Possible.

Telephone: Facilities at each terminal, none on board.
Shore Leave: Unrestricted.
Identification Cards: None issued locally, however advise taking own ashore.
General: Loading grain vessel should be clean on arrival and ready for inspection by Port Warden. Grain loading documents should be completed prior to arrival.

AUTHORITY: Port of Thunder Bay, Harbour Commission, P.O.Box 2266, Thunder Bay, Ontario P7B 5E8. *Tel:* (807) 344-3594. *Telex:* 073-4347. *Contact:* P. R. Cook, Port Manager, Captain R. J. Legros, Harbour Master.

TORONTO, Ontario: 43.40 N. 79.25 W. (See Plan)

For important general information refer to "St. Lawrence Seaway".
DOCUMENTS: Master should prepare for boarding of Customs, Immigration Officers:
Customs: Crew Declaration Lists (in triplicate) and Ship Store Lists (in triplicate).
Immigration: Crew List and Passenger List (in duplicate).
PILOTAGE: As required by Great Lakes Pilotage Authority.
ANCHORAGES: Vessels anchor in Humber Bay or in Inner Harbour. Anchorages allotted by the Harbour Master.
RESTRICTIONS: Vessels may enter port area at any time.
MAX. SIZE: The port has facilities to accommodate any vessel which can navigate the St. Lawrence Seaway Locks.
Max. size of vessels permitted to transit the Seaway:
(a) Ships not exceeding 730 ft. overall and 75 ft. 6 in. extreme breadth may transit.
(b) Masts must not exceed 117 ft. above the water level.
(c) Max. draft 26 ft.
HEALTH: See "Montreal".
RADIO: Controlling radio station in the Toronto area is VBG Toronto. A port communications centre is located in the Harbour Master's Office and operated for emergency, safety and operational requirements. Ships entering Toronto Harbour should contact the Toronto Harbour Master's Office for information by radio telephone. Call sign XJF on frequencies:
156.8 MHz – Safety and Calling
156.6 MHz – Working
156.7 MHz – Alternate Working
TUGS: Not normally required but available. Tugs use ship's lines.
BERTHING: 20 berths available, 2 of which are Ro/Ro berths.
BRIDGES: Two bridges – Ship Channel Bridge and Keating Channel Bridge. Both lift bridges, no height restriction.
SPECIALISED CARGO HANDLING FACILITIES: The following companies offer berthage and storage for the bulk commodities indicated:
Liquid Chemicals. Allied Chemical Co., Domtar (no waterside storage tanks, trucked directly from vessel). Liquiterminals at Berth No. 425.
Cement. Lake Ontario Cement, Canada Cement Lafarge.
Molasses. Canada West Indies Molasses.
Oil. Texaco, Imperial Oil, Sun Oil, Canadian Fuel Marketers, BP, Gulf, Shell, Roy-L Canadian Fuel, Milnes Fuel Oil, Caloil.
Salt. Canadian Salt Co., Sifto Salt, Iroquois Salt.
Chemicals. Domtar.
Sugar. Redpath Sugars Ltd.
Vegetable Oils. Rothesay Concentrates Co. Ltd., Liquiterminals Ltd., Victory Soya Mills.
Grain. Toronto Elevators Ltd., Victory Soya Mills; Canada Malting Ltd. Total capacity: 4 million bushels.
CRANES: Stationary dockside crane, capacity 300 short tons at Marine Terminal 35, floating crane 50 ton capacity and mobile crane 40 ton capacity available.
STEVEDORES: General rule is 24 hours notice.
To work ship at 1300 hrs., order gangs by 1030 hrs. the same day.
To work ship at 1800 hrs., order gangs by 1600 hrs. the same day.
To work ship at 0800 hrs., order gangs by 1530 hrs. previous day.
MEDICAL: Doctor and hospital facilities available.
TANKERS: Diameter of load/discharge lines are the American Standard 8 in. Max. draft at berths is 26 ft.
DENSITY: Fresh water.
FRESH WATER: Available at all berths.
FUEL: In most cases, vessels bunker in Montreal. Fuel available at 12 hours notice, either by road tanker or at oil berths.
Shipmaster's Report: Fuel and lub-oils only delivered by road tankers and vessels are not allowed to bunker while alongside Redpath Sugar Berth. Bunkers not available on Sundays and holidays due to Department of Transportation regulations ruling that no trucks are allowed on highways those days.
GANGWAY/DECK WATCHMEN: Crew member or hired by Agent.
OPENING/CLOSING HATCHES: Carried out by stevedores.
CERTIFICATES:
Certificate of Registry.
Articles of Agreement.
Log Book.
Safety of Life at Sea.
Safety Equipment Certificate.
Safety Construction Certificate issued by the Country to which the ship is registered.
CUSTOMS ALLOWANCES: Tobacco, Crew entitlement on first arrival in Canada – 200 cigarettes, 50 cigars, 2 pounds of tobacco. Wine and/or Spirit, Crew entitlement on first arrival in Canada – 40 oz. of spirits, liquors or wines.
CARGO GEAR: Vessel requires a tackle equipment book and a certificate covering cargo equipment which must be kept up to date and notated every 12 months by a competent person. Port of Toronto has modern equipment including stationary Atlas crane, 300-ton capacity; mobile container crane designed for loading and unloading 20 ft. and 40 ft. containers; 56-ton overhead lift truck equipped with a 40 ft. spreader frame. Two additional container handlers and 50-ton floating crane. Private cranes, ranging in capacity from 20 tons to 150 tons are available by arrangement.
IDENTIFICATION CARDS: Visitor passes available from port police office.
CONSULS:
Belgium
Brazil
Colombia
Costa Rica
Cuba
Denmark
Ecuador
El Salvador
Finland
France
Germany F.R.
Greece
Guatemala
Israel
Italy
Japan
Lebanon
Mexico
Netherlands

Sweden
Switzerland
Thailand
Turkey
United States
Yugoslavia
REPAIRS: Most repairs not requiring dry dock can be carried out in Toronto. Nearest dry dock is located at Port Weller, 30 miles distant.
REPATRIATION: All facilities.
AIRPORT: (1) Toronto Island Airport located at Western end of harbour. General aviation only with regular airlines.
(2) Toronto International Airport approximately 15 miles distant. Airport is served by nine regular airlines.
TIME: GMT minus 5 hours. Two alterations made to clocks during year (1) Last Sunday morning in April, Eastern Standard Time to Eastern Daylight Time 1 hour ahead. (2) Last Sunday morning in October, Daylight Time to Eastern Standard Time 1 hour back.
HOLIDAYS: Work can be arranged on any holiday at double time rate with the exception of Labour Day which is the first Monday in September of each year. No work is done on this day.
POLICE/AMBULANCE/FIRE: Emergency numbers as follows: Marine Unit 967-2680; Port Police 863-2137; Emergency No. 911.
TELEPHONES: No arrangements available for placing telephones on board.
SHORE LEAVE: No restrictions.
AUTHORITY: The Toronto Harbour Commissioners, 60 Harbour Street, Toronto, Ontario, Canada M5J 1B7. *Tel:* (416) 863-2000. *Telex:* 06-219666. *Cables:* Torport or Worldtrade Toronto. *Contact:* John Jursa, Director – Public Affairs. Ian Brown, Port Director.

TROIS RIVIERES, Quebec: 46.22 N. 72.34 W. (See Plan)

DOCUMENTS:
2 sets Crew Lists.
2 sets Passenger Lists.
3 sets Customs Documents.
3 copies Health Documents.
6 sets Manifests.
6 sets Bills of Lading.
3 sets Ship's Papers.
PILOTAGE: Pilots take charge of vessel at Quebec for Trois Rivieres destination. See "Quebec" for further information.
ANCHORAGES: No vessel shall, except in an emergency, anchor within the harbour without prior permission from the Port Manager and then only at such place as is assigned. The anchorage area used for Trois-Rivieres is located approximately 2 miles up river.
RESTRICTIONS: Port open to navigation 12 months of the year. From January – March inclusive, vessels should be reinforced for ice.
MAX. SIZE: Max. draft 10.6 m. (no tide).
HEALTH: Trois-Rivieres is a Port of Entry. Port doctor at the service of vessels. Also see "Montreal".
RADIO: St. Lawrence River Marine Traffic Control call system letters VBK Trois-Rivieres.
TUGS: Not usually considered necessary for berthing ships. However tugs can be made available upon advance notice.
BERTHING: 20 berths are available, including 16 open and 4 shedded. Total berthing length: 3,318 m., including 2 private berths.
Ports Canada Facilities:

Berth Number (usual name)	Wharf Length (m.)	Depth at LW (m.)	Remarks
1	152.4	9.1	Shed

No. 1 No. 2 No. 3	163,000	16	2,100	2 Marine legs at Berth 17 Unloading capacity 1,960 tonnes per hour

CRANES: Mobile cranes (private) up to capacity 200 tons available.
STEVEDORES: Stevedores available through local stevedoring firms.
MEDICAL: If medical service is required upon arrival, call through No. 7 (St. Lawrence River Marine Traffic Control System). Hospital facilities available.
TANKERS: Diameter of oil lines 8 in. and 12 in. No slop discharge facilities. 7 tanker berths – 5 for 30 ft. draft and 2 for 35 ft. draft.
FRESH WATER: Hoses connected to harbour hydrants at 14 berths; rate 20 t.p.h.
FUEL: Certain types of fuel oil, in quantity, supplied to ships by Ultramar Canada Inc. Diesel oil is also available.
GANGWAY/DECK WATCHMEN: Not necessary except if dangerous cargo on board.
OPENING/CLOSING HATCHES: Carried out by stevedores.
CUSTOMS ALLOWANCES: 200 cigarettes each and/or 2 lb. tobacco. Wine and/or Spirits: One bottle each.
IDENTIFICATION CARDS: Seamen's card and/or passport.
CONSULS: At Montreal.
DRY DOCKS: None.
REPAIRS: Minor repairs done by local machine shops.
REPATRIATION: Can be arranged.
TIME: EDST from last Sunday of April to last Sunday of October, then normal EST.
AIRPORT: 5 miles distant. No scheduled flights.
HOLIDAYS: New Year's Day (Jan. 1st and Jan. 2nd); Good Friday; Easter Monday; Victoria Day; St. Jean Baptiste Day; Canada Day; Labour Day; Thanksgiving Day; Remembrance Day; Christmas Day, Boxing Day (Dec. 25th and Dec. 26th).
POLICE/AMBULANCE/FIRE: Police and Fire 374-3535; Ambulance 373-0505, 376-1212, 376-1286; Poison Treatment 374-6211.
SERVICES: Compass adjusting only.
SHORE LEAVE: Crew allowed ashore.
AUTHORITY: Ports Canada, Port of Trois-Rivieres, 1545 du Fleuve, P.O.Box 999, Trois-Rivieres, Quebec G9A 5K2. *Tel:* (819) 378-3939. *Telex:* 05-837226. *Contact:* Paul Alain, Eng., Port Manager.

TWILLINGATE, Newfoundland: 49.40 N. 54.45 W. (See Plan)

PILOTAGE: Pilotage is not compulsory, however, a licensed Pilot is available if desired. A Pilot can be arranged by giving 24 hours notice of requirement to "Pilots, St. John's".

The Pilot will board off St. John's in position Lat. 47° 33′ 42″ N., Long. 52° 37′ 54″ W. or off Twillingate Harbour provided the vessel's Local Agent arranges for a boat to embark the Pilot. The Atlantic Pilotage Authority pilot boat No. 2 is used at St. John's; this boat guards VHF Channels 16 and 11 (156.8 and 156.55 MHz). Alternatively, Shipmasters may arrange to use local persons in the community for pilotage purposes.
ANCHORAGES: The anchorage in Twillingate Harbour is not good as it is open to N.E. winds that send in a heavy sea, and the holding ground is indifferent. The best anchorage is off the West shore N.E. of Twillingate Wharf Light in depths of 6 fathoms (11 m.).
RESTRICTIONS: Navigable from April to February.
BERTHING: The Government Wharf, on the West side of the harbour about 1.4 miles South of Cuckold Point, is 300 ft. (91 m.) long and 35 ft. (11 m.) wide. On the North side of the wharf, the outer 90 ft. (27 m.) decreases gradually from a depth of 34 ft. (10.4 m.) at the head to 21 ft. (6.4 m.), and the next 70 ft. (21 m.) gradually decreases to 13 ft. (4 m.). On the South side, the outer 90 ft. (27 m.) decreases from a depth of 33 ft. (10.1 m.) at the head to 15 ft. (4.6 m.), and the next 90 ft. (27 m.) decreases to a depth of 5 ft. (1.5 m.).

At the boat landing, at the root of the South side of the pier, there is a depth of 2 ft. (0.6 m.). The deck of wharf has an elevation of 10 ft. (3 m.).

A freight shed 90 ft. (27 m.) long and 41 ft. (12 m.) wide stands on the Government Wharf. A bait depot is located adjacent to the Government Wharf.

A rubble mound breakwater 560 ft. (171 m.) long extends West from the North end of Fishery Products Wharf, situated on the East shore near the head of the harbour, Three finger piers, with depths of 5 ft. to 8 ft. (1.5 m. to 2.4 m.) alongside, extend 240 ft. (73 m.) South from this breakwater.

At Jenkins Cove, on the N.E. side of the harbour, there is a Community Wharf 163 ft. (50 m.) long and 21 ft. (6 m.) wide with a least depth of 11 ft. (3.4 m.) at the face. A wharf and fish storage shed extend at a right angle from the Community Wharf; this wharf is 175 ft. (53 m.) long with a depth of 3 ft. (0.9 m.) alongside the face.

Another wharf, at Jenkins Cove, is 200 ft. (61 m.) long and 20 ft. (6.0 m.) wide with a reported depth of 15 ft. (4.6 m.) at HW at outer end.
MEDICAL: Full hospital facilities available. Tel: (709) 884-2131.
SURVEYORS: Not available locally. Lloyd's Register, P.O.Box 5054, St. John's, Newfoundland, A1C 5V3. Tel: (709) 726-0543, (709) 368-2538 (Residence).
GANGWAY/DECK WATCHMEN: Usually crew.
CARGO GEAR: Mobile crane can be arranged through Agent.
AIRPORT: 100 km. by paved road to International Airport (Gander).
POLICE/AMBULANCE/FIRE:

Police: R.C.M.P. local detachment (709) 884-2811.
Ambulance: Available locally (709) 884-2131.
Fire: (709) 884-2224.

EMERGENCY CO-ORDINATION CENTRE: Coastguard, St. John's. Tel: (709) 772-5151 or ask operator for Zenith 07021.
SHORE LEAVE: No restrictions.
BANKS: Scotia Bank (709) 884-2121.
GENERAL: Chart No. 4548 covers the port.
AUTHORITY: Transport Canada, P.O. Box 1300, St. John's, Newfoundland, A1C 5H8. *Tel:* 772-5154. *Telex:* 061-3369. *FAX:* 2193. *Contact:* D. A. Lester, Regional Manager.
Local Wharfinger: John Clarke.

VANCOUVER, B.C.: 49.17 N. 123.07 W. (See Plan)

The port is located in an excellent sheltered natural harbour, open to navigation all year round with a minimum depth of 15 m. in the approach channel and at many berths.
PORT LIMITS: The seaward boundary of the inner port within which a vessel is considered to be an "arrived vessel" is a line drawn between Port Atkinson and Port Grey at the entrance to English Bay. The seaward boundary of the outer port is running North-South between the North Arm of the Fraser River and the International Boundary and being 5 miles offshore in the Straits of Georgia.
DOCUMENTS: The following documents are required to be prepared prior to arrival:

- 3 copies Canadian Customs Form E1-List of ship's stores.
- 3 copies Canadian Customs Form Y14-List of crew's possessions.
- 3 copies List of ship's slop chest stores for sale.
- 3 copies Canadian Immigration Form 200-Crew List.
- 1 copy Canadian Quarantine Form CS1.

Manifests and other documents are prepared by the Agent.
PILOTAGE: Pilotage is compulsory. Pilots board at the Fairway Buoy off Victoria, Vancouver Island. ETA to be sent to "Pilots Victoria" at least 12 hours before arrival and confirmed 4 hours before arrival. Distance to Vancouver – 135 km.
Victoria Traffic Separation: Vessel Traffic Separations schemes are in effect – Straits of Juan de Fuca and Georgia Strait. Vessel Traffic System – VTS are under the control of the US Coast Guard (Seattle Traffic) and the Canadian Coast Guard (Vancouver Traffic) within the respective territorial limits.
SECOND NARROWS TRAFFIC CONTROL: The following procedures are mandatory and apply to vessels intending to enter or move within the area defined in "Area" below.

In addition, East of the line joining Point Grey (Lat. 49° 15′ 54″ N., Long. 123° 15′ 44″ W.) and Point Atkinson (Lat. 49° 19′ 50″ N., Long. 123° 15′ 48″ W.), the clearance and reporting procedures detailed in *Vancouver Traffic Zone* (G1130) are mandatory for the vessels specified in G1130.
Call: CJU52.
Location: CN Railway Bridge, Second Narrows.
Frequency: Channel 16; 06; 12.
Area: Second Narrows Movement Restriction Area (MRA) lies between the following limits:

(a) West limit: Line due North from the light at the N.E. end of Terminal Dock to Neptune Terminals.

(b) East limit: Line due North from Berry Point Light to the North shore.

Procedure: (1) At least 12 hours before entering the MRA, the following vessels should advise Vancouver Harbour Master of their proposed transit time:

(a) Vessels of 20 m. and over in length.
(b) Towing vessels of 8 m. and over in length.
(c) Towing vessels where breadth of tow is 20 m. and over, or length of tow is 30 m. and over.

Any subsequent amendments should be notified.

(2) All deep sea vessels (i.e. vessels requiring a Pilot) intending to pass through the Second Narrows bridges should report their intentions and ETA at CN Railway Bridge to the bridge operator on Channel 12 when entering the harbour limits and before leaving a berth or anchorage in the harbour. ETA should be confirmed on arrival at the limit of the MRA.

(3) Vessels requiring the lift span of the railway bridge raised should contact the bridge operator on Channel 12 – (1) prior to departing berth or anchorage. (2) upon entering port limits if direct from sea. This signal will be acknowledged by the bridge operator on Channel 12.

ANCHORAGE: There are 28 designated anchorages in the port which are available during periods of congestion. 19 in English Bay, 5 in main harbour and 4 above Second Narrows. Main Harbour anchorages reserved mainly for vessels clearing for grain, bunkering or awaiting berths or tides, assignment is limited to a maximum period of 48 hours. Those outside mainly reserved for vessels expecting long waits. Main Harbour anchorages range from 9 to 21 fathoms and English Bay anchorage from 8 to 16 fathoms. Largest vessels using and expected to use Vancouver Harbour can be accommodated at designated anchorages. Holding ground is good and anchorages are protected. Requests for permission to anchor must be made to the Harbour Master.

RESTRICTIONS: Min. depth at LW is 15.00 m. at the First Narrows. Min. clearance at HW is 60.36 m. under First Narrows Bridge (Lions Gate); Min. depth at LW is 13.3 m. at the Second Narrows. Min. clearance at HW is 44.00 m. under Second Narrows Bridge. Vessels are allowed to transit the Second Narrows Movement Restriction Area (MRA) under conditions contained in the Second Narrows MRA Standing Orders (during periods either side of slack water and stemming the tidal current). (All Oil Terminals and Pacific Coast Bulk Terminal lie above the Second Narrows.)

Vessels carrying dangerous goods, tankers, combined carriers, must obtain special clearance from the Harbour Master prior to entry and/or departure.

Canadian Coast Guard maintain and operate the Vessel Traffic System.

All International and National pollution controls are strictly enforced.

MAX. SIZE: Berthing for vessels up to 250,000 d.w.t. and draft up to 75 ft. at Roberts Bank.

HEALTH: *Quarantine Regulations:* Vessels need only apply by radio (Station VAK), where a condition of health irregularity is suspect, or the vessel has called at a country listed under the World Health Organisation as being infected with plague, or has an expired Derat Certificate.

RADIO: VAI/Vancouver Coast Guard Radio.

VHF: VAS/Vancouver Traffic located just North of the First Narrows Bridge. Manned 24 hours per day. Pilots on radio/telephone contact with Vancouver Traffic at all times. Vessels normally communicate on Channel 12 from Iona Jetty/Cape Roger Curtis inwards. Other frequencies available for communication are 16, 6, 14 and 11.

RADAR: Vancouver Traffic continuous radar surveillance from Point Grey/Point Atkinson inward Second Narrows. Anchorage assistance available.

TUGS: Meet vessels East of First Narrows and off berth. Ship's lines are used. Pilots communicate with tugs by VHF Channel 17.

Attendant tugs are required to escort Deep Sea Vessels through the Second Narrows MRA in the vicinity of the Second Narrows Bridges in accordance with the Vancouver Port Corporation (Port of Vancouver) Second Narrows MRA standing orders.

BERTHING: Five vessel Inner Harbour anchorages, 3 anchorages at mouth of Indian Arm and one anchorage in position 49° 17′ 39.5″ N., 122° 58′ W. (all East of Second Narrows Bridge) for vessels awaiting Grain Inspection/Clearance etc., for a maximum period of 48 hours and 19 large vessel anchorages in English Bay for vessels awaiting to berth are available.

Terminal	*No. of Berths*	*Total Length (m.)*	*Depth (m.)*	*Remarks*
Canada Place Cruise Ship Facility	5	746	10.0	Cruise ship terminal 326 m. (West Side) 110 m. (North Side) 310 m. (East side)
Ballantyne	5	725	10.0	General cargo. Cruise ships. Cargo sheds.
Centennial Terminal	7	1,304	10.0–15.0	Berth No. 1, 2, 3 & 4 – 10 m. No. 5 & 6 – 12 m. and No. 7 – 15 m. 2 container berths; 2×40 ton gantry cranes. 1×136 tonne and 1×45 tonne mobile crane. Forklifts to 38 tonne capacity. Cargoes handled: lumber, pulp, general, containers, bulk grain with 2 vacuvators.
Vanterm	5	1,064	15.5	3 berths for container vessels (2×281 m. and 1×228 m.) and 2 berths for conventional vessels (1×91 m. and 1×183 m.) 3 berths equipped for tallow loading. 240 reefer plugs 3×40 tonne gantry cranes. 1×250 tonne mobile crane.
Lynnterm	4	838	15.5	Storage and Shipping - Forest Products, Steel, General cargo, heavy lifts. Forklifts up to 41 tonnes.
Terminal Dock	—	480	9.17	Demolished – use under review
Fibreco	1	137 m. (265 m. with dolphins)	13.1	Bulk loading woodchips (1,200 t.p.h.) - up to 42,000 d.w.t.
Seaboard International Terminal	3	600	12.0	Forest products. Forklifts up to 40 tons.
Cassiar Terminal	1	182	9.0	Asbestos/general Barge ramp (capacity 55 tonnes).
Neptune Terminal	3	717	12.19–15.23	No. 1 - depth 15.23 m. Max. LOA 262 m. (125,000 d.w.t.) draft 13.1 m. No. 2 – depth 13.1 m. can load Panamax. No. 3 – depth 12.19 m. Max. size 50,000 d.w.t. Cargo handled: Coal, potash, feed pellets, chemical fertilisers, phosphate rock and rape seed oil. Equipment: No. 1 – 1 stacker/reclaimer 4,000 t.p.h. and 1 reclaimer 1,000 t.p.h. 2 shiploaders of 3,000 t.p.h. No. 2 – 3 car dumper, 2 shiploaders of 2,000 t.p.h. each (3,500 t.p.h. combined). No. 3 – 2 bridges of 1,000 t.p.h. each. Hopper capacity 30 tonnes each.
Vancouver Wharves	5	1,042	10.7–12.8	Berth No. 1, 2 & 3 – length 540 m. No. 4 & 5 – length 502 m. Depths: No. 1 – 10.7 m. No. 2 & 3 – 11.3 m. and No. 4 & 5 – 12.8 m. Facilities: No. 1: Car unloader, storage sheds, travelling shiploader. Methanol receiving/shipping systems, storage tanks. No. 2: Pulp and paper mobile equipment, storage sheds. Methanol shipping system. No. 3: Pulp and paper mobile equipment, storage sheds. No. 4 & 5: Railcar dumper; bottom-door railcar dumper, sulphur, potash, phosrock, fertiliser shipping/receiving systems. Storage silo, sheds, pads No. 4 berth has twin quadrant retractable shiploaders, and the phosrock receiving system. No. 5 berth has a travelling shiploader trimmer. Storage capacity approximately 800,000 tonnes.
Pacific Coast Terminals	2	386	13.7	2 shiploads: 1×2,500 t.p.h. and 1×1,800 t.p.h. Bulk liquids – 600 t.p.h. Storage capacity: Sulphur (200,000 tonnes), Ethylene Glycol (13,500 tonnes, Styrene Monomer (13,500 tonnes).
Westshore Terminals: See "Roberts Bank" overleaf.				
United Grain Growers Elevators	2	427	7.3-11.6	Depth: 7.3 m. (East Side), 11.6 m. (West Side). 2 belts×500 t.p.h. each. Storage capacity: 102,000 tonnes. Products handled: Grain and by-products.
Pacific Elevators	3	560	7.66	Berth No. 1 – length 134 m. Depth 10.6 m. Loading rate 4×16,000 bu./hr. Berth No. 2 – length 182 m. Depth 13.72 m. Loading rate 4×16,000 bu./hr. Berth No. 4 – length 244 m. Depth 9.75 m. Loading rate 2×16,000 bu./hr. Cargo handled: Wheat, barley and rye. Storage capacity: 199,150 tonnes.
Alberta Wheat Pool	2	493	10.05-15.24	4× 14,000 bu./hr. spouts. 282,800 tonnes storage for grain.
Saskatchewan Wheat Pool	2	460	11.0-12.5	Depths: 11.0 m. (inshore), 12.5 m. (outshore). 5 spouts at each berth. Loading rate up to 2,000 tonnes/hr. (2 commodities maximum). Storage capacity 204,000 tons. Products handled: Grain, grain by-products, durum.
Pioneer Grain Terminal	1	180	15.24	2 loaders of 1,000 tonnes/hr. each. Storage capacity 108,000 tonnes. Cargo handled: Grain, grain by-products, flax.
B.C. Sugar Terminal	1	145	8.23	Sugar Gantry Cranes

Terminal	*No. of Berths*	*Total Length (m.)*	*Depth (m.)*	*Remarks*
Goodwin Johnson	2 1	200 150	15.0	Log loading (500 cu.m./gang shift)
Hooker Chemical Dock	2	153	6.7	Salt, Caustic Soda
Imperial Oil Ltd.	1	213.4	10.7	Petroleum Products
Shell Canada	1	122	9.8	Petroleum Products
Gulf Oil Ltd.	2	100	8.0	Petroleum Products

Transmountain Oil Pipeline Ltd.	1	91.4 (305 m. between dolphins)	12.2	Crude and propane: 12 in. and 24 in. lines. 2×10 in. hoses for crude. 1×10 in. hose and 6 in. vapour return line for propane. Crude 20,000-25,000 bbls./hr. and propane 10,000-11,000 bbls./hr.
Canadian Occidental	1	152	10.66	Salt and Chemicals 3×11,000 tonne tanks and 27,000 tonnes ground storage.
Dow Chemicals (Lynnterm No. 4)	1	200	11.7	Caustic Soda (1,200 t.p.h.), Ethylene Dichloride (1,000 t.p.h.), Ethylene Glycol (800 t.p.h.) Storage: Caustic soda (40,000 tonnes). Ethylene Dichloride (30,000 tonnes). Ethylene Glycol (17,000 tonnes).

There are a number of smaller terminals used principally by the coastal ferry and towing services.

Roberts Bank:

Owner: Port of Vancouver.

Operator: Westshore Terminals Ltd. (subsidiary of B.C. Coal Ltd.) Telephone 946-4491.

Construction: Sand fill; steel pipe and concrete dolphins and wharf head.

Type: Bulk terminal handling coal and petroleum coke.

Max. Size: 250,000 d.w.t. at No. 1 and 125,000 at No. 2.

Berths: Two. The facility can store up to 2 million tonnes (or 1.5 months-worth of throughput) without bulldozing.

Depth: Berth No. 1 – 22.9 m. Berth No. 2 – 20.8 m. Depth in turning basin 20.5 m. (at zero tide).

Facilities & Equipment: 22.3 hectares outside storage. Dual-quadrant shiploaders each with 5443.2 tonnes per hour capacity. Conveyor system, stackers and reclaimers. Rotary dumper for rail cars. Loop track circles perimeter of site.

General: Roberts Bank opened in 1970 on a man-made island and a 5 km. causeway created by the National Harbours Board, and linked to trans-continental railroads by a 30 km. rail line especially built by the B.C. Harbours Board.

Developments: A major expansion programme adding 3 × 20 hectare pads is now underway.

CRANES: Fixed crane capacity 300 tons, floating cranes, 45, 75 and 100 tons and mobile cranes of 150 and 250 tons available.

BRIDGES: See "Restrictions".

STEVEDORES: Gangs normally ordered day before ship's arrival, can be ordered same day for afternoon or evening work.

MEDICAL: All services available.

TANKERS: See "Berthing".

FUEL: All grades of heavy fuel oil and diesel oil are available, delivery by barge or tank truck. Suppliers are:

Chevron, Shell, Imperial, Gulf, Marine Petrobulk and Maritime Oil.

FIRE PRECAUTIONS: All vessels carrying dangerous materials to have suitable towing wires over offshore bow and offshore quarter.

VICTORIA, B.C.: 48.25 N. 123.22 W. (See Plan)

PORT LIMITS: Southern tip of Albert Head, to Southern tip of Trial Island (Canadian Charts 3413, 3423 and 3415).
DOCUMENTS: "See Vancouver".
PILOTAGE: Pilots embark at Victoria for all British Columbia ports. Pilot station within 2 mile radius of buoy in position Lat. 48° 22′ 45″ N., Long. 123° 24′ 56″ W. Radio "Pilots Victoria" through radio station VAK giving ETA at least 12 hours and confirmed 4 hours before arrival. Pilot boat on VHF Channel 16 and 17.
APPROACHES: The entrance to Victoria Harbour has a deep, wide, open water approach. The only hazard is Brotchie Ledge 900 m. S.W. of the outer end of the harbour entrance breakwater. The outer end of the breakwater and Brotchie Ledge are fitted with beacons.
ANCHORAGE:

"A"	Lat. 48° 23′ 46″ N.,	Long. 123° 26′ 58″ W.
"B"	Lat. 48° 24′ 09″ N.,	Long. 123° 27′ 36″ W.
"C"	Lat. 48° 24′ 14″ N.,	Long. 123° 26′ 43″ W.
"D"	Lat. 48° 24′ 24″ N.,	Long. 123° 25′ 54″ W.
"E"	Lat. 48° 24′ 44″ N.,	Long. 123° 26′ 37″ W.
"F"	Lat. 48° 24′ 54″ N.,	Long. 123° 26′ 00″ W.

Anchor berths "A", "C" and "D" have a swinging radius of 1,500 ft. and "B", "E" and "F" 1,200 ft.
RESTRICTIONS: Outer Harbour: Depth 35 ft. MLLW. Inner Harbour: Depth 21 ft. MLLW. Largest vessel to use port, length 575 ft. draft 34 ft.
HEALTH: Quarantine Officials board with Pilot. Advise Agent of ETA.
VHF: Pilot station. VAK.
Harbour Master's Office can be contacted on Channel 73. This Channel is also used by ship's Agents, King Bros., Victoria.
TUGS: Tugs and barges of various powers and sizes are available from Seaspan International Ltd., 345 Harbour Road, Victoria. B.C. V9A 3S2. Tel: 385-7711. Two harbour tugs of 500 h.p. each service the Victoria area. Additional or larger tugs are available giving minimum 48 hours notice.
BERTHING:

Berth	*Length* (ft.)	*Depth* (ft.)	*Remarks*
Ogden Point "A" N. Side	800	35	For handling lumber, pulp, paper, plywood and general cargo. Fresh water available at 20 t.p.h.
Ogden Point "A" S. Side	1,000	35	
Ogden Point "B" N. Side	800	35-40	Dock to be renovated.
Ogden Point "B" S. Side	800	33-35	The South side is used for loading lumber. Fresh water available at 20 t.p.h.

Between Piers A and B (distance 92 m.), at the inner end, is a small fish unloading dock used by the B.C. Packers Cold Storage Plant situated in the terminal area. Ogden Point also has the facilities to handle containers inbound and outbound. The terminal has a 20 acre paved cargo assembly area with on site connections for rail barge, truck barge, tug and barge, and trucks. Vessels must be self loading or unloading, but mobile cranes to 25 tons can be ordered if required.
STEVEDORES: 13 gangs available. Refer "Vancouver" for holidays, etc., arranged by Agent.
Working Hours: Westcan Terminals/Stevedores Ltd. offers 24 hour 7 day cargo handling services. Shifts: first 0100-0430, 0500-0800; second 0800-1200, 1300-1700; third 1700-2100, 2130-0100. Work ceases 1200 on Christmas Eve and New Year's Eve.

WELLAND, Ontario: 42.58 N. 79.13 W.

LOCATION: Industrial city on the Welland Canal, 5 nautical miles below Lock 8.
DOCUMENTS: See "Montreal".
RESTRICTIONS: Navigation season: April 1st to December 30th (usually). Channel depth: Controlled at 8.23 m. (27 ft.) in canal channel.
HEALTH: Pratique granted at Quebec City for incoming vessels from foreign ports.
RADIO: Ship-to-Shore communications through Toronto Coast Guard (VBG) or Buffalo (WBL).
BERTHING: New Welland Dock, Wharf 10. Length of dock wall 182.9 m. (600 ft.). Berth 222.5 m. (730 ft.). Depth alongside 8.2 m. (27 ft.). Type of facility: self unloaders and rental cranes.
SURVEYORS: A.B.S. at Toronto. Lloyd's at St. Catharines.
AUTHORITY: St. Lawrence Seaway Authority, Weston Region, P.O.Box 370, 508 Glendale Avenue, St. Catharines, Ontario L2R 6V8. *Tel:* 416-641-1932. *Contact:* R. B. McLeod, Regional Vice-President.

WEYMOUTH, N.S.: 44.27 N. 66.01 W. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
3 Customs Documents.
3 Health Documents.
3 Manifests.
Ship's Papers.
PILOTAGE: Non-compulsory. Ship's Agent contacts vessel through Marine Radio Station, Yarmouth and notifies Pilot, who will then be on lookout. Ship gives standard whistle signal for Pilot, who boards about 2 hours before high tide. In meantime, ship should ride at anchor about quarter mile N.W. of Fairway Buoy. No special pilot boat. Boat used for Pilot is 35 ft. fishing boat.
ANCHORAGE: Good safe anchorage outside harbour in 33 ft. over mud. Also quarter mile N.W. of Fairway Buoy.
MAX. SIZE: Max. length permissible 375 ft., max. beam 55 ft. Draft, approx. 26 ft. of water at high tide.
RADIO: Yarmouth (VAU) or Saint John (VAR).
TUGS: No tugs required. The fishing-boat will run lines to wharf if required.
BERTHING: Government Wharf – North Weymouth: L-shaped pier provides 85.3 m. length berth. Depth alongside at LW: 3.0 m. (mean tidal range 6.1 m.) A gravel open storage area available at wharf approach.
STEVEDORES: Available. Experienced loading lumber and pulpwood.
MEDICAL: Hospital: at Digby, 20 miles distant. Ambulance can be arranged.
FRESH WATER: Available; delivery by truck.
GANGWAY/DECK WATCHMEN: No watchmen necessary.
TIME: Eastern Standard Time GMT minus 5 hours. Daylight saving time from last week-end in April to last week-end in October, clocks advanced 1 hour.
POLICE/AMBULANCE/FIRE: Police Zenith 50000; Ambulance 245-2205; Fire 837-5142.
TELEPHONE: No arrangement for placing telephones on board ship. Telephone available near dock.
DEVELOPMENTS: Re-dredging of channel in near future. Dates not finalised.
AUTHORITY: Transport Canada, Weymouth, Nova Scotia. *Contact:* R. L. Long, Customs Inspector, at Digby, *Tel:* 245-4039. F. Manzer, Harbour Master, Ashmore, Digby County, Nova Scotia. *Tel:* 837-4064, 837-4467.

WINDSOR, Ontario: 42.19 N. 83.03 W. (See Plan)

For important general information refer to "St. Lawrence Seaway".

DOCUMENTS:

Sanitary Health Certificate – fixed on outside of container for agriculture plant protection. 1 paper affixed to each container.

Meat Locker Certificate.
Quarantine Certificate.
3 Crew Lists.
3 Passenger Lists.
3 Stores Lists.
Manifest – 3 A.6 – 2 A.6 out.
Bill of Lading.

PILOTAGE: Pilots board ships at Sarnia Eastbound and Port Weller Westbound.

ANCHORAGES: Windsor Harbour Anchorage lies approximately 0.5 miles North of Fighting Island marked by 2 white buoys, showing flashing white lights, an area of 800 ft. wide and 0.75 miles long. Depth of 5.5 to 6 fathoms.

MAX. SIZE: Can handle any ship the seaway passes. No tide.

HEALTH: In the case of vessels arriving via the St. Lawrence River Radio Pratique may be obtained from Quarantine Quebec. See also "Montreal".

RADIO: WFS Detroit Marine Radio. Call on Channels 26 – 28.

RADAR/VHF: No radar service. Harbour Master may be contacted on VHF Channel 16.

BERTHING: (Also see "Plan").

1. Canadian Rock Salt Ltd.: A major rock salt mine producing salt products for highways, water softeners and chemical use. Large tonnages are shipped by water. Lake freighters load at a 420 ft. (128 m.) dock.

2. United Co-Operatives of Ontario: A new deep water grain terminal elevator with a storage capacity of 2.7 million bushels. Material handled includes soya beans, corn, wheat, oil seeds, as well as meal from adjacent Maple Leaf Monarch plant. A 1,300 ft. long (396.2 m.) dock enables ships to load and unload with the most modern conveyor equipment. The location provides easy access to all major railways and highways in Canada and the United States.

2a. Maple Leaf – Monarch Company: Canada's first multi-oilseed processing plant, located on a 40 acre (161.8 ha.) site adjacent to the United Co-Operatives elevators and dock. The plant has an on-site storage capacity for 11,000 tonnes of soya meal and 2,500 tonnes of soft-seed meal, and operates in close co-operation with the adjacent United Co-Operatives docking facility.

3. Morterm Terminal Limited: A commercial marine terminal on 180 acres (728.4 ha.) providing large open storage facilities as well as 3 closed sheds with over 60,000 sq.ft. (5574 sq.m.) of space. Three cranes of 10, 25 and 225 ton lifts enable fast movement of goods between ship and the large paved wharves which include a concrete quay-type wharf of 2,400 ft. (731.5 m.) with direct rail transfer in a 200 ft. (60.9 m.) wide slip, water depth presently is full Seaway depth. The Essex Terminal Railway connects with all major railroads.

4. J. Clark Keith – Hydro Electric Power Corporation: A coal-fired hydro electric power generating plant operated by Ontario Hydro. Coal stocks are brought in by self-unloading vessels at a 600 ft. (180 m.) wharf, 184 ft. (56 m.) offshore, and transferred inland by a conveyor system handling 1,250 tons (1,134 tonnes) per hour.

5. Bulk Storage Ltd. (formerly Consolidated Fuels): Operated by Southwestern Sales Ltd. and is used principally to store building materials including stone and sand. The 660 ft. (201 m.) finger pier juts into the river at an angle of about 30°, and accommodates self-unloaders.

6. Canadian Salt Co. Ltd.: Produces fine salt in bulk which is loaded on board vessels at a 185 ft. (56 m.) dock by a conveyor system.

7. Kennette Contracting Ltd.: Provides outside storage acreage for bulk materials, primarily stone and sand.

8. Newman Terminal & Transportation Ltd.: Large open and closed storage facilities adjacent to the 150 ft. (45.7m.) dock. General cargo which includes canned goods, calcium, lumber, steel and vehicles is loaded and unloaded by fully mechanised freight handling equipment and Ro/Ro.

9. J. J. Kovinsky Ltd.: Provides dock serviced property for storage and processing metal for re-cycling purposes. The river frontage is 650 ft. (198 m.).

10. Windsor Harbour Commission – Liquid Fuel Dock: Owned by the Windsor Harbour Commission and includes a 1,000 ft. (304 m.) berth with fuel bunkering facilities – operated by: *Sterling Fuels (Ultramar Canada Inc.):* To fuel any vessel transiting the Great Lakes. A full range of fuels is available on a 24 hour basis.

11. Windsor Harbour Commission – Confederation Dock: Located on a site of over 12 acres. An 1,100 ft. (335 m.) by 100 ft. (30.5 m.) slip runs along the West side. Goods handled are principally bulk stone and sand from self-unloaders.

11a. Canada Building Materials: Cement mixing plant occupies part of the N.W. portion of the property. A large open storage area immediately upriver is presently being developed to accommodate bulk cargo.

12. Windsor Harbour Commission: Future docking area – 25 acres are presently in process of development.

13. Adams Cartage: Principally a steel handling facility. A large closed storage shed is on the property as well as open storage for 100,000 tons of steel. In addition to the dock face, the property includes an 850 ft. (259 m.) by 100 ft. (30.5 m.) slip at an average water depth of 25 ft. (7.6 m.).

14. Pyramid Aggregates Ltd.: Established for the production and processing of quartz products, coloured aggregates, silica, sands, landscaping and exposed aggregate stone. The property includes a 450 ft. (137 m.) by 80 ft. (24 m.) slip adjacent to a steel and concrete warehouse.

15. Premier Concrete and Lake Ontario Cement Ltd.: Maintain this dock for the storage of building aggregates as well as bulk cement which is off loaded into silos. The 9 acre site has a 1,000 ft. (340 m.) dock face on the Detroit River.

16. Canadian Pacific Railways: Operates a daily Ro-Ro railroad car ferry to Detroit. Two loading aprons with three tracks each, move rail cars from ferries and operate on a daily full year operation. Ro-Lo container barges service, also operates out of the same facilities.

17. Dieppe Gardens Dock: Owned by the City of Windsor and docking is administered by the Harbour Commission. Complete with 27 ft. (8 m.) of water at the 800 ft. (244 m.) cement-faced dock, it is used principally for visiting naval ships, cruise ships, etc. Fresh water and sewage disposal are available. Prior application to the Harbour Commission is required.

18. Canadian National Railways: Used only for ferrying Ro-Ro railroad cars and Ro-Lo container barges to Detroit.

19. Hiram Walker & Sons Ltd.: A major distiller and bottler of alcoholic beverages. From the 833 ft. (254 m.) long wharf, the bucket conveyor equipment handles one and a quarter million bushels of bulk grain between ships and elevators.

20. Ford Motor Company of Canada: Dock is a private installation 1,800 ft. (549 m.) long and used mainly for storage of bulk materials including stone, sand and pig iron.

21. Windsor Yacht Club: Private pleasure boat facility for members.

22. Lakeview Park Marina: Operated by the City of Windsor as a facility for pleasure boaters. Docks and launching ramps and parking areas are provided with easy access to Lake St. Clair and the Detroit River.

23. Southwestern Sales Ltd.: A bulk storage dock accommodating large quantities of crushed stone and sand received from self-unloader ships.

STEVEDORES: Advice as to number of gangs should be received no later than 1600 hrs. on day preceding. Arrange through Agent.

MEDICAL: Four hospitals.

TANKERS: Sterling Fuels; hoses 14 in. and 10 in. Max. depth 27 ft. Slop tanks available.

DENSITY: No tide, the water is fresh.

FRESH WATER: Tank truck delivery.

FUEL: Direct liquid fuel bunkering at Sterling Fuel Dock for ships up to and including 1,000 ft. 24 hr. service (VHF Channel 14 or Tel: (519) 253-4694). Dock adjacent to main shipping channel. No coal bunkering available.

FIRE PRECAUTIONS: Fire Dept. requires man at tank installations ashore while pumping, also notify Fire Dept. and Harbour Commission if any spillage.

GANGWAY/DECK WATCHMEN: Not required, but can be supplied.

OPENING/CLOSING HATCHES: Normally done by the stevedoring company.

CUSTOMS ALLOWANCES: See "Montreal".

IDENTIFICATION CARDS: I.D. cards should be carried.

CONSULS: Italian Consul, tel: 256-0092.

REPAIRS: All repairs above water can be carried out.

AIRPORT: Windsor Airport approximately 5 miles. Regular flights 7 days a week by Air Canada.

TIME: GMT minus 5 hours from October to April. DST subject to local vote.

HOLIDAYS: The following are the legally observed holidays; however, vessels will be worked on these days at applicable rates: Christmas, New Year, Good Friday, Victoria Day, Dominion Day. Civic Holiday, Labour Day, Thanksgiving and Veteran's Day.

POLICE/AMBULANCE/FIRE: Police 258-6111; Fire 258-4444; Ambulance 258-2155; Emergency dial 911.

TELEPHONES: Phones can be placed on board by prior arrangement.

GENERAL: Fluctuation of water level; high Westerly wind drops water level. Detroit River Light should be contacted for water gauge on VHF 16 for upbound ships, and Belle Isle Coast Guard Stations on VHF 16 for downbound ships.

SERVICES: Tank truck available for tank-washings, also radio telephone and radar service. Compass adjustor not available.

SHORE LEAVE: No restrictions on shore leave.

AUTHORITY: Windsor Harbour Commission, 500 Riverside Drive West, Windsor, Ontario, Canada N9A 5K6. *Tel:* (519) 258-5741. *Contact:* David S. H. Cree, General Manager. R. D. Beaton, Harbour Master. Tel: (519) 258-5741, 735-5207.

WOODFIBRE, B.C.: 49.40 N. 123.15 E. (See Plan)

LOCATION: Port located in Howe Sound approximately 21 miles from Port Atkinson.
PILOTAGE: See "Vancouver". Arranged through ship's local Agent.
ANCHORAGE: See "Vancouver".
TUGS: Arranged through ship's local Agents. Squamish Tug Tel: 898-3733. Seaspan International Tel: 988-3111. Rivtow Straits Ltd. Tel: 255-1133.
BERTHING: Dock length – 432 ft. Dock width – 24 ft. Depth alongside – 34 ft. at Chart Datum. Principal cargo – unitised baled pulp.
STEVEDORES: I.L.W.U. – Arranged through ship's Agents.
MEDICAL: Squamish Hospital Tel: 892-5211, (plus Mill First Aid). Dental – Squamish Tel: 892-3111. Doctor – Squamish Tel: 892-5151.
FRESH WATER: Limited supply available.
FUEL: Not available.
CONSULS: See "Vancouver".
DRYDOCKS/REPAIRS: North Vancouver, Burrard Yarrows Corp. Tel: 988-2111.
GANGWAY/DECK WATCHMEN: Ship's crew, ship's gangway used.
CUSTOMS: Tel: Vancouver – 665-1545.
AIRPORT: Vancouver.
POLICE/AMBULANCE/FIRE: Police – R.C.M.P., Tel: Squamish – 898-9611. Ambulance, Tel: Squamish – 898-3311. (Plus Mill ambulance). Fire – Mill Fire Department. Emergency number – 911.
SHORE LEAVE: Mill area is a restricted area.
AUTHORITY: Western Pulp Limited Partnership, Box 5000, Squamish, B.C., V0N 3G0, Canada. *Tel:* (604) 897-5311. *Telex:* 04-508828. *Fax:* (604) 877-5311 (Ext. 338). *Cables:* Westpulp Vcr. *Contact:* Jack Westerberg, Traffic Supervisor.

NOTES

Please also advise Shipping Guides Ltd.

Canary Islands

ARGUINEGUIN: 27.45 N. 15.40 W. (See Plan)

LOCATION: On the South coast of Gran Canaria in position Lat. 27° 44.8′ N., Long. 15° 40.1′ W. Port used for loading/discharging cement products.

PILOTAGE: Compulsory. Advise Agent 6 hours prior to arrival. Pilot boards 7 cables off breakwater from a small tug named "Atlante" which is painted with red letter "P" forward on both sides.

ANCHORAGE: One mile S.E. from breakwater. Sand bottom.

VHF: Continuous watch maintained on Channel 16.

BERTHING:

Berth No.	*Length* (m.)	*Depth at LW* (m.)
1	288	5.0 – 8.5
2	25	7.0

CRANES: 2 mobile cranes each with a rate of 200 t.p.h. One mobile crane with rate of 80 t.p.h.

MEDICAL: Hospital at Las Palmas.

DENSITY: 1025.

FRESH WATER: Available at both berths.

OPENING/CLOSING HATCHES: By ship's crew.

AIRPORT: Distance 40 km., served by many airlines.

SERVICES: All services available from Las Palmas.

AUTHORITY: Cementos Especiales S.A., Arguineguin, Gran Canaria, Canary Islands. *Tel:* (928) 735711-12. *Telex:* 95397 Puzz E.

ARRECIFE: 28.57 N. 13.33 W.

DOCUMENTS:

Maritime Health Declaration.
5 Crew Lists.
4 Transit Passenger Lists.
2 Provisions Lists.
8 Manifests Discharge Cargo.
8 Lists of Passengers Disembarking.

PILOTAGE: Call Pilot VHF Channel 16. Pilot boards about 1,000 m. off port.

ANCHORAGE: Safe anchorage available. Cruising vessels may use own boats for transporting passengers.

RESTRICTIONS: None, except draft (see "Berthing").

HEALTH: Pratique granted in berth or at anchorage if vessel not berthing. Suspected disease on board should be reported to Agent by radio before arrival.

RADIO: Las Palmas Radio.

VHF: For communication with Pilot – Channel 16.

TUGS: No tugs stationed at Arrecife. May be ordered from Las Palmas with advance notice.

BERTHING: Muelle de los Marmoles. 1,000 m. long. Max. draft 9 m. Cargo work with ship's own gear.

STEVEDORES: Shifts 0800 – 1400 hrs., 1400 – 2000 hrs. No work Sundays or Holidays except by special arrangement.

MEDICAL: Facilities available. Advance notice required for inoculations/vaccinations which might not be immediately available.

FRESH WATER: Not available either ex-wharf or ex-barge.

FUEL: By arrangement with Spanish Oil Company CEPSA only.

REPAIRS: Slipways up to 400 tons. Workshops for minor repairs.

REPATRIATION: Via Las Palmas only.

AIRPORT: About 15 km. from port. Served by Interinsular flights and charter flights.

TIME: GMT during winter. GMT plus 1 hour from first Sunday in April to last Sunday in September.

HOLIDAYS: As for Spain, plus local holidays February 7th and August 26th.

SHORE LEAVE: Allowed. Passes not necessary except for Eastern Bloc nationals.

AUTHORITY: Grupo de Puertos de Gran Canaria, P.O.Box 156, Arrecife.

AGENT: Arrangeable through Miller y Cia., S.A., P.O.Box 2200, Las Palmas, Canary Islands. Telex: 95153 and 95353 Midat E. Tel: 260850 and 267750. Cables: Miller Las Palmas.

LAS PALMAS: 28.05 N. 15.27 W. (See Plan)

DOCUMENTS:

5 Crew Lists.
4 Transit Passenger Lists.
2 Provisions Lists.
8 Copies of Manifest, with Bills of Lading covering cargo for Las Palmas.
8 Lists of Passengers Disembarking.
Passports of passengers landing (required by Immigration Authorities).
1 Maritime Health Declaration.

PILOTAGE: Compulsory. Masters send radio message to Agents 48 hours and 24 hours prior to arrival giving ETA and requirements. Call Pilot by VHF Channel 16. Pilot boats have black hull, white wheel house, with black "P" and boat number painted both sides of wheel house.

Pilot boards approximately 1 mile from harbour entrance.

ANCHORAGE: Good anchorage in roads, depth in excess of 35 m. Sandy bottom in North Roads, sand and shingle in South Roads. Mean tidal range 2.5 m. Tidal velocity negligible.

If anchoring off Las Palmas great care must be taken in choosing a position to anchor bearing in mind the great depths at relatively short distances from the island and the congested nature of the off-port area. Because the bottom is uneven and rocky ships should not steam to the anchoring position with too much cable walked out but, in view of the depths, it is necessary to lower the anchor to the bottom when all way is off the ship. Several ships have lost their anchors during the anchoring manoeuvre off La Luz.

RESTRICTIONS: No length or beam restrictions. Max. draft for vessels bunkering or working cargo 12.65 m. Vessels berth and unberth during day and night. Vessels carrying explosive or dangerous cargoes must apply through their Agent with sufficient advance notice (5 days for explosives) for permission to enter port, declaring quantity, IMO class and UN numbers also ports of origin and destination of the cargo. Tankers in ballast must declare whether tanks gas-free or inerted.

MAX. SIZE: Vessels of any length and beam can safely berth and normally discharge and load cargo while bunkering. Max. allowable draft 66 ft.

Largest vessel berthed 550,000 d.w.t.

RADIO: Las Palmas Radio, call sign EAL.

VHF: Pilots on Channel 16, working Channel 12 or 14.

TUGS: The following harbour and/or salvage tugs are available: *Tamaran,* 2,375 i.h.p.; *Arucas,* 2,200 i.h.p.; *Nublo,* 1,062 i.h.p.; *Doramas,* 1,313 i.h.p. *Punta Anaga,* 1,930 i.h.p.; *Orotava,* 2,062 i.h.p.; *Bandama,* Bollard pull 50 tonnes.

BERTHING: Subject to availability. Information should be radioed to Agent 48 hours prior to arrival, if berthing required, and for what purpose. Harbour approach from open sea with no impediments.

Generalisimo Franco Mole: Runs North/South, approximately 2,000 m. long. This quay is normally used by vessels bunkering, passenger vessels and is fitted with bunker and fresh water line connections along its entire length.

Height of quay above LW averages 4.5 m. Average rise and fall of tide 2.5 m.

Vessels lie safely alongside at the following maximum drafts:

Berths	1 – 14 (Northern part)	36 ft. 0 in.
	15 – 16	34 ft. 0 in.
	17 – 18 – 19	41 ft. 6 in. (Tankers – Dangerous Cargo)

Vessels using Berths 1 to 14 with drafts between 34 ft. and 36 ft. must enter and clear between half and full tide.

The inside of Dique del Generalisimo is a stone wall fendered about every 30 m. with single point fendering consisting of a horizontal hardwood core around which there are rubber truck tyres, each unit being hung from the stone wall face by chains. This fendering has poor energy absorbing characteristics and there have been instances of ships receiving local structural damage when berthed at excessive impact velocity. It is important that the tugs are placed and manoeuvred to fully control the ship's velocity towards the fendering and to ensure the ship is berthed as parallel to the breakwater as possible.

The breakwater berths are allocated by bollard numbers according to the numbers free at the time of allocation. The distance between the two ships on either side of your ship's berth may not be more than 1.1 times your ship's length, therefore careful manoeuvring into berth is essential.

All bollards for moorings are on the edge of the quay spaced 25 m. apart and, therefore, when ships are light, moorings will have a large vertical angle with little breasting effectiveness.

The public has access to the main breakwater and no control of smoking is effected. Extreme vigilance must, therefore, be exercised to guard against unauthorised boarding and fire hazards.

La Luz Mole: This quay is used mainly for cargo operations and has a total of 1,200 m. of berthing space.

A grain silo is situated at the North end of the quay. Maximum draft for berthing at the silo (capacity 12,000 tons) is 32 ft. Two connections for discharge of edible oils to the local refinery are also on this quay. Maximum drafts alongside the connections are 39 ft. and 32 ft. respectively; at the latter connection there is a length restriction of 150 m. One cold storage installation situated on this quay.

Fish Mole (Espigon del Castillo) and Ribera Mole: These 2 quays are used mainly by fishing vessels and coastal cargo vessels. Five cold storage installations are situated on the Fish Mole.

Santa Catalina Mole: Length 400 m., depth 4 m. – 8 m. This quay is used as a terminal for passenger/car ferries, with Ro/Ro ramps.

Queen Sofia Mole: 3,200 m. breakwater with dolphin berth for tankers. Depth of water 22 m. This allows berthing of ULCCs for repairs afloat, painting, underwater cleaning, etc.

Mole EN-1: Length 520 m., depth 12 m. For berthing vessels up to 300 m. LOA. There is a Ro/Ro ramp and container handling facilities. A fertiliser bagging plant and conveyor system is in operation.

Mole EN-2: Length 410 m., depth 12 m. For berthing vessels up to 200 m. LOA. Facility used by container vessels, general cargo vessels and occasionally passenger vessels (to be extended by 160 m. for Ro/Ro vessels).

Mole EN-3: Length 440 m., depth 14 m. For berthing of vessels laying-up and under repair.

BULK CARGO FACILITIES: Grain silo with 4 extractors. Rate 50 t.p.h. for each extractor. Draft alongside 32 ft. Cement silo with 2 extractors.

STEVEDORES: Loading and discharging of general cargo can be carried out between 0800 hrs. and 0200 hrs. including Saturdays.

Stevedoring labour works on a 6-hour shift system, 3 shifts per 24 hours. The shifts commence at 0800, 1400 and 2000 hrs.

Labour for the 0800 hrs. shift must be ordered by 0700 hrs., and for the 1400 hrs. and 2000 hrs. shifts on Monday to Fridays by 1300 hrs. Labour for all Saturday shifts must be ordered by 2000 hrs. on Friday.

CRANES: Floating crane with capacity of 70 tons and mobile cranes up to 125 tons capacity. 2×30 ton container cranes at Mole EN-1.

MEDICAL: Master should advise Agent if medical attention required on arrival. Hospital and ambulance services available day and night. Vaccination and inoculation available any time but notice should be given prior to arrival.

TANKERS: No facilities for slop discharge. Crude oil tanker berth. There is a special berth for large tankers with a draft of 22 m.

Each of the main oil companies have their own valve manifolds in pits in the breakwater roadways. These manifolds are connected to the ship's manifold by hoses and, sometimes, hard pipe strung along the breakwater road.

Berthing Procedures at Generalisimo Franco Mole: Tugs are made fast, using tug's wires putting eyes over the bitts, before entering harbour. Good messengers are required to lift tug's wires on board, especially if light ship. All ships have one tug on the hook forward, 1 tug on the hook aft and from 1 to 3 tugs alongside on the side away from the berth (usually port side). Communications between ship, tugs and mooring boat are effected by portable VHF sets carried by the Pilots, using Channel 11 or 6.

On passing the Southern end of Dique del Generalisimo the ship makes a 90° turn to starboard and proceeds to berth. Ships are normally berthed head to wind and as this prevails from the N.E., most berthings are starboard side to the breakwater. If the wind is from a Southerly quarter the ship is swung off the berth before going alongside.

The pilot boat follows the ship into the harbour and runs the head and stern moorings ashore. 2 head lines and 1 stern line are usually first ashore. At this time it is essential that the offside tugs are in a position to be able to retard the ship's movement towards the berth. Spring lines are put ashore by heaving line.

The ship is not spotted on to a hose handling point but is placed centrally between bollard numbers. Extension hoses and sometimes hard pipe are then used to connect the valve pit with the ship's manifold position.

Cargo/Bunker Connections: All hose handling is achieved with the ship's derrick which should be topped ready before berthing. Hoses used for cargo discharge are 8 in. with normally ASA bolted flange connections but some companies use quick release couplings. Hoses for supply of bunkers are 6 in. or 4 in. with ASA bolted flange connections.

Preparation of Manifold: Hose derricks to be lifted and plumbed for 1 m. outside ship's rail. For cargo discharge 8 in. outlets should be prepared.

Gangway: Ships must provide their own gangway. Because vehicles pass along the breakwater, gangways must be put out in a fore and aft direction or an accommodation ladder used.

Cargo/Bunkers Handled: Esso imports IF180 and Marine Gas Oil. Marine Diesel Oil is imported by other oil companies. These grades of bunkers are available:

Deballasting Facilities: None.

Ullaging, Temperature, Water Finding: To be done after arrival in conjunction with a Shore Inspector.

Cargo/Bunker Handling Facilities: Esso's storage tanks are located at the shore-end of Dique del Generalisimo at the same elevation as the breakwater road. The tanks are connected to the berth as follows:

IF180 by 2 pipe-lines (1×16 in., 1×12 in.), 3,500 m. long; Marine Gas Oil by 1×14 in. pipe-line, 3,500 m. long.

Maximum back pressure on hoses 8.79 kg./sq.cm. Maximum discharge rate 1,200 t.p.h. Pipe-lines are unlagged but temperature drop between ship and storage is not more than 3°C on coldest day.

If other ships require Fuel Oil bunkers during discharge of this grade, these are delivered via the 12 in. line leaving the 16 in. line for discharge.

Bunker deliveries are made at 600/700 t.p.h. maximum. Normal rates 200/500 t.p.h. All bunker deliveries are metered. Bunkers can be delivered by barge to ships at anchor by CEPSA, but arrangements must be made well in advance.

Passing Traffic, Weather, Tide, Current Problems: No traffic or current problems.

Maximum tidal rise 2.7 m. over datum.

Whilst the weather is generally equable, wind from S.E. can cause a problem to ships with high freeboard due to lack of adequate breasting facilities. A close watch should be kept on moorings and weather conditions.

Density of Dock Water: Full salt.

FRESH WATER: Available at inner harbour mole delivered by hose at rate of approx. 50 t.p.h. per hose, while bunkering and/or loading/discharging cargo. Also available by barge at anchorage.

FUEL: Masters to include in messages to Agents amount, grade and viscosity of oil required, and name supplier, 48 hours prior arrival.

Bunkers supplied 24 hours. Fuel oil, diesel and gas oil available ex-wharf, rate 1,000 t.p.h.

GANGWAY/DECK WATCHMEN: Recommended. Arranged by Agents.

OPENING/CLOSING HATCHES: Performed by stevedores.

CUSTOMS ALLOWANCES: No restrictions for tobacco, wine and/or spirits.

IDENTIFICATION CARDS: Not necessary.

CONSULS: The following countries have Consular Representations at Las Palmas:

Argentina
Austria
Belgium
Bolivia
Brazil
Chile
Colombia
Cuba
Denmark
Dominican Republic
El Salvador
Finland
France
Greece
Guatemala
India
Italy
Japan
Korea
Lebanon
Liberia
Mauritania
Monaco
Morocco
Netherlands
Nicaragua
Norway
Peru
Portugal
Philippines
Senegal
Sierra Leone
Syria
South Africa
Sweden
Switzerland
United Kingdom
United States of America
Uruguay

DRY DOCK: Repair Wharf length 560 m. depth 8 m. – 12 m. Syncrolift platform, lifting power 9,500 tons, for vessels up to 175 m. length, 30 m. beam and 30,000 d.w.t. 5 mooring points of 180 m. and 2 of 220 m.

REPAIRS: All types of deck and engine repairs carried out afloat.

SURVEYORS: The following Classification Societies have resident appointed Surveyors at Las Palmas: American Bureau of Shipping, Det Norske Veritas, Lloyd's Register of Shipping, Nippon Kaiji Kyokai, Registro Italiano Navale, Bureau Veritas and Germanischer Lloyd.

REPATRIATION: All facilities for crew changes, by sea and air.

AIRPORT: International Airport 26 km. South of Las Palmas.

TIME: GMT in Winter. Summer-time is GMT plus 1 hour.

HOLIDAYS: Local holidays: 24th June; 8th September.

National Holidays: 1st January; 6th January; 19th March; 1st May; 25th July; 1st November; 8th December; 25th December.

Feast Days: Maundy Thursday (half-day); Good Friday; Ascension Day; Corpus Christi.

Cargo handling during holidays and feast days; no stevedoring labour available from 2000 hrs. from day prior to Good Friday, Christmas Day and 1st January, until 0800 hrs. on following day.

POLICE/AMBULANCE/FIRE: Police, 264431. Ambulance, 264473. Fire, 243100.

TELEPHONES: Line connected to vessels alongside wharves from Harbour Board exchange if required.

SERVICES: Underwater hull cleaning, painting, surveys are carried out in clear water in outer harbour. Compass adjusting, gyro repairs, radar repairs, etc.

SHORE LEAVE: Permitted. For some nationalities, passes must be issued by Immigration Authorities.

OFF-PORT TRANSFERS: 24 hour service throughout the year by helicopter and launch.

Helicopter: Avicopter S.A. Helicopter Service, Edificio Esta J.O.P., Planta 3a Local, 303, Las Palmas de Gran Canaria. Tel: 270726, 270727, 267986. Telex: 95173 Helic.E. Cable: Helicsa Las Palmas. Range: 80 miles.

DEVELOPMENTS: A new Outer Breakwater is already in use. This runs North/South, parallel to the Generalisimo Franco Mole, and approximately 1,000 m. to the East of it. The new breakwater is 3,200 m. long.

The new harbour area thus created contains at the Northern end the Synchrolift drydock and repair installation which is already operational.

This outer area of the harbour is protected from Southerly weather by a newly constructed jetty heading N.E. from the Southern point of the Generalisimo Franco Mole, and will in due course provide further Ro/Ro ramps and also deep-water berths for large vessels.

AUTHORITY: Port Commandant, (Comandancia de Marina) and Chief Engineer of the Port (Ingeniero Director del Puerto). *Tel:* (3428) 261150. *Telex:* 96004 JPLUZ E.

AGENT: Miller Y Cia, SA, Muelle Santa Catalina, P.O.Box 2200, 35080 Las Palmas, Canary Islands. Telex: 95353 Midat E and 95153 Midat E. Tel: 260850, 267750, 270098. Cables: "Miller Las Palmas".

LA SALINETAS: 27.58 N. 15.22 E.

LOCATION: Private wharf about 15 km. South of Las Palmas, port of fertiliser plant.

DOCUMENTS:
Maritime Health Declaration.
6 Crew Lists.
2 Provisions Lists.
8 Manifests of cargo for discharge.

PILOTAGE: Pilot is taken at Las Palmas. Vessels should advise ETA to their Agents in advance and contact Las Palmas Pilots on VHF Channel 16 on arrival.

MAX. SIZE: LOA 150 m., draft 8.5 m.

HEALTH: Pratique granted on berthing.

RADIO: Las Palmas Radio.

TUGS: Not normally used, but available from Las Palmas if required.

BERTHING: Private loading quay 200 m. long, depth 8.5/15 m., can accommodate ships of 150 m. length and 8.5 m. draft. Loading by conveyor belt, 150/200 t.p.h.

MEDICAL: At Las Palmas, full facilities.

FRESH WATER: Available in an emergency only.

FUEL: Not available. Vessels should be stemmed for bunkers at Las Palmas.

REPATRIATION: Arrangeable via Las Palmas Agents.

AIRPORT: Las Palmas Gando Airport – 5 km.

TIME: GMT during winter. GMT plus 1 hour from first Sunday in April to last Sunday in September.

HOLIDAYS: As for Spain, plus local holiday September 8th.

SHORE LEAVE: Allowed. Passes not necessary except for Eastern bloc nationals.

AUTHORITY: Compania Insular del Nitrogeno, S.A., P.O.Box 417, 35080 Las Palmas, Grand Canary, Canary Islands. *Tel:* 690688, 695860. *Telex:* 95046. *Cables:* Insunitro Las Palmas.

SANTA CRUZ DE TENERIFE: 28.28 N. 16.16 W.

(See Plan)

DOCUMENTS:

6 Crew Lists.
6 Passengers in Transit Lists.
8 Passengers Landing Lists.
7 Cargo Landing Manifests.
2 Stores Lists.
1 International Health Declaration.
1 Free Pratique.

If no passenger or cargo landing, must present negative declarations.

PILOTAGE: Compulsory. Recommended give Agent 48, then 24 hours notice of ETA. Contact Pilot station by VHF Channels 14 or 16. Pilot station located at shore end of Muelle Norte. Pilot boards up to 2 miles off extreme end of Muelle Sur. In daytime pilot cutter identified by blue flag with white "P" superimposed; night-time, red and white light. When pilot cutter unable proceed out of harbour due heavy weather, Pilot awaits in lee of extreme end of Muelle Sur. Pilots called by VHF when entering (Channels 16 and 14); on sailing called by local Agent, or by VHF Channel 16 or 14.

ANCHORAGE: Vessels proceeding to anchorage are conducted by Pilot. Anchorage outside breakwater in depths 10 – 40 fathoms.

MAX. SIZE: Floating pipe-line terminal at Honduras, up to 240,000 d.w.t. Dolphins, up to 45,000 d.w.t.

Dique del Este (new part), 700 m. long with 300 m. LOA limitation, draft up to 60 ft.

HEALTH: Free Pratique not granted by radio. "Q" Flag must be flown until vessel cleared inward by Port Health Authorities, which procedure is very quick. If suspected disease or fever on board, Agent or Port Health Authorities must be notified by radio.

RADIO: Tenerife Radio – call sign EAT working frequency 472 kHz. Short-wave EAT 3 working frequency 1930 – 0830 hrs., 8742 kHz. Short-wave EAT 4 working frequency 0830 – 1930 hrs., 13092 kHz. Radio telephone call sign "Tenerife Radio" working frequency 1740 kHz.

There is a 24 hour telephone link with vessels within 100 miles range, which vessels may utilise by calling Tenerife Radio on VHF Channel 16 for connection to Agent's telephone number.

TUGS: Join vessels entering approximately 0.5 miles to 1 mile from extreme end of Muelle Sur. Use of tug's lines optional, but when supplied by the tug, extra charges incurred. Use of tugs not compulsory.

Tugs normally available: *Guimar* 1,600 h.p.; *Tarifa* 2,300 h.p.; *Algeciras* 3,200 h.p.; *Coria* 3,200 h.p.; *El Guanche* 2,200 h.p.; *Gran Canaria* 2,200 h.p.

BERTHING:

Dique del Este: 960 m. length, depth alongside 16.0 m. – 19.5 m.; 294 m. length, depth alongside 12 m. Quay used by tankers, bulk carriers and container vessels. Water and bunkering facilities available.

New Container Base (South Dock): Length 450 m. Depth alongside 10 m. Gantry cranes up to 35 tons available.

Dique Muelle Sur: 803 m. length, depth alongside 12 m.; 213 m. length, depth alongside 10 m.; 638 m. length, depth alongside 8.00 m. Bunkering and fresh water connections available. Quay used by passenger vessels and vessels bunkering.

Muelle de Ribera: 412 m. length, depth alongside 10 m.; 131 m. length, depth alongside 9.5 m.; 295 m. length, depth alongside 8 m., 314 m. length, depth alongside 7 m. There are 5 Ro/Ro berths. Bunkers and fresh water available.

Fishing Harbour: Total length 1,850 m. Depth alongside 6 m. Bunkers are supplied by road tanker and water available at certain points along the quay.

Muelle Norte: 103 m. length, depth alongside 8 m. Bunkers and water available.

Container Terminal (N.E. Dock): Length 420 m., depth alongside 10 m.

Honduras Mole: Length 90 m., depth alongside 8 m.

Dolphin Berth: Length 90 m., depth alongside 10 m.

CRANES:

Muella de Ribera: 9×6 ton and 2×30 ton electric Portal cranes and 8×3 ton Portal cranes.

Muelle Norte: 2×6 ton electric Portal cranes.

Dique del Este: 2×30 ton electric Portal cranes.

Container Terminal (N.E. Dock): 1×30 ton gantry crane. Mobile cranes 180 tons and 125 tons available.

STEVEDORES: Monday to Saturday gangs ordered at 0600, 1200 and 1800 hrs. On Sunday there is only one shift from 0800 – 1400 hrs. and gangs for Sunday work must be ordered at 1300 hrs. on Saturday. Telegraphic information from Masters to be despatched 48 hours prior arrival giving first ETA. Gangs work three 6-hourly shifts, viz. 0800 – 1400 hrs., 1400 – 2000 hrs., 2000 – 0200 hrs. Fourth shift from 0200 – 0800 hrs. by special request. Orders to be made by 1900 hrs. All necessary gear supplied by stevedores.

BULK HANDLING FACILITIES: Grain silo situated at entrance to East Mole, max. discharge rate per extractor, 200 t.p.h. Two extractors available and can work 24 hours a day. It is only used for government department imports. All other shipments are discharged by grabs at the South Mole.

MEDICAL: Masters to advise by radio if medical attention required on board. Yellow fever inoculation possible in daytime subject prior notification.

TANKERS: Local refinery (Compania Espanola de Petroleos SA) have ample couplings, hoses and reducers. Slop facilities available. Tankers up to 240,000 d.w.t. discharge at Floating Pipeline Terminal at Honduras Buoy Zone.

Loading terminals situated at Dique del Este; at Puerto Honduras (used mainly for LPG and refined spirit loading) for 45,000 d.w.t.; and 2 berths at extreme end of Muelle Sur.

DENSITY: About 1025.

FRESH WATER: Available at all berths, delivered by hose any time day or night. Water barges available 24 hours to supply vessels at anchorage, 500 tons and 400 tons capacity. Night-time at extra cost.

FUEL: All grades available from CEPSA (cables "Spanoil Madrid" and/or "Tenerife"). Fuel available at all berths, average rate of loading 500-600 t.p.h. Bunkers at anchor can be supplied by bunkering barge *Mayorga,* 1,400 tons capacity, or *Spabunker,* 6,000 tons fuel; 1,500 tons gas oil. Notice required for refuelling 72 hours, to be confirmed at 48 and 24 hours before arrival.

FIRE PRECAUTIONS: All tugs equipped fire-fighting equipment including foam and 4 water/foam monitors. Refinery well equipped with shore fire-fighting equipment, including mobile foam trucks.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

HATCHES: Normally opened by crew, stevedores lifting beams. If whole operation carried out by stevedores, extra charge possible.

CUSTOMS ALLOWANCES: Free port, no restrictions in force.

REPAIRS: NUVASA offer a synchro-lift, lifting capacity 2,000 tons, and vessels up to max. 83 m. LOA can slip at their yards, where there is space for 14 vessels at a time. Dry docking can be effected day and night.

Their workshops can carry out major repairs to ships afloat, including engine and boiler work, and is equipped with modern machinery.

SURVEYORS: Lloyds, ABS, NKK, RIN, BV, GL and NV available from Las Palmas. BV and GL in Santa Cruz.

REPATRIATION: All facilities available for repatriation and crew changes. Daily air flights to Madrid and Europe.

AIRPORT: "Reina Sofia" International Airport situated 65 km. from port, served by Iberia, KLM, Air France, Lufthansa, British Caledonian and others. Daily flights to and from most European capitals.

TIME: GMT in Winter, GMT plus 1 hour in Summer.

HOLIDAYS: Local holiday: May 3rd. National holidays: January 1st, January 6th, March 19th, Maunday Thursday, Good Friday, May 1st, Corpus Christi, July 25th, August 15th, October 12th, December 8th, December 25th.

POLICE/AMBULANCE/FIRE: Police 091; Ambulance 241502; Fire 220080.

TELEPHONES: Facilities exist for connecting telephones on board.

SHORE LEAVE: No restrictions, except for Crew members of East European countries, who must obtain Identification Cards from local Immigration.

IDENTIFICATION CARDS: Not required. For citizens of East European countries local Immigration will deliver Identification Cards, which should be returned to Agent before sailing.

SERVICES: Underwater hull cleaning, tank cleaning-compounds (Basic Chemicals, etc.), compass adjusting.

Passenger Transport: 8 special craft are available which listen out permanently on Channel 16 VHF.

Transport, Victualling, Lubricants, etc.: There is a fleet of craft operating 24 hours a day for this pupose.

Cleaning of Hulls and Painting Afloat: The company RETRASUB using the Scamp. system operates, and has special craft for hull painting.

Sick Persons: Brought ashore in small craft, and there are ample medical and surgical services available in Tenerife.

Disembarkation of Crew, Technicians etc.: The airports of the island provide wide international coverage for moving crews, etc.

Waiting for Berths: Very reduced tariffs are applied to vessels waiting on stand-by in the anchorage.

AGENT: Miller Y Cia S.A., Avenida de Anaga 43-2, P.O.Box 79, 38080 Santa Cruz de Tenerife, Canary Islands. Telex 92143 Midoc E. Tel: 282316, 282366, 283766. Cables: "Miller Tenerife".

ADD
STR

Republic of Cape Verde

PALMEIRA BAY, Sal Island: 16.45 N. 22.59 W. (See Plan)

DOCUMENTS:
5 Crew Lists.
2 Stores Lists.
2 Personal Effects Lists.
1 Health Declaration.
1 Derat Exemption Certificate.
1 Vaccination List.
1 Statement of Ports of Call from Last Loading Port.
3 Bills of Lading.
2 Certificates of Quality (2 from each shore tank at load port).
3 Certificates of Quantity.
2 Cargo Manifests.
1 Ship Particulars Paper (local supply).

PILOTAGE: Accurate ETA advice is essential, as the Mooring Master and Pilot have to leave St. Vincent over 12 hours prior to the vessel's arrival at Sal. Close radio contact must, therefore, be maintained with St. Vincent. If difficulty is experienced in contacting St. Vincent, messages can be passed via Lisbon Radio. Sal Terminal can be contacted on VHF Channels 16 and 13 and by SSB radio.

Shell, St. Vincent, send a Mooring Master from St. Vincent who will berth the vessel and remain onboard until departure.

ANCHORAGES: Position: Lat. 16° 44′ 47″ N., Long. 22° 59′ 37″ W. Sandy bottom. Pilots recommend NOT to anchor during hours of darkness, especially in the months December/March when heavy swell may be encountered.

RESTRICTIONS: Heavy swell occasionally closes port from 1st December to 31st March inclusive.

RADIO/VHF: Arrival displacement to be stated in ETA message. Also see "Pilotage".

Mooring Masters have portable VHF sets for communication to shore during berthing and discharging operations.

BERTHING: Length of pier 112.0 m. Depth alongside 4.10 m. (seaward 60 m.), 2.00 m. (next 33 m.) and 1.00 m. (Inner 22 m.) Width of pier 25 m.-22 m. Berthing possible on one side only.

TANKERS: A four-buoy (2 forward and 2 aft) sea berth for the supply of refined products to the Airfield on Sal Island, located in Palmeira Bay. Ship drops port anchor in marked location and pays out approx. 7 shackles cable. Three good ropes are required for each buoy. Shore wires are used when swell present. Bottom is stone and rock with some sand patches. Berthing is impracticable in strong South to North West winds which occur usually during winter months.

Engines should be kept ready at all times. The months December/March particularly critical.

Discharging: Shore gang connect hose, however, ship supplies winch driver. Connection is made amidships on starboard side. 1×8 in. flexible hose to an 8 in. submarine pipe-line (length approx 1,000 m.) Max. back pressure 150 lbs./sq.in.

Products Handled: Mogas, Kerosene and Avtur. First product Mogas and last product Avtur.

DENSITY: 1025.

FRESH WATER: None. Nearest at St. Vincent.

FUEL: None. Nearest at St. Vincent.

REPAIRS: None.

GENERAL: A Customs Officer, the Mooring Master and Pilot remain on board during stay in port.

AUTHORITY: See "Porto Grande".

PORTO GRANDE, St. Vincent: 16.53 N. 25.00 W. (See Plan)

PORT LIMITS: Inside of a direct line running from Pta. Joao Ribeiro to Pta. do Morro Blanco.

PORT: Porto Grande at Lat. 16° 52′ 55″ N., Long. 25° 00′ 25″ W. City: Mindelo.

HARBOUR: Porto Grande is a natural semi-circular harbour sheltered and safe, facing island of Santo Antao over a channel approximately 10 miles wide at nearest points. In this channel but nearer St. Vincent is the rock of Ilheu dos Passaros on which is a lighthouse. Entry to harbour is from North to South. Weather conditions throughout year usually good to excellent.

DOCUMENTS: On arrival Masters should hand to Agent:
3 Crew Lists.
3 Passenger Lists.
1 Maritime Health Declaration Certificate.
1 Copy Stores List.
Port Doctor will also wish to sight ship's Derat Certificate.

When discharging cargo a minimum of 5 copies of Bill of Lading and 5 copies of Manifest are required. No special form for Passenger Lists and Crew Lists, and those in general use by the vessel will be accepted.

PILOTAGE: Radio notice of ETA must be sent by Master to Agent at least 48 hours before arrival. Pilot boards mid-way between Bird Island (Ilheu dos Passaros) and the Quay. The Pilot prefers to use pilot ladder. Signal for Pilot is 2 long and 1 short blast on ship's whistle. However, sound signals prohibited between 2000 hrs. and 0800 hrs. local time. Time between Pilot boarding to vessel's anchoring or berthing at piers is 10 to 45 minutes. See "Radio".

Important: The Harbour Master requests Masters not to anchor in harbour before Pilot on board. Pilots available day and night. Pilotage compulsory for all vessels entering harbour for anchoring, or berthing. When sailing, pilotage not compulsory for vessels which anchored in harbour. Pilotage compulsory for all vessels berthing and unberthing at piers.

ANCHORAGE: Anchorage berth in 4 to 20 fathoms.

MAX. SIZE: The harbour of Porto Grande can accommodate vessels up to any size. Also see "Berthing" and "Tankers".

HEALTH: Free Pratique can be obtained before arrival on application by radio to Guarda Mor (port doctor) of Sao Vicente de Cabo Verde confirming that crew are in good health. The port doctor, however, usually boards vessel on arrival in company with Police and Customs Guards, in order to provide any medical assistance which may be required. Crew and passengers should be in possession of Vaccination Certificates. Production of these certificates will not, however, be called for unless there is a very good reason for doing so.

RADIO: Advice of ETA should be sent by radio to Agents at least 48 hours prior to entering port. Bunker and water requirements, if any, should also be requisitioned in same message. Cash to Master, provisions, cigarettes, spirits, etc., should be also added. ETA message should also advise number of hatches to be worked and number of tons in each hatch.

St. Vincent radio operates on CQA – 500 kHz and 8.738 MHz 24 hours a day – working frequency 435 kHz on 8 MHz. Listening every 2 hours over the hour and again each half hour on the hour. Pilot station may be contacted on VHF Channel 13-16.

BERTHING:

Pier No.	*Max. Depths* (m.)	*Length of Pier* (m.)
1*	11.50	310.00
2	11.50	310.00
3	9.50	160.50
4	9.50	160.50
5	8.50	90.00
6	6.50	122.00
7	4.50	61.50
8	3.50	106.75
9	3.50	40.00
10	4.50	100.00
11	5.50	100.00

(*This pier is open to the sea and usable subject to prevailing winds and swell).

Floating and suspended fenders are available at the piers. Suspended fenders are each of 3 lorry tyres, 3 ft. wide with a diameter of 2 ft. 6 in. suspended at intervals of 70 ft. Floating fenders are of 5 tyres with a wooden core and are 4 ft. 6 in. long and 3 ft. 6 in. in diameter and are placed at intervals between the suspended fenders. Cruising vessels normally berth at Pier No. 2. Max. draft 33 ft.

Height of Pier No. 2 above sea level approximately 2 m. Vessels moor port side to pier. No shore gangways available. Cruising vessels with drafts too deep to berth alongside piers can anchor in harbour about 1,250/1,500 m. distance from Custom House Pier where passengers may land. Ship's launches must be used for the transport of passengers to and from shore. With tug assistance vessels may berth or unberth at any time of day or night at Pier Nos. 2, 3 and 4, but in adverse weather or other adverse conditions berthing at night may be prevented. Berthing and unberthing at night at other piers generally not possible.

CRANES: 1 heavy lift floating crane, max. lifting capacity 60 tons.

STEVEDORES: If quantity for loading or discharging is of 10 tons or under, and in comparatively small parcels, then cargo can be loaded or discharged using the only small lighter available for vessels at anchorage. If larger quantity to be handled vessel must berth alongside quay. In both instances ship's tackle must be used. Discharging rate for bagged cargo, i.e. flour, rice, etc., is about 30 t.p.h. per hatch. In all cases vessel's derricks and winches are used. There are no lighters available, therefore as described above all cargo in excess of 10 tons must be loaded or discharged at the piers. The opening/closing of hatches is the responsibility of the crew on board, but can be done by the stevedores by arrangement with the Master under the supervision and responsibility of the ship's officers.

TANKERS: Max. length 775 ft.; max. draft 36 ft. Underkeel clearance 4 ft. Max. d.w.t. 53,000 tons.

Discharge effected by barge from starboard side of tanker at anchorage, also through submarine pipe-line in harbour at: Lat. 16° 53′ 30″ N., Long. 25° 00′ 50″ W. length of line, 1,000 m.; diameter, 20 in.; Buoy Berth; hoses 12 in.; number of hoses, 7; position of hose connections, midships starboard side; Max. rate per hour, 2,000 tonnes; density of water at berth 1025.

Submarine Pipe-line Buoy Berth: Tankers moored to 1 forward buoy and 3 stern buoys. Tanker also uses port anchor which is dropped before tying up to buoys. Nature of bottom is coarse sand and gravel. Berthing at buoys carried out 24 hours a day and port tugs of up to 1,200 h.p. used always on berthing and on unberthing according to weather conditions.

Cleaning Tanks: 50 miles from shore only.

Gas Freeing: At present no facilities available.

FRESH WATER: Can be supplied at anchorage or at piers or ex-lighter day or night. Water suppliers request at least 48 hours' notice giving quantity required. A minimum charge covering costs of supply of 20 tons is made on supply for under that quantity. To supply over 750 tons during a 12 hour stay in port with 2 lighters, giving between 25 to 50 t.p.h per hose, would be difficult. Connections of hose couplings from water barges are 3 in. male, 11 threads per inch.

FUEL: Oil bunkering carried out ex-lighter at anchorage at rate of up to 300 t.p.h. dependent upon speed at which vessel can receive. Both fuel and diesel oil bunkers can be supplied at the piers. Gas oil can be supplied in drums to vessel at anchorage or in bulk ex-pipe-line on piers. All bunkering at anchorage ex-barge takes place on starboard side of vessel. Supplier: Empresa Nacional de Combustiveis. Telex: 86 Enacol Cv.

GANGWAY/DECK WATCHMEN: Two Maritime Police are always in attendance and are compulsory.

CUSTOMS ALLOWANCES: Tobacco and Wine and/or Spirits, no restrictions within reason.

CONSULS:

Belgian (Vice-Consul)
Danish (Vice-Consul)
Netherlands (Vice-Consul)
Norwegian (Consul)
Swedish (Vice-Consul)
Venezuelan (Belgian Consul acts in a friendly capacity).

REPAIRS: The St. Vincent ship repair yard, situated at Matiota at Porto Grande of St. Vincent, has been completed.

It is constructed on an embankment and protected from the sea by the cliffs and is fitted out with modern installations, well equipped and endowed with specialised personnel, who will be able to execute any repair work on ships up to 6,000 d.w.t.

The elevator system is of slipway type with lateral transference to the repair parks equipped with an elevator platform of 95 m. length and 18 m. width and capacity of 2,800 tons. It has 6 dry repair posts. There is space for 1 more repair post in future.

A pier with a length of 110 m. is situated at the West front and is expected to receive ships of about 6,000 d.w.t. It is used for ship repairs that do not need the dry dock.

The depth along the pier and in the manoeuvring zone is about 6 m. On shore besides all buildings for the services of storage, the necessary repair shops for the repairs are fitted out with modern equipment.

REPATRIATION: Facilities exist for effecting crew changes by air, but recommend that Lisbon be contacted by Owners for crew making flights into Sal Island in order to join vessel St. Vincent. Agents should also be informed to make necessary arrangements for flight on local plane from Sal Island to St. Vincent. All crew travelling to Cape Verde must have transit visa issued by Consul in country of origin. All crew, except cases for hospitalisation, must be in possession of a passport before police will permit them to disembark for repatriation. Crew possessing valid passports or sailors' books can land in Cape Verde for medical and/or hospital treatment or for repatriation to country of nationality provided it is country with whom Cape Verde has diplomatic relations and provided Agents of vessel take full responsibility on behalf of Owners for all expenses.

AIRPORT: Airport served by Dove planes for inter-island service only. 20 flights a week in and out of St. Vincent, 4 direct from Praia and 6 via Sal Island inwards. 5 via Sal and 5 direct Praia outwards. Main Airport is at Sal Island where 5 flights a week by Boeing 727 call to and from Lisbon. At Sal Island the only hotel is situated at the Airport.

TIME: GMT minus 1 hour all the year round.

HOLIDAYS: New Year's Day (1st January); National hero's day (20th January); St. Vincent's Day (22nd January); Women Day (8th March); Workman Day (1st May); Children's Day (1st June); National Independence Day; (5th July) Nationality's Day; (12th September); Christmas Day (25th December).

Although offices closed on holidays, loading and discharging of vessels not generally affected.

POLICE/DOCTOR/AMBULANCE/FIRE: Contact police on board or local Agent.

SHIPMASTER'S REPORT: July, 1984.

Pilotage: Pilot boards 0.5 miles from end of breakwater.

Anchorage: Vessel anchored with Mohle No. 2 Light bearing 068° distance 0.5 miles.

Restrictions: Vessel may enter day and night at any stage of the tide.

Tugs: 2 tugs available. Docking and undocking possible without the assistance of tugs.

Radio: Sao Vicente de Cabo Verde.

VHF: Pilot on Channel 16. Port Authority on Channel 15. Agent on Channels 16 and 15.

Documents:

3 Copies Crew List.
1 Copy Stores List.
Maritime Health Declaration.

Facilities: The following facilities are available: Fresh water. Fresh provisions in limited quantity. Repair facilities. Dry docking facilities for vessels up to 11 m. draft. Machine shop. Lloyd's Surveyor and Salvage Surveyor. Laundry service. Telex. Bunker fuel oil and diesel oil. Doctor and hospital.

Berthing: Vessel berthed at Berth No. 2 (Molhe No. 2). Length of quay 1,000 ft.

Depths: Depths at N.E. end 37 ft. and at S.W. 43 ft. Least depth of water in channel from sea to berth is 44 ft. Mean tidal range 0.8 m. Bottom mud. Density 1025.

Cargo Handling Facilities: Cold storage capacity 24,000 tons. No ro/ro and bulk handling facilities. No quay cranes on the main quay. Floating quay available. Fork lift trucks available. No handling equipment or storage facilities for containers.

AUTHORITY: Direccao Geral de Marinha e Portos, C.P.7, Mindelo, Republic of Cape Verde. *Tel:* 2433, 2470. *Telex:* 32 Marpor CV. *Contact:* Jaoa Baptista Brites, Harbour Master.

AGENT: Agencia Nacional de Viagens (Seccao Internacional) P.O.Box 16, St. Vincent, Republic of Cape Verde. Cable Address: Anavsi Saovicentecaboverde. Telex: 83 Anav Sv – Cv.

NOTES

Please also advise Shipping Guides Ltd.

Cayman Islands

CAYMAN BRAC (See Plan)

SHIPMASTER'S REPORT: February 1979.

Cayman Brac – Lightering Area

Chart: British Admiralty 462.

Radio: Very weak VHF only Channels 16, 10, 6. Call – "Cayman Energy" Agent recommends using Curacao (PJC) for ETAs, etc.

Boarding Positions:
No. 1: Lat. 19° 46′ N., Long. 79° 46.5′ W.
No. 2: Lat. 19° 40′ N., Long. 79° 53′ W.

Documents: 4 Crew Lists, 3 Stores Lists, 3 Personal Effects Lists, 2 Vaccination Lists, Clearance from Last Port, Cargo Manifest and Health Declaration (supplied).

Pilots: Mooring Master boards service vessel, STBL. 2 Pilots, 2 Assistants and 2 Riggers (for fenders). The above 6 men require accommodation on board.

Mooring: According to Operators "Cayman Energy Ltd.", can be carried out anytime day or night.

Cayman Energy Ltd., based in New York, are the operators of the transhipment operation. The local Terminal Manager and Senior Mooring Master resides on Cayman Brac and usually carries out the berthing operation from the service vessel. Ship to ship transfers commenced in 1977, future developments include the construction of a Transhipment Terminal on Little Cayman using SBMs, this project should come into operation late 1979.

The berthing procedure is straightforward and based on the ICS Ship to Ship Transfer Guide. On this occasion, Texaco were using vessels of about 45,000 d.w.t. as service vessels. These ships are in the region of 20 years old and have no modifications for this work. The Officers and crew of these vessels were mainly Italian and well practised in ship-to-ship transfers.

Upon completion of mooring, the Mooring Master departs and the Pilots remain on both vessels in an advisory capacity. 2×10 in. hoses are connected by the respective crews, the shore riggers assisting. Communications between the two vessels is by VHF.

During the transfer operation, the vessels are expected to remain within 4 to 5 miles from the island and the service vessel kept in the lee of the STBL. This entails maintaining a proper bridge watch and frequent use of the engines. The currents invariably set away from the island and can be quite strong at times. The winds during the latter part of January were extremely variable in both direction and force.

The Texaco practice of the STBL taking dirty ballast from the service vessel whilst reducing the risk of pollution, poses stress problems and also requires strict supervision of line draining between each operation. Ideally, water dips and ullages should be taken prior to and after the deballasting.

Unberthing is carried out by the Mooring Master whilst both vessels are drifting. The off-loader is put on the weather side of the STBL. This practice is questionable in winds over 15 knots – the movement of the smaller vessel together with reduced freeboard causes difficulties with the fenders.

The average berth time for each vessel is approximately 30 hours, the number of off-loaders for a ship of this size is five. If a safe and efficient operation is to be maintained throughout the period it is essential that two additional deck officers be available for cargo watch purposes.

SHIPMASTER'S REPORT: January 1980.

Cayman Brac – Little Cayman (See Plan)

Communications: "Cayharb Cayman Brac" via Slidell Radio WNU (see "Admiralty Radio Signals Volume 6").

Via VHF Channel 16:
"Cayman Energy" (good reception)
"Cayman Pilots" (via ship where the Pilot is at the time)
"Cayman Harbour" (weak signal)

Pilot Boarding Station:
Lat. 19° 43′ N., Long. 79° 53′ W. or Lat. 19° 40′ N., Long. 79° 53′ W.

Note: this position may change with seasonal weather conditions. The position is also used for Port Officials who request accommodation ladder in light condition but accept air pilot hoist or pilot ladder in loaded (tanker) condition.

Documents Required: 4 Crew Lists, 4 Cholera Immunisation Lists, 4 Store Lists that include Stores, Narcotics, Bond, 4 Cargo Manifests, 4 Crew Declaration Lists.

Bond: Bonded Stores locker remains unlocked and issues may be made to the crew for onboard use only.

Postal Address: Cayman Harbour Corporation Ltd., Stake Bay, P.O.Box 50, Cayman Brac, Cayman Islands, British West Indies.

Facilities Available: Food, some stores, fresh water limited from tug.

Bunkers: Via lightering tanker ordered via Owners/Charterers.

Medical: Doctor can board ship at any time.

Hospital: Available.

Derat Certificate: No renewal certificate available but a letter of acceptance of renewal for Cayman Brac is issued.

Shore Side Facilities: Cayman Brac: Shops, hotels, post office. Little Cayman: Clubs (tourists). Fishing when in soundings.

Anchorages (under Pilots guidance):

Off Western end of Cayman Brac	up to 57 ft. draft.
Off Little Cayman	up to 69 ft. draft.

Currents: Variable, depending on season and weather. Ships experienced very little set and drift North of Cayman Brac 1.5 mile – 2.5 mile distance, other times over 2 knots. Generally N.W. direction. Stronger South of Islands.

Ship-to-Ship Cargo Pumping Operations: Cayman Energy Corporation Ltd. Tug: "Cayman Energy". Mooring ship to ship – see Plan. Fibre mooring lines instead of wire preferred. Operations under way, under guidance of Pilot/Loading Master. Ships separated by floating fenders supplied by Cayman Energy Corporation. Pumping may continue when ships are manoeuvring dead slow. Fenders remain alongside between lighterings and it is possible to manoeuvre up to 7 knots. Smaller vessel is moored on the lee side of discharging vessel (the larger one).

Pilot plus 4 assistants remain onboard for the duration of all cargo lightering operations but may be relieved if lighterings are prolonged ones.

Shore leave for ship's crew is possible via pilot boat or "Cayman Energy".

Cayman Brac Airport: Flights to Grand Cayman and then overseas.

SHIPMASTER'S REPORT: November 1980.

Vessel (230,000 d.w.t.) arrived at Cayman Brac for 2 to 3 months storage and lightening operations. No information or charts were on board prior to arrival.

Cayman Brac is a small island about 12 miles by 1.5 miles and is used solely for lightening operations, a maximum of 4 pairs of ships being handled at one time, but usually only 2.

There are 2 Pilot and Port Official Boarding Areas, North Boarding Area Lat. 19° 43′ N., Long. 79° 53′ W. and South Boarding Area Lat. 19° 40′ N., Long. 79° 53′ W., the choice depending on the wind direction. If no chart on board Cayman Brac can be approached to within 1 mile at any draft. There is no proper harbour, the launches have to boarded from the beach using small boats, the launches remaining at moorings some distance offshore which can make transfer difficult in bad weather, especially for heavy stores.

There are no stores available on Cayman Brac, all stores have to be flown in from Grand Cayman or from Tampa, Florida. There is no official shipchandler on Cayman Brac although the Agent will assist vessels requesting small amounts of stores. We were informed by other vessels that usual method of obtaining large stores was to arrange for a supply by container direct from Tampa, Florida to the ship using a small coastal freighter. Other ships had stored at Barbados on the way in and way out. All stores are very expensive.

On arrival at Cayman Brac contact was initially made with "Cayman Brac Pilots" on Channel 16. However the call sign "Cayman Brac Pilots" is not usually used as this is in fact "Cayman Energy" who organise all Pilots, launch services and lightening operations. "Cayman Energy" is run by Captain H. Banks who appears to man the shore VHF station 24 hours a day, in addition to occasionally acting as a Pilot.

There are very few suitable anchorage positions, due to deepwater existing right up to the reef. There is one at the West end of Cayman Brac suitable for a VLCC with maximum draft of 66 ft. This is close to the boarding areas. Another at the West end of Little Cayman is suitable for a VLCC but 2 hours by launch from boarding area. There is another at East end of Little Cayman suitable only for vessels up to 100,000 tons. We used the anchorage at the West end of Cayman Brac and although very close to shore experienced no dragging during time anchored. We were informed by Pilots that no ship had ever dragged from that anchorage. Pilot essential for anchoring.

Agents are "Cayman Harbour" who monitor Channel 16 and are very helpful at all times. A doctor is available but no dentist. (Cable: "Cayharb Caymanbrac").

Lightening Operations: Normal procedure is for ship to be lightened (STBL) to fender starboard side before berthing, 4 fenders being brought out by launch "Cayman Mariner" or "North Harbour" also 2 hoses and reducers if required, on a barge. The fenders are positioned and hoses connected using 2 shore operators assisted by ship's crew. This can take up to 6 hours, during which time a Pilot is on board. Two Pilots and 2 shore operators remain on board during lightening. Then, if conditions are suitable both vessels steam with wind 15° on starboard bow, STBL at 4 knots and lightening ship comes up from astern on starboard side and closes with STBL, the operation being controlled by Pilot on lightening ship.

Berthing can take from 1 to 3 hours depending on circumstances, so a suitable clear run is required ahead of vessels to enable this to take place without altering course. Needless to say berthing vessels have right of way over all other vessels and this local rule is enforced by "Cayman Energy".

Both ships have a Pilot during the entire berthing, lightening and unberthing operrations, also Pilot remains on STBL until fenders and hoses removed. This is done unless next lightening operation is expected in near future, as fenders are liable to damage if left in position on STBL.

Due to Cayman Brac lying N.E./S.W. and wind during Winter months generally from N.E. there is not much shelter available but even so lightening operations are only occasionally interrupted due to weather.

Ullages and cargo figures on our vessel and lightening ship were checked by Caleb Brett Surveyors, this service having been arranged by charterers, it is not standard procedure, but depends on charterers.

Whilst lightening, navigation is carried out by STBL so bridge must be manned throughout, as well as cargo control room. Vessel steams normally at slow speed to maintain suitable position, with long periods of "stop" when engines are not required. During this time lightening ship's engines are not used. Maximum discharge rate permitted during discharge is 5,000 t.p.h. No difficulties were experienced during berthing or discharge except that due to communication problems with charterers, STBL and lightening ship occasionally had differing orders regarding discharge quantities, however this could usually be sorted out by "Cayman Harbour" in a short time.

There is a twice daily flight from Grand Cayman to Cayman Brac. This flight is always fully booked but even so seats are usually available. Extra flights are also made when required. Flights lasts 50 minutes and costs £10.00 single. There are 2 hotels on Cayman Brac and rooms are usually available.

Documents: On arrival Customs and Immigration board and require 4 copies each:

Crew Personal Effects Lists (Crew Lists also required before sailing).
Stores Lists including Narcotics.
Crew Lists (with full names).
Vaccination Lists.

Currency is Cayman Island Dollars (CI$) but U.S. Dollars are accepted with exchange rate US$ 1.00 = CI$ 0.82.

AUTHORITY: *Operator:* Cayman Energy Limited, P.O.Box 33, Cayman Brac, Cayman Islands, B.W.I. *Telex:* 4350 Celcb Cp.

GEORGETOWN, Grand Cayman: 19.18 N. 81.23 W.

DOCUMENTS:
Bills of Lading.
Crew List.
Cargo Manifest.
Ship's Register.
Safety Certificates.
Clearance from Last Port.

PILOTAGE: Available on request.

ANCHORAGE: With Georgetown Lighthouse bearing 125° – 150° distance 750 m. to 1,200 m.

RADIO: SSB: 4125 kHz, 0800 hrs. – 1200 hrs. Monday to Saturday. 8291.1 kHz, 1210 hrs. – 1700 hrs. Monday to Friday.

VHF: Channel 16, 24 hours a day.

TUGS: Launches available. No tugs available.

BERTHING:

South Wharf: Length 445 ft. depth 11 ft. – 24 ft.

West Wharf: Length 240 ft. depth 13 ft.

Ro/Ro Ramps: South Wharf: 1 ramp with depth 11 ft. Finger Pier at South Wharf: 1 ramp with depth 21 ft. – 26 ft. West Wharf (South End): 1 ramp with depth 13 ft. – 20 ft.

Cranes: 20 ton, 50 ton and 100 ton cranes available for hire.

Fork Lifts: 5×2.5 tons, 1×5 tons, 1×26 tons, 1×35 tons.

STEVEDORES: Stevedores arranged by Agent, supplied by the Port Authority.

Working Hours:

	0800-1200 1300-1700	Monday to Friday
	0800-1200	Saturdays
Overtime	1700-2100 1300-1800	Monday to Friday Saturdays

In the event that a vessel may finish discharging and sail, an additional 2 hours may be worked.

No work Sundays and Holidays unless Port Director considers it necessary.

MEDICAL: Hospital available.

FRESH WATER: Supplied by truck.

FUEL: Marine diesel only, delivered by truck.

AIRPORT: Scheduled flights by international carriers.

HOLIDAYS: New Year's Day, Ash Wednesday, Good Friday, Easter Monday, Commonwealth Day or Tree Planting Day (3rd Monday in May), Queen's Birthday, Constitution Day (1st Monday in July), Monday after Remembrance Sunday, Christmas Day, 26th December.

SERVICES: Ship chandlers available.

AUTHORITY: Cayman Islands Port Authority, P.O.Box 1358, Harbour Drive, Georgetown, Grand Cayman, Cayman Islands. *Contact:* The Port Director.

NOTES

Chile

GENERAL

The ports of the Republic are under the jurisdiction of the General Directorate of Maritime Territory and Mercantile Marine, and for this purpose, the Director of this Service delegates his functions and responsibilities to the Maritime Authorities located in the different ports of the country, and who in turn are organised into Maritime Governorships, Port Captaincies and Marine Mayors, according to the importance of the port and the extent of its territorial jurisdiction.

ARRIVAL ADVICE: Masters of vessels must inform the Port Captain of their ETA, 24 hours in advance of arrival, via a message which must contain the following information:

Name of vessel and flag.
ETA (date and time).
Number of passengers, or negative.
Quantity of hazardous cargo for the port or in transit, or negative.
State of health of the crew and/or passengers.
Draft.

The telegraphic address of the Maritime Authority is "Maritgob" . . . . . . or "Capuerto" . . . . . ., whichever applies.

All commercial ports have a maritime radio station listening out permanently on 2182 kHz. and Channel 16, VHF.

REPORTING: It is recommended to vessels navigating in the maritime area of national responsibility (200 miles) to communicate their daily position at 0800 hrs. and 2000 hrs.; stating course, speed and destination port, for the purpose of maintaining permanently updated information for achieving efficient and timely action in the co-ordination of search and rescue where persons are in danger or lost at sea.

Also see "Search and Maritime Rescue".

DOCUMENTS: All vessels coming from abroad, on arrival at the first Chilean port, are received by the following authorities presided over by the Port Captain.

Human Health.
Customs.
Vegetable Health.
Immigration.

Prior to the Maritime Authority granting Free Pratique, the vessel must present to the Reception Commission the following ALALC documents:

General Health Declaration	1 (First Port)
Clearance Document from last port	1
Vessel's General Declaration	5
Crew List	5
List of Crew's Personal Effects	3
List of Passengers for the Port	5
List of Passengers in Transit	5
Mail Declaration or Negative	5
List of Provisions	6
Cargo Manifest for the Port	10
Manifest for Cargo in Transit	10
IMO Hazardous Cargo Declaration	6
Declaration of Arms and Ammunition	2

At the first port of call, Immigration will ask for the passports of the crew and/or passengers to make out the cards which they are given and which must be returned when the vessel leaves the last Chilean port.

The Port Captain may require further vessel certificates, but generally asks for the following:

Safety Equipment Certificate.
Certificate of Radiotelegraphic Safety.
Tonnage Certificate.
Certificate of Lighthouses and Buoys (Chilean).
Hydrocarbon Book (Tankers).
Water Pollution Liability Certificate.

Prior to sailing, hatches must be hermetically sealed, and on-deck cargo must be duly lashed, and positioned in accordance with international standards.

When the vessel sails, the Maritime Authority grants a "Sailing Document" stamped by Customs, to which is added a list of the crew and/or passengers, stamped by Immigration.

Transit of persons or crew members to and from the vessel is not permitted once the Sailing Document has been issued. If the vessel does not sail within a reasonable time, for reasons of force majeure, this fact must be communicated to the Port Captain, who will seek the return of the corresponding Document, if he sees fit.

PILOTAGE: The use of a Pilot is obligatory in all Chilean ports, both for berthing and unberthing, including oil terminals. Accordingly, a Pilot is taken on board in each Pilotage Area.

For vessels coming from the North, Pilots come aboard at Valparaiso, Talcahuano, Ancud or at the Pilot Station of Laitec, in Quellon. For vessels coming from the Atlantic, the Pilot comes aboard at the station located in Bahia Possession. For vessels coming from the Antarctic, the Pilot comes aboard at Isla Hornos or Cabo San Pio.

HEALTH: All vessels arriving from abroad are required to call at one of following ports for Free Pratique: Arica, Valparaiso or Punta Arenas. Vessels are also allowed to call direct to Tocopilla, Iquique, Antofagasta, Coquimbo, San Antonio, Talcahuano and San Vicente.

Vessels can be exempted from call at one of these ports, and proceed direct to the port of loading and/or discharge providing permission obtained, with 8 days' notice from National Health Service.

Following details in order to apply for exemption on behalf of a vessel are required:

Name and flag of vessel.
Net registered tonnage.
Last port of call.
Cargo carried, or if in ballast.
Port of arrival in Chile and date of arrival.

FLAG: All vessels arriving in Chilean ports must fly their own ensign and also the Chilean Flag, from the highest mast.

On entering port the "Q" flag should be flown until pratique is granted.

The use of whistles or sirens in port must be strictly in accordance with the Rules for The Prevention of Collisions.

RADIO: There are 74 radio stations along the coast.

Notices to Mariners are transmitted from Valparaiso, Punta Tumbes, Puerto Montt, Corona Lighthouse, Punta Arenas and Punta Delgada.

The observation of local weather is transmitted by the following radio stations in radio telephony:

Valparaiso Playa Ancha Radio – CBV.
Talcahuano Radio – CBT-4.
Calbuco Radio – CBC-6.
Corona Radio – CBF-48.
Guafo Radio – CBF-49.
Raper Radio – CBF 51.
Magallanes Radio – CBM-2.

General and special forecasts covering from Arica to San Pedro are transmitted by Valparaiso Playa Ancha Radio in telegraphy on frequencies 464, 4228, 8677, 12741 and 17146.4 kHz. The following information in facsimile:

1130 hrs. GMT: Area Chart.
1920 hrs. GMT: Nepho Analysis.
1940 hrs. GMT: Wave Analysis.
2310 hrs. GMT: Area Chart.

and in telegraphic system:

0110 Weather forecast Zone I – VI.
1210 Weather forecast Zone I – VI.
1210 Analysis.
1210 Weather forecast Zone X.
2020 Weather forecast Zone X.
2030 Analysis.

and NAVTEX at: 0110, 0410, 0810, 1210, 1610 and 2010 hrs. GMT.
0200 hrs. GMT: Forecast Wave Chart.

The Naval Radio Station of Magallanes transmits the general forecast in telegraphy for Zones VII – VIII and X.

The Chilean Air Force Radio Station Presidente Frei transmits the general forecast for Zone IX.

For weather forecasting the country has been divided from North to South into the following areas or zones.

Zone I : from Arica to Coquimbo;
Zone II : from Coquimbo to Valparaiso;
Zone III : from Valparaiso to Constitucion;
Zone IV : from Constitucion to Isla Mocha;
Zone V : from Isla Mocha to Puerto Montt;
Zone VI : from Puerto Montt to Isla San Pedro;
Zone VII: from Isla San Pedro to Evangelista Lighthouse;
Zone VIII: from Evangelista Lighthouse to Lat. 60° 00′ S.;
Zone IX : from Lat. 60° 00′ S. to Lat. 90° 00′ S.;
Zone X : from Long. 80° 00′ W. to Long. 120° 00′ W.

Chile is normally 4 hours behind GMT, but from the 2nd Saturday in October to the 2nd Saturday in March clocks are advanced 1 hour. However radio transmissions will continue to use GMT minus 4 hours.

ETA advices are best made using GMT.

FUMIGATION: If a vessel's Derat Certificate is overdue an Exemption Certificate may be granted provided that there are no rats on board, and no ports infected by Bubonic Plague have been visited recently. Fumigation can be carried out by the Farming and Cattle Bureau. In such cases the vessel anchors in the inner port or Roads, all crew are landed for a period of 24 hours, and the fumigation carried out before the vessel is berthed.

STEVEDORES: In all Chilean ports there are stevedoring and discharge companies, all of whom have adequate personnel and means for executing the work of loading and discharging vessels.

Daily, Chilean ports work on systems of shifts indicated as follows:

First Shift: from 0800 to 1530 hrs.
Second shift: from 1530 to 2300 hrs.
Third Shift: from 2300 to 0630 hrs.

All vessels in port must have a watchman at its accesses who has the responsibility of ensuring that no person not belonging to the vessel and/or not having due authority comes on board.

Port operations are surveyed periodically by a Safety Patrol whose job it is to ensure that the activity of stevedoring in loading and discharging vessels be carried out in accordance with national and international safety standards. This patrol reports to the Port Captain.

HOLIDAYS: The following dates are public holidays in Chile:

1st January, Thursday and Friday of Holy Week (March/April). 1st May – Labour Day, 21st May – Naval Combat of Iquique (Fleet Day), 29th June (St. Peter & St. Paul), 15th August – Assumption of the Virgin Mary, 11th September – Nation's Liberation Day, 18th September – Independence of Chile. 19th September – Day of the Glories of the Army, 12th October – Discovery of America, 1st November – All Saints' Day, 8th December – Immaculate Conception, 25th December – Christmas.

The holidays do not affect the efficiency of the system of port work.

CREW: Foreign merchant vessels can contract-in Chilean crew members without many problems, the engagement contract having to be authenticated by the Master beforehand.

Curfew: There is no curfew in Chile. Persons may move about freely within the national territory at any hour of the day or night.

FUEL: Fuel can be taken on in any port in the country from tanker trucks. Prices are in accordance with fluctuations in the international market. The ship's Agent must request the required amount in advance.

POLLUTION: It is expressly forbidden to throw overboard any ballast, rubbish or waste, or to spill petroleum or any derivative or residue, contaminated waters from mineral processing plants or any dangerous or noxious substance of any kind either into ports or Chilean jurisdictional waters (200 miles limit) without prior authority from the Port Captain. Standing regulations stipulate that no tanker may dump hydrocarbons or other derivatives within fifty miles of the coast.

In accordance with international rules, vessels navigating in Chilean waters must have an insurance policy against risks of marine contamination. In the event of contamination, without prejudice to the administrative sanctions which may be imposed, the rules of civil responsibility for marine contamination will be applied, as established in international regulations.

MAGELLAN STRAIT: Despite the fact that there is an excellent system of buoys and assistance to navigation, the use of a Pilot (2 Pilots) is obligatory in the Magellan Strait for all vessels and in any condition.

The following lighthouses and installations are equipped with Racon:

Dungenes Lighthouse
Oil Platform PE No. 1
Oil Platform PE No. 2
Oil Platform SPN No. 2
Punta Baxa Lighthouse
Segunda Angostura Lighthouse.

The Government of Chile has established a new system of assistance to navigation in Magellan Strait; in order to provide support to navigation and pilotage in the area; by means of interchange of centralised information with vessels, attempting to provide full safety to human life at sea. This system which has radar stations installed in the Punta Dungenes Lighthouse and the Port Captaincy of Punta Delgada, is at the service of any vessel requesting aid, without any cost to the user, and enables navigation to be guided on the Boca Oriental (Eastern Mouth) and the Banco Triton (Triton Bank) or vice versa.

Vessels requiring this service and who are coming from the Atlantic Ocean, must communicate their arrival at the point located at Lat. 52° 35′ S., Long. 68° 10′ W., at least 24 hours in advance, to Maritime Radio Station Punta Arenas (CBM), using the frequencies and times indicated in the Nomenclature of Coastal Stations, List IV, of the International Telecommunication Union.

At 20 nautical miles from the point of arrival, a direct contact must be made with Punta Dungenes Lighthouse (CBF – 67) or Cabo Espiritu Santo (CBF – 68) on Channel 16 VHF.

Stations at Punta Arenas and Punta Delgada also provide the following information:

traffic present in the area
position of oil platforms and naval installations
indication of the anchorage area and for awaiting the Pilot
weather conditions
tidal information
information concerning urgent notices to mariners and others.

Shipmaster's Report: January 1986.

The transit through Magellan Strait went very smoothly. There are no great difficulties as long as vessel has a good and reliable radar. Extra caution is necessary in Paso Turtoso but there is no problem in passing there during darkness.

Communications with our Agent were good. We sent telex over Maritex and they answered with cable via Valparaiso Radio. Information required by them was a minimum, g.r.t. the most important for obvious reasons. There are no paper formalities at Punta Arenas, Pilot boarding was straight.

Pilot boards one mile due East of Punta Arenas breakwaters, and leaves at Possession Bay. Our Pilot left just after the First Narrows in position: Lat. 52° 24′ S., Long. 69° 24′ W. There are plans to build a pilot station at Punta Felix in position: Lat. 52° 58′ S., Long. 74° 04′ W. and thus making it compulsory to take a Pilot for the whole Strait (ocean to ocean). According to our Pilot this to be effective late 1986 or early 1987.

There are now two reporting points, Los Evangelistas in position: Lat. 52° 23′ S., Long. 75° 07′ W. at the West entrance, and Cabo Espiritu Santo in position: Lat. 52° 40′ S., Long. 68° 36′ W. at the East entrance.

VHF contact to be made with these stations when passing them. They require such information as g.r.t., length, cargo, etc. Their English is fairly good.

Our Pilot did not agree that the best time to pass Punta Arenas was at high water. Because the tide varies in such a way that vessel still has the tide against in the Narrows. Instead he recommended that the tide was calculated for the First and Second Narrows respectively, (with Chilean tables). And then the transit to be made in such a way that the vessel transits the First Narrows just after high slack water. This meant that the vessel would sometimes run against the tide in the Second Narrows. Since the tide in the First Narrows is much stronger, this is more favourable.

Advice from Agent: The Chilean Government issued Decree No. 397 imposing compulsory pilotage for the transit of Magellan Strait in both directions.

Same will become effective from 1st December, 1985, and will apply to all vessels even those crossing ocean to ocean.

Vessels to request Pilots through an Agent in Punta Arenas well in advance of their ETA at either entrance of the Strait.

Westbound traffic will embark Pilots at Possession Bay (Lat. 52° 16′ S. Long. 69° 10′ W.) and disembark them at Punta Arenas.

Eastbound traffic will embark Pilots at Punta Arenas and disembark them at Possession Bay.

SEARCH AND MARITIME RESCUE: (See Plan) In January 1983 Chile established a system of "Notification of the Situation of Vessels" in order to render immediate assistance to vessels in danger or distress. The system is called "SISNAV".

The fundamental objective of the "System" is to provide information for the Head of Search and Maritime Salvage at this General Directorate, and to the Mercantile Traffic Situation Controllers, together with the Operational Centres for Search and Rescue along the extent of the coastline; in the ports of Iquique, Valparaiso, Talcahuano, Puerto Montt and Punta Arenas.

The area of national responsibility, for the purpose of search and rescue, is to the North between Lat. 18° 20′ 08″ S. and Long. 120° W.; and to the South as far as the South Pole, and comprises all jurisdictional waters and the one corresponding to the Chilean Sea. See "Plan".

With regard to the "SISNAV" system, it is necessary to emphasise the following:

(a) The service and its use is free of charge to users.
(b) The format of messages is that recommended by the International Maritime Organisation.
(c) On average, vessels navigating in the area of national responsibility adhere to the SISNAV system; our Service of Search and Maritime Rescue can provide a rapid and efficient aid to any vessel or persons in danger.

Typical messages, provided for the SISNAV system, are as follows, and the maximum priority should be assigned to them:

1. INITIAL REPORT (SP):

(a) When the vessel enters national waters:

The vessel's Master must send the entry message through the intermediary of the Maritime Radio Station corresponding to the sector of the Search and Rescue Service or through that which he is able to contact first.

2. POSITION REPORT (PR):

The message of notification of situation must be originated daily by the vessel's Master at 0800 hrs. and 2000 hrs., or when the situation of the vessel varies considerably from that pre-supposed, and it must be transmitted through the corresponding Maritime Radio Station or through that which the ship is able to contact first.

3. FINAL REPORT (FR):

(a) On leaving the area of national responsibility:

The Master of the vessel must originate the corresponding message through the intermediary of the Maritime Radio Station of the sector of the Service of Search and Rescue in which he is navigating or through that which he can contact first.

SISNAV communications are made using the Network of Maritime Telecommunications, which is able to receive any kind of message of Assistance, Distress or Urgency and those corresponding to the System.

The Maritime Telecommunication Network is shown in List IV Vol. 1 and 2 of the Coastal Station List of the UIT and for the purposes of the SISNAV system the main radio stations are considered to be Antofagasta (CBA), Playa Ancha (CBV), Talcahuano (CBT), Puerto Montt (CBP) and Magallanes (CBM).

To facilitate the drawing up of typical messages in the System, below are outlined the mechanics of the operation:

Requirement for messages: Vessels should send:

(1) A "SP" report when entering Chilean waters or sailing from Chilean port.

(2) A "PR" report daily at 0800 and 2000 Chilean time. (See ALRS 5 for local time details).

(3) A "FR" report immediately prior to arrival at a Chilean port or on leaving Chilean waters.

Form of messages: Addressed to DIRECTEMAR VALPARAISO. Vessels on a Northerly course should report at the same time to the maritime authority at Punta Arenas, Talcahuano or Valparaiso, addressed MARITGOS.

SP REPORT (Initial Report)
(a) SISNAV
(b) SP
(c) Ship's name and callsign
(d) Date and local time (6 digits followed by LT e.g. 012200LT)
(e) Port of departure
(f) Position (Latitude and Longitude e.g. 1832S 7021W)
(g) True course (3 digit group)
(h) Speed (2 digits)
(i) The letters "CO"
(j) ETA (format as for (d)) and Port of destination
(k) Name and callsign of radio station through which report is sent
(l) Date and local time (format as for (d)) of next report

PR REPORT (Position Report)
(a) SISNAV
(b) PR
(c) Ship's name and callsign
(d) Date and local time (0800 or 2000. 6 digits followed by LT e.g. 010800LT)
(e) Position (Latitude and Longitude e.g. 1924S 7032W)
(f) True course (3 digit group)
(g) Speed (2 digits)
(h) Name and callsign of radio station through which report is sent
(i) Date and local time (format as for (d)) of next report

FR REPORT (Final Report)
(a) SISNAV
(b) FR
(c) Ship's name and callsign
(d) Date and local time (6 digits followed by LT e.g. 251820LT)
(e) Port of arrival or "DEPART CHILEAN WATERS"

SEARCH AND MARITIME RESCUE DISTRICTS:

(a) First District for Search and Maritime Rescue

This corresponds to the North Naval District, from the North limiting parallel to Lat. 26° S. The Centre for Coordination of Search and Maritime Rescue is in the Maritime Control at Iquique.

(b) Second District for Search and Maritime Rescue

Corresponds to the First Naval Zone, from parallel 26° S. to parallel 34° 09′ S. The Centre for Search and Maritime Rescue will be located in the Valparaiso Maritime Control.

(c) Third District for Search and Maritime Rescue

This corresponds to the Second Naval Zone, from parallel 34° 09′ S. to parallel 47° S., excluding the territory included in the Fourth District and as indicated in point (d) of this section.

The Centre for Search and Maritime Rescue will be located in the Talcahuano Maritime Control.

(d) Fourth District for Search and Maritime Rescue

This corresponds to the internal waters of the Second Naval Zone, included between Lat. 41° 21′ S. and Long. 74° W. as far as Lat. 43° 16′ S. and Long. 74° W., and from Lat. 43° 16′ S. and Long. 76° W., as far as Lat. 47° S. and Long. 76° W.

The Centre for Search and Maritime Rescue will be located in the Maritime Control of Puerto Montt.

(e) Fifth District for Search and Maritime Rescue

This corresponds to the Third Naval Zone from Lat. 47° S. to Lat. 90° S., and includes all waters under national control and those corresponding to the Sea of Chile.

The Centre for Search and Maritime Rescue will be located in the Maritime Control of Punta Arenas.

SHIPMASTER'S REPORT: January 1985.
Painting: We called recently at Iquique – Antofagasta – Valparaiso – San Vicente. In *all* ports scraping and painting the hull only allowed after having received permission from Port Captain.
Containers: When more than 6 containers have been (re)loaded on deck the lashing of same are to be checked by Surveyor of Port Captain's Office. Surveyor at San Vicente insisted on chains, even when twistlocks were used and containers only single stacked.
Stability: Prior departure last Chilean port, stability particulars to be given to Surveyor from Port Captain's Office.
Time: Summertime is kept, GMT minus 3 hours.

AUTHORITY: Direccion General del Territorio Maritimo Y de Marina Mercante, Errazuriz 537, Valparaiso, Chile. *Tel:* 258091. *Telex:* 230602 DGTMM CL. *Contact:* Admiral Fernando Camus Scherrer, Director-General.

ANTOFAGASTA (including La Chimba Cove): 23.39 S. 70.25 W. (See Plan)

DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory. Pilot should be awaited in position bearing 300° and 4 – 5 cables from the lighthouse at the head of the breakwater mole. The Pilot will board during 24 hours, weather permitting, and if the vessel is at anchor an extra charge will be made for heaving aweigh while the Pilot is on board.

The accommodation or pilot ladder must be rigged for the Pilot. Pilot can be contacted by VHF Channel 16.
ANCHORAGE: About 1,200 m. from green light on coast mole. Vessels that do not enter port anchor in what is known as "old or outer port" where best anchorage is bearing 103° from anchor painted on hillside, about 5 cables from coast in 37 m. – 22 m. of water.

Small vessels anchor about 4.5 cables from old passenger quay in 22 m. – 18 m. of water. Ships should use 2 anchors and follow the indications of the Port Pilot.

There is a forbidden anchorage zone established to avoid obstructing manoeuvres when a vessel is entering or leaving the artificial port. This zone is located between the Paita Rock and the extreme North of the protected mole. It is 2.5 cables from North to South and 2 cables wide.
RESTRICTIONS: From May to July the surge is stronger and results in rough seas lasting from 2 to 4 days interrupting the traffic of small craft.
MAX. SIZE: Fishing zone – 24 ft. draft (7.32 m.).

Berth No. 1 – 30 ft. max. draft (9.14 m.)
Berth No. 2 – 30 ft. max. draft (9.14 m.)
Berth No. 3 – 30 ft. max. draft (9.14 m.)
Wharf Zone – 16 ft. draft (4.88 m.)
Berth No. 4 – 30 ft. max. draft (9.14 m.)
Berth No. 5 – 30 ft. max. draft (9.14 m.)
Berth No. 6 – 31 ft. max. draft (9.45 m.)
Berth No. 7 – 33 ft. max. draft (10.06 m.)

La Chimba Cove: Situated about 5 miles North of Antofagasta. The port entrance is 2 cables wide. Max. length 150 m. Draft 27 ft. Vessels use both anchors, and moor to 2 stern buoys on each quarter. Ship's head 345°T. A further line is sent from the port bow to the shore.
TUGS: 2 tugs available.
BERTHING: Inner Dock measures 4.5 cables long North to South and 2.5 cables wide at entrance.
Depths: Berth Nos. 1 – 5, 10 m.; Berth No. 6, 10.5 m.; Berth No. 7, 11 m.
CRANES: Berth Nos. 1, 2 and 3: 6×12 ton electric cranes, 4×5 ton electric cranes.

Berth Nos. 4 and 5: 4×5 ton electric cranes.

1×40 ton steam crane for heavy lifts.
TANKERS: Buoy moorings for tankers, owned by Standard Oil, Shell, Codelco, and Copec.

All terminals operate 24 hours. Tankers can use steel wires. Mooring buoys are fitted with quick release hooks, difficulties may arise with underpowered mooring launches.
Standard Oil Mooring: Max. length 170 m. Max. draft 28 ft. Flexible hoses. One 10 in. line for products. One 12 in. line for fuel oil.
Copec Buoy: Max. length 180 m. Max. draft 30 ft. fwd., 34 ft. aft. 10 in. lines for fuel oil and clean products. Max. pressure 150 p.s.i.
Codelco Buoy: Max. length 200 m. Max. draft 40 ft. Flexible hose of 8 in. for products and lub oils. Vessel berths using both anchors forward and lines to 3 mooring buoys astern. Hoses lifted midships on port side. No slop disposal facilities.
La Chimba Cove: A 6 in. hose is brought on board on the starboard side. Discharge rate 180 cu.m./hr. 250 p.s.i.
STEVEDORES: Available through the Agents working 24 hours a day in 3 shifts, from 0800–1530 hrs., 1530–2300 hrs. and from 2300–0630 hrs.
MEDICAL: A first class hospital is available with 690 beds and all necessary elements and services. Also a sanatorium (rest home).

RADIO:

Also see "General" before first port.
FRESH WATER: Port has 42 standpipes of 2.5 in. situated at the various moles. Delivery is at the rate of about 10 t.p.h.

Fresh water can also be obtained in small quantities from tugboats for vessels anchored out of port and moored to buoys.
FUEL: Coal: in case of necessity can be obtained in limited quantities. Fuel and diesel oil supplied by Standard Oil, Shell Mex and Copec from petroleum terminals. For quantities less than 70 tons diesel oil can also be supplied from tank cars on the mole. Also see "General" before first port.
GANGWAY/DECK WATCHMEN: Shore watchman.
OPENING/CLOSING HATCHES: By riggers.
IDENTIFICATION CARDS: Required.

REPAIRS: There is one shipyard for repair of small craft, also several workshops, and foundries.
REPATRIATION: Facilities available.
AIRPORT: The Cerro Moreno airport, located 28 km. North of Antofagasta is available for all types of commercial aircraft. There is also another landing field in La Chimba, 11 km. North of the city.
TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before the first port for dates of local changes in time.
HOLIDAYS: See "General" before first port.
BANKS: Several banks, among them:

Banco Central de Chile, 2688 San Martin St., Tel: 221594.
Banco de Credito E Inversiones, 2683 Washington St., Tel: 225054.
Banco del Estado de Chile, 2578 San Martin St., Tel: 221617.
Banco do Brasil S.A., 461 Prat St., Tel: 223767.
Banco Espanol Chile, 2600 San Martin St., Tel: 222537.

EMERGENCY CO-ORDINATION CENTRE: Servicio Radio Costera, Tel: 223978.
STORING: Trucks and railway carriages can proceed alongside.

Fork lift trucks and other storing machines can be used to handle stores.
SHORE LEAVE: Allowed.
REGULATIONS: Inflammable explosives over 100 tons must be discharged in Mejillones. An Antofagasta Pilot goes to Mejillones by land, in order to take ships to be anchored.
GENERAL: Antofagasta is a transit port for Bolivia, Argentina and Paraguay cargo. It is one of the ports operated by Empresa Portuaria de Chile.
AUTHORITY: Empresa Portuaria de Chile, Avenida Grecia S/N°, Casilla 190, Antofagasta. *Tel:* 251737 and 223171. *Telex:* 25232 Empor Cl. *Contact:* James Brown Rojas, Port Manager.

ARICA: 18.28 S. 70.20 W. (See Plan)

PORT LIMITS: Ships are considered "arrived vessels" the moment they drop anchor within the safe anchorage zone indicated on the chart, or at the pilot station.
DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory. Ships approaching port should fly international signal flag "G" to request Pilot. Pilot boat is small craft painted white, with "P" or "H" flag on the mast. Pilot boards incoming vessels at pilot station, located 3 cables and 165° from red light at end of breakwater. If more than one ship awaiting Pilot, vessels are requested to hoist, below the flag "G", a numeral, indicating order of arrival, especially if arrived overnight. Vessels waiting to be docked can anchor in Road at pilot station in 10 fathoms of water. Pilot station maintains a VHF watch.

Reception and docking of vessels is done 24 hours a day, but buoy mooring to fuel terminals takes place during daylight hours only.
ANCHORAGE: Safe anchorage for vessels arriving after sunset can be found in a line bearing 194° Faro Isle Alecran distance 7 cables in depths varying from 9 to 10 fathoms.
RESTRICTIONS: There are no restrictions. If the weather permits it, ships can be docked and undocked at any time.
MAX. SIZE: Five berths available within port area. They are numbered from East to West.

Berth	*Vessel Max. Length* (m.)	*Vessel Max. Draft* (ft.)
Berth No. 1	114	13†
Berth No. 2	200	16/20‡
Berth No. 3	200	26/30
Berth No. 4	170	32.5
Berth No. 5	170	34
Berth No. 6	170	34

†Not suitable for larger vessels.
‡Restricted by draft.

REPAIRS: 2 shipyards to repair tugs and lighters only.
REPATRIATION: Facilities exist.
AIRPORT: The airport is located 2 km. North of Chanaral.
TIME: Local time is GMT minus 4 hours. Also see "General" before first port.
SHORE LEAVE: Allowed.
DELAYS: There is frequent surf during June and August, sometimes interrupting traffic and cargo operations in the bay for a short time. Surf generally comes from the N.W. or the West. Fogs are frequent between April and August, but sometimes they are quite heavy during other months of year.
AUTHORITY: Empresa Portuaria de Chile.

COQUIMBO: 29.57 S. 71.21 W. (See Plan)

DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory for vessels mooring to quay. Pilot boards day and night in position bearing 101° and 1,215 m. from Point Tortuga Lighthouse, between Lat. 29° 55′ 38.5″ S., Long. 71° 19′ 56″ W. and Lat. 29° 56′ 10″ S., Long. 71° 20′ 34″ W.
ANCHORAGES: Vessels lie in roads until ready to tie up to quay. Bay has good anchorage with a sandy bottom and depths varying from 15 m. – 10 m. A forbidden zone is indicated on charts.

Vessels frequently have to anchor first before mooring to the quay as this only has capacity for 2 vessels at a time.

Waiting zone between Lat. 29° 55′ 38″ S., Long. 71° 19′ 56″ W., and Lat. 29° 56′ 10″ S., Long. 71° 20′ 34″ W.
MAX. SIZE: 378 m. long and 32.8 ft. draft.
RADIO:

Station Call Sign	*Category*	*Frequency*	*Type*	*Receives*	*Transmits*	*Schedule*
Coquimbo	(S)	4 MHz	A 3	4091.6	4396.6	H00-30
CBC-2				6265.5		
		6 MHz	A 1	6280	6505.5	H30-60

TUGS: No tugs available, only motor launches to assist the Pilot and for passing mooring lines.
BERTHING: *Mooring Mole:* 378 m. long, for 2 vessels of 180 m. each with draft of 32.8 ft. Berth No. 1 is on the South side and No. 2 on the North. Can be used at all times except during stormy weather, or when heavy swell is experienced.
Passenger Mole: To the South of mooring mole.
Cranes: 6 rail mounted quay cranes of 5 ton capacity.
Warehouses: 5,000 sq.m. of covered warehousing, of which 2,500 sq.m. for storage of minerals.
STEVEDORES: *Loading/Unloading Rates:* Loading – Barium Sulphate 60 – 80 t.p.h. Unloading – Wheat 80 – 90 t.p.h. Loading – Fish meal 35 t.p.h.

Working hours are 0800 – 1530 hrs., 1530 – 2300 hrs. and 2300 – 0630 hrs.
MEDICAL: Hospital at Coquimbo and La Serena.
FRESH WATER: Can be obtained in limited quantity at quay at rate of 25 t.p.h. Quality is good.
FUEL: Coal can be obtained in limited quantity. Diesel oil and gasoline can be obtained at the quay from truck or railcar.
GANGWAY/DECK WATCHMEN: Available.
OPENING/CLOSING HATCHES: Done by stevedores.
IDENTIFICATION CARDS: Required.
CONSULS:
Denmark (Vice-Consul)
Liberia
Panama
Peru
Spain
United Kingdom
REPAIRS: No shipyards. There is a private workshop for minor repairs.
REPATRIATION: Facilities exist.
AIRPORT: 7 km. to the East of La Serena and 30 km. from the Port of Coquimbo.
TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before the first port for dates of local time changes.
SHORE LEAVE: Allowed.
AUTHORITY: Empresa Portuaria de Chile, Casilla 133-V, Valparaiso, Chile. *Tel:* 55749, 57167. *Telex:* 30313 CL. *Cables:* Emporchi. *Contact:* Vice-Admiral Joroe Baeza, Director.

Empresa Portuaria de Chile, Administracion del Puerto, Cas 10-D, Melgarejo 676, Coquimbo. *Tel:* 311365, 311852. *Telex:* 20005. *Contact:* Domingo Ormazabal Gonzalez, Port Administrator.

CORONEL: 37.02 S. 73.10 W.

PILOTAGE: Compulsory. The Pilot should be requested at Talcahuano. Pilot boards vessels in front of Punta Pochoco.
BERTHING: *Mechanical Pier:* Length 120 m., draft 24 ft.
There are 5 mooring buoys, and the vessel berths starboard side alongside. Ship's head bearing 180°. Both anchors are used to the final shackle. Loading rate 200 t.p.h. Vessels will be required to shift so that each hatch is under the loading arm.

Max. size 120 m. Draft 24 ft. However, it should be noted that there is only 18 ft. of water near the stern buoy. The berth is exposed to Northwesterly winds and vessels should be ready to sail at short notice.
FRESH WATER: Available at a rate of 20 tons per day.
FUEL: Not available.
MEDICAL: Doctors and hospital available.
CONSULS: At Concepcion.
TIME: Local time GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before the first port for dates of local time changes.

EASTER ISLAND: 27.08 S. 109.22 W. (See Plan)

DOCUMENTS: *Navy Port Authority:*
Last Port Clearance.
Ship's Certificates.
1 Crew List.
1 Passenger List.
1 Complete Copy of each Manifest for goods to be discharged locally.
Immigration:
2 Crew Lists.
2 Passenger Lists.
Passport and Visas are required for all foreigners.
Customs:
1 Crew Declaration List.
1 Ship's Store List.
Health/Animal and Vegetable Lists.
Complete Declaration of Health.
International Vaccination Certificates.
PILOTAGE: Vessels approaching to anchor do not require pilotage but small boats and launches services to the shore will require assistance of local natives.
ANCHORAGE: The best anchorage is at Hanga Roa Bay (27° 08′ S., 109° 26′ W.) in good sea conditions. Vessels should anchor outside the 30 m. (98.4 ft.) line. Anchorages in general are poor and vessels should be prepared to sail at any time with the onset of bad weather. Other recommended anchorages are:

Vinapu	27° 10′ S.,	109° 24′ W.
La Perouse	27° 04′ S.,	109° 17′ W.
Anakena	27° 04′ S.,	109° 19′ W.

HEALTH: Pratique procedure and action neccessary to obtain Pratique can be arranged through Port Agent.
RADIO: Navy Radio Station, call sign is 'CBY'. Calling on 500 kHz. Other safety radio calling through 2,182 kHz. Further communications on 2,738 kHz or 4,125 kHz.
VHF: Navy Radio Station and Port Captain Authority. VHF service facilities through Channel 16 and for further communications use Channel 8.
CRANES: Shore-Crane available, Bucyrus-Erie Type SP360 with lifting capacity of 17 tonnes. Fork lift truck of 4 tonnes capacity.
MEDICAL: Hospital and dental services are available.
DENSITY: 1025.
FRESH WATER: Potable water is available only on shore. But in extreme emergency can be delivered from land to ship at Vinapu Fuel Terminal. Loading line 2 in. Rate approx. 20 t.p.h. Contact Port Agent.
FUEL: Local Products Availability: Diesel Oil 2-D; 93 Octane Gasoline; Kero Jet AJ-1; Domestic Kerosene. Delivered through pipe-line at Vinapu Fuel Terminal. Discharge 8 in. connecting valve ASTM – A350 6 in. 150 pounds. Contact Port Agent.
CERTIFICATES:
Construction Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Load Line Certificate.
REPAIRS: All minor repairs (Carpenter, mechanical and electrical). Other repairs to be carried out will need early advice.
SURVEYORS: Asociacion de Aseguradores de Chile (AACH). Agent Mr. Gerardo Velasco G-H. Tel. 212, 227.
CUSTOMS ALLOWANCES: Tobacco, wine, spirits, personal video/photography equipment.
REPATRIATION: Crew change and repatriation are possible. Contact Port Agent.
AIRPORT: Mataveri Airport is 1 mile from Hanga Roa Bay LAN-Chile Airline flights connect Easter Island to mainland (Chile) and Tahiti once a week.
TIME: Summertime: From the second Saturday of October to the second Saturday of March, GMT minus 5 hours.

Wintertime: From the second Saturday of March to the second Saturday of October, GMT minus 6 hours.
HOLIDAYS: New Year's Day; Easter Days; May 21st, Navy Day; September 18th-19th, National Festivities; Christmas Day.
POLICE/AMBULANCE/FIRE Police, Tel. 219; Ambulance, Tel. 215, 217; Fire, Tel. 264.
EMERGENCY CO-ORDINATION CENTRE: Navy Station or Port Captain Authority Tel. 222
BANKS: Banco del Estado de Chile. Tel. 221
SHIP SUPPLY SERVICE:
(a) Vaihu Ltd. Tel: 325, 239, 220.
(b) Blanco Ltda.
SHORE LEAVE: No restrictions after ship's reception by the authorities.
IDENTIFICATION CARDS: Shore passes or seaman's book is sufficient.
REGULATIONS: Fruits and vegetables (from abroad) transfer to shore are prohibited.
AUTHORITY: Capitania de Porto, Policarpo Toro s/n Isla de Pascua (Easter Island), Chile. *Tel:* 222 *Contact:* Francisco Santana Gomez, Port Captain.

GUAYACAN: 29.58 S. 71.22 W. (See Plan)

DOCUMENTS: See "General" before first port.

APPROACHES: The entrance to the bay between Point Miedo and Point Herradura is 800 yards wide and its depth varies between 42 m. and 65 m.

Since Herradura de Guayacan Bay is a fishing zone, caution must be observed in navigation. Trawlers and hand propelled craft are used.

Currents from the South and S.W. tend to set the vessel to the N.N.E. when entering the bay. There is a light at the entrance to Herradura de Guayacan Bay on Point Herradura.

Vessels should approach the port at reduced speed on course 140° heading on leading line C. When the vessel reaches leading line C, it turns to the port in order to be placed on leading line B, which indicates course 112° in approach to anchorage. Heading on this leading line and once the vessel is located on leading line of Beacon D1 and D2, the starboard anchor will be dropped, leaving as many as 6 shackles in the water. With the help of the engine and rudder the vessel is turned until located parallel to the pier, then it is docked with the mooring lines previously secured to the buoys and pier.

Leading lines D1 and D2 are used for vessels of 300 m. length and leading lines D1 and D3 are for vessels with 250 m. length.

PILOTAGE: Compulsory. Under no circumstances can the pilot's launch exceed the limits of the port. It is imperative that the ETA of the vessel be as exact as possible.

ANCHORAGES: Vessels that are waiting to moor at the Mechanised Quay of Guayacan will anchor in Coquimbo Bay, where the Pilot will embark to guide the vessel to Herradura de Guayacan Bay once the berth is free.

MAX. SIZE: LOA – 315 m., beam – 50 m. Max. draft – 16.2 m.

RADIO: Operators' cable address is CMP, La Serena, Chile, and all messages having their origin in North America should be routed via All America Cables, and in the rest of the world, via Cable and Wireless Limited. Ship's radio messages should be routed via I.T.T. by radio.

Vessels should advise ETA 7 days, 96 hours, 48 hours and 24 hours out by radio. Also advise Agent. Also see "General" before first port.

BERTHING: The ore pier, of steel construction with a concrete deck, is 700 ft. long and located at the N.E. part of the bay. A total of 10 mooring bitts are available on the main pier, with 2 each on mooring dolphins to the South and North of the pier. Two twin mooring buoys, 1 North and 1 South, a distance of 350 ft. and 410 ft. from each dolphin and slightly inshore of the pier, are also available. A twin buoy to assist in docking and undocking is located 460 ft. to the West of the North end of the pier. Depth of water at the pier is 55 ft. at MLW. Max. draft 16.2 m.

MOORING: Vessels dock port side to the pier. On approaching the pier, the starboard anchor is dropped at a position indicated by cross bearing on markers located on the shore to the N.E. and at the South end of the pier and the shore. Lights are located on the markers for night docking. 9 shackles of cable are laid.

Two motor launches assist in rope handling to the pier and buoys. Sufficient deck crew must be available at all times to shift the vessel if required and to adjust moorings during loading.

Engines must be available at short notice. Permission for any major repair to the engines at the dock must be obtained from Maritime Authorities.

LOADING: In the case of combination ore carrier/tanker type of vessel, the Master must present a gas-free certificate before notice of readiness will be accepted. Such certificate may be obtained from a Coquimbo firm and request for same should be included in the 96 hours ETA message, reporting if there is or there is no tank gas detecting instrument on board.

The loading boom extends 51 ft. from the face of the pier and can be retracted 22 ft. It may be raised or lowered 18° from the horizontal when loading.

The tower is mobile with a run of 390 ft. Clear height (above HWL) is 18.0 m. Vessels may have to be shifted. Aft hatches should be loaded first, when possible, to facilitate efficient loading. When not loading the rig is parked at the centre of the pier with the boom in a vertical position inside the pier face. In the horizontal loading position the boom is 40 ft. from the water at LWL and vessels should be ballasted to ensure hatch coamings and other fixed structure at the hatches have a height less than 40 ft. above water at LWL. Booms and other tackle should be cleared from all hatches.

Rated loading capacity is 3,000 t.p.h.

Emergency stops only are permitted on the conveyor system. Vessels on which cargo reaches coamings should note that 390 tons are on the belts between the stockpiles and the ship and this must be cleared before stopping the system.

Cargo is belt trimmed only. Hire of trimmers, if required, is for vessel's account.

On completion of loading, the vessel shall leave the pier. Delays of port operations including delays of other vessels awaiting berth, caused by a vessel which for any reason is not prepared and able to move from the pier when so ordered, are chargeable to the vessel which causes such delays, at the rate of $4,000 per day or at the demurrage rate of any other vessel that may be delayed – whichever is higher.

BALLAST: Vessels should be ballasted to meet the loading tower information given and to ensure safe handling. Wind condition can make docking of light vessels difficult. Ballast may be discharged at the pier while loading. Upper wing tanks emptied by gravity should have covers fitted over discharges. Vessels are liable to fines by Maritime Authority for any oil or other contaminate discharged in the bay either from tanks or from pumping bilges.

MEDICAL: Medical attention may be arranged through the vessel's Agent. No person will be attended unless he is provided with a letter from the Master authorising such treatment.

FRESH WATER/FUEL: Fresh water and fuel are not available at this port, although water and diesel fuel may be obtained in nearby Coquimbo, or at Salinas, near Valparaiso. Bunker "C" type fuel can be obtained at Salinas also.

REPAIRS: Only in cases of extreme emergency can limited ship repairs be effected at this port.

CONSULS: Consulates of Liberia, Panama, Peru, Spain and United Kingdom and Vice-Consul of Denmark are in Coquimbo or the adjacent city of La Serena.

TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before first port for dates of local time changes.

HOLIDAYS: If advance ETA is received, ships will generally be received every day with the following exceptions: 1st January; Good Friday; 1st May; 18th September; 25th December. Also see "General" before first port.

SHORE LEAVE: Shore leave may be granted at the Master's discretion. There are no restrictions by local authorities, but crew should be certain to carry their identification cards (shore pass).

SERVICES: Mail for vessel and crew should be addressed care of ship's Agent at Coquimbo, all mail that is received for holding by the Agent will be delivered to the vessel upon arrival.

Do not have parcel post packages sent, as they must go through Customs in Santiago and are delayed from 2 weeks to a month for their despatch.

Spare or repair parts for the vessel should be sent via air express, addressed to the ship, care of ship's agent at Coquimbo, Chile and marked "Ship's Stores in transit", so as to avoid paying Customs duties. Information regarding the shipment should be sent to the Company via air mail correspondence.

A limited supply of provisions is available, but requests should be sent by radio 48 hours prior to arrival.

AUTHORITY: Compania Minera del Pacifico, S.A.

HUASCO: 28.27 S. 71.14 W. (See Plan)

DOCUMENTS:

1 Clearance.
12 Cargo Manifests, or 2 No Cargo Manifests.
6 Passenger Lists, or 1 No Passenger List.
7 Crew Lists.
4 Stores Lists.
3 Crew Personal Effects.
2 Stowage Plans.
2 Per Passenger Baggage Declarations.
1 Health Certificate.

PILOTAGE: Compulsory for vessels mooring at Santa Barbara, Guacolda and Guacolda II mechanised quays. Vessels awaiting Pilot and/or clearance can anchor in position bearing 090° and 1,200 m. from Guacolda Lighthouse, within a circle of 2 cables radius, in 60 m. depth.

ANCHORAGES: Vessels can anchor at N.N.E. of Cayo Isle distance 3 cables in 24 m. – 26 m. depth; small vessels bearing 090° distance 2 cables from Cayo Isle in 12 m. depth of water, sandy bottom.

Depth is generally moderate and level with a sand and shell bottom, while at the maritime terminals of Santa Barbara and Guacolda is quite deep, around 50 m., which has to be taken into account when anchoring. The bottom at these terminals is mud, offering a good holding ground. Pilot compulsory for anchoring in the Bay.

MAX. SIZE: See "Berthing".

RADIO:

Station call sign	*Category*	*Frequency*	*Type*	*Receives*	*Transmits*	*Schedule*
Huasco CBH-3	(T)	2 MHz	A 3	2182	2182	H30-60

VHF: Vessels must call pilot station 2 hours before arrival.

TUGS: No tugs available. At Huasco there are 4 motor launches for use of Pilot.

BERTHING: There are 3 cargo terminals in service: Guacolda I, Guacolda II and Santa Barbara, property of Compania Minera del Pacifico S.A.. The particulars of these installations are:

	Santa Barbara	*Guacolda I*	*Guacolda II*
Max. d.w.t.	—	—	200,000
Max. LOA	290 m.	260 m.	314 m.
Max. Draft	49 ft.	44.3 ft.	23.0 m.
Max. Beam	—	30.0 m.	47.5 m.
Air Draft (HW)	42 ft. 6 in.	42 ft.	22.8 m.
Loading Rate (Average)	2,000-2,500 t.p.h.	2,500 t.p.h.	5,000 t.p.h.
Max. Loading Rate	3,600 t.p.h.	—	6,000 t.p.h.
Loading Arm Reach	30.5 m.	—	42.0 m.

Tidal Range: 3.5 ft. Springs, 2.7 ft. Neaps.

Santa Barbara Terminal: Used exclusively for loading iron ore. No dock to berth only 1 loading tower protected by dolphins (Duque de Alba). Ships berth without tugs to 7 buoys using the starboard anchor. Vessel has to be shifted to receive cargo in all the hatches. Transit through the installations is not allowed, and taxi boat service is provided to go ashore to Huasco wharf.

Guacolda I Terminal: Normally used to load iron ore. Length 183 m. However it is intended in future to use the berth to discharge oil or coal for internal company use. The loader has a 100 m. run. If it is necessary to shift the vessel, this must be done by crew members, as shore gangs are not available.

Guacolda II Terminal: Only Iron Ore pellets loaded – at the present time ship's crew required to shift vessel.

STEVEDORES: There are 50 stevedores for up to 4 gangs. In addition there are 20 longshoremen and 14 lightermen. Working hours are 0700 – 1200 hrs., 1400 – 2100 hrs.

MEDICAL: Hospital at Huasco, also 2 doctors and dentists.

TANKERS: Berth at No. 1 Guacolda. Max. LOA 272 m., max. draft 13.5 m.
FRESH WATER: Not available.
FUEL: None available.
OPENING/CLOSING HATCHES: By stevedores in general cargo ships.
IDENTIFICATION CARDS: Not required.
CONSULS: Norway – Honorary Vice-Consul.
REPAIRS: Only for the repair of minor craft.
AIRPORT: Nearest commercial airport is at Vallenar, 52 km. away.
TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before first port for dates of local time changes.
TELEPHONES: Local and outward service.
GENERAL: Zone for ballast: it is prohibited to deballast in port except clean water from deep tanks. For any other kind of ballast authorisation should be requested first from the maritime authority who will indicate the appropriate place.
SHORE LEAVE: Allowed.

SHIPMASTER'S REPORT: September 1986.
Communications: Initial cables were sent via Portishead Radio but when in range Valparaiso Radio was used. There is no shore station at Huasco. On approach to the port contact was made by VHF on Channels 16 and 14.
Approaches: As per "Sailing Directions". The pilot boarding area is in position 090° – 1,200 m. from Guacolda light.

Pilot ladder to be rigged on the port side. As this vessel is over 200 m. 2 Pilots were used.
Berthing/Berth – Guacolda II: Off the berth the starboard anchor is let go to 8 shackles on deck and then held. The vessel is then manoeuvred in towards the loading dolphins, checked with the anchor and laid parallel to the loading arm dolphins about 8.0 m. off. When close enough lines are run to the buoys forward and aft. These together with the anchor hold the vessel in position off the dolphins. When moored the vessel is made fast to 3 buoys fore and aft. 1 buoy ahead and 2 to the landward, 1 buoy astern and 1 seaward and 1 landward. 2 lines are made fast to each buoy.

Berthing took just over an hour from the time the Pilots boarded till all fast.

Pilots advise that there is about 22m. of water at the berth.
Arrival Formalities:

Pratique: Radio Pratique was requested by radio via the Agents but this was not given as the necessary formalities are carried out on berthing. The standard Maritime Declaration of Health is required.

Agriculture Inspection: The galley, refrigerators and provision store rooms are inspected. No fruit or vegetables are to be landed from the vessel.

Customs: 3 copies of Crew Personal Effects were made up and completed prior to arrival and found acceptable. Only the bonded stores (Spirits, tobacco and cigarettes) were sealed.

Immigration: Shore passes for all personnel are required and these MUST be collected and returned prior to sailing. No restrictions on shore leave and no curfew. A launch service to Huasco (15 minutes away) is available.
Arrival Documents:
1 Maritime Declaration of Health.
3 Crew Personal Effects Lists.
8 Crew Lists.
4 Stores Lists (Deck and Engine).
4 Stores Lists (Provisions).
1 'Nil' Passenger List.
2 'Nil' Cargo Manifests.

Register, Derat, etc., required to be sighted.
Loading: The loading of the iron ore pellets commenced once Pratique had been granted and was, with the exception of shifts and shore breakdowns, continuous. The nett loading time was 44 hours and this gave an average loading rate of 2,679 tonnes/p.h.

Shifting ship was necessary to reach the end holds and was carried out by ship's personnel. Rigging gangs are available to assist in shifting and they remain onboard throughout. Before arrival the Agents had inquired if these gangs were required but I advised that the ship's personnel would carry out the shifts. No difficulties were experienced shifting but long lines to the buoys ahead and astern are essential.

As the vessel is kept off the dolphins at all times there is no access to the shore except by launch which is kept alongside for draft checks. As the shore weigh-bridge is not reliable all tonnages are by drafts. The after accommodation ladder is used for access to the vessel.

The final Bill of Lading figure is by draft survey – carried out by ship's personnel.
Departure: Final documentation is completed onboard and takes about an hour after completion of loading with the Port Captain boarding to give a clearance.

All passes are checked and the Master signs a Declaration to the effect that all personnel are onboard.

The Pilot disembarks as soon as the vessel clears the moorings using the accommodation ladder.
General: Provisions/Supplies: No fresh water or fuels available but fresh provisions in season can be supplied and appear to be of reasonable quality and price – £0.45 for a kilo of tomatoes and £8.28 for a case of oranges for example.

Postage: Mail from the UK took about 7 days to reach Huasco. Deliveries are made at noon.

Telephone: Available from the Agent's office. Local line to Vallenar then International.

Repairs: Main Engine maintenance can be carried out but the vessel must be ready for sea within 3 hours at any time. A formal request is required should immobilisation be required.

Tugs: There are no tugs. 3 mooring boats are used and are in contact with the vessel by VHF.

Shore Contact: The loading foreman keeps in contact with his office every 3 hours using the ship's VHF.

ADD SMR. - MARCH '88

AUTHORITY: Armada de Chile, Direccion General, Territorio Maritimo y M.M., Capitania de Puerto, Huasco, Chile. *Contact:* Port Captain.

IQUIQUE (including Patillos Cove):
20.12 S. 70.09 W. **(See Plan)**

PORT LIMITS: The interior area included between a line joining the Serrano Island and Mole lights and another line running 290° (True) to the North buoy of the Esso tanker anchorage.
DOCUMENTS:
For vessels coming from foreign countries:
Clearance from last foreign port.
Crew list.
Passenger list.
Manifest of hazardous cargo (when applicable).
Insurance policy against contamination (for tankers).
International Maritime Health Declaration.
Derat certificate.
Tonnage certificate.
Radio-telegraphy safety certificate.
Certificate of equipment.
Lighthouses and buoys certificate.
Freeboard certificate.
Construction Certificate.
For vessels coming from another Chilean port:
Clearance from last port.
Crew list.
List of passengers.
Manifest of hazardous cargo (when applicable).
PILOTAGE: Compulsory. During the day the pilot cutter displays the "H" flag of the international code, and at night the lights prescribed by the International Regulations. Pilot boards 5 cables North of the head of the breakwater. Berthing and unberthing takes place 24 hours a day. Telegraphic address for the Pilots is "Maritgob Iquique 7", it being necessary to give prior notice of requirement 72, 48, 24 and 12 hours ahead of arrival.

Channel for calling the Pilot is VHF Channel 16 and working is on Channel 6. The launch used by the Pilots is white, and approx. 27 ft. overall length, the Pilot coming out beyond the port limits to board the vessel.
ANCHORAGES: Access to the bay is rendered difficult by the continuous traffic of fishing vessels, which limits the manoeuvring area and makes vigilance very necessary. The bay contains a spacious and suitable anchorage with varying depths from 40 m. to 14 m. with sandy bottom, the depth descending gradually from the entrance towards the East. Vessels which are going to stay for a short period of time and which are not going alongside the moles, are safe with a single anchor and necessary chain, according to the point where they moor.

Vessels which moor at the tanker buoys, either Copec or Esso, must remain with bow heading 270° and anchored with 2 anchors. This is convenient so as to remain with the bow pointing out to sea and not to cause the hoses to work. There are 2 submarine cable zones where only vessels of the Chilean Navy may moor. This is defined by a line joining the head of the Naval Quay (ex Alimar North) to the light of the extreme breakwater (291°) and the demarcation 000° determined by a radius of 460 m. from the centre of the quay head.
RESTRICTIONS: Mist occurs with greater frequency from December to March, and is generally slight and low which produces a danger when making a landfall. The general direction of the current is from South to North at a rate of 0.5 to 3 knots. This current is strong at Punta Gruesa, Cavancha and Punta Piedras. Fierce winds frequently occur from May to September but their action is very much less within the area protected by the breakwater.
MAX. SIZE: The berthing areas with their specifications are as follows:

Berths 1 and 2, with a total length of 270 m. and an average depth of 29 ft. The West side quay comprises Berths 4 and 5 with a length of 335 m. and an average depth of 29 ft.

The East side quay comprises Berths 6 and 7 with a length of 280 m. with an average depth of 29 ft. (working with the tide a draft of 31 ft. is allowed).

No. 3 Berth is used by the fishing industry.
PRATIQUE: On arrival in port vessel will be received by the Health Authority, and if everything is in order, by the Maritime Authority and Customs. It will then be granted "free pratique". In the event of illness or fever on board, contact must be made with the local Agent who will inform the medical authorities.
RADIO: The best way for the vessel to pass ETA messages, both to Agents and to the Maritime Authority, is to "Maritgob Iquique" via Antofagasta Radio: CBA-3 and Antofagasta Naval Radio: CBA.
VHF: In the Iquique Maritime Control there is VHF equipment to facilitate communications between vessel and Pilot, the procedure used being to call up on Channel 16. The Pilot and tug use walkie talkies which have Channel 16 and 6.
TUGS: 1×720 h.p. and 1×1,200 h.p. Both tugs owned by S.A.A.M. (private company).
BERTHING: Inside the breakwater are Berth Nos. 1, 2 and 3, Berth No. 3 is permanently occupied by deep sea fishing vessels. On the mooring pier on the West side are Berth Nos. 4 and 5, and on the East side, Berth Nos. 6 and 7. When there is a swell, it is not recommended to berth at Berth Nos. 4 and 5 as mooring ropes may be parted. Maximum drafts for mooring are: Berth Nos. 1, 2 and 6: 30 ft.; Berth Nos. 4, 5 and 7: 29 ft. Loading and unloading is by ship's derricks.
Length of Berths
Berth Nos. 1 and 2 – 270 m.
Berth Nos. 4 and 5 – total length 300 m.
Berth Nos. 6 and 7 – total length 270 m.
Patillos Cove: The port is used for the bulk shipment of salt. It is located 33 miles South of Iquique. Pilot boards to the North of Punta Patillos Lighthouse and 6 cables off, weather permitting. Vessels berth to 5 buoys, but must move to present each hatch to the port loader. Max. size: length 250 m., draft 12.0 m. ALSO SEE S.M.R.
CRANES: Berths not equipped with cranes for discharging operations. There is one mobile container crane for 80 tons.

MEDICAL: In the event of any serious case or an emergency it is necessary to advise the Agent by telex, otherwise advice should be by Channel 16 VHF. In the district is a modern hospital with sufficient medical resources, and Crew members can be treated.

STEVEDORES: Gangs of stevedores, for ship and shore, must be requested prior to 1600 hrs., which means, in effect, the day prior to that when they are needed. They work continuously, in 3 shifts: 0800 – 1500 hrs., 1530 – 2230 hrs., 2300 – 0600 hrs.

TANKERS: The loading and discharging line is of metal and of 12 in. diameter, reducing at its connecting point to 8 in. There are no deballasting tanks in the port nor any for accepting oil residues. In front of El Colorado Beach, there are 2 groups of buoys with 3 buoys in each, intended for mooring tankers. The North group is for refined products, and the South group for crude oil. Maximum permitted draft is 32 ft.

FRESH WATER: This is brought from the mountain range by pipes for consumption by the town. It can be delivered to vessels moored at the pier in small quantities, and is of good quality.

FUEL: Diesel or boiler oil can be supplied to vessels on request, in any quantity, and for this purpose they must moor at the tanker buoys in front of El Colorado Beach. If quantity required is less than 300 tons, it may be taken at the pier by means of tanker trucks.

CONSULS:

Bolivia
Colombia
Denmark
Italy
Peru
Spain
Sweden
Yugoslavia

REPAIRS: Minor repairs can be effected at the Marco Shipyard.

SURVEYORS: Lloyds.

GANGWAY/DECK WATCHMEN: It is convenient for all vessels to have a gangway watchman, a second guard is required when hazardous cargo is carried.

OPENING/CLOSING HATCHES: Vessels must enter with their holds closed, and these will be opened by a special gang of seamen in the port who, furthermore, attend to all movements of derricks, cranes, and equipment, etc.

DRY DOCKS: There are 2 dry docks for vessels up to 500 tons.

CUSTOMS ALLOWANCES: It is permitted to have all that is required for normal consumption from the ship's store.

REPATRIATION: There are no problems in repatriating crew, either for exchange purposes or for holidays, who have to travel back to their country of origin.

AIRPORT: The airport of Chucumata is 30 minutes away by car, and there are connections by the National Airline and Ladeco (Linea Aerea del Cobre) with foreign airlines at the Airport in Santiago de Chile.

TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 during the Summer season. See "General" before the first port for dates of local time changes.

HOLIDAYS: 1st January (New Year's Day); 1st May (Labour Day); 21st May (Navy Day); 15th August (Assumption); 18th September (Independence); 19th September (Army Day); 12th October (Race Day) (Discovery of America); 1st November (All Saints); 8th December (Immaculate Conception); 25th December (Christmas).

There is also Holy Week which is a movable holiday between end March and middle of April.

POLICE/AMBULANCE/FIRE: Police, Tel. 23456; Ambulance Tel. 22370; Fire Brigade, Tel. 21212.

TELEPHONES: There is no facility for connection on board. Telephones on the quay less than 100 m. from the vessel.

SERVICES: It is possible to obtain gangs for tank and hold cleaning.

SHORE LEAVE: Permitted, no restrictions.

IDENTITY CARDS: Any crew member coming ashore is given an identity card by the International Police, card is returned when the vessel sails.

AUTHORITY: Empresa Portuaria de Chile, Casilla No. 407, Iquique. *Tel:* 22848. *Telex:* 223054 Empor CL. *Contact:* Francisco Alvares Rojas, Administrador del Puerto.

LIRQUEN: 36.42 S. 72.59 W. (See Plan)

DOCUMENTS: See "Talcahuano".

PILOTAGE: Pilot boards off end of pier.

TUGS: 1×1,300 h.p.

VHF: Facilities available.

BERTHING: Total length of pier 615 m.

Berth No.	*Length (m.)*	*Depth (ft.)*
1	250	41*
2	200	38.5
3	170	32.5
4	170	27.5

*This depth permits vessels to be handled up to 45,000 d.w.t. or greater

For Port Plan see "Port of Talcahuano".

CARGO HANDLING FACILITIES: *Open Storage Areas:* 50,000 sq.m. for storage, excluding the areas intended for traffic.

Warehouses: 8 warehouses covering an area of 27,000 sq.m.

Equipment: 38 stacker trucks with forks and/or grabs from 4,500 lbs. to 22,000 lbs. lifting capacity.

45 tractors

46 haulage trucks.

855 m. of conveyor belts for solid bulk cargoes (30 in. width) and with a capacity of 350–400 t.p.h.

15 mechanical shovels from 900 litres to 3,500 litres each.

5 front loaders (large) with shovels for bulk and/or forks for trunks of timber.

3 front loaders for work on board ship.

3 fertiliser bagging plants, with capacity of 2,500 tons per day of 24 hours.

Loading/Unloading Rates: With special vessels, the following loading and unloading rates per berth have been attained:

Cellulose: (loading) 5,400 tonnes in one shift of 8 hours and 13,430 tonnes in 3 shifts (24 hours total).

Trunks of timber: (loading) 10,380 cu.m. in 3 shifts (24 hours total).

Fertilisers: (Unloading) 7,550 tonnes in 3 shifts (24 hours total).

Types of cargo which are moved through the port: 33% trunks of timber; 30% cellulose, paper and Bristol board; 25% fertiliser; 7% sawn timber and 5% general cargo.

Apart from these cargoes, the port is able to move, where necessary, 100% of the metallic copper coming from the mines in the centre of the country, plus a significant percentage of the exports of fruit not requiring refrigeration facility in the port, and a large part of the imports of cereals which are currently discharged in the ports of the central area.

SERVICES: Fresh water, telephone and telex.

AUTHORITY: (Private Port) Puerto de Lirquen S.A., P.O.Box 173-D, Teatinos No. 220, Office No. 92, 9th Floor, Santiago de Chile, Chile. *Tel:* 716550, 716577, 726941. *Telex:* 240835 Pudel CL. *Cables:* Lirquenport. *Contact:* Jaime Lea-Plaza, General Manager.

Lirquen: Recinto Muelle S/No., Octava Region. *Tel:* 51037, 51257, 51030, 51098. *Telex:* 240650 Pudel CL. *Cables:* Lirquenport (Penco).

LOTA: 37.06 S. 73.10 W.

DOCUMENTS: See "General" before first port.

PILOTAGE: Service is carried out by the Pilot Corps of Talcahuano. This service is compulsory.

ANCHORAGE: N.W. of the Lutrin Light. The Pilot will board here.

MAX. SIZE: Length 160 m. Max. draft 27 ft. (8.2 m.).

BERTHING: Mechanical Pier: The pier is 277 m. long, 14.7 m. wide. This is a fully mechanised quay with a transportation system and a loading tower on its head, and is designed for coal handling at approx. 600 t.p.h. The outermost 140 m. of the pier is used for berthing with a max. draft of 8.2 m. at HW.

To prevent vessels striking against the pier, they secure to 3 mooring buoys available on their outboard side. There are wires which enable the vessel's stern to be secured to the shore.

FRESH WATER: Available.

FUEL: Not available.

CONSULS: At Talcahuano.

TIME: Local time is GMT minus 4 hours during the Winter season and GMT minus 3 hours during the Summer season. See "General" before first port, for dates of local time changes.

MEJILLONES: 23.06 S. 70.28 W.

DOCUMENTS:

Vessels directly from foreign ports:

3 Crew Lists.
3 Passenger Lists.
3 Stores Lists.
5 Import Cargo Manifests.
11 Manifests for cargo destined for Bolivia.

Vessels coming from another Chilean port:

1 Crew List.
1 List of Passengers.
1 Stores List.
5 Import Cargo Manifests.
13 Manifests for cargo destined for Bolivia.

PILOTAGE: Service carried out by the Pilot Corps of Antofagasta (65 km. from this port). Service is compulsory. Agent has to apply for the Pilot, and it is important to give arrival notice in good time.

ANCHORAGES: Open bay very well protected and with deep water.

MAX. SIZE: No restrictions. Vessels work cargo at anchor.

HEALTH: Pratique is automatic for vessels coming from another Chilean port, otherwise it will be granted after Sanitary visit.

RADIO: Antofagasta radio station CBA-3. Listens out between 0800 hrs. and 1200 hrs. and between 1400 hrs. and 1800 hrs.

Transmits 8,370 receives 8,354 Telegraphy H 00–30.
Transmits 4,396 receives 4,091 Speech H 30–45.
Transmits 8,780 receives 8,230 Speech H 45–60.

The station is active listening out every 2 hours, i.e. 0800, 1000, 1200, 1400, 1600 and 1800 hrs.

TUGS: There are none available locally but can be supplied from Antofagasta if needed.

BERTHING: There are no berths. Vessels work cargo at anchor.

Anaex or Proquim Terminal: 3 mooring buoys and a small platform for connection for ammonia discharge. Max. length 180 m. (15,000 d.w.t.). Flexible hose of 6 in., temperature – 32°C.

STEVEDORES: Agent to be informed before 1800 hrs. the day before arrival to order gangs.

MEDICAL: There is a doctor in the port but no hospitals are available and patients are transported to Antofagasta.

DENSITY: Sea water.

FRESH WATER: No fresh water available.

FUEL: Not available.

GANGWAY/DECK WATCHMEN: This service is recommended.

OPENING/CLOSING HATCHES: This work can be carried out by crew and/or stevedores. Derricks operated only by crew.

SHIP'S CERTIFICATES:
Register Certificate.
Tonnage Certificate.
Radio Certificate.
Safety Equipment Certificate.

CUSTOMS ALLOWANCES: 200 cigarettes for each member of the crew besides the ones in the stores. One bottle wine/spirits per person.

REPAIRS: There are no workshops. Vessel repairs done by the crew are allowed.

IDENTIFICATION CARDS: Not necessary, only passport and boarding card.

REPATRIATION: There are facilities for changing the crew.

AIRPORT: 25 km. from Mejillones is the airport Cerro Moreno. To travel to U.S.A. one must go via Santiago. There are daily flights from Antofagasta to Santiago, and from Santiago to U.S.A. with stops in various countries.

TIME: There are two official times:

Summertime: from the second Sunday in October to the second Saturday in March. Local time is GMT minus 3 hours.

Wintertime: from the second Saturday in March to the second Saturday in October. Local time is GMT minus 4 hours.

HOLIDAYS: It is possible to work on holidays with a surcharge of 100%. New Year's Day; Maunday Thursday; Good Friday; 1st May; 21st May; Ascension Day; 18th September; 19th September; 12th October; 1st November; 8th December; 25th December.

POLICE/AMBULANCE/FIRE: Police Tel: 7 Mejillones; Ambulance 222370 Antofagasta; Fire 41 Mejillones.

TELEPHONES: It is not possible to install lines on board.

SHORE LEAVE: Members of the crew are allowed ashore.

AUTHORITY: Captain of the Port.

PUERTO MONTT: 41.28 S. 72.57 W. (See Plan)

PORT LIMITS: Between the meridians of 72° 55′ 50″ W., 72° 59′ 00″ W. The Southern limit is the parallel of 41° 29′ 48″ S. in Reloncaui Bay.

DOCUMENTS: See "General" before first port.

PILOTAGE: Pilotage is compulsory. Foreign vessels entering port from the Pacific Ocean will usually embark Pilots in Valparaiso or in Ancud Pilot Station for navigation through the channels near Puerto Montt. The Harbour Pilot is requested by the Agent on reception of vessel's ETA, at least 24 hours in advance. Otherwise, a request should be made to the Port Captain, cable address "Maritgob Montt". While waiting for the Harbour Pilot, vessels should anchor as indicated below and exhibit code flag "G". Pilot boards from a motor boat at the anchorage. Pilot's boat is equipped with VHF.

APPROACHES: The approach to Puerto Montt is made through the Channels, the most important of which is Canal Chacao, which requires careful navigation due to the existence of rocks and shallow areas, as well as tidal currents that reach up to 8 knots. Any type of vessel may pass this channel without problems with a Pilot aboard.

ANCHORAGES: Vessels of any size can anchor in the Outer Roads of the port. The following positions with respect to the touristic pier near the principal square are recommended: (1) bearing 175°, distance 850 m. in 40 m. depth; (2) bearing 175°, distance 1,780 m. in 59 m. depth; (3) bearing 154°, distance 1,200 m. in 50 m. depth. In bad weather, it is recommended to have a second anchor ready to let go.

RESTRICTIONS: Authorisation for entering the port is considered in each particular case, depending on the type of mooring and vessel's draft and length, according to the tide. Tidal amplitude is 6.50 m. (21 ft. 3 in.).

MAX. SIZE: Max. length 172 m., max. draft 26 ft 6 in. LW. In these conditions, manoeuvring is affected by the tide and favourable weather.

HEALTH: All ships are boarded by Authorities on arrival unless coming from another Chilean port. In case of suspected disease on board vessel must advise Authorities by radio before arrival.

RADIO: Radio Maritima Puerto Montt, used for communications, working frequencies Channel 16 VHF, 2182 kHz and 500 kHz, 24 hours a day.

VHF: Marine Control operates VHF equipment between 0700 hrs. and 2400 hrs. on Channel 16.

TUGS: 1 small tug available, "Bores" 180 h.p., owned by Naviera Magallanes (NAVIMAG).

BERTHING: The Commercial Pier, owned by Empresa Portuaria de Chile, has a total length of 320 m. Berths available: No. 1: 200 m. long, depth 8 m.; No. 2: 120 m. long, depth 7.5 m., both at LW.

Ro/Ro Terminal: 200 m. to the West of the commercial pier is the Ro/Ro Terminal with 4 ramps for vessels up to 120 m. LOA, the max. draft 4 m. The commercial pier as well as the Ro/Ro Terminal operate during day and night, in good weather conditions and taking tidal effects into consideration.

CRANES: 4×3 tons and 1×8 tons capacity. Mobile crane of 23 tons at 3.5 m. outreach also available.

Equipment: 1 forklift, 1 tractor, 2 wagons, 4 grain scoops, 2 chutes and 50 pallets.

STEVEDORES: Vessel should advise Agent before arrival the number of gangs required by hatch, and amount of cargo for discharge.

Working hours are 0800 – 1530 hrs., 1530 – 2300 hrs. and 2300 – 0630 hrs.

Also see "General" before first port.

MEDICAL: All facilities available, vaccination, inoculation can be arranged. Prior notice should be given if urgent assistance required on arrival.

TANKERS: *Esso Chile S.A. Terminal:* Tankers moor at buoys in the Eastern part of the bay, in daylight hours only, for vessels up to 15,000 g.r.t.

Copec Chile Terminal: Out of service for the moment.

Vessels moor using both anchors forward and 2 buoys aft. 10 in. submarine pipe-line, 2×8 in. hoses connected. No slop facilities.

FRESH WATER: Available alongside Commercial Pier at 10 t.p.h.

FUEL: Only diesel oil available, supplied by trucks at Commercial Pier or Ro/Ro Terminal.

See "General" before first port.

OPENING/CLOSING HATCHES: It is obligatory to employ shore labour for this purpose.

CUSTOMS ALLOWANCES: Two cartons of cigarettes and 2 bottles of liquor for each man in his cabin, the rest to be declared with his personal effects.

CONSULS: Argentina, Germany, Spain, and Netherlands are represented locally.

REPAIRS: Minor engine repairs can be effected.

REPATRIATION: Can be arranged.

AIRPORT: Situated 17 km. from the port. Daily flights (75 minutes) to Santiago where international connections can be made.

TIME: GMT minus 4 hours. In Summertime: GMT minus 3 hours.

Also see "General" before first port.

HOLIDAYS: Work may be arranged on most holidays. Also see "General" before first port.

POLICE/FIRE/AMBULANCE: Police Tel: 2240. Fire Tel: 2222. Ambulance Tel: 3991.

TELEPHONES: No facilities for placing telephones on board.

TRANSPORTATION: There are de-luxe bus services, with daily departures, between Puerto Montt, Santiago, Valparaiso, and intermediate points.

SHORE LEAVE: Allowed.

DEVELOPMENTS: Outer berths have been dredged to a depth of 8.50 m.

AUTHORITY: Empresa Portuaria de Chile, Administration del Puerto, Puerto Montt, Chile. *Tel:* 2247. *Telex:* 270007 Empor Cl.
Contact: The Administrator.

Armada de Chile, Puerto Montt. *Contact:* Captain Ignacio Campos, Maritime Governor.

PUNTA ARENAS (including Lenadura, Cabo Negro, Clarence Cove, Port Percy, Gregorio): 53.10 S. 70.54 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory for foreign vessels. Vessel entering from the Pacific will usually embark Pilots in Valparaiso or any other nearest port. Vessels coming from the Atlantic embark Pilots in Bahia Possession, 30 miles to the West side of the Eastern entry of Magellan Strait. The Southernmost position to embark Pilots is Ancud or Laitec on Chiloe Island, where vessels navigating through the channels from East to West and not calling at Chilean ports can also disembark Pilots.

The landing craft "Crux Australis" and the 2 pilot boats "Ona" and "Yagan" keep a listening watch on 2,182 kHz. and Channel 16 VHF. All carry International Pilot Lights. ETA at Bahia Possession has to be given at least 24 hours in advance. In bad weather, vessel to anchor and wait at Lat. 52° 17.7′ S., Long. 69° 10.6′ W. For VLCC the position to anchor and wait is Lat. 52° 19.6′ S., Long. 69° 00.4′ W.

Two Pilots are necessary for any navigation, be it in the Magellan Strait and/or channels, but only 1 is required for vessels coming from the Atlantic Ocean and calling at Punta Arenas or any maritime terminal in the Magellan Strait only.

Navigation Assistance by Radar: From Punta Dungenes to Primera Angostura there are several petroleum platforms which often change their location. Some of them are near the navigation track and it is therefore required to consider wide berth. In order to facilitate navigation, there are radars in Dungenes and Delgada, which will help navigation in the area, at no cost, through Channel 16 VHF.

The Pilot for Westbound vessels travels to Bahia Possession by air from Valparaiso. It is therefore important to request the Pilot through the Valparaiso Agent with as much advance notice as possible, and keep the Agent advised on vessel's ETA.

Pilot's travelling expenses from and to Valparaiso are included in pilotage charges.

ANCHORAGES: Anchor Berths A – G are situated E. and S.E. of Muelle Prat. Anchorage is prohibited within 300 m. of the Fiscal Quay. Vessels should be ready to leave the anchorage on orders from the Port Captain, or in event of bad weather from the East.

RESTRICTIONS: No tidal restrictions, vessels can come alongside day or night.

MAX. SIZE: *Magellan Straits:* Max. draft 70 ft., no limit on d.w.t. tonnage for very large vessels. Vessels with a draft in excess of 70 ft. may be allowed to pass through but only after the authorities have studied the vessel's characteristics. As a safety measure, large vessels navigate the First Narrows in daylight only and with good visibility.

HEALTH: At first Chilean port, doctor will come aboard with Authorities. In other Chilean ports there is no need to ask for Pratique or to hoist the "Q" flag as Pratique is automatic.

RADIO: There are 2 radio stations: *(a)* CBM Radio Naval of Magallanes permanent watch on 500 kHz. Telegraphy (A1). *(b)* CBM2 Radio Costera Magallanes operating from 0830 to 1830 hrs. on frequencies 4390, 8694 (transmitting) and 4085, 8360 (receiving).

TUGS: Used to go alongside in Punta Arenas tanker terminals – ship's lines used.

BERTHING: A berth should be requested 24 hours before arrival. The pier is 372 m. long with 36 ft. depth at the seaward end, reducing to 28 ft. on both sides toward the land. Vessels berth bow in, and care must be taken to avoid the shallow patches on both sides of the jetty about 120 ft. off. Normally 4 headlines, 4 stern lines and 2 or 4 springs are used.

Berthing is usually at night or early morning as strong winds blow during the day, occasionally rising to Force 12 in the Summer. The port is often closed due to inclement weather.

Weather signals are shown at the North end of the pier.

Weather	*Signal Day*	*Signal Night*	*Meaning*
Variable	Black Ball	1 green light	Put out extra moorings
Bad weather	Flag M	1 red light	Put out extra moorings
Storm	Flag R	2 red lights	Port closed

Tankers: See below. No limits for vessels at anchor.

STEVEDORES: Gangs to be requested 24 hours before arrival. Loading/discharge rate depends on type of cargo but can be estimated at an average of 15 tons/hour/gang. According to the working rules of this port, when a vessel starts its loading/discharging operations without working overtime, it has to continue doing so until work is finished. If it starts working with overtime, it must continue doing overtime every day.

MEDICAL: No advance notice to Agent required. There is a hospital with all facilities.

TANKERS: There are the following terminals for tankers:

Lenadura: Position Lat. 53° 12′ S., Long. 70° 54′ W. Max. length 160 m., draft 30 ft., 18,000 d.w.t. Vessels moor to 3 buoys, 1 astern and 1 on each quarter, using both anchors. Ship's head bearing 090°T. Manifold connection 8 in.

Cabo Negro: Position Lat. 53° 01′ S., Long. 70° 51′ W. Max. length 170 m. Draft 14 m. (46 ft.). Vessels berth port side alongside, using the starboard anchor, and a stern line to a warping buoy 180 m. off the jetty.

Vessels moor to a "T" form jetty head, 280 m. long and 36 m. head. There are also 2 dolphins. The manifold hose is 10 in. Gas is loaded at 1,000 t.p.h. A tug is usually available for berthing.

Clarence Cove: Position Lat. 52° 55′ S., Long. 70° 09′ W. Max. length 200 m. Max. draft limited by the entrance to the cove to 36 ft. (10.97 m.). Vessels berth to 4 buoys, using both anchors. 4 headlines, 3 stern lines, 4 lines to the starboard quarter buoy, and 3 to the port quarter buoy are required. A tug is available. Ship's head 255°T. There are 2 × 8 in. hoses for loading and deballasting facilities will be available shortly.

Forbidden Anchorage Zone: Area within a circle of 0.9 miles radius around the terminal buoys, and leaving entrance clear from 320° to 140°.

Port Percy: Position Lat. 52° 54′ S., Long. 70° 14′ W. Max. length 400 ft., draft 33 ft. vessels use both anchors, vessel's head on 242°T. 10 lines are required to the 4 buoys, 3 headlines, 3 to the starboard quarter, 2 astern and 2 to the port quarter. Wires must not be used. There is a 10 in. line for gas loading, with a 6 in. return line. Load rate 250 t.p.h. A 4 in. line is also available for diesel. Load rate 50 t.p.h

Gregorio: Position Lat. 52° 38′ S., Long. 70° 11′ W. Max. length 650 ft. Max. draft 42 ft. (subject to tidal conditions), 75,000 d.w.t. Manoeuvres should be done with daylight and preferably with high and slack water. Vessels moor with ship's head 232°T, using both anchors to 8 or 9 shackles. 14 mooring lines are required to 4 buoys. There are two 10 in. and 8 in. floating hoses for loading crude oil. Loading rate 1,700 cu.m./hr. Deballasting facilities are installed.

Forbidden anchorage zone is the area limiting Lat. 52° 38′ 30″ S. and Long. 70° 11′ 00″ W., maintaining entrance heading of 331° on head of wharf.

DENSITY: 1025.

FRESH WATER: Only available at Punta Arenas Quay through hoses at a rate of 8 t.p.h. In case of emergency it can be delivered by vessel of the Chilean Army, if advance notice is given.

FUEL: Only diesel oil available in Port Percy with advance notice of at least 7 hours. Also available ex-barge at Punta Arenas, capacity 300 tons (diesel). See "General" before first port.

FIRE PRECAUTIONS: Tankers are forbidden alongside at the quay.

GANGWAY/DECK WATCHMEN: Foreign vessels obliged to employ a watchman, except on Tanker Terminals.

OPENING/CLOSING HATCHES: Carried out by riggers. Crew from the vessel and stevedores not allowed to do this work.

CERTIFICATES: All International Certificates to be shown on arrival.

CUSTOMS ALLOWANCES: Quantity in possession of every member of the crew to be declared at the Customs.

IDENTIFICATION CARDS: Chilean International Police (Extranjeria) provides a provisional card to stay in the country. It has to be held each time a member of the crew goes ashore.

CONSULS:

Argentine
Austria
Belgium
Brazil
Colombia
Denmark
France
Germany F.R.
Greece
Italy
Netherlands
Norway
Paraguay
Peru
Spain
Sweden
Switzerland
United Kingdom
Yugoslavia

REPAIRS/DRY DOCKS: "Asmar" (Astilleros de la Armada) has a shipyard for small vessels up to 1,500 tons as well as a good workshop to effect floating repairs. Some marine spares can be obtained. A 4,000 ton capacity slip will be available November 1986. Max. size: 130 m. LOA; 24 m. beam and 6.0 m. draft.

REPATRIATION: Facilities for repatriation, subject permission of International Police (Extranjeria) and Maritime Authority.

AIRPORT: Distance to airport is 18 km. Daily flights from and to Santiago by two national airlines LAN and LADECO. Argentina Airlines fly to Argentine cities twice a week.

TIME: See "General" before first port.

HOLIDAYS: See "General" before first port.

POLICE/AMBULANCE/FIRE: Maritime Police Tel: 22356; Fire 21212, 21264; Ambulance 22658.

TELEPHONES: There is no connection on the quay. From the City of Punta Arenas it is possible to make international calls.

SERVICES: Compass and gyro compass adjusting can be done.

SHORE LEAVE: Crew allowed to go ashore in all ports of the area. Crew must be in possession of provisional Identity Cards issued by police.

SHIPMASTER'S REPORT: 1976.

Documents required by Research Ships:
Clearance from Last Port.
10 Crew Lists.
3 Nil Passenger Lists.
3 Nil Cargo Declarations.
1 Health Declaration.
6 Lists of Personnel disembarking.
2 Stores Lists from each department.
2 Bonded Stores Lists.
2 Crew Manifests.

Pilotage: Vessel entered and sailed via Western end of Magellan Straits. No Pilot is available unless coming from the North. A radio message should be sent to "Commandante Naval Zona Terciera" requesting permission to proceed without a Pilot, giving ETA at Cabo Pilar and Punta Arenas. Messages should also be sent updating ETA and also when passing Cabo Pilar, the latter giving ETA at Paso Tortuoso and speed. This last information should be promulgated to "All ships". The reverse procedure applies when sailing.

Since we had not arrived with a Pilot on board, we waited for the Pilot about 0.25 miles off the jetty for docking. When we sailed, since it was a Saturday morning, I suggested we could manage without a Pilot for undocking. The Port Captain was agreeable to this, but he may have taken a different view had we been in a less convenient berth.

Time: Summertime is kept (GMT minus 3 hours), dates in force not known. (Ended 2nd weekend in March, in 1976).

Stores and Provisions: Available in limited quantity and range, and very expensive. There is no ship chandler. The Agent's runner will take the Catering Officer around the shops and market, purchasing the items required, and arranging collection and delivery to the ship.

Bunkers: Gas oil was obtained from Cabo Negro, a tanker terminal some 9 miles to the North. Vessel berthed alongside the jetty head of the terminal, designed for much bigger ships. There was no real problem with lines, although stern lines were very short nips. The forward lines ran to a dolphin connected to the jetty by a catwalk. The stern overhung the jetty head slightly. Docking and sailing can be done on slack water, but was straightforward, the starboard anchor being used to dredge down on to the jetty head, which lies East/West, with the prevailing wind blowing strongly from W.N.W. A boat is in attendance for running lines. Pilots are very capable and experienced. The berth may not always be available when the ship requires it, which might mean delays.

SHIPMASTER'S REPORT: March 1985 (Research Ship).

Approaches and Pilotage: Report to Chilean Radio Station when 200 miles off.

The Pilot, a Chilean Naval Officer, boards/leaves via a warship. The Pilot brings his own charts. We did not have a suitable chart of Bahia Cook. On a future visit one should be obtained for a safe approach.

Berths: Either side of a 380 m. long pier. There is a Berthing Pilot, and because of the prevailing very strong winds in the afternoon and evening it is customary to use a tug aft.

Punta Arenas is a busy port.

Documentation:
10 Crew Lists (not all taken).
3 NIL Passenger Lists.
3 NIL Cargo Lists.
3 Lists of Personnel Disembarking.
2 Store Lists (Deck, Engine, catering).
2 Bonded Store Lists.
2 Crew Declarations.
1 Maritime Declaration of Health.

Officials: Extremely courteous. We were made to feel most welcome. The bond was not sealed. The Port Captain (Navy) visited the vessel on several occasions, and offered every assistance should any need arise.

Immigration: Shore passes are issued, and must be returned on sailing.

Fuel: Diesel was delivered by road wagon. This took most of the day, but saved having to shift the ship to the Oil Jetty – which would have taken all day.

Water: Laid on to the quay.

Provisions: Ship Chandler: Juan Carlos Carrasco Harris (Aguas Negras), Errazuri 455, Punta Arenas. Tel: 21549. Telex: 280056 Danep Cl.

Able to supply all our requirements, even to a medical oxygen bottle adaptor.

The quality of fresh fruit and vegetables was as good as U.K., in some cases better. Prices were similar. The chandler has a refrigerated store, thus items were delivered in prime condition. Even bananas lasted 2 weeks.

Prices: Unfortunately there is, at the moment, no Duty Free facility. In addition all items (and services) are subject to +20% VAT. This included fuel.

Laundry: Very good standard. Average price range (subject to the 20% VAT).

British Consul: Mr. Bill Matheson. Tel: 22325.

Repair Facilities: Not tried, but reported good.

Repatriation: No particular problems. There are flights daily. It is however a long haul back to the U.K., requiring a night stop over in Santiago.

The best hotel accommodation at Punta Arenas was very expensive. Alternative accommodation can be had at Mother Teresa's Home for Seamen at about £20 a night (but not usually single occupancy).

AUTHORITY: Maritime Governor of Punta Arenas.

QUINTERO: 32.47 S. 71.33 W. (See Plan)

PORT LIMITS: The seaward limit of the port is a line running 052° from the lighthouse at Los Molles to Punta Ventanilla.

DOCUMENTS:

1 Outwards Clearance Certificate from the last port of call.
5 Cargo Manifests for the port.
5 General Manifests for cargo.
5 Manifests for Cargo in transit.
4 Lists of Passengers for the port.
4 Lists of Passengers in transit.
10 Lists of Crew Members.
5 Lists of Personal Effects.
1 Fumigation Certificate.
1 Maritime Health Declaration.
1 Certificate of Dues in respect of lighthouses and buoys.

PILOTAGE: Pilotage is compulsory. Pilots and port officials board ships 2,450 m. off the R.P.C. Pier, bearing 290°, not far from the single Mooring Buoy, and 1,500 m. on 055° from the Los Molles Lighthouse.

The accommodation ladder should be rigged on the starboard side. Vessels can enter and moor during the day only, but it is possible to sail at night. Pilot usually boards between 0700 hrs. and 2200 hrs.

ETA should be sent to Agent 72 hours before arrival, with confirmation 24 hours before arrival. The message should state if any special service is required, and additionally Masters are requested to inform "Capuerto, Quintero".

ANCHORAGES: Vessels may anchor within port limits. The bay is well sheltered with ample room for manoeuvring. Vessels should keep clear of the S.W. portion of the bay, due to rocky nature of the bottom, and of the prohibited zone indicated on the charts. Larger vessels may anchor West of Punta Liles lighthouse, where there are depths greater than 20 m. with sand and mud bottom. An anchorage has been established at Lat. 32° 45.77' S., Long. 71° 30.5' W.

The anchorage at Ventanilla is an open roadstead, exposed to S.W. winds and swell, with the possibility of dragging anchors, especially in the Winter months.

RESTRICTIONS: Quintero Bay is entered between Point Ventanilla and Point Liles, entrance 2.5 miles wide, with a bight extending 1.5 miles towards the S.E. Point Liles is surrounded by submerged rocks and reefs for a distance of 2 cables.

Tankers discharging at the buoy terminals may be required to disconnect hoses in the event of bad weather, to avoid damage to the installation.

Also see "Pilotage".

MAX. SIZE: *S.B.M.:* Up to 120,000 g.r.t. (215,000 displacement tons).

Oil Multi-Buoy Terminal: Up to 50,000 g.r.t. (100,000 displacement tons).

Liquid Gas Multi-Buoy Terminal: Up to 30,000 g.r.t. (40,000 displacement tons).

Chilectra Andina Quay: LOA 175 m., draft 32 ft.

Las Ventanas Chemical Terminal: Up to 40,000 g.r.t., max. draft 41 ft.

El Durazno Quay: LOA 96 m., draft 19 ft.

RADIO: The Naval Radio Station of Valparaiso also handles commercial traffic.

The Coastal Radio Service Station situated in the Port Captain's office, call sign "Capuerto Quintero".

TUGS: No tugs available at Quintero, but they can be requested from Valparaiso, or through Agent.

TANKERS:

S.B.M. Quintero Terminal: The depth at the S.B.M. is 47 m. Max. size for berthing, length 342 m. draft 25.5 m. (83 ft.). Manifold connection is 16 in. Ship's derricks must be rigged to carry a 12 ton lift. Max. pressure 200 p.s.i. Average discharge rate 8,000 t.p.h. for 25 API crude.

Gas Berth: Max. size 15,000 tons or 40,000 displacement tons. Max. draft 39 ft. Vessels drop both anchors, and moor to 3 stern buoys. Ship's head should lie on 285°. Hose connection 6 in. Discharge rate 240 cu.m.p.h.

Vessels may moor or unmoor at any time at these terminals. Mooring warps must be more than 400 ft. in length.

R.P.C.: Max. draft 50 ft. Vessels berth to 3 stern buoys, using both anchors, ship's head on 305°. Manifold connection starboard side 10 in. Hose lift 6 tons. Normal pressure 100 p.s.i.

BULK HANDLING FACILITIES:

Chilectra Andina Quay, Las Ventanas: Quay is 530 m. long with max. depth of 19 m. at the head of the North side of the pier.

Coal berth situated on the North side of the quay, equipped with mechanical discharging tower which loads up to 300 t.p.h.

The South side of the quay is used for loading copper concentrates, with the addition of 4 dolphins vessels up to 160 m., draft 30 ft., can now berth. Bulk grain can also be discharged here, although the loading tower, being fixed, requires vessels to shift berth to unload each hatch. The berth is exposed to a Southwesterly swell.

FRESH WATER: Available by barge from Valparaiso.

FUEL: Only available at Valparaiso. See "General" before first port.

MEDICAL: There is a small local hospital,and there is an ambulance service to Valparaiso. (20 miles away).

REPAIRS: Only minor repairs may be effected at workshops ashore.

CONSULS: Nearest at Valparaiso.

AIRPORT: Nearest commercial airports at Pudahuel and Cerrillos, near Santiago. Military airfield at Quintero may be used in emergencies, subject to necessary authorisation.

SHORE LEAVE: Curfew in operation. Crew must carry an Interpol Identity Card. See "General" before first port.

SERVICES: Food, laundry, etc. can be supplied.

REPATRIATION: Possible.

TIME: GMT minus 3 hours (October to March). GMT minus 4 hours (March to October).

TERMINAL OPERATORS: Refineria de Petroleo Con Con (R.P.C.), Compania Chilean De Electricidad (Chilectra), Andean Mineral Company (Andina), Las Ventanas Chemical Terminal.

AUTHORITY: Quintero Port Captaincy.

SAN ANTONIO: 33.35 S. 71.37 W. (See Plan)

DOCUMENTS:

Customs Clearance Document.
2 Light Dues Certificates.
9 Cargo Manifests.
2 Crew Lists.
2 Passenger Lists.
2 Lists of Stores.
1 Arms and Ammunition List.
1 List of Personal Effects.
2 Baggage Declarations per passenger.
1 Derat Certificate.
List of Equipment.
Lifesaving Equipment Certificate.
Tonnage Certificate.
Radio Certificate.
Crew Vaccination Certificates.

PILOTAGE: As port is narrow, pilotage is compulsory for entering or clearing the artificial port. Pilots board vessels about 1 mile outside the port, weather permitting. Vessels should wait for Pilot with engines stopped in position bearing 060° and 1 mile from Panul Lighthouse.

ANCHORAGES: Vessels must anchor in position 090° and 1.3 miles from the edge of the South Breakwater in 28 m. of water. The bottom is sand and mud, permitting anchorage of vessels of any length or draft.

Mooring Buoys: In the North Basin is located Buoy No. 1, situated 85° and 180 m. from the head of the Maritime Control Quay, which can be used for vessels up to 210 m. LOA, draft 40 ft. and 35,000 d.w.tonnes.

There is also Buoy Location No. 2, located 150 m. West of former location No. 3 and permits transfer of bulk liquids from vessels of 190 m. LOA, draft 33 ft. and 40,000 d.w.tonnes.

RESTRICTIONS: San Antonio is a narrow and difficult manoeuvring port, entrance to artificial port is subject to weather conditions.

No restriction on vessels of less than 210 m. LOA.

From September to March S.W. wind blows from noon to sunset. It is therefore recommended to arrive at the port during night hours or daybreak, so entering the port immediately. Fog is most frequent in March and April.

MAX. SIZE:

Berth No.	*Max. Length* (m.)	*Depth* (ft.)
No. 4	160	33
No. 5	180	33
No. 6/7	320	28/24
Buoy No. 1	Max. displacement	55,000 tonnes
Buoy No. 2	Max. displacement	40,000 tonnes

Vessels intending to discharge are authorised 1 ft. more draft at all Berths, with the proviso that they must berth within 2 hours before high tide, up to 2 hours after high tide, and commence discharge immediately.

TUGS: 3 modern tugs, 1,000 h.p., 1,250 h.p. and 2,450 h.p.

BERTHING: San Antonio has 7 piers and 2 mooring buoys.

Pier No. 4: Depth 33 ft., 3 quay cranes of 7.5 tons will be available in 1987.

Pier No. 5: Depth 33 ft., 4 quay cranes.

Pier Nos. 4 and 5 are used specially for containers and have a mobile crane, capacity 50 tons.

Pier No. 6: Depth 28 ft., has 2 shore cranes for 5 tons.

Pier No. 7: Depth 24 ft., has 3 shore cranes for 5 tons.

All the piers have double strong fenders.

Berth Usage: Berth Nos. 4 and 5 are used preferably for container vessels, bulk grain carriers and larger sized ships in general.

For transfer of containers, there are 2 mobile cranes type 'Demag MC900 Q' of 50 tons lift and a capacity of 20 TEU per hour.

In the open area of Berth Nos 4 and 5, it is possible to store 1,175 TEU simultaneously plus 486 TEU in pre-stacking, there being also a zone for reefer containers with a capacity of 96 TEU.

In the port there are 13,689 sq.m. of covered areas intended for cargo warehousing, and 120,395 sq.m. of open areas.

The private companies entrusted with stevedoring within the port have the necessary equipment for this work, there also being equipment owned by Port Administration which can provide a minimum service.

Note: Berth Nos. 1, 2 and 3 damaged by earthquake.

Fumigation: When vessels are required to be fumigated due to Chilean health restrictions, they must be towed to Buoy No. 1 where the treatment is appropriately carried out. In general, this takes 72 hours, during which time only a security guard may remain on board. It is recommended that these vessels arrive equipped with high resistance ropes.

STEVEDORES: There are various stevedoring contractors who between them have some 2,400 workers specialised in the various port and maritime operations (dockers, shipboard workers, watchmen, deckhands, tallymen, crane operators, etc.). The contractors have equipment for all kinds of work, including 2 fork lifts (Hyster & Taylor) with spreaders for 20 ft., 35 ft. and 40 ft. containers, industrial tractors, lorries, etc. The work timetable for the port is from 0800 hours to 0630 hours the next day (i.e. 22.5 hours a day).

Average cargo handling rates:

Copper: 120 t.p.h. per shift.
Copper concentrate: 550 t.p.h. per shift.
Wheat pellets: 300 t.p.h. per shift.
General cargo: 30 – 40 t.p.h. per shift.
Containers: 14 – 16 TEU/hour per shift.
Bulk salt: 100 – 120 t.p.h. per shift.
Drums: 35 – 40 t.p.h. per shift.

TANKERS: Oil products can be transferred at Buoy No. 1, Berth Buoy No. 2 and Berth Nos. 5 and 6. From Buoy No. 1, cargo is transferred to the terminal owned by Liquidos a Granel who have tanks with a total capacity of 25,360 cu.m.

At Berth Buoy No. 2 liquids can be transferred to Terquim who have tanks with a storage capacity of 12,830 cu.m.

Berth Nos. 5 and 6, as with the above locations, have facilities for transfer of liquid products to the Esso terminals, where there is a maximum storage capacity of 19,780 cu.m.

RADIO:

Station Call Sign: San Antonio CB2. *Category:* (S)

Frequency	*Type*	*Receives*	*Transmits*	*Schedule*
2 MHz	A 3	2182	2182	24 hours
		2738	2738	As required
4 MHz	A 3	4143.6	4143.6	As required

However it is advisable to use Radio Playa Ancha, Valparaiso, which is connected by telex with San Antonio.

Port Control can be contacted by VHF on Channel 16, 24 hours a day.

MEDICAL: Hospital with 190 beds and necessary surgeons. 3 clinics with 40 beds, minor surgery.

FRESH WATER: All berths equipped with standpipes to supply fresh water direct to vessels at a rate of about 20 t.p.h., but during day rate may be less due to low pressure.

FUEL: Marine diesel oil can be supplied to vessels, provided this is requested with sufficient advance notice.

Also see "General" before first port.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Done by stevedores.

IDENTIFICATION CARDS: Required.

CONSULS: Italy.

REPAIRS: Three workshops for minor repairs. Major repairs in Valparaiso.

REPATRIATION: Facilities exist.

AIRPORT: At Arturo Merino Benitez Airport near Santiago only 2 hours away by road. National and foreign airline services to world-wide destinations.

TIME: Local time GMT minus 4 hours; October to March (Daylight Saving) GMT minus 3 hours.

SHORE LEAVE: Allowed. Also see "General" before first port.

DELAYS: S.W. winds generally blow at dawn calming at sunset, leaving a heavy and strong swell in the bay. It is therefore recommended to arrive at the port at daybreak from September to March, so as to enter the artificial port immediately. South winds also develop a Northerly current. Fogs are frequent from November to March.

DEVELOPMENTS: In 1987, Panul Quay will be equipped with mechanised plant, providing a discharge rate of 500 t.p.h. and will be able to berth vessels up to a maximum draft of 40 ft.

AUTHORITY: Empresa Portuaria de Chile, Casilla 163-A, San Antonio, Chile. *Tel:* 32159. *Telex:* 38505 Empor CL. *Contact:* Patricio Toro Ferrari, Director.

SAN VICENTE: 36.44 S. 73.08 W. (See Plan)

Also see "General" before first port.

PORT LIMITS: East of meridian from Punta Pardo and South of parallel from Punta Hualpen.

PILOTAGE: Compulsory. Pilot boards inside the port limits. Pilot will designate anchorage. Accommodation ladder must be rigged if the vessel is at anchor awaiting berth as the Port Authorities will board. Pilots are arranged by Agent.

RESTRICTIONS: Berthing or unberthing from 0600 hrs. to 2400 hrs. weather permitting. For tankers daylight only.

MAX. SIZE: Draft only restrictions, can berth ships greater than 200 m. LOA and 42 ft. draft.

HEALTH: Port Authorities give Pratique on arrival.

RADIO: Radio Estacion Naval Talcahuano. 500 kHz. A-1 H-24.
Costera Talcahuana 2182 A-3 H-24.
Radio Estacion Naval Valparaiso. A-1 and A-3 all frequencies H-24.

VHF: Channel 16 safety and calling.

TUGS: 2 tugs × 1,200 h.p. Join vessel at the same time as Pilot.

BERTHING: *CAP Pier:* North, length 240 m. draft 33 ft. at any time; South, length 200 m. draft 24 ft. at any time.

General Cargo Berth:

Pier 1: Length 220 m., draft 34 ft. at any time, ships' own gear.

Pier 2: Length 215 m., draft 36 ft. at any time, 2 cranes for bulk cargoes, for general cargo ships own gear.

Comap Berth "A": Vessel moors with starboard anchor with 7 shackles and 3 lines to 2 buoys astern. Max. LOA 150 m. 1 hose with 8 in. connection on port side midships. Gasoline, kerosene, diesel oil and jet fuel handled. 1 tug and 1 mooring launch available.

ENAP Berth "B": Vessel moors with 2 anchors with 8 shackles on starboard, and 3 lines to 3 buoys astern. Max. LOA 250 m. or up 42 ft. draft. 1 tug and 2 mooring launches required. 3 hoses with 8 in. connections for crude and fuel oil. Handling rate 1,500 cu.m./p.h.

ENAP Berth "C": Vessel moors with both anchors, using 9 shackles starboard side, and 3 lines to 3 buoys astern. Max. LOA 200 m. and 36 ft. draft. 1 tug and 1 mooring launch required. 2 hoses with 8 in. connections, 1 for fuel oil rate 900 cu.m./p.h. can also be used for crude. 1 hose for gasoline, kerosene, turbo, diesel and liquid gas.

STEVEDORES: Through Agents. Stevedores available 24 hours.

MEDICAL: Good hospitals, no special notice required.

DENSITY: Salt water.

FRESH WATER: Available at all piers.

FUEL: Diesel by truck or rail road at piers, or at buoy berths.

CONSULS: Argentina, Belgium, Bolivia, Colombia, Ecuador, France, Germany (F.R.), Italy, Netherlands, Norway, Paraguay, Peru, Spain, Sweden, United Kingdom.

REPAIRS: Deck and Engine workshops.

DRY DOCKS: ASMAR for large vessels.

SURVEYORS: Lloyds, N.V., B.V., N.K.K., A.B.S., G.L.

WATCHMEN: Gangway watchmen compulsory. Deck or Hatch watchmen optional.

HATCHES: Open and closed by riggers gangs.

CARGO GEAR: Ship's gear. 2 cranes for bulk cargoes, rate 200 t.p.h. Heavy lift crane with 50 tons capacity.

REPATRIATION: There are facilities for crew changes.

AIRPORT: 1 airport for internal flights.

POLICE/AMBULANCE/FIRE: Available in the port.

IDENTIFICATION CARDS: Immigration provide identification cards.

SHIPMASTER'S REPORT: 1977 (Updated 1982).

Documents:

Customs:
- 2 copies List of Ammunition.

- 2 copies Stores List.
- 2 copies Personal Effects List.

Navigation: Bay of San Vicente is entered between rock "Villa de Burdeos" and "Point Gualpen".

There is a traffic route for vessels leaving and entering Bay San Vicente. The separation zone bounded by lines connecting the following geographical positions: 73° 10.7′ W., 73° 10.6′ W. and 73° 09.7′ W., 73° 09.8′ W. Vessels inbound should keep close South of this separation zone and vessels outbound close North of the separation zone.

In the traffic route, Pilot boarding position and the anchorage, the depth is 36 ft. Maximum permissible draft is 38 ft.

The wreck in position Lat. 36° 44.3′ S., Long. 73° 08.6′ W. has been removed.

The present breakwater is under extension to 800 m.

Pilot: Pilotage is compulsory and the boarding position is about Lat. 36° 44.7′ S., Long. 73° 09.8′ W. in Bay San Vicente, or 1 mile S.W. of rock "Villa de Burdeos" Gp. Fl. (2) 10 secs.

Anchorage: The anchorage is about 900 m. East of rock "Villa de Burdeos". The Pilot anchors the vessel.

Radio: Advance notice: Vessels bound for San Vicente must advise Port Captain by radio 24 hours before arrival giving information about ETA, draft, if vessel carries passengers or mail, and state of health on board. Cable address: "Maritgob Talcahuano".

Also ETA to pilot station, VHF Channel 16, 1 hour prior to arrival. Pilot station's name is "Gobernacion Maritima Talcahuano" or Capitania de Puerto de San Vicente.

Tugs: At present there are 2 tugs (1,200 h.p.) in operation. Tugs use ship's lines.

Pilot is in VHF contact with the tug(s) which assists in mooring and unmooring vessels.

Mooring Method: Vessel approaches and enters the berth from South. Mooring and unmooring may take place also during hours of darkness, provided weather conditions are fair and visibility good.

When the vessel is near the berth, port anchor is usually let go and dragged or paid-out while a tug slowly pushes the vessel alongside.

The vessel is moored with 4 headlines and 2 springs forward and 4 sternlines and 2 springs aft.

Wharves: The pier is 435 m. long and is provided with rubber fenders. A new pier 110 m. long is under construction. Depth alongside the pier is 34 ft. to 36 ft.

There are 2 cranes on the pier for grain or other bulk cargoes. Each has a capacity of 240 m.t.p.h. (grain).

Behind the pier is 41,975 sq.m. for log storage. There are railway tracks on the pier and the log deposit area. Logs are brought in by railway wagons.

Stevedores: Stevedores work in 3 shifts of 8 hours each.

Logs are loaded with ship's gear and at present the capacity is max. 60 cu.m. per log-gang per hour. Stevedores working rather slowly but make very good stowage.

Medical: There is an ambulance station just outside the pier gate and good hospital facilities near the port.

Supply Service: Bunkers, provision, fresh water and laundry are available.

Shore Leave: All Crew members are issued with landing permit/identification card, which has to be returned before departure.

Time: Local time is GMT minus 4 hours but from second Saturday in October to second Saturday in March GMT minus 3 hours.

Weather and Tide: During Summer the prevailing wind is Southwesterly. In the Winter and specially in the months May to August, the winds are North and Northwesterly.

In general, the weather throughout the year is good, sometimes however, during Wintertime with a Northwesterly wind, weather may become too rough for cargo operations due to the swell and the vessel's heavy movements. In this case the Port Authorities may order the vessel to leave the pier and shift to the anchorage, however that is a rare occurrence.

Tidal difference is 1.50 m.

Advice: All store rooms on deck and in the accommodation should be locked. Crew members should lock their doors, even if they are leaving their cabins for a short period.

Crew members should also take care not to walk alone during late night time near or around the harbour area.

AUTHORITY: Armada de Chile, Direccion Del Litoral y M.M., Gobernacion Maritima, Blanco No. 475, Talcahuano. *Contact:* Captain P. Urbina Sanguesa, Maritime Governor.

Empresa Portuaria de Chile, Casilla 133-V, Valparaiso, Chile. *Telex:* 30313. *Contact:* Vice Admiral Jorge Baeza, Director.

Empresa Portuaria de Chile, Administracion Puerto, Casilla 355, Talcahuano.

TALCAHUANO (including Concepcion Bay): 36.41 S. 73.06 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory. Pilot boards vessel near Belen Lighthouse, 3 cables distance.

ANCHORAGES: Each berth has its own distinct anchorage point.

Berth	*Anchorage*	*Bearing*	*Depth*
Berth 2	Huascar	101° × 600 m.	21 ft.
Berth 3	„	101° × 900 m.	24 ft.
Berth 4	„	101° × 1200 m.	27 ft.
Berth 5	„	101° × 1500 m.	30 ft.
Berth 6	„	088° × 1000 m.	30 ft.
Berth 7	Mole 500 (Sth. Encl.)	104° × 820 m.	28 ft.
Berth 8	„ „	136° × 400 m.	21 ft.
Berth 9	Explosives Anchorage	36° 06′ S. 73° 04′ 08″ W.	

Vessels in quarantine are moored 182° from Belen Lighthouse and 7 cables distant. Vessels carrying explosives are moored in same direction but 9 cables from Belen Lighthouse.

RESTRICTIONS: Port works 24 hours. Only 6 vessels can moor alongside quay at one time.

MAX. SIZE: Vessels of 28 ft. draft and 195 m. in length can moor on the East side.

RADIO:

Station: Talcahuano. *Call sign:* CBT-4. *Category:* (S).

Frequency	*Type*	*Receives*	*Transmits*	*Schedule*
6 MHz	A 1	6265	6414.5	H00-30
4 MHz	A 3	4085.2	4390.2	H30-60

TUGS: There are two sea-going tugs, 800 h.p. and 350 h.p. Asmar (T) has 3×800 h.p. sea-going tugs.

BERTHING: Berth No. 1: Length 155 m., max. draft 7.32 m. (24 ft.)

Berth No. 2: Length 205 m. of which 180 m. is usable. Max draft 6.71 m. (22 ft.). Berth only used by fishing vessels.

Mole 500/Naval Pier. Max. length 656 ft., draft 26.2 ft., 4 headlines, 4 stern lines and 2 springs required. Ship's gear used for cargo handling.

Passenger Mole: At a distance of 80 m. from the Fiscal Quay and on the Blanco Encalada Mole is the Passenger Pier with concrete steps for passenger traffic.

Chacabuco Quay: Situated in the Inner Harbour for repairs. Vessels up to 21 ft. draft can moor. No railway line or cranes, therefore vessels must work with own derricks to vans. "Asmar" tugs are used for mooring.

Concepcion Bay: Penco Private Pier: The pier is 1700 m. long ending in a platform on which stands a fixed base rotary crane. Vessel's bows lie on 348°T, both anchors used to final shackle. There are 4 buoys, 1 on each bow, 1 astern, and 1 on the starboard quarter. Vessels also tie up to 3 dolphins on the East side of the pier. 12×600 ft. mooring lines are required and also 2 springs. A tug is required. The berth is exposed to strong Northerly winds, and vessels must be prepared to leave at short notice.

Max. draft 33 ft. There are 2 sea-going tugs for docking and undocking.

Also see "Lirquen".

CRANES: 4 × 5 ton Portal crane on the Fiscal Pier. One floating crane 180 tons. One mobile crane 30 tons.

STEVEDORES: 12 gangs available. Loading: assorted goods 12 t.p.h./gang/hatch. Cereals 25 t.p.h./gang/hatch. Timber 100 t.p.h./gang/hatch. Newsprint 20 t.p.h./gang/hatch.

Discharge: assorted goods 12 t.p.h./gang/hatch. Bagged cargo 25 t.p.h./gang/hatch.

When loading is carried out by means of lighters, this is usually done from privately owned moles belonging to the principal commercial firms of the port from their warehouses situated inside the Morro Channel. Working hours are 0800 – 1430 hrs. and 1430 – 2100 hrs. Also see "General" before first port.

MEDICAL: Public hospital with board and sanatorium for infectious/contagious diseases. In addition, private clinics and a naval hospital.

FRESH WATER: Occasionally available on Berth No. 2.

FUEL: Can be supplied only to vessels moored alongside quay and this in small quantities up to 100 tons, by means of cistern-truck or in drums. Also see "General" before first port.

GANGWAY/DECK WATCHMEN: Available.

OPENING/CLOSING HATCHES: Done by stevedores.

IDENTIFICATION CARDS: Required.

CONSULS: Brazilian and Norwegian consulates. At Concepcion the following:

Argentina
Belgium
Bolivia
Colombia
Denmark
Ecuador
El Salvador
Finland
France
Guatemala
Germany F.R.
Honduras
Italy
Mexico
Netherlands
Paraguay
Panama
Peru
Sweden
Switzerland
Spain
U.K.
Uruguay
Venezuela

REPAIRS: "Asmar" or the navy workshop has capable personnel and modern equipment to effect all kinds of repairs, not only to hull, but also to engines, boiler plates, welding, carpentry and electrical works. Chilean Navy has high-sea tugs to effect salvage and assist vessels in danger. 3 private-owned workshops, which can effect small repairs to vessels afloat. Several slipways for construction and repair of small craft.

DRY DOCKS: Naval shipyard and workshops have 2 dry docks, Dock number 1 is 180 m. long by 30 m. wide. Dock number 2 is 250 m. long by 40 m. wide.

Two floating docks: one 200 ft. long by 30 ft. wide for vessels up to 1,000 tons, and the other 333 ft. long by 50 ft. wide for vessels up to 3,500 tons. There is also a workshop for repairs to be effected afloat. There are 6 anchored mooring buoys used by vessels when entering Dry Dock 2.

REPATRIATION: Good facilities exist.

AIRPORT: Carriel-Sur is situated between Talcahuano and Concepcion, 7 km. N.W. of Concepcion. Lan-Chile has connections from this airport with all the towns of the country from Arica to Punta Arenas and abroad.

TIME: GMT minus 4 hours. Also see "General" before first port.

SHORE LEAVE: Allowed.

GENERAL: South wind affects vessels only when moored outside the port zone. Weather signals are indicated on Signal Station of Port Authorities' Building.

Climate: Temperate.

Predominant Wind: South – West at 26 knots.

Rainfall: 736 mm. per year.

Temperature: Average maximum 16°C, average minimum 7°C.

AUTHORITY: Empresa Portuaria de Chile, Casilla 355, Talcahuano, Chile. *Contact:* J. Carlos Arredondo Gallardo, Administrator.

TALTAL: 25.24 S. 70.29 W. (See Plan)

DOCUMENTS: See "General" before first port.

PILOTAGE: No official pilot station at Taltal. If professional assistance required vessel should give ETA 24 hours in advance via Valparaiso Radio. Pilot boards at the anchorage. International code signals used. Harbour Master's Office can be contacted by radio-telephone on 2182 kHz.

ANCHORAGES: Sheltered deep-water anchorage suitable for any size vessels. Locations of designated areas marked on the chart.

RESTRICTIONS: Port closed in Summer from 2000 hrs. to 0600 hrs.; in Winter from 1900 hrs. to 0700 hrs.

MAX. SIZE: Limited only by depths in anchorage.

HEALTH: Vessel boarded on arrival by Health Inspector.

RADIO: Radio Naval Valparaiso or Radio Naval Arica. Use R/T on 2182 kHz. and 2738 kHz. A3 on the half hour from 0800 hrs. to 1800 hrs.

TUGS: One privately owned tug may be called on to assist if necessary.

BERTHING: No berths alongside shore. Vessels work cargo in open anchorage. One buoy berth for tankers. Mooring, unmooring in daylight only. 6 in. hoses for discharging fuel and diesel.

STEVEDORES: At least 24 hours advance notice of ETA required to arrange gangs. Also see "General" before first port.

TANKERS: *Caleta Ossa Mooring Berth:* Vessels berth to 2 stern buoys, using both anchors. Ship's head on approximately 225°T. Depth of water 47 ft. A Pilot is required and comes from Antofagasta.

MEDICAL: Doctors and hospital facilities available. Advance notice desirable.

FRESH WATER: Not available.

FUEL: Not available.

IDENTIFICATION CARDS: Required by all crew members.

CONSULS: There are no local representatives.

REPATRIATION: No facilities for crew change or repatriation.

AIRPORT: There is no airport.

TIME: GMT minus 4 hours. Also see "General" before first port.

HOLIDAYS: See "General" before first port.

TELEPHONES: There is a telephone service.

SHORE LEAVE: Allowed.

AUTHORITY: Capitania de Puerto, Taltal, Chile. *Contact:* Luis Alegre Lepe, Capitan de Puerto.

TOCOPILLA: 22.05 S. 70.11 W. (See Plan)

DOCUMENTS: See "General" before first port.

ANCHORAGE: There is an anchoring zone for tankers at 351° and 1,550 m. from the lighthouse "Punta Algodonales".

There is anchoring zone for general cargo vessels at 031° and 1,650 m. from lighthouse "Punta Algodonales".

PILOTAGE: Compulsory. Pilot will board at any time.

MOORING: The port has 2 buoys for mooring vessels, for general cargo and nitrate in sacks. The vessel anchors with 6 to 7 chain lengths (port anchor) and then secures to the buoys using at least 2 ropes (220 m. each one).

The port has 2 tanker terminals and vessels anchor with both anchors using at least 7 chain lengths. They must be secured to buoys and cleats ashore with an average of 6 ropes (220 m. each one).

The port has a mechanical conveyor crane and vessels anchor with port anchor, using at least 7 chain lengths. They must be secured to 3 buoys with an average of 6 ropes (220 m. each one).

Also see "Berthing".

RESTRICTIONS: Ships are boarded by Pilot and Port Authorities at any time.

HEALTH: On arrival vessel boarded by Sanitary surgeon, who will grant full Sanitary Pratique valid for all Chilean ports of call in the present voyage. In cases of suspected disease he will determine if patient or patients should be removed to local hospital, otherwise he will declare the effected vessel Sanitary Free Pratique cleared.

RADIO: See "General" before first port.

TUGS: No tugs are used for mooring or unmooring of ships.

BERTHING: All berthing is done during daylight.

Nitrate Plant: For loading nitrate in bulk and copper concentrate a Mechanical Conveyor Crane, owned by Sociedad Quimica y Minera de Chile S.A. (SOQUIMICH), is used. Maximum draft permitted is 36 ft., Mechanical arm's height above medium sea level is 17.35 m., its arm loads bulk nitrate directly into the ship's hold with a rate of 1,000 t.p.h. Cargo is worked on vessel's port side, therefore all cargo gear should be swung outboard.

Sulphate Mooring Berth: Vessels berth to 3 stern buoys using the starboard anchor. Ship's head on 276°T.

Lighters' Berths: Vessels berth to a stern buoy, using starboard anchor, ship's head on 265°T. There are 3 berths 410 m., 610 m. and 810 m. North of No. 1 mole.

The port has 36 lighters. Working hours 0800 – 1200 hrs., 1400 – 1800 hrs. and 1800 – 2100 hrs.

STEVEDORES: Number of gangs required for loading and/or unloading operations should be radioed 24 hours in advance, indicating last ETA. Also see "General" before first port.

MEDICAL: In case of urgent need of a doctor on arrival the Master should request medical assistance by radio to Agent and/or Port Captain. A modern hospital is available with adequate facilities. There is a first-aid clinic for minor surgery.

TANKERS: Two buoys used for oil discharge. Both for clean and crude products. One of them belongs to Cia de Cobre Chuquicamata – (CODELCO) and operates with 2 lines of 8 in. diameter, the other buoy is property of Sociedad Quimica y Minera de Chile S.A. and has 2 lines of 8 in. diameter for discharge of clean oil and crude.

Codelco Terminal: Maximum draft 36 ft. Maximum length 250 m. manifold distance to bow 130 m., in case greater than 130 m. the maximum draft is limited to 26 ft.

SOQUIMICH Terminal: Maximum draft 45 ft. Maximum length 250 m.

Also see "Shipmaster's Report".

FRESH WATER: None available, except small quantities.

FUEL: None available.

GANGWAY/DECK WATCHMEN: Compulsory to employ services of a gangway watchman.

OPENING/CLOSING HATCHES: Ship's crew not allowed to work in port opening or closing hatches. Riggers' Union should be employed, 1 foreman and 8 riggers.

CERTIFICATES:

Safety equipment (radio, etc.).
Tonnage.
Derat.
Radio.
Chilean Light Dues Certificate.

CUSTOMS ALLOWANCES: No special restrictions.

CARGO GEAR: Gear that complies with standard Port Safety Regulations.

IDENTIFICATION CARDS: Required.

CONSULS: None.

REPAIRS: Facilities only for minor repairs.

REPATRIATION: There are facilities.

AIRPORT: Closed.

TIME: GMT minus 4 hours. Also see "General" before first port.

HOLIDAYS: See "General" before first port.

POLICE/AMBULANCE/FIRE: Police Headquarters 32; Hospital 231; Fire Department 84.

TELEPHONES: No facilities for placing telephone lines aboard.

SHORE LEAVE: Allowed.

REGULATIONS: Not allowed to pump oil or dirty water from bilges or throw rubbish overboard while anchored.

DELAYS: Probable on surf days, mainly in the months of June, July and August.

DEVELOPMENTS: Codelco are building an offshore coal unloading berth to accommodate vessels up to 60,000 d.w.t. Depth alongside 19.0 m. Discharge rate with 2 fixed Whirly-type level luffing grab cranes will be 1,500 t.p.h. Completion expected March 1987.

SHIPMASTER'S REPORT: July 1986

Cargo: 36,400 tonnes of sodium nitrate in bulk.

Shipper: Sociedad Quimica y Minera de Chile/Tocopilla.

Receivers: China National Chemical Import and Export Corporation, Peking.

Documents:

1 copy Last Port Clearance.
3 copies General Declaration.
5 copies Crew List.
3 copies Stores List.
2 copies Personal Effects List.
1 copy International Health Declaration.
Ship's Register.
Ship's Safety Equipment Certificate.

Anchorage: A good anchorage can be found 5 cables from shore, in depths of 50 m. The vessel rolled constantly in a S.S.W. swell.

Pilotage: Compulsory for berthing/unberthing. There is one Pilot (Captain Jerko Huerta Rochas), who is very good.

Mooring at Nitrate Plant: Mooring in daylight only; unmooring any time of day and night.

Clearing: Shortly after anchoring at 2230 hrs., Authorities and Soquimich Surveyors came on board, for which accommodation ladder was prepared.

Health: Applying for Radio Pratique not necessary.

Radio: Vessel, possessing Satcom/telex had no problems contacting Agent. Agent is reachable 24 hours a day on VHF Channel 16. ETA notice to Harbour Master will be given by Agent.

Note: When in 200 mile territorial waters of Chile, daily report to Radio Naval Valparaiso should be given, stating ship's movements.

Tugs: 1×1,500 h.p. and 1×300 h.p. For berthing/unberthing we used the larger tug.

Berthing: Without problems; port side to plant/70 m. from shore (see "Plan").

Sequence:
1. Drop starboard anchor and slack away.
2. 2 lines (not wires) to port forward buoy (all buoys have hooks).
3. 2 lines to starboard aft buoy.
4. 2 lines to port aft buoy.
5. Extra line to starboard buoy on recommendation of Pilot.

When above is completed, a mooring gang comes on board to pick up 2 polypropylene springs from shore, using ship's winches. They stay on board in 3 shifts, to shift vessel under rotating telescopic loading arm. Officers should ensure that vessel is kept within line of port buoys as there are a few rocks close by.

Warning: When loading No. 1 hold (our vessel's length being 186 m.) ship had to be heaved very close to the port aft buoy. Longer vessels could have problems. Problem was recognised by the Pilot, who in the past said to have applied for buoys being replaced to create room for larger vessels.

Maximum permissible draft 36 ft. Depth of water 42 ft. All during her loading vessel experienced a 4 ft. – 5 ft. swell, which kept her rolling constantly.

Medical: Hospital facilities available.

Provisions: Chandler very expensive; many products not available.

Shore Communications: Distance to shore is 70 m.; accommodation ladder found best on starboard side. Agent boats U.S.$12 – 18/two ways, but crew found out, that for a small amount there was always/any time transport available and Agents boat-service was abandoned.

Customs Allowances: No special restrictions; bonded store was not sealed.

Meatroom: Not sealed as in most other Chilean ports.

Identification Cards: Necessary. Will be issued by arrival boarding party. Have to be returned on sailing.

Time: Local time is GMT minus 4 hours.

Delays: Vessel experienced no delays due to weather or swell. Apparently delays occur sometimes on surf days, mainly in June, July and August, when vessel has to leave berth.

Authority: Port Captain.

Watchmen: From shore 24 hours a day in 3 shifts. Found very co-operative; no pilferage.

Report on Loading 36,400 tonnes Sodium Nitrate in Bulk:

1. Holds have to be extremely clean. Most vessels find themselves rejected on arrival and after agreeing about price of cleaning, will be cleaned by Soquimich personnel with their water-pressure equipment. This being the only way to start loading.
   For taking the heavy compressor on board cargo gear at all holds is necessary. Some vessels were said to have been forced to have their holds/tanktops painted, before being passed.
2. The cargo is stowed in 5 silos and transported to the ship via a belt, which runs into a turnable arm, which can bridge a distance of 90 m., including the last 26 m., covered by a telescopic extension. The loading did not produce extensive dust and the vessel's decks and accommodation were easily cleaned after sailing.
3. Loading rate found to be max. 900 t.p.h., overall calculation (including minor delays) 600 t.p.h.
4. Stowage factor appeared to be slightly higher than stated (0.88 against 0.84/0.86).
5. Airdraft as per Charter Party had to be max. 10.50 m. Found airdraft loading arm-end to be approximately 12 m. But there has to be a safe allowance for the 4 ft. – 5 ft. swell. Vessel experienced no problems however, the airdraft being the recommended 10.5 m.
6. When loading was completed, the cargo was covered with plastic sheets, before closing the holds.
7. The stevedores were found very co-operative.

AUTHORITY: Port Captain.

VALPARAISO: 33.02 S. 71.39 W. (See Plan)

DOCUMENTS:

1 Clearance.
1 Light Dues Certificate.
7 Port Cargo Manifests.
4 General Cargo Manifests.
7 Transhipment Cargo Manifests.
3 Passenger Lists for the Port.
3 Passenger Lists for Transit.
18 Crew Lists.
1 Personal Effects List.
Passenger Baggage Declaration (2 per passenger).
1 Fumigation Certificate.

PILOTAGE: Compulsory. Pilot boards vessel 0.5 miles from East Dupret Light.

ETA: Port Authorities require 24 hour, and 4 hour notice prior arrival.

ANCHORAGES: Outside the harbour and close by, vessels find good anchorage in 25 – 15 fathoms of water. It is always prudent to secure a good anchorage owing to possible strong winds during all periods of the year which cause heavy swells.

In Winter, vessels anchor with one anchor with full chain and have another ready for emergencies. During Winter it is not convenient to anchor near the coast due to the risk of dragging; during Summer the nearer to coast, the better.

With the object of keeping the entrance to Valparaiso Bay clear and to assure a proper anchorage when arriving at this port, the Harbour Master has fixed the following anchorages according to arrival, so that vessels may proceed to berth in order of arrival.

Anchorage No.		
1	104° True and	980 m. from breakwater's red light.
2	099° True and	1,400 m. from breakwater's red light.
3	079° True and	820 m. from breakwater's red light.
4	083° True and	1,220 m. from breakwater's red light.
5	056° True and	980 m. from breakwater's red light.
6	066° True and	1,340 m. from breakwater's red light.
7	070° True and	1,730 m. from breakwater's red light.
8	041° True and	1,250 m. from breakwater's red light.
9	052° True and	1,550 m. from breakwater's red light.
10	059° True and	1,900 m. from breakwater's red light.

If any vessel does not occupy the anchorage assigned, she shall be shifted by a Pilot of the Harbour Master's Office for Account of Owners.

Should the ten anchorages be occupied when vessel arrives, a provisional one shall be expressly given by the Harbour Master's Office to the vessel that requires it.

RADIO/VHF: Maritime Radio Station of Valparaiso in Playa Ancha which attends the public maritime service. Coastal Radio Service (SRC) with its station situated in the Port Captaincy Building, also attends the public maritime service, both national and foreign (CBV-2).

Maritime Radio Station "Valparaiso Playa Ancha Radio/CBV" serves the Official Correspondence (OC) and Public Correspondence (PC) of the National and International Maritime Mobile Service (MMS).

Quay cranes	5	5	4	—	—	7	2	7	4	—
Telephone	1	1	1	1	1	1	—	1	1	—

Berthing by day or night.

Earthquake 1985: Berths No. 1, 2 and 3 in use without restriction. Berth No. 4 (Container Berth) – damaged but working normally. Berth No. 5 – heavily damaged but in use by small vessels. Berth Nos. 6, 7 and 8 – damaged and in use but cranes cannot be used.

STEVEDORES: The stevedoring syndicate has 397 registered members and 108 substitutes. Working hours are 0800 – 1530 hrs., 1530 – 2300 hrs. and 2300 – 0630 hrs.

MEDICAL: Several hospitals and clinics with qualified staff.

TANKERS: *Las Salinas Oil Terminal:* Depth 40 ft. Max. displacement 40,000 – 50,000 tons. Sailing anytime, day or night.

FRESH WATER: Delivered by hoses connected to the existing standpipes. The quality of the water is good and can be delivered at the rate of approximately 20 t.p.h. The couplings are 2.5 in.

FUEL: Oil: Copec, Shell Chile, or Esso Standard Oil deliver petroleum or diesel oil in any quantity needed by pipe-line at Salinas, approximately 5 miles North of the port, mooring vessel in 7 fathoms water to special buoys and embarking a Pilot at Valparaiso Port. Delivery is at a rate of 180–200 t.p.h. There is also a barge with a capacity of 180 tons for delivery in Valparaiso Bay itself. Diesel oil can be delivered from tank cars by pipe at the quay.

GANGWAY/DECK WATCHMEN: Available and are to be used by Law.

OPENING/CLOSING HATCHES: Carried out by the stevedores by Law.

CUSTOMS ALLOWANCES: No unusual restrictions.

IDENTIFICATION CARDS: Required.

REPAIRS: Several shipyards, workshops and foundries for repairs to hull, boilers, machinery and engines. The principal is Asmar belonging to the Navy. There are several other smaller shipyards for construction and repair of minor craft.

DRY DOCKS: Floating dock 10,000 tons lifting capacity with length 167.1 m. and inside width 26.1 m. Max. draft possible is 9.7 m. Max. displacement 30,000 tons. Max. d.w.t 24,000 tons.

REPATRIATION: Facilities available.

AIRPORT: International airport at Pudahuel, 90 km. from Valparaiso. Los Cerrillos is the nearest airport. From Pudahuel, Lan-Chile maintain daily services to Arica to the North and to Punta Arenas with stops at all the principal towns.

TIME: Local time October to March, GMT minus 3 hours. March to October, GMT minus 4 hours.

HOLIDAYS: See "General" before first port.

SERVICES: Compasses, radars, meteorological instruments and other nautical equipment can be tested and fixed. Charts and maps can be obtained from the Chilean Navy Navigation and Hydrographic Department.

SHORE LEAVE: Allowed.

WEATHER: A weather report showing the condition at various points off the coast of Chile can be obtained from Playa Ancha Radio twice a day. A general rule for the next day's forecast: the weather condition at Juan Fernandez Islands will be 24 hours later than the conditions at Valparaiso.

Climate: Temperate.
Average Amount of Cloud: 4.8 – 8 hours.
Predominant Winds: S.W. and N.W., speed 23 knots.
Rainfall: 360.2 mm. in one year.
Temperature: Average max. – 19°C.
Average min. – 11°C.

PORT REGULATIONS: It is strictly prohibited to dismantle the main engine or effect repairs to the engines without previous notification and authorisation from the Maritime Authorities. Also, to deballast petroleum, pump bilges, throw waste or refuse overboard in the artificial port.

SHIPMASTER'S REPORT: April 1980 (updated 1984).

Documents:
6 General Declarations
12 Crew Lists
6 Passenger Lists for the Port
6 Passenger Lists (even if nil)
6 Mail Lists (or no Mail)
2 Crew Effects Lists
6 Bond and Canteen Lists
6 General Stores, Food Lists
Clearance from Last Port.

Pilotage: Compulsory. Pilot boards vessel 0.5 miles East of Dupret Light. 24 hours notice required to Port Captain (Maritgob).

Anchorage: Anywhere outside the "Prohibited Anchorage Area". The holding ground is moderate.

Restrictions: Port closed for all kinds of activities only in bad weather.

Max. size: Max. LOA: 200 m. (depending on berth). Max. draft 10 m. (except berths 9 and 10) after completion of dredging which is in progress. 2 ft. keel clearance required.

Health: Quarantine message should be sent 24 hours prior to arrival.

Radio: Playa Ancha Radio "CBV".

VHF: Port Captain on Channel 16. Pilot on Channel 6, vessel's Agent equipped with Private Channels, contact on Channel 16.

Tugs: 4 tugs available. Compulsory for large vessels.

Cargo Handling Facilities: Portable screw elevators available for grain. Berth No. 9 is equipped for handling bulk cargoes.

Most berths equipped with cranes of 3 and 5 tons capacity. There is sufficient equipment for handling of palletised cargoes and containers, and there is sufficient storage space for the containers.

Density: 1025.

Fresh Water: Available. Rate 15 to 20 t.p.h.

Fuel: Bunker fuel oil and diesel oil available, but expensive.

Airport: At Santiago.

Repairs: Very good services available.

Services Available: Fresh provisions, machine shop, Lloyd's Surveyor, Salvage surveyor, laundry service, lubricating oil, doctor, hospital, meats and groceries.

AUTHORITY: Empresa Portuaria de Chile, Casilla 133-V, Valparaiso. *Telex:* 30313. *Contact:* Vice Admiral Jorge Baeza, Director, Blanco 839, *Tel:* 25 57 49. Maritime Governor of Valparaiso, Av. Errazuriz 537. *Tel:* 25 80 91. Port Administrator, Av. Errazuriz 629. *Tel:* 25 55 73.

NOTES

Please also advise Shipping Guides Ltd.

People's Republic of China

GENERAL:

We have been advised by the Head Office of the China Ocean Shipping Agency in Beijing that Ship Masters of foreign vessels calling at Chinese Ports should contact the Branch Office at the Port concerned (cable address "Penavico") in order to be provided in due time with necessary information relating to port entry requirements.

DOCUMENTS:
First Port
1 Maritime Declaration of Health.
2 Reports of Entry for foreign ships.
6 Crew Lists.
1 List of Specified Articles (money, gold and silver).
1 Report of Articles Restricted for use in Port.
4 Passenger Lists (if carrying passengers).
Subsequent Ports
1 Report of Entry for Foreign Ships.
5 Crew Lists.
1 Report of Articles Restricted for use in Port.
The list of money, etc., is carried with the ship from the first port.
All forms used to be Chinese.

PILOTAGE: *Regulations with Respect to Sea-port Pilotage issued by The Ministry of Communications (dated 1977):* These Regulations have been made with a view to safeguarding the sovereignty of the People's Republic of China and ensuring the safety of ports and vessels.

Article 1: For all foreign vessels which enter, leave, or navigate or shift berths within any port of the People's Republic of China, pilotage is compulsory. No foreign vessel shall enter, leave, or navigate or shift berths within a port without having on board a Pilot designated by the Harbour Superintendency Administration. In cases of emergency, such as a sudden change of weather, a vessel at anchor may, however, for the purpose of ensuring safety, shift from her original anchor position to any other position in its vicinity without a Pilot, provided the Harbour Superintendency Administration is notified of the same simultaneously.

Article 2: Incoming foreign vessels shall anchor in the designated anchorage or pilot station and await the Pilot. In case an outgoing foreign vessel requests the Pilot to conduct the vessel beyond the limits of the pilotage waters, the Pilot has the right to refuse such request.

Article 3: Prior to arrival at the pilot anchorage, incoming foreign vessels shall communicate with the pilot station (boat) or the port signal station by exhibiting appropriate signals prescribed by the Chinese Port Authorities and follow the instructions given by the pilot station (boat) or the port signal station.

Article 4: When the Pilot is boarding or leaving, it is the duty of the Master of the vessel piloted to take safety measures and furnish a pilot ladder complying with the requirements of the International Convention for the Safety of Life at Sea for embarking and disembarking the Pilot safely and quickly, with due regard being paid to the safety of the pilot boat.

Article 5: The Master of the vessel piloted shall give the Pilot a correct description of the vessel's navigability and steering qualities, and shall meet the Pilot's demands in piloting. Failing to do so, the Master shall be responsible for the consequences arising therefrom.

Article 6: While the vessel is under pilotage, the Master thereof shall in no way be relieved of his responsibility for management and operation of the vessel. The Master shall still give care to the safe navigation of the vessel and must co-operate closely with the Pilot. In the interests of safe navigation, the Master may put forward reasonable recommendations and requirements, but shall not interfere in the Pilot's work unreasonably. If the Master has to leave the bridge temporarily, he shall inform the Pilot of the same and designate an officer as his representative during his absence.

Article 7: In order to ensure the vessel's safety, the Pilot has the right to suspend pilotage when necessary until the circumstances are suitable for safe navigation again.

Article 8: For marine accidents occasioned by the fault of a Pilot in the course of piloting, the Pilot shall be duly punished, but shall hold no liability for loss or damage resulting therefrom.

Article 9: When sea conditions or other special circumstances make it impossible for the Pilot to board an incoming vessel at the designated place, the vessel shall first be guided by the pilot boat to a place at which the Pilot can safely embark and then be conducted by the Pilot into the port after his boarding.

In the case of an outgoing vessel, if the Pilot finds it difficult to disembark at the designated place for the same reasons as are stated above, he may disembark midway at a safe place and then guide the vessel out of the port with the pilot boat.

Article 10: The Pilot may be accompanied by apprentice Pilots who go on board for practice. The Master of the vessel piloted shall provide them with conveniences in regard to both work and life.

Article 11: The Master of the vessel piloted shall sign the Pilotage Bill and pay the pilotage or shifting charges according to the prescribed tariff. If the Pilot considers that the vessel should be assisted by a tug or tugs, the charges for the tugs actually employed shall also be for the account of the vessel.

Article 12: These Regulations shall come into force on the date of publication. The "Regulations Relating to Sea-Port Pilotage", promulgated by the Ministry of Communications of the People's Republic of China on 9th December 1959, shall at the same time be abrogated.

VHF: *Provisional Regulations Governing the Use of VHF Radio-telephone by Foreign Vessels Issued by The Ministry of Communications:* (Dated 1976).

Article 1: During navigating or mooring at anchorage or by buoys in the harbours of the People's Republic of China, foreign vessels may use their VHF radio-telephone for service contacts with the Harbour Superintendency Administration (including pilot station or pilot boat station) and the China Ocean Shipping Agency. But at no time shall VHF radio-telephone communications be permitted between foreign vessels or after berthing alongside wharf.

Article 2: VHF radio-telephone communications are restricted to service contacts only.

Communications by VHF radio-telephone between foreign vessels and the Harbour Superintendency Administration shall be restricted to the following matters:

(1) Entering or leaving port, anchorage or berth; and pilotage.
(2) Safety and rescue of vessels, crew members and passengers.
(3) Navigational safety matters such as weather information, beacons, obstructions, etc.
(4) Other matters that need to be reported to the Harbour Superintendency Administration.

Communications by VHF radio-telephone between foreign vessels and the China Ocean Shipping Agency shall be restricted to the following matters:

(1) The estimated and exact time of ship's arrival at and departure from the port; berthing schedule, etc.
(2) Loading and discharging.
(3) Supply of bunkers, fresh water, provisions, and application launches, etc.
(4) Applications for ship's repairs, marine survey, cargo survey, hold inspection, and for labour for hold sweeping or washing, etc.
(5) Application for urgent medical assistance.
(6) Other urgent matters such as marine casualties, urgent instructions to the ship from the Owners or entrusting parties, or instructions from the Authorities concerned.

Article 3: Foreign vessels intending to establish communications with the Harbour Superintendency Administration shall, on Channel 16 (156.80 MHz), call "Harbour Superintendency Administration XX (name of the port concerned)", and then the Harbour Superintendency Administration Station (including pilot station or pilot boat station) will designate the channel on which the communications are to be made.

Foreign vessels intending to establish communications with the China Ocean Shipping Agency shall call and work on the designated channel. The name of the station called is "Penavico XX (name of the port concerned)".

Article 4: The procedures of call and communications shall be in compliance with the stipulations regarding maritime radio-telephone contained in the International Radio Regulations.

Article 5: VHF radio-telephone communications shall be made either in Chinese, in International Code of Signals or in English. The traffic should be distinct, concise and item by item according to the nature of the services.

Article 6: The working hours for VHF radio-telephone communications in each individual port shall be announced by the Harbour Superintendency Administration of the port concerned. To ensure smooth communications, foreign vessels shall keep constant listening upon their arrival at the pilot anchorage and during their entry into the port.

Article 7: Communications relating to distress or urgent need of medical assistance shall be given priority over all other service communications, in which case other stations operating on the same channel should suspend their operation immediately and keep listening on the designated channel.

Article 8: These Provisional Regulations come into force on the day of publication.

TIME: GMT plus 8 hours. Summertime (1986) May 4th – September 14th – GMT plus 9 hours.

REGULATIONS:
Regulations governing the passage of non military foreign vessels through the Chiungchow Straits.

Article 1. According to "The Declaration of the Government of the People's Republic of China on China's Territorial Seas, the Chiungchow Straits (the Hainan Straits) are Chinese inland waters, where all foreign military vessels are prohibited from passing through. Any non military foreign vessel in need of passing through the Straits must apply for permission in accordance with the present Regulations.

Article 2. For facilitating the control of the Chiungchow Straits, the Chinese Chiungchow Straits Authority of the People's Republic of China (hereinafter referred to as the Chinese Chiungchow Straits Authority) is hereby set up.

The present Regulations are to be carried out under the supervision of the Chiungchow Straits Authority.

Article 3. The water area which comes under the control of the Chiungchow Straits Authority (hereinafter referred to as the Control Area) is bounded temporarily as follows: West of the line connecting the Hainan Head Light Beacon (approx: Lat. 20° 09′ 37″ N., Long. 110° 41′ 00″ E.) and San Kao Lung Light Beacon (approx: Lat. 20° 26′ 00″ N., Long. 110° 30′ 22″ E.) (known as the East Line) and East of the line connecting Cape Kami Light Beacon (approx: Lat. 20° 13′ 30″ N., Long. 109° 55′ 30″ E.) and Cape Lin Kou Light Beacon (approx: Lat. 20° 00′ 22″ N., Long. 109° 42′ 06″ E.) (known as the West Line).

Article 4. Any non military foreign vessel passing through the Chiungchow Straits must comply with the following procedures:

1. Apply for passage permission by cable to the Chiungchow Straits Authority 48 hours before the vessel enters the control area, or before the vessel leaves the port of departure, giving detailed information on ship's name, nationality, gross tonnage, speed, hull colour, funnel marks, port of departure and destination as well as date and time of sailing.

2. After obtaining the passage permission, inform the Chiungchow Straits Authorities 24 hours before entering the control area or within 2 hours after vessel port of departure of the exact time of entering the control area.

All cables relating to the application and permission for the passage through the Straits are to be transmitted through the Haikou Branch of China Ocean Shipping Agency.

Article 5. Notification may be given by the Chiungchow Straits Authority, whenever it deems necessary, to cancel the permission already granted to those non military vessels for passing through the Straits.

Article 6. Passage through the control area by non military foreign vessels should be made in the day time only. They should enter the control area after sunrise and leave before sunset. On the basis of the ship's speed the Chiungchow Straits Authority shall fix the time for the non military foreign vessel concerned to enter or leave the Straits.

Article 7. Non military foreign vessels entering and leaving the Chiungchow Straits should pass through the middle channel, unless special permission has been granted by the Chiungchow Straits Authority.

Article 8. Non military foreign vessels passing through the control area should navigate within the following specified navigation area: North of the line connecting the point on the East line 4 nautical miles away from the Hainan Head Light Beacon to the point on the West line 4 nautical miles away from the Cape Lin Kou Light Beacon; and South of the line connecting the point on the East line 6 nautical miles away from the Hainan Head Light Beacon, the point 4 nautical miles due South of the Cape Paimi Light Beacon (approx: Lat. 20° 15′ 00″ N., Long. 100° 17′ 00″ E.) and the point on the West line 14 nautical miles away from the Cape Lin Kou Light Beacon.

Article 9. Non military foreign vessels passing through the Chiungchow Straits must punctually observe the time as reported and comply with the stipulations on the limit of the navigation area. All vessels entering and passing through the control area should immediately answer and unconditionally comply with the signals from the shore or patrol ships. The vessels in question shall be held responsible for all consequences arising from non observance of the above stipulations.

Article 10. Non military foreign vessels passing through the Chiungchow Straits are not allowed to use radar. If the vessels are under the conditions of restricted visibility caused by dense fog, torrential rains, etc., which necessitates the use of radar, they should make an application to the Chiungchow Straits Authority, giving their reasons as well as the ship's position, speed, etc., and they may set ship's radar in operation when permission is obtained. In the case of emergency which endangers safe navigation of the ships, they may use their radar while making their application simultaneously; after that, they should submit a detailed account (report) to the Chiungchow Straits Authorities giving a full account, together with a statement of facts of the time as to when the radar set in use and when ended for the archives.

Article 11. Non military foreign vessels passing through the Chiungchow Straits are not allowed to take photographs, soundings, or do any other things in violation of the laws and regulations of the People's Republic of China.

Article 12. Any non military foreign vessel violating the present Regulations shall be treated as follows:

1. Before entering the control area, the vessel may be ordered to stop proceeding and to round out by her original route, so as to sail around the Hainan Island; or, to wait until the necessary formalities are completed and the permission for passage granted.

2. In case the vessel has entered the control area, she may be ordered to stop and be escorted to Haikou for inspections; and she shall be treated according to the findings after inspection. After that, the vessel may, as circumstances require, be allowed to pass through the control area, or ordered to return out from the control area, or even be escorted out of the Straits.

Guide to foreign vessels calling at Shanghai

1. Regular channel in Chusan area: Foreign vessels may navigate in the regular channel between Chusan and Raffles Island which is open to navigation, but are not allowed to navigate in other channels between these islands. (By the regular channel is meant the channel from Tongting Island, Steep Island, Elgar Island, Bonham Island, Button Island, Gutzlaff Island to Chang Kiang Kou).

2. Pilotage Area:

(a) Pilotage on vessels entering/leaving port commences from/termination at the position Lat. 31° 05′ N., Long. 122° 10′ E. at Chang Kiang Kou.

(b) The Pilot vessel, when engaged on her pilotage duty, will anchor near 1 mile East of the entrance buoy No. 54 (Lat. 31° 04′ 52″ N., Long. 122° 10′ 00″ E.) at Chang Kiang Kou.

3. Anchorage awaiting for the tide:

(a) Foreign vessels may, when the draft at the time of entry is 25 ft. or less, proceed direct to the pilot station (Lat. 31° 05′ N., Long. 122° 11′ 30″ E.).

(b) In the case of draft at time of entry is more than 25 ft. or it is impossible to arrive at the pilot station at the declared ETA or impossible to proceed direct to the pilot station for reasons of the tide, then the foreign vessels may anchor and wait for the tide near 1 mile N.E. of the Chang Kiang Kou Lightvessel. Such foreign vessels waiting there may telegraph to ask "Penavico" Shanghai for the time of arrival at pilot station and picking up the Pilot.

4. Notice to Mariners: Chang Kiang Kuo South Channel. Also see "Shipmaster's Report", date July 1984 (after No. 7).

(a) The Chang Kiang Kuo Light vessel No. 50 is as described below:
Location Lat. 31° 01′ 48″ N., Long. 122° 25′ 14″ E.
Characteristic Flashing every 6 seconds.

(b) Vessels entering or leaving the port should keep Chang Kiang Kou Lt. Vessel on vessel's port side:
1. Fairway Buoy M.1:
Location Lat. 31° 02′ 51″ N., Long. 122° 19′ 35″ E.
Characteristic Group flashing (3) every 6 seconds.
Shape – can shape, red and white chequered.

(c) No vessel allowed to enter the dangerous areas bounded by lines connecting the following points:
1. Lat. 30° 47′ 15″ N., Long. 123° 03′ 00″ E.
2. Lat. 30° 47′ 15″ N., Long. 123° 05′ 54″ E.
3. Lat. 30° 44′ 45″ N., Long. 123° 03′ 00″ E.
4. Lat. 30° 44′ 45″ N., Long. 123° 05′ 54″ E.

5. Telegraphic Communication:

Foreign vessels at sea may despatch radiograms to "Penavico" Shanghai via Shanghai Coastal radio station, the particulars of which are as follows:

Call sign: XSG
Calling frequency: 500 kHz
Working frequency: 458 kHz
Working hours: 0000 – 2400

Answering frequency:		Listening frequency:	
8502 kHz	GMT 0000 – 2400	8364 kHz	GMT 0000 – 2400
6414.5 kHz	GMT 2200 – 1000	6273 kHz	GMT 2200 – 1000
12871 kHz	GMT 0000 – 1400	12546 kHz	GMT 1000 – 1400
4349 kHz	GMT 1000 – 2200	4182 kHz	GMT 1000 – 2200

6. Large number of fishing vessels around areas 25-30 miles N.E. of North saddle and 20-25 miles East of East saddle, Barren Island and Lukon Island, please navigate with caution.

7. Anchorage for awaiting tide – Changkiang Kuo:

(a) The water area bounded by lines connecting the following points is the anchorage of Changkiang Kuo for vessels awaiting tide:
Lat. 31° 01′ 00″ N., Long. 122° 24′ 42″ E.
Lat. 31° 01′ 00″ N., Long. 122° 20′ 00″ E.
Lat. 30° 56′ 00″ N., Long. 122° 20′ 00″ E.
Lat. 30° 56′ 00″ N., Long. 122° 24′ 42″ E.

(b) From 25th April 1970, all vessels are strictly prohibited to anchor at any place out of the said anchorage of Changkiang Kuo for waiting tides without obtaining permission (permits) from Shanghai Harbour Authority concerned.

Shipmaster's Report: July, 1984.

Following telex received July 1984.

Regulations governing Supervision and Control of Vessels of Foreign Registry sailing in the Yangtze River. (Dated April 1983).

Article 1. The Yangtze River is the inland waterway of the People's Republic of China. These Regulations have been formulated with a view to safeguarding the sovereignty of the People's Republic of China, to ensuring safety of vessels and to maintaining order of traffic in the Yangtze River Waterway and its Ports in accordance with the Regulations governing supervision and control of foreign vessels by the People's Republic of China.

Article 2. These Regulations and all relevant laws and administrative statutes issued by the Government of the People's Republic of China shall be complied with by all propelled and non-propelled vessels and other water-borne means of transport of foreign registry (hereinafter referred to as "vessels") sailing in the Yangtze River Waterway or berthing at its Ports.

Article 3. For the purpose of these Regulations, the "Yangtze River Waterway" shall mean the main waterway extending from the line joining Liuheiwu (Lat. 31° 30′ 52″ N., Long. 121° 18′ 54″ E.) at the lower reaches of the Estuary of the Liu River, and the signal post (Lat. 31° 37′ 34″ N., Long. 121° 22′ 30″ E.) at the lower reaches of the Estuary of the Shiqiao River, Congming Island, and upwards to the upper boundary of Zhangjiagang (a line joining point Lat. 31° 59′ 35″ N., Long. 120° 20′ 00″ E. and point Lat. 31° 57′ 13″ N., Long. 120° 20′ 00″ E.).

For the purpose of these Regulations, the term "Ports" shall mean Nantong and Zhangjiagang, being those open to vessels of foreign registry in the Yangtze River Waterway.

Article 4. These Regulations shall be enforced by the Harbour Superintendency Administration of the People's Republic of China, and all vessels shall be subject to their supervision and control.

Article 5. No vessels can enter the Yangtze River Waterway or its Ports without the Permission of the Harbour Superintendency Administration of the People's Republic of China. Those permitted to enter the Yangtze River Waterway shall be subject to inspection of the Quarantine Office, the Harbour Superintendency Administration, the Frontier Defence Office, the Customs and the Animal and Plant Inspection Office, and complete all relevant formalities. The above-mentioned authorities are entitled to exercise control on board if required.

Article 6. Vessels entering the Yangtze River Waterway shall not engage in shipping business between the ports along the Yangtze River and between the Ports and the port of Shanghai, nor shall they engage in other unauthorised operations.

Article 7. Vessels entering the Yangtze River Waterway and its Ports shall:

(a) a week prior to its expected time of passing through the port of Shanghai, apply to the Harbour Superintendency Administration at her expected port of arrival through the port Agent for completion of entry formalities;

(b) 24 hours in advance of her passing through the port of Shanghai (or on her departure from the last port of call if the voyage takes less than 24 hours), report the vessel's expected time of passage and the vessel's ETA at her expected port of arrival along the Yangtze River, the vessel's size, fore and aft drafts, the maximum height above the actual water line to the Harbour Superintendency Administration of Shanghai and of the expected port of arrival through the port Agents;

(c) give timely advice of any alteration in the ETA reported.

Article 8. Vessels sailing in the Yangtze River Waterway or berthing at its Ports shall apply to the Harbour Superintendency Administration at the port of arrival along the Yangtze River for pilotage and for passing through the port of Shanghai, shall apply to the Shanghai Harbour Superintendency Administration for pilotage.

Article 9. Upon arrival at the port, vessels shall immediately submit the Entry Report and other relevant forms, ship's papers and relevant documents for examination and be subject to inspection. Before leaving the port, vessels shall report the time of departure and the port of destination to the Harbour Superintendency Administration and complete departure formalities through the port Agent and may only leave the port after port clearance has been obtained.

Article 10. Vessels sailing in the Yangtze River Waterway or berthing at its Ports shall by day hoist the national flag of the People's Republic of China at the top of the foremast and the national flag of state of registry at the stern; an "H" flag shall in addition be hoisted when there is a Pilot on board. On entering or leaving Ports or shifting berths, vessels shall moreover display signal-letters and other prescribed signals.

Article 11. Vessels making use of their VHF radio-telephone in the Yangtze River Waterway or its Ports shall comply with the provisional Regulations Governing the use of VHF Radio-telephone by foreign vessels issued by the Ministry of Communications of the People's Republic of China.

Article 12: In the Yangtze River, vessel's radio-telegraph and radio-telephone transmitters can only be used to communicate with the river or coastal radio-stations of the People's Republic of China, and they can only be used in Ports in case of emergency, and reports shall be made to the Harbour Superintendency Administration immediately afterwards.

In the Yangtze River Waterway and its Ports, vessel's signal rockets, flare or gun signals can only be set off in case of emergency, and reports shall be made to the Harbour Superintendency Administration immediately afterwards.

Article 13. Vessels sailing in the Yangtze River Waterway or berthing at its Ports are prohibited from carrying out the following activities:

(a) having military installations and military ships photographed, drawn pictures of, videotaped or surveyed; or

(b) shooting, swimming, fishing, and setting off firecrackers or fireworks; or

(c) other activities threatening the national safety, interests and good order of the People's Republic of China.

Article 14. Vessels sailing in the Yangtze River Waterway shall anchor as near the outer limit of the fairway as is practicable under extraordinary circumstances such as bad weather, flood peaks, etc., which make temporary anchoring necessary, and shall not take the main fairway. Those vessels shall have the position and time of anchoring and the time of departure promptly reported to the nearest Harbour Superintendency Administration, and no one shall be allowed ashore without permission of the local public security authorities.

Article 15. Vessels sailing in the Yangtze River Waterway shall not proceed at a speed that would threaten the safety of other vessels and installations ashore.

Article 16. With respect to the regulations on navigation, berthing and prevention of collisions, vessels in the Yangtze River Waterway or berthing at its Ports shall comply with the Regulations governing prevention of collision in inland waterways promulgated by the Ministry of Communications of the People's Republic of China.

Article 17. While using signals, vessels shall comply with the Regulations governing prevention of collision in inland waterways and other relevant signal regulations; signals not being specified therein shall be displayed in accordance with the relevant international regulations.

Article 18. No vessel sailing in the Yangtze River Waterway or berthing at its Ports shall discharge or dispose of oils, oily mixtures or other harmful pollutants or refuse into water.

Article 19. Matters provided for in these Regulations shall be carried out in accordance therewith, while those not being set forth herein shall be dealt with in accordance with the Regulations governing supervision and control for foreign vessels by the People's Republic of China and other relevant laws and statutes.

Article 20. These Regulations shall become effective upon the date of promulgation.

Regulations for Merchant Ships passing through Lao Tie Shan (Liau-ti-shan) Channel.

Merchant vessels passing through the Lao Tie Shan Channel must observe the following regulations:

1. The water area with Lao Tie Shan Lighthouse as centre and a distance of 10 miles as radius, and the water area with North Huang Cheng Dao Light Beacon as centre and a distance of 7 miles as radius are prohibited areas.

The middle channel between these two prohibited areas is a navigable channel.

Note:

(a) Characteristics of Lao Tie Shan Lighthouse (Lat. 38° 43′ 37″ N., Long. 121° 08′ 02″ E.) Fl. (2) 30 sec. 25 miles.

(b) Characteristics of North Huang Cheng Dao Light Beacon (Lat. 38° 23′ 40″ N., Long. 120° 54′ 33″ E.) Fl. 3 sec. 15 miles.

2. Merchant vessels intending to pass through Lao Tie Shan Channel must send a wireless message to "Harbour Master, Dalian" at least 8 hours prior to the passage reporting the following matters: Ship's name, nationality, call sign, port of departure, port of destination, speed, colours of ship's hull, funnel mark and the accurate expected time to pass the line joining Lao Tie Shan Lighthouse and North Huang Cheng Dao Light Beacon.

Note:

(a) Dalian coastal wireless station:
Signal letters: X S Z; calling frequency 500 kHz;
Working frequency: 462 kHz; 8694 kHz; reserve frequency: 8678 kHz; working day and night.

(b) If weather conditions should cause any change in the expected time of passage, the facts must be immediately reported to "Harbour Master, Dalian".

3. Merchant vessels passing through the Lao Tie Shan Channel must show the lights or signals in accordance with the International regulations for Preventing Collisions at Sea, 1972.

4. Vessels are prohibited to pass through the area with Hai Mao Dao (Lat. 38° 52′ N., Long. 121° 01′ E.) as centre and a distance of 10 miles as radius.

5. Any vessel violating any of the above mentioned regulations will be held responsible for all consequences.

Guide to Foreign Vessels Calling at Dairen: Also see "Dairen" – Shipmaster's Report, dated April 1984.

1. When entering or leaving Dairen Harbour please pass through the channel between Daisansantao and Hwangpotsui. You are not allowed to navigate within area 2.5 miles radius from Daisansantao Lighthouse Lat. 38° 51′ 50″ N., Long. 121° 49′ 20″ E. and 1 mile radius from Lighthouse Hwangpotsui Lat. 38° 54′ 14″ N., Long. 121° 42′ 54″ E.

2. After entering joining line between Daisansantao and Hwangpotsui Lighthouses, radar, radio transmitter and other forbidden articles are prohibited from use, in case of danger or necessity for transmitting emergency message you must report to Harbour Superintendency Administration immediately after you have used.

3. You are requested to wait for quarantine and Pilot within area bounded by lines connecting the following areas: Lat. 38° 57′ 02″ N., Long. 121° 45′ 00″ E., Lat. 38° 55′ 30″ N., Lat. 121° 44′ 28″ E., Lat. 38° 57′ 02″ N., Long. 121° 41′ 11″ E., Lat. 38° 56′ 19″ N., Long. 121° 41′ 11″ E.

4. All merchant vessels are informed that vessels passing through the Liau-ti-shan Channel entering or leaving the port of Dairen, besides it ought to observe the regulations relating to the Liau-ti-shan Channel, must keep the way to navigate through the Southern water area beyond the tangent line joining from the Encounter Rock (Lat. 38° 34′ 21″ N., Long. 121° 38′ 12″ E.) to the outer verge of the Liau-ti-shan prohibited area and the Eastern water beyond Northward meridian line of the Encounter Rock to the continent.

5. Dairen coast radio station.
Call sign: XSZ
Calling frequency: 500 kHz
Working frequency: 462 kHz
Answering frequency: 8694 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to Foreign Vessels Calling at HUANGPU *Whampoa (Kwangchow).*

1. Foreign vessels are prohibited to sail in the water areas of the joint lines among Vanshan, Chaieng and Tankan Islands, except the route as designated hereunder:

(a) The vessels calling at Whampoa from ports other than Hong Kong, should proceed from seaward to Lat. 21° 40′ 44″ N., Long. 113° 56′ 00″ E. and set course to 318°T, or to Lat 21° 37′ 30″ N., Long. 113° 37′ 45″ E. and set course to 047°T; proceed to Lat. 21° 47′ 45″ N., Long. 113° 49′ 32″ E. then alter course to 013°T; proceed to Lat. 22° 00′ 00″ N., Long. 113° 52′ 34″ E., then alter course to 334°T; to Lat. 22° 05′ 36″ N., Long. 113° 49′ 36″ E., then straight to Lafsami Pilot Anchorage waiting for Pilot.

Vessels departing should sail along the opposite course and positions above mentioned, after disembarking Pilot at Lafsami Pilot Anchorage.

(b) The vessels calling at Whampoa from Hong Kong should proceed throught West Lamma Channel to Lat. 22° 08′ 44″ N., Long. 113° 55′ 30″E. then alter course to 295°T; to Lat. 22° 12′ 04″ N., Long. 113° 47′ 41″ E. then alter course to 204°T to Lat. 22′ 10′ 36″ N., Long. 113° 47′ 00″ E. then straight to Lafsami Pilot Anchorage waiting for Pilot.

The vessels departing for Hong Kong should sail along the opposite course and positions above mentioned, after Pilot disembarked at Lafsami Pilot Anchorage.

2. The position of Lafsami Pilot Anchorage:
Lat. 22° 07′ 20″ to 22° 08′ 30″ N.
Long. 113° 45′ 48″ to 113° 47′ 54″ E.

3. Kwangchow (formerly Canton) coastal radio station:
Call sign: XSQ
Calling frequency: 500 kHz
Working frequency: 445 kHz
Answering frequency: 8514 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to foreign vessels calling at QINHUANGDAO *Chinwangtao:*

(1) When non-military foreign vessels call at Chinwangtao, they may pass through Liau-Ti-Shan channel. For governing regulations, please refer to "Regulation for merchant vessels passing through Liau-Ti-Shan Channel". If a vessel violates the said regulations and enters the prohibited area, the Master of the vessel is to be held responsible for whatever consequence arising therefrom.

(2) All foreign vessels should anchor 3 miles off Chinwangtao Lighthouse waiting for Pilot. In case vessels come from foreign ports, quarantine inspection will be carried out at anchorage. After all formalities completed vessels can enter the harbour with Pilot.

(3) In order to make necessary arrangements beforehand, when vessels calling at this port, the ship should send the following information to Penavico Chinwangtao:
  (a) Vessels ETA, the draft fore and aft, stowage plan (if loading export cargo), length overall and derricks' capacities (if first call this port).
  (b) Further advice of accurate time of arrival will be required 24 hours before arrival.
  (c) If any change in the arrival time owing to certain cause, it should be reported to the Agents immediately.

(4) If weather permits, vessels are requested to lift up all derricks before going alongside, thus enabling vessel to load cargo immediately after berthing.

(5) All telegrams to "Penavico Chinwangtao" from the vessels at sea should be sent via Chinwangtao coastal radio station:
Call sign; XSE
Working frequency: 286, 8734 kHz
Calling frequency: 500, 8364 kHz
Working hours: 0600 – 2400

Guide to foreign vessels calling at Taku Bar:
(Hsinkang Tangku and Tientsin)

(1) Foreign vessels entering Pohai Gulf are only allowed to pass through Changshan Channel and/or Liau-ti-Shan Channel. If the latter way is taken, the vessel must send a wireless message to "Harbour Master, Dairen" for directions 8 hours prior to passage. It should be noted that no other channels are permitted for navigation.

(2) Vessels passing Liau-ti-Shan Channel for Dairen must take a detour along the East of "Encounter Rock".

(3) Position of sunken dredger "SE Ho" is at Lat. 38° 31′ 00″ N., Long. 119° 10′ 05″ E. Vessels should keep far away from the above mentioned area during navigation.

(4) Position of the Taku Bar Light Vessel is at Lat. 38° 56′ 51″ N., Long. 117° 55′ 32″ E. Vessels may anchor at N.E. direction of the Light Vessel, according to different condition of vessel's arrival draft, to wait for Pilot.

(5) Vessels are prohibited to enter into the area joining the following four buoys:

Lat.	Long.	
38° 56′ 35″ N.	117° 58′ 33″ E.	flash every 6 secs.
38° 56′ 29″ N.	117° 59′ 11″ E.	flash red (2) every 6 secs.
38° 55′ 45″ N.	117° 58′ 59″ E.	flash red every 6 secs.
38° 55′ 51″ N.	117° 58′ 22″ E.	flash (2) every 6 secs.

(6) Vessels may send radiogram to "Penavico Hsinkang" (via Hsinkang Coastal Radio Station, Call Sign XSV, calling frequency 500 kHz, working frequency 445 kHz, reserve frequency calling 8600 kHz, listening 8364 kHz, working hours 0000 – 2400) giving exact *ETA also fore and aft draft, before entering Pohai Gulf.*

(7) The pilot station is at Tangku. Any foreign vessel, according to harbour regulations, is required to have a Chinese Pilot when entering or leaving the port and among Taku Bar, Hsinkang, Tangku and Tientsin. The Pilot will board the vessel at Taku Bar Anchorage after receipt of exact ETA given by the Master.

Guide to foreign vessels calling at QINGDAO *Tsingtao:*

(1) Definite route must be taken when sailing in or out : From Lat. 35° 56′ 24″ N., Long. 121° 05′ 00″ E. to Lat. 35° 56′ 24″ N., Long. 120° 46′ 42″ E. course 270° (090°).
From Lat. 35° 43′ 15″ N., Long. 120° 53′ 09″ E. to Lat. 35° 56′ 24″ N., Long. 120° 46′ 42″ E. course 335° (155°).
Thence from Lat. 35° 56′ 24″ N., Long. 120° 46′ 42″ E. course 283° (103°) to Lat. 36° 02′ 00″ N., Long. 120° 15′ 56″ E. then alter course 000° (180°) proceed to Quarantine Anchorage within following 4 points: Lat. 36° 05′ 18″ N., Long. 120° 15′ 34″ E.; Lat. 36° 05′ 18″ N., Long. 120° 16′ 50″ E.; Lat. 36° 04′ 00″ N., Long.120° 16′ 22″ E.; Lat. 36° 04′ 00″ N., Long. 120° 15′ 20″ E.

(2) Pilot station is within the area: with the point Lat. 36° 02′ 00″ N., Long. 120° 18′ 16″ E. as its centre and 3 cables length as its radius (all called Outer Anchorage where vessels inward anchor for initial clearance from Authorities).

(3) Dropping and dragging anchor are strictly prohibited within the following areas:
  (a) Within the 4 points: Lat. 36° 04′ 00″ N., Long. 120° 14′ 00″ E.; Lat. 36° 03′ 12″ N., Long. 120° 17′ 00″ E.; Lat. 36° 03′ 27″ N., Long. 120° 14′ 00″ E.; Lat. 36° 02′ 40″ N., Long. 120° 16′ 56″ E.
  (b) Within the 4 points: Lat. 36° 02′ 42″ N., Long. 120° 20′ 00″ E.; Lat. 36° 00′ 48″ N., Long. 120° 18′ 00″ E.; Lat. 36° 03′ 36″ N., Long. 120° 23′ 16″ E.; Lat. 35° 59′ 48″ N., Long. 120° 18′ 30″ E.

(4) Must advise ETA Chalientao 24 hours before ship's arrival.

(5) When abeam Chalientao on ship's entry, should cable again immediately time abeam Chalientao and accurate time arriving pilot station and awaiting Authorities instructions attentively.

(6) Proceeding on above mentioned route following stipulations should be observed:
  (a) Ship's national flag and code flags should be flown in daytime.
  (b) Dumping rubbish and pumping out oil and oily substance are prohibited.
  (c) If by some reasons the vessel needs to anchor, Master should report to Harbour Authorities first for permission.

(7) Within harbour limit the prohibited articles should not be used. In case the use of radar is required for navigation, Master should report to Harbour Authorities beforehand.

(8) Above mentioned Regulations should be strictly complied with. Otherwise the vessel is held responsible for all the consequences arising from the violation of the above.

(9) Tsingtao Coastal Radio Station:
Call sign: XST
Calling frequency: 500 kHz
Working frequency: 435 kHz
Answering frequency: 8546 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to foreign vessels calling at Lienyunkang:

(1) Foreign vessels must anchor at pilot station to wait for Pilot. Pilot anchorages:
  (a) For vessels under 5,000 d.w.t.
  Lat. 34° 45′ 20″ N., Long., 119° 31′ 36″ E. (about 3,000 m. East of Tunglientao Lighthouse).
  (b) For vessels over 5,000 d.w.t.
  Lat. 34° 46′ 54″ N., Long. 119° 34′ 45″ E. (about 4.5 miles off Tunglientao Lighthouse).

(2) Foreign vessels calling this port shall advise the Agents (Penavico Lienyunkang) of her ETA via the Shanghai Coastal Radio Station.

Guide to foreign vessels calling at ZHANJIANG *(Tsamkong):*

(1) Pilot station: North Anchorage of Nau Chow Island.
Lat. 20° 58′ 21″ N., Long. 110° 36′ 42″ E.

(2) Tsamkong Coastal Radio Station:
Call Sign: XSJ
Calling frequency: 500 kHz
Working frequency: 462 kHz
Answering frequency: 8614 kHz
Listening frequency: 8364 kHz
Working day and night.

Guide to foreign vessels calling at Pasuo:

(1) Coastal Radio Station:
  (a) Call Sign: XSH
  (b) Working frequency:
  452 kHz 0000 – 2400 (local time)
  4278 kHz 1800 – 0900 (local time)
  8634 kHz 0900 – 1800 (local time)
  (c) Listening frequency:
  500 kHz 0000 – 2400 (local time)
  4182 kHz 1800 – 0900 (local time)
  8364 kHz 0900 – 1800 (local time)
  (d) Traffic list at 20 minutes pass every odd hour.

(2) Pilot station:
Lat. 19° 07′ 09″ N., Long. 108° 36′ 02″ E.
Bearing upon Telanchau 175° (T) distance 1 mile.

(3) Signal station:
The signal station is on top of Telanchau Hill (Lat. 19° 06′ N., Long. 108° 37′ E.) with light beacon of white light Gp. Fl. (2) 6 sec. 54 m. 12 M. at night.

(4) Radio report before ship's arrival:
Masters are requested to advise "Penavico Pasuo" of the following particulars. 48 hours before ship's arrival or right after departure from last port:
  (a) 48 and 16 hours ETA.
  (b) Route taken (via Hainan Straits or Yulinkong).
  (c) Cargo to be loaded in each hold and/or tweendeck.
  (d) The ship's length overall (first call only).
  (e) Ship's breadth (first call only).
  (f) T.P.I. (laden) (first call only).
Remarks: All derricks up and beams off before arrival if and when weather permits.

Guide to foreign vessels calling at Wenchow:

(1) When arriving at or departing from the port of Wenchow, foreign vessels should pass through Whang Dan Sha Channel to enter or leave the Quarantine and Pilot Anchorages.
Before reaching Whang Dan Sha Channel, the vessels should navigate along the water areas 27° 46′ N. – 27° 54′ N. between Fu Tou You Light Beacon and Dong Yu, Dong Tou, Heng Zhi Shan Light Stations, but keep off the area within 27° 55′ N. – 28° 05′ N. and 121° 35′ E. – 121° 55′ E. a suspected minefield.
The vessels should not be allowed to enter into the water areas East of the joint line of Dong Yu and Heng Zhi Shan Light Stations, and also the water areas West of Fu Tou You Light Beacon and Dong Tou Light Station for navigation or anchorage.

(2) Quarantine Anchorage is in the water area with the point Lat. 28° 01′ 10″ N., Long. 121° 05′ 20″ E. as its centre and 0.6 nautical miles in length as its radius.

(3) The above Regulations should be effective as from 0000 hrs. 1st January, 1972, and observed by the foreign vessels accordingly.

(4) Aids to navigation available for fixing ships position.
  (a) Fu Tou You Light Beacon:
  Lat. 27° 50′ 08.7″ N., Long. 121° 14′ 48.8″ E.
  White light Gp. Fl. 6 sec. 99 m. 16 M. (U).
  Fog signal sounded on foggy day.
  (b) Dong You Light Station:
  Lat. 27° 55′ 56.8″ N., Long. 121° 13′ 24″ E.
  White light Gp. Fl. (3) 10 sec. 39 m. 9 M. (U).
  (c) Dong Tou Light Station:
  Lat. 27° 57′ 43.5″ N., Long. 121° 08′ 46.7″ E.
  White light Gp. Fl. (2) 6 sec. 21 m. 7 M. (U).
  (d) Heng Zhi Shan Light Station:
  Lat. 28° 01′ 03″ N., Long. 121° 08′ 34″ E.
  White light Gp. Fl. (3) 10 sec. 58 m. 7 M. (U).

(e) Quarantine Light Buoy:
Lat. 28° 01′ 10″ N., Long. 121° 05′ 20″ E.
Orange and yellow can buoy; orange and yellow light Gp. Fl. (2) 6 sec.

(f) Yuan Yi Shan and Lang Dang Light Stations should be suspended to navigate by the foreign vessels as from 0000 hrs. 1st January, 1972.

Other points for attention:

When it is necessary for the foreign vessels to call at Foochow, Amoy, Swatow and Pakhoi, it is requested to contact Messrs. Penavico at relative port direct 48 hours before vessel's arrival at the port in order to know the position of pilot station and quarantine anchorage as well as directions to be observed for navigation.

Regulations Governing Supervision and Control of Foreign vessels by the People's Republic of China (ENGLISH TRANSLATION)
Dated: 1979

GENERAL PROVISIONS

Article 1

These Regulations have been formulated with a view to safeguarding the sovereignty of the People's Republic of China, to maintaining traffic order in port areas and coastal waters, to ensuring safety of navigation and to preventing pollution of waters.

Article 2

These Regulations as well as all relevant laws, statutes and rules issued by the Government of the People's Republic of China shall be complied with by all foreign vessels (hereinafter referred to as "vessels") navigating in port areas and coastal waters of the People's Republic of China. Vessels shall be subject to inspections by the Harbour Superintendency Administration set up in the port by the Government of the People's Republic of China where the latter deems such inspections necessary.

The term "coastal waters" mentioned in these Regulations means inland waters and territorial sea of the People's Republic of China as well as water areas officially defined as coming under the jurisdiction thereof.

Part 1 ENTRY, DEPARTURE AND NAVIGATION

Article 3

The Master or owner of a vessel shall, a week prior to its expected arrival at the port, submit the required forms to the Harbour Superintendency Administration through the vessel's port Agent for completion of entry formalities, and shall report, 24 hours in advance of her arrival (or on her departure from the last port of call if the voyage takes less than 24 hours), the vessel's ETA, fore and aft drafts on arrival to the Harbour Superintendency Administration through the port Agent. Should there be any change in the ETA, same shall be reported in time.

A report shall be submitted in advance to the Harbour Superintendency Administration in case of special circumstances, such as the vessel being in distress, the engines broken down or her crew or passengers suffering from acute disease, which necessitate the vessel to make an emergency entry into or to return to the port during the voyage.

Article 4

No vessel shall enter or leave the port, or navigate or shift berths therein without a Pilot being appointed by the Harbour Superintendency Administration. Matters regarding pilotage shall be dealt with according to the Regulations with respect to Sea-port Pilotage issued by the Ministry of Communications of the People's Republic of China.

Article 5

Upon arrival at the port, vessels shall immediately submit the Entry Report and other relevant forms for checking; besides, vessels shall submit ship's papers and relevant documents for examination and be subject to inspections. Prior to leaving, vessels shall submit the Departure Report and other relevant forms for clearance examination and may only leave the port after port clearance has been obtained.

Article 6

Upon arrival at the port, arms and ammunition on board are to be sealed up by the Harbour Superintendency Administration. Radio-telegraph transmitter, radio-telephone transmitter, signal rockets, flare signals and signal guns shall only be used in case of emergency, and a report shall be made to the Harbour Superintendency Administration immediately afterwards.

Article 7

Shooting, swimming, fishing, setting off of firecrackers or fireworks and other actions calculated to endanger the order and security of the port shall be prohibited.

Article 8

The Harbour Superintendency Administration is fully authorised to detain the vessel concerned, or to order the vessel to stop sailing, to change route or to return to the port under any of the following circumstances:

(a) unseaworthiness;
(b) violation of laws or regulations of the People's Republic of China;
(c) involvement in marine accident;
(d) non-payment of expenses to which the vessel is liable or failure to produce security required; or
(e) other cases prohibiting the vessel from sailing.

Article 9

Vessels navigating in Chinese port areas and coastal waters shall not be engaged in activities endangering the national safety, rights and interests of the People's Republic of China and shall comply with regulations governing straits, waterways, routes and areas closed to navigation.

Article 10

Vessels navigating within the port areas shall not proceed at a speed liable to endanger the safety of other vessels and port installations.

Article 11

Boats (rafts) attached to vessels shall not be manoeuvred within port areas except for life-saving purposes.

Article 12

No vessel shall have its boats, derricks and gangways, etc., rigged outboard while navigating or shifting berths within port areas.

Article 13

Vessels requiring to enter any of the Chinese ports open to foreign trade for shelter or temporary stay shall apply to the Harbour Superintendency Administration for permission. Such application shall state: name of the vessel, call-sign, vessel's nationality, name of the shipping company, port of sailing, port of destination , vessel's position, speed, drafts, colour of hull and colour and mark of funnel. Such vessels shall take shelter at places designated.

Vessels requiring to take shelter or to lie at anchor temporarily at places other than any of those Chinese ports open to foreign trade shall, in addition to the above formalities observe the following regulations:

(a) reporting promptly to the nearest Harbour Superintendency Administration the time and position of anchoring and the time of departure;
(b) fulfilling the requirements of local authorities concerned and submitting to their inspections, inquiries and instructions; and
(c) no one to be allowed ashore and no cargo loaded or discharged without permission of local authorities concerned.

Part 2 BERTHING

Article 14

While berthing in port, vessels shall have on board a sufficient number of men to ensure safe manoeuvring, and, in case of emergency such as typhoon warning, etc., all hands shall return immediately aboard to take necessary precautions and urgent measures.

Article 15

Gangways for access of crew members, passengers and other persons shall be properly secured and fitted with railings or manropes. Rope ladders shall be safe and strong. Sufficient illumination shall be available at night.

Article 16

Vessels requiring to turn propellers shall pay close attention to the surroundings at the stern, and shall only do so under the condition that the safety of other vessels and harbour installations has been ensured.

Article 17

While berthing in port, all exhaust valves and discharge openings of the vessel which may give trouble to other vessels, harbour craft, the wharf or the access of persons shall be properly covered.

Article 18

No light of any vessel shall be exhibited in such a manner as to impair the safe navigation of other vessels; strong lights directed at the fairway must be properly screened.

Article 19

All vessels should be in safe and good working condition for cargo operation as required. All cargo handling equipment should be maintained in good working order and certificate of fitness should be made available.

Article 20

Vessels shall apply in advance for and obtain permission from the Harbour Superintendency Administration before carrying out the following operations:

(a) overhauling of any boiler, main-engine, windlass, steering gear or radio-station;
(b) trial trip of engine-test;
(c) lowering boat (raft) for life-saving drill;
(d) welding (except for repairing in shipyard) or working with naked light on deck; or
(e) decorating with colourful lights.

Article 21

Vessels under fumigation shall take strict safety measures and exhibit appropriate signals prescribed by the Harbour Superintendency Administration.

Article 22

In order to ensure the safety of the port and vessels, when ordered to shift berth or to sail ahead of or behind the schedule, vessels shall observe such orders as given by the Harbour Superintendency Administration.

Part 3 SIGNALS AND COMMUNICATIONS

Article 23

Vessels navigating or berthing in Chinese port areas or coastal waters shall by day hoist the national flag of the country of registry. On entering or leaving port or shifting berths, vessels shall in addition display signal-letters and relevant signals prescribed by the Harbour Superintendency Administration.

Article 24

When entering or leaving port or at anchor, vessels shall pay close attention to the call and signals of the port signal-station. When visual signals are used, the Regulations with respect to Coastal Port Signals issued by the Government of the People's Republic of China shall be complied with. Where signals are not specified by Chinese coastal ports, the International Code of Signals shall be applicable.

Article 25

Vessels shall not make sound signals at will within the port except when necessitated by safety of navigation. Vessels requiring to test whistles shall make an advance report to the Harbour Superintendency Administration.

Article 26

Vessels making use of their VHF radio-telephone in port shall comply with the Provisional Regulations governing the Use of VHF Radio-telephone by Foreign Vessels issued by the Ministry of Communications of the People's Republic of China.

Part 4 DANGEROUS CARGOES

Article 27

Vessels carrying or handling dangerous cargoes shall exhibit the prescribed signals, comply with the regulations relating to the carriage of dangerous cargoes and take all necessary safety measures. Cargoes of contradictory nature, in particular, must be separately stowed. It is strictly forbidden to stow explosives with ignitable materials or inflammable cargoes in the same hold.

Article 28

Vessels carrying Grade 1 highly hazardous cargoes shall, 3 days prior to the ETA, apply to the Harbour Superintendency Administration through their port Agent for endorsement, with their descriptive names, properties, packing, quantity, place of stowage stated in detail and a booklet of Description of Dangerous Materials attached, and shall not enter the port, discharge the cargoes or make transit unless permission has been obtained. Such cargoes being: explosives, highly poisonous articles, radio-active substances, compressed gases, liquefied gases, oxidising agents, substances liable to spontaneous combustion, substances which, in contact with water, emit inflammable gases, inflammable liquids, inflammable solids, acidic corrosives, etc.

Vessels intending to carry the above-mentioned hazardous cargoes for export shall, 3 days prior to the loading thereof, apply for endorsement and shall not load until permission has been obtained.

Article 29

Vessels applying for Certificate of Safety Stowage of Export Dangerous Cargoes shall, 3 days prior to loading, submit a written application to the Harbour Superintendency Administration, stating, inter alia: descriptive names, properties, packing, quantity, place of stowage (accompanied by stowage plan), intermediate ports, port of destination, and shall load at the berths designated by the Harbour Superintendency Administration.

Part 5 FAIRWAY PROTECTION

Article 30

Vessels under way shall comply with the Rules of Navigation and maintain traffic order. In case of accidents involving the risk of sinking, a report shall immediately be made to the Harbour Superintendency Administration and all effective measures shall be taken to steer clear of the fairway to avoid impeding the traffic and endangering other vessels. If the vessel is sunk, a temporary signal shall promptly be marked by the parties involved at the place of the wreck.

Article 31

Salvage operations on shipwrecks or other objects in port areas or coastal waters shall be carried out in accordance with the Regulations Governing the Salvage of Shipwrecks or Sunken Objects issued by the Government of the People's Republic of China. The Harbour Superintendency Administration may, as it thinks fit, notify the owners thereof to carry out salvage and clear the fairway within a specified time, or to arrange an immediate salvage to refloat or demolish the sunken vessel or object and to clear the fairway, with all responsibilities and expenses incurred borne by the owners concerned.

Article 32

Where any sunken or floating object has been found by any vessel, a report thereon shall be made and the object salvaged handed over to the Harbour Superintendency Administration, whereupon, a reward may be given by the latter as appropriate.

Article 33

Where any vessel wishes to dispose of any refuse such as garbage in port, it shall exhibit signals prescribed by the Harbour Superintendency Administration to request ash boats (cars).

Article 34

Fairway installations and aids to navigation shall be well cared for. Vessels causing damages thereto or to harbour constructions or other facilities shall report immediately to the Harbour Superintendency Administration and shall be held responsible for the restoration made or the expenses incurred.

Part 6 PREVENTION OF POLLUTION

Article 35

No vessel shall discharge oils, oily mixtures or other harmful pollutants or refuse within port areas and coastal waters of the People's Republic of China.

Article 36

If any ballast water, tank washings or bilge water is to be discharged from any vessel, an application shall be made to the Harbour Superintendency Administration for approval. Where a vessel has arrived from a plague-infested port, necessary sanitary treatment should been given by the Quarantine Authorities. Dirty water and hold washings from holds where dangerous cargoes or harmful pollutants have been stowed shall only be discharged at the designated place after their having been tested by and to the satisfaction of the sanitation departments concerned.

Article 37

Oil tankers and vessels with oil as fuel shall carry the Oil Record Book on board and make appropriate entries as required.

Article 38

Where a pollution has occurred within the port area or coastal waters, the vessel at fault shall have all relative particulars entered in the Oil Record Book and the Deck Log, and shall have the matter immediately reported to the Harbour Superintendency Administration. Meanwhile, all effective measures shall be taken to prevent the oil from spreading. Where any chemicals should be applied, an application together with a description of their compositions and properties shall be sent to the Harbour Superintendency Administration for approval.

Article 39

Matters not provided for in this part shall be dealt with in accordance with the regulations relating to the prevention of pollution of marine environment issued by the Government of the People's Republic of China.

Part 7 FIRE FIGHTING AND SALVAGE

Article 40

Smoking or naked flames in the hold or elsewhere liable to cause fire hazard to the vessels is strictly prohibited.

Article 41

Vessels bunkering oil or oil/tankers handling cargo oil shall take strict fire prevention measures for safety.

Article 42

While welding in port, vessels shall clean up the surrounding area beforehand, take strict precautionary measures, be provided with fire-fighting apparatus and examine the work site before and after the operation. No welding can be done inside or near oil compartments, unless and until all the oil has been emptied, oil residues cleared out, the compartments sufficiently ventilated, the inflammable gases expelled, and a certificate of fitness obtained.

Article 43

Should any vessel be involved in a fire hazard or marine casualties, an immediate report shall be made to the Harbour Superintendency Administration. Such report must contain ship's position, tonnage, drafts, cargo on board, damages suffered and assistance required.

Article 44

Where necessary, the Harbour Superintendency Administration may order and direct any vessel in port or in coastal waters to rescue the vessel in distress. The vessel so ordered and directed is obliged to do its utmost to render every possible assistance as long as its own safety will not be endangered.

Article 45

As soon as the officers from the Harbour Superintendency Administration or the salvage departments concerned have arrived, the Master of the vessel in distress shall report the accident occurred and measures taken so far, provide all information and facilities required and make suggestions with regard to the salvage as appropriate. All decisions taken by the Harbour Superintendency Administration for maintaining safety and order shall be complied with by all parties concerned.

Part 8 MARINE ACCIDENTS

Article 46

Should any vessel be involved in marine accident, the Master shall give the Harbour Superintendency Administration a summarised report by telegram or radio-telephone soonest possible. In case the accident has occurred outside of port areas, the Master shall, within 48 hours of the vessel's arrival at the first port of call, submit a marine accident report to the Harbour Superintendency Administration. Such report shall be submitted within 24 hours of the accident if the same has happened in port.

Article 47

Should any vessel be involved in marine accident causing death of or injury to persons or damages to properties in port areas or coastal waters of the People's Republic of China, the Master of the vessel at fault shall render every possible assistance to the ship and persons in distress, make timely report to the Harbour Superintendency Administration and be prepared for investigation and settlement. Should the party at fault refrain from rendering any assistance in spite of the imminent danger or flee into hiding, severe punishment will be imposed.

Article 48

Should death happen to any person on board, an immediate report thereof shall be sent to the Harbour Superintendency Administration. Where any damage or death has caused to the port or its persons through the fault of the ship, or vice versa, the spot should be kept untouched and timely reports should be given to the Harbour Superintendency Administration by both parties. In case of dispute, either party may resort to the Harbour Superintendency Administration for investigation and settlement. Matters involving penal proceedings shall be dealt with by judicial organs of the People's Republic of China.

Article 49

Matters not provided for in this part shall be dealt with in accordance with the Regulations Governing Investigation and Settlement of Marine Accidents promulgated by the Ministry of Communications of the People's Republic of China.

Part 9 PENALTIES FOR VIOLATION OF REGULATIONS

Article 50

Vessels violating these Regulations and all relevant laws, statutes and rules issued by the Government of the People's Republic of China shall, according to the seriousness of the case, be warned or fined by the Harbour Superintendency Administration. All offences of vicious or serious nature shall be handed over to the judicial organs.

Article 51

Any offender not yielding to the conclusions made by the Harbour Superintendency Administration may, within 15 days of the receipt thereof, appeal to the Bureau of Harbour Superintendency of the People's Republic of China. The above said conclusions, however, shall remain valid before its being modified.

Part 10 SUPPLEMENTARY PROVISIONS

Article 52

Matters concerning prevention of collisions not provided for in these Regulations and relevant rules and regulations issued by the Government of the People's Republic of China shall be dealt with in accordance with the International Regulations for Preventing Collisions at Sea accepted by the Government of the People's Republic of China.

Article 53

These Regulations shall become effective upon the approval by the State Council of the People's Republic of China. The Regulations Governing Entry and Departure of Foreign Vessels Into and From Ports of the People's Republic of China promulgated by the Ministry of Communications of the People's Republic of China on the 12th March, 1957 shall at the same time repealed.

CHI WAN: 22.28 N. 113.53 E.

Port under construction.

DEVELOPMENTS: A wharf, length 3,000 m. under construction. The wharf will handle vessels up to 100,000 d.w.t. Oil storage facilities are planned. The first 4 berths will be ready late 1987 and vessels of 50,000 d.w.t. and 35 ft. draft at HW will be handled.

SHIPMASTER'S REPORT: April 1984.

New port still under construction situated in Lat. 22° 28.5′ N., Long. 113° 53′ E. Pilot station is located in position Lat. 22° 25′ N., Long. 113° 52.6′ E. It is reached by passing through Hong Kong East Lamma Channel then passing North of Ma Wan Island. There is plenty of water until the pilot station. Anchorage is in very good holding ground. Density of water at any stage of the tide is 1020. Alongside the pier (only one working at the moment), the depth is 8.5 m. but the bottom is soft mud. At HW it varies from 9.5 m. to 10 m. according to the stage of the tides. Fresh water is available at a low rate alongside the pier. Chi Wan Radio working on Channel 16 and 84. Discharging at about 1,000 tons per day with ship's gear and shore cranes. Only one crane is assembled at the moment. 3 cranes of 10 tons capacity will be available in the near future, 1 crane of 40 tons is already working.

Facilities to go to Hong Kong: (2 photographs must be available for the Immigration Visa) Hong Kong dollars are accepted as currency. US dollars must be changed at the local Banks. Entering and leaving the port only during daylight hours. 2 low powered tugs assisting mooring and unmooring the ship.

DAIREN: (Dalian) 38.55 N. 121.40 E. (See Plan)

Also see "General" before first port.

REGULATIONS: Abstract of Port Regulations for Dalian Port issued by Dalian Harbour Superintendency Administration.

The Dalian Harbour Superintendency Administration:

1. All vessels (both Chinese and foreign) entering or leaving Dalian port (hereinafter referred to as this port), in addition to strictly abiding by "The Regulations Governing Supervision and Control of Foreign Vessels by The People's Republic of China" shall observe these regulations.

2. The vessels entering or leaving this port must pass through the channel between Da San Shan Dao and Huang Bai Zui and navigate strictly according to "The Navigation Rules for Vessels Passing Through Da San Shan Channel".

Vessels entering or leaving Dalian Xin Gang must navigate through the channel between Sha Tuo Zi and Xian Jiao.

3. The vessels entering or leaving this port after sunrise and before sunset, shall display the ship's national flag, call sign flags and other required flags. The vessels entering the port shall hoist up the above-mentioned flags before Da San Shan Dao lighthouse is abeam, and the vessels leaving the port shall haul down these flags outside the harbour limits.

Remarks:

The harbour limits of this port are the line joining Huang Bai Zui lighthouse (Lat. 38° 54′ 14″ N., Long. 121° 42′ 56″ E.), Da San Shan Dao lighthouse (Lat. 38° 51′ 51″ N., Long. 121° 49′ 29″ E.), the N.E. end of Da San Shan Dao (Lat. 38° 53′ 36″ N., Long. 121° 50′ 03″ E.), the East end of Xiao San Shan Dao (Lat. 38° 54′ 58″ N., Long. 121° 50′ 08″ E.), Jiu Cai Tuo Zi light beacon (Lat. 38° 56′ 48″ N., Long.121° 51′ 42″ E.), Sha Tuo Zi lighthouse (Lat. 38° 58′ 03″ N., Long. 121° 54′ 15″ E.), Xian Jiao light beacon (Lat. 38° 57′ 49″ N., Long. 121° 59′ 11″ E.), and Sha Yu Zui (Lat. 39° 01′ 51″ N., Long. 121° 57′ 42″ E.).

4. The vessels passing through the Lao Tie Shan channel must strictly follow the regulations on passing through Lao Tie Shan channel. (refer to Annex 2).

5. The vessels passing through Lao Tie Shan channel and entering or leaving this port shall, in addition to observing the regulations relating to the Lao Tie Shan channel, keep themselves to the South of the tangent line drawing from Yu Yan (Lat. 38° 34′ 21″ N., Long. 121° 38′ 12″ E.) to the South verge of Lao Tie Shan prohibited area, and to the meridian line drawing North from Yu Yan.

6. When entering or leaving this port, vessels shall pay unremitting attention to the communication with the signal station in the port.

7. When loading or discharging jute, cotton or other inflammable cargoes, vessels must:

(a) Get effective fire-extinguishing equipment ready by the operating hatches;

(b) Put the copper net cover on the top of ship's funnel lest the sparks should come out, and allow no crew members to smoke on deck and near the hatches or to throw cigarette stumps at random.

8. Any vessel alongside an oil jetty must keep her main engine ready all the time and keep sufficient persons on duty, and put a steel wire tow line fore and aft over the off-shore side for emergency.

9. Oily-water separators shall be installed on board and be kept in normal order. After treatment, oil content in the draining water shall be less than 15 p.p.m.

10. The vessels intending to drain engine room bilge water which is not separated or has not been separated up to the above mentioned requirements, must apply for oil collecting boat by displaying "L6" flags in daytime and all-round lights (white, red, green) in a vertical line at night.

11. The vessels intending to pump out ballast water and/or washing water must apply to the Harbour Superintendency Administration for permission at least 12 hours in advance, no such pumping shall be allowed without permission.

12. The vessels replenishing bunkers or loading oil must comply with the following requirements:

(a) 12 hours' notice shall be given to the Harbour Superintendency Administration prior to bunkering. Bunkering operations shall, whenever practicable, be scheduled during daylight hours.

(b) Before bunkering, all scuppers and water drainage pipes on weather deck must be properly plugged.

(c) The oil transfer pipes on board must be carefully connected with the hoses of the bunkering vessels, and oil collectors must be placed under the transfer pipes' connection.

(d) There must be oil-collecting containers placed under the air pipe's outlets (goose-necks).

(e) During bunkering or loading oil, there must be an adequate number of persons on duty, constantly checking the ullage of the tanks, accurately calculating the oil quantity and when a tank is nearly filled with oil, signalling in time to reduce the rate of bunkering or oil loading speed, and opening or closing the proper valves so as to guard against any oil spilling.

(f) In case of an oil spill, effective measures must be immediately taken to prevent the oil from dispersing, and in the meantime a report containing the time and date of the spill and reason thereof as well as the quantity of spilling must be submitted to The Harbour Superintendency Administration without delay.

13. Any tanker carrying 2,000 or more tons of cargo shall have a valid Certificate of Insurance or Other Financial Security in respect of Civil Liability for Oil Pollution Damage. Or a Certificate of Credit for Civil Liability for Oil Pollution Damage or furnish a financial security.

14. The vessels navigating in this harbour may use their VHF telephones for intership navigation communication, Channel 6 is designated for the purpose.

15. The vessels under fumigation in assigned anchorage shall take strict safety measures and exhibit appropriate signals prescribed by the Harbour Superintendency Administration.

16. Tankers calling at this port shall apply for the Certificates of Stockpiling of the Oil Boat and Materials at Deposit Spot from the Harbour Superintendency Administration.

17. The vessels violating the above mentioned regulations shall, according to the case, be subjected to warnings, fines or other punishments.

The Dalian Frontier Defence Inspection Station:

1. When going ashore, crew members and passengers have to observe all laws and regulations of the Chinese Government.

2. When a foreign vessel is entering or leaving the port, crew members and passengers on board shall present their passports or other identity cards to the Frontier Defence Inspection Authorities for inspection.

3. Foreign crew members and their dependents or passengers in transit intending to go ashore shall apply, through Master, to the Frontier Defence Inspection Station and the local visa-issuing authorities for landing permits and visas respectively. Only by the abovementioned certificates can they go ashore, while Chinese crew members and their dependents with their valid identity cards with photos, which sufficiently certify their nationality – Chinese – can go ashore.

4. Foreign crew members go on board each other's vessels in the same port using their valid passports or other identity cards and their landing permits, while Chinese crew members with their valid identity cards.

5. On embarking or disembarking, crew members and passengers shall present their identification to the inspectors of the Frontier Defence Inspection Station for inspection.

6. The time limit for landing is from sunrise to 2400 hrs. (local) of each day.

7. The area limit for landing is subject to that confined by the local people's government at the place where the port is at which the vessel calls.

8. Crew members having the necessity of lodging ashore, travelling beyond the port area at which the vessel stays, leaving China therefrom, or exiting by a ship he doesn't serve, the Master shall report the case, whichever it may be, to the Frontier Defence Inspection Station and crew member himself shall go through with all necessary formalities in compliance with the regulations concerned. Only after the certificates and visa are granted and submitted to the Frontier Defence Inspection Station for inspection, can he be permitted to leave his ship.

9. Those (crew members and passengers) who break the abovementioned rules shall be criticised or punished with a warning, a fine, a statement or signed repentance, or going ashore prohibited subject to the seriousness of their case. Those who violate the criminal law of China shall be brought to justice by the Public Security Authorities according to the Chinese law.

The Dalian Customs:

(1) Carrying, into or out of the country, of the national currency of the People's Republic of China is prohibited.

(2) Shipmasters and seamen in possession of Chinese national currency obtained by exchanging of gold, silver or any kind of foreign currencies should carefully keep the bank's exchange memo for Customs scrutiny.

(3) All articles brought ashore or taken aboard ship by Shipmasters or seamen should be reported to the Customs Officers on duty for permission. Selling of articles brought ashore is strictly forbidden.

(4) Customs seals affixed to any place on the ship should not be tampered with.

(5) All unmanifested cargo or parcels carried on the ship should be declared to the Customs by the Shipmaster while performing formalities for ship's entry.

(6) Ships sailing between Chinese ports must not deviate from their course and proceed abroad without Customs approval. Prior permission must first be obtained if condition necessitates.

The Dalian Quarantine Service:

(1) While in port if a case or a suspected case of any quarantinable disease, or any death not from an accident trauma is found on board, the Master (or the responsible person on duty) shall at once report the case to the Quarantine Service, so as to have a temporary quarantine effected.

(2) While in port the Master of the vessel shall be responsible for carrying out the following:

1. Effective rat guards or other means against rats shall be properly placed on all mooring ropes.
2. When a gangway or gangplank is used, it is to be illuminated with strong electric lights at night.
3. When rats are found dead or rodents are caught on board, a report shall be made to the Quarantine Service for examination.
4. When flies, mosquitoes or other disease-spreading insects are found on board, necessary measures shall be taken by ship's personnel to kill them.

(3) The garbage on board must be kept in a garbage drum or container and covered tightly. Under the direction of Pratique the garbage and ballast water on board controlled by the Quarantine Service shall not be moved away or pumped out in port unless permission is granted by the Quarantine Service. If the Master of the vessel requests to do so, a report must be made to the Quarantine Service.

(4) Derat or Derat Exemption Certificate is valid, within only 6 months from the issued date; if not valid or is going to expire, the vessel should have the application for the inspection forwarded in time to the Quarantine Service.

Note 1. In the absence of surgeon the Master shall regard the following symptoms as grounds for suspecting the existence of infectious diseases:

High fever or fever persisting for several days, or attended with glandular swelling; any acute skin rash or eruption with or without fever; severe diarrhoea and vomiting,; jaundice accompanied with fever.

2. The signal call for a doctor

A "W" flag to be hoisted in the daytime and 3 lamps: White, Red and White to be hoisted perpendicularly at night signify that a sick man having any of the abovementioned symptoms is on board.

	Lat. 38° 55′ 00″ N.	Long. 121° 59′ 00″ E.
	Lat. 38° 56′ 48″ N.	Long. 121° 59′ 00″ E.
	Lat. 38° 56′ 48″ N.	Long. 122° 02′ 00″ E.
	Lat. 38° 55′ 00″ N.	Long. 122° 02′ 00″ E.

TRAFFIC SEPARATION SCHEME: *Traffic Separation Scheme of Da San Shan Channel, Port of Dalian:*

1. For the purpose of strengthening the traffic control of this port, so as to ensure the safety of navigation, all Chinese and foreign vessels passing through Da San Shan Channel shall comply with this Traffic Separation Scheme.

2. A Separation Zone and a Separation Line are established in Da San Shan Channel.

The Separation Zone, 0.3 nautical miles wide, is centred upon the following geographical positions:

(a) Lat. 38° 51′ 00″ N., Long. 121° 46′ 12″ E.
(b) Lat. 38° 54′ 24″ N., Long. 121° 46′ 12″ E.

The Separation Line connects the following geographical positions:

(c) Lat. 38° 55′ 00″ N., Long. 121° 46′ 12″ E.
(d) Lat. 38° 57′ 00″ N., Long. 121° 46′ 12″ E.

3. To both sides of the Separation Zone and Separation Line are Traffic Lanes for vessels of 20 m. or more in length, outside the Traffic Lanes are Inshore Traffic Zones for vessels of less than 20 m. in length.

The lines connecting the following geographical positions are boundaries between the Separation Lanes and the Inshore Traffic Zones:

A. The East Boundary:

(e) Lat. 38° 51′ 00″ N., Long. 121° 48′ 30″ E.
(f) Lat. 38° 54′ 24″ N., Long. 121° 48′ 00″ E.

B. The West Boundary:

(g) Lat. 38° 54′ 24″ N., Long. 121° 44′ 00″ E.
(h) Lat. 38° 52′ 57″ N., Long. 121° 44′ 00″ E.
(i) Lat. 38° 51′ 00″ N., Long. 121° 43′ 00″ E.

4. A Bifurcation-Junction Buoy "H1" is located at the North end of the Separation Zone (Lat. 38° 54′ 24″ N., Long. 121° 46′ 12″ E., fitted with a fog siren and a radar reflector). The Northern part of the semi-circle made by a 0.6 nautical mile radius from the marking buoy "H1" is a Precautionary Area. Vessels shall keep a proper lookout and take particular care while crossing/meeting with other vessels when navigating within this area.

5. Vessels shall keep their VHF radiotelephone in working order as soon as they enter Da San Shan Channel and report the fact to Dalian Harbour Superintendency Administration and keep in communication throughout the passage.

6. Vessels passing through Da San Shan Channel, shall proceed in the appropriate traffic lane in the general direction of the traffic flow and shall not enter or cross the Separation Zone. In case a vessel trying to avoid immediate danger or being forced to enter or cross the separation zone or separation line, she shall return to the original traffic lane and navigate in it as soon as possible, so as to avoid interference with the safety of navigation of other vessels.

7. Vessels shall normally enter or leave a traffic lane at its terminals; if entering or leaving the lane from its boundary side lines, they shall do so at as small an inclined angle to the general direction of the traffic flow as practicable.

8. Vessels entering harbour and proceeding to Gan Jing Zi or Xiang Lu Jiao Wharves, shall navigate in the appropriate traffic lane in the general direction of the traffic flow and turn into Gan Jing Zi Channel when near to the "H2" Light Buoy (Lat. 38° 57′ 21″ N., Long. 121° 46′ 12″ E.). Vessels departing from the above mentioned wharves shall also turn near to the "H2" Light Buoy and navigate in the appropriate lane along the general direction of the traffic flow.

9. Vessels directly entering the main port or Si Er Gou District or the Quarantine Anchorage West of the Separation Line, shall in day-time hoist a "Substitute 1" flag and a "W" flag vertically and shall at night show vertically three all-round lights of white, red and red in colour.

10. Vessels of less than 20 m. in length, when proceeding to or departing from Dalian Bay, shall navigate along the East Inshore Traffic Zone, while those proceeding to or departing from Hei Zui Zi or Xiang Lu Jiao, shall navigate along the West Inshore Traffic Zone. Those navigating along the traffic lane should act according to the requirements of this Scheme.

11. Vessels passing through Da San Shan Channel, while observing the articles of this Scheme, shall also strictly observe the International Regulations for Preventing Collision at Sea.

12. Anchoring, trawling and underwater planting in the water area within the limit of this Scheme and surrounding water area near its South end, are strictly prohibited.

13. Any vessel violating the requirements contained in this Scheme shall be punished with warning, fine or revocation of certificates according to the severity of the violation by Dalian Harbour Superintendency Administration.

14. *The application of this Scheme is to commence from February 1, 1984.* The Rules to be observed by merchant vessels passing through the Separation Scheme in Da San Shan Channel promulgated by Dalian Harbour Superintendency Administration on October 10, 1978 shall then be repealed simultaneously.

The Bureau of Harbour Superintendency of the
People's Republic of China, October 26, 1983.

DEVELOPMENTS: Container Berth: Length 270 m. under construction. Grain Terminal: To be built for vessels of 80,000 d.w.t. 2×750 t.p.h. shiploaders to be installed.

SHIPMASTER'S REPORT: 1978.

General:

Rule governing the prohibited passage through the inner area of the Encounter Rock:

Vessels passing through the Laotiehshan Channel as well as entering or leaving the port of Dairen besides observing the rules relating to the Laotiehshan Channel, must keep their course within the area from Encounter Rock (Lat. 38° 34.2′ N., Long. 121° 38.12′ E.) to the South outer joining line of Laotiehshan Prohibited Area and the North Encounter Rock to the East of meridian line of continent. Failing which, vessels to be held fully responsible for all consequences.

With exception of Laotiehshan and Changshan Channel of Pohai Gulf, no vessel is allowed to pass through any channel of Miaotao group islands.

Harbour regulations required to be observed by merchant vessels calling at Dairen Port.

When entering or leaving Dairen Harbour vessels must pass through channel between Daisansantao and Kwangpotsue. Vessels are not allowed to navigate within area 2.5 miles radius from Daisansantao Lighthouse, position Lat. 38° 51′ 50″ N., Long. 121° 49′ 29″ E. and 1 mile radius from Kwangpotsue Lighthouse position Lat. 38° 54′ 14″ N., Long. 121° 42′ 54″ E.

After entering joining line between Daisansantao and Kwangpotsue Lighthouses, radar, radio transmitter, radio-telephone, radio direction-finder, echo sounder, range-finder, sextant, firearms, flare signals and rockets of all kind are prohibited to be used.

In case danger occurs or vessel has to send any emergency message, the above-mentioned apparatus may be used, but vessels must report to Harbour Superintendency Administration immediately after using.

Vessels must wait for quarantine and Pilot within area as follows: Lat. 38° 57′ 00″ N., Long. 121° 41′ 00″ E. – Lat. 38° 57′ 00″ N., Long. 121° 46′ 00″ E. – Lat. 38° 56′ 18″ N., Long. 121° 41′ 00″E. – Lat. 38° 55′ 00″ N., Long. 121° 46′ 00″ E. In case this area is occupied, surrounding area may be used.

The List of Specified Articles (money, gold and silver, but not cigarettes and spirits) is taken from port to port. All forms to be Chinese.

General Information: Dairen (Ta-lien) – B.A. Chart No. 3694:

In the fairway the turning basin and along Pier No. 4 East-side, at least 38 ft. of water. Length of the pier about 1,500 ft. Several berths for vessels up to 34 ft.

It was not possible to obtain information on the cranes, and they were not marked with SWL, so the following figures are only estimated:

Pier No. 1 W.-side =4 cranes about 5 tons.
Pier No. 2 E.-side =3 cranes about 3 tons.
Pier No. 2 W.-side =4 cranes about 4 tons.
2 cranes about 10 tons.
Pier No. 3 E.-side =2 cranes about 3 tons.
Pier No. 3 W.-side =4 cranes about 2 tons.
6 cranes about 10 tons.
Pier No. 4 E.-side =6 cranes about 6 tons.
Pier No. 4 W.-side =3 cranes about 6 tons.

One floating crane with 100 tons capacity.

About 8 tugs, 600 – 1,000 h.p. tugs are also used as pilot boat and to bring information and boarding party out to vessels at the anchorage.

One fresh water barge.

Three oil-barges, about 150, 500 and 800 tons.

Medium size shipyard, building vessels up to about 25,000 tons.

SHIPMASTER'S REPORT: September 1979.

Dairen (Ta-Lien) Dry Cargo Harbour:

1. Maximum size and d.w.t.: No restriction.

Draft (Charter Party) 34 ft., but verbally assured to be 35 ft. Probably 35 ft. berthing on rising tide, and discharging to remain, "always afloat" before the next LW.

No port handbook available.

2. (1) ETA's as per Charter Party and Owner's instructions.

(2) Radio Pratique not available.

(3) Pilotage. *(a)* Contact through Dairen Port Radio on Channel 16 VHF who will pass message. The Pilots are not in direct VHF communication with the ships, but do have walkie/talkie communication with the tugs.

(b) Pilots board from a tug at the anchorage.

(c) Pilotage is compulsory from the anchorage, and for shifting in the port.

(d) Pilots are on a three shift system and available at any time. Berthing, shifting, and/or sailing may be carried out at any hour of the day or night. Estimated berthing/shifting times were not updated, and were considerably earlier than initially estimated.

(4) On arrival, anchor without Pilot in the Quarantine Anchorage as shown on BA Chart No. 3694. Straightforward approach, without hazards into spacious anchorage with good holding ground. If quarantine anchorage is busy, anchor as close as may be practical to the North-Eastwards.

(5) Lighthouses operating normally, and no special hazards noted.

(6) Do not approach within 1 mile radius of Huang-Pai Tsui Light in position: Lat. 38° 51.9′ N., Long. 121° 42.8′ E., or within 2.5 miles from Nan-San-Shan Tao Island South Light in position: Lat. 38° 51.9′ N., Long. 121° 49.37′ E., or within the area to the North-Westwards of Encounter Rock in position: Lat. 38° 34.5′ N., Long. 121° 38.5′ E. which remain as designated prohibited areas.

(7) *(a)* Advise Dairen Harbour Radio on VHF Channel 16, your approach time and time and position of anchoring. Such advice is passed to Dairen Harbour Office.

(b) Telephone communication with the Agents office can be arranged through Dairen Harbour Radio. Calling on Channel 16, working on Channel 9.

(c) At anchor, whilst waiting a berth, monitor Dairen Harbour Radio on Channel 16, especially at 1100 and 1600 hrs. when Agents pass berthing instructions and other information on a schedule basis. The ship may contact the Agents by day or night at any time through Dairen Harbour Radio on Channel 16, whether anchored or alongside. The Agents office is open 24 hours a day.

(d) On no account is the main radio transmitter to be used after entering the harbour limits, and until well clear of the port after sailing. This rule is one of the few remaining from previous times, but must be strictly observed.

3. There are two modern tugs of 3,000 h.p., three tugs of 2,000 h.p., and three tugs of 1,600 h.p., in addition to the numerous smaller tugs. The two modern tugs use their own lines which are very heavy and difficult to handle. Other tugs use lighter lines, or ship's lines, without difficulty. Tugs are generally well handled and controlled. Two tugs used at each operation.

4. *Berths:* There are three main piers, each about 600 m. long, (Grain Silo on No. 1 Pier) with wharfage each side, and at the ends. All are well supplied with 5 tons SWL cranes, and have shed storage centrally. Also other berths available. There was no reliable information regarding the depth of water alongside at the other berths, but it would appear that about three ships of around 34 ft. draft could be accommodated simultaneously. There are regular ferry services between Dairen/Japan and Dairen/Shanghai, in addition to numerous other ferries which appear to be Chinese coastal traffic.

5. *Repairs:* Agents advice verbally was that hull, engine, and electrical repairs could be carried out, including winding of electric motors. Underwater cleaning of the hull can also be arranged.

6. *(a)* Provisions are mainly good, and reasonably priced. Worth purchasing most items when found available.

(b) Fresh water was available and good. Said to be available from most wharves, but we were supplied from a waterboat, as we were not allowed to take the supply from the wharf during discharge of grain.

(c) Fuel oils available. Diesel oil shipped was of good quality.

(d) Lubricating oil doubtful, but perhaps available in an emergency as this is a very busy and important shipping port.

(e) Derat Exemption Certificate renewed.

(f) Good and efficient medical facilities.

(g) Agent advised that there were no consular services.

(h) Mail service to Japan said to take up to one week, and to Europe or U.S.A. about 10–14 days. We received mail posted in Japan 6 days previously, but this mail might have arrived earlier as it was only delivered on ship's arrival.

7. Cargo consisted of 30,000 metric tons of American soft red Winter wheat. Discharging was effected by grabs into railway wagons, although we were berthed at the grain silo. Appeared to be no facilities for any other type of discharge.

Four gangs were employed round the clock, on shift system. Highest discharging rate 8,000, and lowest 500 m/tons per day. The reason for the fluctuations was the erratic availability of railway wagons. Grab drivers were not very skilled at clearing the hold bottoms, and time was lost there. No bulldozers were used, and the only mechanical aid was a grain trimmer which was used to transfer the grain from the wings into the centre of the hatches, but this was not very effective, and eventually the bottoms were all cleared using savealls on nets, and shovelling up the grain.

8. Rescue and Distress organisation not located.

9. As at this time, written rules and regulations are not available for either National or local conditions, but the "Old Regulations" have definitely been dropped.

Documentation for Arrival:

Chinese forms only, are acceptable, except for the Crew Lists which were made on standard IMO forms, and articles restricted for use in port. (Bonded and Stewards store lists).

(1) Report of entry for foreign-going ship. (Original and one copy).
(2) Crew Lists. (Four copies).
(3) Report of articles restricted for use in port. (One copy).
(4) Import Manifest.
(5) List of Specified Articles, Foreign Currency, Gold, Silver, as belonging to the ship and/or members of the crew (1 copy).
(6) Maritime Declaration of Health. (One copy).

Papers submitted for examination:

Ship's Register.
Tonnage Certificate. (Not examined).
Loadline Certificate. (Not examined).
Derat or Derat Exemption Certificate.
Tonnage Tax Certificates. (Not available in our case).

The boarding party consisted of two each Port Health, Frontier Guards, Customs, Agents, and Harbour Office officials. Chinese forms "Report of Entry" and "Maritime Health Declaration" completed during initial boarding, but the List of Specified articles was completed and handed to the Customs official on berthing alongside. Money and shore passes were received on berthing alongside, but mail was delivered to the ship at the anchorage.

Frontier guard stationed at the foot of the gangway. Shore passes, Passports or Seaman's Books examined on every occasion of going ashore or coming aboard. A further checkpoint existed at the dock gate where Passports only were sighted on leaving and returning to the dock area.

Foreign currency could be freely exchanged at the Seaman's Club or the Friendship Store. Mandatory to return all Chinese currency prior to leaving the port.

Documents required before departure:

Report of Clearance. (One copy).

Crew Lists, (4 copies, but only required in the case of crew replacements, stating the reason therefore. If no changes, no crew lists required.)

Export Manifest. (One copy, but 2 if carrying dangerous cargo).

List of Cash returned. (5 copies. Two to the ship. Two to the Agent, and one to the Customs).

All shore passes to be returned without fail. (Counted and Examined).

All Seaman's Books/Passports (scanned and counted).

10. Very much relaxed regulations now in force. There was no thorough search and inspection of the ship and crew on arrival and departure, as previously. Regulations appear to have been revised about June 1979.

The bonded stores were not sealed up, and there was no restriction on usage other than that all items had to remain on board.

The old rules regarding the use of radar and other electronic navigational aids, have been lifted, and there is now no restriction whatsoever on their use. The prohibition on fishing by crew whilst at anchor, has also been lifted, as has the prohibition of chipping overside.

The only restriction imposed was regarding the use of the main Radio Transmitter, which was not to be operated whilst the ship was in the Harbour Area.

Oil and dirty ballast pollution regulations, are of course to be strictly observed at all times.

The grain cargo was thoroughly inspected for damage from sea water or other, and for insect infestation, prior to berthing. The inspection was carried out by 4 Chinese Government Agricultural Officials.

The Agent advised verbally that if the ship arrived at 34.5 ft. draft, it could be accommodated, and even up to 35 ft. draft maximum. However, in such case, it would probably mean that vessel would berth on a half flood tide, so that with a quick initial discharge into waiting rail transport, it would thus be possible to remain "always afloat" at the next LW.

The Agents are both willing and helpful.

Inspection was carried out for renewal of the Derat Exemption Certificate, and the officials (three) advised that the inspection was completed and satisfactory, and that the new Certificate would be delivered to the ship through the Agents.

It is prudent to call the Agents by telephone in good time prior to completion of discharge and update the estimated completion time, so that they may advise the officials, Pilots and tugs as necessary.

SHIPMASTER'S REPORT: March 1980.

Berth: Oil Terminal No. 1 Berth (Lat. 38° 58′ 30″ N., Long. 121° 54′ 10″ E.).

Chart: B.A. 1798.

Draft: Departure draft, 38 ft. 4 in., fore and aft.

Approach: The approach to the Inspection/Pilot Boarding Anchorage is clear of obstructions but large concentrations of fishing vessels were encountered off Shantung Promontory.

Anchorage: S.E. of Hsien Chiao Light (Lat. 38° 57′ 45″ N., Long. 121° 59′ 05″ E.) and bounded by Positions:

Lat. 38° 55′ 42″ N., Long. 121° 59′ 00″ E.
Lat. 38° 56′ 48″ N., Long. 121° 59′ 00″ E.
Lat. 38° 56′ 48″ N., Long. 122° 02′ 00″ E.
Lat. 38° 55′ 42″ N., Long. 122° 02′ 00″ E.

Depth 15/18 fathoms.

Entry Inspection: Carried out at the Anchorage, during daylight hours, by 8 officials representing Customs, Immigration, Harbour Authority and Agency. The entry formalities were very easy and a Bonded Stores List was not required and the Bond was not sealed. The Immigration Officer checked all passports but a Crew muster was not required. After pratique has been granted and other entry formalities completed, 2 Immigration Guards stay on board until the vessel berths, and during this time they make out Crew Shore passes from Passports. After berthing, the Agent's representative lives on board during the vessel's stay and is very obliging and helpful.

Berth: A modern (1977) concrete dolphin structure with tower/elevator gangway and winches on all dolphins, 420 m. long, direction 149°/329°.

No. 1 (outside)	Max. size:	100,000 d.w.t.
	Depth:	17 m.
	Max. draft:	15 m.
	Max. length:	360 m. O.A.
	Loading arms:	4×12 in. Chicksans
	Max. load rate:	10,000 t.p.h.
No. 2 (inside)	Max. size:	50,000 d.w.t.
	Depth:	14 m.
	Max. draft:	12 m.
	Max. length:	230 m.

Fresh water is available on the berths but bunkers are supplied by barge from Dairen old port.

The berths are connected to the shore by a cantilever bridge approximately 0.5 miles long and vehicles are not permitted over the bridge.

There is a dirty ballast reception facility with a maximum rate of 3,000 t.p.h.

Berthing/Unberthing: Carried out at any time with 3 Pilots, 2 large and 1 medium tug for berthing and 2 Pilots and 2 large tugs for unberthing. Berthing at No. 1 Berth is always port side to and is straightforward with plenty of men for handling moorings. Starboard anchor is let go about 100 ft. off the berth. Pilots advise there can be moderate swell with E./S.E. winds.

On departure the vessel is swung to starboard off the berth by 2 tugs and the Pilots disembark shortly after the swing is completed. The Red Flashing Buoy in Lat. 38° 58′ 20″ N., Long. 121° 55′ 00″ E. is left to port when berthing and to starboard on sailing.

Communications: Agents: China Ocean Shipping Agency, Cable: Penavico, Dairen, require following message 7 days, or after sailing from previous port; name, call sign, nationality, ETA, draft fore and aft, cargo quantity to be loaded, crew's nationality and number, departure port and destination after Dairen.

72 hours: ETA, clean and dirty ballast to discharge, cash required.
48, 24 and 8 hours: ETA.
8/12 hours: ETA to Harbour Master Dairen.
8/12 hours: ETA, crew health condition to Port Health Dairen.

Dairen Port Radio can be contacted on VHF Channel 16 and will transfer call to Agents on Channel 9.

Agent: China Ocean Shipping Agency, will provide cash advance but any unused currency must be returned to Agent before departure. Rate of exchange March 1980 – 3.4 Yuan = £1.00. Foreign currency can be exchanged ashore. Agents will provide mini-bus/taxis for crew travel to Dairen Town which is about one hour's drive. After completion of loading there is a delay of 3 to 5 hours before documents are brought on board for signature. Immigration require all shore passes to be returned and Customs wish to sight Tonnage Dues Certificate provided on arrival. There is an armed guard stationed at the shore end of the gangway at all times, and he inspects shore passes and Passports when leaving and returning to the vessel.

Cargo: Taching Crude Oil. A.P.I.: 32 – 33, Pour Point: 28° – 33°C, Sulphur: 0.1%, Load Temp: 40° – 45°C.

Harbour Authority: As vessel's first call, authorities visited after arrival alongside and checked and inspected all safety and fire-fighting equipment, and required details of engine room bilge and sewage disposal whilst in port. Also checked Oil Record Book. They were a little concerned at direct mooring with wires and would perhaps be better to have rope pendants on mooring wires. Normal tanker port restrictions apply regarding pollution avoidance from oil, garbage and sewage, also no fishing is allowed either at anchorage or alongside. When alongside shore labour empty garbage receptacles once per day.

Chandler: Dairen Ocean Supply Corporation have a comprehensive range of catering supplies, and limited deck and engine stores. From the price list obtained the range and price of provisions was extremely competitive. As no stores were purchased quality cannot be commented upon although the Catering Officer did visit the store in Dairen and reported that most of the articles listed in their brochure seemed to be available and of reasonable quality. Our call being in Winter season, fresh vegetables, fruits, salads, etc., were in short supply.

Chandlers Cable Address: Supco, Dairen. Telephone 26820.

SHIPMASTER'S REPORT: September, 1980.

This is a brief report on port information obtained when vessel (42,764 g.r.t. 75,877 d.w.t.) called at Dairen, China in September, 1980 for loading Daqing Crude Oil.

Oil Terminal: Position Lat. 38° 59′ N., Long. 121° 54′ E.

Documents:

To be submitted to the Port Officials:

a)	Crew Lists (Chinese Form)	6 copies
	* Japanese crew members are required to fill in their names and address in Chinese characters	
b)	Report of entry for foreign-going ship (Chinese Form)	2 copies
c)	Maritime Declaration of Health	1 copy
d)	Import Manifest (Free Form)	1 copy
e)	List of specified articles, foreign currencies, gold, silver belonging to ship and/or member of crew (Chinese Form)	1 copy
	* Specified articles mean watch, camera, recorder and transistor radio, etc.	
f)	Vaccination List (Free Form)	1 copy
g)	Application for discharge of dirty ballast water to shore facility (Chinese Form)	1 copy
h)	Application for discharge of segregated ballast water into sea (Free Form)	1 copy
	* Store List is not required	
	* Chinese Forms are obtainable by the Agent	

To be shown to the Port Officials:

a) Ship's Register
b) Last Port Clearance
c) Derat Certificate
d) Load Line Certificate
e) Safety Equipment Certificate
f) Safety Construction Certificate
g) Safety Radiotelegraphy Certificate
h) Oil Record Book
i) Certificate of Financial Security in respect of Civil Liability for Oil Pollution Damage
j) Discharge Books, Passports and Yellow Cards

Pilotage: Compulsory for berthing and unberthing at the oil jetty. Pilot boards about 5 miles E.S.E. of the jetty.

No pilot boat, tug used.

Anchorage: Quarantine Anchorage surrounded by the following four points is established:

a) Lat. 38° 56′ 48″ N., Long. 121° 59′ 00″ E.
b) Lat. 38° 56′ 48″ N., Long. 122° 02′ 00″ E.
c) Lat. 38° 55′ 42″ N., Long. 122° 02′ 00″ E.
d) Lat. 38° 55′ 42″ N., Long. 121° 59′ 00″ E.

Nature of bottom is mud, depth of water 27 m. to 35 m.

Restrictions: Entering formalities, so-called "General Examination" made, as a general rule, during day time only by the Port Officials of Quarantine, Immigration, Customs and Harbour Superintendency Administration.

Berthing and sailing operations take place 24 hours a day with the exception that the vessel does not berth on Berth No. 2 during night time.

Berths: There are 2 tanker berths on the oil jetty with a length of about 400 m. and depth of 17 m. at Berth No. 1, 14 m. at Berth No. 2.

Max. Size:

Berth No. 1: 100,000 d.w.t., LOA approx. 260 m., max. draft 15 m.
Berth No. 2: 50,000 d.w.t., LOA about 230 m., max. draft 12 m.

Berth No. 1 is located on the offshore side of the jetty and Berth No. 2 on the inshore side.

Vessels generally berth portside alongside.

Health: Radio pratique is not available. The Master has to show the yellow cards together with a vaccination list and submit a Declaration of Health.

Radio: The Master or owner of a vessel, shall 7 days prior to vessel's arrival, submit the required forms to the Harbour Superintendency Administration through the Agent (Penavico, Dairen) for completion of entry formalities. They require:

a) Vessel's name
b) Nationality
c) ETA
d) Arrival draft
e) Quantity of cargo to be loaded at Dairen
f) Nationality and the number of the ship's personnel
g) Last port
h) Destination

The Master has also to radio to the Agent her ETA and arrival draft, 24 hours in advance of her arrival, through Dairen Radio, who is to advise the Harbour Superintendency Administration.

Furthermore, the Master is also required to advise her Agent 2 or 3 days prior to her arrival, of the quantities of the segregated water ballast and other water ballast retained on board at the time of arrival.

VHF: Dairen VHF station keeps a 24 hour listening watch on Channel 16 and is available to communicate with Agent (Penavico).

Tugs: Available. Normally 3 tugs join the vessel for berthing and 2 for unberthing.

Fresh Water: Available either from the shore or barge.

Fuel: Fuel oil and marine diesel oil are both available from barge.

Ballast: No ballast water is allowed to be discharged into the sea, except segregated ballast water.

Shore reception facilities with a capacity of 30,000 tons can receive 3,000 tons of oily ballast water per hour at a cost of 0.8 Yuan per ton.

According to the Regulations, the Authorities will allow discharge of ballast water into the sea subject to the oil content of the ballast water being less than 10 p.p.m. However, as a matter of fact, any ballast water loaded in cargo tanks is not allowed to be discharged into sea for the reason that the Master cannot give them any evidence of the oil content of the ballast water.

Therefore, there is no necessity for cleaning cargo tanks for ballasting purpose.

Customs Allowances: Ship's bonded stores are not sealed. No limitation to cigarettes or wine/spirit for use on board.

Identification Cards: Shore leave is granted from sunrise to midnight.

Shore passes are issued by the Immigration Officer.

Crew members going ashore must carry the shore passes together with their passports or discharge books.

There is a seamen's club with a Chinese restaurant and some souvenir shops. Bus service is also available between the terminal and the seamen's club.

Cargo: The crude oil shipped at this terminal is the Daqing Crude. The properties of Daqing Crude which the vessel loaded in September 1980 at this terminal were as follows:

a) API	32.84
b) Temperature of cargo loaded	41.0°C. (106.0°F)
c) Pour point	24.0° – 25.0°C (77.0°F)

Cargo heating may be required.

Loading:

Berth	Size of arm flange	Number of arm
No. 1	12 in.	5
No. 2	12 in.	3

Max. loading rate is reported to be about 7,000 t.p.h. using 3 arms.

Notice of Readiness will be accepted at the time of completion of the general examination.

Agent: China Ocean Shipping Agency, Dairen Branch (Penavico Dairen).

Provisions: Available at a low price. Ship chandler will be arranged by the Agent.

Currency: (Rate October 1st, 1980.) US$1.00 equal to 1.4377 yuan; 1,000 yen equal to 6.7064 yuan.

Some foreign currency is allowed to be exchanged for Chinese currency at seamen's club.

SHIPMASTER'S REPORT: April, 1984.

I made a port call at Dairen in April 1984 and found after anchoring without Pilot that I had made a wrong passage in the channel, switching off radar, etc. in accordance with previous regulations.

There is now no restrictions or prohibitions on using navigational aids in the harbour.

When entering the Inner Harbour Anchorage without Pilot it is important for the Master, on the first visit, to know that there is a Traffic Separation Scheme and it is sometimes congested with vessels. See "Traffic Separation Scheme".

SHIPMASTER'S REPORT: October, 1984.

Master received following telex from Dairen Agent:

"When entering Dalian Harbour you must pass through Dasanshan Channel and navigate within Right Traffic Lane of Traffic Separation Scheme.

Separation Zone, 0.3 nautical miles wide, is centred upon following geographical positions:

Lat. 38° 51′ 00″ N., Long. 121° 46′ 12″ E.
Lat. 38° 54′ 24″ N., Long. 121° 46′ 12″ E.

Separation Lane is connecting following:

Lat. 38° 55′ 00″ N., Long. 121° 46′ 12″ E.
Lat. 38° 57′ 00″ N., Long. 121° 46′ 12″ E.

and turn into Ganjingzi Channel at Light Buoy H2 (Lat. 38° 57′ 21″ N., Long. 121° 46′ 12″ E.) then enter into Quarantine Anchorage:

Lat. 38° 59′ 08″ N., Long. 121° 42′ 30″ E.,
Lat. 38° 57′ 39″ N., Long. 121° 42′ 30″ E.,
Lat. 38° 57′ 39″ N., Long. 121° 45′ 00″ E.,
Lat. 38° 59′ 08″ N., Long. 121° 45′ 00″ E.

The East Boundary Line between the Separation Lane and the Inshore Traffic Zone is:

Lat. 38° 51′ 00″ N., Long. 121° 48′ 30″ E.,
Lat. 38° 54′ 24″ N., Long. 121° 48′ 00″ E."

FUZHOU (Foochow): 26.03 N. 119.18 E.

SHIPMASTER'S REPORT: July 1985.

DOCUMENTS: Documents required are same as for other Chinese Ports. 7 copies of Notice of Readiness must be provided. Inspection party boards with Agents and all formalities are carried out promptly. Formalities include Port Health Inspection (granting of Quarantine) and Immigration and Customs clearance. 2 Police Officials remain on board throughout until vessel's departure.

PILOTAGE: At Quarantine Anchorage 2 Pilots board, and the vessel is taken 5 miles up river to either Guantou Anchorage or a few miles further up river to Minan Anchorage.

APPROACH: From 5 miles S.W. of Baiquan Liedo pass around its S.W. side and approach position Lat. 26° 06.22′ N., Long. 119° 52′ E. Then turn West to cross bar at HW (daytime only). Set course 265.5°T against Baiyun Shan leading lights. (These are visible clearly as white concrete structures on hills in daytime at least 15 miles off). On reaching Lat. 26° 05′ 37″ N., Long. 119° 41′ 40″ E. and 0.21 miles Southward of Buoy No. 3 in position Lat. 26° 05′ 49″ N., Long. 119° 41′ 42″ E. alter course to 308°T against Culudao leading lights. These leading lights are not marked on BA. Chart 2400. The forward light (white concrete structure) is on Xifengshi Point in approximate position Lat. 28° 08.2′ N. Long. 119° 38.3′ E. Thence approach Quarantine Anchorage. Whilst awaiting daylight HW vessel can anchor in position Lat. 26° 06′ 30″ N., Long. 119° 50′ 00″ E. There is no restriction on use of Radar or echo sounder.

General: Vessel must cross bars and arrive at Quarantine Anchorage marked on BA. Chart 2400. Time of arriving at Quarantine Anchorage is time of Arrival at the Port. Pilots usually do not reply when called on VHF, however, Foochow Radio can be called on Channel 16 at any time and asked to convey message to Pilots. Foochow Radio will also make VHF contact with Penavico. Thus for any assistance Foochow Radio on VHF Channel 16 can be contacted at any time.

Authorities do not board at this anchorage, since it is far from Ma Wei. Agents main Office is situated in Fuzhou City but their full Operations Department is stationed in Ma Wei within the dock area. From Quarantine Anchorage vessel is Piloted to either Guantou or Minan waiting anchorage, about 12 miles and 6 miles respectively from Ma Wei. The Arrival formalities are carried out at these anchorages.

RESTRICTIONS: Navigation and all movements during daylight HW only. Max. draft 7.5 m. for going to Ma Wei. No navigation is possible beyond Ma Wei. If vessel is drawing more than 7.5 m. she can be lightened at anchorage, but this will be difficult and cause delays due to shortage of barges, etc. In any case maximum draft permissible is 8.00 m. However it is advisable not to load to more than 7.5 m. if complications are to be avoided. Vessels of more than 155 m. length may find difficulties at anchorages. Ideally vessels of 10,000 tons gross are suitable.

RADIO: 48 hours and 24 hours Notices of Arrival must be sent via Fuzhou Radio. Call sign "XSL". Frequencies: MF-430 kHz all day, and HF-4343 kHz (1800 hrs. – 0600 hrs. local time) or 8598 kHz (0600 hrs. – 1800 hrs. local time) to "PENAVICO Fuzhou". All foreign vessels are handled by Penavico. They will reply with radio message giving tide times and arrival instructions which are similar to those found in BA. Pilot.

Prohibited area for Navigation is bounded by Beipiao Peninsular Lat. 26° 21′ N., Long. 119° 55′ E.; Mazuleidao Lat. 26° 09′ N., Long. 119° 55′ E.; Baiquan Liedo Lat. 25° 57′ N., Long. 119° 58′ E. and Tongyindao Lat. 26° 22′ N., Long. 120° 30′ E.

BERTHING: Four ships can be berthed at Ma Wei. Berth No. 1 is suitable for ships drawing 7.5 m., other berths can accommodate vessels drawing 7.00 m. About 5 to 6 vessels can work at anchorages off Ma Wei. Discharge rate about 1,000 tons per day (Bags/about 4 gangs).

Cargo Gear: There are 4 cranes of about 5 tons capacity, one for each berth. Cargo work is mostly carried out with ship's derricks. There are several new mobile cranes, and new fork lifts capable of handling 20 ton containers. Cargo is discharged on to trailers and taken to storage sites or directly to railway wagons.

STEVEDORES: State controlled. Work is continuous in three shifts daily.

MEDICAL: Hospitals situated very close to dock area with full facilities. Inoculations can be carried out.

FRESH WATER: Laid on at wharf. Rate 50 t.p.h. Due to waiting period vessels must arrive with tanks full, and water must be rationed during waiting period. With difficulty water is supplied at anchorages by barge (capacity 60 tons.)

FUEL: All grades available.

DENSITY: 1000 at LW. 1015 at HW.

TIME: GMT plus 8 hours.

DEVELOPMENTS: Large areas are being reclaimed and long term plans exist to increase berthing facilities. Extensive dredging is also in progress.

DELAYS: Vessels may have to wait for berths for long periods. Sometimes 30 to 40 days.

GENERAL: *Provisions:* Reasonable amounts of fresh provisions are available at very good prices. However dairy products like butter and frozen provisions not available. Vegetables in limited variety. Fresh meat, poultry and fish are plentiful.

Laundry: Local Seamen's Club handles laundry. Delivery after about 10 days. Service is unreliable.

Agents: China Ocean Shipping Agency, Jiesang Road (West), Fuzhou. Cable Address: PENAVICO FUZHOU. Telex: 92137 FAHN CN.

HUANGPU (Whampoa): 23.05 N. 113.25 E.

Also see "General" before first port.

SHIPMASTER'S REPORT: July 1981 and October 1984.

Item Nos. 6 – 9 amended by report received in October 1984.

Southern Approaches to Huangpu:

1. Vessels approaching from the South, bound for Canton and Whampoa should steer a course of 005°, so as to arrive approximately 5 miles West of Wen-Wei Chou (Gap Rock). An occasional light is exhibited from Gap Rock Lighthouse, but more often this light does not function and therefore should not be relied upon.

2. On approaching Gap Rock the first land mark that appeared on the horizon was the group of Great Ladrone Islands at a distance of approximately 20 miles on a clear afternoon. On closing Great Ladrone to a distance of about 10 miles, the group of islets to the East of Gap Rock were seen. Closing further to a range of 8 miles only, the Gap Rock was seen and identified.

3. The Gap Rock Islet is rugged in appearance and devoid of any vegetation. The lighthouse is located at the centre of the islet and differs slightly from the illustration in the Pilot, in that the dome-like structure is non-existent. The structure is slightly inclined and looks neglected.

4. The light on the Chuk Wan Shan Island is prominent and was visible at a distance of approximately 15 miles and is located at the summit. It is whitish and dome-like in appearance.

5. On identifying Gap Rock, vessel should proceed on the recommended course of 013°, keeping clear of the wreck marked 3 miles (approximately) West of Gap Rock and follow the recommended track so as to arrive at the Quarantine Anchorage demarcated West of La Sa Wei Island. It was observed that most ships prefer to anchor closer to the Ma Wan Light due to deeper waters. The anchorage off La Sa Wei affords good holding ground and shelter from all types of weather.

6. Vessels remain at this Quarantine Anchorage for a considerable length of time and all ships requirements, Pilot, berthing instructions, movements, etc., will have to be sought from the Agents "Penavico" through Canton Radio on 8490 MHz.

7. Loaded vessels may have to anchor at the Bar before entering the Chuen Pi Channel at Lat. 22° 45′ N., 113° 39′ E. (B.A. 1741) to await the next tide. Once ready for heaving anchor and swinging the vessel's bow into port direction, Pilots ask for the lights "Red" over "White" to be switched on for turning and to switch them off again after completing the turning manoeuvre.

Pilots listen on VHF Channels 9 and 16 and vessels can try to contact them once approaching La-Sa-Wei Quarantine Anchorage but vessels have to be patient as not many of shore personnel appear to understand English and they will not reply unless there is a Pilot standing by to attend.

8. The usual muster of crew is not carried out. However, a very thorough inspection is carried out by Immigration at Pratt Point, about 3.5 miles downstream (B.A. 1742). At that position the vessel drops anchor and awaits Immigration, who once on board order all the crew into one messroom, leaving wardrobes, lockers and cabin doors open. Then 4 men of the crew will be chosen, 1 to go with 1 soldier through the accommodation, 1 to go with another through the engine room and 2 others to accompany 2 other soldiers through the cargo holds. This procedure takes about 1 hour. Only after this inspection does Master obtain his clearance and is able to sail.

9. Huangpu Port (Whampoa) has been extended enormously. There are pier facilities for at least 6 medium size general cargo ships and at appprox. position Lat. 23° 03.25′ N., Long. 113° 28.5′ E. near Shuang Kang (B.A. 1742) there exists a new container and Ro/Ro pier for 3 ships.

The cargo of my vessel (ST 14 of 11,363 tonnes) of bagged urea was discharged in 62 hours after working with up to 9 gangs (5 hatches) day and night.

10. The Seaman's Club Representatives board the vessel soon after arrival and will arrange any sight seeing tours at nominal cost. Seaman's Club provides good meals and club facilities. Seaman's Store and the Friendship Stores afford good shopping at reduced prices. Ship provisions and fresh vegetables are available in abundance.

11. Vessels leaving Whampoa, Northbound will have to follow the same route unless prior approval is sought from the Agents to go through the Lema Channel.

NINGBO (Beilun): 29.52 N. 121.31 E. (See Plan)

VHF: Pilot on Channels 16 and 9. Agent on Channel 12, contact through Ningbo Harbour Radio on Channel 16.

BERTHING: Principal Wharves:

	Name	Location	Construction	Length (m.)	Width (m.)	Depth (m.)	Capacity (t.)
Work Area No. 1	Chezhan Lu	North bank of the river	Steel concrete pontoon	50.0 46.5	8.5	3.8	3,000
	Pier No. 1	North bank of the river	Steel concrete pontoon	40.0 40.0	9.0	3.8	3,000
	Pier No. 2	North bank of the river	Steel concrete pontoon	49.0	9.0	3.8	1,000

CRANES: *Work Area No. 3:* 2 gantry cranes. (Berth Nos. 1 – 9). 2 tower cranes (Berth No. 12). 2×3 ton tower cranes. (Berth Nos. 13 – 16).

Work Area No. 4: 10 ton crane and loading machines at coal pier.

BULK HANDLING FACILITIES: 2 unloaders × 2,100 t.p.h. each. 2 loaders × 4,200 t.p.h. each.

TANKERS: See "Berthing".

FRESH WATER: Available.

TIME: GMT plus 8 hours. GMT plus 9 hours in Summer.

SHIPMASTER'S REPORT: May, 1983.

Beilun

Port Limits: The port is part of Ningbo Port Complex and situated at approx. Lat. 29° 55.7′ N., Long. 121° 52.6′ E. Port consists of a pier accommodating 1 ship of 100,000 d.w.t. and a pier accommodating 2 ships of 25,000 d.w.t. – See B.A. Chart 1429.

Documents:

12 copies Crew List (preferably Chinese forms).
1 copy Customs List (Chinese form mandatory).
2 copies Health Declaration (Chinese forms mandatory).
4 copies List of Narcotics (free form).
2 copies Master's Report (Chinese forms mandatory).
12 copies Passenger List (free form).
4 copies Arms and Munitions List (free form).

Regarding Customs List: Following to be declared: tobacco, spirits, watches, cameras, radios, tape-recorders, T.V. sets, video recorders. Gold, silver jewels, foreign currency. All electronic equipment and cameras to be named with brand, number, etc.

Pilotage: Following received by cable from agents before arrival: "From outer sea steer to position Lat. 30° 10′ 15″ N., Long. 123° 03′ 20″ E. Then, course 218° to reach position Lat. 29° 45′ 00″ N., Long. 122° 40′ 36″ E. at 8.3 miles from Tung Ting Tae L/H bearing 326°. Then course 270° steering directly to pilot station between Lat. 29° 44′ 30″ N., – 29° 46′ 00″ N. – Long. 122° 20′ 30″ E. – 122° 22′ 30″ E. Use of other channels is forbidden. Please contact Pilots through VHF Channel 16 one hour before arrival pilot station."

Call: NINGBO Pilot VHF Channel 16. Pilot boards from pilot vessel which comes from Ningbo. Pilot vessel is same size as a large harbour-tug, white hull and long white superstructure. Funnel placed aft-part of superstructure, and painted in chinese colours – red band with yellow stars. Equipped with radar and VHF. Difficulties experienced in contacting Pilot on arrival and the difficulties are believed to be because of distance from the pilot vessels stationed in Ningbo and the ship waiting on the above pilot station.

3 Pilots boarded the ship, and the ship continued via the narrow but deep strait of Shih-Peng-Chiang.

Anchorages: Above designated pilotage area considered to be a good anchorage for large vessels. Minimum depths of 10 fathoms. Current setting NW and SE with rates up to 4 knots.

Restrictions: No information on restrictions upon entry. The Strait of Shih-Peng-Chiang and inwards to the port was found to be well equipped with lighthouses and other navigational aids (not shown on the chart). Shore based Decca-radars cover the area and give instructions to Pilots during navigation in these waters. The outermost of the radar station is situated in approx. position Lat. 29° 44.4′ N., Long. 122° 18.3′ E. Our vessel arrived at pilot station on LW. Echo-sounder was used and there was not found to be less water than charted.

Max. Size: The port is designed to accommodate 1 ship of 100,000 d.w.t. and 2 ships of 25,000 d.w.t. Minimum depth on the outer-pier said to be not less than 18 m. on LLW.

During ship's stay in Beilun at Outer Pier the LLW depth alongside the pier was found to be 22.30 m. Only measured by echo-sounder.

Health: No special requirements. Ship cleared by Health Authorities after arrival.

Radio: No special instructions. During voyage cables regarding ETA and arrival-conditions were sent to Penavico Beijing and Penavico Ningbo via Shanghai Radio XSG. When within range Ningbo Radio was used (XSN).

VHF: See "Pilotage".

Radar: See "Restrictions".

Tugs: 2 tugs of 3,200 h.p. stationed in port. Very efficient. Meet ships off the pier using tug's lines. They handle vessels "Japanese style" in making fast on ship's sides.

Berthing: The port consists of 2 piers built out into the sea, parallel to the coast. The piers are connected to the coast by a long bridge, estimated 3 km. long. The density of water was measured to be 1019 but varies.

The outermost pier is used for large vessels. It is equipped with a sonar docking system, which shows the distance between the pier and the ship's bow and stern, and the vessel's approach speed in cm. per second. This pier is for bulk cargo discharge only. It is well protected with large rubber fenders. The pier is high and fenders keep ship so far from the pier that most ships unable to use normal accommodation ladder. Necessary to use gangway at right angles to the ship. No gangway supplied from shore.

Cranes: The outermost pier is equipped with 2 large gantry cranes with grabs. They are Japanese built Hitachi-cranes 30 ton SWL. Grabs used are 9.5 cu.m. The cranes discharge from ship to a belt conveyor leading to storage facilities on shore. Estimated length of conveyor belt 3.5 km. During our stay the cranes did not work in wind force exceeding 10.8 m./sec., or in dense fog. Also not working during periods of rain.

The innermost pier is equipped with 2 plants designed for loading bags into ships. The plants are fed with bags from 2 belt conveyors coming from the storage/packing area on shore. The bags slide from the top of the plant to the ship's hold via a "snail". Plants are Japanese built.

None of the piers are designed for anything other than discharging bulk or loading bags. Maximum discharge rate unknown. Our ship, which was unloading potash was guaranteed 1,500 tons per day but more than 5,000 tons per day was experienced. Only one crane was used, and it was only working slowly, because of delays in the packing area. All cargo from the ship was bagged immediately after discharge.

Stevedores: Labour arranged by Agent. Working day and night without any stops, weather permitting.

Medical: Seaman's hospital in Ningbo about 45 km. from the port.

Density: Varying with tide but average 1019. Water discoloured by mud.

Fresh Water: Available from pipes on the pier. Delivery rate 18 t.p.h. Approximate cost 1.5 Yuan/Tons.

Fuel: No fuel on the pier. Not known whether any bunker supply in the area.

Consuls: None.

Hatches: Operated by ship's crew.

Customs Allowances: On arrival each crew had max. 1 bottle of spirits and 200 cigarettes. No objections was made to this. No cabins were searched. Neither were the Chief Steward's lockers with spirits, beer and slop chest checked. Chief Steward was allowed to take out any of the above mentioned goods for use during stay in port.

Cargo Gear: All cargo work carried out with shore gear.

Repatriation: Arrangements can be made. Crew members are transported to Shanghai by ship or train.

Time: GMT plus 8 hours.

Holidays: None.

Shore Leave: Crew members not allowed to go outside the gate situated on the shore end of the bridge connecting pier to shore. Distance from pier to gate about 3 km. There is a seaman's club in Ningbo. On request the club will arrange tours and sightseeing. The cost for a tour to Ningbo and return to the ship is 7.5 Yuan per man.

Identification Cards: Shore passes are issued on arrival. Each time a crew member steps ashore or comes aboard the ship, the shore pass and national passport should be shown to the Emigration Officer.

Watchman: An Emigration Officer is constantly on board checking passports each time people leave or come to the ship.

Telephones: Telephone placed on board for convenience of Agents, Stevedores, etc.

Regulations: Following received by cable from Agent before arrival: "Not permitted to use radio transmitters at anchorage or in port unless emergency. Must keep main engine, steering gear, rudder indicator, telegraph communication equipment, whistle/siren, gyro compass repeaters, radars and echo sounder in good condition, but not permitted to use any of them unless allowed by Pilot. Photographing and survey are not allowed in Chinese territorial waters, stay at anchorage or in port. The above regulations must be observed strictly."

Delays: No delays observed.

General: A ship's chandler from Ningbo is able to deliver all usual kinds of provisions.

Agent will arrange for laundry.

During the stay I was invited to see the packing area. The potash goes from the belt conveyor to 8 spouts, which weigh out the cargo and fill it into bags. Each spout capable of average 45 t.p.h. I was told that more equipment would be installed this year thereby doubling the packing capacity. Behind the packing house, there was a large area where ore of various kinds, which was discharged from large bulk-carriers at the outer pier, could be stored. The ore is reloaded into smaller ships at the inner pier using the same plants as when loading bags. These plants are designed for both bags and bulk. The loading rate of ore is said to be up to 4,000 t.p.h.

Developments: No information available.

Agent: China Ocean Shipping Agency, Ningbo Branch. No agent's port office at Beilun. No telex available from Ningbo. Cables from ship to Owners/Charterers and vice versa are taken by car to/from Ningbo which makes communication slow and expensive.

SHIPMASTER'S REPORT: December 1985

Location: Beilun Oil Terminal in position 29° 57.4′ N., 121° 48.7′ E., about 45 km. by road from the town of Ningbo.

Chart: B.A. Chart No. 1429.

Documents:

Required on arrival:
*5 Crew Lists.
*1 Personal Effects List (see 'note' below).
*1 Health Declaration.
1 Vaccination List.
2 Cargo Manifests ('Nil' return if in ballast).
1 Drugs List.
*1 List of Arms and Ammunition.
*3 Copies of Application for Entry and Inspection.
*Indicates a Chinese form, others not acceptable.

On Personal Effects List individual crew members must declare radios, cassette players, cameras, watches, jewellery and currency.

No stores lists of any kind required. Bond is not sealed and crew issues may be made without restriction.

Formalities: All Officials board in Quarantine anchorage (believe occasionally in Ching Tang Yang). Pratique granted first and then vessel berths, remainder of formalities completed alongside.

Formalities are minimal and consist mainly of checking arrival papers, Register and Statutory certificates. No searches, crew inspections, etc. 2 Immigration Officers (Frontier Police) remain on board throughout vessel's stay and require accommodation.

Approaches/Pilotage: Telex from Agents prior to arrival with information as to approach track to follow and position of Pilot Station Anchorage – see "copy of telex" below. Communications with Pilot on VHF Channel 16. Difficult from outer anchorage due distance involved. Pilot establishes contact from pilot vessel or an outward bound ship about 1 hour to 2 hours before boarding. Pilot boards within Shih Peng Chiang which is well sheltered. It should be noted that this approach to Ningbo Gang is the only one permitted to foreign vessels and passage is in daylight only.

Thereafter navigation to anchorages/berth is straightforward. No objections raised to use of any of the vessel's navigational equipment or charts. Pilot brought his own charts of certain sections which could be referred to but not copied.

From entrance to Shih Peng Chiang inwards there are a considerable number of navigation marks and lights not marked on B.A. chart.

There is a Harbour Radar System with a chain of stations which would appear to give complete coverage from outer approaches to Ningbo; this was not in operation on either our inward or outward passage. Pilot stated that radar itself was excellent (Decca) but standard of operators poor and information received on VHF link unreliable.

Copy of Telex: Ningbo approaching guidance as follows please steer from high-seas to position 28° 53′ 00″ N., 122° 26′ 45″ E. 10 miles East of Beiyushan lighthouse (disused), therefrom take course of 013 degrees to reach position 29° 45′ 00″ N., 122° 40′ 36″ E. at 8.3 miles from Dongtingshan lighthouse (bearing 326 degrees) stop Then A/C 270 degrees and steer directly to p/anchorage (situated between 29° 44′ 30″ N.-29° 46′ 00″ N., 122° 20′ 30″ E.-122° 22′ 30″ E.) and must await Pilot there stop Other channels forbidden stop Photographing and survey are not allowed after entering China's territorial waters stop Please contact Pilot through VHF Channel 16 one hour before arrival at p/anchorage and keep on listening VHF Channel 16 until Pilot aboard stop Not allowed to use radio transmitter at anchorage unless emergency stop Must keep main-engine steering-gear rudder-indicator telegraph communication equipment whistle/siren gyro-compass repeaters radar and echo-sounders in good condition but not allowed to use any of them after arrival at p/anchorage unless permitted by Pilot stop Above regulations must be observed strictly stop Please confirm upon receiving.
PENAVICO

Anchorages:

1. Outer (pilot station) Anchorage as given in pre-arrival telex (See "Approaches/Pilotage".)

2. 'Mashi' Anchorage, to North and N.W. of Tieng-fing Shan (29° 52.5′ N., 122° 13.6′ E.), which is used for bad weather and typhoon shelter.

3. Quarantine Anchorage in area between latitudes 30° 00.3′ N. and 30° 02.4′ N. and longitudes 121° 48.0′ E. and 121° 49.7′ E. (approximate position).

Note: Quarantine Anchorage already marked on chart, centred on approximate position 29° 59.8′ N., 121° 46.9′ E. is used for small vessels only.

4. There were a number of vessels anchored in Ching Tang Yang between the Ore and Oil terminals, apparently awaiting cargo.

Also a crude oil storage tanker of approximately 220,000 d.w.t. on a permanent mooring here. Good holding ground reported at all anchorages.

Radio: Agents: China Ocean Shipping Agency, Ningbo Branch, 20 Xi Cao Ma Road, Ningbo, China. Telephone: 55375, 56449, 55744-573. Cable address: PENAVICO. Telex: 37028, 35289 NBPEN CN.

All communications prior to arrival by sat/comm telex without problem.

W/T traffic lists copied from Ningbo Radio (M/F only) and Shanghai Radio; both stations appeared to handle traffic efficiently. Good weather forecasts in English from Shanghai Radio. As mentioned initial VHF contact with Pilot difficult. Within the port, Agents may be contacted on VHF through 'Ningbo Harbour Radio'; call on Channel 16 and then switch to working Channel 12. Agents listen on Channel 12 but this is the preferred method of contact. Use of main transmitter prohibited after arrival at pilot station, as is use of sat/comm.

When in port all cables and telex messages are required to be routed through Agents; these can be passed by VHF. If Agent has to collect/deliver messages it can take some time due to distances involved – all port offices and telex facilities are at Ningbo town.

All Chinese personnel dealing with vessel, i.e. Pilot, Agents and Port Officials spoke excellent English.

Tugs: 4 tugs available of 3,200 h.p. 2 tugs used when berthing and unberthing, tugs' lines used. Tugs well handled to Pilot's instructions. It was noted that Chinese tankers of about 20,000 d.w.t. berthed/unberthed without tugs.

Berthing: Vessel moored to No. 2 Berth. Conventional berth (See "Plan") with good mooring points and fendering. Ship's gangway used.

Berthing and unberthing daylight only at any state of the tide; berthing in wind up to force 5/6, unberthing up to force 8 (Pilot's estimate).

No mooring boats; all lines passed by messenger with winches adjacent to each shore bollard (except for springs). Offshore anchor used.

Shore based berthing approach aid on No. 1 and No. 2 berth. Visual display on top of jetty house gives speed of approach (cm./sec.) and distance off (metres) of each end of vessel. No details available.

Strong tidal streams (probably up to 5 knots) but run along line of berth, i.e. 134° – 314° and did not cause any difficulties.

Berth exposed to North and N.W.; a Northwesterly gale gave rise to some swell movement.

Maximum permitted draft on berth given variously as 9.0 m. and 12.0 m. Echo sounder indicated a minimum depth of approximately 15.0 m. at LW but not permitted to sound round the vessel.

Cargo Facilities: Cargo hoses on No. 2 berth all of 6 in. diameter and handled by ship's equipment and small (mobile) shore crane.

An English speaking interpreter on duty at jetty head throughout vessel's stay alongside.

Communication between jetty head and pump station/tank farm appeared to be slow and difficult.

No. 1 berth (of similar construction to No. 2 – see "Plan") is understood to handle only crude oil imports from North China; apparently all by Chinese tankers.

No. 2 berth handles all export products. Understand only products available are gas oil, gasoline, naphtha and fuel oil. A cargo of approximately 20,000 tonnes of gas oil is exported each month. No information on other grades.

No. 3 berth is for LPG. No information available.

The previously mentioned 220,000 d.w.t. storage tanker (Chinese) (See "Anchorages")moored in Ching Tang Yang is understood to be for transhipment of crude oil (from North China) for export. Equipped with Yokohama type fenders on starboard side. No other information available.

Ballast Facilities: No ballast may be discharged overboard without Harbour Master's permission. This is virtually automatic in case of segregated/permanent ballast.

Permission to discharge clean cargo tank ballast must be requested in writing and ballast water is subjected to analysis before permission is granted. Analysis takes about 6 hours.

Dirty ballast or ballast which fails analysis, may be discharged ashore. Receiving rate approximately 250 cu.m.p.h., maximum capacity unknown. There is a charge for this, understood to be 1.5 Yuan/ton.

Medical Facilities: Hospital at Ningbo. Transport provided by Seamen's Club.

Fresh Water: Available on jetty at cost of US$1.00/ton. Rate and quantity unknown. Also available by barge at Quarantine and Ching Tang Yang anchorages but 3 days' notice required. Cost unknown.

Fuel: Agents advise that marine diesel and also fuel oil bunkers are available but minimum of 7 days' notice required.

Repairs: No information on facilities available. Harbour Master's permission required for immobilisation of main engines.

Cargo Surveyors: Zhejiang Import & Export Commodity Inspection Bureau who attended for final ullaging and sampling were efficient.

Repatriation: No difficulties with repatriation of sick crew members or arranging routine changes. It takes 1 to 2 days to arrange visas and Agents will only arrange flights as far as Hong Kong. Airline Prepaid Ticket Advice accepted.

Shore Leave: Allowed. Passes issued on arrival by Immigration (must be returned). Transport provided by Seamen's Club at Ningbo and arranged through Agent.

General: Chandler: Not used. Understand meat/fish available at any time. Vegetables and salad seasonal.

Laundry: Available. Not used. Reputed to be good quality service and fast.

QINGDAO (Tsingtao): 36.03 N. 120.20 E. **(See Plan)**

Also see "General" before first port.

SHIPMASTER'S REPORT:

Approaches: 1. Approaching from the S.W. on the authorised route in clear water, the following observations were made.

(a) Cape Yatall Lt. Range 20 n.m., not sighted at 10 n.m.
(b) Tai Kungtan Lt. Range 15 n.m., not sighted at 15 n.m.
(c) Ynui Shan Lt. Range 14 n.m., sighted at 15 n.m.
(d) Outer Harbour Fairway Buoy, sighted at 4 n.m.

2. When abeam of Tai Kungtan orders were received to proceed to inner quarantine anchorage.

3. All Inner Harbour buoy lights characteristics did not agree with the recent chart.

Documents: Port Officials board by tug using the gangway. The following papers are required.

4 copies of the Ship's particulars.
4 copies of the Crew List.
2 copies of the Crew Manifest with all foreign currency duly noted.
1 copy of the Health Declaration.
All Identity Cards.
2 copies of the letter requesting a hold survey.
9 copies of the Notice of Readiness.
Usual ship's papers, including Deck and Engine room Logs.

Delays caused by:
(a) Crew members not holding I.D. Cards.
(b) Insufficient copies of the necessary papers supplied at Hong Kong.

Muster: After the above had been inspected, all officers and ratings were required to muster in the saloon. A search of all spaces was then carried out. Each person was required to be compared with his I.D. card, those not possessing one were eventually cleared on discharge books. The Authorities will not recognise passports held by Spanish Nationals.

Detailed Information: Required with regard to the ports at which stores and water have been obtained and a list of the ports visited in the previous six months.

Currency: Available in the form of Chinese Yen.

Cargo: (a) Delivery alongside is very poor. *(b)* Condition of cargo received on board is good. Temperatures of hard frozen cargo are well down. *(c)* Damaged cartons are replaced. *(d)* Stowage, good.

Outwards Clearance: (a) After all B/Ls have been signed and five copies of the vacant space/space used handed over. *(b)* Muster of all persons takes place in the saloon. *(c)* I.D. cards produced and shore passes handed in. *(d)* Vessels searched. *(e)* All foreign currency spent ashore has to be accounted for. Totals of money drawn and returned to Agent produced to the Customs.

Departure: Vessel leaves the berth and anchors at the Inner Quarantine Anchorage. Guards and Port Officials leave after "Clearance" papers have been handed over. Pilot leaves, vessel proceeds without the aid of a Pilot along the authorised route.

SHIPMASTER'S REPORT: 1977.

Pilot: A total of four Pilots board together with Inspection Team from a tug (black hull, white superstructure) at the pilot station. Pilots usually handle vessels very carefully and speak little English.

Piers: The bulk handling piers are equipped with shore cranes (their capacity unknown) but are poorly fendered.

Tugs: A large number of modern (and likely powerful) tugs were noted, ships lines always used.

VHF: The Port is equipped with VHF (most likely at Harbour Master's Office) and the ship's set is handled by the Pilots. After berthing it is prohibited to use it.

Tide: The rise of the tide is considerable (no figures available) and all piers seem to be well protected by any wind.

Ice: Melting ice was noted on approaching the piers (mid January 1977).

Traffic: Heavy traffic was noted there both in ocean-going and medium-sized tonnage.

SHIPMASTER'S REPORT: 1978

Master's Observations: Approaching from South:

1. From a point W.N.W. about 5 miles from Chalientao L/H until Tsingtao a very strong set was experienced, on ebb tide, position must be checked very frequently and strong counteracting set should be applied. Deep draft vessels should take care particularly near Swallow Bank.

2. Speed was reduced when crossing 9 fm. patch (extending about 1.7 miles long across) in approximate position Lat. 35° 59.5′ N., Long. 120° 27′ E. (vessel's draft 9.95 m.).

3. It is not possible to take a course of 283° as per direction as this leads almost on the edge of Swallow Bank and edge of Pile Point. Therefore a slight change was made, from position Chalientao L/H W.N.W.×5 miles, 284° was steered till Lat. 35° 59.7′ N., Long. 120° 26′ E., thence course was altered to 287°. This course keeps vessel well clear of Swallow Bank and Pile Point.

4. The vessel can expect a cable (after cabling ETA pilot station when abeam Chalientao) giving directions, and usually the Port advises the vessel to anchor within 3 cables of pilot station, where Pilot boards later and takes the vessel to inner anchorage.

5. All the necessary lights and buoys were found working at satisfactory range and in position.

6. A slight delay can be experienced if vessel does not have inward clearance forms in Chinese prints. In this regard it is advisable to put 2/3 people on the job to facilitate quick completion of formalities (if Chinese forms are supplied by the Immigration Authorities).

7. Vessel berthed at No. 2 Mole Centre pier at high tide on a draft of 9.95 m. It was found that vessel had difficulty in getting alongside and finally secured some 3 ft. off wharf fenders. This was probably due to there being less depth. By Master's reckoning and observations, perhaps 27/28 ft. would be maximum safe depth at low tide at this pier. Vessel was shifted to after pier during the fall of tide, and on this berth by observations about 30.5 ft. would be safety draft at low tide.

8. Fresh water can be supplied without problem. Provisions are in short supply. Laundry can be done, about 3 days notice required. Medical facilities are good. Seamen's club caters to seamen's shopping and tastes. Repatriation is possible arranged by train to Peking and thence by air. Cable facilities exist but there is no telex system.

SHIPMASTER'S REPORT: September, 1979.

Documents: On arrival: 1 Report on Entry, 4 Crew Lists, 1 Import Cargo Manifest, 1 List of specified Articles, Currency, gold, etc. and all ship's certificates.

Navigation: BA Chart 876. On passing Cha Lien Tao Island, call "Tsingtao Radio" for entry instructions. The outer quarantine anchorage for which Pilot is not compulsory is in position Lat. 36° 02′ N., Long. 120° 18.3′ E. The approach is straightforward and the lighthouses are in good working order. The authorities board at the outer anchorage via pilot ladder from a tug. The use of radar in the harbour area must be sanctioned by Pilot or Harbour Authorities. All other navigational gear may be used as required.

Communications: Both Agents and Harbour Authorities have VHF with most Channels. When vessel is at Inner anchorage, Agency contact vessel twice daily for berthing times, etc.

Currency: Local Yuan available. Foreign currency can be exchanged but a receipt must be kept and produced to the Authorities prior to departure.

Draft: Up to 35 ft. alongside at discharging berth – in approach entrance off Horseshoe Reef up to 34 ft. depending on tide.

Agents: China Ocean Shipping Agency are sole Agents. They visit vessels twice daily and are also in VHF contact from their office. Communications with other countries from Tsingtao is by cable only, telex is due to be installed next year.

Medical: Hospital and doctors available.

Laundry: Excellent and not expensive.

Provisions: Not expensive but very limited in both content and availability. Not to be relied on, especially if in port for short stay.

Fresh Water: Alongside from quay – 35 t.p.h. Also available at anchorage from water barge.

Time: GMT plus 8 hours.

Immobilisation: Permitted by arrangement with Harbour Authorities.

Opening/Closing Hatches: Either ship's crew or stevedores. In the case of the latter, a charge is payable.

Garbage: Removed when requested by small barge.

Repatriation: Difficult at present as no regular air passenger flights from Tsingtao. Only way would be overnight train journey to Peking then flight to Europe.

Repairs: Possible, large repair shops and naval yards in port area.

Bunkers: Available to Chinese vessels. Gas oil also available if adequate notice given.

Cargo Working: Discharged 24,000 m/tons sulphur in 6.75 working days, using shore cranes and grabs. Discharged into railway wagons on twin rail tracks also into large "silo" adjacent to the berth. Good standard of crane operation. Cargo tonnage discharged determined by draft surveys performed by Government surveyors and ship's staff. Statement of facts drawn up by Agents.

Watchmen: One gangway guard for inspecting Crew members' passes.

Tugs: Four large tugs – one of 3,000 h.p.

Pilots: Usually three on each vessel – reasonable English.

Density: Varies between 1020 and 1025.

Tours, etc.: Tours are arrangeable via the Seaman's Club and are good value. There are no shore leave restrictions and cameras may be used. Inter ship visiting is allowed also film and book exchanges between ships.

Shore leave is possible from the Inner anchorage by tug.

Mail: From Europe by air freight via Tokyo and Peking takes 7 days.

Bond, etc.: Not sealed or inspected by Authorities. Stores Lists NOT required.

Floating Crane: Available, lifts estimated 150 tons.

General: Stevedore labour appeared plentiful – delays are occurring due to large increase in foreign trade. New berths are being planned and dredging is taking place continuously. Officials, Agents, etc. most pleasant and helpful and very eager to learn English. It is advisable to make a 'sea protest' to the Harbour Authorities if any bad weather experienced on voyage.

SHIPMASTER'S REPORT: June 1981.

Port: Qingdao (Tsingtao).

Berth: Huang Dao Oil Terminal. 36° 04′ N., 120° 13.5′ E.

Departure Draft: Forward 11.7 m. Aft 12.1 m.

Charts: BA 1255, 876, 857. Chinese (up to date) 9106, 9408, 9432.

Approach: Only by 'defined routes':

from: 35° 56′ 24″ N., 121° 05′ 00″ E. or 35° 43′ 15″ N., 120° 53′ 09″ E.
Course 270°T Course 338°T
to 35° 56′ 24″ N., 120° 46′ 42″ E.
then Course 283°T
to 36° 02′ 00″ N., 120° 18′ 16″ E. (Pilot boarding/Arrival Inspection Anchorage)

and reverse courses to same positions outward.

Entry: Arrival inspection formalities carried out at above anchorage, by boarding party of 8 persons from Agents, Customs, Immigration and Harbour Authority. We arrived at 1700 hrs. and inspection party boarded at 0930 hrs. next morning. China Ocean Shipping Agents, representatives spoke very good English and most helpful. Chinese documents required, including crew declaration form but Bonded Stores list not required and Bond not sealed. After inspection, about 30 minutes, shifted to Inner Tanker Anchorage with 2 Pilots.

Agents: China Ocean Shipping Agents, Cable: Penavico 2213 Qingdao.

VHF: Channel 16 to Qingdao Radio who will give you a channel to Agents, usually Channel 11.

Anchorage: Inner Tanker Anchorage is 1 mile North of Oil terminal with varying depths from 11 m. to 30 m.

Berths: Concrete dolphin structure, adequately fendered. West berth max. draft 12 m., berth port side to, approach from North. East berth max. draft 13 m., approach from South rounding No. 23 buoy to starboard when coming from Inner anchorage, Port side to. No shore gangway. Connection with flexible hoses so derrick required. Usual moorings. Head and stern line dolphins have small winches on them but out of order so mooring gang reluctant to handle wires.

Berthing/Unberthing: Competently carried out by 3 Pilots and 2 tugs. Tugs, Nos. 10 and 11 are 3,200 h.p. Gather vessels of our size (55,000 d.w.t.), and above only depart during daylight and on HW.

Cargo: Loaded Shengli Crude API. 23.3, loading temperature 40°C. Terminal state maximum loading rate 2,500 tonnes per hour. We achieved 1,980 t.p.h. Connection is by 2×10 in. 'Y' connectors at manifold connected to flexible hoses. After completion documents take 3/5 hours to prepare and bring on board.

Ballast: As first cargo after dry dock we received permission from Harbour Authority to deballast to sea although pumped tank bottoms ashore just in case. I gather that it is normal to deballast to shore reception at maximum rate of 600 t.p.h. and believe charge per ton is quite high so it is prudent to arrive with minimum dirty ballast.

Repairs: Appear to be quite readily available. We had some boiler tubes welded and Chief Engineer reported that the work was competently carried out. Chinese surveyors also act on behalf of Lloyd's.

Fresh Water: Available at anchor from powered barge at 50 t.p.h. and also available on terminal but pressure is unreliable.

Shore Leave: Allowed from anchorage and terminal. Request for launch to be passed to Agents by VHF before 1100 hrs. and launch alongside around 1230/1300 hrs. and returns from shore between 1700/1900 hrs. There is a Seamen's Club with a new hotel attached which was opened during our stay. Seamen's Club will arrange football matches, and various tours. International telephone calls can be made from Agents' office.

Currency: Cash can be drawn from Agents but is in 'Foreign Exchange Certificates' which state on back: "The Yuan expressed in this certificate is equivalent in value to the Renminbi Yuan. This certificate can only be used within China at designated places. No request to register its loss will be accepted by the Bank". Any Chinese currency remaining must be returned to Agents before sailing. Foreign currency can be exchanged at the Seamen's Club for the same certificates. Rate of exchange June 1981 – RMB. Yuan 3.44=£1.00.

Garbage: A garbage collection boat calls every other day whilst at anchor.

General: During our 16 day stay in June there was fog during some part of nearly every day, occasionally dense.

QINHUANGDAO (Chinwangtao): 40.00 N. 119.30 E.

(See Plan)

Also see "General" before first port.

NOTICE: Chinese Notice June 1984.

Anchorages with bearings and distances from Nanshan Tou light (Lat. 39° 54.6′ N., Long. 119° 36.9′ E. approx.):

(a) Oil tanker anchorage. Sector between bearings 100° and 110° and distances 3.0 miles and 7.0 miles.

(b) East Anchorage. Sector between bearings 110° and 135° and distances 3.0 miles and 7.0 miles.

(c) West Anchorage. Sector between bearings 165° and 190° and distances 3.0 miles and 5.0 miles.

BERTHING:

Berth	*Depth* (m.)	*Remarks*
General Cargo	12.0	2×35,000 d.w.t.
General Cargo	12.0	2×15,000 d.w.t.
General Cargo	9.5	7 Berths
Coal Terminal	13.5	1×20,000 d.w.t.
Coal Terminal	13.5	3×50,000 d.w.t.
Crude Oil Terminal	13.5	1×50,000 d.w.t.
Crude Oil Terminal	10.5	2×20,000 d.w.t.

TIME: GMT plus 8 hours. Summertime GMT plus 9 hours from May 4th until September 14th (1986).

DEVELOPMENTS:

Berth	*Depth* (m.)	*Remarks*
General Cargo (2nd phase)	12.0	3×35,000 d.w.t.
		3×15,000 d.w.t.
General Cargo (3rd phase)	12.0	2×35,000 d.w.t.
		3×20,000 d.w.t.
	10.5	2×20,000 d.w.t.
Coal Terminal (By Year 2000)		5×20,000 d.w.t.
	12.0	3×35,000 d.w.t.
Crude Oil Terminal (3rd phase)		1×100,000 d.w.t.
	13.5	2×35,000 d.w.t.

SHIPMASTER'S REPORT: 1979.

Approaches: Straightforward, mountains to N.W. show on radar at 48 miles, tanker berths to East at 24 miles, also ships at anchor. Notice of passage through Liau-Ti-Shan Straits to be given to Harbour Master Dairen as per "Guide to Port Entry", (see "General" before first port), this also applies when sailing.

Anchorage: Vessel lies mostly to the wind rather than the tide. Winds of up to Force 7 experienced.

Also see "Notice".

Pilots/Berthing: Pilots board from a tug, accompanied by an Assistant Harbour Master who assists with VHF. The approach is on a heading of 308° True, not on the charted leading marks, with a draft of 34 ft. the least depth recorded below keel was 10 ft. A strong tidal set was noted across the entrance. One tug pushing forward, and one standing by, no launch to run lines, port anchor let go approaching berth, veered to one shackle and dredged in. Similar arrangement of tugs when sailing, Harbour Master again boards with Pilot and will not hand over clearance until well clear of the berth.

Tugs: 4 for harbour work, 2 new large, and 2 smaller, plus 1 fairly old tug used by the Agents for visiting ships at the anchorage.

Berth: No. 14 Berth is apparently the grain berth, it is low, well fendered and the accommodation ladder may be turned out prior to berthing. Depth alongside is 40 ft. Berthing seems to be always head in, starboard side to.

There are 2 bulk coal loading berths, one fairly close to the grain berth, and one on the breakwater.

Cargo: All discharging by crane, (5 at this berth), using grabs as long as possible then net and burlap slings, into hoppers which feed railway wagons. Many delays awaiting wagons, average rate at first was 8,200 tonnes per day but this falls off slightly. When hatches are finished the cranes are not utilised at other hatches. 2 shifts, changing at 0700 and 1900 hrs. Very little damage, all repaired when Form 62 presented.

Fresh Water: By barge, very little delay once application made. Garbage boat also by application, again very little delay.

General: All previous restrictions on the use of radar, echo sounders etc., are now lifted, although the Agent advised me not to use them whilst alongside, and permission had to be requested for testing the radar before sailing.

Written application has to be made to the Harbour Master for permission to immobilise the main engine, apparently it is always granted, but for maximum of 48 hours only. Definitely no main engine trials alongside berth.

The cargo was fumigated at the anchorage, gangs for rigging the equipment and for the fumigation, using Methyl Bromide, live on board, and were very efficient and co-operative. All personnel not essential for the vessel's safety were disembarked and accommodated at the Seamens' Club.

Accommodation and food at the Seamans' Club were fairly good. The Club will arrange trips to Peking, about 6 hours by train, they consider the minimum time to be 3 days and 2 nights on average, all in cost of about £40. Also trips to the Great Wall of China 10 miles by road.

Shopping only at the Friendship Store, adjacent to the Club, a wide variety of goods are available. Chinese currency only accepted but notes of almost any nationality can be changed at the Club, £1 Sterling to 3.19 Yuen.

Communication with the U.K. by cable or telex is quite good. Air mail from the U.K. takes about 10 days.

Agents, etc: Most speak fairly good English and are keen to improve. All arrival formalities completed at the anchorage, no musters or searches required either arriving or sailing. Three Frontier Guards live on board at the anchorage, and when berthed they maintain a 24 hour watch at the gangway, all passes to be shown going ashore and returning.

Chandler: Boards on berthing and takes the order. Fresh provisions only available.

SHIPMASTER'S REPORT: March 1981.
CHINWANGTAO (QIN HUANG DAO) (CHIN HUANGTAO).
Lat. 39° 54.6′ N., Long.: 119° 36.7′ E.

Chart: BA No. 3378.

Documents:

5 copies Crew Lists.
1 copy Import Manifest.
1 copy List of Specified Articles belonging to Ship and/or Members of Crew.
1 copy Maritime Declaration of Health.

Anchorage: In case there is ice at anchorage in Winter it is advisable to anchor further off and not pay out too long scope of chain.

Also see "Notice".

Pilotage: Pilotage is compulsory for foreign vessels entering and leaving the port. Pilots board ships at pilotage/quarantine anchorage. Pilotage is undertaken day and night. Pilot boat (tugboat) displays the International Pilot Signal when on pilotage duty. There are about 12 Pilots available. Pilots can speak and understand English sufficiently.

Berthing:

	Name		*Capacity*
Small pier	Berth No. 2		One 5,000 ton ship
Large pier	Berth No. 4		One 7,000 ton ship
Large pier	Berth No. 5		One 10,000 ton ship
Large pier	Berth No. 6		One 10,000 ton ship
Large pier	Berth No. 7		One 10,000 ton ship
New pier	Berth No. 8	Pier B	One 10,000 ton ship
New pier	Berth No. 9		One 10,000 ton ship
New pier	Berth No. 14	Pier A	One 10,000 ton ship
New pier	Berth No. 15		One 10,000 ton ship
Oil pier	East Berth		One 10,000 ton ship
Oil pier	West Berth		One 10,000 ton ship

Channels: In port there are three channels. Original channel, new channel and oil pier channel.

Original channel is about 1.7 miles in length, 100 m. in width and 9 m. to 10.4 m. depth. It is used by ships berthing and leaving the large pier and the small pier.

New channel about 0.9 miles in length, 100 m. in width and 9.4 m. to 10.4 m. in depth. It is a branch of the original channel and is used by ships berthing and leaving the new pier.

Oil pier channel is about 2 miles in length, 100 m. in width and 10.7 m. in depth. It is used by ships berthing and leaving the oil pier.

Radio: Foreign ships calling at this port may according to International Radio Regulations communicate with Qin Huang Dao Coastal Radio Station.

Name	Chinwangtao Radio
Call sign	XSE
Medium frequency (kHz)	486
Hours of service	0000 – 2400
High frequency (kHz)	8484
Hours of service	0600 – 2400
Time of traffic list	At H + 10 each given hour.

There is VHF Channel 16 at port control and Channel 11 at 'Penavico' Agents. To call Agents first call port control and then change to Channel 11 after informing the vessel's intention to use VHF.

General: The port is equipped with lifting machinery, tippers, universal lifting machines, belt conveyors. Cargo is unloaded directly into railway wagons. Coal loading is done by conveyor belts. Hatches are opened by ship's crew. Stevedores are not competent in derrick work. Stevedores work in three shifts of eight hours each commencing at 0600 hours. Discharging rate is fully dependent on availability of wagons. There are 11 tugs available. Fresh water and fuel are available by boats. Limited provisions are available.

There is a Seaman's club in the city, well equipped with recreation facilities. A trip to Great Wall of China can be arranged through the club.

AUTHORITY: Qinhuangdao Port Adminstration, 6 Haibin Road, Qinhuangdao, The People's Republic of China. *Tel:* 34812-3522. *Telex:* 27121 QH PEN CN. *Cables:* 2156 Qinhuangdao. *Contact:* Huang Guosheng, Port Director.

SHANGHAI: 31.14 N. 121.28 E.

Also see "General" before first port.

PILOTAGE: Pilot available 24 hours. Working VHF Channels 16 and 6. Pilot boards:

(a) Vessels using Beicao Hangdao and Beicao Hangcao: between Light Buoys "Y1" and "Y4";

(b) Vessels using Nangcao Hangdao: between Light Buoys "47" and "49".

Send ETA at the outer roundabout, when at least 4 nautical miles from it, on Channels 6 or 16. Vessels making for Beicao Hancao should make a safety broadcast 3 nautical miles before entering it and on entry, broadcast their name and the time. Vessels intending to navigate in Yawosha Hangcao should be equipped with VHF Channel 6.

CIRCULARS:

China Ocean Shipping Agency Shanghai Branch
CIRCULAR

June 1, 1977

The VHF radiotelephone of China Ocean Shipping Agency Shanghai Branch is, from this day, open to foreign vessels calling at the port of Shanghai:

Channel: 11. (If Channel 11 is not available on board, the vessel may make contact with the Shanghai Harbour Radiotelephone Station (Channel 16) and then communicate with Penavico on the Channel appointed by that Station).

Call Sign: Penavico.

Working Hours: 0000 – 2400 hrs., continuous service day and night. (All ships anchored at Woosung Quarantine Anchorage and in its vicinity or moored at buoys – those berthed alongside wharves excluded – are requested to have their VHF radiotelephone station opened every day at the undermentioned times:

1115 – 1130, 1515 – 1530, 1915 – 1930 hrs.

in order to keep watch and receive any message such as berthing information, which Penavico may transmit to them. The ships which are not called in the above period of time may then close down their station. Ships which intend to communicate with us may call Penavico at any other time).

When using VHF radiotelephone, foreign vessels should observe "Provisional Regulations Governing the Use of VHF Radiotelephone by Foreign Vessels" issued by the Ministry of Communications of the People's Republic of China.

CHINA OCEAN SHIPPING AGENCY
SHANGHAI BRANCH

GUIDE TO FOREIGN VESSELS CALLING AT SHANGHAI

October, 1978

1. Regular Channel in Chusan Area:

Foreign vessels may navigate in the regular channel between the Chusan and Raffles Islands which is open to navigation, but are not allowed to navigate in other channels between these islands. (By the regular channel is meant the channel from Tongting Island, Steep Island, Elgar Island, Bonham Island, Button Island, Gutzlaff Island to Chang Kiang Kou).

2. Dangerous Area:

All vessels are to note and keep away from the dangerous area bounded by lines joining the following four points:

Lat. 30° 47′ 05″ N.,	Long. 123° 03′ 00″ E.	see Chart No. 1199
Lat. 30° 47′ 15″ N.,	Long. 123° 05′ 54″ E.	
Lat. 30° 44′ 45″ N.,	Long. 123° 03′ 00″ E.	
Lat. 30° 44′ 45″ N.,	Long. 123° 05′ 54″ E.	

3. (a) The Chang Kiang Kou Lightvessel: See "Shipmaster's Report", dated July 1984.

4. *(a)* With the line joining Chang Kiang Kou Lightvessel and Light Buoy M-1 as a demarcation line.
   (i) Entrance Channel: The water area within 1,100 m. and on the Northern side of the line is the Entrance Channel.
   (ii) Departure Channel: The water area within 1,100 m. and on the Southern side of the line is the Departure Channel.
   (b) With the line joining Light Buoys H12, H14, H16 and H18 as a demarcation line, the water area within 1,100 m. and on the Southern side of the line is open to navigation. The water area on the Northern side of the line is prohibited to navigation.

Shipmaster's Note:

Extensive dredging is taking place between the pilot vessel and Woosung Anchorage.

A buoyed channel has been established under the same project and several buoys have been re-positioned and laid above those charted in B.A. Chart 1602. All the buoys have new numbers.

DEVELOPMENTS: Container wharves at Wusong under construction. Two berths. Hitachi container crane (30.5 tonne) under construction.

Two coal wharves (4 berths) being re-built.

Seven new berths for vessels of 10,000 d.w.t. to be built.

SHIPMASTER'S REPORT: 1974.

B.A. Chart 1602. China Sea Pilot No. 32, Vol. 111.

Navigation: Marine flashing light Yangtse North – the position quoted in the Nautical Light Service 11 agrees with Pilot's information. Marine flashing light North Saddle – very weak, signals KK. Marine flashing light Gutzlaff Island – out of service.

The wreck shown on the chart between the entrance of the Wangpoo into the Yangtse Kiang and Buoy No. 51 (new numbering) has been removed.

On the Yangtse Kiang there has been considerable dredging, particularly between Buoy Nos. 54 and 51-3 (new numbering) in order to clear the Bar. According to the Pilot, until the present time, only vessels with less than 25 ft. draft could pass at slack water.

Following the Pilot's disembarkation, vessels proceeding Northbound should make an Easterly course to Lat. 31° 05′ N., Long. 122° 31′ E. and then alter course Northerly, Chi-ku Chiao Lt. (Amherst Rocks) should be passed at a distance of about 6 – 8 miles.

Buoy No. 51-0 (Entrance) is in position at Lat. 31° 04.9′ N., Long. 122° 10′ E. Same signal. Buoy No. 51 (Fairway) is in position at Lat. 31° 03.8′ N., Long. 122° 14′ E. Same signal. Buoy at Lat. 31° 12.8′ N., Long. 122° 19.1′ E. Non-existent. Buoy at Lat. 31° 07′ N., Long. 122° 22.5′ E. Flashing green every 3 secs. Buoy Nos. 54 (now 51-2), 57 (now 51-3), 58 (now 53), and 61 (now 54) are in process of positional alterations. Characteristics are not as on chart. Shaweishan Light Gp. Fl. (2 and 1) 12 secs. was observed. Numbering of the buoys on the Yangtse is now changed, and the numbers given on the chart no longer apply. The buoys are spread-out in accordance with the depth of the river. Lightvessel No. 60 (old number) now carries the words Jui Dan, and is in approximately the same position. Ch'ang Chiang K'ou Lightvessel was replaced end-1974 for repairs, by a buoy with radar reflector.

Documents: Clearance takes place quickly. On arrival the following documents are required:

6 Crew Lists.

Health Clearance Certificate.

List of Effects.

Declaration of Navigational Equipment. Make, type and quantity of Sextants, Binoculars, Radio Station Equipment and Emergency Signal, must be quoted.

If no pre-printed Chinese Forms are on board, the Authorities will accept the vessel's own forms, and will themselves carry out the transfer of information to their own documents.

When proceeding to another port within the People's Republic of China, only the Seamen's Books, Landing Permit and Seamen's Club Purchasing Cards are required. The Authorities will still require a list of Chinese currency remaining on board but only wish to know the total sum and not the amounts held by individual Crew members.

Pilotage: Pilots are requested via Shanghai Coastal Radio. Installation of a VHF service is planned within the next three years, but at present the pilot boat is not fitted with VHF, and no radio service is available for pilotage. Installation of Port Radar Service is planned within the next five years, but is presently not available.

Shanghai Harbour Control is equipped with VHF, and Pilots communicate with Harbour Control on Channel 10 concerning ship's movements. Traffic is passed in the Chinese language only and may be operated by the Pilot. A total of up to 5 Pilots board the vessel together with the Agent of the Harbour Authority. The Pilot boarding position is approximately Lat. 31° 05′ N., Long. 122° 01′ E. The main pilot craft is usually at anchor in that position, and the Pilots board from small launches. The main pilot craft corresponds closely to those used in Germany and the Netherlands, and has white superstructure and a white hull. Pilots are available day and night. Pilots are efficient, speak some English, and control the vessel most carefully. After the Pilot's boarding, no further use may be made of the vessel's own charts, and the Pilot brings his own charts with him.

Anchorage: The main quarantine and inward clearance zone is now on the Yangtse in the area of Lat. 31° 04′ N., Long. 121° 06′ E. (See 1978 Report below) and is of sufficient area to accommodate about 15 deep-sea vessels. The anchorage is good with sufficient depth for loaded vessels. The two quarantine areas shown on B.A. Chart 1602 (October 1974) have been abolished, and a new zone has been established due East of the Ch'ang Chiang K'ou Lightvessel, with middle point 10 miles due East of the lightvessel extending about 5 miles by 5 miles.

A Notice to Mariners issued by the Shanghai branch of the China Ocean Shipping Agency, and dated December, 1974, reads as follows: "As Woosung Quarantine Anchorage is effected by the current of Changkiang, vessels anchored there are apt to drag anchor if no proper safety measures have been taken or there is negligence in keeping watch, thus resulting in grounding or collision with other vessels. To ensure safety of vessels at anchor, we hereby draw your attention to the following:

(1) Vessels waiting for berth or for other reasons drop anchor at Quarantine Anchorage, someone must be appointed to keep watch of the anchor.
(2) To have no less than 6 shackles of anchor chain in the water.
(3) On the following occasions, watch should be re-inforced and, at the same time, have the engine ready against accidents:
   (a) Bad weather.
   (b) Wind force 6 and upwards.
   (c) Foggy and misty weather.
   (d) Stormy weather.
   (e) Spring tide.
(4) If a vessel is dragging anchor or any accident has happened to a vessel anchored at anchorage, the Captain of the vessel should report to this Agency *immediately*, enabling this Agency to make arrangement for sending Pilot on board or take other effective measures".

Restrictions: Permission to swing-out lifeboats must be obtained in writing from the Port Authority, through the Agent. If the request is made 24 hours in advance stating that the vessel's own country's laws require it to be done, then permission is given the same day, for the operation to be carried out the following day. Lifeboat engine trials are not permitted in view of the very intensive traffic on the Wangpoo, and the very strong current. No filming is permitted in the port area, but is permitted in the town with the exception of military installations. Electronic navigational equipment, navigational aids, echo-sounding equipment and radio may not be used except with the Pilot's permission during the approach to port.

Mooring: Mooring to buoys takes place with assistance of tug and mooring craft. Pilots manoeuvre vessel to forward buoy with use of the anchor which remains paid-out after tying up, and is only raised prior to sailing. Approximately one to one-and-a-half shackles used. Vessel is moored to buoys with four lines fore and aft, and slip-wires. Lines are paid-out in equal lengths either side through the mooring leads and not through the Panama hawse.

Tugs: When proceeding from buoys to alongside berth, tugs provide assistance in un-mooring, but not in berthing which is conducted by Pilot without tug assistance. When leaving the berth, tugs are used to assist, and use their own lines.

Berthing: Pier installations are partly damaged and have no fendering. If possible, vessels should have their own cork or wooden fenders.

Cargo Gear: Loading and discharging is by means of ship's gear. There are three heavy-lift floating cranes with lifting capacities of about 130 tons, and of modern construction. A number of mobile cranes are available with lifting capacities of about up to 5 tons.

Currency: For vessels tied to buoys there is an hourly boat-service to the Seaman's Club where foreign currencies may be changed into Chinese Yen, and where purchases may be made.

Provisions: Stores, alcohol and cigarettes are not sealed. Fresh provisions are available depending upon time of year. Sufficient quantities are available including beer, poultry, meat and fish. Ample advance notice is required.

Telephones: Telephone calls to foreign countries are possible either from the Agency or from the main Post Office in Nanking Road.

SHIPMASTER'S REPORT: 1978.

Anchorage: The anchorage, prescribed by the Agents to await the tide is the Chang Kiang Kou Anchorage, as shown on B.A. Charts 1602 and 1199, between the following positions:

A – Lat. 31° 00′ N., Long. 122° 25′ E.
B – Lat. 31° 00′ N., Long. 122° 32′ E.
C – Lat. 30° 56′ N., Long. 122° 32′ E.
D – Lat. 30° 56′ N., Long. 122° 25′ E.

Pilotage: The pilot station is as charted on B.A. Chart 1602 in position Lat. 31° 03.5′ N., Long. 122° 12′ E.

The pilot boat is equipped with VHF (Channel 16). They do reply to calls in the English language, but they have no authority to give any information concerning dates and times of proceeding up-river. (Those orders come by radio from Penavico). The pilot station however gives instructions by VHF to ships approaching the pilot station to pick up the Pilot, concerning speed, which side the pilot ladder, etc.

VHF in Port: For the VHF communication in port please see "Circulars".

Shipmaster's Report above dated 1974: The information concerning Navigation, Pilotage, Documents, etc., dated 1974 is still correct and up to date, except for the anchorage area Lat. 31° 04′ N., Long. 121° 06′ E., which we cannot place.

Quarantine Anchorage and Waiting Area: Ships are boarded and cleared at Woosung Quarantine Anchorage. It is also there that ships await berthing orders. About 15 deep-sea vessels can be accommodated at Woosung.

SHIPMASTER'S REPORT: 1979

General: The vessel followed the recommendations of the latest "Guide to Port Entry" and Admiralty Sailing Directions for approaches to pilot station and entrance buoys.

However, the latest information was cabled to vessel by Penavico Shanghai, as Agents (China Ocean Shipping Co.), as appended below, and confirmed by the Pilot and Harbour Official that boarded vessel.

The notable changes are: shift of position of Chang Kiang Kou Lightvessel, and in its 'old position' is new "M-1" Buoy; the channel buoys are only 'fractionally different' from those given in latest amendment of Sailing Directions.

Anchorages seem to be variable, and vessels were anchored at both positions indicated by Admiralty Sailing Directions and "Guide to Port Entry"; vessels were also anchored to the North and East of the new position of lightvessel.

Pilots are recommending that vessels buy the latest Chinese Charts for up to date information on approaches to Chang Kiang Kou and all the way to the Port of Shanghai, including Woo Sung Anchorage; as most charts do not have the latest buoys and Light Floats for the river passage.

Message From Penavico: (NB: Bracketed *italic* notations are Master's remarks).

Pilot Station is in 31° 03′ 30″ N., 122° 12′ 00″ E.
Dangerous area: 30° 47′ 05″ N., 123° 03′ 00″ E. *(These positions*
30° 47′ 15″ N., 123° 05′ 54″ E. *are the same*
30° 44′ 45″ N., 123° 03′ 00″ E. *as indicated*
30° 44′ 45″ N., 123° 05′ 54″ E. *on charts)*

Regular channel: between Chusan and Raffles Islands: routing, Tengting Island, Steep Island, Elgar Island, Bonham Island, Butten Island to Gutzlaff to Chang Kiang Kou, other channels between Chusan – Raffles Islands NOT ALLOWED. *(Again same as publicised . . . but be very wary of concentrations of fishing craft in this area and nets extending some distance).*

Chang Kiang Kou Lightvessel: Lat. 31° 03′ 32″ N., Long. 122° 23′ 26′ E. Fl. 6 secs. *(high intensity light).* Light buoys between Chang Kiang Kou Lightvessel and pilot boat:

"M-1"	31° 03′ 00″ N., 122° 18′ 42″ E.	3 Fl./6 secs.

Red and White Chequered Can Shaped:

"H 12"	31° 03′ 45″ N., 122° 14′ 28″ E.	2 Fl./3 secs. Red.
"H 14"	31° 04′ 11″ N., 122° 12′ 11″ E.	2 Fl./1.5 secs. Red.
"H 16"	31° 04′ 37″ N., 122° 09′ 54″ E.	2 Fl./3 secs. Red.
"H 18"	31° 05′ 03″ N., 122° 07′ 59″ E.	2 Fl./3 secs. Red.

White Chequered Can Shaped:

"H 11"	31° 03′ 49″ N., 122° 15′ 03″ E.	2 Fl./3 secs.
"H 13"	31° 04′ 15″ N., 122° 12′ 47″ E.	2 Fl./1.5 secs.
"H 15"	31° 04′ 41″ N., 122° 10′ 30″ E.	2 Fl./3 secs.
"H 17"	31° 05′ 07″ N., 122° 08′ 14″ E.	2 Fl./3 secs.

Approach to pilot boat at Lat. 31° 03′ 30″ N., Long. 122° 12′ 00″ E. with a line joining Chang Kiang Lightvessel and Light Buoy M-1, as demarcation line for entrance channel/departure channel is at water area within 1,100 m. North or South of demarcation line. With line joining Light Buoys "H 12"/"H 14"/"H 16"/"H 18" as demarcation line, water area within 1,100 m. South of line open to navigation. ATTENTION: North of line not allowed to navigation . . . end of message.

Vessel's Own Observations:

With regards the latter demarcation line: this means leaving BOTH buoys i.e. "H 12/13", "H 14/15", "H 16/17" and "H 18", on the mariners starboard hand on entering and on the port hand when departing.

Caution: These buoys are very hard to observe in (a) rough sea at night and (b) daylight in similar conditions, however they can be distinguished on the radar screen. The 'run-in' from "M-1" Buoy to pilot station is not a straight course as would appear from the demarcation line of the buoys, but would entail 2/3 courses if vessel keeps close to the buoys.

The Pilot on this occasion met the vessel abeam of "H 16" Buoy.

There is a VHF service now operating from the pilot station, and information will be passed on Channel 16; Pilots once on board vary their channels but most commonly used is Channel 6.

Penavico have Channel 11, used from the Woosung Anchorage; they also say it can be used in port, but Pilots instructions are that it cannot be used in port. There is a set time given to vessels to listen in whilst at the anchorage, again if vessel does not have Channel 11 for direct communication then Penavico will call through Channel 16 and ask which Channel vessel has available (if nothing suitable then message will be passed on Channel 16).

Echo sounder has to be switched off when the Pilot boards.

Radar can and will be used by Pilots for river navigation and docking purposes, however they will advise vessel on this point.

Pilot boards with "Harbour Official" who appears to do the 'initial clearance' whilst proceeding up river; if vessel does not have Chinese entry forms, these will be given to vessel to fill in on way up river. (They would not accept our IMO forms or vessels forms). The "Harbour Official" will also require the Master to present the following: (1) Deadweight of vessel; (2) Summer loaded draft; (3) Light ship draft; (4) Drafts for all conditions, i.e. Winter, tropical; (5) FWA; (6) If vessel has "delta" marks then only the highest gross and nett tonnage is acceptable; (7) BHP/NHP/IHP of main engine; (8) Type of engine; (9) Capacity of fuel oil and fresh water tanks; (10) He will inspect and take down the issue date and expiry date of: Safety Equipment Certificate, Safety Radio Certificate, Safety Construction Certificate, Load Line Certificate, Tonnage Certificate, Derat, Registry. (Much of this information is again required at main clearance procedure also if vessel's first call at Shanghai, then Penavico will require all the above and more on an official printed form).

Inward bound vessels will generally anchor at Woosung Anchorage for main quarantine clearance, customs clearance and immigration clearance, I found that this was quite straightforward and was done in less than 1 hour.

On departure the vessel has an 'inspection'; this entails all members of the vessel mustering in an area designated by the officials, whilst they then go through the discharge books/passports and their own issue of 'shore pass'. During this period three men are detailed (one from each department) to go right round the vessel, into every cabin, locker, store rooms, etc., with the port officials.

Movement of vessels takes place 24 hours a day for berthing and unberthing.

Steaming time from Pilot to Woosung Anchorage depends largely on tides and speed of vessel but averages 3 – 6 hours, for berthing from Woosung Anchorage into Shanghai port about 2 – 3 hours. However, there are wharves right throughout the river on both sides, this time only indicates the centre of Shanghai Docks.

SHIP'S OFFICER'S REPORT: June 1979.

Vessel discharged 21,000 tons of phosphate in 30 days using 2 gangs only.

Dredging is underway in the river and the max. draft at present is 9.5 m.

The buoyage system is being changed.

SHIPMASTER'S REPORT: July 1979

Vessel on time charter to Chinese National Chartering Corporation of Peking.

Approaches: Hua Niao Shaw Light very good, solar-powered. I was advised to anchor within the Changkiangkow Anchorage, this is clearly defined on Chart B.A. 1602. The anchorage area is 24 square miles; depths of water vary between 6 and 9 fathoms, our draft was 29 ft. fresh water.

Pilot: Location between Buoys H17/18 which is some 3 miles further than charted location. Pilot boards from a small motor launch, usually only one Pilot to take vessel to Woosung Quarantine Area. Pilot cutter equipped with VHF Channel 16 *only.*

Woosung Quarantine/Inspection Area: This anchorage is located some 35 miles from the pilot station. After anchoring vessel awaits the arrival of one additional Pilot to assist for the journey up the river to Shanghai.

In addition to the extra Pilot, the following personnel board: Harbour Master, Port Health Doctor, Immigration, Customs and Agent. On this vessel the procedure of inspection of papers, etc., was undertaken in the Owner's suite in the presence of the Master and Purser. An adequate supply of soft drinks is recommended.

The following documents were required:

7 Crew Lists, one copy to remain on board
1 Copy EAL 127-private effects, radios, cameras, etc
1 List of foreign currency on board
1 List of bonded stores
1 List of provisions
1 List of all previous ports of call for current voyage
1 Health list
1 Vaccination list of valid certificates
All ship's certificates/Register
All discharge books & CDC examined

After Inspection: Light dues certificate is issued (optional 30 days/3 months) Shore passes issued by Immigration. Friendship store passes issued to record purchases.

Alongside Kai Ping Wharf: Visit by Customs, security man placed at foot of gangway, all ships personnel checked by him before proceeding ashore.

Agents: Only one agency, the China Ocean and Shipping, could be contacted throughout the 24 hour period, by calling "Penavico" on VHF Channel 11, this proved to be a very satisfactory method of communication provided one speaks very slowly. The boarding Clerk visited the vessel every morning to attend to any ship requirements eg. Telex messages and mail.

Stevedores: Work around the clock but do stop for meal breaks, number of men per gang varied depending upon the nature of the cargo.

Density: At all stages of the tide 1000.

Fresh Water Supply: Available alongside the wharf at a rate of 50 t.p.h. also available at buoys/stream – cost three times more than alongside.

Marine Bunkering: Suppliers are China Marine Bunkering & Supply Co. – Grades of fuel, Marine Fuel oil 1000 Redwood. Light diesel K/centistroke, 3-8 at 20°C and heavy diesel 20 K/centistrokes at 50°C. Very efficient service.

Consuls: Japan only.

Classification Society: Chinese only.

Cargo Surveyors: Arranged through the Harbour Authority.

Customs/Bond: Normally British ships are not sealed, this also applies to European Maritime vessels except Greece, much depends upon the discretion of the Customs, however Philippino, Japanese and some Hong Kong operated vessels are sealed

Airport: Located about 25 km. N.W. from the city, the only foreign airline operators are JAL (Japan Airlines).

Important Regulations: Whilst within port limits radar *not* to be switched on without permission of Harbour Authority, this even applies once vessel entered; passed inspection, etc., and wish to do any repairs to Radar. Dock trials are not permitted

Hospitals: There is one special hospital for seafarers.

Dental Treatment: Arranged in the normal way through the Agents.

Laundry Service: Good and inexpensive compared with Europe. No dry cleaning

Sailing Inspection: Carried out 1 hour before sailing, passes collected, money returned to Agents, ships' papers checked, etc.

General: I found the Chinese most friendly and only eager to help and accommodate us. The Seamen's Club organises various outings to ballet, the world famous Yu Gardens, acrobatics, football matches, etc.

SHIPMASTER'S REPORT: March 1980.

Tanker's Particulars:

Ship's Length: 170.75 m. Breadth: 26.09 m. Depth: 14.9 m.
Summer Deadweight: 31,600 tonnes. Draft: 11.33 m.
Loaded Shanghai: 19,897.184 tonnes Chinese motor gasoline.
Sailing Draft: Forward 8.54 m. Aft 9.02 m.

Navigation: British Admiralty Charts 1601 and 1602 (T) proved most reliable with all buoys in their correct position exhibiting the correct lights. Where the channel is constantly dredged, there are a few extra buoys but they follow the normal numbering of odd on the starboard hand and even to port when proceeding up river.

Anchorage: Anchorage is obtained in the area shown S.E. of Chang Kiang Kou Lightvessel. There is a constant strong tide running here and at least 6 shackles in the water are recommended.

Pilotage: The pilot vessel is anchored at Lat. 31° 03.4′ N., Long. 122° 12′ E. The Pilots listen on Channel 16 but berthing information usually comes from the Agents "Penavico", through Shanghai Radio. When picking up the Pilot, vessels are told to approach as close to the pilot vessel as possible and the Pilot boards from a small boat. An approach to the pilot station may be made either by keeping well South of the Yangtze Channel or going up the channel until Buoy No. 14, then cutting down South.

Radio: Pilots listen to VHF Channel 16. The national agency "Penavico" listen on Channel 11 for all ships. Foreign ships are especially asked to listen at the following times when they will normally be contacted. 0715 hrs., 1115 hrs., 1515 hrs. and 1915 hrs.

The Agents "Penavico" also have Channel 27 if Channel 11 is busy.

Papers: The following papers are required, and must be on the Chinese printed forms:

2 Report of entry for foreign-going ship
1 Maritime Declaration of Health
1 Report on articles restricted for use in port
7 Crew lists
1 List of specified articles, foreign currencies, gold, silver belonging to the ship and/or members of the crew.
1 Import manifest showing goods to be imported into Shanghai

A boarding official came aboard with the Pilot and all the Chinese forms were completed en route to the Quarantine Anchorage. At the Outer Anchorage, no persons boarded.

Clearance and Pratique at the Quarantine Anchorage took about an hour. After this all the officials and the Pilot left.

All non-Chinese are given Identity cards. Each man receives a currency card and all cash drawn on the ship is noted and stamped by the Agent. All unused cash must be returned.

Shore leave is allowed from the Quarantine Anchorage. There are two boats daily, one at 0900 hrs. and the other 1600 hrs. Vessels requiring this boat must hoist the flag signal "DI".

Berthing: All berthing information comes from the Agent via VHF. Berthing is carried out day or night at Kao Chiao Sha which is on the North bank of the river between Buoy Nos. 107 and 108. Berth is in position Lat. 31° 20.75′ N., Long. 121° 32.1′ E. Vessels loading berth starboard side alongside so they can turn around in the narrow river whilst still light draft. Vessels turn in the river off Buoy No. 110. The turn is made to starboard using the engines and a tug which pushes on the port bow. Sometimes the starboard anchor is used. At the berth one tug only is used, this not being made fast at all. It simply pushes where required.

Moorings are 4 headlines plus 2 springs forward with 4 sternlines and 2 springs aft. Whilst approaching the berth, the port anchor is run out although its usefulness is doubtful.

The actual berth is a "T" shaped concrete pier on wooden piles. It is about 400 ft. long with a maximum depth of 9.5 m. 560 ft. is about the maximum length for the berth. Springs go to the jetty whilst other lines go to the shore. Despite the heavy traffic on the river, very little surging was experienced on the berth.

No fuel, water, diesel available ex-berth. All available from a barge but not during cargo operations. No slop facilities ashore, again a barge is available if required.

No ballast to be discharged into the river without the permission of the Harbour Authorities. A written application must be made through the Agents for the authorities to inspect the ballast. After inspection, permission may then be given to start de-ballasting, This ballast check is most stringent and samples of every tank are taken plus a really good visual check carried out. The oil record book is also checked by the authorities.

Whilst at the berth, no visitors are allowed on board. Four armed border guards are on the vessel at all times. Two maintain a continuous gangway watch recording the arrivals and departures. Customs Officials also stay on board throughout. Whilst at the berth, an Agents representative also stays aboard.

Facilities: Medical facilities are good and they are arranged by the ship chandler. Provisions and stores are readily available and found to be of good quality and inexpensive. The bond was not sealed.

There is a free transport to and from the seaman's club in Shanghai which was about 1 hour's drive. Photography is allowed in all areas except the docks and military areas.

Notice of Readiness is only accepted during office working hours. Anything required such as cargo surveyors, tank inspectors, bills of lading or certificates of quality and quantity must be applied for in writing well in advance.

Repatriation is possible, the ship chandler provides all the necessary alien application forms.

If tankers wish to take a shore line sample at the start of loading, written permission must be applied for.

Tankers should be well advised to ballast well out to sea as the water 20 miles from shore tends to contain a lot of mud and sand.

Sailing: All unused cash, plus currency cards and passes are collected prior to sailing. Papers take about 4 hours. The maximum river draft is 9.0 m. fresh water.

Two tugs are used for unmooring, one each end and use either tug's or ship's gear. Before singling up, the anchor is pulled home if possible. Ships with deep draft have 2 Pilots who speak good English. Once the vessel is off the berth, the tugs depart. There seemed to be no radar assistance or traffic control on the river. Each Pilot depended greatly on the whistle and smaller craft seemed to keep the main channel clear. Pilots sometimes talked ship to ship on VHF, Channel 6.

In the main Yangtze River there are 3 shallow areas and if drawing 9.0 m., they cannot all be transitted in one passage. First after un-mooring day or night, the vessel clears the shallow area off Buoy No. 58 at HW. Anchor is then dropped with 6 shackles on deck in the anchorage just off Buoy No. 57. Just prior to the next high tide, vessels weigh anchor to pass shallow areas off Buoy Nos. 55 and 23, the latter being passed at HW. The minimum under keel clearance recorded was 1.0 m.

Pilots depart as close to the pilot vessel as possible, taking ships South of the channel to do this. It is up to the Master whether he remains outside the channel or goes back in it after the Pilot has left.

Conclusion: There were no musters of officers or crew. No problems were encountered and all shore personnel seemed pleasant and polite.

The berth itself was rather old with no gear at all. Ship's gangway was used and ship's derrick was required to handle 2×6 in. hoses. Loading rate was 450 t.p.h. and the jetty was manned at all times.

Agency Notice: To the Master,
m.v. ".."

Dear Captain,

Please find attached herewith the following forms required by the Port Authorities at the Joint Inspection which is to be conducted on your vessel's arrival at the Quarantine Anchorage:

2 Report of Entry for foreign-going ship
1 Marine Declaration of Health
1 Report on articles restricted for use in port.
1 set of specified articles, foreign currencies, gold, silver belonging to ship and/or members of crew
7 sets Crew List

Please have the above forms filled in now and be ready to submit them to the port officials on their boarding for Joint Inspection.

Yours faithfully,
China Ocean Shipping Agency
Shanghai Branch

SHIPMASTER'S REPORT: October 1980.

Shanghai pilot vessel will now give orders about proceeding inwards to pilot vessel or remaining outside at designated anchorage. Pilot checked to make sure we had anchored in the correct anchorage. Channel buoys as per "Guide to Port Entry". See "Circulars – Guide to foreign vessels calling at Shanghai – Para 3(c)". These buoy positions and descriptions were transmitted to vessel but only 4 hours before arrival at channel entrance. Pilot vessel tends to be between Buoy Nos. 14 and 18. All other information in the Shipmaster's reports appears to be still valid.

Since about July 1980 foreigners changing money ashore are issued with Bank of China foreign exchange certificates, likewise if drawing cash from Agent. Denominations of 50, 10, 5, 1, 0.50, 0.10 yuans. The certificates (like banknotes) are printed with the following:

"The yaun expressed in this certificate is equivalent in value to the Renminbi yuan. This certificate can only be used within China at designated places. No request to register its loss will be accepted by the Bank".

The Renminbi Yuan is the official currency unit. Designated places are Seaman's Club, Seaman's Store and Friendship Store. The two former have cheaper prices for seamen. Other designated places are the tourist hotels.

For tankers, authorities require a cargo manifest of nil cargo, no special form required.

For entry papers the official Chinese forms must now be used for 'Report of Entry for Foreign-Going Ship, Crew List and List of Specified Articles, Foreign Currencies, Gold, Silver belonging to Ship and/or Members of Crew'. If not available on board before arrival then vessel must now transfer the information to the Chinese forms.

If vessel coming from what they describe as a cholera infected port then the following are required. A statement of ballast quantities and disposition (required from clean port also) and where the ballast came from, i.e. open sea or which river. They are most concerned that no ballast is imported from a cholera infected port. Ballast is inspected by quarantine officials and the slightest "rainbow" on top means the top one third of that tank will have to be pumped into a barge. They will not give statement to say they consider any tank is not suitable to pump overboard into river. A statement of where you last took fresh water, amounts taken and amounts remaining on board. They analysed our water from Bangkok and declared it was not very good and chlorinated the drinking water tank and also the wash water tanks but again they would not give a statement to say what was wrong with it, although they do not give a certificate to say the tanks have been chlorinated. A list of stores taken at any 'cholera infected port'. If any fresh stores were taken then samples are taken ashore for analysis. Obviously, it is best to endeavour to ascertain beforehand whether they consider your last port cholera infected.

Other papers required are crew declaration (to include makers names for items like watches, radios, etc.). Ten copies of Notice of Readiness. They do not consider a vessel ready until all ballast has been discharged. They did not require lists of bridge navigational equipment or lists of pyrotechnics or lists of radio equipment.

Light dues are payable for 3 months or 30 days. For 30 days, dues are calculated at Yuan 0.90 per nett registered ton. For 3 months it is more expensive.

At Quarantine Anchorage, accommodation required for 2 guards. At berth same required plus accommodation for 2 Customs Officials, 1 Agent and possibly 1 cargo surveyor.

Inspection is carried out on arrival at the Quarantine Anchorage and prior to departure berth. This was just the entry and departure formalities. No search was made and there was no crew assembly. Passes issued to everyone and collected prior to sailing.

Apparently fresh water and bunkers are available. There appeared to be no restrictions on use of radar, echo sounder, binoculars, etc.

Gasoline cargo loaded was about average S.G. with a loading temperature of 23.5°C. Cargo papers on sailing are manifests and Bills of Lading only.

SHIPMASTER'S REPORT: July, 1984.
Shanghai Entrance. Buoys as follows:
AAA Changkiangkou Lightvessel Lat. 31° 03′ 30″ N., Long. 122° 23′ 1″ E.
BBB Changkiangkou Lightbuoys M1 H11-H20 replaced by Buoys 44 – 49.

Buoy 44	Lat. 31° 03′ 22″ N.,	Long. 122° 19′ 52″ E.	Fl. 3/10 secs.
Buoy 45	Lat. 31° 03′ 14″ N.,	Long. 122° 16′ 58″ E.	Fl. 3/6 secs.
Buoy 46	Lat. 31° 03′ 06″ N.,	Long. 122° 14′ 02″ E.	Fl. 3/10 secs.
Buoy 47	Lat. 31° 03′ 00″ N.,	Long. 122° 11′ 06″ E.	Fl. 3/6 secs.
Buoy 48	Lat. 31° 03′ 34″ N.,	Long. 122° 08′ 14″ E.	Fl. 3/10 secs.
Buoy 49	Lat. 31° 04′ 11″ N.,	Long. 122° 05′ 26″ E.	Fl. 3/6 secs.

Pilot vessel moving in/area Buoys 47 – 49 serving/as pilot station.

SHIPMASTER'S REPORT: January 1986

Documents: The following papers are required by the Port Authorities:

1 copy Maritime Declaration of Health.
2 copies Report of Entry for Foreign Going Vessels.
4 copies Crew List.
1 copy List of Specified Articles, Foreign Currency, Gold, Silver belonging to the ship or crew members.
1 Import Manifest.

The following certificates and papers are to be submitted for examination by the Port Authorities:

Registry Certificate.
Tonnage Certificate.
International Load Line Certificate.
Derat Certificate.
Deck and Engine Log Books.
Tonnage Dues Certificate.
Manifest of Cargo for Discharging and Transit Cargo.
Oil Record Books.

Clearance: Clearance of the vessel usually takes place at the Shanghai Quarantine Anchorage located in the following position between the buoys:

Buoy No. 25	Lat. 31° 20.8′ N.,	Long. 121° 39.7′ E.
Buoy No. Q1	Lat. 31° 21.9′ N.,	Long. 121° 37.8′ E.
Buoy No. 29	Lat. 31° 23.0′ N.,	Long. 121° 35.9′ E.
Buoy No. Q4	Lat. 31° 23.5′ N.,	Long. 121° 36.3′ E.
Buoy No. Q3	Lat. 31° 22.6′ N.,	Long. 121° 38.4′ E.
Buoy No. Q2	Lat. 31° 21.8′ N.,	Long. 121° 40.4′ E.

After clearance vessel proceeds for berthing/mooring. Occasionally Port Authorities instruct Pilots to proceed direct for berthing/mooring and Entry Clearance of the vessel carried out after berthing or mooring.

Navigation: B.A. Charts No. 1601 and No. 1602 proved most useful when entering the South Channel in order to receive Pilots.

The positions and new numbers of the buoys are indicated below:

Changjiang Kou Lightvessel	Lat. 31° 03.4′ N.,	Long. 122° 23.2′ E.
Buoy No. 1 (ex-Buoy No. 44)	Lat. 31° 03.4′ N.,	Long. 122° 19.8′ E.
Buoy No. 2 (ex-Buoy No. 45)	Lat. 31° 03.2′ N.,	Long. 122° 17.0′ E.
Buoy No. 3 (ex-Buoy No. 46)	Lat. 31° 03.1′ N.,	Long. 122° 14.0′ E.
Buoy No. 4 (ex-Buoy No. 47)	Lat. 31° 03.0′ N.,	Long. 122° 11.1′ E.
Buoy No. 5 (ex-Buoy No. 48)	Lat. 31° 03.6′ N.,	Long. 122° 08.2′ E.
Buoy No. 6 (ex-Buoy No. 49)	Lat. 31° 04.2′ N.,	Long. 122° 05.4′ E.
Buoy No. 7 (ex-Buoy No. 50)	Lat. 31° 05.4′ N.,	Long. 122° 02.8′ E.
Buoy No. 8 (ex-Buoy No. 51)	Lat. 31° 06.6′ N.,	Long. 122° 00.2′ E.
Buoy No. 9 (ex-Buoy No. 52)	Lat. 31° 07.6′ N.,	Long. 121° 57.7′ E.

The characteristics of all the above buoys of the South Channel are Red/White with radar reflector on top.

The South Channel is used for vessels in light condition or vessels with a draft up to 7.5 m. (FW).

The North Channel is used for large vessels or vessels with a draft over 7.5 m.

The numbering of the buoys of the North Channel is still the same as indicated on B.A. Chart No. 1602 but in the near future this channel will also be re-numbered.

Pilotage: During good weather the pilot vessel is anchored in position Lat. 31° 03.8′ N., Long. 122° 07.2′ E. and Pilots board vessels between Buoys Nos. 5 and 6 in the South Channel.

For vessels using the North Channel, boarding area is between Changjiang Kou Lightvessel and No. 1 Buoy of South Channel.

During bad weather or strong winds Pilots board between No. 6 and No. 7 Buoys of South Channel and occasionally near No. 8 Buoy.

For entry or departure through the South Channel all ships navigate anti-clockwise within a radius of 1.3 miles of the Changjiang Kou Lightvessel but clear of an inner radius of 0.3 miles centred on Changjiang Kou Lightvessel and then entering South Channel within 500 m. North of the line joining mid-channel Buoy Nos. 1 – 9 or 500 m. South of the line joining mid-channel Buoy Nos. 1 – 9 on leaving.

Pilots listen on VHF Channel 16, and give instructions to vessels entering or berthing at Shanghai. They also give instructions as to the Pilots' boarding position. Foreign vessels contact the pilot station at 0845 hrs., 1115 hrs., 1515 hrs. and 1915 hrs. to enquire if they are on the daily list for entering.

Local Agents "Penavico Shanghai" also inform vessels by cable via Shanghai Radio of berthing prospects and Pilots' boarding time. Two Pilots board vessel and they stay on board until vessel is berthed or moored.

Anchorage: Vessels anchor in the area indicated to the S.E. of Changjiang Kou Lightvessel (between 30° 35′ N. and 31° 00′ N. and between 122° 25′ E. and 122° 32′ E.).

Due to strong current and tide at least 6 – 7 shackles are recommended when anchoring in the above anchorage.

Radio: All telexes transmitted to Agents via Singapore Radio and Shanghai. Agents "Penavico" relay cables via Shanghai Radio only.

The following information is required by the Agents:
Forward and aft arrival draft (Salt Water).
Crew/Passengers on board and if all healthy.
Ports of call from Loading Port with dates of arrival/departure each port.
Quantity of main provisions, drinking water, ballast water on board and when and where taken.
Derat or Derat Exemption Certificate, port and date of issue.

"Penavico" use VHF Channel 11 for all ships when giving any information required by the vessels.

Berthing: All berthing information received from the Agent via VHF. Berthing or shifting carried out day and night.

For discharging of soyabean oil, vessel moored to No. 81 – 82 Buoys located on the ninth section of the river. The actual berth for soyabean oil is a small wooden pier used only by small coasters and barges. During mooring 1 tug used only for pushing. 4 headlines and 1 slip wire used forward and only 4 stern lines used aft.

No ballast water can be discharged into the river without the permission of the Harbour Master.

For a short period (6 – 8 hours) the Port Authorities (through the Agent) give permission for engine inspection and overhauling of pistons.

Discharging: Notice of Readiness tendered on vessel's arrival at the Outer Anchorage but accepted by "Penavico" after berthing and only during office hours.

Cargo Surveyors (3 persons), board vessel and check the quality of the cargo, taking ullages and samples. The Surveyors company is the national firm China Commodity Inspection Bureau.

After cargo inspection and test, and if they find cargo in good order, they give permission for discharge to commence. No ship's papers or cargo calculations signed by them.

Cargo discharged into the barges at a maximum rate of 350 tonnes/p.h. through a flexible 6 in. hose. Each barge has a capacity of about 350 – 500 tonnes. There is always a shortage of barges. For a quantity of 10,000 tonnes the discharging time is usually 4 – 7 days.

The daily quantity discharged was:
Day 1 – 350 tonnes (1 barge).
Day 2 – 685 tonnes (2 barges).
Day 3 – No discharging. No barges available.
Day 4 – 1,250 tonnes (3 barges).
Day 5 – 1,745 tonnes (4 barges).
Day 6 – 2,200 tonnes (5 barges).
Day 7 – 3,515 tonnes (9 barges) maximum.
Day 8 – 485 tonnes (1 barge).

The daily maximum quantity which they can receive is approximately 3,500 tonnes.

After discharging and squeezing of the cargo the Surveyors inspected all the tanks carefully and gave their own Dry Certificate. If there is a difference between the ship's figures and shore figures, vessel's departure is postponed until a final settlement is reached.

Unberthing: 2 tugs are used for unmooring, one each end, using tugs' lines.

Large vessels always use 2 Pilots and they speak good English. The Pilots use the ship's whistle a lot in order to keep the main channel clear as no safety regulations followed by small craft, barges, ferries, etc.

Both anchors to be ready for use at all times when berthing/unberthing.

Facilities: Free transportation by a small ferry is available from the ship to the ferry station.

Two guards and 1 Customs Officer stay on board from arrival until sailing.

Provisions, stores, bunkers and water are available with 2 – 3 days' notice. The water is not very good quality so should be avoided if possible. Bonded stores are not sealed. Port Authorities and Agents are very pleasant and polite. The vessel did not face any problems during entering, stay alongside or when leaving Shanghai.

SHIPMASTER'S REPORT: March 1986.

Vessel anchored with 6 shackles in the water; Changjiang Kou Lightvessel bearing 277°×9.5 miles. Strong winds (force 6) were experienced and vessel rolled 20°. Ebb tide is stronger than the flood. All messages were passed on to the Agents via W/T, who keep watch 24 hours on VHF Channel 11, but there was no answer. Entry and departure is through the South Channel (Nancao Hangdoa). Changjiang Kou Lightvessel and the buoys are in position as marked on Chart No. 1602; but no racon was observed on any of the lightvessels. Light Buoy Nos. 44 onwards are re-numbered as Nos. 1 onwards; and are red and white can buoys with spherical topmarks. The lightvessel and all the buoys are to be passed on the port side. 2 pilot vessels were cruising between No. 5 and 6 Buoys and Pilot boards from a small boat coming alongside.

Vessel had to anchor for Free Pratique at Woosung Quarantine Anchorage, which was granted in 30 minutes. After the vessel was tied up at berth between Buoy Nos. 44 and 45, Customs and Immigration boarded the vessel (4 people). The following documents were required: 6 Crew Lists; 1 Private Property List including currency; List of Provisions and where purchased; quantity of fresh water, ballast and where and when taken; List of Ports of Call during last 30 days.

All passports and health books to be collected. Bonded Stores not sealed. No separate List of Foreign Currency on Board required. Foreign currency can only be changed at "Friendship Stores", Seamen's Club or big hotels in exchange for specially made notes for use of foreigners – but can also be used in any other stores or hotels. No restrictions on the use of VHF, radar, echo sounder or any other navigational equipment. Cargo Manifest was sighted.

Two officials from Customs and Immigration stay on board and a cabin has to be made available. Everyone has to show shore passes before going ashore. There is a launch every hour – last one at 2330 hrs. Charges US$10.0 per day for every ship on the buoys.

Fresh water costs 2.50 Yuan per tonne, plus 50.00 Yuan handling charges during normal working hours when alongside at wharf. If supplied by barges, it costs 8.00 Yuan per tonne including handling charges. (US$1.0 = 3.12 Yuan).

Agent: Only one Agent in the port – China Ocean Shipping Agency, Shanghai Branch, 13 Zhong Shan Road (E.1), Shanghai. Cable: Penavico. Telex: 33052. Penav Cn. Tel: 212707.

TAKU BAR: 38.56 N. 117.53 E.

Also see "General" before first port.

SHIPMASTER'S REPORT.

Guide to foreign vessels calling at Taku Bar (Hsinkang, Tangku and Tientsin) issued by the Harbour Master at Tientsin.

1. Foreign vessels entering Pohai Gulf are only allowed to pass through Changshan Channel and/or Laotiehshan Channel. If the latter way is taken, the vessel must send a wireless message to "Harbour Master, Dairen" for directory 8 hours prior to passage. It should be noted that no other Channels are permitted for navigation. (Also see "Dairen").

2. Vessels passing Laotiehshan Channel for Dairen must make a detour along the East of "Encounter Rock".

3. Position of sunken dredger "Se Ho" is at Lat. 38° 31′ N., Long. 119° 10.5′ E. Vessels should keep far away from the above-mentioned area during navigation.

4. Position of Taku Lightvessel is at Lat. 38° 56′ 51″ N., Long. 117° 55′ 33″ E. Vessel may anchor N.E. of the lightvessel according to different condition of vessels arrival draft, to wait for Pilot.

5. Vessel may send radiogram to "Penavico Hsinkang" (via Hsinkang Coastal Radio Station XSV, calling frequency 500 kHz, working frequency 445 kHz, reserve frequency calling 8630 kHz. Listening 8364 kHz, working hours 0000 – 2400), giving exact ETA also fore and aft draft, before entering Pohai Gulf.

6. The pilot station is at Tangku. Any foreign vessels, according to Harbour Regulations are required to have a Pilot, when entering or leaving the Port of Taku Bar, Hsinkang, Tangku and Tientsin. The Pilot will board the vessel at Taku Bar Anchorage after receipt of exact ETA given by the Master.

The Salation Light Beacon in position Lat. 38° 56′ 16″ N., Long. 118° 30′ 38″ E. shows a white flash every 3 seconds and visible at a distance of 13 miles.

Regulations Issued by the Harbour Superintendent's Office:

1. All foreign vessels (hereafter referred to as vessels) entering or leaving the port of Tientsin (hereafter referred to as this port) are required to observe strictly the provisions of the Regulations Governing the Entry and Departure of Foreign Vessels into and from Ports of the People's Republic of China (hereafter referred to as Regulations Governing Foreign Vessels) and of the Port Regulations of Tientsin.

2. On arrival at this port, vessels are prohibited to use the articles enumerated in Article VII of the Regulations Governing Foreign Vessels. Should it be necessary to repair any of the articles enumerated in Item 2 of the same article, permission to do so must be obtained beforehand from the Harbour Superintendent's Office.

3. Articles placed under seal shall not be used and the seals shall not be removed without permission. Should any of the paper seals be found falling off, the fact shall be reported to the Harbour Superintendent's Office immediately.

4. Whilst in port, vessels are not allowed to dress ship or hoist flag at half mast without the permission from the Harbour Superintendent's Office.

5. Vessels in port desiring to undertake any of the following work must first apply in writing to the Harbour Superintendent's Office. After permission is obtained the work can then be carried out at the appointed place.

(a) Lifeboat practice;
(b) Overhauling boiler, main engine, steering engine or windlass;
(c) Engaging in welding work or burning anything on board;
(d) Pumping out ballast water regardless of whether the water is contaminated with oil or not.

6. After a vessel's arrival at this port, sounding, survey sketching, photo-taking, fishing and swimming are strictly prohibited.

7. After arrival at this port, vessels are strictly prohibited to dump ballast materials, coal ashes, garbage, rubbish and mud, or to discharge dirty oil or oily bilge water into the harbour. It is also prohibited to wash double bottom oil tanks or oil deep tanks inside the harbour.

8. Vessels in port must provide secure gangways or gang planks with rails or manropes for passengers, crew and all workers to embark or disembark. All gangways or gang planks are to be provided with lights at night.

9. Vessels lying alongside the pier should properly cover up all their exhaust valves and discharge openings on the ship's side facing the pier.

10. Garbage bins or drums with tight covers must be provided on board. The bins or drums should not be filled to overflow. When the garbage-collecting cart comes daily to the ship to collect the garbage and rings the bell on its arrival, the ship should arrange to deliver the ship's garbage into the cart.

11. If, owing to some special reasons, a vessel desires to return to this port after departure, the Master should first telegraph to the Harbour Superintendent for permission and must act according to the instructions given.

Frontier Inspection Station:

1. All the officers and crew of a foreign vessel and the passengers on board should produce their passports or other certificates to the Frontier Inspection Station and submit to the inspection of the Station.

2. When the ship's crew or passengers in transit desire to go ashore, the Master is to apply to the Frontier Inspection Station and the passport endorsing authorities, respectively, for landing permits.

3. A landing permit is valid only at the port where it is issued. On the ship's departure, all landing permits for the crew should be returned to the Frontier Inspection Station for cancellation.

4. The time limit for going ashore is from sunrise to midnight. When any Crew member wishes to stay overnight on shore, the Master should apply for permission on his behalf. Staying overnight ashore without permission is not allowed.

5. All laws and regulations of the People's Republic of China must be observed.

Customs:

1. It is forbidden to carry the national currency of the People's Republic of China into or out of the country. Violation of this rule will render the money in question liable to confiscation.

2. The Master or crew desiring to exchange foreign currencies, gold or silver for Chinese currency should so declare to the Customs and, after the exchange, produce the bank's Exchange Slip for inspection.

3. The Master or crew desiring to carry articles ashore or aboard should report to the Customs for permission and the articles concerned are subject to Customs inspection. Sale of articles taken ashore is prohibited.

4. Exposed films or plates should be developed and submitted to the Customs for inspection before they are allowed to be carried into or out of the country.

5. Places sealed up by the Customs are not to be opened without Customs permission.

Quarantine Office:

1. During a vessel's stay in port, if any person on board is found to be in high fever or to be feverish continuously for several days (or with the swelling of the lymphatic gland), or to suffer from acute rash on the skin with or without fever, or to suffer from acute diarrhoea and in a state of collapse, or to suffer from jaundice with fever, the matter should first be reported to the Quarantine Office. The patient can go ashore for medical treatment only when he has been examined and allowed to do so by the Quarantine Officer.

2. Effective rat-guards or other rat-preventing devices should be fixed on all mooring ropes.

3. Gangways and gangplanks are not allowed to be put on to the wharf when not required. Should they be used at night, strong electric lights should be provided.

4. Should any dead rats or mice be found or any rats or mice caught on board a vessel, the fact should be reported to the Quarantine Office for the necessary inspection to be made.

The above regulations are in force at most Chinese ports.

Berthing: In the fairway and on the West side of the first pier vessels may pass on 34 ft. draft. Length of pier about 1,500 ft.

Another pier is under construction, and when ready will have berths for 5 vessels of about 600 ft. length. The depth alongside will be 34 ft.

On the first pier 7 cranes with a capacity of about 10 tons. It was not possible to obtain information on the older berths. Four tugs with up to 1,000 h.p.

All bunkers to be brought in from Dairen.

XIAMEN: 24.30 N. 118.04 E.

SHIPMASTER'S REPORT: February 1986.

DOCUMENTS: Standard Chinese Forms.

PILOTS: Pilots ordered by Agents only if the vessel shifting from working anchorage to alongside after clearance.

APPROACHES: As per sailing directions and charts. The swept channel is very narrow, and the ship must pass 3 cables off a rock awash to port soon after an alteration. Then 3 cables off another rock to starboard. The channel is not marked for night navigation, and navigation should only be attempted with good radars and very careful planning. Navigation lights are weak and extinguished. Pilotage is not available from sea to Quarantine/Working Anchorage and vice versa. (Quemoy and Matsu lie close to starboard of channel).

ANCHORAGE: Quarantine and cargo working anchorages are to the South and West of Gulang Yu Island. Cable crossing area to Eastward, some dangers as shown on chart. Good shelter from monsoon.

HEALTH: Standard Chinese Health Declaration and Vaccination Lists required.

RADIO: Xiamen Radio Station used when within range and if the operator is on watch. Otherwise vessel should use Canton or Shanghai Radio.

VHF: Xiamen Radio. Call on Channel 16, ask for 'Penavico' and the station will patch through, normally on Channel 12.

TUGS: For berthing 2 tugs pushing, for sailing 1 tug pushes.

BERTHING: The Inner Harbour or Neigang is only suitable for small coastal vessels. Ocean-going vessels may berth at Dong Du (24° 30′ N., 118° 04′ E.) at new wharf for 5 vessels. Large range and fall of tide, loaded vessel's bulwarks drop below wharf level. Said to be capable of berthing two 50,000 ton vessels, and others of 10,000 tons.

CRANES: At Dong Du, one standard container crane on rails at No. 1 Berth. A number of standard Chinese two wire grabbing/general cranes. Ship's gear also used which may work ashore or overside.

BULK CARGO FACILITIES: At Dong Du, 2 berths equipped for bagging bulk cargo discharged by grabs. Artificial fertilisers are worked at wharf and anchorage.

SPECIALISED CARGO HANDLING FACILITIES: Full container terminal behind container crane.

DENSITY: About 1022 at Dong Du.

FRESH WATER: By barge at anchorage or by low pressure shore hose at Dong Du.

FUEL: Fuel oil and diesel oil said to be available but details not known.

REPAIRS: A small local shipyard, and several boatyards but details not known.

TIME: GMT plus 8 hours.

REPATRIATION: Possible. Local airfield with flights to major cities in China and some times to Hong Kong. Twice weekly overnight ferry to Hong Kong.

TELEPHONES: *Telephones/Telexes:* Recently modernised as part of the Special Economic Zone centred on the nearby Huli Industrial Estate. Direct dialling to Hong Kong. Quick operator service to the U.K. Mail service was erratic, 7-20 days from Hong Kong, one despatch went missing.

STORING: Provisions supplied by light truck to foot of gangway at Dong Du.

SHORE LEAVE: Allowed. Shore passes issued for non-Chinese personnel.

DEVELOPMENTS: 4 berths to be built. One berth for container vessels and 3 berths for general cargo and bulk (3×25,000 d.w.t. vessels). The port is likely to have a Free-port within the next few years.

AGENT: China Ocean Shipping Agency. Cables: "Penavico".

XIANG JIANG (Hsingkang): 39.02 N. 117.41 E.

Also see "General" before first port

SHIPMASTER'S REPORT: 1974.

B.A. Chart 2653. China Sea Pilot No. 32, Vol. 111.

NAVIGATION: The lighthouse in position Lat. 38° 55′ N., Long. 117° 59.5′ E. was visible at a distance of 10 miles, flashing every 10 secs., and is surrounded by 4 units buoys at a distance of about 180 m. from the tower. The Fairway to berth installations is being dredged, but presently appears to permit a draft of only 25 ft. LW with a draft of 27 ft. It was necessary to await HW before sailing.

PILOTAGE: Pilot and Port Authority Agent board at the anchorage. Pilot boat is large tug which may also be used as an ice-breaker, and has black hull with white superstructure. Pilots are careful and efficient, and speak some English. No VHF or HF radio facilities are available to the Pilot.

MAX. SIZE: See "Navigation". All berths are suitable for vessels of up to 9 m. draft.

TUGS: Six large tugs, and three smaller tugs.

BERTHING: The harbour is under considerable development, and at present has availability for about 15 or more vessels. All berths have rail connections and are approachable by trucks. There are no sheds at the berths and refrigerated stores are only available at Tientsin to where they are transported by train, lighters or trucks. Berths are equipped with rubber fendering, suitable for all requirements.

CARGO GEAR: There are some cranes available and in operation with a lifting capacity of about 10 tons. There are also about 3 floating cranes with capacities of up to about 80 tons. Where no cranes are available, vessels are required to load and discharge with ship's gear.

FRESH WATER: Connections at some points have still to be made, but otherwise fresh water is available at all berths. Due to the very long waiting time for berthing and the lack of some of the connecting points, it is advisable to arrive with full F.W. tanks.

PROVISIONS: It is essential to check all provisions when delivered since they may be of poor quality. Rejected goods are accepted back without problems.

NOTES

Please also advise Shipping Guides Ltd.

Christmas Island

CHRISTMAS ISLAND, Indian Ocean: 10.25 S. 105.43 E. (See Plan)

PORT LIMITS: The area of sea in and adjacent to Flying Fish Cove in the Territory of Christmas Island enclosed by a line commencing at a point where a line bearing 270° True from the flagstaff at Government House intersects the coastline of Christmas Island at MHW thence bearing 270° True for a distance of 2 km. thence bearing 360° True for a distance of 2 km. thence S.E. by a straight line to Rocky Point thence generally S.W. along the coastline of Christmas Island at MHW to the point of commencement.

DOCUMENTS:

Port Clearance.
2 Crew Lists.
2 Passenger Lists.
2 Manifests.
Health Certificate.

PILOTAGE: Pilot boards 1 mile West of Smith Point.

ANCHORAGES: None.

RESTRICTIONS: Daylight entry only.

MAX. SIZE: LOA 192 m. Beam 28 m. Summer d.w.t. 35,000 tons.

HEALTH: Radio Pratique granted whenever possible. Information required: date of departure, last port of call, number of persons aboard, number of passengers disembarking, state of health. Contact Port Health before arrival in event of suspected disease. No automatic Pratique.

RADIO: All communications through Perth Radio.

VHF: Channel 16 during office hours only.

TUGS: None.

BERTHING: Berthing daylight hours only, mooring gangs provided.

BULK CARGO HANDLING: The bulk loading berth is served by 2 cantilevers each capable of delivering rock phosphate at an average rate of 1,500 t.p.h. Bottom of telescopic chutes when fully raised are 50 ft. above sea level at HWS.

CRANES: On wharf, 1 Favco 20 tonne S.W.L. and 1 Babcock & Wilcox 4 tonne S.W.L.

STEVEDORES: Supplied by Agents.

MEDICAL: No notice required for medical attention. Hospital facilities available throughout 24 hours.

TANKERS: Furnace and diesel oils pumped ashore simultaneously through floating pipe-lines, 8 in. and 6 in. diameter respectively.

DENSITY: 1023 constant.

FRESH WATER: Very limited quantities supplied, only in emergency.

FUEL: Very limited quantities supplied, only in extreme emergency.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: All beams and hatches to be handled by ship's crew.

CERTIFICATES: Register of Cargo Gear and Test Certificates.

CARGO GEAR: To comply with requirements of the Australian Navigation Act, 1912-58.

IDENTIFICATION CARDS: Not required.

CONSULS: Administrator's Office performs some consular functions.

SURVEYORS: Cargo Surveyors: The Harbour Master or his assistant in his capacity as Lloyd's Agent. There are no authorised hull surveyors.

REPAIRS: No facilities exist.

REPATRIATION: Only for medical emergencies.

AIRPORT: Weekly flights from Perth and Singapore.

TIME: GMT plus 7 hours throughout the year.

HOLIDAYS: New Year's Day; Australia Day (26th January); Hari Raya Haji; Chinese New Year – two days; Good Friday; Easter Monday; Queen's Birthday; Territory Day (1st October); Hari Raya Puasa; Christmas Day; Boxing Day.

No work performed on New Year's Day, Hari Raya Puasa, Good Friday, 1st day of Chinese New Year and Christmas Day.

POLICE/AMBULANCE/FIRE: Police Tel: 444. Ambulance Tel: 333. Fire Tel: 222.

EMERGENCY CO-ORDINATION CENTRE: The nearest Co-ordination Centre is the Coastal Surveillance Centre, Canberra. Tel: Canberra 476666. Cables: "Marineops" Canberra.

BANKS: The Bank of New South Wales, Christmas Island, Indian Ocean. Telex linked direct to head office of the Bank of New South Wales in Perth, Australia.

STORING: See "Prelims".

1. The Island is stored purely for local needs with limited quantities and range of supplies. It would therefore only be in cases of extreme emergency that stores would be supplied to ships.
2. In such cases vessels would be stored by barge, and this would take place at any convenient time prior to or during loading.
3. Not applicable as moorings are off shore.
4. Fork lifts are available to assist in loading stores.
5. There are no Customs regulations or requirements pertaining to the loading of ship's stores.
6. Local labour is available to load stores onto ships.

TELEPHONES: Placed aboard when required by Port Authorities. No charge.

GENERAL: Ships may be ordered to leave berth at short notice if weather deteriorates.

AUTHORITY: Phosphate Mining Corporation, Christmas Island, Indian Ocean, via Perth Western Australia 6798. *Tel:* 8264. *Telex:* Indian Ocean 766 78005. *Cables:* Ciphos, Christmas Island. *Contact:* Captain A. G. Turner, Harbour Master.

Colombia

GENERAL:

DOCUMENTS:

Consular Documents:

In foreign ports where cargo for Colombia is loaded, the Colombian Consulate must receive two copies of the Cargo Manifest, on a special form (Colombian Freight List), one of which is returned to the vessel and the other is filed at the Consulate.

Prior to Arrival:

Notice of arrival:

The agency must prepare the standard Colombian document for confirmation of vessel arrival, giving the characteristics of vessel and indicating the services requested: pilotage, towing, anchorage, berthing, cargo to be loaded and unloaded, as well as water, electric power, telephone, fuel and lubricants.

This form is addressed to the Director of Operations of the Marine Terminal of the Colombian Port Authority (COLPUERTOS) and is submitted in seven copies (original and three copies for the Marine Terminal and a copy each to the Port Captain, the Customs Security Office, and the Port Public Health Officer). If passengers disembark, an additional copy must be submitted to Migration.

Information on cargo for the port:

At least 24 hours in advance of the vessel's arrival, the agency must receive the following documents by airmail, with the distribution indicated:

Documents	*Customs*	*Marine Terminal*	*Agency*	*Total*
Freighted Manifest (Freight List)	–	–	1	1
Freighted Bills of Lading	1(a)	3	1	5
List of Cargo by Hatch	–	1	1	2
List of Dangerous Cargo in Transit	–	1	1	2
Stowage Plans	–	1	1	2

(a) Stamped.

Request for Port Services:

The agency must submit to COLPUERTOS, 8 hours in advance of the vessel's arrival, the following documents, in original and two copies: request for berthing crew, cranes, terminal crew, motorised equipment and storage; request for inward pilotage and towing.

On Arrival:

On the entrance of a vessel, the following documents must be submitted, either on the model forms established by LAFTA Resolution 254 (IX), or on similar forms, except the cargo manifest, which will be made out on the Colombia Freight List form.

Type of Documents	*Number and Distribution of Documents*						
Basic Forms	*Capt. Port*	*Cus. Sec.*	*Marine Term.*	*Port Pub. Health*	*Migr.*	*Agency*	*Total*
1. General Declaration	1	1	–	–	–	1	3
2. Cargo Manifest	–	1	1	–	–	–	2
3. Crew List	1	2	–	1	1	1	6
4. Passenger List	1	1	–	1	1(a)	1	5
5. Ship's Stores	1	2	–	–	–	1	4
6. Crew Effects Declaration	1	2	–	–	–	1	4
7. Maritime Declaration of Health	–	–	–	1	–	–	1
8. Mail List	–	2(b)	–	–	–	1	3
Additional Documents:							
9. Clearance from Last Port	–	–	–	–	–	–	+
10. List of Passengers in Transit	1	1		1	–	1	4
11. "No Passengers" Declaration (c)	1	2	–	1	–	1	5
12. List of Dangerous Cargo in Transit (c)	1	–	1	–	–	1	3
13. "No Mail" Declaration (c)	–	2(b)	–	–	–	1	3
14. List of Passengers' Baggage (a)	–	3	–	–	–	–	3

(a) Only for those disembarking.
(b) One copy for the Post Office.
(c) When required.

Other Requirements:

The agency provides a landing permit for each crew member and passenger, which is stamped on board by the Captain of the Port.

Prior to Departure:

Clearance for the vessel is requested from the Captain of the Port on a special form. It is prepared in triplicate (original for the vessel, one copy for the Port Captain's file and one for the agency). The following documents accompany it:

1 Crew List.
1 Passenger List or "no passengers" declaration.
1 Ship's Stores List, and
1 Fuel Supply Declaration or negative

Request for Pilotage:

At least 2 hours before departure, a request for pilotage, clearance and unberthing crew must be submitted to the COLPUERTOS Maritime Section.

Port Authority Circular: July 1986.

Documentation Required:

The Maritime Agencies must present:

(a) Maritime Sector Discharge (imports and transit):

Up to date stevedoring plans showing the location of the cargo for the port and hazardous cargo.

List of Cargo per Discharge Hold.

List of Containers for the Port.

Sets of Bills of Lading.

Sets of Check Lists of Cargo with Manifest.

Tally Books.

List of Missing Cargo showing the ship which recorded them but did not load them, together with their Bills of Lading and Check Lists against the Manifest.

For cargoes in-transit, national or international, transhipment, Declaration of Final Destination, with presentation of the Memorandum of Authorisation of Customs.

Certificate of the draft survey of the port of shipment for bulk cargo.

(b) Maritime Sector Cargo (Exports):

List of Cargo for Shipment by Port of Destination.

List of Empty Containers to be Shipped.

Shipment Orders Authorised by the Customs.

Sets of lists checking loading against Manifest once loading has been completed.

FREE PRATIQUE: There is no Radio Pratique. The standard W.H.O. Health Certificate must be used.

PILOTAGE: Pilotage is compulsory for all vessels over 200 g.r.t. The Pilot must be requested by the Agent at least 24 hours in advance.

Berthing preference will be given as follows:

1. Warships.
2. Passenger vessels and Mail Boats on a fixed itinerary.
3. Vessels with livestock and perishable cargoes.
4. Passenger vessels not on a fixed itinerary.
5. Vessels loading cargo for export.
6. Vessels discharging cargo for import.
7. Tankers.
8. Coasters.
9. Vessels carrying explosives.

On sailing all vessels must fly the "P" flag.

Vessels at anchor can be authorised to work to lighters.

All Colombian ports are open 24 hours a day.

ARRIVAL ADVICE:

(1) The local Agent must advise Empocol 72 hours, 48 hours and 24 hours in advance the vessel's ETA.

(2) With the ETA pre-arrival advice, Owner or Master must advise the Agent the following:
  (a) Estimated arrival draft, aft and forward
  (b) Full vessel's particulars, including breadth
  (c) Vessel's side for which she must be docked (port side or starboard)
  (d) Cargo hatch distribution

(3) At least with 48 hours in advance, the Agent must receive in order to give to Empocol (together with others issued by the Agent according to the information supplied by the Master and Owner), the following documents:
  (a) 5 original copies (not photocopies) of each Bill of Lading, duly freighted and signed by the shipper
  (b) Stowage plan.

(4) Also 24 hours prior vessel's arrival, the Agent must pay to Empocol the proforma invoice which amounts to the estimated port expenses plus 25 per cent surcharge. Hence it is of paramount importance the Agent receives well in advance the funds required, in order to convert the U.S. Dollars into local currency and proceed to effect the corresponding payment.

It is important to point out that in case the above mentioned instructions are not fulfilled, or the documents are not presented and the proforma invoice is not paid in due time by the Agent, Empocol will not authorise docking and operations of the vessel.

STEVEDORES: Supplied by the Port Authorities although it is often necessary to employ extra labour through the Agent, due to the fact that gangs are seldom complete. At week-ends, gangs required for Monday must be ordered by 1000 hrs. on Saturday. Masters should bear this in mind when sending their ETA.

Cargo in a damaged condition or showing signs of pilferage will not be handled until inspected by a Port Official and ship's officer, leaving on record the actual condition of the cargo.

Containers are discharged or loaded as all other cargo, though if they are stuffed or unstuffed immediately this must be done with the Port Labour provided.

Opening and closing of hatches, and the rigging of gear, is done by a gang of riggers. The ship's crew can do this work, but it is advisable to use Union Labour.

Rain tents are not supplied by the port.

All gear, slings, spreaders, etc., must be supplied by the ship.

Rat guards must be fitted on all mooring lines whilst in port.

PORT SECURITY MEASURES: All ports are rigorously patrolled by Port Police, and crew members are advised to carry Identification Cards at all times when ashore.

FUMIGATION: This can only be carried out alongside with the permission of the Port Authority.

GARBAGE: No garbage may be thrown overboard. This includes flakes of paint from vessels chipping or scraping the hull. No paint must be allowed to drop into the water or onto the quayside. Overboard discharges must be kept off the quay.

POLLUTION: The standard requirements for the prevention of oil pollution must be adhered to within the continental shelf off the Colombian coast.

All vessels calling at Colombian ports must have "Pollution Policy" onboard. If not onboard vessel will be heavily fined and clearance will not be granted by the Port Captaincy.

All vessels must ensure that the Oil Record Book is up to date prior to arrival, as it is likely to be inspected.

Fines can range from 50,000 to 500,000 Pesos, not including the cost of any clean up operation.

No vessel contaminating the waters of any port may sail until the corresponding fine has been paid.

Oil Tankers are not permitted to clean tanks within 60 miles of the Colombian shores. If a vessel arrives in port with dirty ballast, she will be ordered to proceed to sea beyond the 60 mile limit, and take on clean ballast.

CREW: The authorities will not allow crew to be of unkept appearance or improperly dressed at any time while the vessel is in port.

FUEL: Bunkers are only supplied to vessels which were supplied in 1972, and are actually trading to Colombia. Vessels may not take more bunkers than the amount they received in that year. Requests for bunkers must be made to Agents at least 1 week in advance.

TIME: GMT minus 5 hours. Summertime is not observed.

BARRANQUILLA: 10.58 N. 74.47 W. (See Plan)

DOCUMENTS:

Clearance from Last Port.
Ship's Register.
Load Line.
Safety Radio.
Safety Equipment.
Cargo Gear.
Oil Pollution Certificate – Policy of Insurance.
6 Crew List.
5 Crew Personal Effects List.
5 Provision List.
5 Store List.
6 Passenger List (In Transit).
6 Passenger List (Disembarking).
4 Declarations of Passenger Baggage.
4 List Port Mail.
1 Sanitation Declaration.
Sets of manifests covering port cargo.

PILOTAGE: Compulsory for all vessels over 200 g.r.t. The Pilot Department of Empresa Puertos de Colombia at Barranquilla require that the vessel's Agent advises them with at least 24 hours in advance, the best vessel's ETA, together with the estimated arrival draft (fresh water).

Therefore it is important that Masters of vessels advise Agent 72, 48 and 24 hours in advance the best ETA to the port, in order to avoid any delays because of unavailability of Pilot.

The Pilot will board and leave vessels at Bocas de Ceniza, 1 mile North of the Western Breakwater, and they are not authorised any more to pick up/leave vessels at either Cartagena or Santa Marta, except when the weather does not permit such operation at Bocas, in which case the Pilot Department will decide whether the Pilot must be picked up/left at any other place.

Radio telephone frequency of pilot station 2738 alternative 2638 or 2182 kHz and VHF Channel 16. 2 pilot boats speed 7 – 9 knots. Sufficient depth to allow vessels wait for Pilot in boarding position, including trade wind season end November to beginning April.

ANCHORAGE: If awaiting Pilot, anchor 1 or 2 miles West of West Breakwater during non-windy season. After Pilot boards and when no berthing space at the quay, anchorage is made in the river, about 1,500 ft. off the dock in approximately 40 ft. of water. 3 shackles of chain required in good holding ground.

RESTRICTIONS: Depth at the river bar is being maintained at a minimum of 34 ft., however, the actual permissible draft has been curtailed to 30 ft. or less (23 ft. FW in September 1985 – check with Agent) on account of silting conditions of the river and low river levels, particularly around the area known as Siape, approximately 4 miles from the dock area.

MAX. SIZE: Recommended max. LOA 600 ft. due necessity for turning vessel before sailing. Also see "Restrictions". Rate of current 2.5 knots during dry season, 4 knots in rainy season.

HEALTH: On arrival port doctor boards vessel to inspect crew Yellow Fever Certificates, also Derat Certificate. If any crew members suspected suffering contagious disease Master to radio prior arrival advising Agents accordingly. Port doctor visits vessel even if previous port was in Colombia.

RADIO: Messages to and from Agents routed through station HKB. Ship's messages should include call letters.

TUGS: Generally no tugs required for river entrance. Tug assists berthing and turning vessels before sailing. 1×1,225 h.p. tug available.

BERTHING: 7 berths. Total length of quay 1,058 m. Depth alongside 32 ft. Vessels berth starboard side alongside.

CRANES: 2×10 ton quay cranes and 1×60 ton floating crane.

6 privately operated cranes of 30 tons – 100 tons capacity.

STEVEDORES: Agents should receive advance copies of stowage plan and adequate notice ETA order arrange gangs. Working hours: First shift Monday to Saturday and Holidays: 0800 – 1200 hrs. and 1400 – 1800 hrs. Second shift Monday to Friday: 1800 – 0200 hrs. No work on Sundays.

MEDICAL: All facilities available.

TANKERS: No facilities.

FRESH WATER: Available. Rate about 20 t.p.h.

FUEL: Only small quantities of gas oil available.

FIRE PRECAUTIONS: No vessel requirements. Terminal has own fire-extinguishing equipment.

GANGWAY/DECK WATCHMEN: Request watchmen through Agents.

CUSTOMS ALLOWANCES: No limitations for individual consumption.

IDENTIFICATION CARDS: Supplied by Agents.

CONSULS:

Austria
Belgium
Bolivia
Brazil
Chile
Costa Rica
Denmark
Dominican Republic
Ecuador
Egypt
El Salvador
Finland

United Kingdom
U.S.A.
Venezuela

REPAIRS: Good facilities for mechanical or electrical and radio repairs.

DRY DOCKS: Only one dry dock for very small vessels.

REPATRIATION: Good facilities available.

AIRPORT: 6 km. from city. Airport served by major airlines.

TIME: GMT minus 5 hours.

HOLIDAYS: 1st January, 6th January, 8th April, 9th April, 1st May, 23rd May, 2nd June, 29th June, 20th July, 7th August, 15th August, 12th October, 1st November, 11th November, 8th December, 25th December.

POLICE/FIRE/AMBULANCE: Fire 411828, ext 38. Ambulance 410736 or 319594. Police 411937.

TELEPHONES: Arrangements available for placing telephones on board.

SPECIAL RECOMMENDATION: Masters to warn crew to close and lock cabins.

REGULATIONS: No special facilities for discharging explosives.

If explosives on board vessel not allowed berth.

DEVELOPMENTS: Two more berths under construction. Dredging under way in access channel.

AUTHORITY: Direccion General Maritime Y Portuaria – Capitania De Puerto de Barranquilla.

BUENAVENTURA: 03.53 N. 77.05 W. (See Plan)

DOCUMENTS: On vessel's arrival, Master must present following documents to Port Captain's Office:

Travel Memorandum.
Sole document or Consular despatch from the last port or ports where vessel disembarked or embarked passengers.
3 Crew Lists.
3 Provision Lists.
3 Lists Crew's Personal Effects.
3 Lists Passengers in transit (or negative).
3 Lists Disembarking Passengers (or negative).
3 Lists Port Mail (or negative).
1 Sobordo or Manifest of Cargo for the port.
2 Declarations of Passenger Baggage, if any.

Destined to Maritime Terminal:

3 Sets Sobordos or Manifests covering port cargo (or negative).
1 Set of Bills of Lading, covering discharge cargo.
20 Tally Books for discharge cargo.

Destined to the Custom House:

3 Sets of Sobordos or Manifests for cargo destined to the port.
1 Set of Bill of Lading for port of destination.
1 Tally Book for cargo to be discharged in port.
2 Declaration Lists for Passenger Baggage, if disembarking.

Destined to the Health Doctor:

Vessel's Travel Memorandum.
International Health Certificate.
1 Crew List.
List of Passengers in Transit (or negative).
1 Vessel's Fumigation Certificate (for presentation only).
1 Port Passengers List (or negative).
Certificate of Exemption of Derat (for presentation only).

Destined to Immigration Authorities:

1 Crew List.
1 List of Transit Passengers (or negative).
1 List of Port Passengers (or negative).

Destined to Agents:

1 Travel Memorandum as above mentioned.
9 Crew Lists for Consular despatch and handling of sailing permit.
6 Lists of Passengers in Transit (or negative), for Consular despatch.
6 Lists of Personal Effects for Consular despatch.
2 Mail Lists for the Port (or negative).
3 Sets of Sobordos or Manifests covering port discharge cargo (or negative).
4 Sets of Bills of Lading covering port discharge cargo.
10 Tally Books covering discharge cargo.
2 Lists of Passenger Baggage Declaration for the port, if any baggage.

PILOTAGE:

(a) Entry marked by Channel having minimum depth of 3.25 fathoms low tide. Advisable enter Channel or leave wharf 1 hour after low tide and 2 hours after high tide, restricting departure during any other periods, particularly when draft exceeding 20 ft. Pilot boards in vicinity of No. 1 Buoy (position: Lat. 03° 50′ 00″ N., Long. 77° 10′ 00″ W.).

(b) 72, 48, 24 and 12 hours before reaching port, Master must cable separately to Agent and Port Captain confirming hour of arrival Punta Basan (pilot station). Message to Agency must indicate, in addition to ETA, quantity of cargo destined for the port, number of disembarking or in-transit passengers, number of gangs required for operations, draft, mail for the port, if fresh or running water is required; fuel-oil, cash to Master or any other special requirement; whether special side of wharf is required for berthing, and whether dangerous cargo (explosive) or inflammable cargo, and what quantity. Message to Port Captain must also indicate arrival time, quantity of cargo destined to the port, number of disembarking or in transit passengers, mail, whether dangerous or inflammable cargo is carried and in what quantity, and any other data that may be considered useful in accordance with International regulations.

(c) Radio beacon at Punta Soldado, characteristics: Frequency, 317 kHz. Letters, B.T. Time 0000 – 2400 hrs. every day and every 10 minutes with 20 minutes of rest during 30 minutes work. Flashes 12 seconds duration.

(d) Radio-telephone in pilot station of Punta Basan or La Bocana (opposite to Punta Soldado), characteristics: VHF Channels 11 and 16 every day from 0600 – 2400 hrs.

(e) Since Master's advice to Agency serves as notification to pilot station, Pilot will be at Punta Basan ready for vessel. In case of delay due to any circumstance, vessel may anchor and request Pilot by 4 short blasts.

(f) Port has 8 Pilots.

(g) Pilot ladder must be lowered a few feet from the surface. Vessel must proceed slowly in order facilitate boarding.

(h) Pilotage compulsory.

ANCHORAGE: Marked by Buoy No. 7, located Lat. 03° 53′ 59″ N., Long. 77° 04′ 04″ W.; depth from 33 ft. to 70 ft. and distance from wharves approximately 1,000 yards.

There are 3 additional anchorage zones and their use will be ordered by the Authorities.

RESTRICTIONS: Max. draft for crossing bar is 28 ft. one hour before/after HW. Bar is located in position 03° 48′ N., 77° 19′ W.

MAX. SIZE: No restrictions on the length of vessel, depth alongside wharf approximately 12 ft. – 30 ft. under terms "not always afloat but safely aground", low tide.

HEALTH: *(a)* As soon as vessel anchored by Pilot within bay, Port Authorities including doctor, will board by means of ladder which must be lowered when port area entered.

(b) In case of sickness on board, Master must advise in order doctor may determine whether vessel will be under quarantine or not. This will apply even if vessel arriving from a port of the same country.

(c) Time-table for meeting vessel: Ordinary or regular time – ordinary time: 0800/1200-1400/1800 hrs.; overtime – 0700/0800-1200/1400-1800/2200 hrs. Sundays and holidays, overtime.

(d) After 2000 hrs. and up to 0700 hrs. of following day it is not possible to make arrangements for meeting vessels, unless in emergency.

RADIO: (Also see "Pilotage"). Port has receiving-transmitting radio station Buenaventura/Colradio HKC. For listening and transmitting there are following frequencies:

Listening	*Transmitting*
8354 to 8374 kHz	8574 kHz
12531 to 12561 kHz	13087.5 kHz
6265 to 6280 kHz	6386.5 kHz

In emergency: Listening: 500 kHz. Transmitting: 441 kHz. Station operates 24 hours a day.

TUGS: Normally only required for berthing. Tug operation handled by Pilot. Generally tug service consists of pushing from stern or bow as required. When necessary to use ropes, they must be supplied by vessel. 2 tugs of 1,200 h.p. each and 1 of 350 h.p.

BERTHING: Main wharf 2,136 m. long, divided into two sections, one for import cargo and one for export cargo. Facilities exist for handling container traffic.

Berthing arranged by turn according to time of anchoring in bay for each vessel. Tidal currents exist alongside berths.

Berth	*Length*	*Depth at LW*
Shed No. 1	202 m.	12 ft.
Shed No. 2 – No. 9	1,257 m.	23 – 25 ft.
New Pier	80 m.	30 ft.
	597 m.	17 – 20 ft.

Depths 25 m. off the quays is 30 ft. – 32 ft.

STEVEDORES: Port has at present time 80 gangs of 16 men each. *Working Hours:* First Shift: Monday to Saturday and holidays from 0800 – 1700 hrs. Second Shift: Monday to Friday and holidays from 1700 – 0100 hrs. and Saturdays from 1700 – 2400 hrs.

No work from 2400 hrs. Saturday until 0800 hrs. Monday.

MEDICAL: Agent must be given advance notice of urgent medical attention. Properly equipped hospital.

TANKERS: Independent oil pier with depth 33 ft. (25 m. off) with capacity to accommodate vessels of medium size. 4×8 in. hoses for discharge of petroleum products, and 2×6 in. and 1×4 in. hoses for unloading chemicals. Average rate of discharge of gasoline is 5,000 b.p.h. (approx.) Fuel oil and chemicals 1,500 b.p.h.

DENSITY: 1012 (approx.) average.

FRESH WATER: Drinking water unlimited quantity. Delivered through hose from end of wharf. Rate of delivery: 6 t.p.h.

FUEL:

(a) Two kinds of fuel, marine gas oil and bunker "C" fuel. Characteristics of gas oil: API gravity 33.0 at 60° F. Specific gravity: 0.8602. Characteristics of bunker "C" fuel: API gravity, 13.2 at 60° F. Specific gravity, 0.9779.

(b) To take bunkers vessel must berth between warehouse 2 to 9, and for delivery of gas oil between warehouse 1 to 5.

(c) Rate of delivery (approx.), 250 b.p.h. for bunkers and 700 b.p.h. for gas oil.

(d) Deliveries depend on quantity available when order placed, consequently Agent must know well in advance (10 – 15 days) vessel's requirements.

(e) Cash payment according to prevailing prices at time of delivery; otherwise, according to contracts between Shipowner and supplier.

FIRE PRECAUTIONS: Fire station within port installations with proper equipment. In city also another fire station, co-operating if necessary.

WATCHMEN: Service necessary both by crew members' and Agents' personnel. There is an established body of watchmen named "Policia de Vigilancia Portuaria" (National Police); additionally, the steamship agencies carry out this work with their own personnel with previous request by Master. The port has a Port Police body and Custom House Guards which co-operate in vessels' watch.

Piracy: Mariners are advised to be alert to unusual, abnormal or hostile activities by pirates (especially during darkened hours) in the approaches to and in Buenaventura Harbour/Anchorage.

OPENING/CLOSING HATCHES: All Agents have special gangs to handle this operation and to fix the vessel's gear for discharge and/or loading. These personnel permanently stand by on board on account of climatic conditions of port with frequent and sudden rains. No prohibition against crew carrying out such operations when charter parties are involved and which stipulate that such operation must be done by crew. It is known from experience, however, that vessel's personnel are not, on occasions, sufficient to do this work.

CUSTOMS ALLOWANCES: No regulations establishing quantities which each crew member may have outside bond, but must not be excessive order avoid problems with authorities.

CARGO GEAR: Ship's gear used. Also see "General".

CONSULS: Panama Tel: 2 22 50. Most countries have consuls in Cali – approximately 142 km. from Buenaventura.

IDENTIFICATION CARDS: Agent will supply special cards to crew and passengers in transit so that they may go ashore. Cards valid for entering and leaving port installations and for identification with the Immigration authorities. Must be returned before vessel departure.

REPAIRS: According to port regulations vessels must at all times be ready with engines to sail, consequently repairs of engines not allowed when ship berthed at wharf. No prohibition against minor repairs on deck. When engine or deck repairs taking a long time are necessary, vessels not being loaded and/or discharged simultaneously with repairs must go to anchoring ground, since crowding of vessels at port does not permit vessel being inactive occupying space while other vessels are anchored waiting for berth.

REPATRIATION: Authorities render co-operation for change of crew and arrangements of repatriation in co-ordination with ship's Agent.

AIRPORT: Located 18 km. from Buenaventura. Airport is small and is inactive. Agent in charge of the repatriation of a crew member must handle necessary connection in Cali or Bogota, where there are international airports.

TIME: GMT minus 5 hours. Permanent.

POLICE/AMBULANCE/FIRE: A voluntary firemen corps in the city. Alarm, Tel: 22222; Guard, Tel: 23720; Firemen, Tel: 15; Ambulance, Tel: 22830, 22638, 23708, 24475; Police, Tel: 22738.

GENERAL: Provisions available. Cable service to all parts of the world. Telephone and telex service inside country and to foreign countries through Bogota. Weather conditions: generally rainy. Explosives: if the vessel is transporting dynamite and detonating caps they are placed in separate lighters, and armed guards are required on board any vessel transporting explosives. In such cases, the vessel must anchor in front of Buoy No. 9 and discharge to lighters during daylight. No vessel can berth at the wharf if transporting explosives, and only permitted with dynamite in closed hatches, which will not be opened at the wharf according to government regulations. Port is equipped with following shore cranes: 2×80,000 lb. capacity (mobile), 1×60,000 lb. capacity (mobile), 3×20,000 lb. capacity (mobile), 2×14,000 lb. capacity (mobile), and 1×10,000 lb. capacity (fixed). Floating crane: 1×45 tons capacity.

Lighters available: 3 with following characteristics:

Size *Length/width*	*Capacity*	*Type*
24.40× 9.45 m.	280 tons	Flat surface
34.40× 7.60 m.	150 tons	Flat surface
38.80×10.60 m.	150 tons	Flat surface

No refrigeration space available.

SHORE LEAVE: Permitted (with ID cards).

DELAYS: At anchorage in Bay average delay of 1 day while waiting for berth. On account of the rainy condition of the port, discharge or loading is at times stopped up to 12 hours.

DEVELOPMENTS: Improvement in wharf installations, warehouses and equipment and dredging is scheduled to deepen the depth alongside wharf.

SHIPMASTER'S REPORT No. 1: 1978.

Pilotage: Normally the Pilot boards at Punta Basan but can be arranged at No. 1 Buoy at request of Master as most shallow water is from No. 1 Buoy to No. 5 Buoy.

Anchorage: Vessels are warned not to anchor near No. 1 Buoy or at Punta Basan because of piracy. Pirates steal ships' cargoes at these anchorages.

Buoys: All buoys marked on chart are not dependable (for example the No. 1 Buoy has been shifted 070° about 1 mile).

Berthing: Depth 9 m. at LW, capacity for 12 ocean going vessels.

Stevedores: For general cargo, each gang 6 – 8 persons. Working hours 0800 – 1130, 1400 – 1730, 1800 – 2300, 0000 – 0300 hrs.

Watchmen: Policemen engaged on board on arrival as gangway watchmen and hatch watchmen. Vessel to victual those persons.

Caution: Strong tidal current up to 3 knots in this port, vessel must keep strict watch when anchored and when berthed.

Shallower depth may exist due to silting at fairway and at inner side of the pier.

SHIPMASTER'S REPORT No. 2: 1978.

Whilst at the port we were boarded by two well organised gangs of thieves. The first incident took place in the Roads, when thieves managed to steal cases of whisky and a Xerox machine from No. 1 L/H before being seen and chased off by the ship's crew. The second incident, which could have had serious consequences, occurred whilst at anchor in the estuary awaiting sufficient water to cross the river bar. Here, an aggressive, well disciplined gang, armed with parangs and staves boarded, and only after a running skirmish with the ship's officers did they retreat having stolen one box of cargo from No. 2 L/H. A constant two-man deck patrol has been in operation since arriving at Buenaventura, but the only method of deterring these experienced thieves is effective hold security.

SHIPMASTER'S REPORT No. 3: August 1979.

Silting of Berths: Whilst berthed at No. 2 considerable problems have been experienced due to lack of water alongside the berth (See "Plan").

The berth is charted as having 9.1 m. alongside, maximum draft of vessel being 7.64 m. However, 2 hours before first LW alongside, the vessel had clearly taken the mud and began to come off the wharf. Considerable slacking was necessary in order to prevent parting of moorings. At LW the vessel had come to rest 30 ft. off the quay fore and aft whilst still maintaining reasonable weight on moorings. After draft was indicating 7.00 m. and vessel listed 3° to port. This tide was particularly low, being −0.5 m. below chart datum. It had been previously observed from anchorage that the previous vessel alongside, a large Colombian vessel, had been having similar problems but it was noted that she had been 2 ft. deeper draft.

40

As the tide flooded the vessel was gradually heaved alongside, but it was 2 hours after LW before she was fully alongside. Similar tending of moorings was necessary during the following 4 days alongside. However, it was found beneficial to give her a list to port which had the effect of lessening the movement of the berth. During this period, 4 hours cargo work was lost at each LW (2 hours before and after) as the derricks could not plumb the wharf. However, I am assured that we were not paying for this lost period. In addition, the Chief Engineer experienced considerable cooling problems due to the intake of mud, leaves and organic matter.

On the Sunday during the period alongside when there is normally no cargo work, all 10 vessels alongside were shifted out to anchor so that soundings could be taken by the Port Authority. The vessel was returned to Berth No. 3, but there proved to be a similar lack of water. (See "Plan").

The silt alongside these berths is very soft mud and therefore does not pose any danger to the hull, however the situation is entirely unsatisfactory and as can be seen from the Plan, soundings alongside the jetty show depths of 3 m. to 4 m. less than charted. I am told by the Agent and Port Authority that a large contract dredger is due to begin work within one month.

SHIPMASTER'S REPORT No. 4: November 1979.

Vessel called at Buenaventura recently, drawing 27 ft. The vessel was berthed 1 hour before HW and experienced no difficulty getting alongside the berth. The draft was then reduced to 25 ft.

However, on the falling tide, the vessel could not be kept alongside and also listed 2.5°. On sounding the berth I found only 20 ft. of water at low tide.

On taking up the matter with the Agents I was informed that it is quite normal to sit on the bottom, which is soft mud. Furthermore, the berths have not been dredged in the last 10 years and the depth of 24 ft. cannot be relied upon.

I am also advised that plans are afoot for a massive dredging operation, due to commence sometime in November this year.

AUTHORITY: Puertos de Colombia, Terminal Maritimo de Buenaventura, Apartado 570, Buenaventura, Colombia. *Tel:* 24421, 24425. *Telex:* 052371. *Cables:* Termarit. *Contact:* Captain Carlos Prieto Pabon, Captain of the Port.

CARTAGENA (Incl. Mamonal and Ecopetrol):

10.26 N. 75.33 W. **(See Plan)**

(A) GENERAL CARGO (B) TANKERS

(A) GENERAL CARGO

DOCUMENTS:

Clearance from Last Port.
7 Crew Lists.
Ships Papers and Certificates.
Oil Pollution Certificates.
7 Personal Effects Lists.
3 Sets of Cargo Manifests of each port with respective bills of lading.
Tally books of cargo for each port.
Health Declaration, Certificate of Vaccination, Derat Certificate.
7 Lists of Passenger to Disembark (or negative).
7 Lists of Passengers in Transit (or negative).

PILOTAGE: Compulsory. Boarding position, at sea buoy in position: Lat. 10° 19′ 44″ N., Long. 75° 36′ 14″ W. 2 Pilot boats, black hull, white superstructure. Speed 6 knots. Sound signals, 4 long blasts for all type of vessels. Radio: VHF – standing by on Channels 11 and 16. Also Channels 6 and 26 to shift. Service 24 hours every day. At Central Radio Terminal there is A.M. radio on frequency 2738 and 2638 kHz and VHF.

ANCHORAGE: Anchorage in foul weather or other reasons 0.5 mile S.W. from Buoy No. 1. For vessels awaiting berth in Cartagena, South from Punta Castillo Grande. For tankers in Mamonal, West of the pier of Refineria Ecopetrol.

RESTRICTIONS: Depth in access channel 38 ft. Entry day or night.

MAX. SIZE: Cartagena: length 600 ft., beam 79 ft., draft 30 ft. (for berthing).

Tankers: length 850 ft., beam 110 ft., draft 38 ft. Tankers anchor and berth in port of Mamonal, within bay, using same approach.

HEALTH: Doctor requires the Crew Lists with data of vaccination. International regulations in cases of contagious sickness or epidemic are carried out.

RADIO: Radio Barranquilla – HKB

VHF: Pilot station, pilot boat, Terminal Superintendent and Agents on Channel 16.

TUGS: 1×750 h.p. tug. Compulsory for all vessels over 2,000 g.r.t. at Cartagena and in Mamonal.

BERTHING: ~~Also see "Developments".~~

Port has two piers: Berth No. 1, outside length 202.60 m., depth 32 ft.; inside length 184.76 m., depth 32 ft.; Berth No. 2, outside length 184.76 m., depth 32 ft. A new marginal dock is in service with length 258 m. and depth 32 ft., located West of piers. Between the two piers there is a 134 m. dock with 32 ft. depth. Docking and undocking around the clock. Berthing shifts or turns: 1st, Passenger vessels (Tourist). 2nd, Cargo vessels with live animals. 3rd, Vessels with mail. 4th, Cargo vessels according to arrival in port.

Cranes and Cargo Handling Equipment:

Floating crane: 1×50 tons capacity
Truck cranes: 1×30 tons capacity
1×20 tons capacity
3×10 tons capacity
Fork lift trucks: 1×62,000 lbs.
2×45,000 lbs.
30× 6,000 lbs.
2×15,000 lbs.
Tractors: 13
Trailers: 24

Over a three year period the port of Cartagena will acquire:

Fork lift trucks: 3×15 tons
for empty containers: 3
for loaded containers: 3
for loading and unloading containers: 3×4,000 lbs.
cranes: 1×4 ton capacity
3×16 ton capacity
5th wheel tractors: 5
Trailers for 20 ft. containers: 17
Trailers for 40 ft. containers: 7

STEVEDORES: Can be requested with 24 hours notice. Services for Mondays must be requested on Saturdays before 1000 hrs. Ship starting work after a Holy Day, must request personnel the day before the Holy Day, before 1500 hrs. No work on Sundays, January 1st; Good Friday; November 11th; December 25th; May 1st. When ship is delayed there is a conventional waiting time of 4 hours, after that time stevedores retire charging the vessel with 4 hours work (union arrangement). Port Authority charges commence when Pilot boards on arrival and cease when the Pilot disembarks on sailing.

Working Hours: First shift: Monday to Saturday and holidays, from 0800 – 1200 hrs. and from 1400 – 1800 hrs. Second shift: Monday to Friday, from 1800 – 0200 hrs.

BULK HANDLING FACILITIES: Grain unloading undertaken with clamshell or vacuum equipment for bagging on the quay. Rate in excess of 1,200 tons for a 14 hour shift.

MEDICAL: Requests for medical service through Telecom Radio Station. 6 hospitals. Also dental services. Vaccinations can be given.

TANKERS: See "Section B".

FRESH WATER: Available at all berths.

FUEL: Requirements should be ordered at least 8 – 10 days in advance, via the vessel's Agent.

Agent requires the following details:
(i) Vessel's name and nationality.
(ii) Daily consumption at sea and in port.
(iii) BHP.
(iv) N.r.t. and g.r.t.
(v) Next port after Colombia.
(vi) Port of origin.
(vii) ETA.
(viii) Quantity and type of bunkers required.

DENSITY: 1015 (At Mamonal)

WATCHMEN: Watch service at the gangway and deck. Officially this service is done by port's guards. It is recommended that members of crew assist in this service.

CLOSING/OPENING HATCHES: Undertaken by port stevedores.

IDENTIFICATION CARDS: Agents supply cards signed by Port Captain and Master.

CONSULS:

Belgium
Bolivia
Costa Rica
Chile
Denmark
Dominican Republic
Ecuador
Finland
France
Germany F.R.
Guatemala
Honduras
Italy
Mexico
Netherlands
Nicaragua
Norway
Panama
Peru
Spain
Sweden*
Venezuela

*Consular representative.

DRY DOCK/REPAIRS: Commercial Shipyard "Conastil":

Synchrolift 120 m. length, 22 m. width. Lifting capacity 5,000 tons.

8 repair positions ashore; 4 with a capacity of 5,000 tons and 4 with a capacity of 10,000 tons.

600 m. length of piers with 18 ft. depth with all services and repair facilities.

Mechanical, fitting, welding, electrical, motor, and carpentry shops.

SURVEYORS: The following cargo inspectors and surveyors are available: Saybolt, P&I, Lloyd's Register of Shipping, American Bureau of Shipping, Bureau Veritas and Germanischer Lloyd.

REPATRIATION: Facilities available for crew changes.

AIRPORT: Only local airlines Avianca and SAM serve flights from/to Cartagena.

All international airlines serve Bogota (the capital).

HOLIDAYS: Eighteen days of holidays during year, but at terminal there is no service on following dates only: New Year Day (January 1st); Good Friday (Viernes Santo); Labour Day (May 1st); Cartagena Independence Day (November 11th); Christmas Day (December 25th). During the days December 24th and other holidays there is 24 hour service with 50% surcharges.

POLICE/AMBULANCE/FIRE:

Police Radio patrol	04
Red Cross	20360
Hospital Universitario	22380
Hospital Bocagrande	40270
Hospital Naval	40248
Clinica de Manga	40762
Clinica Cartagena	20910
Ambulance of Terminal	Channel 16 VHF
Firemen of Terminal	Channel 16 VHF
Firemen of Cartagena	42222, 20903

TIME: Colombian official time: 5 hours behind GMT. Permanent.
TELEPHONES: May be placed aboard.
SHORE LEAVE: Crew allowed disembark. Every member of crew is given card signed by Port Captain and Master of the vessel.
REGULATIONS: To clear the wharf if required for tourist vessels or export cargo vessels.
SERVICES: Contact: Maritima Comercial Agencia Naviera Ltda., P.O.Box 207, Cartagena, Colombia. *Tel:* 45-557, 45-752 and 46-532. After Hours: 43-481. *Telex:* 37804 Marco Co.

Services: Ships agency, ship chandler, launch and tug service, private Pilot, medical assistance for sick crew, crew repatriation, etc.

GENERAL: Cartagena can be entered or left at any time day or night. Vessels can also berth or unberth in dry season or rain seasons, and services are rendered during 24 hours.

There is a very tight security system with a detachment of 145 port police, watch towers, dogs, sodium vapour lighting, access control, full identification, cargo control unit. This new unit, and the administrative controls that complement it, has reduced losses to near vanishing point.

The port has international communications with telex, phone and cable. Complete marine service with VHF and can communicate with Bogota and the other Colombian ports with S.S.B. radio.

SHIPMASTER'S REPORT: 1976.
Advice of ETA should be telexed from Cristobal and confirmed by radio upon departure from that port. Agents also request that they are advised prior to vessels arrival, of commodity and tonnage for discharge in each hatch. This should be included in the telex from Cristobal to enable them to arrange the labour and equipment for unloading.

Pilot boards from a black hulled motor launch, about a half mile outside Boca Chica. The launch flies "H" flag by day and white over red lights at night. The Pilot has a portable VHF radio and works on Channel 16. If the pilot boat is not waiting on arrival he can be summoned by sounding 4 blasts on the whistle, at which signal he appears from the pilot station at Fuerte San Jose, on the Northern side of the entrance. The prevailing wind would normally make the starboard side the lee side for the pilot ladder on arrival.

There are 2 piers, each capable of taking 1 large vessel on each side. Depths vary from 28 ft. to 31 ft. The piers are in good condition and are well fendered. A tug is available and assists in berthing by pushing vessel alongside. The tug also stood by on departure but was not used. Cartagena has now become a popular cruise port and on occasions when 2 cruise liners are in port at the same time, delays could be incurred to cargo vessels.

Cargo for discharge consisted of palletised milk powder. The stevedores worked well and achieved an average rate of discharge of 16 pallets (24 tons) per hour. Ship's gear is used, there being no cranes on the piers. There is a 30 ton floating crane available for heavy lifts. Fork lift trucks etc., are hired by the Agents from various sources in the town.

Precautions should be taken against theft by locking up everything possible. It is customary to employ 3 shore watchmen who are fed on board.

No difficulties were experienced with the arrival papers and in this respect much assistance was received from the Agents at Cristobal in preparing Manifests, etc. It is essential that in future, Bills of Lading and Manifests covering cargo for discharge at Colombian ports, are placed on board before departure from vessels final loading port.

Fresh water and provisions are available but Agents should be notified of any requirements whatsoever prior to arrival. Landing Cards, supplied by Agents and signed by Master are required for shore leave.

The following papers are required on arrival:

- Clearance from previous port.
- Register.
- Health Declaration.
- *4 Lists Crew personnel effects.
- *7 Passenger lists (or negative).
- 7 Lists dry/bonded stores.
- *4 Lists Deck and Engine Stores.
- *7 Crew lists (1 with vaccination dates to be attached to health declaration)
- *3 Lists commodity/tonnage for discharge in each hatch and tonnage of transit cargo.
- 2 Lists ship's information (Tonnages, owners, length, fuel and water on board, etc.)
- 4 Lists mail for discharge (or negative).
- *8 sets Sobordos (manifests) with Bills of Lading (2 to be freighted in US dollars)
- 15 Tally books in alphabetical order of cargo marks. (for use of tally clerks in discharge)

*Require to be Consular stamped before arrival.

AUTHORITY: Puertos de Colombia, Terminal Maritimo de Cartagena, Apartado Aereo 94, Nacional 200, Cartagena. *Tel:* 64655, 63478. *Telex:* 37718. *Cables:* Termarit. *Contact:* Vivian Dahl Pareja, Chief of Information Office. Gilberto Rengifo Varon, Port Captain.

(B) TANKERS

LOCATION: Cartagena is located on the Bay of Cartagena, North coast of Colombia, Lat. 10° 19′ N., Long. 75° 31′ W.
DOCUMENTS: Documents necessary for a petroleum tanker arriving at Cartagena are as follows:

- 1 copy Clearance (Despacho) from Last Port (if vessel was directed while en-route, Master's affidavit). Consular visa unnecessary.
- 1 copy Consular Dispatch.
- 4 copies Crew List.
- 4 copies Personal Effects Lists.
- 2 copies Ballast Manifest (Manifiesto de Lastre).
- 4 copies Stores List.

PILOTAGE: Pilotage is compulsory. If, on arrival outside the entrance to the channel leading to Cartagena harbour, a Pilot does not meet vessel, vessel is to sound the whistle signal, 4 long blasts, and display International Code Flag "G" for a Pilot.

Vessels are not to pass each other in the channel leading into the harbour of Cartagena and inbound vessels are to give way to outbound vessels.

Vessels entering or leaving the port must have a Pilot on board, otherwise they might be subject to a fine for failure to comply with this regulation.

The vessel must sound 4 long whistle blasts so that it will be met by the Mooring Master inside the harbour and who will take it alongside immediately if berth is available. If the ship's Master sees that another ship is at the loading berth, he must anchor.

It will be necessary to deliver to the Mooring Master a report stating the exact time he arrived on board and left vessel outside the channel. If, when inbound, the Pilot does not meet vessel outside the channel, Master is to note this fact on the Pilot's Report.

NAVIGATION AIDS: For information pertaining to Navigation Aids, consult the latest edition of the Light List (H.O. III A) or equivalent British Light List; also the Sailing Directions covering the area.

RESTRICTIONS/MAX. SIZE:

		Refinery Terminal Max. – Min.	*Nestor Pineda Terminal* Max. – Min.
Size of vessel that can safely berth:	Length (ft.):	853 – 492	853 – 577
	Beam (ft.)	125 – 65	125 – 82
	Draft (ft.):	38	38
	d.w.t.:	85,000 – 12,000	85,000 – 25,000
Location of Terminals South of the City of Cartagena:		7 miles	5 miles
Latitude:		10° 19′ 09″ N.	10° 19′ 39″ N.
Longitude:		75° 30′ 42″ W.	75° 30′ 54″ W.
Distance from port entrance:		5.5 miles	6.5 miles
Least depth of water from Bocachica Channel to Terminal:		44 ft.	44 ft.
Depth of water at Terminal at Mean Low Tides:		40 ft.	40 ft.
Mean Tidal Range at Terminal:		1.5 ft.	1.5 ft.
Nature of bottom at Terminal:		Mud	Mud
Docking and unloading:		Night and day	Night and day

Also see "Berthing".

RADIO: Masters of vessels proceeding to the Cartagena Terminals are to send a radio notice at least 48 hours prior to arrival to the Agent at Cartagena; this should be corrected promptly in the event of any change in the time of arrival.

The Agency, upon receipt of the arrival cable, will cable the vessel with pertaining instructions about the cargo, if not ready, or if the berth is occupied at the time of arrival by another vessel. In these instructions, the Agency will indicate the estimated docking time.

BERTHING: Ecopetrol owns 2 terminals on the Bay of Cartagena:
Refinery Terminal: The dock of the Refinery Terminal consists of a "T" loading platform with trestle connection to shore, 4 breasting dolphins and 2 mooring dolphins. These facilities are used for receiving crude oil, gas oil and white products and shipping refined products and spent caustic in tankers up to 85,000 d.w.t., either empty or partially loaded to a maximum draft of 36 ft.
Nestor Pineda Terminal: Consists of an isolated loading platform, connected to the shore by 7 submarine pipe-lines, 3 breasting dolphins, and 2 mooring dolphins. These facilities are used for receiving crude oil and shipping fuel oil and aromatics in tankers up to 85,000 d.w.t., either empty or partially loaded to a maximum draft of 36 ft.

The size of tankers entering Cartagena's bay is limited by the depth of the entrance channel (Boca Chica), which is limited to ships with a maximum draft of 38 ft.

Vessels are supposed to berth alongside the dock with bow and stern lines from both the port and starboard bow and stern.

To dock vessels over 2,000 d.w.t., Maritime and Port Authorities request the use of tugs. Tug costs are on the ship's account. It is recommended that 2 mooring lines be bent together on the starboard quarter. The Mooring Master boards the vessel about 0.5 mile from dock and remains aboard during the entire stay of the vessel at the dock. The Loading Master is to be supplied with room and meals on board.

LOADING/DISCHARGING:
Name of grades handled at Refinery Terminal:

	No. and Size of F.M.C. Tubular Arms	*Diameter of Pipe-line (in.)*	*Max. Pumping Rate – Barrels Per Hour*	*Max. Pump. Pressure psig.*
Crude Oil	3 – 12 in. × 60 ft.	20	20,000	150
Fuel Oil	3 – 12 in. × 60 ft.	2 – 14	5,000	150
Gasoline	3 – 12 in. × 60 ft.	18	10,000	150
Kerosene-turbo	1 – 12 in. × 60 ft.	8 – 10	2,100	150
Diesel	2 – 12 in. × 60 ft.	12	7,000	150
Spent Caustic Soda	1 – 12 in. × 60 ft.	6	2,000	150
Ballast Water	3 – 12 in. × 60 ft.	16	20,000	150

Name of grades handled at Nestor Pineda Terminal:

	No. and Size of F.M.C. Tubular Arms	*Diameter of Pipe-line (in.)*	*Max. Pumping Rate – Barrels Per Hour*	*Max. Pump. Pressure psig.*
Fuel Oil	3 – 12 in. × 60 ft.	24	10,000	150
Crude Oil	3 – 12 in. × 60 ft.	20	20,000 (1)	150
White Products (2)	2 – 12 in. × 60 ft.	6	1,500	150
Ballast Water	3 – 12 in. × 60 ft.	16	20,000 (1)	150

(1) From ship to shore facilities.
(2) Includes facilities for loading Aromatics (Benzenes and Xilenes).

BALLAST: Vessels must arrive with sufficient ballast to permit safe handling in port. Vessels in ballast shall not have greater than 4 ft. trim difference between the fore and after draft. Dock Master requirements in this connection under normal weather conditions are interpreted as drawing approximately 14 ft. forward and 18 ft. aft.

The deballasting facilities are as follows:

In the Refinery Terminal the pipe-line to the shore installations is 2,835 ft. long and 16 in. diameter, 3×12 in. loading arms are available to a maximum rate of deballasting of 20,000 bbls.p.h. In the Nestor Pineda Terminal the pipe-line to the shore is 3,600 ft. long, and 16 in. diameter, also there are 3×12 in. loading arms to a maximum rate of deballasting 20,000 bbls.p.h.

No dirty or clean ballast, nor engine room, or pump room material must be pumped overboard while inside the port.

The Ship's Master should be fully aware of the Colombian laws and regulations pertaining to pollution of the environment and the sanctions derived from their infringement.

Extreme care must be taken to avoid spillage of oil or any other contaminants. In the occurrence of any spillage attributable to the crew's responsibility, immediate action must be taken in order to clean the affected areas. The costs of this action are on the ship's account.

There are strict legal regulations concerning pollution problems. Those responsible for this type of situation will be heavily fined by the Port Authority.

FRESH WATER: Fresh water is available only at Nestor Pineda Marine Terminal. This water is not recommended for drinking.

FUEL: Bunker C, Marine Diesel and Diesel Oil are available only in the tanker anchorage area, from local suppliers.

GANGWAY/DECK WATCHMEN: An accommodation ladder shall be lowered on the port side upon arrival at the port.

SHORE LEAVE: Shore leave is granted to members of the crews of vessels calling at Cartagena. Before granting shore leave, the Master must address a letter to the Port Authority requesting permission to grant shore leave and must assume all responsibility for his men.

Crew deserters will be arrested by the local police and the vessel in all probability will be fined. Every precaution, therefore, is to be taken to prevent members of the crew from going ashore without permission from the Master. The Port Authority restricts, under penalty of fine, the boarding of any tanker while at the loading terminal by all persons except those having official duties to perform on board. Masters are to make sure that no unauthorised persons are permitted to come on board their vessel while at the terminal.

REGULATIONS: Ecopetrol requires that all vessels loading or unloading at their terminals comply with the following regulations:

a. Tankers must arrive in port with hose derricks rigged and mooring lines on deck.

b. During the time the tanker is at the loading platform a sufficient number of the ship's crew must be on duty to properly attend the mooring and hose lines; so that necessary changes can be promptly made.

c. The tanker must furnish one member of the crew to operate the ship's winch, which operation, however, is to be under the direction of the Loading Master.

d. The tanker's crew must handle all ship's valves.

e. The ship's officers must follow the instructions, in all aspects, from the Loading Master as to all the signals to be given to the shore loading stations. When the tanker is about to be loaded, a "stand-by" signal is to be given. The "Slow-down" signal must be given at least 5 minutes before the "Shut-down" signal.

f. In order to facilitate the above, the crew should be on deck immediately following the "stand-by" signal and preparations must start to unberth the ship on completion.

g. No ship will be berthed except under the sole direction of the Mooring Master.

h. While the ship is berthed, the propellers must not be moved; engines shall be ready for immediate use and steam, or power must be available to work winches and windlasses to meet emergencies at all times.

i. All instructions from the Loading Master, whether contained in these regulations or not, must be followed by the ship's officers and if not, all operations will be discontinued, and, if necessary, the ship removed from the loading berth until such time as the ship's officers comply with orders of the Loading Master.

j. No maintenance, or repair to the ship, such as welding, or any other hot work will be undertaken, while at the berth and which will endanger the safety of the installations, or equipment, owned by Ecopetrol.

k. When loading/unloading operations are complete, the crew shall endeavour toward clearing the facilities in the shortest period of time possible.

SHIPMASTER'S REPORT: August, 1979 (Updated 1986).

Approaches: Cape Santa Domingo shows up at 35 miles on radar. During Summer months May to September strong N.E. winds with heavy swell are prevalent in the approaches.

Thunderstorms and squalls are usual in Summer near the coast with a marked shift in wind.

Boca Chica Light and Fairway Buoy Light are conspicuous. Bancas Salmedina Light on wreck merges with shore lights from the West.

Generally even with strong N.E. winds in Summer it is fairly calm off Fairway Buoy, even if blowing strongly a few miles further seaward.

Pilotage: Pilot boards off Fairway Buoy, usually starboard side, using gangway/pilot ladder arrangement.

The pilot station is on Isla Draga on the South side of Boca Chica Channel, 24 hour service maintained.

The proper launch is a large black hulled craft but at present (August '79) it is being re-engined. A small pleasure type craft is being used at present of very low speed and light construction. In the bay the Pilots have a turbo craft, small but very fast. The Boca Chica Pilots are a Government service and dock vessels at public piers only, otherwise take vessels to area off private piers and hand over to private Pilot, same when leaving. Pilots speak some English.

The private Pilot at Mamonal Pier is good and speaks good English.

VHF: Appear to use Channel 16 only.

Boca Chica: The narrow entrance to Cartagena Bay Channel well lighted by buoys as per British Admiralty Chart. Max. draft 38 ft. accepted. Sometimes cross currents are Southerly across the entrance with strong Northerly winds. Course steered 086°.

Anchorages: For Mamonal Oil Pier, 1 mile S.W. of pier, with 3 shackles, whole of bay affords good shelter and all the bay is compulsory pilotage.

Berths: Mamonal Pier virtually due East of Boca Chica Channel. It is owned by Ecopetrol and leased to Amocar Refinery behind the berth. Both state owned. Max. size 75,000 d.w.t. (approx.).

Draft: Limited by Boca Chica Channel. This vessel's draft: 41 ft. 3 in. forward and 50 ft. aft.

Jetty: Vessel berthed heading North. A short jetty, length 50 m. with pipe gantry and dolphin each end connected by catwalk. Total length 100 m.

The pier ashore is for the pipes and has a narrow catwalk. No stores could be loaded along jetty. No fresh water on the berth. Gangway is a problem and is nearly impossible to land. Ships with long "B.O.T. type" can be landed on the jetty. We lowered ours to the water and used mooring boat which is on constant stand-by at jetty.

Fenders in a bad state of repair. The aft dolphin has no fender and vessel is kept off by port quarter buoy line. Fender is under repair.

Tugs: Generally two small tugs used for pushing, however, we used only one. A larger tug of 2,500 h.p. should be back in service after repairs.

Mooring: (See "Plan"). The first two lines fast each end are the springs, then the port quarter line aft to keep vessel off the damaged dolphin.

A line boat is used which goes backwards and forwards each end. The berth is approached from the South and port anchor is let go off the berth. Vessel eventually had 5 shackles in water. It takes about three hours from picking up Boca Chica Pilot to all fast.

Cargo: The pier handles gasoline, ammonia, propane and butane outward and crude oil inward. About 6,000 tonnes a month of ammonia is shipped for export.

About three 40,000 ton shipments of crude per month are brought in mostly from the Colombian Pacific coast but an occasional Nigerian shipment is also received.

Hoses: All flexible hoses, no Chicksan arms. Ammonia 8 in. 150 ASA with gate valve at ship's manifold, flexible wire braided with rubber covering. Joints liable to leak. Generally two connected ready, but we had to use three and P&O 'Galara' class have to use four due to high freeboard.

No vapour line. No Nitrogen purging. Shore labour connect. Can take up to 1.5 hours to connect/disconnect.

Rate: Maximum Ammonia rate 450 t.p.h. Four pumps at refinery, using two only seems to make 50 t.p.h. difference. Emergency stop – recirculates on jetty.

Survey: Bill of Lading on ship's tanks.

Loading Master: Speaks good English and very helpful. He requires a cabin as does a Pollution Inspector, Agent's runner and Surveyor.

Pratique: No radio pratique available.

N.O.R.: Signed by Pier Master on behalf of 'AMOCAR' refinery on arrival alongside or at anchor if waiting for berth.

Holidays: Public holidays with banks closed. 1st January, 1st May, 20th July, 7th August, 25th December.

Documents: 5 Crew Lists.
2 Personnel Effects.
2 Store Lists.
Vaccination List.
Maritime Declaration of Health.
Ship's Papers.

Generally very good co-operation with four persons boarding, none on departure, Agent brings clearance. Require to sight register, load line certificate, radio certificate, safety certificate and DTI/P&I Pollution certificate.

In some publications a document called 'SOLE' form is mentioned. The Agent said this was a form from Colombian Consul at last port to say all papers in order but no longer required. Shore passes valid for 3 days are issued, no photographs required. Passes are not returned.

Customs: Will only board between 0700 hrs. and 1900 hrs. If the vessel has not cleared before 1900 hrs. she cannot start cargo. This is a new law by the Port Captain since the end of July 1979, previously he used to issue a waiver and allow loading but some Agencies didn't apply to him and started before Customs came with waiver. A meeting is due to be held before the end of August 1979 on this subject between Agencies, Customs and Port Captain. This means, at present, that it is not advisable to pick up the Boca Chica Pilot between 1730 hrs. and 0530 hrs. as vessel will not be able to work cargo and will probably have to pay an extra day's port costs as they are on 24 hour arrival Pilot basis.

Communications: Barranquilla "HKB". Frequencies: 476; 6463.5; 8666; 13087.5. HF: Channels 5/6; 6, 8, 12 MHz.

Telex: Good.

Telephones: To Europe from Cartagena, 2 to 3 hours delay.

Bunkers/Fresh Water: At Bay piers, can easily be obtained by barge.

Agent: Did not seem aware of new Port Captain decree on not starting cargo at night which cost extra day's port charges, which could have been avoided, until he boarded with Customs.

Apart from the above, very good and attentive. Can be contacted on VHF Channels 16 and 6. A "runner" is on board all the time with a walkie-talkie.

I was told that crew changes are easily done as long as 24 hours notice is given for Immigration clearance. It is quite normal for ships to sail with crew members adrift and as long as Master gives Agent letter of authority for hotel costs and air ticket there are no problems with the Authorities. The nearest British Consul is in Bogota.

Shore Leave: It takes about 20 minutes from Amocar Refinery (At foot of Mamonal jetty) to Cartagena by bus. Rate of exchange: Pesos to Dollar = 200 (1986).

Thieving/Stabbing: All officials and Pilot advised us to make sure we had a very good deck patrol with no ladders overside, thieving at Bay Berths is rife. Also make sure you have some strong weapon with you and you lock yourselves in at night as people have been stabbed in bed when woken by thieves. Lock everything up.

Developments: Considerable developments have taken place in the area in recent years. Cartagena is a big tourist centre from Venezuela and the U.S.

Exports include coffee, fruit, lumber, tobacco, precious metals and petroleum products.

Good road and rail communications exist with Bogota the capital taking about 18 hours.

The Eastern shore of the bay is being developed as an industrial area. The following piers and sea island are in evidence.

ECOPETROL sea island (Nestor Pinead Terminal) takes up to 100,000 d.w.t. tankers, 54 ft. at the berth but limited by Boca Chica Channel. Chicksan connections. FW piped to berth, mooring to buoys. Used for export of fuel oil and other petroleum products. Situated just North of Brujas Island.

Cement Jetty	in position:	Lat. 10° 20.4′ N., Long. 75° 30.9′ W.
Soda Pier	in position:	Lat. 10° 19.9′ N., Long. 75° 30.85′ W.
Syncrolift	in position:	Lat. 10° 19.7′ N., Long. 75° 30.8′ W. 15,000 d.w.t. commissioned early 1980.
LPG Barge Pier	in position:	Lat. 10° 19.4′ N., Long. 75° 30.8′ W.
Mamonal Pier	in position:	As charted
Industrial Berth	in position:	Lat. 10° 17.3′ N., Long. 75° 30.4′ W.
Products Pier	in position:	Lat. 10° 18.2′ N., Long. 75° 30.55′ W.
Products Pier	in position:	Lat. 10° 18.2′ N., Long. 75° 30.7′ W.

Considerable barge traffic with big pusher tugs use the River Dique, which comes out in the Southern part of the bay, this joins up with the River Rio Magdalena in the interior and to Barranquilla, etc.

AUTHORITY: *Operator:* Empresa Colombiana de Petroles, "Ecopetrol", Apartados: Aereo 5938-6813, Postal 808, Bogota, Colombia. *Telex:* 44464. *Cables:* Ecopetrol. *Contact:* Jorge Lozano, Depto. Coordinacion de Operaciones.

~~Ship's Papers.~~
~~Clearance Ballast Manifest.~~
~~Crew's Personal Effects Declaration.~~
~~Vaccination Certificates.~~
~~Stores List.~~

~~**PILOTAGE:** Advise ETA 72, 48, 24 hours in advance. Pilot leaves dock on sighting vessel. Ship boarded approx. 1 mile N.W. of Sea Buoy or at anchorage. Pilot boat is 25 ton tug, 60 ft. length, 500 h.p., steel hull.~~

~~**ANCHORAGE:** Vessels arriving at night anchor 1 mile N.E. of lighted marker buoy. Bottom – mud.~~

~~**RESTRICTIONS:** Docking only during daylight 0500 – 1730 hrs. Undocking – any time.~~

~~**MAX. SIZE:** Length 800 ft., draft 42 ft. 6 in. Depth in approach channels 42 ft. Mean tidal range 18 in. Current 3 knots (max.).~~

~~Also see "Shipmaster's Report".~~

~~**HEALTH:** Quarantine Officials board ship at berth or at anchor. Accommodation ladder should be rigged for Quarantine and Customs Officials. From December to March ladder should be rigged on port side due to prevailing North wind.~~

~~**RADIO:** Radio traffic addressed "Sagoc Tibu" via Barranquilla Radio or Cartagena Radio.~~

~~**TUG:** Tug-pilot-boat leaves dock on sighting vessel.~~

~~**BERTHING:** Vessels use starboard anchor with approx. 5 lengths of chain, and 2 starboard mooring buoys aft; 2 port mooring buoys aft and 2 port mooring buoys forward. All mooring lines should be 120 fathoms. Prevailing wind 310°. Terminal is a sea-berth approx. 1 mile from illuminated marker buoy. The berth has now been taken over by Ecopetrol and may be used in future for the discharge of imported crude.~~

~~Also see "Shipmaster's Report".~~

~~**MEDICAL:** Doctor on call at any time. 12 bed hospital.~~

~~**LOADING:** Hoses connected on port side 2×10 in., each 2.5 tons, to be lifted by ship's boom and winch. Pipe-line 20 in. 7,300 ft. from pump station to berth. Average pumping rate: 2,000 t.p.h. Max. pressure ashore: 120 p.s.i. 3 grades of oil handled by same pipe-line. Approx. API gravity of crudes: heavy Barco 32.5, Cicuco 45.5, Valasquez/Barco mix 24.0.~~

DENSITY: 1021.

FUEL: See "General" before first port.

IDENTIFICATION CARDS: If required by Customs, issued by Sagoc.

CONSULS/REPAIRS/DRY DOCKS/FUEL/FRESH WATER: None.

REPATRIATION: Only if sick crew member left ashore after vessel sails.

~~**AIRPORT:** Barranquilla. Flights to U.S.A., Europe and other South American countries.~~

~~**TIME:** Eastern Standard Time. GMT minus 5 hours.~~

~~**HOLIDAYS:** Loading carried on during holidays and week-ends.~~

~~**SHORE LEAVE:** At discretion of Master. Crew uses private motor vessel at own risk.~~

~~**REGULATIONS:** Vessels should arrive with clean ballast. No dirty ballast to be pumped into bay, violation subject to penalties. If impossible to arrive with clean ballast, dirty ballast will be discharged through cargo lines and 3,000 barrels of dirty water displaced into vessel. Capacity of slop receiving facility unlimited.~~

~~**DELAYS:** Only when other vessels occupying mooring.~~

~~**AUTHORITY:** Ecopetrol.~~

(B) OFF-SHORE PETROLEUM TERMINAL – OCCIDENTAL

LOCATION: Situated in the Gulf of Morresquillo approximately 56 miles S.S.W. of Cartagena. "Arrived Ship" position is Lat. 09° 33′ N., Long. 75° 51.5 W. which is 4.5 nautical miles from the Floating Storage Unit (FSU). (See "Plan"). The Terminal loads one grade of crude oil (API 29.3°. Temperature 88°/90°F).

DOCUMENTS:

Clearance from Last Port.
9 Crew Lists.
Ship's Papers and Certificates.
International Oil Pollution Prevention Certificate.
9 Personal Effects Lists.
Health Declaration.
Vaccination Certificate.
Derat Certificate.

PILOTAGE: Compulsory except for anchoring. A company Mooring Master will board the incoming tanker approximately 4.5 nautical miles N.W. of the FSU. VHF Radio – Stand-by on Channel 16, shift to Channel 10 for manoeuvring – 24 hours' service, weather permitting.

ANCHORAGE: The recommended anchorage for export tankers and vessels having business with the off-shore terminal is within a radius of 1.5 nautical miles of position: Lat. 09° 33′ N., Long. 75° 51.5 W.

RESTRICTIONS: Berthing night and day weather permitting, in open water in the Gulf of Morrosquillo.

MAX. SIZE: FSU: 145,000 tonnes displacement with LOA 265 m.

Minimum Size: 55,000 tonnes displacement with LOA 220 m. for berthing alongside. Vesssel can berth either side.

TLU: For berthing at the Tanker Loading Unit (TLU) 145,000 tonnes displacement with LOA 300 m.

Minimum Size: No minimum size providing vessel can handle the system equipment.

HEALTH: Port Authorities grant Free Pratique on clearing the vessel inwards. International regulations in cases of contagious sickness or epidemic are carried out.

RADIO: Radio Barranquilla, HKB.

VHF: Pilot station, Terminal Superintendent and Agents on Channel 16. Shift to Channel 10 for pilot boat, and for manoeuvring with harbour small craft. Shift to Channel 11 for loading.

RADAR: Use of harbour radar, situated on FSU, is available on request. Call on Channel 16 and shift to Channel 10.

TUGS: The use of terminal tugs (2) is at the Mooring Master's and/or Port Authorities' discretion. The mode of operation is made in conjunction with the vessel's Master.

BERTHING: The terminal can load 2 tankers simultaneously, one alongside the FSU and one at the TLU (See "Plan").

The FSU is a modified 384,000 tons ULCC, yoke-moored on a custom built catenary anchor leg mooring system with a 6 anchor pile spread. The installation is the principal unit in the terminal complex. The Terminal operations and control centre, communications network and accommodation facilities are housed on board. Water depth is 35 m. at the berth. Tankers can berth either side (preferably port side alongside) with 4×12 in. hard arm loading arms. Maximum loading rate 40,000 bbls.p.h.

The TLU is a catenary anchor, 6 legged, SPM functioning as a secondary tanker loading berth. Water depth is 25 m. at the berth. Loading is via 24 in. floating hose string with 2×16 in. connections on tanker port side, lifted by 10 ton S.W.L. ship derrick. Maximum loading rate 40,000 bbls.p.h.

MEDICAL: Emergency medical services are available if needed but not on a routine basis.

DENSITY: 1015–1025, depending on state of Sinu River which empties into the Gulf.

FRESH WATER: Not available locally but could in an emergency be barged from Cartagena.

FUEL: Not available locally but can be barged from Cartagena.

FIRE PRECAUTIONS: See "Port Regulations" (copy placed on board on arrival).

CONSULS: None at Covenas – the nearest being Cartagena – 3 hours drive.

REPAIRS: No dry dock facilities – minor repairs can be carried out through Cartagena.

SURVEYORS: Cargo Inspectors – Saybolt on site. Caleb Brett and S.F.S. available on few hours' notice.

Surveyors – Lloyd's Register, A.B.S., etc. Available on few hours' notice.

CARGO GEAR: Port derrick (10 tons S.W.L.) required at TLU.

REPATRIATION: Can be arranged but not encouraged.

AIRPORTS: Cartagena – (3 hours' drive) to U.S.A. and Monteria – (1.5 hours' drive) to Bogota for connections world wide.

TIME: GMT minus 5 hours permanent.

HOLIDAYS: Terminal loads 24 hours per day, 365 days per year.

SHIPMASTER'S REPORT: June 1986.
Vessel: 36,800 g.r.t.
Operator of Terminal: Occidental de Colombia, Inc.,
Documents: As per Section (A).
Pilotage: Compulsory within terminal area, except when proceeding to anchor.

A Company Mooring Master will board all vessels scheduled to occupy a loading berth at a position nominated by Mooring Master. At present 3 miles North of SPM (approx.). Mooring Masters are fully licensed Colombian Master Pilots. Mooring Masters remain on board throughout loading and require facilities complying with accepted standards. Complex run by Occidental de Colombia.
Anchorage: At present 3.5 miles North of SPM. Actual position will be given by Covenas Control.
Max. Size: Vessels up to 145,000 tonnes displacement and not exceeding 300 m. LOA may be loaded at SPM. Mean sea level at berth is 25 m.
Health/Radio: As per Section (A).
Tugs: 2 multi-service vessels, including tug capability (equipped with fire fighting and anti-pollution equipment). 2 personnel/pilot vessels. 1 fast boom layer. 1 oil-mop vessel/line handler. 1 hose and line handling vessel.
Berthing: Mooring mentioned in Section (A), still in operation, but used mainly by coastal tankers.

One SPM (Tanker Loading Unit) in position Lat. 09° 29′ 46″ N., Long. 75° 44′ 15″ W. is a catenary anchor, 6 legged, SPM.

Development – An FSU consisting of a converted 384,000 tons ULCC yoke moored on a custom built catenary anchor leg mooring with a 6 anchor pile spread, mooring in position Lat. 09° 31′ 45″ N., Long. 75° 47′ 11″ W. This installation will be the principal unit in the terminal complex as it is due for operation in August 1986. This unit will house Terminal Operations and Control Centre, communications network and accommodation facilities. The unit (FSU) will be capable of simultaneously receiving stabilised crude oil, and loading 2 export tankers, 1 secured alongside and 1 at the TLU (SPM) at a maximum of 40,000 bbls.p.h. each unit. Mean sea level at this berth is 35 m. At present the TLU (SPM) has a maximum loading rate of 7,000 bbls.p.h. and only 1×16 in. hose is connected; 2 will be available when complete complex in operation. Vessels arriving at TLU (SPM) should have port derrick rigged and a bow chain stopper capable of accepting a 76 mm. diameter chain. The vessel is also required to supply a good mooring rope on the forecastle head to use as a messenger for the buoy mooring. Bow fairlead(s) require an opening of 600 mm. × 450 mm. The complex is a joint venture between Ecopetrol, Occidental and Shell.
Medical: No facilities except in an emergency.
Shore Leave: Strictly forbidden.
Fuel: Available from Cartagena; 7 days' notice required.
Repairs: No dry dock available. Minor repairs may be carried out by local engineering firm in Cartagena. These services should be arranged through Agents.
Ballast: Discharge of dirty ballast into sea is strictly prohibited. No facilities for accepting dirty ballast or slops. Vessels must arrive with clean ballast. Ballast samples taken by shore Authorities (this vessel has segregated ballast and samples were taken).

SHIPMASTER'S REPORT: September 1986.

The conventional buoy mooring no longer exists, it has been replaced by a Tanker Loading Unit (TLU) in position Lat. 09° 29′ 46″ N., Long. 75° 44′ 15″ W., which is in effect an SBM. There is also a Floating Storage Unit (FSU) in position Lat. 09° 31′ 45″ N., Long. 75° 47′ 11″ W., which is a 390,360 d.w.t. tanker permanently moored.
Documents: As per list in "Guide". All ship's certificates sighted. Authorities mainly interested in vessel's Safety Certificates and Pollution Certificates. Shore personnel board vessel once on the SBM, sometimes at anchor if more than one ship being cleared. It would appear authorities only board vessels during daylight hours but this does not prevent commencement of cargo operations.
Pilotage: Vessel contacts FSU when 30 miles off port, FSU will pass on any information regarding berthing, etc. When due to berth Pilot will contact vessel on VHF Channel 16. Pilot usually boards when vessel passing North of FSU, actual boarding area is 3 miles North of TLU.
Anchorage: Approximately 3 miles West of FSU centred on Lat. 09° 29′ 49″ N., Long. 75° 41′ 44″ W. with a radius 1.5 miles from this position.
Restrictions: None, 24 hour port operations.
Tugs: One small tug assists in berthing, pushing only as required.
Berthing: SBM. One chain through centre panama lead onto vessel's AKD stopper, shore able to provide mooring gear if vessel not fitted with AKD stopper. Pilot on forecastle head when approximately one mile from SBM, he is in radio contact with Master on bridge.
Loading: 2×16 in. hoses connected port side. Shore labour connects hoses. 1 crew member required to drive crane/winch. Loading rate 25,000 bbls.p.h. (4,000 cu.m.p.h.). Vessels can load directly from shore or from the FSU.
Ballast: There are *no shore facilities for dirty ballast so vessels must arrive with clean ballast.*
Points of Interest: Accommodation required for Pilot (who also acts as Loading Master), and 1 Cargo Surveyor. One person (clerk) arrives on board towards end of cargo operations, he completes Bills of Lading on board on completion of loading. Medical facilities are available, the largest town close to Covenas being Tolu.

ADD SMR.

AUTHORITY: *Operator:* Occidental de Colombia Inc., Calle 71A, No. 6-30, Piso 18, Bogota, Colombia. *Tel:* 211 50 00 – 211 83 00. *Telex:* 42220 Oxcol Co.

POZOS COLORADOS TERMINAL: 11.09 N. 74.15 W.

(See Plan)

LOCATION: North coast of Colombia, approximately 6 miles S.W. of Santa Marta.

DOCUMENTS:

For the Port Captain:
1 Clearance for Last Port.
1 Voyage Report.
1 Crew List.
1 List of Passengers for Santa Marta.
1 List of Passengers in Transit.

Vessel Certificates: (These only need to be shown).
Registration Certificate.
Load Line Certificate.
Classification Certificate.
Safety Equipment Certificate.
Radiotelegraphy Safety Certificate.
Construction Certificate.
Cargo Handling Equipment Safety Certificate.
Oil Pollution Certificate (Insurance for US$1,000,000).

For Port Health Authority:
Derat Certificate.
Maritime Health Declaration.
Toxic Element Certificate.
Crew List with dates of vaccination.
List of Passengers for Santa Marta.
List of Passengers in Transit.

For Customs:
3 Cargo Manifests.
3 Crew Lists.
3 Lists of Passengers for Santa Marta.
3 Lists of Passengers in Transit.
3 Lists of Crew Personal Effects.
3 Lists of Provisions.
3 Mail Lists.

For Agencies:
1 Voyage Report (these only need to be shown).
2 Crew Lists.
2 Lists of Passengers for Santa Marta.
2 Lists of Passengers in Transit.
2 Crew Personal Effects Lists.
2 Lists of Mail for the Port.
4 Cargo Manifests.
4 Bills of Lading.
2 Cargo Stowage Plans.

PILOTAGE: Mooring Master will meet vessels approximately 1 mile seaward of terminal location. He will remain on board throughout the vessel's stay and should be provided with accommodation.

ANCHORAGE: When vessels arrive at night, they anchor one mile out to sea from the Terminal.

RESTRICTIONS: Docking only during daylight 0500 hrs. – 1600 hrs. Undocking 0430 hrs. – 1800 hrs.

MAX. SIZE: Berth in approximately 52 ft. of water and can accommodate vessels of up to 69,000 d.w.t., LOA 900 ft., beam 110 ft. with max. draft 45 ft.

HEALTH: Port Authorities board with Mooring Master to enter ship and attend all formalities.

RADIO: *Notice of Arrival:* Agent for the vessel must confirm arrival of vessel at the Port with a minimum advance notice of 24 hours, giving with this information the following information:
Name of the vessel
Name of the Master
Nationality
Last port of call
Destination of the vessel
Overall length
Draft forward and aft
Tonnage to be unloaded
Time at which Pilot is required.

VHF: Permanent communications Vessel-Terminal with VHF Channels 16 and 6. National and International communications through "Empresa Nacional de Telecomunicaciones (Telecom)" 0800 hrs. – 2200 hrs.

TUGS: Tugs are available if necessary for manouevring when berthing and unberthing.

BERTHING: The vessel will be berthed in the area surrounded by the 7 mooring buoys, in following order from for'd port side, passing round stern to for'd starboard side: No. 7, 1, 2, 3, 4, 5, 6. Vessels lie in berth on approximate due North heading; vessel's lines run by means of mooring launch to stern, quarter, and breast buoys. Vessels up to 20,000 d.w.t. require at least 5 good manila lines; vessels in excess of 20,000 d.w.t. require at least 12 good manila lines. These lines must be of not less than 120 fathoms in length each. Synthetic lines of equivalent strength may be used. Vessels equipped with wire mooring winches may use wires in lieu of fibre lines. The mooring requires use of both bower anchors, each having at least 150 fathoms of chain and be prepared to handle 5-ton lift on starboard side at ship's manifold. Because of rigidity of submarine hose, a small movement of vessel out of correct position could damage submarine equipment. Extreme caution must be exercised to ensure that vessel is correctly moored. During loading operation slack must be kept out of submarine hose by adjustment of vessel's anchor and lines.

TERMINAL REPRESENTATIVE: The Terminal has skilled personnel to represent its business on board and they will remain on board during all operations.

HOSES: Submarine hose 16 in. with 16 in. to 12 in. reducer for connection to vessel's 12 in. deck hose. For vessels not equipped with 12 in. deck hose, a 12 in. to 10 in. reducer is available. A 25 ft. length of 10 in. deck hose is also available for vessels not having a deck hose on board. Ship's crew perform all hose connecting, disconnecting, etc.

PUMPING: Average pumping rate 12,000 b.h.p. Max. working pressure 120 p.s.i.

CARGO HANDLING: Terminal is designed for loading and unloading crude oil or products. Currently, it is used to unload white products (motor gasoline and virgin naphtha). The products must be transported and unloaded in segregated form. The total capacity of storage is 750,000 bbls. Distance to tanks 9,997 ft. Diameter of line 20 in.

BALLAST: The utmost care must be exercised by all tankers to avoid any contamination of the terminal bay waters, since the entire area is a developing tourist resort. This means that absolutely no deballasting or disposal of bilge water must take place in the bay. Shore deballasting facilities can handle up to 84,000 bbls. if ship provides advance warning.

FRESH WATER: Not available.

FUEL: No bunkers available at terminal. Acquisition is possible at Cartagena (Colombia). See "General" before first port.

MEDICAL: Doctor and hospital located at Santa Marta, throughout 24 hours.

CONSULS: No consular office in vicinity of terminal.

The following countries have consulates in Santa Marta:

		Phone
Costa Rica	Avda. Libertador No. 33-47	32199
Dominican Republic	Cra. 21 No. 15-99	32962
Ecuador	Las Villas 2a. etapa, Villa No. 15, El Rodadero	27590
Finland	Edificio de bs Bancos Oficina No. 605	35317
France	Calle 17 No. 2-56, Of. 212	32014
Guatemala	Calle 11 No. 1C-23 P. 8	34048
Netherlands and Sweden	Calle 15 No. 3-94	33403
Norway	Calle 11 No. 1C-23 Dpto. 306	33501
Panama	Calle 17 No. 2-56 Of. 416	34253
Peru	Calle 16 No. 1-92	33420

Other consuls located in Barranquilla, approximately 35 miles distant.

REPAIRS: Limited repair facilities available in Santa Marta, approximately 6 miles from terminal.

SURVEYORS: There are 3 petroleum inspection companies.

SHORE LEAVE: Through the ship's Agent, shore leave can be arranged, but sufficient crew must remain on board to handle emergencies. Most Maritime Agencies own 2 safety launches for vessel-shore-vessel routine.

GENERAL: No ships' stores.

SHIPMASTER'S REPORT: November, 1984.

1. The Terminal is now used exclusively for the import of gasoline.

2. *Mooring:* Forward: 2 anchors and 1 starboard breast line to buoy.
Aft: Lines to 5 buoys, 3 of which require double lines (8 ropes in total aft).

N.B. All ropes require a 'long drift' as buoys are well away from ship. Wire ropes not suitable for this terminal. (Mooring is a long procedure).

3. Pilot and 'Loading Master' joined at anchor – awaiting tide – and stayed on board throughout stay; in addition 10 personnel have to be fed.

4. *Port Papers:* All ship's documents required for sighting and expiry dates (except, in our case, Ship's Register).

Agents advised the following required:
4 Crew Lists (provided 12 copies and all 'required').
3 Personal Effects Lists (provided 9 copies and all 'required').
3 Stores Lists (provided 4 copies and all 'required').
3 Bonded Lists (provided 4 copies and all 'required').

N.B. Federal Police require at least 2 Crew Lists with complete names not just surnames and initials ('difficult' with Indian crew).

5. *Stores:* Fresh provisions.

6. *Shore Leave:* Shore Passes issued, no problems except for distance to shore. Passes to be returned prior to sailing.

7. No repairs possible – no fresh water – no bunkers.

8. *Discharge:* With 1×12 in. line but fitted with 10 in. reducer to 24 in. undersea line to shore, about 2 km.

Can accept 15,000 bbls./p.h. subject to 7 kg./sq.cm. pressure.

9. *Weather:* (November) Very heavy swell running but this was reported as being very unusual for this time of year. Vessel rolled heavily.

ADD S.M.R.

AUTHORITY: *Operators:* Empresa Colombiana de Petroleos "Ecopetrol", Departamento de Coordinacion de Operaciones, Bogota, Colombia. Telex: 44 787. Tel: 85 67 97.

Estacion Pozos Colorados, Santa Marta, Colombia. Telex: 38 849. Tel: 7499, 7095.

PUERTO BOLIVAR: 12.16 N. 71.57 W. (See Plan)

LOCATION: Puerto Bolivar is at the entrance of Bahia Portete, a natural bay on the North coast of Colombia's Guajira Peninsula, located at Lat. 12° 16′ N., Long. 71° 57′ W. It is on the Caribbean, about 350 km. N.E. of Barranquilla.

DOCUMENTS:

1. According to the rules in force at the time these regulations were approved, the vessel's Master shall show the Authorities and the Port Cargo Inspector the following documents:

Register Certificate.
Classification Certificate. Cargo ships shall show the Certificate of Safety Construction for Cargo Vessels.
Load line Certificate.
Pollution Certificate that must cover Colombian waters (see 'note').
Certificate of Radiotelegraphy and/or Radiotelephony.
Cargo vessel Safety Equipment Certificate with valid annual inspection carried out by an independent surveyor.
Derat Certificate.
Clearance from the Last Port.

Notwithstanding the above, the Master shall show the Port Authorities whatever other documents they may require.

Note: All vessels and marine craft that arrive in Puerto Bolivar shall comply fully with the International Convention for the Prevention of Pollution by Vessels of 1973 and its 1978 Protocol (Marpol 73/78) including all its amendments in force.

2. According to the rules in force at the time these Regulations were approved, the Master shall hand over the following documents to the Port Authorities:

5 Crew Lists containing the following information: name, capacity in which serving, I.D. Documents – class and number – or licence, nationality, date and place of birth.
4 Store Lists; narcotics for medical use must be listed in detail as well as tobacco, alcoholic beverages and taxable goods according to the Customs General Directorship.
4 Mail Lists, if any.
3 Crew Curio and Personal Effects List.
3 Passenger Lists, if any.
2 Quarantine Declarations.
4 Stowage Plans.

Notwithstanding the above the Master shall hand over to the Port Authorities other documents that they may require.

PILOTAGE: Compulsory. Pilot normally boards at the Fairway Buoy, unless otherwise advised.

Pilot Ladder: Unless otherwise advised, the pilot ladder should be rigged on the starboard side of arriving ships.

The pilot ladder, should be of a SOLAS 1974 approved type. To meet those specifications it must have one-piece non skid steps equally spaced, about 14 in. apart with spreader bars five steps from the bottom and then at 9 ft. intervals.

Ships having a freeboard in excess of 30 ft. must have a suitable accommodation ladder rigged adjacent to the pilot ladder so that the Pilot can transfer to it when boarding. Ships' Masters may know this as "The Rotterdam Rig".

ANCHORAGES: Defined by Colombian Port and Maritime Directorship (DIMAR) as follows:

The anchorage area for vessels and marine craft that arrive in Puerto Bolivar shall be located within the following points and geographical co-ordinates:

Point A. Lat. 12° 18′ 00″ N., Long. 72° 00′ 00″ W.
Point B. Lat. 12° 16′ 15″ N., Long. 71° 58′ 45″ W.
Point C. Lat. 12° 15′ 00″ N., Long. 72° 00′ 30″ W.
Point D. Lat. 12° 16′ 45″ N., Long. 72° 01′ 45″ W.

The quarantine area for vessels and marine craft that arrive in Puerto Bolivar shall be located within the following points and geographical co-ordinates:

Point A. Lat. 12° 16′ 30″ N., Long. 72° 02′ 45″ W.
Point B. Lat. 12° 15′ 00″ N., Long. 72° 02′ 45″ W.
Point C. Lat. 12° 15′ 00″ N., Long. 72° 03′ 45″ W.
Point D. Lat. 12° 16′ 30″ N., Long. 72° 03′ 45″ W.

The anchorage and quarantine areas established in the above articles are experimental and therefore all vessels and marine devices shall manoeuvre with care.

APPROACHES: *Landmarks:* For vessels arriving from the Eastern Caribbean, Punta Gallinas (Lat. 12° 28′ N., Long. 71° 40′ W.) is approximately 20 miles E.N.E. of Puerto Bolivar.

For vessels arriving from the Panama Canal or ports to the West of Puerto Bolivar, Cabo de la Vela (Lat. 12° 13′ N., Long. 72° 10′ W.) is approximately 12 miles W.S.W. of Puerto Bolivar. Both Landmarks have prominent lighthouses which are shown in the appropriate light lists.

In addition there is a rotating beacon on the shiploader at Puerto Bolivar with the following characteristics:

Position: Lat. 12° 15′ N., Long. 71° 58′ W. (Expected 1986).
Description: Rotating white beacon.
Period: Flashing white every 2 seconds.
Height: 35 m. (115 ft.).
Visibility: 18.75 miles.

Fairway Buoy: A lighted radar reflector sea buoy located in position Lat. 12° 19′ N., Long. 72° 00′ W. marks the entrance to the Port. The sea buoy has the following characteristics:

Colour: Red and white vertical stripes.
Shape: Pillar with spherical topmark.
Topmark: Single red sphere.
Light: Colour: White. Rhythm: Isophase, 2 seconds on – 2 seconds off.

Aero Beacon: The company airport at Puerto Bolivar has an aero beacon located in position Lat. 12° 13′ N., Long. 71° 58′ W. with the following characteristics/frequencies: 400 kHz – "PTE" – Continuous. Also 230 kHz – "PB".

Channel: Vessels will enter and leave the port by a dredged channel 3.5 km. in length that connects the turning basin with the open sea. The channel's allowable ship's draft is 17 m. (max.). Minimum depth in channel and Berth Reach is 19 m.

Turning Basin: Allowable ballasted draft is 9.0 m. (max.). Vessels scheduled to load enter the circular turning basin, depth 11.5 m., where they are completely stopped, then turned by tugs to berth at the coal pier, port side to.

MAX. SIZE: The Port can accommodate vessels with the following dimensions:

LOA	300 m. (984 ft.).
Beam	45 m. (147 ft.).
Max. Loaded Draft	17 m. (55 ft.).
Max. Ballasted Draft	9 m. (30 ft.).

HEALTH: Radio Pratique is not granted and vessels arriving will have to be granted Pratique upon entering port or at anchorage. The standard World Health Organisation Certificate must be used.

TUGS: 3×3,700 h.p. to be located at the port. The use of tugs both entering and leaving is mandatory. Tugs will be utilised as deemed necessary by the Pilot. Tugs will normally be made fast prior to entering the channel for inbound ships. Tugs will utilise their own lines but ships should have crew standing-by with heaving and messenger lines to be used as directed by the Pilot.

RADIO: Coastal Station HKB may be used for routine messages.

Estimated Time of Arrival Notices: Masters should advise their ETAs upon receipt of orders to proceed to Puerto Bolivar. In addition, 72, 48 and 24 hour ETAs should be transmitted to INTERCOR with a copy to Agent.

ETA Message Text: (To be cabled with the first ETA, at least 72 hours before arrival).

OOO	Parcels and sequence of grades to be discharged	NA	NA	NA	R
PPP	Official deadweight tonnage (d.w.t.) taken from ship registry	R	R	R	R
QQQ	Length of loading area from Hatch No. 1 forward to end of last hatch aft	R	R	NA	NA

R = Information requested.
NA = Information not requested because not applicable to vessel's class.
* = Maximum segregated ballast possible, including fore peak and after peak, provided max. draft does not exceed 9 m., the propeller is totally immersed and the trim does not exceed 6 ft. by the stern.

Lack of compliance with any of the above requirements will result in non-acceptance of the vessel at Puerto Bolivar Terminal.

This format is to be included in the Port Information Manual and should be used for the first ETA radio message to be received from incoming vessels not later than 72 hours before their arrival at Puerto Bolivar's Sea Buoy.

VHF: VHF Radio Channels 14 and 16; call "Puerto Bolivar Marine" for anchoring or berthing instructions. Normal marine communications will be available.

BERTHING: *Cerrejon Coal Terminal:* The single coal berth is in operation 24 hours daily, year round. It has 3 breasting dolphins and is designed for a maximum ship size of 150,000 d.w.t., 300 m. LOA, 45 m. beam, and 17 m. draft.

Access to the Port is via a dredged lighted buoy channel approximately 3.5 km. (1.9 miles) long and 225 m. (738 ft.) wide on a 326° – 146° true heading. The principal coal loading berth is located on the West side of the bay.

An additional pier designed for other commodities may be utilised for coal loading. Length of pier 280 m. Max. draft permissible 9.8 m. Tankers berth on East side and general cargo vessels on the West side.

After embarking the Pilot, vessel proceeds down the main ship channel past the coal loading pier. During transit and mooring tugs are used depending on vessels size. Vessel continues into turning basin where she is completely stopped and turned, to berth port side to. Smaller ships using the commodities pier may or may not be turned prior to berthing.

Vessels will normally load on a first come, first served basis.

Ships to load must arrive with clean ballast carried in segregated ballast tanks, with holds swept clean and, in the case of ore-oil or OBO vessels gas free.

At Pilot's discretion and with approval of Port Operator a vessel may be requested to ballast a cargo hold for manoeuvring and berthing purposes.

The maximum distance between the bottom of the shiploader spout and MLW is 23 m. The average tide is 0.35 m.

Mooring Line Arrangements: The number of lines or wires will depend on the d.w.t. and/or displacement of the vessel. In general, vessels will utilise head, stern and spring lines. The leads for the head and stern lines are almost perpendicular to the ship's side.

The number of lines and specific mooring arrangement will vary from ship to ship and will be reviewed by Pilot and Master, prior to mooring.

Should a vessel have insufficient or poor quality mooring ropes or wires to safely keep her properly berthed, the terminal will provide same as necessary. This determination will be made by the Pilot prior to berthing or by the loading supervisor after the ship is alongside. Charges will be assessed against the vessel for these services.

BULK HANDLING FACILITIES: *Railroad:* The 150 km. mine to port railroad is dedicated to handling Cerrejon coal.

Stockpile: Maximum storage is 1.7 million metric tons (tonnes), live storage is 1 million tonnes.

Weights: Will be determined by draft survey.

Sampling: The Ramsey automatic sampler operates according to ASTM standards.

Analysis: ASTM standards are applied.

Shiploader: One line loader can handle up to 10,000 tonnes/p.h.

Trimming: Spout trimmed.

Also see "General".

MEDICAL: First aid treatment is available, but not on a routine basis. Extreme emergencies must be handled at Barranquilla.

FRESH WATER: Not available.

FUEL: Not available. Nearest bunkering ports are Cartagena, Aruba and Curacao.

CONSULS: Located at:

REPAIRS: No facilities for major repairs. Also see "General".

SURVEYORS: Exclusive surveyors for A.B.S. and Lloyds' are located at principal Colombian ports. These surveyors may or may not also act as non-exclusive surveyors for other classification societies.

Masters should be reminded that sufficient advance notice (at least 72 hours) should be given when requesting classification society services.

OPENING/CLOSING HATCHES: Opening and closing of hatches will be the ship's responsibility. Sufficient hatches are to be open in order to permit commencement of loading upon acceptance of Notice of Readiness. Ship's crew will also be responsible for opening hatches in sequence so as not to delay loading.

REPATRIATION: Because of the port's remoteness, it is suggested that seamen neither join or leave at Puerto Bolivar.

AIRPORT: The nearest international airport is at Barranquilla (326 km.).

TIME: Local time is GMT minus 5 hours.

GENERAL: Port charges available upon Master's and/or Agent's request. Charges will be made for pilotage and tug service. Full agency service will be provided through a licensed Colombian Agent of Owner's and/or Charterer's choice.

Publications:

N.O. Chart No. 24460.
B.A. Chart No. 1529.
Sailing Direction No. 144 (U.S.) and Coast Pilot No. 7A (British).

Weather: Puerto Bolivar is generally outside the hurricane belt. Prevailing winds are from the North East. In the area of the Port, winds may gust to 35 – 40 knots.

Months of high winds are December to March and July and August. Dry season is from November to May. The wet season is from May to November. This is in general for this area. At Puerto Bolivar, rain is infrequent.

Stores: Very limited amounts of stores of an emergency nature only will be available and can be expected to be expensive due to the remote location. Request must be advised with the first ETA and availability still cannot be guaranteed.

Bonded Stores: No bonded stores are available.

Navigational Publications and Charts: Navigational charts and/or publications are available on a very limited basis with prior radio request through the Agent.

Mail: Mail may be sent and received through vessel's local Agent. Owners should be advised that as all mail must be channelled through Barranquilla or Cartagena Agents, addresses in those respective cities should be used as no mail is received at Puerto Bolivar at this time.

Laundry: No laundry services are available at this time.

Transportation: As Puerto Bolivar is in a remote location it is suggested that crew members neither join nor be repatriated from Puerto Bolivar. However, should it be deemed necessary that this be done, the Agent can arrange same. As the closest international airport is in Barranquilla, approximately 326 km. away, the cost will be significant. Air transportation out of Barranquilla is not on a daily basis to all world points and costly delays could possibly be encountered.

Gangway: Vessels will be expected to provide their own gangway or accommodation ladder.

Emergency Towing Wires: Vessels while alongside piers shall have fire wires to enable the vessel to be towed from the pier should it become necessary. These fire wires will consist of at least 2 wires, one forward and one aft, hanging from the vessel on the outboard side. They shall be made fast on deck and small hang approximately 6 ft. from the water's edge when the vessel is in a light condition. They shall consist of wire of a diameter in proportion to the size of the vessel, however, the minimum acceptable fire warp shall be 1 in. wire. Each wire will have an eye at the end hanging over the water.

Notice of Readiness: Notice of Readiness shall be submitted by Master and will be accepted by the Loading Supervisor at such time when vessel has arrived at the loading port, is ready to load, and in Free Pratique whether at berth or not.

Cleanliness of Holds: All holds will be inspected prior to commencement of loading by the Loading Supervisor to ascertain that they are clean, dry and suitable for the receipt of cargo.

Emergency Shutdown: If an emergency should occur making it necessary to immediately stop loading operations, the ship shall sound short blasts in groups of five blasts on the ship's whistle and immediately contact Puerto Bolivar Marine Operations on VHF Channel 14 or 16.

Ballast: The maximum ballasted draft for vessels entering Puerto Bolivar is 9.0 m. All ballast must be clean and carried in segregated ballast tanks. It is prohibited to pump any ballast overboard other than that which has been carried in designated ballast tanks and is clean. Vessels arriving at Puerto Bolivar should have all cargo holds clean and ready to receive cargo. Should ballast have been carried in the holds, it would be necessary for this hold to be cleaned and dried prior to entering port.

Prior to entering port the Pilot will inspect the vessel and may or may not request more segregated ballast to be pumped out or additional ballast be added to certain segregated ballast tanks should the trim of the vessel so require. Vessels down by the head or according to their size, trimmed excessively by the stern thus making their manoeuvrability unacceptable will not be allowed to enter port.

Trim: The terminal shall co-operate in every possible way with the ship to obtain the required trim. Masters are reminded that the responsibility to trim their vessel for sailing draft shall be their responsibility and the terminal shall load the vessel based on information submitted by the ship's Master.

Customs and Immigration: Puerto Bolivar is a port of entry and Colombian Government Customs and Immigration officials will board vessel either at anchor or when made fast alongside the pier. All formalities and necessary documents should be made available to them at this time. Masters are advised that they are expected to extend the usual common courtesies to visiting officials. However, gratuities in the form of liquor or cigarettes are neither necessary nor expected.

Swimming and Fishing: Swimming in the harbour is prohibited, either from the ship, pier or shore.

Fishing over the side or from the pier is also prohibited.

Firearms and Ammunition: The display, carrying or discharge of firearms is prohibited on board or within the port area.

Drugs and Alcohol: The purchase or sale of drugs is illegal and is strictly prohibited. Violation of this law may result in fines and/or imprisonment.

The sale of alcohol by ship's crew is also prohibited.

Fire Signal: Fire on board shall be indicated in the same manner as emergency shutdown – short blasts in groups of 5 on the ship's whistle for at least 1 minute or until acknowledged by shore side marine operations. Advice of fire should also be given by VHF on Channel 12 or 16.

Fire Fighting Procedures: Vessels while alongside or at anchor have the responsibility for fire fighting aboard their own vessels. Upon request, the terminal operator may join in fighting a shipboard fire by utilising the tug boat water/foam fire fighting capabilities.

INTERCOR reserves the right to fight fires and take other action as deemed necessary, even if not requested, including removal of the vessel from her berth to anchorage if it appears that the fire is a threat to the terminal.

Loading Supervisor: The Loading Supervisor shall be in charge of all cargo operations and in conjunction with the vessel's Chief Officer shall control the vessel's loading operation. Prior to commencement of loading, planned loading procedure and hatch sequence will be agreed upon between the Loading Supervisor and the Chief Officer. Prior to arrival, the Chief Officer should be requested to have drawn up a proposed loading plan for review.

Loading Rate: Normal loading rate is 10,000 t.p.h. Vessels must be able to discharge all ballast in time so as not to impede loading. Should a cargo loading shutdown be necessary because of vessel's inability to discharge her ballast in time to prevent exceeding her permissible draft, all time lost will be for vessel owner's account.

Overload Drafts: Prior to loading, the full amount of cargo to be loaded should be determined between the Chief Officer and the Loading Supervisor. Masters are advised that they are responsible for obeying all laws pertaining to International Load Lines and shall be held solely responsible for any overloading on their part. When topping off, the terminal shall in every way co-operate with the ship to assist in attaining their legal draft within Puerto Bolivar constraints. Should erroneous information be given to the terminal and should the vessel for some reason be overloaded, the costs of discharging any cargo shall be for the account of the vessel's Owners.

Repairs: Only repairs of a very minor nature can be effected at Puerto Bolivar. These must be proven to be of an emergency nature and necessary for the pursuit of the voyage. While every effort will be given to assist vessels in any way possible, Masters must keep in mind that no shore side facilities are available.

SHIPMASTER'S REPORT: August 1986.

Vessel: 107,000 d.w.t.

Location: Puerto Bolivar is situated at the entrance to the Bay of Bahia Portete approximately 350 km. N.E. of Barranquilla. The port is the outlet for coal mined at Cerrejon 150 km. away, the coal is transported from the mine by train.

Organisation: The terminal has been recently constructed by a large American contractor and is now operated by INTERCOR (International Colombia Resources Corporation). The mine, product sales, marketing, etc. are handled by CARBOCOL (Carbones de Colombia S.A.). The terminal is extremely remote, all labour being flown from Barranquilla on a 4 day on 4 day off basis. The terminal is self sufficient in all services, electricity, fresh water, maintenance, etc.

Product:

Bituminous steam coal from El Cerrejon.

Density +0.8 to 1.0 tonnes/MC.

Stowage factor is given as 41/42 cu.ft./ton but as a practical guide we stowed at 41.5 cu.ft./tonne.

All cargo weights used are tonnes.

Particle size loaded: Max. 50 mm.

No methane gas is emitted from coal.

No history of spontaneous combustion. No ventilation is recommended, holds being kept sealed whilst under way.

Moisture content: 11.5%.

Maximum size of vessel: The largest ship to visit the port to date is 150,000 d.w.t. which is the maximum allowed at this time. Max. allowed sailing draft is 17 m., max. LOA 300 m. and max. beam 45 m.

Approach: No Radio Pratique is granted.

Two hours before arrival contact "Puerto Bolivar Marine" on VHF Channel 16 for berthing/anchoring instructions.

Vessels over 100,000 d.w.t. are not allowed to berth in the dark as yet but will do in the future. However, night-time sailing is allowed for this size of vessel.

The sea buoy shown on the chartlet issued by Intercor is not in position and it is not intended to replace this Buoy. Channel Buoy No. 1 will be fitted with racon (morse 'M') in the future. (Also see "Shipmaster's Report" – September 1986).

Charts: Colombian chart COL. 228 issued by the Colombian Government and the United States Hydrographic Department. This chart will be available from the Marine Senior Supervisor at the terminal. There is also a small chartlet issued by Intercor.

Anchorage: The anchorage is very exposed. Recommended anchorage is 3.5 nautical miles N.W. of Buoy No. 2 in 170 ft. of water. The prevailing winds are N.E. 25 to 35 knots. The prevailing current is S.W. going at a rate of 1 knot to 2 knots. We anchored with 8 shackles in the water and yawed between N.N.E. and East.

Pilot: The Pilot Instructor is an American who boarded with 2 local trainee Pilots. The Pilots board from a tug in position 2.5 nautical miles N.W. of Channel Buoy No. 2. The Draft Surveyor also boards with the Pilots.

The pilot ladder was rigged on the starboard side 2.0 m. from the water. The Pilot carries out an inspection of the holds and issues a Hold Inspection Certificate if the holds are found dry and clean without mineral residues. Ballast holds are inspected after the vessel is alongside.

The Pilot will not berth the vessel if the wind exceeds 35 knots.

Draft Surveyor: The Bill of Lading weight is determined by SGS Surveyor not belt scales. The Surveyor determines the net lightweight of the vessel prior to loading then completes his survey on completion.

A Weight Certificate and Survey Report is provided for the ship.

Tugs: 2×4,000 h.p. and 2×3,000 h.p. Three of the tugs are chartered and will be used until the regular 4,000 h.p. tugs are built. All 4 tugs make fast on the starboard side of the vessel using their own lines. 3 tugs make fast before the vessel enters the approach channel.

Channel: Well buoyed. Length of channel 4 km. Width 225 m. and depth 19 m. Maximum draft allowed 17.0 m.

Turning Basin: Width 600 m., depth 11.0 m. Max. allowable draft 9.0 m.

The Pilot likes to ensure that the propeller is 100% immersed due to the 25 to 35 knot prevailing wind blowing onto the berth. We deballasted No. 6 hold and the forepeak prior to berthing.

Vessels are turned to port before berthing port side to the loading berth.

Coal Loading Berth: Maximum air draft allowed 21.0 m.

To date only working 0600 hrs. to 1800 hrs. every day. This is due to shortage of trained operators and staged development of productivity. 24 hour operation is planned for the future.

The vessel berths against 3 large patent fenders with mooring lines being made fast to quick release bollards using shore capstans to heave the lines.

Springs are made fast first, then breast lines, then head/stern lines.

Ship's gangway cannot be used. Shore gangway must be lifted on board by ship's gear and a safety net provided.

The single loader is fitted with a trimming spoon. Maximum throughput is 11,000 tonnes/p.h. However, this is dependent on stacker/reclaimer rate. Presently only 1 reclaimer is in operation, rate approximately 5,000 tonnes/p.h.

Most of the coal was loaded directly onto the conveyor belt from the train cars giving a maximum load rate of 6,000 tonnes/p.h.

At the present time 3 trains run from the mine every day. Each train lifts 10,000 tonnes of coal. The balance of the coal was loaded from the stock pile.

The stockpile can store a maximum of 1.7 million tonnes.

The loader stops work if wind exceeds 35 knots.

Officials on Arrival: 1 Port Captain, 3 Customs Officers, 1 Port Health Official, 2 Agents.

No Immigration Officials as shore leave is not allowed.

Arrival Forms: 6 Crew Lists, 1 Maritime Health Certificate, 2 Bonded Stores Lists, 2 Ship's Stores Lists, 2 Crew Effects Lists, 2 Vaccination Lists.

Certificates Required by Port Captain Prior to Clearance: Ship's Register, Clearance from Last Port, Derat Certificate, International Oil Pollution Certificate, Load Line Certificate, Safety Radio Certificate, Safety Equipment Certificate.

Shore Leave: Not allowed.

Repatriation: Not recommended due to the remoteness of the port.

Fresh Water: Not available.

Bunkers: Not available.

Ship Repairs: No facilities.

Chandler and Provisions: None available.

Medical: First Aid treatment is available only in emergency. Extreme cases must be flown to Barranquilla.

Time: Local time is GMT minus 5 hours.

Security: Watertight as no unauthorised persons are allowed on board and no shore leave is allowed.

SHIPMASTER'S REPORT: August 1986.
Vessel: 72,000 d.w.t. LOA 230 m. Sailing Draft: Forward 12.78 m. Aft 12.80 m.
ETA: Master to give 14, 10, 5, 4, 3, 2 and 1 days ETA to INTERCOR Barranquilla, INTERCOR Puerto Bolivar and ship's Agent.
Arrival: Pilots and tugs meet ships about 2 nautical miles N.W. off Buoy No. 1. Two tugs making fast with tug's ropes assist ship through the dredged channel. Having passed the loading pier, the ship is stopped, and the 2 tugs swing the ship assisted by 1 or 2 more tugs as appropriate. Vessels always berth port side alongside. This vessel (230 m. LOA) used 2 lines, 2 breasts and 2 springs each end.

After Pilot came on board, Master and Pilot exchanged information regarding ship's particulars and berthing procedure, etc.

A Vessel Inspection Report/Pre-Berthing delivered by Pilot and to be filled in before entering port. Puerto Bolivar Safety Regulations and Safety Check List also delivered.

Various regulations received from Agents by telex. The essence of the regulations is that the loading facility is very effective, and ship's officers are not allowed to stop loading for making draft surveys, etc. A stop can only be done *once*, and it should be for trimming purposes. The importance of having calculated a fixed and reliable loading rotation should be emphasised.
Approaches to Puerto Bolivar: At present there is no official chart of Puerto Bolivar and approaches, however I managed to obtain a "working copy" of a chart from the Agent. Even though it is cautioned not to use the chart for navigating purposes I found is extremely useful as an addition to B.A. Chart No. 1529. It should be noted that the Sea Buoy has never been in it's charted position. The Pilot advised that the Sea Buoy would be placed in the position of Buoy No. 1 about September 1st, 1986. (Also see "Shipmaster's Report – September 1986").
Anchorage: The anchorage is about 2 nautical miles N.W. of Outer Channel buoys, holding ground found to be good.
Ballast: It is recommended to have the ship well ballasted when passing through the dredged channel when current and wind are abeam of the ship.
Gangway: It is difficult to rig a good and safe gangway from ship to shore, and on this ship it was only possible to rig a combination pilot ladder/gangway. A gangway is available on shore, but there is no shore crane to lift it to the ship's rail. As only a few big bulk carriers are equipped with cranes/derricks it will often be impossible to lift the gangway on board.
Crew Changes: Crew change is difficult but possible. One crew member joined the ship and one was repatriated. They were transported from and to Barranquilla by car – a journey of about 6 hours.
VHF: Puerto Bolivar Marine (Port Control) and Agents listen on VHF Channel 16 around the clock, working on Channel 14.
Tugs: 4 powerful tugs in the port. 1 is under Colombian flag, 1 under British flag and 2 under Dutch flag. Pilots advised that 2 more Colombian tugs are being built at present, and hopefully another one later. Pilots insist that 3 tugs are not sufficient for handling vessels.
Survey: A surveyor from SGS Colombia S.A. (Societe Generale de Surveillance S.A.) carries out draft survey on arrival and departure and issued certificates. Bills of Lading are issued on basis of draft survey.
Supplies: No people live in the port and surrounding area. All workers work for 4 days and then go home for 4 days. No shops or markets or ship's chandlers available. All necessary supplies have to come from Barranquilla which is costly and difficult. However, in the port area there is a small supermarket, where shore personnel can buy their daily needs. It may be possible for Agents to supply a very limited amount of fresh fruit and a few kilos of coffee.
Port: Port found to be very safe in spite of the wind constantly blowing against the pier with wind forces up to 40 knots. There was no swell at all, but very choppy sea made it difficult to read ship's draft.

SHIPMASTER'S REPORT: September 1986.
Vessel: 117,600 d.w.t.
Navigation: The Sea Buoy in position Lat. 12° 19′ N., Long 72° 00′ W. (B.A. Chart No. 1521 – last correction 618 (1986)) was removed in September 1986.

Buoy No. 1 (position Lat. 12° 17′ 31″ N., Long. 71° 58′ 48″ W.) in the Harbour Approach Channel has been fitted with Racon and bell.

No light exists on Point Coco.

Pilot boards about 2 nautical miles W.N.W. of Buoy No. 1.
Tugs: 4 good tugs work in this harbour.
General: Cargo holds are inspected by the Pilot while at anchor, and a Certificate of Cleanliness is issued if the holds are found acceptable.

Used St. Lys Radio (FFL) when in the Atlantic and when in the Carribean used Barranquilla Radio (HKB). All cables received at Agents main office in Bogota without delay.

Messages regarding ETA should also be cabled direct to Port Authorities in Puerto Bolivar, care of "INTERCOR Puerto Bolivar".
Shore Leave: Not permitted.

AUTHORITY: *Operator:* INTERCOR, C.E.I. Cra. 54 No. 72-80 Barranquilla, Colombia. *Tel:* 457339 or 562131. *Telex:* 033577 – 031251 Itcor Co. Port Operator telex at Puerto Bolivar is 31354 Itcor Co.

SANTA MARTA (Including Puerto Prodeco): 11.15 N. 74.14 W. (See Plan)

DOCUMENTS:
For the Port Captain:
1 Clearance from Last Port.
1 Voyage Report.
1 Crew List.
1 List of Passengers for Santa Marta.
1 List of Passengers in transit.
1 List of Provisions.
Vessel Certificates: (these only need to be shown)
Registration Certificate.
Load Line Certificate.
Classification Certificate.
Safety Equipment Certificate.
Radiotelegraphy Safety Certificate.
Construction Certificate.
Cargo Handling Equipment Safety Certificate.
Oil Pollution Certificate.
For Port Health Authority:
Derat Certificate.
Maritime Health Declaration.
Crew List with dates of vaccination.
List of Passengers for Santa Marta.
List of Passengers in Transit.
For Customs:
3 Cargo Manifests.
3 Crew Lists.
3 Lists of Passengers for Santa Marta.
3 Lists of Passengers in Transit.
3 Lists of Crew Personal Effects.
3 Lists of Provisions.
3 Mail Lists.
For Agencies:
1 Voyage Report.
6 Crew Lists.
6 Lists of Passengers for Santa Marta.
6 Lists of Passengers in Transit.
6 Crew Personal Effects Lists.
2 Lists of Mail for the port.
4 Cargo Manifests.
4 Bills of Lading.
2 Cargo Stowage Plans.

PILOTAGE: Pilot boarding station:
Lat. 11° 14′ 44″ N., Long. 74° 13′ 58″ W. Information regarding ETA should be relayed to Agent, who will advise Port Authority. Pilotage compulsory for all vessels over 200 g.r.t.

ANCHORAGES: When it is not possible to come alongside a berth immediately, the vessel may anchor within the area included within the following coordinates.
Lat. 11° 14′ 45″ N., Long. 74° 13′ 15″ W.
Lat. 11° 14′ 45″ N., Long. 74° 14′ 00″ W.
Lat. 11° 14′ 15″ N., Long. 74° 13′ 25″ W.
Lat. 11° 14′ 15″ N., Long. 74° 14′ 00″ W.

Seabed is rocky and sandy, with depths about 120 ft.

Vessels should anchor in the lee of the Morro Grande and Morro Paqueno (large and small headlands), particularly during the months of December to March, when there is a strong N.E. wind.

RESTRICTIONS: None. Good visibility throughout year. Difference in tides negligible.

MAX. SIZE: 730 ft. length, 40 ft. draft. No limit to beam. Oil carriers: Refer to Pozos Colorados.

PRATIQUE: Pratique granted by Port Captain who visits vessel immediately on arrival. Doctor also attends on this visit.

RADIO: Barranquilla Radio or Cartagena Radio; radio stations messages relayed by telex to Sta. Marta. Ship's Agents use same system. Terminal Office may be contacted on radiotelephone, 2738 kHz.

TUGS: Join vessels just before entrance to inner harbour; they may use own lines or vessels lines.

BERTHING:

Quay	*Length*	*Minimum Depth*
No. 1	175 m.	38 ft.
No. 2	145 m.	33 ft.
No. 3	232 m.	45 ft.
No. 4	153 m.	40 ft.
No. 5	153 m.	60 ft.
No. 6	100 ft.	15 ft.

Facilities exist for container traffic. 30,000 tons silo for grain storage and discharge facilities for up to 5,000 tons per day.

CRANES: 5×10 ton – 30 ton mobile cranes and 2 cranes 90 tons and 100 tons on rails.

BULK HANDLING FACILITIES: *Puerto Prodeco:*
Location: Lat. 11° 09′ N., Long. 74° 13′ W.
Depth: 18.0 m.
Loading: At anchorage 1 mile – 2 miles offshore.
Working: 24 hours a day, 7 days a week.
Facilities: 4×1,500 d.w.t. barges for carrying coal.

Barges loaded at pier at a rate of 8,000 tonnes per day.

STEVEDORES: ETA to be given 72 and 24 hours before arrival, indicating number of gangs required. Unloading rate of general merchandise 10 t.p.h., and homogeneous cargoes around 15/20 tons.
Working Hours: First shift: Monday to Saturday and holidays, from 0800 to 1200 hrs. and 1400 to 1800 hrs. Second shift: Monday to Friday, from 1800 to 0200 hrs.

MEDICAL: Advance notice required whenever special medical attention needed on arrival; hospital available.

TANKERS: See "Pozos Colorados".

DENSITY: 1025.

FRESH WATER: Available alongside docks: delivery (approx.) 10 t.p.h.

FUEL: Not available.
GANGWAY/DECK WATCHMEN: Deck watchmen supplied by Agent.
OPENING/CLOSING HATCHES: By special gang ordered by Agent.
SHIP CERTIFICATES: Load Line, Cargo Gear, Classification, Lifeboat, Main Engines, Radio Equipment, Fire Fighting Equipment, Ship's Register, Officers' Certificates (licences).
CUSTOMS ALLOWANCES: (Tobacco), 2 cartons of cigarettes per man. All other tobacco will be sealed by Customs. (Wine and/or Spirits), 1 open bottle of liquor permitted per crew member. All other spirits will be sealed by Customs.
IDENTIFICATION CARDS: Given by Port Captain once quarantine is cleared.
CONSULS:

Costa Rica
Ecuador
Finland
France
Guatemala
Italy
Netherlands
Norway
Panama
Peru
Sweden

REPAIRS: Only minor welding.
REPATRIATION: Facilities available.
AIRPORT: 19 miles from town.
TIME: 75th Meridian time, Eastern standard time. GMT minus 5 hours.
HOLIDAYS: New Year (January 1st); Church Holiday (April 12th); Labour Day (May 1st); Local Holiday (July 29th); Church Holiday (December 24th); Christmas Day (December 25th); Church Holiday (December 31st). No work on New Year's Day, Labour Day, Local Holidays, Christmas Day. Work until 1600 on other holidays.
POLICE/AMBULANCE/FIRE: Police, Tel: 6079; Ambulance, Tel: 3116 – 5555; Fire, Tel: 6091 – 4545 – 6055.
SHORE LEAVE: Granted after quarantine cleared.
DELAYS: Up to 12/14 hours because of shortage of docking space.
AUTHORITY: Captain Jaime Sanchez, General Manager. Captain Jaime Gaviria, Port Captain.

TUMACO: 01.49 N. 78.45 W.

DOCUMENTS:

5 Crew Lists.
5 Stores Lists.
5 Passenger Lists (local, in transit, or negative).
1 Sanitation Declaration.
12 Complete sets Manifests.
3 Mail Certificates (when not included in Manifest).

PILOTAGE: Compulsory. Entrance to the port can only be made during the day by vessels with a max. draft of 19 ft. – 20 ft., due to the bar between Buoy Nos. 2 and 3.

For the Tumaco Terminal vessels are boarded by the Pilot in position Lat. 01° 53′ 00″ N., Long. 78° 48′ 35″ W.

ANCHORAGE: Sufficient area available in depths of 25 ft. to 35 ft.
RESTRICTIONS: Entrance channel depth 20 ft. Height of tide varies from 8 ft. to 12 ft.
HEALTH: On arrival, port doctor boards vessel to inspect crew Yellow Fever Certificates, also Derat Certificate. If any crew members suspected suffering contagious disease Master to radio prior arrival advising Agents accordingly. Port Doctor visits vessel even if previous port was in Colombia.
RADIO: Ships must communicate with the Texaco Head Office in Bogota, who will then inform the Terminal. The Terminal can be reached using VHF Channel 16 at a range of up to 30 miles.
BERTHING: Wharf is 310 m. long. Depth alongside averages 22 ft. Berthing for two vessels of 4,000 – 5,000 tons. 1×5 ton and 1×10 ton crane available.
STEVEDORES: Stevedores work continuously with breaks at 1200-1400 hrs. and 1800-2000 hrs.
TANKERS: *Empresa Colombiana de Petroleos:* Vessels moor to 7 buoys, using both anchors. Ship's Head 255°T.

Manifold connections are 12 in., although 10 in. and 8 in. reducers are available. Hoses are connected on the starboard side.

The Mooring Master will remain on board throughout, and accommodation must be provided.

Location: Lat. 01° 50′ 25″ N., Long. 78° 49′ 49″ W.
Tidal Conditions: Range of tide: 12 ft. Currents: 2 knots.

Controlled depth in the proximity of the mooring is 110 ft. of MLT.

Maximum Size of Vessels: Deadweight: 80,000 tons. Overall Length: 1,200 ft. Draft 90 ft.
Class of Cargo and Pumping Rate: Crude. Maximum rate of pumping 30,000 bbls.p.h.
Ballast and Bunkering Facilities: There are no ballast facilities. No bunkers or water available.
Additional Information:

1. The discharge of dirty ballast is prohibited in Tumaco.
2. Berthing can only be carried out during daylight hours and on the rising tide.
3. Tankers can sail at night.
4. Customs documents are required for berthing.
5. Medical services available.

FRESH WATER: Available from wharf.
FUEL: Supplied by Esso Colombia, by barge.
CARGO GEAR: Terminal owns 3 cranes of 5 to 15 tons capacity.
AIRPORT: Suitable for DC.4 type aircraft, situated 4 km. from port.
DEVELOPMENTS: Programme for deepening the port to 33 ft. at HW.
AUTHORITY: Empresa Puertos de Colombia, Tumaco, Colombia.
Contact: Vicente Marines Valencia, Manager.

TURBO: 08.06 N. 76.43 W.

ANCHORAGES: Anchorage 2.5 to 3 miles off mouth of Leon River, used for loading bananas from barges.
CLEARANCE: Vessel must first proceed to Punta las Vacas for official visit of Port Authorities to obtain clearance.
MOORING: With sea and wind from the North, loading operations are not possible unless vessel employs the "Baltic Moor".

On arrival at the Leon River Anchorage, vessels should let go a couple of shackles. After that, a 3 in. to 3.5 in. wire (or mooring line) is passed from the after leads on the poop, along the ship's side, outside and clear of everything. This wire is to be shackled to a number three chain shackle.

By heaving in the wire and slacking the chain as required (about a 60° angle) vessel will give the necessary shelter to banana barges, for normal cargo operations.

SHIPMASTER'S REPORT: 1976. *Chart used No. 24515 (American).*

Vessels ordered to Turbo first proceed for clearance off Turbo town and anchor in position about 1 mile West of Pta. Las Vacas Lighthouse (Lat. 08° 04′ N., Long. 76° 45′ W.). The lighthouse, which is situated on the Southern end of Pta. Las Vacas is not readily identifiable from the N.W. until within about 2 miles and the light is reported to be poor. The chart in the area of Pta. Turbo, about 4 miles Northward of Pta. Las Vacas, does not correspond to the radar picture presented, and therefore a berth of at least 2 miles is recommended.

After clearance by Port Authorities at Turbo vessels should proceed to Pinchindi, about 7 miles W.S.W. of Pta. Las Vacas, for loading during the period December to May. It is reported that during the season May to December vessels load off the mouth of the Rio Leon, about 7.5 miles S.S.E. of Pta. Las Vacas. Approaches to this berth apparently pose no problems and the loading position is reported to be close to a buoy off the river mouth, the position of which could not be confirmed.

There is no Pilot available at Turbo.

Vessels loading at Pinchindi should steer to pass about 1.5 to 2 miles S.E. of Boca Pinchindi. When the black buoy, Fl. 3 sec. (marked on chart No. 24515) bears about 335°(T), but not less than 315°(T) course should be altered to bring the buoy right ahead and anchorage should be taken up as convenient on this bearing. The black buoy referred to above is very difficult to pick up against the land, and in February 1976 was extinguished. There are two mooring buoys to the Eastward of the black flashing buoy. These are unlighted and not marked on the chart. Positions of these mooring buoys are as follows, bearings and distances from the black Fl. 3 sec. buoy: BWVS 83.5° (T)×380 m. R 99.5° (T)×760 m. These mooring buoys are more readily identifiable from the offing than the Fl. 3 sec. buoy, particularly the red one, which is painted in "International Orange". However it should be borne in mind that this buoy may have just received a new coat of undercoat at the time this report was written. The red buoy may be seen over the land which lies on the Eastern side of the anchorage before course is altered for the final approach. Vessels of draft up to 25 ft. may anchor up to within about 300 m. of the Fl. 3 sec. buoy in about 22 m. of water.

As the wind strengthens during the afternoon to about force 5/6 from between N. and N.E., and due to the proximity of other vessels in the anchorage, it was considered advisable to use two anchors; the vessel in fact used port anchor with 4 shackles on deck and starboard anchor underfoot. This prevented the vessel from yawing more than a maximum of about 15°, while other vessels moored with only one anchor were observed to be yawing considerably more during the afternoon breeze.

Winds, during the period while the vessel was at Turbo (February 2-4) were predominately from North to N.E. and no significant currents were observed in the anchorage described above.

Caution is advised while navigating in this anchorage at night, as vessels loading logs often have large unlighted timber rafts alongside. It should also be borne in mind that tugs, lighters and launches are often unlighted, and radar echoes from these might easily be mistaken for those of the buoys. While the radar echoes of the land in this anchorage are quite clear, they do not in any way correspond with the chart.

No opportunity presented itself for checking soundings, however, on the vessel's track arriving and sailing soundings on the whole agreed with charted depths.

Loading of bananas is carried out in the anchorage using mechanical conveyors from lighters through vessels sideports, and on the whole was found to be quick and efficient.

No fresh water or provisions are available at Turbo. Indeed no facilities whatever are available from ashore. There is no radio station, although banana shippers "Uniban" have VHF 16 in their office during office hours, Spanish language only. Agents for United Brands Company have VHF Channel 16, call sign is "Casanova".

Caution should be exercised when taking any navigational advice from Officials in Turbo as this may at times be misleading and it is questionable whether persons proffering advice regarding best anchorage position etc. are in possession of all facts necessary for safe navigation in the area.

Documents Required for Inward Clearance at Turbo:

1 Clearance from last port.
6 Crew Lists.
5 Passenger Lists (Nil passengers to be declared).
5 Disembarking Passengers.
5 Mail Lists (No mail to be declared).
1 Maritime Declaration of Health.
1 Vaccination List.
6 Manifests.

Ships Certificates for Inspection:

Register.
Safety Equipment Certificate.
Safety Radio Certificate.
Radio Station Certificate.
Cargo Gear Certificate.
Derat Certificate.
Ship's Capacity Plan.

In addition to above list of documents required, the following are also to be presented to Authorities on arrival:

2 Store Lists.
2 Crews Personal Effects.

SHIPMASTER'S REPORT: February 1979.
Pilotage: It is necessary to take a Pilot at Punta Las Vacas for entrance to the bay. Thereafter, any movement inside the bay will also require a Pilot.

SHIPMASTER'S REPORT: July 1979.
Vessel arrived Pta. Las Vacas anchorage at 0207 hrs. 30th July. Cleared Port Officials and proceeded to R. Leon Anchorage where vessel anchored at 1010 hrs. to port anchor, 4 shackles in water. Rigging gangs boarded at 1330 hrs. 31st July and completed rigging hatches at 1900 hrs. Loading commenced at 2230 hrs. and completed at 1210 hrs. 2nd August. All gear and labour off vessel at 1220 hrs. At the start there was no co-operation from the stevedores and repeated requests for information regarding which side doors and how hatches and derricks were required to be rigged met with no response until such time as the riggers boarded. It was then expected that the vessel could do everything at one and the same time. To commence only starboard side doors were used but on completion of No. 5 hatch it was decided to work No. 2 hatch both sides, once again no mention of doubling No. 2 hatch was made although the question had been asked repeatedly, the stevedore assured the Chief Officer that the port side doors would not be required. No information regarding quantity of bananas to be loaded or number of Bills of Lading was forthcoming and there was a very definite language barrier until it was made clear that any Bills would be claused "mixed". From this point co-operation improved and the language problem became less difficult. During loading there were numerous delays for weather, machinery breakdowns on the barges and waiting for cargo to arrive alongside. Before cargo operations commenced vessel was requested to "point" the ship using a rope from the port quarter to the port anchor cable and this was attempted with varying amounts of cable paid out, before operation could be completed the wind died down and wind and tide were acting against one another with result that operation was ineffective.

Turbo must now be regarded as being on a par with "ports" regarding theft and all precautions taken, many horrific reports on theft were heard from other vessels; however, if vessel was obviously taking all precautions then generally after being looked over, vessel is left alone. One case concerning a crew member and radio took place but his property was recovered by Cargo Supervisor and Customs Official, although culprit was not apprehended.

SHIPMASTER'S REPORT: August 1981.
Pilots are now compulsory at Turbo and board with the inspection party off Pta. Las Vacas. They also board after loading is completed and leave off Pta. Vacas.

The larger United Brands banana vessels now use overhead conveyors for loading instead of the sideports.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Comoros

PORT DZAOUDZI (Ile Mayotte): 12.50 S. 45.10 E.

SHIPMASTER'S REPORT: August 1982

Mayotte Island is situated in position Lat. 12° 46′ S., Long. 45° 13′ E. in the Indian Ocean and known to be one of the Comoro group of Islands, but it is under the administration of French Government. It has no connection with the Comoro Government. Therefore, vessels calling "Zaoudzi" should hoist French National flag. Population is mostly Muslims. The island is surrounded by a barrier reef which is broken by many small passages but the main passage to arrive Ilot Zaoudzi is via Passe Mount Zamboro. This passage is deep but very narrow with a width of 9 cables safe water in between the Eastern extremity of Recif du Nord and the N.W. extremity of Grand Recif du Nord-Est. It leads to the anchorage off Ile Pamanazi and the Ile Dzaoudzi, where vessels work cargo on anchor moorings. The maximum draft permissible is 40 ft. The inhabitants of the island speak French, Arabic and a mixture of Somali and other African languages. There is nobody who can speak English, therefore care should be taken while arranging Pilot and entry to the Zaoudzi harbour.

DOCUMENTS: On arrival Harbour Master and Customs Officer boards the vessel.

Customs Officer Requires: 2 copies Cargo Manifest; 2 Crew Lists; Bonded and Provision Stores Declaration Lists. (2 copies).

Harbour Master Requires: 2 Crew Lists; 1 Vaccination List; 1 copy Cargo Manifest.

No other documents are asked for. Agent does not require any documents, not even ship's papers. Agents are only interested in ship's husbandry.

PILOTAGE: Pilotage is optional but Port Authorities should be notified on VHF Channel 16 when entering the M'Zamboro Passage in good time. Large vessels calling first time must arrange Pilot by cable with correct ETA. Messages to Agents should clearly indicate whether Pilot will be required or not. In case cable should not reach in time, then vessels should call on VHF Channel 16 and ask Harbour Master to send the Pilot. In that case vessel has to wait about 2 hours close to barrier reefs. Pilot boards the vessel about 1.5 miles off the passage M'Zamboro. There are only two Pilots who belong to French Navy.

ANCHORAGES: Vessels should only call or enter the barrier reefs in daytime, that is from sunrise to 3 hours before sunset. Therefore, daytime approaches should be maintained. There are no good anchoring grounds outside or inside Recif du Nord. Vessels arriving after hours have to keep on steaming until day breaks. However in case of emergency a temporary anchorage can be made on Banc de la Prudente, 2 miles N.W of Ile M'Zamboro. This anchorage should be used with utmost care because of poor holding ground. In case vessels can cross barrier reefs and shallows from the Passe M'zamboro entrance to Bancs Jameaux (position: Lat. 12° 40′ S., Long. 45° 08′ E.), then she can anchor in depths where it is safe and sound, or she can make, if time permits, to arrive straight to Zaoudzi anchorage.

Anchorage Around Dzaoudzi: Vessel can anchor anywhere in between l'Mogne Amiri and Ile Dzaoudzi and main island coast named Mamutzu. It is better to confirm anchoring position with Harbour Master. Sometimes if it becomes necessary, then Harbour Master boards the vessel near mooring buoy in position Lat. 12° 45.47′ S., Long. 45° 15.87′ E. Therefore, it is of prime importance to establish communication on VHF Channel 16 with Harbour Master at all times.

MAX. SIZE: There is no restriction on the size of the vessel, because there are no berths. Every vessel has to anchor and work cargo, however drafts are taken into consideration. Max. draft permitted 40 ft. (12.19 m.). Vessel's engines and steering should be very reliable while navigating through passage to Zaoudzi.

HEALTH: All persons are required to have valid health certificates against Cholera. Yellow fever vaccination not required, but can be arranged if ship requires.

COMMUNICATION/ETA's: There is no direct communication between ships at sea and Ile Mayotte. In the Admiralty Radio signals there is listed Dzaoudzi station, but in actual fact there is no station, therefore all cables to Zaoudzi Agents should be routed through Reunion Radio only. Ile Mayotte has direct connection with Reunion Island, therefore messages can be sent via Reunion Radio for quick despatch. But from experience it is found that cables normally arrived at Mayotte Agents very late. Therefore, ETA and other requirements should be sent to Agents with a margin of 5 to 6 days.

On arrival off M'Zamboro passage vessels can call "Zaoudzi Harbour Control" on VHF Channel 16. The range of their VHF is about 25 miles. Therefore vessels can call "Zaoudzi Harbour" when 25 miles off and arrange passage through barrier reefs to Zaoudzi. Pilots are always booked by cable, because it takes a long time for Pilot to arrive outside M'Zamboro Pass from Zaoudzi.

TUGS: No tugs, one towing boat is available for towing the barges and lighters.

BERTHING: There are no berths, all vessels have to anchor.

STEVEDORES/CARGO HANDLING: Agents work as stevedores, they arrange lighters and labour. There is no limit in ordering labour but lighters are limited. Therefore cargo discharging rate is affected.

If continuous flow of lighters is available then bagged cargo could be discharged at the rate of 100–150 tons per hook per day. There is no night work. During Ramadan they work from 0700 hrs. to 1600 hrs. and no work in the night. During normal days they work from 0700 hrs. to 1900 hrs. There is no floating crane. About 4 steel barges and remainder are wooden sail boats which carry 10 to 20 tonnes at a time.

DENSITY: 1025.

FRESH WATER: Abundance of fresh water on the island but no arrangements to supply to the ships. In case of emergency naval barge which has desalting plant can supply small quantity of evaporated water (up to 40 to 50 tonnes) provided it is arranged 7 days in advance. This is very expensive, therefore it should be avoided.

MEDICAL: Good hospitals are available in Zaoudzi and Momutzu. All kinds of cases are dealt with.

PROVISIONS: Very small quantities of meat, fish, vegetables and fruits are available. Ship's personnel can only go and buy it. There is little variety of vegetables or fruits. Vegetables: Lettuces, local spinach, French beans, local onions and potatoes, etc.

Fruits: Apples from South Africa, bananas, coconuts and when in season pineapples are available but in small quantities.

FUEL: Nothing can be arranged.

GANGWAY WATCHMEN: This is a very peaceful island, no pilferage, therefore watchmen are not kept or arranged.

OPENING/CLOSING HATCHES: It is normally done by ship but in case of frequent rains and with special cargo like rice or wheat, extra labour could be arranged with Agents.

CUSTOMS ALLOWANCES: No restrictions on any type of goods. Bonded stores are not sealed, therefore no limit on allowances.

CARGO GEAR: Only ship's gear is used, however rope slings are arranged by the stevedores.

SHORE LEAVE: No restrictions on shore leave and no passes are issued.

CONSULS: No Consulates. Difficulties if any, can be handled by Mayotte Administration.

REPAIRS: No workshop. No repairs possible by shore persons.

REPATRIATION: There are three flights a week from Ile Pamanzi Airport to Reunion Island only, i.e. on Tuesday, Thursday and Saturday. Repatriation can be arranged on these days.

TIME: GMT plus 3 hours. No variation in the time throughout the year.

HOLIDAYS: French administrative holidays i.e. 1st January, 1st May, and 25th December (Christmas Day), the local people enjoy Muslim rites holidays such as Eid-ul-Fitar, Eid-ul-Azha, 10th of Muharam holidays. The labour works on Saturdays and Sundays.

GENERAL: *Communications: While at Anchor:* Ships are allowed to use their transmitters for sending cables. However, cables can be sent through Post Office. Ship to shore communication is by VHF Channel 16 for Port Control and VHF Channel 12 with Agent's office, during office hours only.

Currency: French franc is the local currency. There are two banks: Banco de Franco, (one on Zaoudzi Island and other on Mamuzu). U.S. dollars can be changed either at the banks or direct at shops. No other currency is accepted in the shops.

AUTHORITY: Commandant Porto de Zaoudzi, Mayotte.

AGENT: There is only one Agent at the moment who is M/S Societe Mohoraise d'Acconage de Representation et de Transit (short form SMART), Dzaoudzi Mayotte. Cable address: SMART Dzaoudzi. They work ship to shore communication via VHF Channel 12 – only during office hours i.e. from 0800 to 1600 hrs. If one wishes to communicate during night hours, one should call VHF Channel 16 and ask Port Control to inform "SMART" to call the ship on VHF Channel 12, then communications can be established.

NOTES

Please also advise Shipping Guides Ltd.

People's Republic of Congo

DJENO TERMINAL: 04.56 S. 11.54 E. (See Plan)

LOCATION: The loading point is located 3,800 m. from the coast in position Lat. 4° 56′ 35″ S., Long. 11° 54′ 15″ E., that is to say 9.5 miles S.S.E. of the main Pointe Noire Lighthouse.

NAVIGATION:

Djeno Lighthouse: Position Lat. 04° 55′ 01″ S., Long. 11° 55′ 45″ E.

The Terminal has a prohibited area which is covered by the red sector of light. No vessel may enter this area between depths of 50 m. and 70 m. as there are offshore production installations, underwater pipelines and the loading point within the red sector from approximately S. 3° W. to S. 73° W. Also vessels may not proceed inside 25 m. depth of the red sector without a Pilot on board.

The lighthouse has the following characteristics:

17 m. metallic tower, aluminium colour;

Light is regular occulting light at 4 second intervals, light 29 m. above MHWS.

Range of white light 18 miles and red light 15 miles.

SBM: Equipped with radar reflector and white light with 60 flashes per minute, range 6 miles. The floating pipe extending over a radius of 245 m. round the buoy is lit by small white intermittent lights.

PILOTAGE: Compulsory. Pilotage is carried out by Pilots from Pointe Noire (See "Shipmaster's Report"). Call signals for the Pilot are those provided for by the International Code. The pilot station keeps a permanent watch on VHF Channel 16. Pilot boarding position: Lat. 4° 47.44′ S., Long. 11° 48.10′ E.

Limits of Pilotage Zone: South, parallel 5° 07′ S.; West, meridian 11° 46′ E.; North, parallel 4° 42′ S.

During the day, when leaving the mooring, request for Pilot is to be made to the Port Commander's Office 3 working hours before the hour of departure. If vessel is ready to leave and the Pilot has not boarded, he may be called by means of the following signal, International flag "G" and at the same time 3 long blasts on the ship's whistle.

If departure should be during the night, request for Pilot should be made to the Port Commander's Office before 1700 hrs., indicating as near as possible the probable time of departure.

Should any changes take place in the time of departure the Port Commander's Office is to be advised at least 1 hour in advance in order that the vessel should not incur any surcharge. During these hours call for the Pilot shall be made at the Port Commander's Office by the ship's Master or his representative.

Sound Signals: The use of ship's whistle is forbidden between 1700 and 0600 hrs.

Should Pilot be required at any time on a Sunday, order should be placed before 1200 hrs. on Saturday. Should a Pilot be required on a public holiday, order should be placed by 1700 hrs. on the day prior to holiday.

ANCHORAGE: Vessels loading at Djeno may anchor in Pointe Noire Roadstead, 1 mile North of the Outer Dyke Light.

MAX. SIZE: Maximum permissible draft 16 m. (52 ft. 6 in.). However, Elf Congo may reduce this draft if weather conditions are unfavourable. Also see "Berthing" and "Developments".

HEALTH: The Pilot may act for the Hygiene Department, Pointe Noire if instructed to do so by Pointe Noire.

RADIO: Call signal "TNA".

Permanent watch on 500 and 2182 khz from 0600 to 1800 hrs.

Transmits on 8,722 kHz from 0930 to 0945 hrs. (GMT)
from 1030 to 1045 hrs. „
from 1330 to 1445 hrs. „
from 1530 to 1545 hrs. „
from 1730 to 1800 hrs. „
on 13,101 kHz from 0630 to 0645 hrs. „
from 0730 to 0745 hrs. „
from 0830 to 0900 hrs. „
from 1700 to 1715 hrs. „

Elf Congo Terminal: Watch VHF Channel 12 – 156.1 MHz whilst tanker at the loading point.

Pointe Noire Office: Call signal: "Echo Lima". Watch radiotelephony – 2182 kHz.

Management of Port of Pointe Noire: Permanent watch on VHF Channel 16.

Advice of Arrival: Tankers shall have their arrival at Djeno notified by their consignees 72 and 24 hours in advance.

Thereafter, they shall notify any appreciable change in their ETA.

TUGS: Three tugs available from Pointe Noire. 1,000 h.p., 600 h.p. and 1,800 h.p. Request for tugs should be made at least 3 hours in advance and before 1700 hrs. if required during the night. For berthing, mooring boats will be supplied by Elf Congo.

BERTHING: The loading point of Elf Congo at Djeno is of an SBM type, with single mooring at the bow.

The vessel is moored by the bow to a buoy consisting of a cylindrical frame of diameter 10 m. and 4.35 m. high.

This buoy is moored by chains to 6 drilled piles. Anchor moorings extend over a radius of 300 m. around the buoy.

A 40 in. sea-line connects the tank farm with the loading point; the buoy is connected to the sea-line by 2 lines of flexible hoses 20 in.

The loading point is provided for the mooring and loading of full-loaded tankers of approximately 40,000 d.w.t. – 140,000 d.w.t. and half-loaded tankers of 240,000 d.w.t.

Depth of water at the buoy is 22 m.

In 1983 second loading buoy was installed at about 1,500 m. from the existing buoy in an area with 29 m. water depth.

The connection between buoy and tanker is by 2 floating flexible hoses, approx. 220 m. long and 20 in. in diameter, each ending in a length of 16 in.×30 m. flexible hose. Connection to the tanker manifold is by 16 in. hose.

Notice of Readiness: Shall be sent to Elf Congo.

MOORING: Mooring ropes supplied by Elf Congo. The vessel shall be ready to take aboard two mooring ropes, one on the starboard bow and the other on the port bow. Each rope consists of 42 m. of nylon of 13 in. circumference and 5 m. of 47 mm. diameter chain. Each rope is equipped with a polypropylene lead of 10 in. circumference, 105 m. long for one and 45 m. for the other.

Leads are passed to the vessel by a motor boat. The vessel shall have two ropes ready at the bow to take them aboard.

Mooring can be carried out by day as well as by night, weather and sea permitting.

The derrick shall be rigged before arrival on the port side with a minimum hook SWL of 5 tons.

The ship's manifold shall be made ready on the port side for connection of the two 16 in. flexible hoses.

Flexible Hoses: Loading of vessels carried out through 2 lines of 220 m. of 20 in. flexible floating hose, terminating in 2×20 m. sections of 16 in. flexible hose. Manifold connections on board shall be 16 in. ASA flanges. Elf Congo can supply 10 in. to 16 in. reducers.

During connection and disconnection of the flexible hoses, assistance by the crew is essential, in particular for the handling of the winches and derricks. During the whole stay of the vessel at the loading point, the Pilot shall maintain safety watch on board and also assume the duties of head of loading in the absence of a representative of Elf Congo.

The Elf Congo service vessel shall remain at the disposal of the Pilot and shall remain alongside the tanker or nearby. A ladder must be kept permanently alongside the vessel so as to permit access by the team in charge of the flexible hoses.

LOADING: Loading may be carried out with a maximum flow of 8,000 cu.m./h. with two 20 in. lines or 5,500 cu.m./h. with a single 20 in. line, finished with 2×16 in.

Inspection of tanks after deballasting and after loading shall be undertaken in the presence of the Elf Congo loading representative.

The Terminal shall place on board the vessel sealed samples of the cargo.

20 minutes before the end of loading, the vessel shall warn the Terminal by VHF so that pumping may be stopped accordingly.

The ship's Master shall be fully responsible for the manoeuvring of the valves and safety of the cargo on board.

DEBALLASTING: The Djeno storage installation is not equipped to receive dirty ballast. The vessel shall, therefore, arrive with a clean ballast.

Any vessel arriving with dirty ballast may be forced to leave the loading point and delay arising therefrom shall be fully incumbent on it. Acceptance of Notice of Readiness will be rectified accordingly.

It is forbidden to throw into the sea any cinders, burning materials, objects and waste of any kind.

The ship's Master shall be responsible for any leaks on board. Such leakage shall be stopped immediately.

Scuppers shall be plugged during the whole loading time.

SAFETY: The ship's Master shall be responsible for safety aboard the vessel at all times. Sufficient crew members must be aboard the vessel at all times for handling moorings and fire appliances. The vessels main engines must be kept ready at all times. A watch should be maintained to ensure that no undue stress is placed on the moorings and that the floating pipe-lines do not rub against the vessel. Also the vessel should not be allowed to come into contact with the single buoy mooring which may be caused by changes in current, wind direction or other reasons.

Smoking outside of authorised area, use of naked lights, or tools liable to cause sparks not allowed.

Vessel's anchors should be secured in the hawse pipe. No repairs allowed whilst at the mooring also no stores or equipment may be handled on the deck whilst at the mooring.

Whilst Loading: All hull valves shall be kept closed except those required for water circulation. The scuppers on the main deck shall be blocked. Two fire hoses shall be connected and placed one at each end of the vessel. The fire lines should be under pressure at all times.

If there is a fire aboard a vessel moored at the SBM, the following sound signal shall be given on the vessel's whistle: continuous short blasts. The Master of the vessel shall immediately take charge of fire fighting operations.

MEDICAL: There is one hospital, 2 clinics and several doctors.

FRESH WATER: Drinkable water at quays inside the port of Pointe Noire or by tanker of 200 tons in roadstead under shelter (minimum delivery 100 tons).

FUEL: Not available at Djeno. Vessels proceed to tanker berth at Pointe Noire.

REPAIRS: Workshops at Pointe Noire. Facilities for repairing radar and radios.

WATCHMEN: Compulsory.

TIME: GMT plus 1 hour.

AIRPORT: 6 km. from the port of Pointe Noire. 1 or 2 flights daily to Brazzaville. 1 or 2 flights daily from Brazzaville to Europe.

CONSULS: At Pointe Noire: French Consulate, Tel: 94.00.02. Federal German Consulate, Tel: 94.00.10.

GENERAL: *Charts:* French chart No. 3357 and B.A. chart No. 3206.

Stores: A ship chandler at Pointe Noire can supply vessels with any foodstuffs required.

Territorial Waters: The sovereignty of the Republic of the People of Congo extends to 30 nautical miles as from the lowest sea watermark along the coast.

Boat Service: A motor boat can be rented through the consignee. Elf Congo motor boats must not be used by the tanker crew except for an urgent medical evacuation.

Meteorology: The rainy season extends from November to May with a maximum in February and March.

Visibility: Visibility can be reduced to less than 1 mile in June, July and August.

Sea: Mean density of the sea at the loading point is 1025. Sea temperature varies between 27°C in February (austral Summer) and 22°C in August (austral Winter).

Tide: Tide is of a semi-diurnal type. Mean amplitude of spring tides is 1.60 m.

Wind: S.S.W. generally less than 15 knots.

Swell: Generally S.S.W. less than 2.50 m. with periods of 10 to 12 seconds.

Current: Sector S. to S.S.E. generally less than 1.5 knots on surface.

The current can change to the North without any apparent reason for a period rarely greater than 2 days.

SHIPMASTER'S REPORT: (1976): Received prior to above report and updated 1982.

Documents: Papers required on arrival;

Last port clearance.
2 copies Crew lists.
2 copies Vaccination Certificates dates.
2 copies Stores list and bond.
1 copy Crew Personal effects lists.

Pilot and Agent do all paper work.

Approaches: Pointe Noire shows up well on radar at 25/30 miles, but Djeno and the SPM are poor. The phosphate wharf shows up well and projects out from the land about 2 miles S.E. of Pointe Noire Breakwater.

Also see "Shipmaster's Report" of approaches to Pointe Noire.

Pilotage: Pointe Noire has 4 working Pilots, one of whom, on the rota system serves Djeno when a tanker arrives.

Both Pilot and Loading Master board from a fast Pilot launch off Pointe Noire and an assortment of mooring ropes and chains and messengers are taken aboard from a work boat which is also met 2 miles West of the breakwater. After that is completed, vessel proceeds the 9.05 miles to the SPM at Djeno.

Max. Size: Depth of water at SPM is 22 m. and the max. draft is 52 ft. 6 in. (16.0 m.).

Berthing: Mooring to the buoy consists of:

Port and starboard mooring ropes, 42 m. of 13 in. circumference nylon and 5 m. of chain, polyprop messengers 10 in. circumference are attached to each rope for the initial haul-in. Port line first. Derrick to be rigged on the port side and manifolds to be ready port side to receive two 16 in. hose connections.

No dirty ballast reception facilities ashore, vessel must arrive with clean ballast. Crew moor vessel with assistance of 3 shore crew and advice of Loading Master who is on foc'sle head and liaises with Pilot on bridge.

Crew bring on board cargo hoses and connect same. Pilot and Loading Master remain on board throughout with Pilot changing every 24 hours.

SHIPMASTER'S REPORT: September 1984.

Documents: Documents required: 3 each of Crew Lists, Vaccination Lists, Stores & Crew Declaration. 2 each of Passengers (or Nil) List, Birds and Animals, Narcotics, Arms and Ammunition. 1 Notice of Readiness. All paperwork carried out by Loading Master.

On departure, vessel steams slowly back to Pointe Noire while calculations and papers are completed on board.

Pilotage: Pilot and Loading Master boarded from pilot boat which has speed of about 20 knots.

On departure, the Pilot, Loading Master and Cargo Surveyor left using an inflatable dinghy. They prefer the ladder on the starboard side. The tug carries 2 inflatable dinghies.

Anchorages: For tankers waiting to berth at Djeno the indicated anchorage off Pointe Noire was found to be good with thick grey mud. Gear for mooring and hose connecting put on board from tug at anchorage. The tug then goes to Djeno to standby.

Tugs: There is a small buoy N.E. of the SBM and the tug moors there when not working.

Mooring: While mooring, tug is used to keep hoses clear.

Loading: Cargo Surveyor boarded while deballasting. Used combination accommodation ladder/pilot ladder on port side. Pilot, Surveyor and Loading Master stay on board.

OPERATOR: Elf Congo, Terminal de Djeno, B.P. 761, Pointe Noire, Congo. *Tel:* 94.20.41. *Telex:* Elfco 8239 Kg.

POINTE NOIRE: 04.47 S. 11.49 E. (See Plan)

PORT LIMITS: *Pointe Noire Pilotage area limits:*

South: 5° 07′ S.
West: 11° 46′ E.
North: 4° 42′ S.

DOCUMENTS: On arrival, the Master must hand over to:

The Agents:

4 Crew Lists.
4 Lists of Crew Boys.
4 Passenger Lists or negative.
4 Lists of Ports of Call.
2 Lists of Crew Personal Effects.
2 Stores Lists.
5 copies of Cargo Manifest.
1 List Narcotics.
1 List Arms.
1 List Ammunition.
1 List Animals.
Master's copy of B/L.

Harbour Authorities:

1 Arrival Form issued by Port of Pointe Noire.
1 Departure Form issued by Port of Pointe Noire.

Health Authorities:

1 Vaccination List for crew members.
1 Declaration of Health (form issued by the port of Pointe Noire).
Vaccination cards for the whole crew.

PILOTAGE: Compulsory. Telegraphic address: Harbour Master's Office of the Port of Pointe Noire. Pilot station can be contacted by VHF Channel 16; 24 hour service.

Boarding position: Pilot boards 1 mile North of the green channel light buoy.

Tankers awaiting a Pilot for the SBM at Djeno should wait 2 miles West of the main light at Pointe Noire.

APPROACHES: *Shipmaster's Report:*

The approach to Pointe Noire from the West using Chart 4105 Freetown to Luanda is clear of dangers as far as our experience goes. After crossing the 200 m. (100 fathom) line, the soundings are consistent with a gently shelving coast until there is 30 m. – 40 m., 3 miles West of Pointe Noire breakwater.

Approaching Pointe Noire from the West the radar picture of the coast about 20 miles North of Pointe Noire is very similar to Pointe Noire itself. This could confuse and lead one to think that the ship is further South than she really is, but the cluster of oil rigs should be a good guide.

There is a cluster of oil rigs with flares S.S.W. by 13 miles from Pointe Noire main lighthouse, with another cluster about due South by 17 miles, both good radar targets. Do not go in between these clusters. Watch out for numerous small dugouts, etc. fishing.

New oil rigs with 1 flare were constructed in 1977 in position Lat. 4° 28.8′ S., Long. 11° 15.4′ E.

RESTRICTIONS: Minimum draft allowed for ore-carrying vessels of more than 130 m. drawing alongside at Quay G: 20 ft. aft and 15 ft. forward. Max. draft allowed for all vessels: 31 ft. at any hour. Max. draft allowed for ore carriers leaving Quay G will be 34 ft. 4 in. after dredging of the channel in 1980 (1 hour before high tide). Tying to mooring buoy can be done only between sunrise and sunset.

Max. draft tankers 33 ft. 6 in. Tankers to enter in same period as departing ore carriers (1 hour before high tide).

HEALTH: Port Health Officer boards immediately on berthing. Compulsory vaccinations: Yellow fever and cholera.

RADIO: Pointe Noire Radio, call sign TNA. Continuous service on 500 and 2182 kHz from 0600 to 1800 hrs. GMT. Transmission on 8722 kHz. TNA from 0930 to 0945, 1030 to 1045, 1330 to 1445, 1530 to 1545, 1730 to 1800 hrs. GMT; on 13101 kHz. TNA from 0630 to 0645, 0730 to 0745, 0830 to 0900, 1700 to 1715 hrs.

Shipmaster's Report: If vessel is coming from the South it is advisable to pass messages through Luanda.

RADAR/VHF: The Harbour Master's Office has a VHF set (call Channel 16) but no radar.

TUGS: 2 tugs 1,800 h.p. and 900 h.p. Tugs normally join the vessel as soon as it crosses the passage. The vessel's own lines are usually used.

BERTHING:

	Length	Draft Permitted
Quay D: Berth 1	720 m.	24 ft.
„ 2		26 ft.
„ 3		28 ft.
„ 4		29 ft.
„ 5		29 ft.
Quay G: Ore Berth	530 m.	34 ft. 04 in. (See "Restrictions")
Tanker Berth	—	33 ft. 06 in.
Mole 1: Timber Berths	350 m.	31 ft.
Lighter Berth	—	12 ft.

Potash Berth: 4 miles Southward of Pointe Noire. Max. draft 44 ft.

STEVEDORES: The Agent requires the following information 48 hours in advance, in order to arrange gangs: precise ETA; number of gangs required for unloading/loading; distribution per hold unloading/loading; draft, fore and aft – before 0600 hrs. in the morning on weekdays counting as overtime; before 0600 hrs. Saturday mornings for the weekend or day before holiday also counted as overtime.

MEDICAL: Notice for medical attention not needed. There are 2 private clinics.

TANKERS: Diameter of loading/unloading lines: 6 in.=aircraft fuel. 10 in.="white product". 12 in.=1500 fuel. Hoses=8 in.

Also see "Djeno Terminal".

DENSITY: 1025 on average. Only slight variations according to tides.

FRESH WATER: 2 hoses can be connected at each berth.

Rate: 20 t.p.h. per hose.

FUEL: Ordered from suppliers: Hydrocongo. Pipe-line supply to tanker berth and berth Nos. 1 and 8.

FIRE PRECAUTIONS: The port must be informed of ETA of tanker 24 hours in advance.

GANGWAY/DECK WATCHMEN: Compulsory for tankers and gas carriers.

OPENING/CLOSING HATCHES: Usually the crew's responsibility. Can be carried out by the stevedore for payment.

CUSTOMS ALLOWANCES: No limit – must be stated on crew declaration, and quantities must be accurately stated.

CARGO GEAR: Derricks to be in good condition. There are 2 cranes at the new jetty.

IDENTIFICATION CARDS: Seaman's cards or passport needed.

CONSULS: France, Tel: 94.00.02–94.00.03. Germany (F.R.) 94.00.10.

REPAIRS: Most repairs for the deck and engines are possible. Also facilities for electronic repairs.

DRY DOCKS: One slipway for vessels up to 800 tons.

REPATRIATION: Every facility for crews equipped with a crew card and passport.

AIRPORT: 6 km. from the port. 1 to 2 flights per day to Brazzaville. 1 to 2 flights per day from Brazzaville to Europe.

TIME: Local time is GMT plus 1 hour.

HOLIDAYS: 1st January (1 day's holiday); 1st May (2 days' holiday); 31st July (1 to 2 days' holiday); 15th August (2 to 3 days' holiday); 1st November; 25th December (1 day's holiday).

POLICE/AMBULANCE/FIRE: Police 17; Fire 94.00.49; Ambulance 94.00.49, 94.21.98.

TELEPHONE: Cannot be connected on board ship but there is one in the middle of Quay D for the use of vessels.

GENERAL: As the Congolese Customs are very strict, the drawing up of the store list and crew declaration should be carried out very carefully, as the slightest error is penalised and a fine imposed.

Stores are expensive and not easily obtainable. Fish available also fruit and vegetables but not in the Rainy Season.

SHORE LEAVE: No restrictions.

PORT REGULATIONS: In the event of congestion, vessels are obliged to work at night and on Sundays, and if they refuse to do this, they may be relegated to the roadsteads and thereby lose their turn to draw alongside.

DELAYS: *Shipmaster's Report:* Occasionally tankers are delayed for long periods as the shore tanks may be full.

SHIPMASTER'S REPORT: Mail takes between 3 and 7 days from Pointe Noire to Paris, and Pilot assures that it is reliable.

SHIPMASTER'S REPORT: March 1980.

Pilotage: Compulsory. Pilot boards in position 4° 45.5′ S., 11° 45.9′ E. 24 and 12 hours notice required.

Anchorage: Position 4° 47.2′ S., 11° 49.4′ E.

Restrictions: Vessels able to enter and leave at any stage of the tide day or night.

Max. Size: Max. draft 31 ft.

Health: Quarantine Authority require 12 hours notice of arrival.

Tugs: 1 tug available.

Radio: Luanda or Portishead. No replies locally.

VHF: Pilot and Port Authority on Channel 16.

Berthing: Position 4° 46′ S., 11° 50′ E. Distance from entrance to berth less than 1 mile. Nature of bottom sand and mud. Vessel able to dock and undock at any stage of the tide day or night. There are facilities for loading coal in bulk. No quay cranes available, ships gear used. There is no link span for ro/ro vessels. Usual precautions taken with regard to security, no losses suffered. There is sufficient equipment for handling palletised cargo. Ship's gear is used for handling containers and the necessary shore equipment is available.

Density: 1025.

Fresh Water: Available.

Fuel: Bunker fuel oil, diesel oil and lubricating oils available.

Medical: Doctor and hospital available.

Provisions: Fresh provisions available but expensive as they are flown in from South Africa. Meats and groceries also available.

Repairs: Small repair facilities and small machine shop available.

Airport: Local airport with flights to Brazzaville.

AUTHORITY: Direction du Port de Pointe-Noire, P.O.Box 711, Pointe-Noire, Peoples Republic of Congo. *Tel:* 94.00.52.

AGENT: Ponteco-Socopao, BP 714/664, Pointe Noire, Peoples Republic of Congo. Cable address "Freight Pointe Noire". Telex: 8201 and 8252. Tel. 94.11.21 and 94.11.27.

NOTES

Please also advise Shipping Guides Ltd.

Cook Islands

AVARUA, (Including Avatiu) Rarotonga:
21.12 S. 159.47 W. **(See Plan)**

DOCUMENTS:

Health:	International Maritime Declaration of Health.
Customs:	(Immigration) 2 Manifests of Cargo showing weight or measurement (basis on which freight calculated). 2 Crew Lists. 2 Passenger Lists (landing and transit). Each disembarking passenger to complete a landing card and baggage declaration. Clearance from Last Port.
Agent:	5 Manifests of Cargo. 1 Crew List. 1 Passenger List.

PILOTAGE: Not compulsory at present. However, Pilot available. Arrange through vessel's Agent 24 hours notice of ETA. Pilot boards from 35 ft. steel tug *Avatiu.* Craft painted blue hull, white superstructure. Tug equipped with VHF Channels 6, 12, 14 and 16. Pilot normally boards 0.75 miles off entrance Avatiu on line of leads.

ANCHORAGES: *Avarua:* As shown on Admiralty Chart No. 1264. Prevailing wind is S.E. and the anchorage is safe except in some instances when wind and/or sea are fresh from N.W. through N.E. 4 to 5 shackles of cable in the water has been found the most satisfactory in normal circumstances in 25 fathoms.

RESTRICTIONS: None. Anchorage, in 25 fathoms, is well defined with cross leads.

MAX. SIZE: No restrictions.

HEALTH: Vessel should radio "Porthealth Rarotonga" not less than 24 hours before arrival giving ports of call for preceding 3 weeks, number of crew, number of passengers, state of health and requesting Free Radio Pratique.

RADIO: Call sign ZKR continuous listening watch on 2182, 4125 and 8198 kHz, also Channel 16 on the VHF. Weather forecasts are broadcast daily by R/T on 2207 kHz, and 8291.1 kHz at 0615 hrs. GMT and 1815 GMT after a preliminary call on 2182 kHz.

VHF: Harbour Master has VHF for communication between vessel and office on Channels 6, 12, 14 and 16. Listening watch on Channel 16 between the hours 0800 – 1200 and 1300 – 1600 (local time) from Monday to Friday. Harbour Master can be contacted after hours by arrangement through vessel's Agent.

TUGS: Small tug available (1.25 ton bollard pull) to assist with mooring.

BERTHING: *Avatiu:* Vessels berth port or starboard side too as may be necessary, berth 320 ft. in length having a depth alongside of 20 ft. MLWS. Swinging basin for vessels not over 270 ft. in length. Draft 18 ft. aft, 16 ft. forward.

STEVEDORES: Arranged by ship's Agent.

MEDICAL: Medical and hospital facilities available. International vaccinations/inoculations required depending on prior ports of call.

TANKERS: Small tanker from Fiji, using ship's hose for discharge. The transfer of bulk fuel takes place at N.E. end of the Outer Eastern Wharf in Avatiu Harbour.

DENSITY: 1025.

FRESH WATER: Available in limited quantities (alongside berth).

FUEL: Not available.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: By crew or stevedores to vessel's convenience.

TOBACCO ALLOWANCE: 200 cigarettes, or half pound tobacco or 50 cigars.

WINE AND/OR SPIRIT ALLOWANCE: Allowance is 1 opened bottle of either wine or spirits, or a reasonable quantity of beer per person, for consumption on board. Under no circumstances may any wines, spirits or beer be brought ashore.

CARGO GEAR: Ship's gear for discharging and loading, 12 ton heavy lift crane available.

IDENTIFICATION CARDS: Not required.

CONSULS: New Zealand only is represented by a New Zealand Representative.

REPAIRS: Only minor repairs possible such as welding and repairs to pumps and other auxiliaries.

REPATRIATION: Confined to repatriation of crew landed for hospitalisation.

AIRPORT: Rarotonga International Airport is 2 miles away.

TIME: GMT plus 10 hours. Daylight Saving Time (GMT plus 10.5 hours) from last Sunday in October to first Sunday in March.

HOLIDAYS: Cargo cannot be worked on any Sunday or on Good Friday and Christmas Day. Other Holidays: Boxing Day (26th December); New Year's Day; Easter Monday; ANZAC Day (25th April); Queen's Birthday (1st Monday in June); Constitution Celebrations (4th Monday in August).

POLICE/AMBULANCE/FIRE: Ring exchange operator.

TELEPHONES: No connection available at present. Telephone available at Wharf Gate for emergency services.

GENERAL: Bananas available at times. Green vegetables are always difficult to obtain. Oranges, lemons, mandarines available March-August, pineapples November-February.

SHIP SUPPLY SERVICE: There are no ship-to-shore services available as a regular daily schedule. However, there are occasions when vessels are anchored off the Avatiu Harbour or in the 'Roads' that requests for boat transport are provided by the small tug of the Department of Trade after application by the Shipping Agent for its services.

The Agent is The General Manager of the Waterfront Commission. Telex: 62002. Rarotonga, Cook Islands.

DEVELOPMENTS: Harbour development at Avatiu although not completed, is currently in use and accommodating vessels of about 1,200 tons and 260 ft. in length.

AUTHORITY: Department of Trade, Labour & Transport, P.O.Box 61, Rarotonga, Cook Islands. *Telex:* Shipping RG 62202. *Cables:* Labcom, Rarotonga. *Contact:* Bruce Graham, Chief Administration Officer (Harbours). Captain A. N. Lewis, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

Costa Rica

GENERAL:

DOCUMENTS: *Prior to Arrival:* Arrival Notice: In practice, owing to the closeness of other ports of call, the shipping Agent notifies the Port Authority 48 to 72 hours in advance of the vessel's arrival. 24 hours before the vessel's arrival in the Pilot Waiting Zone, the Agency must report in writing to the Port Authority (Dockmaster) the vessel's time of arrival and the company that owns it. 12 hours before arrival, the time of arrival is confirmed, also in writing. One of these two written notices must contain the distribution list of the cargo to be unloaded, although failure to submit this information shall not delay docking. In addition, the number of longshoremen for loading and unloading, and if necessary, the number of launches or feluccas that will be required if the pier is occupied on both sides (Puntarenas) must be reported. Failure to confirm the time of arrival may result in losing the vessel's turn in docking.

Copies of the arrival notice should be sent to the Port Captain's Office, which performs the functions of Migration, Customs Administration, Customs Security, Delegate of the Ministry of Agriculture and Livestock (MAG) and the Veterinary Health Officer. In addition, copies must be submitted to the shipping agent and Customs for them to report to their clients on the arrival of the shipments and to initiate import procedures.

Information on cargo for the port

It is recommended that the shipping Agency send by airmail 2 Cargo Manifests and 2 copies of the Bills of Lading; 1 copy of each document shall be kept for the Agency's internal use, and the other shall be used to report to the Customs Agents and the cargo consignees.

On Arrival:

Type of Documents	*Number and Distribution of Documents*					
Basic forms	*Captain of Port*	*Customs*	*Maritime Health*	*MAG*	*Port Authority*	*Total*
General Declaration	1	1	–	1	–	3
Cargo Manifest	12(a)	5	–	–	3	20
Crew List	3(b)	–	1	–	–	4
Passenger List	1	1	1	–	–	3
Ship's Stores List	–	1	1	1(d)	–	3
Crew Effects Declaration	–	–	–	–	–	–
Maritime Health Declaration	–	–	1	–	–	1
Mail Guide	–	–	–	–	–	1(e)
Additional Documents:						
Visaed Clearance Permit	1	–	–	–	–	1
Consular Manifest	–	2	–	–	–	2
Crew List (f)	–	1	–	–	–	1
Passenger List (f) (g)	1	1	–	–	–	2
Maritime Health Declaration (f)	–	1	–	–	–	1
Cargo Tally Books	–	15(h)	–	–	–	15

(a) To be distributed among customs agents.
(b) A copy remains in the control booth at the exit of the port area.
(c) Sometimes checks vaccination certificates.
(d) Inspects meat in ship's stores (Ministry of Agriculture & Livestock).
(e) If there is a mail bag, the list is submitted to the ship's Agent.
(f) With consular visa.
(g) A visaed "no passengers" declaration is also required, when appropriate.
(h) For use of Customs and the Port Authority.

Other Requirements:

The Agency must provide a card to each crew member and passenger, which is stamped by the Captain of the Port and filled out on board. The card is used when passengers and crewmen go ashore and return on board the ship.

Prior to Departure:

The clearance permit is requested from the Captain of the Port 24 hours in advance of the ship's departure, or immediately upon its arrival, if the ship is to remain less than 24 hours in the port.

The clearance permit requires Customs Clearance (certification that there are no charges pending) and remains in force up to 24 hours after the requested departure time.

CALDERA: 09.54 N. 84.43 W. (See Plan)

LOCATION: The Port of Caldera is located in the Gulf of Nicoya in position Lat. 09° 54′ 44″ N. and Long. 84° 43′ 14″ W.

DOCUMENTS:
2 Certified copies of Clearance from Last Port.
2 Certified copies Crew Lists and 6 copies for distribution.
2 Certified copies Passenger Lists and 6 copies for distribution.
2 Certified copies Cargo Manifest and 25 copies for distribution.
2 Certified copies Stores/Provisions List and 6 copies for distribution.
3 Sets of Bills of Lading.
Construction Certificate.
Safety Equipment Certificate.
Radio Safety Certificate.
Load Line Certificate.
Cargo Gear Book.

PILOTAGE: Pilots are available and compulsory, arranged by Agents.

ANCHORAGE: Anchorages are defined on a chart supplied by the Port Authority (approx. position 09° 55′ N., 84° 45′ W.).

RESTRICTIONS: None. Vessels can enter or depart at any time.

MAX. SIZE: Max. LOA 205 m. Max. draft 10 m.

HEALTH: Vessels must be in possession of a Maritime Sanitary Declaration signed by the Master. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limits of territorial waters until clearance is given.

TUGS: Compulsory for berthing and unberthing. 2 tugs available. 1×1,700 h.p. and 1×1,800 h.p.

RADIO: *Arrival Notice:* Agents must be advised 24 hours and 12 hours prior to ship's arrival indicating amount of cargo to be discharged in metric tons. This information is required by the Port Authority.

Radio Station: Call sign: T.E.C. (Tango Echo Charlie). Geographic Position: 09° 58′ 56″ N., 84° 48′ 36″ W.
1300 GMT-1500 GMT, working 8,472.0 kHz (A1A), listening Channel 5.
1500 GMT-1530 GMT, working 8,291.1 kHz (J3E), listening Simplex.
1530 GMT-1600 GMT, working 12,429.2 kHz (J31), listening Simplex.
1600 GMT-1800 GMT, working 13,058.0 kHz (A1A), listening Channel 7.
1800 GMT-2100 GMT, working 8,472.0 kHz (A1A), listening Channel 5.
2100 GMT-2130 GMT, working 8,291.1 kHz (J3E), listening Simplex.
2130 GMT-2200 GMT, working 12,429.2 kHz (J3E), listening Simplex.
2200 GMT-0000 GMT, working 8,472.0 kHz (A1A), listening Channel 5.

On VHF 24 hours, working Channel 16.

Transmitting traffic list at H-00 each hour, on the frequency and hour indicated above (from 1300 GMT to 0000 GMT).

BERTHING:

No. of Berth	*Length (m.)*	*Depth (m.)*	*Max. d.w.t.*
1	210	11.0	25,000
2	150	10.0	15,000
3	130	7.5	5,000

For Berths No. 4 and 5 – see "Puntarenas".

CARGO HANDLING FACILITIES: The port is equipped to handle general cargo, containers, Roll-on/Roll-off and solid bulk cargoes.

Cranes: Mobile cranes and stacker trucks of varying capacities, also other modern port equipment. See "Port Equipment".

Bulk Cargoes: The Port Authority owns and operates a discharge system with pneumatic suction units and silos for storage.

Port Equipment: In its first stage, operations at Caldera will be supported by the following equipment:
Fork lifts: 28×3 ton, 5×6 ton, 1×10 ton, 1×35 ton.
Flat Beds: 20×8 ton, 5×30 ton.
6 Towing tractors.
4 Mobile cranes from 10 tons to 127 tons.
3 Trucks.

Containers: Container reefer station with capacity to handle 20 TEU's.

STEVEDORES: The Port Authority provides stevedores throughout 24 hours.

Gangs must be ordered at the following times: At 0700 hrs. to commence working at 0900 hrs., 1200 hrs. or 1500 hrs. At 1500 hrs. to commence working at 1800 hrs., 2000 hrs. or 0800 hrs. the following day.

TANKERS: *Caldera Bay:* Buoy mooring for tankers about 1,000 ft. offshore. Vessels moor using starboard anchor and lines to 3 buoys astern. Hoses connected on port side by ship's crew.

MEDICAL: Medical services can be provided at a clinic in the port or at a hospital in Puntarenas.

FRESH WATER: Provided by the Port Authority at all berths.

FUEL: Available by road tanker, arranged by Agents.

FIRE PRECAUTIONS: Vessels must comply with all the port requirements regarding fire prevention, contamination and safety to navigation within the port.

GANGWAY/DECK WATCHMEN: At the discretion of the Port Authority. All vessels anchored in the port must be adequately covered by watchmen service.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Distance 100 km. Served by KLM, Eastern, LACSA, COPA and NANICA. Various flights daily.

TIME: Local time is GMT minus 6 hours.

HOLIDAYS: January 1st, March 19th, Holy Thursday and Good Friday, April 11th, May 1st, May 29th, Saint Peter and Paul, July 25th, August 2nd, August 15th, September 15th, October 12th, December 8th and December 25th. The port works throughout 24 hours, except Good Friday.

TELEPHONE: Telephones may be placed onboard on request. International and local telephone and telex services available on shore.

IDENTIFICATION CARDS: On landing, crew members and passengers in transit must carry identity documents which are to be submitted to the Port Authority.

SHORE LEAVE: Possible.

REGULATIONS: The vessel, the Owner and his Agent must comply with all the arrangements set out in the Port Services Regulations and the General Tariff. The Port Authority will supply these regulations on request.

GENERAL: The new port of Caldera commenced operating in 1982. Since commencing operations at Caldera, Puntarenas is considered as an extension of the port of Caldera. Caldera has a marginal wharf of 490 m. long consisting of three berths. The outer berth or Berth No. 4 at Puntarenas and the inner berth or Berth No. 5 are at Puntarenas.

Please note that Puntarenas is now strictly for handling bulk cargoes and Caldera is for break-bulk and container operations.

DEVELOPMENTS: In the medium term, the second stage of the port complex of Caldera will be constructed, with which the current capacity will be doubled to 1,200,000 tons per annum.

SHIPMASTER'S REPORT: October 1982

Draft: Forward 5.6 m. Aft 8 m.

Pilot: Pilot boards vessel 2 miles S.W. off end of breakwater.

Tugs: 2 tugs available, one is compulsory for berthing. We employed one pushing and the other as a line boat taking 2 stern lines ashore.

Berthing: Vessel let go port anchor to 2 shackles in water with view to it being used to draw vessel away from quay on leaving.

Line Gangs: Good – 4 men per gang.
Tie-up: 4 headlines and 2 springs each end. This proved sufficient throughout stay, even though moderate surge from swell was experienced.
Gangway: A shoreside gangway was available and used. Gangway/line watchman was provided by Port Authority.
Quay: Modern concrete construction 490 m. in length. 50 tonne bollards and good solid, non spring loaded rubber fenders – both placed every 20 m. along quay.

Electricity, telephone and water all supplied to wharf.
Cargo: Port has good lighting and good sized sheds. Container storage area under construction.

No shore side cranes at present – proposed 40 tonne capacity container gantry.

Fork lifts are plentiful and in good working order.

GOLFITO: 08.37 N. 83.10 W. (See Plan)

DOCUMENTS:
- 2 certified copies of Clearance from Last Port.
- 6 certified copies of Crew List and 6 copies for distribution.
- 6 certified copies of Passenger List and 6 copies for distribution.
- 2 certified copies of Cargo Manifest and 25 copies for distribution.
- 4 certified copies of Stores Provisions List and 6 copies for distribution.
- 3 sets of Bills of Lading.

PILOTAGE: No Pilot in port. Cia. Bananera sends a launch to guide vessel to quay if requested. Arrival has to be notified at least 24 hours in advance.
ANCHORAGES: Anchorage area to S.E., diagonal towards end of quay. Depth: 35 ft. – 50 ft. Area 1,000 m. by 300 m. approx. Quay distance: approx. 500 m. Sufficient space for 4 vessels.
RESTRICTIONS: Vessel allowed to enter at any time, day or night.
MAX. SIZE: Length of quay is 1,040 ft., enough for two steamers to berth, one in banana berth and the other in cargo berth, each one of 450 ft. Depth 35 ft. alongside.
HEALTH: Any vessel that enters this port has to be in possession of a Sanitary Manifest (Sanitary Maritime Declaration) signed by Master of vessel. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limit of territorial waters until clearance is given.
RADIO: Station call sign TIM, frequencies 8478 and 500 kHz. Working hours 0400 – 1300 GMT.
Notice of Arrival: Radio Agent at least 24 hours before arrival advising date and time of arrival, number passengers disembarking, if any, amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.
TUGS: No tugs. A launch from the Cia. Bananera takes lines from vessel to quay.
BERTHING: Vessels berth starboard side to. Vessels of Cia. Bananera have preference.
STEVEDORES: Cia. Bananera controls gangs. Advance notice required. Work possible 24 hours a day.
MEDICAL: Cia. Bananera has a hospital for its employees. They can give assistance if a request through the Agency has been made 24 hours in advance. On arrival of vessel a valid vaccination certificate of each member of crew has to be shown.
TANKERS: Can berth in cargo area if length is less than 450 ft., depth is 35 ft. Diameter of pipe-lines 8 in. and 6 in.
FRESH WATER: Cia. Bananera supplies any quantity at a rate of 50 t.p.h. through shore hoses.
FUEL: Diesel and fuel oil available from time to time.
GANGWAY/DECK WATCHMEN: Available but not compulsory. Customs guard on gangway.
OPENING/CLOSING HATCHES: Normally carried out by stevedores.
CUSTOMS ALLOWANCES: No limit on board but only one packet cigarettes when going ashore. No alcohol may be taken ashore.
IDENTIFICATION CARDS: Required.
CONSULS: Nicaragua, Honduras and Panama represented locally.
REPAIRS: Cia. Bananera of Costa Rica has a workshop that can do small repairs such as soldering or small winch repairs.
REPATRIATION: Can be arranged.
AIRPORT: One airport one mile from port. Serviced by two airlines "Lacsa Airlines" with two daily flights, one at 0700 hrs. and the other at 1030 hrs. "Ave Airlines" offer only one daily flight, Sundays included, at 0700 hrs. "Lacsa" has no Sunday flights.
TIME: GMT minus 6 hours.
HOLIDAYS: 1st January, no work can be arranged; 19th March, work at double time; Easter Thursday, no work can be arranged; Easter Friday, no work can be arranged; 11th April, work at double time; 1st May, no work can be arranged; Corpus Christi, work at double time; 29th June, work at double time; 2nd August, work at double time; 15th August, work at double time; 15th September, no work can be arranged; 12th October, work at double time; 8th December, work at double time; 25th December, no work can be arranged. Stevedores are not obliged to work Sundays and holidays if not voluntary.
POLICE/AMBULANCE/FIRE: It is sufficient to ask operator for connection with the desired department.
TELEPHONES: No facilities on board vessels.
SHORE LEAVE: Crew are allowed on shore.
DELAYS: Only when quay is occupied by vessels of Cia. Bananera de Costa Rica, which have preference.

SHIPMASTER'S REPORT: January 1980.
Documents: As per "Guide to Port Entry". Documents to be certified by Costa Rican Consul at last port.
Pilotage: No Pilot available.
Restrictions: It is advisable to berth and unberth during daylight hours. Vessel can enter and leave at any stage of the tide.
Max. Size: Safe draft in channel (United Brands) 30 ft. Mean tide range 10.5 ft.
Tugs: None available.
VHF: Agent on Channels 16 and 14.
Berthing: Vessel berthed at the Banana Wharf which is 2 miles from the entrance and is 1,000 ft. in length. There is a banana elevator at the N.W. end.
Docking: Starboard side alongside: Approached Golfito as per Pilot Book, steering North until leading marks bear 047° then steer on leading marks at dead slow speed to pass 2 cables S.E. of Beacon 'A'. With ebb tide running vessel sets to the S.E. when approaching Beacon 'B'.

Vessel stopped and way taken off when about 3 cables from wharf, then proceeded to a position between Beacon 'F' and shore to attempt to turn round to port with port anchor on the bottom, however anchor did not hold against engine, so hove up anchor and turned short to starboard. Final approach to wharf made at an angle of about 30°, let go port anchor when approaching close to wharf and canted stern well in to wharf to pass heaving line. No noticeable current when close to wharf. When in position, port anchor had 3 shackles in water.
Unberthing: Left on ebb tide with another vessel moored close astern. Singled up to headline and spring forward, tightened up on anchor cable and hove on headline to cant stern off. Very short ahead movements and full starboard rudder necessary to achieve this, as current had little effect. Anchor did not hold sufficiently to pull head off the wharf, so came astern on engine until sufficiently clear of wharf to make port turn to leave harbour.

Very little wind on docking or undocking.
Facilities: The following are available: Fresh water, fresh provisions, minor repairs, airport, telex, bunker "C", diesel oil, doctor and hospital.

No dry docking facilities, no laundry service and no lubricating oils available.
Consuls: Nicaragua, Honduras and Panama.
General: Cautions: Beacon 'G' destroyed (January 1980). Rear range lights/marks 047° have very little horizontal separation. There is a small buoy in the approximate position of Beacon 'G' but exact position not established.

If vessel is loading on the Banana Berth, the secondary leading marks will probably be obscured by that vessel's superstructure.

Poor holding experienced when anchoring off the berth.

SHIPMASTER'S REPORT: July 1984.
Documents: As per "Guide to Port Entry".
Pilotage: Not available.
Restrictions: Vessels may enter/leave at any stage of the tide day or night as long as the lights are working and they are familar with the port.
Max. Size: Max. LOA 680 ft. Max. draft alongside 30 ft. Tidal range 10.5 ft. Limiting conditions are the swinging room between Beacons "4-G" and "6-F" and the wharf.
Tugs: None available or necessary.
Radio: Limon Radio "TIM" and Slidell Radio "WMU".
VHF: Bananera on Channels 16, 14, 6 and 8.
Berthing: See "Report" below.
Density: 1010.
Equipment: 1 small mobile crane. 4 banana elevators. 2×3 ton fork lift trucks.
Report: Berthing at Golfito:

From a position 2.8 miles due South of Curupacha Point Light the vessel was turned onto the channel leading marks (047°T) and speed reduced to pass Beacon "H-2" at dead slow ahead, a course of 049°T was required to maintain the leads in line with Buoy "4-G". Beacons "4-G" and "6-F" have now been replaced with square white buoys, same light characteristic as the original beacons. S.S.W. of Beacon "B-3" turned onto leads 036°T. Both these leading marks are quite small and the front triangle is not easy to make out against the steel work of the shed.

A very small tidal stream was observed passing Beacon "4-G" setting approximately West.

Rounding Beacon "4-G" the ship was swung to starboard to bring the channel marks 2 points on the port bow then commenced swinging to port using engines and rudder the ship was brought to within heaving line distance and a head line landed, the vessel now lying at approximately 45° to the wharf. Despite several engine movements she would not swing any further to port. The line boat (an old ship's lifeboat) lacked power, and dedication of the crew to pull a rope ashore in an attempt to land a stern line and control the stern while using the engine to back against the tide.The tidal stream was noticibly stronger the closer the ship came to the wharf, running parallel to the wharf in a N.W.'ly direction. After the failure of the boat to land a stern line I decided to berth port side to. By the time the stern line was inboard the vessel was being carried rapidly N.W.'wards and lying bows on at 90° to the wharf. The head line was let go and the vessel backed off to about 300 ft. and commenced swinging to starboard with the engines. Due to the stronger current closer to the wharf the swing to starboard was checked on each astern movement. The starboard anchor was let go to one shackle to control the bows. The use of the anchor proved very effective and the ship was steered alongside dredging the anchor through the mud. Berthing safely port side to at 1310 hrs., nearly 3 hours after HW.

Departure: Sailing time was set for 2 hours after HW with the tide running diagonally out under the wharf. Singled up to after backspring, head line and for'd spring and with all lines slack I expected the ship to be set off the quay by the tide, but she remained alongside.

The after spring was let go and the stern canted off by heaving on the head line, finally the engines were used against the for'd back spring to cant her to approximately 60° to the wharf. Let go for'd and came astern until the poop as in a line between Beacons "7-D" and "5-C" then commenced turning short around to starboard, the tide carried the ship down to line up on the 036°/216° leads nicely and course was set down the channel to sea.

Conclusions: 1. The ebb tide sets N.W. along the wharf and is about 50% stronger than the flood.

2. Berthing starboard side to is preferred as sailing is much easier at any state of the tide, but should not be attempted after HW.

3. Considering the ease with which the ship dredged the anchor I would say that the holding ground is poor and due to the limited swinging room and the necessity to use a short scope cable I would not recommend waiting at anchor within the harbour.

A safe waiting anchorage can be found approximately 6 miles S.W. of the entrance channel in depths of 60 ft., firm mud and shell.

4. No reliance should be placed on the line boat.

5. Use of the anchor should be considered when berthing either side to, even under ideal conditions, as this would greatly reduce the number of engine movements and conserve engine starting air.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, 001-5400 Puntarenas, Costa Rica. *Tel:* 63-40-06 and 63-40-23. *Telex:* 6045 Incop Cr. *Contact:* Lic. Rodrigo Arauz Bonilla, Presidente Ejecutivo.

PUERTO LIMON: 10.00 N. 83.01 W. (See Plan)

PORT LIMITS: Limits considered as arrival are 0.5-1.0 mile distance from breakwater, anchorage is required.

DOCUMENTS: Required by Port Authorities at Port Limon:

2 certified copies of Clearance from last port. (Zarpe) (original and dup.)

Crew List, 1 original legalised copy. 5 copies not legalised.

Passenger List, 1 original, 1 copy. 5 additional copies not legalised (if no passengers carried, this must be stated on the same document).

Maritime Health Certificate, 1 original, 1 copy.

Provisions List, not legalised : 7 copies.

Stowage Plan, not legalised : Total cargo on board, 4 copies.

Hatch List, not legalised: Total cargo on board, 4 copies.

Cargo Manifest, legalised (Manifiestos de carga): From each calling port. 1 original, 1 copy. 30 additional copies, not legalised.

Bills of Lading – 4 sets.

Local Agents or General Agents require the following documents urgently, by Air Mail (Special Delivery), from each calling port directly to address in San Jose, Costa Rica.

2 sets Cargo Manifest – copies

2 sets Ship's Declaration

2 sets Bills of Lading.

If there are Ocean Freight rates to be collected at destinations, please send Agent by Air Mail (registered), the 3 originals and 2 copies, in order to get the payment of the freight rates in time.

Data in every document must be in Spanish or with proper translation.

PILOTAGE: Pilot boards ship with Port Authorities about 1 mile from pier. Also see "Shipmaster's Report".

ANCHORAGES: All anchorages are South-West of "Isla Uvita" in depths between 34 ft. – 36ft.

MAX. SIZE: See "Berthing".

HEALTH: In the event of contagious disease or fever being suspect on board, agency should be advised immediately.

RADIO: Call letters TIM, frequency 500 kHz and 8478 kHz – working hours 0400 to 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival, advising date and time of arrival, length, draft, number of passengers disembarking (if any), amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

VHF: Port Authority on VHF Channel 16. All vessels anchoring in the port must communicate with the Pilot office on Channel 16.

TUGS: Two tugs are available, each with a capacity of 850 h.p., these are required for berthing and unberthing.

BERTHING:

Berth No.	*Usage*	*Depth (ft.) Fore*	*Aft*	*LOA (ft.)*
1	Conventional	32	29	600
2	Conventional	25	26	400
3	Conventional	29	30	450
4	For small craft			
5	Conventional	12	16	300
6	Ro/Ro	28	30	300
7	Conventional	29	35	500
8	Conventional	30	30	500
9	Conventional	18	28	200
10	Ro/Ro	32	30	800
11	Containers	33	33	705*
12	Containers	33	33	705

*35 ton container crane available.

Note: Measurements are given in feet. Berth Nos. 1–2 have a length of 1,020 ft. In order to use No. 2 berth Agents need to know or check LOA of the vessel at No. 1 berth, if it is less than 520 ft. it is possible to berth a vessel.

CRANES:

1 Portal Crane	10 ton capacity.
1 Grove Crane	30 ton capacity.
1 P & H Crane	50 ton capacity.
1 Liebherr Container Crane	45 tons, under hook, and 35 tons, under spreader.

STEVEDORES: ETA should be sent to Agent in due time. There are 2 stevedoring companies who work throughout 24 hours.

MEDICAL: No advance notice except in case of serious illness to be included in arrival notice, ample hospital facilities available.

TANKERS: See "Puerto Moin".

FRESH WATER: Available and obtained alongside pier delivered by hose, 1.5 to 2 t.p.h. cost $1.56 per ton.

FUEL: Any quantity can be obtained as there is a refinery at Limon.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: One packet of cigarettes may be taken ashore. No alcohol may be taken ashore.

IDENTIFICATION CARDS: They are needed and supplied by the Agent.

CONSULS:

Colombia	Tel: 58.02.21	Nicaragua	Tel: 58.04.47
Ecuador		Norway	58.01.83
France	58.02.21	Panama	58.09.65
Honduras	58.03.13		

SURVEYORS: Lloyds, ABS and Norske Veritas.

REPAIRS: Minor repairs only.

REPATRIATION: Facilities available.

AIRPORT: 5 miles from city. 2 daily flights (except Sundays) to San Jose International Airport. Also air taxi service to the whole country.

TIME: Local time minus 6 hours.

HOLIDAYS: Holidays and days on which the port will remain closed: 1st January from 1200 hrs. to 0600 hrs. following day; Holy Thursday and Good Friday from 0001 hrs. on Thursday to 2400 hrs. on Friday; 1st May from 0001 hrs. to 2400 hrs.; 12th October from 0001 hrs. to 2400 hrs.; 24th December 1800 hrs. – 26th December 0001 hrs.

POLICE/AMBULANCE/FIRE: Police Tel: 117; Red Cross Ambulance Tel: 580125; Fire Tel: 118.

SHORE LEAVE: Crew members are allowed to go ashore.

BANKS:

Banco Popular.

Banco Nacional de Costa Rica.

Banco Anglo Costarricense.

Banco de Costa Rica.

STORING: Vessel can be stored by truck, which can proceed alongside the berth, local riggers can be employed.

GENERAL: There is a small surge alongside the berths in Port Limon, especially when winds coming from the South East, which occurs occasionally (August and September).

In Port Moin the surge occurs when winds come from the North, which occurs occasionally in the months of December and January.

SHIPMASTER'S REPORT: May 1984.

Before leaving Gulfport I contacted Standard Fruit Company at Bocaraton, Florida. They confirmed that the Pilot boards off Limon breakwater. They also confirmed that there is a heavy surge alongside the berths in Moin Bay due to the prevailing swell and that shore springs are not normally available at the cargo berths although they are supplied to tankers.

This vessel possesses 2×6 in. nylon tails and 2×3.25 in. mooring wires and these were made ready.

A cable was sent to the Agent at Limon requesting information concerning berthing arrangements. A reply was received to the effect that the ship would berth at the "German Wharf". This conveyed nothing to me at the time.

It turned out that the "German Wharf" is, in fact, the new container berth in Puerto Limon. This berth does not appear on the navigational chart but is shown in the "plan section" of "Guide to Port Entry".

The old banana berth at Puerto Limon is no longer used and all banana loading takes place at Puerto Moin. The Pilot confirmed that there is a heavy surge at Limon/Moin and also that newcomers to the trade are boarded off Limon whilst regular traders are met by the Pilot off Moin fairway buoy.

The "German Berth" is not supplied with shore springs and there is a considerable surge alongside. We secured starboard side to using 4 lines and 1 spring at each end plus the 2 wires with nylon tails. It is considered that the latter are essential in this port as considerable chaffing of the polypropylene lines can be expected.

The berth is provided with very effective sprung fenders but these ensure that the ship is held several feet off the quay. No shore gangway is supplied and access was by way of the accommodation ladder which was landed on the quay at an angle of about 30° to the ship's side. To avoid damage to the ladder due to surge it is essential that particularly secure moorings be used.

A powerful tug is available at Limon and another at Moin.

AUTHORITY: Junta de Administracion Portuaria y de Desarrollo Economico de la Vertiente Atlantica (JAPDEVA), Administracion Portuaria, Apartado "T", Puerto Limon, Costa Rica, Central America. *Tel:* 58.05.67. *Telex:* Japuer 8518. *Contact:* Carlos Thomas Arroyo.

PUERTO MOIN: 10.00 N. 83.05 W. (See Plan)

PORT LIMITS: See "Puerto Limon".

DOCUMENTS: Required by Port Authorities at Port Moin:

2 Certified copies of Clearance from last port (Zarpe original and dup).

Crew List: 1 original legalised copy, 5 copies not legalised.

Passenger List: 1 original, 1 copy, 5 additional copies; not legalised (if no passengers carried; this must be stated on the same document).

Maritime Health Certificate: 1 original, 1 copy.

Provisions List, not legalised: 7 copies.

Stowage Plan, not legalised: Total cargo on board, 4 copies.

Hatch List, not legalised: Total cargo on board, 4 copies.

Cargo Manifest, legalised (manfiestos de carga): From each calling port 1 original, 1 copy, 30 additional copies, not legalised.

Bills of Lading: 4 sets.

Local Agents or General Agents require the following documents urgently, by air mail (special delivery), from each calling port directly to address in San Jose, Costa Rica.

2 sets Cargo Manifests – copies.
2 sets Bills of Lading.
2 sets Ship's Declaration.

If there are Ocean Freight rates to be collected at destinations, please send Agent by air mail (registeres), the 3 originals and 2 copies, in order to get the payment of the freight rates in time.

Data in every document must be in Spanish or with proper translation.

PILOTAGE: Pilot boards off Puerto Limon breakwater if first visit. Regular visitors take Pilot near Puerto Moin fairway buoy.

Also see "Puerto Limon" – Shipmaster's Report.

ANCHORAGES: One mile off piers.

MAX. SIZE: Tankers up to 35 ft. draft. Also see "Berthing".

HEALTH: In the event of contagious disease or fever being suspected on board, Agency should be advised immediately.

RADIO: Call letters TIM, frequency 500 kHz and 8478 kHz; working hours: 0400 to 1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival, advising date and time of arrival, number of passengers disembarking (if any), amount of cargo to discharge in metric tons, number of gangs required to work on board. This information is required by Port and Customs Authorities.

VHF: Port Authority on VHF Channel 16. All vessels anchoring in the port must communicate with the pilot office on Channel 16.

TUGS: Available if required.

BERTHING:

Berth No.	*Usage*	*Depth (ft.) Fore*	*Depth (ft.) Aft*	*Length (ft.)*
1	Bananas	39	39	659
2	Bananas	39	39	659
3	Ro-Ro – Oil Pier (MIXT)	47	47	715

STEVEDORES: ETA should be sent to Agent in due time. There are 3 stevedoring companies who work throughout 24 hours.

MEDICAL: Complete medical attention and hospital facilities available.

TANKERS: Berth No. 3 (oil pier) 47 ft. draft.

Shore Lines:

Black/White: 2×20 in. lines and
2×10 in. hoses
Av. gas: 1×6 in. line and 1×6 in. hose.
LPG: 1×6 in. line and 1×6 in. hose.
Bunkers: 1×8 in. line and 1×8 in. hose.

FRESH WATER: Obtained alongside.

FUEL: See "Puerto Limon".

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: One packet of cigarettes may be taken ashore. No alcohol may be taken ashore.

TIME: Local time GMT minus 6 hours.

HOLIDAYS: Holidays and days on which the port will remain closed: From 0001 hrs. to 2400 hrs. 1st January, Holy Thursday and Good Friday; 1st May, 15th September, 12th October, 25th December.

POLICE/AMBULANCE/FIRE: Police tel. 117; Red Cross ambulance tel. 58 – 01 – 25; Fire tel. 118.

SHORE LEAVE: Crew members are allowed to go ashore.

GENERAL See "Puerto Limon".

AUTHORITY: See "Puerto Limon".

PUNTARENAS: 09.58 N. 84.49 W. (See Plan)

DOCUMENTS: See "Caldera".

PILOTAGE: Pilots are available and compulsory, arranged by Agent. Signal for Port Captain and other officials is 2 long blasts.

ANCHORAGE: Vessels should keep Eastward of four submarine cables originating at Puntarenas where suitable anchorage may be found in 6 – 7 fathoms depth. Vessels should anchor as near the pier as safety permits to facilitate boarding by port officials.

MAX. SIZE: Length 500 ft., max. draft 26 ft.

RESTRICTIONS: Recommended that vessels not equipped with radar enter in daylight only.

HEALTH: Any vessel that enters this port has to be in possession of a Sanitary Manifest (Sanitary Maritime Declaration) signed by Master of vessel. In case of any suspected disease or fever aboard, Master to notify by radio to Port Authorities and vessel to wait outside the limit of territorial waters until clearance is given.

RADIO: Station call sign TIM, frequencies 8478 and 500 kHz. Working hours 0400-1300 GMT.

Notice of Arrival: Radio Agent at least 24 hours before arrival advising date and time of arrival, number passengers disembarking, if any, amount of cargo to discharge in metric tons, number of gangs to work on board. This information is required by Port and Customs Authorities.

TUGS: None available.

BERTHING: Vessels usually moor in daylight only. Unmooring night and day.

Muelle Nuevo: Pierhead runs East/West, connected to shore by 350 ft. gangway. One special heavy mooring line supplied from pier in addition to ship's ropes. Heavy surge experienced at the berth.

Berth No. 4 (outer berth): Length 140 m. Depth alongside 9.0 m. at LW.

Berth No. 5 (inner berth): Length 117 m. Depth alongside 7.5 m. at LW.

Also see "Caldera" – General.

There are lighters available for hire for vessels working cargo at the anchorage.

STEVEDORES: Available for work 24 hours a day.

MEDICAL: Facilities available at Puntarenas.

FRESH WATER: Available only from pier at Puntarenas.

FUEL: Not available.

IDENTIFICATION CARDS: Required.

TIME: GMT minus 6 hours.

TELEPHONES: No connection to vessels.

SHORE LEAVE: Allowed at Puntarenas.

SHIPMASTER'S REPORT: 1978.

Anchorage: Vessel originally anchored in the area marked (Pilots) on Chart B.A. 1931, but subsequently moved in to a position with the Light on the Pier bearing 332°(T) – 9 cables and lay to the starboard anchor, 3 shackles, in 6 fathoms of water. Other ships and draft permitting, it is safe to anchor 5 cables off the pier.

This is a quiet, safe anchorage. A Pilot is not used arriving and sailing from the anchorage, but is compulsory if berthing.

Berthing: There are two berths on the pier. As the port was very congested, we remained at anchor.

Communications: With the Charterer's Agents when at anchor, were by VHF, Channel 16. Long-range communication was by radio.

Documents: As per "Guide to Port Entry".

Cargo Work: Due to congestion, we waited 3.5 days to start work, although we only had a small quantity of cargo for discharge. When work did start, discharge was continuous and at a good rate.

I understand that ships loading export cargo receive preference for labour.

Pratique: Granted on arrival.

Provisions: Available, but great care is necessary with regard to price and quality.

Fresh Water: Normally available only when alongside the pier. As we were very short of water by the time we had been in port for a few days, we managed to obtain a minimum supply from a tug. This can only be obtained as an emergency measure.

General: It was noted that the Light on the Pier was flashing letter "P" in the Morse Code and was not Gp. Occ. (4) as shown on the Chart.

Shore Leave: A launch service was arranged through the Agents for this purpose.

AUTHORITY: Instituto Costarricense de Puertos del Pacifico, 001-5400 Puntarenas, Costa Rica. *Tel:* 61-06-28. *Telex:* 6045 Incop Cr. *Contact:* Lic. Rodrigo Arauz Bonilla, Presidente Ejecutivo.

NOTES

Please also advise Shipping Guides Ltd.

GENERAL:

ARRIVAL ADVICE: ETA messages should be sent to Mambisas Havana when Havana is the first port of call, or to Mambisas (at port of call) and Mambisas Havana simultaneously, when the first port is other than Havana.

Mambisas Agency at the port where vessel was nominated for operation or call will advise Port Authorities and concerned parties, but this in no way relieves Masters from any specific obligation to advise other parties according to Charter Party, or orders received from Owners, Managers, Charterers, etc., to such effect. The following list of Agencies is in geographical order, starting from the Westernmost port Head Agency on the North coast (Mariel) in an Easterly direction, and from East to West on the South coast, ending at the sub-Agency of Nueva Gerona.

Mariel:	(including Santa Lucia, Bahia Honda and Cabanas): Mambisas Mariel.
Havana:	Mambisas Havana.
Matanzas:	Mambisas Matanzas.
Cardenas:	Mambisas Cardenas.
Isabela de Sagua:	Mambisas Sagua la Grande.
Caibarien:	Mambisas Caibarien.
Nuevitas:	Mambisas Nuevitas.
Puerto Padre:	(including Manati): Mambisas Puerto Padre.
Antilla:	(including Banes, Felton, Preston, Nicaro, Tanamo and Vita): Mambisas Antilla.
Moa:	(including Punta Gorda): Mambisas Moa.
Guantanamo:	Mambisas Caimanera.
Santiago de Cuba:	Mambisas Santiago de Cuba.
Manzanillo:	(including Pilon, Niquero, Media Luna and Ceiba Hueca): Mambisas Manzanillo.
Guayabal:	Mambisas Santa Cruz Del Sur.
Cienfuegos:	(including Tunas de Zaza and Casilda): Mambisas Cienfuegos.
Nueva Gerona:	Mambisas Nueva Gerona.

PILOTAGE: Pilotage is compulsory for all foreign and Cuban vessels at all Cuban ports.

DOCUMENTS: Required on arrival at *every* port:

Sanitary Authorities:
1 Bill of Health.
1 Crew List.
2 Passenger Lists (if any).
Vaccination cards and derat certificate will be inspected by Authorities.

Immigration Authorities:
3 Crew Lists.
3 Passenger Lists (if any).

Customs Authorities:
3 Crew Lists.
3 Passenger Lists, including baggage (if any).
3 Crew Personal Effects Lists.
3 Copies Foreign Money List.
2 Provisions Lists.
2 Spares and Stores Lists.
3 Cargo Manifests (if any cargo on board).
3 In-Ballast Manifests (if no cargo on board).
3 Manifests of Cargo in care of the Master (if any).
1 Copy of Clearance from Last Port.

Agents:
4 Crew Lists.
3 Cargo Manifests
2 Copies each Bill of Lading.
3 Manifests of cargo in care of the Master.
6 Hatch Lists.
6 Stowage Plans.

Shipmaster's Comment: One Crew List returned to vessel stamped by Customs/Immigration for next port.

CERTIFICATES REQUIRED:
Ship's Register.
Safety Equipment.
Load Line.
Safety Radio.
Safety Construction.
Derat.

Instructions for Master of Vessel: How to process Custom's Model Dirad-7, in connection with crew's money control and personal effects.

Custom's inspector when boarding the vessel besides carrying out their usual duties, should deliver to the Master duly legalized, as many of these forms as members of the crew are reported on Crew List.

Legalization of these forms consists of Customs Inspector's signature, Customs stamps and consecutive numbering which indicates quantity of forms delivered to Master.

2. Ship's Master or Officer in charge should fill in only those spaces of the form as: crew member's name, number of passport, as well as ship's name and date of arrival in port, on the first page of the card.

Besides amount of money delivered to the crew member, date of delivery and signature must be shown as evidence that the crew member has been provided with the money, with signature of the Master alongside, all of this information appears on page 2 of the form (card).

In case crew member requires additional amount during vessel's stay in port, notation should be entered following the first, in same way.

3. No crew members, except the Master, are allowed to come in or leave the Custom House premises without presenting this form to the Custom's Inspector at the gate, who will enter therein the pertinent notations.

All these forms legalized by Customs must be carefully kept for subsequent delivery to Customs upon vessel's departure, even those that might become useless.

Should a crew member require more than 1 form because of that previously delivered having been filled up, or become useless, Master will give a new one which the crew member will present, together with the previous one, to Custom's Inspector at the gate. Thereafter, notations should be entered in the new form, the previous one must be returned to Master for subsequent delivery to Customs.

If at any time more forms are required because those previously delivered have become exhausted, they should be requested from Ship Clearance Department of the Custom House, phone 61-8572. After 1800 hrs. these should be requested from Guard Room, phone 6-9698.

4. Upon ship's sailing, Master will gather all the forms from the crew, delivering same to Custom's Inspector who boards the vessel and will perform the following verifications:
(a) To see that none of the legalization forms are missing.
(b) To verify that such forms have no alterations, erasures, etc.
(c) To add up total spent by all crew members and to verify it with amount settled with ship's Agents Consignatarias Mambisas.

5. Non-compliance with above instructions will subject the violator to corresponding penalty.

Director of Customs.

LOCAL TIME: Official local time in all Cuban territory is that for the 75th West Greenwich Meridian and there is a difference of 5 hours compared to GMT, that is, 1200 hrs. GMT is equivalent to 0700 hrs. local time.

From the last Sunday in April to the last Sunday in September, Summer Daylight Saving Time is in effect and the difference then is only of 4 hours, that is, 1200 hrs. GMT is equivalent to 0800 hrs. local time.

HEALTH AND SANITARY REQUIREMENTS: Free Pratique is automatic for vessels coming direct from another Cuban port; from foreign countries, usual procedure of Sanitary Inspection applies. In case of suspected disease or fever on board, Master must radio Mambisas Agency in order to advise the Health Office.

All crew and passengers must have vaccination cards up to date.

Below is copy of warning sent to us by a Ship's Master. The words in italics are the Master's comments.

National Veterinary Medicine Institute
Warning
Master:

You are kindly requested to comply with and acknowledge this warning regarding veterinary sanitary regulations and also to inform your crew members of same.

One Green Vet. Form given to ship to take to next Cuban port, one copy for ship also.

1. Refrigerators of vessels which contain in their victuals meat and meat products originated in countries declared as being affected with foot-and-mouth disease, Rinderpest, Vesicular stomatitis, African swine fever and other diseases non existent in the Republic of Cuba, shall be sealed while remaining in our territorial waters.

Sealed.

2. Milk, butter, cheese, fish and poultry products, as well as canned meat, and meat and meat products from Australia, New Zealand and Canada, are not subject to this procedure for the time being.

All victuals of animal origin must be declared to the Frontier Veterinary Services Officer.

3. Prohibitions:
(a) Arriving in port with live food animals (cattle, swine, poultry, etc.) on board, unless duly authorised by the Animal Health Authorities of the Republic of Cuba;
If pets on board – not allowed ashore.
(b) Unloading or releasing of any species of pet animals. These animals (birds included) are subject to quarantine control on board;
(c) Unloading of victuals of whatsoever origin, including those not subject to sealing procedures;
(d) Arriving in port with compartments or receptacles containing garbage;
Dump rubbish at sea 6 miles out from Cuba.
(e) Scattering of garbage containing food scraps, portions or other wastes of animal origin, or throwing them overboard into the sea or onto shore.
Cover garbage drums.

4. Ratguards must be placed once the vessel has docked.
Fines if not done or if they fall off!

5. Footwear and clothing of the crew members of ship coming from countries known to be affected with diseases dangerous to the fauna of the Republic of Cuba shall be subject to fumigation with formaldehyde gas.

6. Non-compliance of the sanitary regulations, or any action aimed to prejudice or evade them, shall be regarded as an offence liable to a fine of not less than $500.00 (Cuban Official Currency), or to the implementation, at the expense of the transgressor, of appropriate quarantine measures intended to minimise the consequences resulting therefrom.

The following is reproduced from a booklet given to Masters of arriving vessels. The booklet is produced by the Ships' Agent and dated 1983. Comments are made throughout the text by the Master who supplied us with an earlier booklet – such comments are reproduced in italics.

PORT REGULATIONS: In order that you may be properly informed, on not only Port and Cuban Government Regulations, but also on various matters related to the loading and/or discharging operations of your vessel, we wish to bring to your attention the following:

1. Crew Regulations (Important Notice to Masters)
(a) The Customs Authorities have put into effect new Regulations which the Masters of all vessels arriving at Cuban ports are under obligation to observe. The regulations in question are as follows:

First: The Master must advise vessel's ETA at least 24 hours in advance and is obliged to deliver to the Customs Authorities at the port of arrival the complementary documents to the Cargo and Passenger Manifest, which comprise:

(a) Hatch List, Hazardous Cargo List, Stowage Plan, Provisions, Accessories and Spare Parts List, Narcotics List (crew's usage). Firearms List and Clearance Certificate (from previous Cuban port). Ship's Register must be exhibited.

(b) List of crew belongings including objects, property of each crew member which he maintains on board for his use, such as, for instance, electric shaving machines, watches, radios, soaps, etc. *(4 copies required at every port – Declare everything in personal possession).* See "Shipmaster's Report".

(c) Detailed list of all articles transported by crew members free of charge, including those which are for his use on board, or that may be destined to other persons (men, women or children), such as for instance perfume, umbrellas, dresses, ladies stockings and lingerie, cloth to make dresses, etc. *(4 copies every port – declare everything and place in bond.)*

(d) Foreign currency whether convertible or not, must be declared on a crew list. *(4 copies required every port – placed in ship's safe). Narcotics List – 4 copies morphine only. Provisions List – not listed but requested.*

(e) Upon vessel's arrival the Master will be provided with money control cards for each crew member which must be carried by them when going ashore and shown to Custom House Inspector whenever requested.

(f) Each crew member must declare the articles referred to in paragraphs (b), (c) and (d) immediately upon vessel's arrival, since Harbour Officers may search the vessel at any time they should deem convenient.

Second: Each crew member may keep in his cabin up to 200 cigarettes and a bottle of spirits.

Third: The importation into, and the exportation from the Republic of Cuba of Cuban currency is forbidden, and no crew member may have in his possession any amount in excess of that delivered to him by Master from the cash advanced by the agency. *(Collected and sealed in safe).*

Fourth: Each crew member is allowed to have in his cabin, only those articles which are for his use on board. Any article in excess (more than 1 radio, 1 shaver, etc.) should be kept in the bond store.

Fifth: Any article not declared, or possessed by the crew member in excess of the amount allowed, also Cuban and foreign currency not properly accounted for, will be confiscated and should circumstances warrant, the courts of law will be informed, the latter having the right to impose penalties, or fines, depending on the value of the objects found in the crew member's possession.

Immediately following the arrival of the vessel, the Master is under obligation to make these regulations known to each and every crew member, as the Customs Authorities will consider that the Master and the crew have been put on notice as to what is herein provided at the moment the vessel has been cleared through Customs, insofar as concerns any violation of the above referred to regulations.

Masters are likewise required to provide a place or space sufficiently ample to deposit the articles transported by the crew free of charge or, in other words, those articles referred to in paragraph (c) above.

Sixth:

(a) Crew members are not allowed to buy personal effects on shore, except in the sailors' or tourists' shops and the articles so obtained can not be sold to any other person.

(b) Except for the Pilots and the Public Health Officials, no other person can go on board and no crew member or passenger of vessels arriving at Cuban ports from abroad is allowed to disembark until the vessel has been cleared by the Immigration and Customs Authorities.

(c) Crew members, including Officers and Master, in addition to their standing passports or seaman's books, must be provided with immigration passes (landing cards) to go ashore.

(d) Depending upon the characteristics and circumstances of the different ports there might be certain limitations in the hours the crew may remain ashore. Port Authorities, through the Agent will advise the Master accordingly.

(e) Shore passes are confined to the city limits of the port where the ship is lying and whenever a crew member requires to move away from the said area, the corresponding permit must be obtained from the immigration port authorities through the agent. Each territorial infringement is subject to a fine.

(f) Upon arrival at Cuban port of any vessel proceeding from foreign country, the Immigration Authorities will deliver to Master the Entrance Certificate which is valid for all Cuban ports and will be under custody and preservation of the Master until final sailing.

(g) If a vessel enters into or sails from any Cuban port without having fulfilled all requisites or procedures of clearance and inspection of the Immigration Authorities it will be subject to a fine.

(h) To take away or to violate the seals or straps fixed by the Customs Authorities means vessel will be subject to sanction or fine.

2. Sanitary Regulations

(a) Following docking, crew members are not allowed to go down to the pier to fix the ratguards or the gangway until the Sanitary Inspection (Free Pratique) has been completed and for non fulfilment of this regulation a fine of 2,000 pesos will be imposed on the Master.

(b) Thereafter, ratguards are to be kept in proper place otherwise the Master shall be liable to as many fines as there are ratguards missing.

(c) If any crew member should go down to the pier from a vessel which is under sanitary observation, the vessel will be penalised with a 5,000 pesos fine.

(d) Vessels proceeding from countries affected by animal diseases which do not exist in Cuba, are subject to full disinfection at the time when the sanitary veterinarian authorities of the Republic of Cuba deem it convenient.

Phytosanitary Regulations

(a) The Master has to deliver to the Phytosanitary inspectors the following documents:
- Phytosanitary certificate of all vegetable origin or regulated cargo carried by the vessel.
- Fumigation certificate, if said cargo was fumigated before arriving at Cuban port.
- Copy of cargo plan.
- Copy of provisions list.

(b) It is forbidden to withdraw from the vessel while at Cuban ports, products of vegetable origin (fruits, fresh vegetables, plants, parts of plants and seeds), soil or organic materials, origin, of micro-organisms, insects, acarus and threadworm in any state of their biological cycle.

(c) The waste of vegetable origin must be hermetically packed in plastic bags and treated as instructed for garbage in article 7 here below.

Veterinary Sanitary Control – Complete sealing of ships' refrigerators which contain dangerous victuals.

(a) It is hereby instructed that the refrigerators of Cuban and foreign flag vessels which contain in their victuals meats and cattle products originating in countries affected by bovine pest, vesicular stomatitis, African pork pest and other animal diseases not existent in Cuba, must be completely sealed.

Exempt from the above are cattle products industrially canned, salted butter and cured cheese destined to be consumed only aboard ship.

(b) Only ships' refrigerators which contain victuals of animal origin shall be sealed. Compartments where vegetables and other victuals are kept, will not be sealed.

(c) Ships' refrigerators will be opened under Veterinary supervision. *(US $5.00 each time).*

(d) Meats and other animal products purchased in Cuba must be so placed in the refrigerator that they will not enter into contact with similar products purchased abroad.

(e) Sealing of ships' refrigerators will apply to vessels at berth as well as to vessels at anchorage.

(f) Sealing must be performed in an effective manner. To this end, it is necessary to verify that it was done correctly; a sufficient enough depression of the seal which makes it impossible to withdraw the wire.

(g) It is forbidden to have on board live animals for consumption and to fish using baits of animal origin.

(h) Any pets carried by the ship will be placed in quarantine aboard.

(i) For the breaking of the seal or the violation of any of these dispositions the Master will be brought to Court where according to the Law the corresponding penalty or fine will be imposed.

3. Labour Regulations

In accordance with Resolution of the Cuban Labour Ministry, it is forbidden for vessels' crews, during their stay in port, to do work that should be performed by port labourers, such as loading or discharging, rigging booms, driving winches, opening and closing hatches, (except MacGregor type or any other type of special mechanical system), laying wood or paper dunnage, construction of stalls, etc. Therefore you should apply to us in writing, so that arrangements can be made for the necessary port labour to perform such work.

Please note that if any of the work described were to be done by ship's crew, port labourers must be paid as if they had actually performed the services.

4. Bunkers

Should your vessel be bunkering at this port, it is necessary that we be notified in advance, so that appropriate arrangements can be made not only with the local suppliers, but also to comply with government regulations, which provide that funds to cover the cost of bunkers be received from the Owners *or Charterers* prior to delivery. Since this procedure takes a few days, it is suggested that any request for bunkers be made with due anticipation.

When delivery of bunkers is to be made in the port of Havana, the order or requisition must be sent to the suppliers at least 2 days in advance of the desired date of delivery, and 3 days in advance when delivery is to be made at a port other than Havana.

5. Galley Oil or Coal

The above requirements for bunkers do not, of course, apply to galley oil or coal as this item, if needed, is to be purchased directly by the ship from a shipchandler.

6. Cleaning

In accordance with Port Regulations, this work must be performed by local shore labour. The cleaning work done by shore labour is limited to only the sweeping of cargo compartments.

7. Garbage: *(Vessel needed 10 drums).*

Port and Customs Regulations forbid the throwing of garbage on to the pier or into the sea while the vessel is within the harbour limits.

According to Sanitary Regulations vessels must arrive at each Cuban port of call with the garbage deposits or tanks empty.

Garbage cannot be thrown into the sea inside Cuban territorial waters.

While in port the garbage must be hermetically packed in plastic bags and kept in drums with fitted covers.

Drums, in clean and hygienic condition, are to be placed in a properly selected place in the vessel until the bags are delivered to the garbage collector.

The services of the garbage collector must be requested by the Master, who can apply for it through the Agent.

For the non compliance of this regulation the ship will be subject to a fine.

8. Cash to Master *(Owners must remit cash in advance).*

Cash advances authorised by Owners or Charterers will be supplied to the Master upon request. Such request is to be made during office hours and the money will be delivered at the Agent's place of business.

Upon completion of loading and/or discharging operations, any unused funds of Cuban Currency must be handed over to the Local Agent; in other words, Cuban Currency left over from a cash advance drawn at one port cannot be returned or used at any other port.

However, further cash advances may be requested at the next Cuban port of call.

9. Damage to Cargo

As you undoubtedly realise, it is necessary to establish with the utmost degree of accuracy possible with whom the responsibility for damage to cargo lies, whether for vessel's or stevedores' account.

To ascertain this, the Terminals in Cuba employ Damage Inspectors to take note of all cargo that is found on board in damaged condition prior to its discharge from the ship, and the Master or Chief Officer is asked to sign an acknowledgement. Therefore, we suggest that in order to avoid unnecessary discrepancies between the vessel and the Terminal, and to properly protect the Owners' interests, you please instruct your cargo officer to coordinate his work in this connection with that of the Terminal Damage Inspector. Upon completion of discharge operations, the Terminal will submit to the Master for signature the relevant Survey Report.

Should you Note Protest owing to bad weather on the voyage or any other reason whatsoever, since the note must be presented to Harbour Master within 24 hours after ships' arrival, it must be handed to the Agent with time enough to prepare translation. One copy of the Note of Protest should be delivered to the Agent for record purposes.

10. Stevedore Damage to the Ship *(Stevedores usually repair damage).*

Any damage caused to the vessel during the loading and/or discharging operation, should be reported immediately to the Head Discharging Foreman on the Terminal, followed by a written notice to us in duplicate. Such notice should be made out within 24 hours following the incident, otherwise the Terminal will not accept any claim.

11. Repairs for Vessel's Account

Any repair work to be done for vessel's account must be requested in writing, sufficiently in advance of vessel's estimated departure in order to obtain from the repair shop the budget for the work, in the event of course, that the job can be done locally.

12. Engine Repairs or Engine Overhaul while in port

In the event vessel requires engine repairs or an engine overhaul (usually performed by the ship's crew) even if berthed at a pier or dock in port, it is necessary that the Master so informs his Agents before undertaking such work in order that his Agents may, in turn, notify all parties concerned, and obtain necessary authorisation from Harbour Master.

Read Charter Party/"Baltime" usually 24 hours' notice for engine cleaning.

The reason for this is that it may be necessary to shift the vessel from one berth to another, for any reason whatsoever, and it is necessary to know in advance if the vessel can move with her own engines or whether tugboats will be required for the movement. In the latter case it is of course understood that the cost of tugboats will be for vessel's account.

13. Hull Repairs and Maintenance

It is forbidden to perform any repairs or welding work in the hull, without obtaining, through the Agent, the previous authorisation of the Maritime Safety Office.

14. Redelivery

If your vessel is to be re-delivered at this port, this should be made known to us as soon as possible after arrival here, for although we may be aware of this fact, there is a possibility we might be lacking the necessary details concerning the terms of re-delivery.

15. Lowering Boats *(Apply in writing).*

Port regulations prohibit the lowering of boats except for fire drill or to do maintenance work of the ship (painting, etc.). For either of these purposes, a permit is required from the Harbour Master, and the crews of such boats are not allowed to land on any pier or board any vessel in the harbour. Please be informed that our Ministry of the Interior has issued the following instructions to be strictly observed by the Masters of all foreign vessels during their stay at Cuban ports:

(a) When a vessel is carrying out paint work or similar tasks while in port, at the end of the day's work the craft or boat used to perform the work should under no circumstances remain in the water, but must be hoisted aboard to be again lowered the following day or whenever the work is resumed.

16. Radio Communications

Vessels within harbour limits are not allowed to transmit messages by radio.

17. Port Expenses

The bills covering port expenses will be submitted for your approval and signature, prior to vessel's departure from this port, regardless of the fact that such expenses might be for Owner's or Charterer's account, as this can subsequently be easily determined by examination of the Charter Party. However, if we are to obtain reimbursement for the amounts expended to cover port expenses, it is necessary that your approval and signature be secured.

Mark Owner's account or Charterers' account.

18. Stowaways

(a) In the event of vessels arriving from foreign countries, carrying stowaways or persons without documents, the Master or the Shipowner must advise the Immigration Control of the port immediately, who in turn, will advise them of the respective regulations in force.

(b) Masters are kindly requested to instruct all ships' officers that every possible precaution should be taken to prevent stowaways.

(c) Whenever the Master of a vessel finds a stowaway on board, either in port or outside the port's limits but within Cuban territorial waters, he is under obligation to deliver same to the Port Unit and Harbour Master's Authorities of the Frontier Guard Troops. If the stowaway is found outside the port, the Master must report this by radio so that the stowaway may be picked up by Port Unit and Harbour Master's Authorities of the Frontier Guard Troops.

(d) At no time are the Masters of vessels allowed to lower rope ladders or ropes on the vessel opposite the dock where the ship is berthed.

19. Paper and Dunnage: ***(very important).***

In the event that your vessel is scheduled to load sugar in bags, citrus fruits, cement, etc., in Cuba and should you require paper and/or wood dunnage, you must make known to us your needs in writing as soon as possible, bearing in mind that the suppliers require at least five (5) days for delivery.

20. Loading Sugar

Whenever your vessel is assigned to load sugar the following precautions are to be taken:

(a) Cleaning and Dunnaging of Hatches: You must be extremely careful to have the vessel's hatches thoroughly dry, clean and without odour, as well as properly dunnaged to the satisfaction of the shippers, before starting loading.

(b) Cleaning Holds: In order to avoid damage to the sugar cargo during the voyage, please make proper arrangements for the closing of holds before starting loading in 'tweendecks.

(c) Tally: With respect to the dispute that occasionally arises between the vessel and the shippers during the course of loading sugar shipments regarding the number of bags delivered on board, we wish to inform you that the only document with official validity is the tally sheet prepared by the shore tallyman assigned to each loading hatch, and that if you wish to verify the accuracy of said tallying you could hire a tallyman's service, through the Agency, in those ports where we have this service available, to count the cargo jointly with the shore tallyman, as this is the only possible way of avoiding discrepancies in the checking of the bags actually delivered on board.

Consequently, we request that you please keep the above in mind, as this will tend to reduce if not completely eliminate, the problems which are now being confronted.

21. Agency Office Hours

We list hereunder our office hours:

From Monday to Friday: 0800 to 1200, 1300 to 1700.

Saturday: 0800 to 1200.

Our representatives will call on the ship as regularly as possible to discuss with the Master any matter or problem he may have in connection with the operations of his vessel and to deliver the crew's mail; however, such calls are contingent upon the volume of work, for which reason we suggest that the Master calls at our office when any matter arises which requires immediate attention.

22. VHF Communication System

The VHF (150 MHz) communication system is officially established between most of our Agencies and ships in port or close to port. Normally, service will be provided during the Agency's regular office hours only, but this work schedule will be expanded in the near future, as is now at our Havana Agency, where service is granted 24 hours a day.

Havana Pilot Channel 16. Agent's Channel 12.

23. Medical and Dental Services

Any man requiring medical or dental attention should be sent to our office whenever possible, with a letter from Master containing full name and rank, at 0800 or 1300 hrs. from Monday to Friday, and we will see to it that he is promptly sent in a car to the hospital and back to the ship afterwards.

In the event of an accident or serious illness, please contact Mambisas Agency on the telephone, and an ambulance will be sent immediately to transport the man to the hospital.

24. Safety Measures

(a) Vessels are obliged to have on-board the manoeuvre and safety elements indicated in the International rules and regulations. Any vessel lacking or having in bad condition any of these elements (defective derricks, lack of electricity, etc.) will not be brought to pier and if berthed will be removed at vessel's expense.

(b) The Master must remove anything protruding from the vessel, like boats, anchors, booms, etc., or overhanging, like tackles and riggings whenever they constitute a risk or danger for the workers, port installations, other vessels, etc., or whenever they interfere with the operations.

25. Other Regulations

(a) Any exchange of provisions, films, spare parts or any kind of object, etc., between vessels in any port, requires the previous authorisation of the Customs House. Therefore, in order to apply for this permit, Masters are kindly requested to give a letter to the Agent detailing all articles that are to be transferred.

(b) It is forbidden, unless previously authorised by Customs House:

to bring ashore any article or merchandise.

to allow any boat, launch, tugboat or any other type of craft, to approach to the vessel at a distance of less than 25 m. except for the purpose of transferring passengers or to perform any service duly authorised.

to lower ladders on any side of the vessel.

(c) All provisions, belongings and spare parts not declared in the corresponding documents, or found on board in excess of those declared, will be confiscated. This is valid also for the commercial stores of passenger vessels.

(d) Any mistake in the manifest must be amended within 48 hours after arrival of the vessel.

(e) All articles carried on board and destined for Cuban territory, must be declared in the cargo manifest or in the complementary documents.

26. Important Notice

Pollution: Very strict regulations are in force and Port Authorities keep a close watch on this matter. It is absolutely forbidden to pump or throw out of the ship, oil, dirty water, wastes of animal origin, dunnage wood, or any kind of Liquid or substance into the sea, whether inside or outside the ports and any infringement will bring the Master to Court.

FROM INFORMATION BOOKLET COMPILED BY MAMBISAS AGENCIES

USE OF SOUND SIGNALS IN PORT: It is prohibited to use sound signals except those internationally known for safe navigation, fire or emergency.

DRY DOCK: There is a dry dock at the port of Havana with berthing capacity of 440 ft. length and 91 ft. width which can accommodate vessels up to 23 ft. draft.

SURVEYORS: Following surveyors are established in Cuba:

Cuban Maritime Regulation Surveyors, Bureau Veritas, Lloyd's Register, German Lloyd and U.S.S.R. Ship's Register.

Above listed surveyors should be contacted through the Consignataria Mambisas main office.

EIGHT HOURS DAILY WORK: We wish to call attention to the fact that although the working periods observed at the various Cuban Ports vary considerably, as for example, the port of Jucaro where the period is from 0600 – 1000 hrs., 1200 – 1600 hrs.; Caibarien 0700 – 1100 hrs., 1200 – 1600 hrs.; Havana 0700 – 1300 hrs., 1300 – 1900 hrs. etc., and others from 0700 – 1100 hrs., 1300 – 1700 hrs.

Labour Legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

HOLIDAYS:

National Anniversaries	*Holidays*
January 1st.	July 25th.
May 1st.	July 27th.
July 26th.	Sundays
October 10th.	

REPATRIATION: There are good facilities and repatriation can be arranged through Mambisas Agency.

SHIPMASTER'S COMMENTS: Also see "Shipmaster's Report" for Nuevitas dated February 1984.

Fresh Water: Always take full fresh water. Water barges available at Havana and Santiago. No fresh water at Jucaro or Boca Grande.

Documents: Sample crew manifest to avoid confiscation: 2 Radios, packet of paints, tape recorder (Akai), gloves, speakers, star plotter, cassette tapes, set of ship plans, earphones, plastic mac, 3 prs. sunglasses, dress uniform, calculator, battle dress uniform, matchstick model ship, brown suit, plastic battleship model, blue coat, bridge coat, 10 packs glue, grey trousers, 1 pk. razor blades, 3 khaki shirts, 1 Fernox medicine, 1 Savlon cream, 3 khaki shorts, 3 balsa cement, 5 uniform shirts, 1 stop watch, 1 briefcase, 2 coloured shirts, 1 tee shirt, 1 knapsack, 6 uniform white shirts, 1 photographic bag, 3 white shorts, assorted films, 4 ties, 2 cravats, 1 brown cardigan, 1 pullover, 1 dressing gown, 1 pair longjohns, 1 pr. sandals, 2 alarm clocks, 1 sextant, 4 watches, 1 boiler suit, 3 plastic trays, 2 beakers, 1 belt, 2 toy engines, cellotape, 14 wagons, gold braid, 8 points, keys, 8 curved rails, tape recorder cords, 4 vests, swimming trunks, 5 pants, 1 blue socks, 5 brown socks, 6 white socks, 1 cap cover, 1 pr. pyjamas, 1 silk scarf, 1 pr. black shoes, 1 pr. brown shoes, toilet articles, 1 copy stand, 1 enlarger, assorted chemicals, powersaw, typewriter, calculator, adding machine, 4 packs tea, 4 cameras, 1 lens, 1 light meter, 3M duplicator, binoculars, Sanyo tape cassette, assorted perfumes and curios. 1 kitbag, 1 flip-flops.

200 cigarettes, 1 spirits, number cans of beer, number of bottles of wine.

If in doubt – put it in a suitcase and lock it in the bonded store!

SHIPMASTER'S REPORT: December 1983.

All foreign currencies must be declared and may be used freely ashore.

A landing pass and foreign currency pass is issued to each member of the crew and they are to be accompanied by Seaman's ID Card or Discharge Book when going ashore.

A cabin is to be set aside and marked Transit Room. Would advise that anything and everything that is not required during your stay in Cuba be put in a suitcase and lodged in the Transit Room which is sealed on arrival and then left alone. All cameras must be placed under seal on arrival (i.e. in the Transit Room). Permission is granted to use them in Havana but was not allowed in Nuevitas.

A strict Customs search usually follows arrival with every cabin and compartment thoroughly searched. This vessel was not searched by Customs at Havana but was at Nuevitas.

Prior to departure from each Cuban port the vessel is searched by Harbour Master Guards.

On the whole relationship between ship and Authorities was good. The Agents proved very helpful and telex communication was satisfactory.

Only meats of origin U.S.A., Australia and New Zealand are permitted to be used whilst vessel is at a Cuban port.

The Port Authorities are very strict regarding rat guards which must be checked at frequent intervals, also garbage which must be placed in sealed bags ready for collection by shore labour.

ANTILLA: 20.50 N. 75.44 W. (See Plan)
(and sub-ports of Felton, Nicaro and Preston)

LOCATION: The Port of Antilla is located on the North side of Nipe Bay, on the North Coast of Cuba: Lat. 20° 50′ N., Long. 75° 44′ W.

Nipe is the largest bay in Cuba and is considered among the biggest in the world.

Within Nipe Bay there are 3 ports: Felton, Preston and Antilla, Antilla being the head port of a region, and very important because of its natural resources in agriculture, mining, etc., as well as for sugar industries close to the port.

The Antilla Agency attends also at the following ports: Preston, Felton, Nicaro, Banes, Tanamo and, temporarily at Vita.

Nipe Bay is suitable for large vessels of any length and up to 20 m. draft, which can anchor in the vicinity of buoy No. 9, (La Estrella Shoal) inside the triangle formed by Pt. Saetia, Pt. Berraco and La Estrella Shoal.

Antilla is a very efficient port in all respects but as a sugar shipping port ranks among the best in the nation.

ENTRANCE TO PORT: Entrance to Nipe Bay is safe and free of risks. Limitations as to length and draft of vessels are only those imposed by the places of operations or ports.

Entrance channel is ample (0.75 miles wide at its head and 0.33 miles at its narrowest point, located South of Pt. Caimanes), having a minimum depth of 150 ft. up to Saetia Anchorage.

From Saetia up to Antilla piers the distance is 10 miles.

Navigating toward Western Nipe Bay, in the direction of Antilla, after Saetia is past, to the South can be seen: Cayagima Cove, Point Cobos, the mouth of Mayari River and the Port of Preston.

To the North can be seen after departing from Saetia: the town of Ramon, located on high lands at the back of Melilla Cove, Pt. Berraco, Pt. Las Chivas, Honda Cove, Pt. Salinita, Hermenegildo Cove, Pt. Negra, Felipe Cove, Pt. Carbonera and Pt. Salina.

From the latter onward, Antilla's piers channel is navigated, and to the North can be seen Pt. Barrancones, Marbella Cay and finally the town and port of Antilla.

PILOT: *Where Pilot should be taken and distance to place of operation:*

The place where Pilots board the vessels nominated to perform operations at Antilla, Preston, Felton, Banes or Nicaro, is located at 1 mile N.E. of Point Mayari, that is in an East/West line from Pt. Mayari lighthouse on the course of the bearings indicated by the port chart.

The exact position where Pilots board vessels is: Lat. 20° 47′ 46″ N., Long. 75° 32′ 15″ W.

From this point the distances to the ports are:

	Miles to pier	*Miles to anchorage*
Antilla	13	13.5
Preston	6.5	6.5
Felton	5	4
Nicaro	13	12
Banes	17	17
Fondeadero Saetia	2.5	

Point Mayari Lighthouse consists of a conical/cylindrical steel tower, painted aluminium, 40 ft. tall and its light is visible up to 10 miles away.

As the pilot station is located in Antilla, upon receipt of an ETA message from an incoming vessel, Mambisas Agency immediately informs the Pilots who depart accordingly to Saetia to await the vessel.

Once the Pilot is in Saetia it is almost impossible to communicate with him, therefore Masters must exert care in sending ETA messages to Antilla in order to offer the Pilots the closest ETA at Pt. Mayari, thus avoiding unnecessary problems for Pilots or delays to ship.

ANCHORAGES: Anchorages at Nipe Bay are used only when waiting for berth, or at Saetia, to await favourable tide to enter Banes or Nicaro.

No operations are performed at anchorages.

Saetia Anchorage: Located about 1,000 m. West of Pt. Carenero (Saetia).

Limitations: Draft 20 m., Length: No limitations. Swinging area: About 800 m.

3 vessels (557 ft. in length) or one supertanker can be accommodated at this anchorage.

The bottom is soft mud but anchors hold well, ships usually anchor with 4 or 5 shackles of chain.

In front of this anchorage is the small town and beach of Saetia.

Usually this anchorage is used by vessels destined for Felton or to await favourable tide to enter the ports of Banes or Nicaro.

La Chiva Anchorage: Located at about 1.25 miles from Pt. Berraco, to the North on the Melilla Heights, the small town of Ramon can be seen.

Limitations: Draft 20 m., Length: No limitations. Swinging area: About 900 m.

Can accommodate two 557 ft. length vessels or 1 supertanker.

The bottom is hard sandy mud with loose stones and anchor holding is good. It is sheltered from the winds by Melilla Heights.

Ships usually anchor with 3 or 4 shackles of chain.

This anchorage is used for similar reasons as Saetia.

Cajimaya Anchorage: Located just in front of the port of Felton.

Limitations: Draft 32 ft., Length 600 ft. Swinging area: About 400 m.

2 vessels can be accommodated at anchorage.

The bottom is soft mud but anchors hold well.

Sheltered from winds by Saetia mountains, ships usually anchor with 3 or 4 shackles of chain.

This anchorage is used by vessels awaiting berth at Felton.

Pt. Salinas Anchorage: Located about 500 m. S.S.W. of buoy marking Salina Grande Shoal; Antilla Town is about 3 miles to the N.W. and at a similar distance is Preston to the S.S.W.

Limitations: Draft 31 ft., Length: No limitation. Swinging area: About 500 m.

Four or five regular size vessels can be accommodated at this anchorage.

The bottom is soft mud but anchors hold well.

It is not sheltered from winds, being located in a spot where, when there is bad weather, the sea becomes rough.

Usually vessels anchor with 3 shackles of chain.

This anchorage is used by vessels awaiting berth at Antilla.

Preston Anchorage: Located about 1,200 m. N.N.W. of the head of Preston pier; to the South of the small town of Guatemala (formerly Preston) sugar mill can be seen.

Limitations: Draft 30 ft., Length: No limitations. Swinging area: About 1,000 m.

Three or four regular size vessels can be accommodated at this anchorage.

The bottom is soft mud but anchors hold well, anchorage is open to the winds.

Usually vessels anchor with 3 shackles of chain, depending on wind force.

This anchorage is used by vessels awaiting berth at Preston.

Corojal Anchorage: Located about 320 m. N.W. from Antilla pier head, just in front of Antilla town.

Limitations: Draft 18 ft., Length 557 ft. Swinging area: About 180 m.

Anchorage can accommodate 1 vessel only.

Bottom is soft mud but anchors hold well.

Anchorage is open to the winds and vessels anchor with 2 shackles of chain, depending on wind force.

This anchorage is used to wait for Port Doctor visit in cases of incoming vessels from foreign countries and also to await berth at Antilla.

Antilla Anchorage No. 2: Located about 700 m. from Antilla pier head.

Limitations: Draft 23 ft., Length 500 ft. Swinging area: About 300 m.

Anchorage can accommodate 1 vessel only.

Bottom is soft mud but anchors hold well.

It is open to the winds and vessels anchor with 3 or 4 shackles of chain. If strong winds do blow, then vessels drop another anchor to reduce the swinging action.

This anchorage has the same use as Corojal Anchorage.

Saetia, La Chiva and Cajimaya Anchorages have no transportation service; the remaining anchorages have launch service available, if requested by Masters.

MAX. SIZE: Vessels' maximum official draft and length allowed to enter or sail from Antilla are: Length 557 ft., draft 21 ft. fore, 23 ft. aft.

Regarding length of 557 ft., it is the maximum advisable for dry cargo vessels.

Tankers having a length of 610 ft. have called at this port to load molasses.

Entrance to or sailing from Nipe Bay and Antilla can be effected either during day or night-time.

CLEARANCE: All Port Authorities, Port Doctor, Customs, Immigration and Captain of the Port have their offices at Antilla. Vessels may proceed directly to sub-ports without entering Antilla for clearance. Port Authorities clear ships at sub-port when necessary.

Launch service is the preferable means of transportation used by the Port Authorities to the various sub-ports under Antilla jurisdiction.

There are Custom House Delegations at sub-ports of Preston, Nicaro, but no Immigration. The Custom House Delegate at the sub-port of Nicaro also acts as Delegate for the Captain of the Port.

Although there is no Port Doctor Delegate at the sub-ports, the General Hospital Doctors may act as such, if requested, in order to give a quick entry to the ship.

Notwithstanding the above, in those cases when a ship is coming from a Cuban or foreign port, destined to Nicaro, and happens to lose the slack water tide, it will be necessary for the ship to anchor at Saetia (Antilla) and to wait the next tide. In these particular cases the Port Authorities give entry to the ship at Saetia anchorage, and it is not necessary for another Port Authority visit at the sub-port of Nicaro.

RADIO: At Antilla, means of communications are: Telephone, telegraph, radiograms RCA System, telex and Post Office.

The Antilla Agency is connected to the National Telex System, which is the quickest means of communication.

Vessels proceeding to Cuba can communicate with Mambisas Antilla Agency through "CLA" Havana Radio Station which immediately relays the messages to Antilla by radiograms, telegraph or telex.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisas Antilla and Mambisas Havana.

TUGS: No tug is required for entry to Antilla. There is a tug available 24 hours of the day, but service must be requested at least 24 hours in advance. Name, *Macabi;* length, 81 ft. 1 in.; width, 24 ft. 0 in.; gross tonnage, 183.53; net tonnage, 86.00; motor, one diesel; h.p., 750; speed, 8.5 knots.

BERTHING: The 3 berthing spaces of this port have standard gauge railroad tracks.

Each pier is connected with 1 railway which is independent of the others, but with no car outlet at end of piers, consequently, to perform any movement, it is necessary to take out the remaining cars. For that reason, there is no road connecting the piers, and since piers are not paved, trucking operations cannot be performed.

Pier No. 4

North Side: Length 458 ft., maximum length vessel allowed 557 ft., draft 17 ft. forward and 23 ft. aft.

South Side: Length 458 ft., maximum length vessel allowed 557 ft., draft 21 ft. forward and 23 ft. aft.

The construction of this pier is concrete, that is the platform and the piling. It is protected by hard wood fenders and has a fixed red light at the S.W. end.

Cargo handled: Bagged raw sugar, molasses, general cargo.

Coast Pier: Length 398 ft., draft 20 ft. even keel., maximum advisable vessel length for operation 455 ft.

Construction of this pier is similar to Pier No. 4, concrete piling and platform, and, in fact, is really a continuation of Pier No. 4 South Side and for that reason if a vessel longer than 455 ft. is docked at this pier, it is in detriment to the operations of vessel docked at No. 4 South Side, which will have part of its length outside the pier.

Cargo handled by this pier: Bagged sugar, general cargo, gasoline, kerosene and diesel oil.

Diesel oil, kerosene, gasoline: Connections 1×8 in., 1×6 in. and 1×4 in. diameter.

STEVEDORES: Working periods – loading sugar; Monday to Friday – 0700 – 1100/1300 – 1700 hrs. Saturday – 0700 – 1100/1300 – 1700 hrs. Sunday – no work performed.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Capacity: Three ships can be performing sugar loading operations simultaneously, although the labour force available is for a total of 12 gangs.

1. Raw Sugar: *(a)* Loading rate: 1,330 bags of raw sugar (of the 220-pound type) per 4 hours per gang. *(b)* Bags per sling: 6 bags of raw sugar (of the 220-pound type).

2. Refined Sugar: *(a)* Loading rate: 2,100 bags of refined sugar (of the 100-pound type) per 4 hours per gang. *(b)* Bags per sling: 12 bags of refined sugar (of the 100-pound type).

No shore crane available at this port, but there are 5 machine throwers for bulk sugar operations, grates and canvas funnel, etc. These machines function with diesel motors.

Sugar bags are opened in the square of the hatch.

TANKERS: Molasses pumping rate is at an average of 35,000 gallons per hour. Two connections 1×8 in., 1×12 in. diameter.

MEDICAL: There is a hospital where crew members may be hospitalised.

WATER: *(Potable or for boilers):*

Small amounts of water (about 30 tons) can be delivered if requested 48 hours in advance.

Water is brought to the port by railroad tank-cars from distant places, and is pumped directly to ships by portable pump.

Water deliveries at Antilla are deficient and not reliable, because on occasions there are no tank-cars available.

Price: $4.83 per ton FOB, delivery rate 15 t.p.h.

Daily delivery rate cannot be determined due to unreliability of transportation.

FUEL: Not available.

PAPER/WOOD DUNNAGE: It is advisable that vessels nominated for operations at Antilla, or any of the ports listed as attended by Antilla Agency, arrive with enough wood dunnage.

Wood dunnage, although not impossible to obtain, sometimes is hard to secure, and to avoid delays it is better to have the vessel supplied at a prior port of call.

Paper is supplied if ordered at least 3 days in advance.

REPAIRS: No repairs can be performed.

DEVELOPMENTS: It is planned to build at this port, among other improvements, a bulk raw sugar shipping plant.

AGENT: Attending the port of Antilla, and the sub-ports of Preston, Nicaro and Felton, also the port of Banes.

Agency Address: Empresa Consignataria Mambisa, Agencia Antilla, Avenida 28 de Enero No. 67, Apartado No. 52, Antilla, Prov. de Oriente. Telephone: 98248 and 98225 (office); 98580 (night). Telex: 21302. Cables: Mambisas Antilla.

Agency VHF works on Channel 16.

Mail and Parcels: Should be sent to the Main Office at Havana from where it will be sent to Antilla by the quickest means possible.

SUB-PORTS:

Distance from Antilla to:

Preston (Guatemala), 7 miles.

Felton, 11 miles.

Nicaro, 14 miles.

To the port of Banes, which is attended by Antilla Agency, 50 km. Highway transportation is used from Antilla to Banes.

Time from Antilla to:

Sub-port	*Launch*	*Highway*
Preston	1 hour	1 hour 45 minutes
Felton	1 hour 30 minutes	2 hours 15 minutes
Nicaro	2 hours	3 hours

There is only a regular launch service from Antilla to Nicaro, leaving daily from coastal pier Antilla at 0900 hrs., arriving Nicaro at 1100 hrs.

(a) SUB-PORT OF PRESTON (GUATEMALA):

LOCATION: This port is located on the North coast of Cuba: Lat. 20° 46′ N., Long. 75° 40′ W.

Preston is one of the 3 ports located within Nipe Bay and is situated on the South coast of said bay, on a peninsula named "Punta Tabaco", S.E. of Antilla.

Traditionally this port has shipped the production of "Guatemala" sugar mill (formerly "Preston") which ranks among the biggest in the sugar industry.

Mayari River flows to the East and close to the port, and maintenance dredging is necessary alongside pier to preserve the depth required.

Dredging is effected at the West side of pier as the East side is not used.

PILOT: From the place where Pilots board the vessels to Preston pier the distance is 6.5 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: As is described under Antilla, up to Pt. Carenero (Saetia), the channel is common to the 3 ports located in Nipe Bay.

On reaching Pt. Carenero, vessels take a course Northwestward in the direction of the buoy marking "La Estrella" Shoal and then take a course W.S.W. up to Preston pier.

On the North side can be seen: Pt. Piedra, Melilla Cove and on the hills the town of Ramon. Pt. Las Chivas and the rest of coast of the bay up to Antilla port and town, which is clearly visible.

On the South side can be seen: The entrance to Cajimaya Cove and Felton town, Pt. Cobos, light buoy No. 5 marking "La Estrella" Shoal, the mouth of Mayari River and lastly the town and port of Preston.

There are no limitations as to vessel's length, and max. draft allowed is 25 ft., which is imposed by pier's depth.

Entrance to or sailing from Preston can be effected during day or night-time, generally without tugboat assistance, except when there is flood tide or wind interference, then tugboat assistance is required.

TIDAL VARIATION: Tidal variation at this port averages from 2.25 ft. to 2.5 ft.

CLEARANCE: See "Antilla". Port Doctor, Immigration and Port Captain travel from Antilla to Preston to give ship's entry. Custom Delegation at this sub-port only occasionally, and in order to avoid delay Preston Hospital Doctor clears the ship.

Vessel can proceed directly to this sub-port, since Port Authorities come from Antilla to give ship's entry.

RADIO: See "Antilla".

TUGS: See "Antilla". No tug available, but can be obtained from Antilla.

BERTHING: Preston pier is located at the Northern extremity of Punta Tabaco.

Its construction is entirely of hardwood, including its piling, and at the moment it is not in good condition and requires rebuilding.

Along the pier run double standard railroad tracks but there is no outlet at pier's end.

Guatemala Pier: (Formerly Preston Pier) Overall length: 1,036 ft. – berthing length: 586 ft. Draft: 25 ft. even keel. No limitations as to vessel's length. Water available, but bunkers not available.

No cargo operations are conducted in the bay.

STEVEDORES: Loading sugar – working period (max. 4 gangs). Monday to Friday: 0700 – 1100/1300 – 1700 hrs. Saturday: 0700 – 1100 hrs. Sunday: No work is performed.

General cargo: No discharging operation is performed at this port.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Raw sugar-loading rate: About 1,330 bags of raw sugar (of the 220-pound type) per 4 hours per gang.

Bags per sling: 6 bags of raw sugar (of the 220-pound type).

Operational capacity: At this sub-port only one vessel at a time can be operated.

Refined sugar: No refined sugar has been shipped by this sub-port.

Equipment: There is one movable shore crane available with lifting capacity of about 60 tons with 75° boom inclination. Boom length 50 ft. Crane is mounted on a railroad flat car which is operated by steam supplied by an adapted boiler. As the greater part of the year this crane remains idle, it is possible that its lifting capacity might have decreased. Five grates, but no thrower machines.

TANKERS: Molasses pumping rate average of 75,000 gallons per hour.

Fuel Oil: 2 connections – 1×8 in., 1×10 in. diameter.

Molasses: 2 connections – 1×8 in., 1×10 in. diameter.

MEDICAL: There is a hospital at Preston which offers very good service to ship's crew. In cases requiring special attention, patients can be taken to Holguin, where there are reliable specialists.

WATER: *(Potable or for Boilers):* Delivered by pipe-line to ships while docked to Preston pier. Delivery rates: During sugar harvesting season, from 5 to 10 tons daily, only during night-time, otherwise from 40 to 50 tons daily, depending upon the pressure on the line.

FUEL: Not available.

REPAIRS: No repairs can be performed at Preston.

TRANSPORTATION: Usually transportation between Preston and Antilla (and other nearby ports) is performed by launch and also by road.

From Preston there are the following distances and travelling time to:

	by launch	*by road*
Antilla	7 miles – 1 hour	1 hour 45 minutes
Nicaro	8 miles – 1 hour	1 hour 15 minutes
Felton	5 miles – 45 minutes	45 minutes

COMMUNICATIONS: Vessels cannot communicate directly with Preston. Means of communications between Felton and Antilla (and other nearby ports) is only by telephone.

Telephone communications are rather irregular and sometimes are the cause of delays in urgent matters.

PORT AUXILIARY EQUIPMENT: This port has no auxiliary equipment.

AGENT: See "Antilla".

(b) SUB-PORT OF NICARO (LENGUA DE PAJARO) LEVISA BAY:

LOCATION: This port is located on the North Coast of Cuba:

Lat. 20° 43′ N., Long. 75° 33′ W. **(See Plan)**

The port of Nicaro is situated inside Levisa Bay, on a small peninsula named "Lengua de Pajaro", located at the Southwestern part of the bay.

Levisa Bay is landlocked, sheltered and moderately ample. Its shores are rather irregular due to numerous points, creeks, coves and inlets. The centre of the bay is free of cays, but close to the coast and around it, there are several cays.

Ample zones of shoals almost entirely cover its extension, except the channels and the anchorage zones.

Nicaro region is very rich in mineral fields and the port is used principally to export the production of the mining enterprise located there.

At the West side and next to Levisa Bay, Nipe Bay is located, and to the East, having a common entrance, which is divided as a fork by Pt. Dos Bahias, is Cabonico Bay.

PILOT: Distance from the place where Pilots board the vessels to Nicaro anchorage is 12 miles, to Nicaro pier 13 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: The entrance channel for the port of Nicaro is difficult for vessels over 350 ft. length, due to its narrowness and because of having sharp turns, some of them forming angles of almost 90°. Also, its bottom and banks are rock and coral. Regarding draft it offers no obstacles as there are about 174 ft. and 47 ft. depths max./min. respectively.

To minimise all risks and perform a fairly safe crossing of the entrance channel, while entering to or sailing from this port, the following measures must be accomplished:

(i) Entrance or sailing to be effected only during daylight hours, at slack water.

(ii) Tugboat assistance is required for vessels exceeding 350 ft. in length.

(iii) Vessel's length should not exceed 500 ft., the extreme max. length allowed, if really necessary, being 513 ft.

(iv) Simultaneous entrance or sailing of 2 or more vessels is not permitted.

Channel is navigable by only one course.

Max. draft allowed to vessels operating at Nicaro pier is 28 ft. forward and 29 ft. aft. (at low tide).

As vessels larger than 350 ft. length require tugboat and it is obtained from the nearby port of Antilla, it is necessary that vessels assigned to perform operations at Nicaro advise their ETA with sufficient time in advance to vessel's arrival.

The restrictions for vessels to sail or enter this port during night-time are due to the port conditions such as: lack of light buoys in the bay and the channel, as well as the inherent dangers in the channel due to its narrowness and its winding shape.

ANCHORAGES: There are two anchorages at Nicaro:

Anchorage No. 1: Located at about 1,200 m. S.W. of Pt. Gorda and 1,500 m. N.N.E. of Raton Cay.

Limitations: Draft: 30 ft. – Vessel's length: 513 ft.

Swinging area: About 200 m.

Can accommodate 1 vessel only.

Soft mud bottom but anchors hold well.

It is open to the winds. Usually vessels anchor with 2 or 3 shackles of chain.

Anchorage No. 2: Located at about 1,000 m. N.E. of pier's head.

Limitations: Draft: 30 ft. Vessel's length: 513 ft.

Swinging area: About 200 m.

Can accommodate 1 vessel only.

Soft mud bottom but anchors hold well.

It is open to the winds, usually vessels anchor with 2 or 3 shackles of chain.

At both anchorages launch service is available at Master's request.

TIDAL VARIATION: Tidal variation at this port averages from 2.25 ft. to 2.5 ft.

CLEARANCE: Although Nicaro, under Cuban Customs Laws and Regulations, is a sub-port of Antilla, all Authorities are located at Nicaro (delegations).

RADIO: Vessels proceeding to Cuba can communicate with Antilla Agency through "CLA" Havana Radio Station which promptly relays the message to Antilla.

Vessels cannot communicate directly with the port of Nicaro.

Masters must send their ETA messages simultaneously to Mambisas Antilla and Mambisas Havana.

Means of communications at Nicaro are:

Long distance telephone, RCA System Radiograms and telegraph.

Telephone communications are rather irregular and difficult, therefore any instruction or sudden change in previous instruction to vessels operating at Nicaro may not be delivered in time.

TUGS: Obtained from port of Antilla. Therefore it is recommended that when vessels are assigned to this sub-port, advice of their ETA be given with sufficient time prior to vessels' arrival. Particulars of tugboats are shown under "Antilla" information.

BERTHING: The place of operation of Nicaro is its pier, a large installation built of reinforced concrete, 690 ft. long, of which, counting from the head of pier, 450 ft. corresponds to the berthing area, and the remaining 240 ft. is the narrow part of pier connecting with the shore, not used for operations.

Along both sides of pier run railroad tracks of standard gauge, and also trucks can operate.

At the South side of pier, mounted on rails, there is a gantry crane.

The boom of the crane is about 50 ft. long and although mounted on the South side, can also operate at the North side, which is not often done because it loses much in efficiency and speed.

The crane is electrically powered and its accessories are: A grab 1.5 tons and another 3 tons capacity, steel slings, special slings for loading nickel, etc. It can lift up to 20 tons.

This equipment, excluding ship's tackle, is the only equipment available for loading or discharging at this port.

Both sides of pier have muddy bottom.

Nicaro Pier.

Overall length: 690 ft. Berthing length: 450 ft.

Max. length allowed to vessels: 513 ft.

No bunkers available.

North Side:

Draft: 26 ft. 6 in. forward and 29 ft. aft.

Kind of cargoes handled by this side: Bagged raw sugar, general cargo, fuel oil, diesel oil and liquid ammonia.

Water available by pipe-line.

Tanker Information:

Liquid ammonia: 2×6 in. diameter.

Fuel oil: 2×8 in. diameter.

Diesel oil: 1×6 in. diameter.

South Side:

Draft: 28 ft. forward and 29 ft. aft.

Kind of cargoes handled by this side:

Anthracite coal, nickel oxide, nickel sinter, bagged raw sugar, general cargo.

Water available by pipe-line.

This side of pier was dredged in 1969.

Port can operate 2 vessels at a time: One dry cargo vessel loading or discharging and 1 tanker vessel.

At the present time the port does not have enough personnel to operate 2 dry cargo vessels at a time.

No cargo operations are carried out in the bay.

STEVEDORES: Loading or unloading of general cargo, nickel, mineral coal, etc., is performed by port workmen of sub-port of Nicaro.

Raw sugar-loading rate. At present, average loading rate in a period of 4 hours per gang, is about 1,330 bags.

Bags per sling (Guatemala sugar): 6 bags of raw sugar (of 220 pound type) per sling. Nicaragua sugar: 6 bags of raw sugar (of 220 pound type) per sling. Sugar bags from sugar mills Guatemala and Nicaragua are transported from respective mills to Nicaro in railroad flat cars, already slung.

Refined sugar. No refined sugar is exported.

General cargo discharging rate. General cargo of a fragile nature and careful handling: about 5 tons per gang hour. General cargo of sturdy nature and easy handling about 20 tons per gang hour.

Bagged cargo: about 30 tons per gang hour.

Mineral coal: at present the shore crane is averaging 110 t.p.h.

Nickel: at an average of 800 bags (26 tons) per gang hour.

Bulk sugar: no bulk sugar equipment available. In those cases when bulk sugar operations are performed, the necessary equipment is obtained from sub-port of Preston.

Working Hours: Sugar: Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs.

Nickel loading and other cargoes: Monday to Friday: 0800 – 1130 hrs.,1230 – 1700 hrs. Saturday: Same periods.

On Sundays the port does not perform any work, except discharging of tanker vessels.

Labour legislation presently in force provides that the numbers of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

TANKERS: No molasses or alcohol re-loaded. Only fuel oil, liquid ammonia and gas oil are discharged. Average discharging of fuel oil at present is about 400 t.p.h. Liquid ammonia discharge averages about 27 metric t.p.h.

MEDICAL: Hospital at Nicaro offers good service to ships' crew members. In case of special attention, the patient can be taken to Holguin, where there are reliable specialists.

Dental care is available at Levisa, 6 km. distant.

WATER: *(Potable or for boilers):* It is supplied to vessels while docked to Nicaro Pier (both sides). Average delivery rate: 30 t.p.h.

Water is usually delivered by night in order not to disturb the Nickel Plant production, although, occasionally it is delivered during the daytime. Vessels must furnish the hoses.

FUEL: Not available.

REPAIRS: There is no repair shop at this port.

DISTANCES: The nautical distance between Nicaro and Antilla for vessels drawing over 6 ft. draft is 24 miles. For small craft drawing less than 6 ft. the distance is 14 miles. By highway, 130 km. from Nicaro to Antilla.

Sea transportation takes 1 hour 45 minutes, and highway 2 hours 30 minutes. There is a daily launch service between Nicaro and Antilla. Launch leaves Antilla 0930 hrs. arriving at Nicaro at 1130 hrs. and a launch leaves Nicaro at 0930 hrs. arriving at Antilla at 1130 hrs.

AUTHORITY: Sub-port of Nicaro is under Antilla Custom House jurisdiction. There is a Custom House Delegate at this sub-port, who acts as a Delegate of the Captain of the Port.

Vessels at Nicaro are handled by personnel of Antilla offices who visit Nicaro, and are located at Oficina de la Marina, Tel. 216. In case this office is closed, these personnel could also be contacted through Customs House telephone of Nicaro.

AGENT: Antilla Agency personnel attend. Agent has a small office, close to the pier, telephone number 62.

(c) SUB-PORT OF FELTON:

LOCATION: This port is located on the North Coast of Cuba: Lat. 20° 44′ 45″ N., Long. 75° 35′ 40″ W. **(See Plan)**

Felton, as are Antilla and Preston, is located in Nipe Bay and is the closest port to the Bay entrance.

It is located 1.75 miles to the S.W. of Saetia, just in Cajimaya Cove and 3 miles East of Preston.

At the present time this port mainly handles the importations of raw materials for the fertiliser plant in the vicinity of the port.

PILOT: From the place where Pilot boards the vessel to Felton Pier there is a distance of 5 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: As described under Antilla, up to Pt. Carenero (Saetia), the channel is common to the three ports located in Nipe Bay.

On reaching Pt. Carenero, vessels turn course Southward seeking Felton Channel and after four changes in the pilotage route the port is seen.

The most remarkable points of visual orientation after Pt. Carenero is sailed past, are:

On the East side: Saetia Cay, Points Campeador No. 1, 2 and 3; light buoys Nos. 1-A and 3-A (green light) and the unlit buoys indicating the port channel.

On the West side: Pt. Cobos, Pt. Largo, the town of Felton and the unlit buoys marking the channel.

Entrance to the port up to Cajimaya Anchorage can be effected either in day or night-time, but docking or undocking is performed only during daylight hours, if it is not windy.

Limitations as to draft and length of vessels are those imposed by the place of operation or Cajimaya Anchorage. Anchorage for this port is Cajimaya Anchorage, but Saetia Anchorage can also be used.

TIDAL VARIATION: Tidal variation at this port averages from 2.25 ft. to 2.5 ft.

CLEARANCE: Vessels can proceed directly to Felton, as Port Authorities from Antilla are taken by launch to visit vessel at Felton pier, or at sea in Cagimaya Anchorage.

RADIO: Ships can communicate with Felton by wireless via CLA, but it is recommended that ETA messages be given to Mambisas Antilla and Mambisas Havana simultaneously.

The means of communication between Felton and Antilla are telephone and telegraph.

BERTHING: The place of operation of Felton is a solid coastal-pier built of concrete, although vessels are not docked directly at it.

Vessels are berthed to 3 solid steel dolphins, the first and the third being spaced 350 ft. apart.

Dolphins are located at about 50 ft. from the side of the pier and therefore vessels are 50 ft. off the pier.

Pier is located at the East side of that portion of land on Nipe Bay and runs from North to South.

Besides the three solid dolphins, vessels are secured also to two mooring buoys located 250 m. to the West, in front of and parallel to the pier.

There is an electric shore crane mounted on rails that runs along the pier, which is used mainly for the discharge of bulk raw materials for fertilisers, with a 4 ton grab. If the grab is removed the crane is capable of lifting up to 40 tons, and can be used for the discharging of heavy equipment, such as tractors, bulldozers, etc. This crane has a wide field of operation.

Also in operation at this port is a device called "Unicular", a kind of hopper-car, which runs on rails from the hatch of the vessel to the pier, and is loaded by ship's gear to its full capacity of 3 tons.

Taking into consideration the characteristics of pier, the manoeuvring basin and the approach channel to place of operations, the following regulations must be followed:

Vessels up to 500 ft. length:

Can dock without tugboat assistance, during daylight hours, if the wind and sea do not interfere with the manoeuvres.

Same conditions for undocking.

Maximum draft allowed 28 ft.

Vessels longer than 500 ft. and up to a maximum of 557 ft. length:

(a) Assistance of tugboat, of 750 h.p. or more, is required.
(b) Vessels must dock with bow facing North.
(c) Docking must be effected during flood tide.
(d) Condition of sea and wind at the time of docking must be taken into consideration in order to avoid interference of wind and sea with the manoeuvres.
(e) Maximum draft allowed is 26 ft. or 27 ft., depending on the type of vessel, its manoeuvrability, etc.

Tanker Information: Fuel oil: 1×8 in. diameter.

For discharging fertiliser raw materials or fuel oil, 24 hours a day are worked, Saturdays and Sundays included. For general cargo, when occasionally discharged, from 0700 hrs. to 1500 hrs. Monday to Saturday. Berthing space of this port only permits operating 1 vessel at a time.

No cargo operations conducted in bay.

MEDICAL: There is a small hospital at Felton where crew members requiring medical and dental care are attended.

Cases requiring surgical or specialised treatment, are sent either to Mayari Hospital or Lenin Hospital, at Holguin.

FRESH WATER: Temporarily no water available at Felton.

FUEL: Not available.

REPAIRS: Cannot be performed at this port.

TRANSPORTATION: Usual means of transportation between Felton and Antilla, and other nearby ports, is by launch and also by road.

From Felton there are the following distances and travelling time to:

	By launch	By road
Antilla	11 miles – 1 hr. 30 min.	2 hrs. 30 min.
Nicaro	3 miles – 30 min.	50 min.
Preston	4 miles – 40 min.	1 hr.

DEVELOPMENT: Specialised fertiliser unloading equipment to be introduced at port.

AUTHORITY: The Port Authorities are located at Antilla and visit Felton as necessary.

AGENT: See "Antilla". Mail should be sent through Antilla's main office by registered mail. Spares by railway express to Antilla.

BANES: 20.54 N. 75.41 W.

LOCATION: Banes is located on the North coast of Cuba: Lat. 20° 53′ N., Long. 75° 40′ W.

Banes is a sheltered, land-locked port located next and to the West of Nipe Bay.

Traditionally this port used to ship raw sugar and molasses, that is, the production of "Nicaragua" sugar mill, formerly "Boston".

Due to limitations imposed by the characteristics of this port to the length of vessels, and the constant increase in size and tonnage of vessels operating currently in Cuba, gradually the port lost its use and importance, and nowadays is only used for coastal trade.

While approaching Banes, the points of visual orientation are:

Banes Bay Light, shown from a red iron skeleton structure, 30 ft. above sea level, situated about 400 yds. Southward of Pt. Fuerte. A small house located on the Southern side of the entrance to bay, and the port entrance itself, cliffs at both sides and forming a remarkable canyon.

Banes port mouth lighthouse is located on the Western extremity of Caracolillo Beach, between Pt. Fuerte and Pt. Penasco.

At the extremity of Pt. Penasco there is a masonry house, visible up to 2 or 3 miles away.

PILOTAGE: Vessels should pick up Pilot at 20° 53′ N., 75° 29′ W., 1 mile N.E. of Banes Canyon Lighthouse. Pilot station located at Embarcadero (Banes). Agent informs Pilot of ship's arrival by means of local telephone. Distance from point where Pilot boards vessel to pier is about 6 miles.

RESTRICTIONS: Entrance is through narrow channel with sharp turns where there is a strong current. For this reason vessels can only enter on slack water tide and during daylight. Assistance of tug necessary for entering and sailing. Bottom and banks are rock and coral. Depth about 60 ft.

MAX. SIZE: Max. length due to characteristic of channel is of 360 ft. Due to insufficient water at pier, and in bay, ships are limited to draft 19 ft. forward and 23 ft. aft.

Average of about 2 ft. 4 in. between high and low tides.

ANCHORAGES: *Macabi Anchorage:* Located S.S.W. of Nicaragua Pier.

Limitations: Max. draft 31 ft., max. length 360 ft. Swinging area: About 620 m.

Anchorage can accommodate 2 or 3 vessels.

Bottom is soft mud but anchors hold well and vessels anchor with 3 or 4 shackles of chain.

TUGS: At present no tug available, but when needed same is requested from Antilla. Particulars of tug shown under Antilla information.

RADIO: Ships can communicate with port by wireless via CLA, but recommended that ETA message be sent to Antilla Agency, simultaneously advising Mambisas Havana.

MEDICAL: There is a hospital where sick crew members may be hospitalised. Dental care is also available.

BERTHING: Nicaragua Pier (formerly Banes Pier): Length 240 ft., max. length allowed to vessels 360 ft., draft 19 ft. forward and 23 ft. aft.

The pier is built entirely of wood and in need of repairs.

Only 1 vessel can be berthed.

At the present time only cargo handled is the discharge of fuel oil (coastal trade).

Tanker Information: Fuel oil: 1×8 in. diameter.

No cargo operations performed at anchorage.

STEVEDORES: *Working Periods:* For discharge of fuel oil: 24 hours a day, 7 days a week.

Dry cargo vessels operate Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs. Sunday: No work performed.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday; and 4 hours on Saturday, for a total of 44 hours weekly.

FRESH WATER: Fresh water supplied, delivered by 3 in. diameter pipeline, with average delivery 4 t.p.h.

FUEL: Not available.

REPAIRS: No repairs can be effected at this port.

TRANSPORTATION: Transportation between Nicaragua Pier and Antilla or Banes is by road. From the pier to Banes there is a distance of 15 km. and to Antilla 50 km.

COMMUNICATIONS: Only means of communications between Antilla and Banes are telephone and telegraph.

PORT AUTHORITIES: All Port Authorities are located at Antilla except Port Captaincy which is located at Banes.

Authorities travel from Antilla to clear vessels at Banes.

AGENT: See "Antilla".

For information regarding ship's operations, Antilla Agency should be contacted. Antilla office personnel travel to Banes to attend vessels operating there. Any mail should be addressed to Antilla Agency. Spare parts by railway express.

BARACOA: 20.21 N. 74.30 W. (See Plan)
(and sub-ports of Moa and Punta Gorda)

LOCATION: This port is located on the North coast of the extreme Eastern portion of Cuba in Oriente Province:

Lat: 20° 21′ N., Long: 74° 30′ W.

Its bay is fan shaped and is almost in its entirety sand and mud bottom, 325 yds. in width at its entrance, and opens out to 1,150 yds. in a N.W. and S.W. direction, and 800 yds. in breadth.

Its shores are bordered by sand banks.

"Buren", an isolated rock visible only at low tide, lies about 30 yds. North-Westward of Pt. Barlovento; the sea always breaks on it; it is steep-to and constitutes the only danger.

S.E. of the town is Miel Bay where excellent anchorage is available.

PILOTAGE: Pilots board vessels 2 miles off port. Pilot station located in Baracoa City. Distance from point where Pilots board vessels to operation place (anchorage) is about 2 miles.

RESTRICTIONS: Vessels can enter port only during daylight.

MAX. SIZE: Entrance channel straight – without turns. Vessels up to 400 ft. length and 28 ft. draft can enter through Channel. Two to 3 ft. rise of tide.

TUGS: Not available.

STEVEDORES: No pier at this port. Vessels anchor in bay for operations. Several barges, capacity 100 tons.

Only one vessel can be handled at a time.

Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

Labour legislation presently in force provides that the number of hours to be worked is 8 hours daily, from Monday to Friday, and 4 hours on Saturday, for a total of 44 hours weekly.

Discharge rate: about 80 tons daily per gang.

RADIO: Vessels navigating to Baracoa can communicate with the Port Agency through "CLA" Havana Radio Station which relays the messages promptly to Baracoa.

Masters must send their ETA messages simultaneously to Simon Baracoa and Mambisas Havana.

MEDICAL: There is a general hospital for sick crew.

FUEL/FRESH WATER/REPAIRS: Not available.

TRANSPORTATION: Transportation to and from Baracoa is difficult.

There is daily air service and also bus service to Moa and other towns in the province, but best advisable means of travel is by car.

AUTHORITY: Port Authorities located at Baracoa. They have Delegation at Sub-port of Moa.

AGENT: See "Moa".

(a) SUB-PORT OF MOA (Moa Bay): 20.41.15 N. 74.52.30 W. (See Plan)

Vessels can proceed directly to sub-ports of Moa and Punta Gorda where they are visited by Customs Authorities.

LOCATION: The port of Moa is situated in the rear part of Yaguasey Bay, where in an artificial inner harbour lies the pier of Moa, and at the entrance of the inner harbour a small coastal trade pier.

Both the port of Moa and the sub-port of Punta Gorda mainly handle the imports and exports of the huge mining enterprise, Major Pedro Soto Alba.

PILOTAGE: Pilots board vessels at Moa Port mouth which is distant about 2 miles from entrance. Pilot station located at Punta Gorda at distance of about 5 miles from port entrance. Distance from point where Pilot boards vessel to Darsena de Moa (pier) is about 4 miles; to Moa Anchorage about 2 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Entrance channel to Moa is almost straight having two very slight turns, minimum depth on its course is 40 ft. and length and draft limitations to enter to or sail from this port are those imposed by Moa pier and inner harbour:

Draft: Vessels drawing 28 ft. 6 in. can enter/sail at any tide, those drawing more than 28 ft. 6 in. up to 30 ft. only at high tide.

Length: 500 ft.

Channel bottom from its head up to the pier is as follows: From the head to Grande or Del Medio Shoal, coral and rocks; then up to Yaguasey Bay, coral and mud; and on its final stretch to the pier, hard red mud.

Length of channel: 1,560 m.; minimum width 200 m. and maximum 720 m.

For both, Moa and Punta Gorda, entrance to or sailing from, can only be performed during daylight.

As tidal currents average only 1.25 m.p.h., and since the inner harbour is almost devoid of currents, it is not necessary to wait for slack water for entering, sailing or crossing the channels.

Approaching the port of Moa, at both sides of port entrance, strings of breakwaters can be seen.

Behind the Western side breakwater, Moa Grande Cay is conspicuous and a lighthouse rises at about the middle of its North coast.

ANCHORAGES: Moa: *Anchorage No. 1:* Located Northward of Fabrica River and S.E. of Pt. Pajaros: Lat. 20° 40′ 38″ N., Long. 74° 53′ 10″ W.

Minimum depth: 38 ft. Swinging area: 250 m.

Anchorage No. 2: Located Northward of Fabrica River and South of the Eastern extreme of Moa Grande Cay: Lat. 20° 40′ 35″ N., Long. 74° 53′ 28″ W.

Minimum depth: 37 ft. Swinging area: 250 m.

Anchorage No. 3: Located N.W. of Del Medio Shoal: Lat. 20° 40′ 32″ N., Long. 74° 54′ 04″ W.

Minimum depth: 68 ft. Swinging area: 300 m.

Anchorage No. 4: Located Northward of Del Medio Shoal: Lat. 20° 40′ 43″ N., Long. 74° 52′ 30″ W.

Minimum depth: 41 ft. Swinging area: 250 m.

Although above anchorages are listed under the port of Moa, they can be used if necessary, for shipping or unloading cargoes destined to Punta Gorda.

TIDAL VARIATION: Tidal variation at these ports averages 30 in.

TUGS: Tug used at Moa for docking. Tug operated by Mining Enterprises.

RADIO: There is a Government Radio Station at Moa.

Vessels navigating to Cuba can communicate with Mambisas Moa through "CLA" Havana Radio Station and the message will be relayed to Moa by telegraph or telex.

Masters must send their ETA messages to Moa or Punta Gorda, simultaneously to Mambisas Moa and Mambisas Habana.

BERTHING: *(a) Moa Pier* (Also known as Moa Darsena): It is a solid concrete construction in an artificial inner harbour. Berthing length: 308 ft. Max. length permitted to vessels: 500 ft. Draft: Vessels drawing 28 ft. 6 in. can enter/sail at any tide, those drawing more than 28 ft. 6 in. up to 30 ft. only at high tide.

Due to pier dimensions, only 4 hatches can be worked at a time, but despite above limitations, occasionally larger vessels have been operated.

Cargo handled by this pier: Importation: Bulk sulphur, empty ore containers, occasionally general cargo.

Exportation: Nickel and cobalt concentrate in containers and drums.

Coastal trade: Discharge of fuel oil, diesel oil, kerosene, gasoline, sulphuric acid.

Tanker Information: Mining Enterprise: Gasoline/kerosene: one connection 6 in. diameter. Fuel oil: 4 connections 8 in. diameter.

ICP: Gasoline/kerosene/diesel oil: one connection 6 in. diameter.

(b) Coastal Trade Pier: It is a small coastal pier for small vessels, located at the entrance of the inner harbour. Constructed of piles and filled with earth.

Cargo handled by this pier: Coastal trade, general cargo.

No cargo operations in the bay.

STEVEDORES: *Working Hours:* Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs. Saturdays 0700 – 1100 hrs.

EQUIPMENT: 1 shore crane 30 tons with 3 tons grab; 4 contact grabs; 2 trucks 30 tons capacity each; 1 pay loader; 2 fork lift trucks; 1 stationary crane; 1 steel barge 500 tons capacity; 1 tugboat (2 diesel engines 180 h.p. each).

Loading/discharging operations: Raw material for the nickel plant is imported as well as fuel oil. Nickel concentrate is exported.

Loading/discharging rate – Nickel (in containers): loaded at a rate of approximately 30 tons per hour-gang.

MEDICAL: Industrial Hospital where crew members can be hospitalised. General Hospital at Baracoa.

FUEL: Not available.

FRESH WATER: Delivery at rate of about 10 t.p.h.

REPAIRS: There are machine shops at nickel plant where small emergency repairs can be performed.

AUTHORITY: Port Doctor, Customs and Port Captain Delegations at this sub-port. Immigration Delegate is the same one who attends vessels at Baracoa and other sub-ports. Vessels can proceed directly to Moa where they are cleared by Port Authorities. Means of transportation from Baracoa to Moa or other sub-ports are: air, launch and overland (jeep). Customs House inspectors travel from Moa to Baracoa.

Baracoa to Moa about 32 miles distant. Following services used: by plane, 20 minutes; by launch, 6 hours; by jeep, 5 hours. Daily flights and regular bus services.

AGENT: Empresa Consignataria Mambisa, Agencia Moa, Reparto "Rolo Monterrey" No. 163, Moa, Prov. de Oriente. Telephone: 7527 (day) 7105 (night). Telex: 021123. Cable: Mambisas Moa.

(b) SUB-PORT OF PUNTA GORDA: 20.38.30 N. 74.51.15 W.

(See Plan)

LOCATION: Punta Gorda is located at about 3.5 miles East of Moa and consists of an anchorage where loading is effected by means of barges.

APPROACHES: Entrance channel to Punta Gorda is the same as for Moa, and once the first stretch of it up to Del Medio Shoal is sailed past, it turns to the East, following a winding course, having four turns. The turns themselves are difficult but what makes them really dangerous is the lack of proper buoying and navigational signals.

Maximum width of channel is 300 m. and minimum 200 m. Maximum length and draft to enter to or sail from Punta Gorda are as follows: Length: 442 ft.; Draft: 28 ft.

RESTRICTIONS: Vessels can enter only during daylight.

PILOTAGE: Pilots board vessels at Moa port mouth. Pilot station located at Punta Gorda at a distance of about 5 miles from port mouth.

Distance from point where Pilot boards vessels to the anchorage (loading place) is about 4.5 miles.

ANCHORAGES: Located North of Punta Gorda and East of Pt. Yagrumage.

TUGS: One tug which tows 1 or 2 barges as necessary. Work performed day and night.

RADIO: Through Simon – Baracoa by Inalambrica (cable).

LOADING: *Punta Gorda Anchorage:* Located North of Punta Gorda and East of Pt. Yagrumage: Lat. 20° 38′ 55″ N., Long. 74° 51′ 13″ W.

Minimum depth: 31 ft. Max. draft allowed to vessels: 28 ft. Max. length allowed to vessels: 442 ft. Swinging area: 300 m.

Vessels operating at Punta Gorda load their cargo by means of barges.

Only cargo handled at this anchorage is loading of bulk refractory chromium.

STEVEDORES: Chrome, at average loading rate of 1,000 tons (approx.) per day of 24 hours. Loading operations carried out at anchorage. There are 2 wooden barges 130 tons capacity each; 1 tugboat; 2 trucks 10 tons capacity each; 1 pay loader; 1 shore crane.

MEDICAL: No hospital at Punta Gorda. Crew members can be attended to at Moa or Baracoa Hospital.

FUEL/REPAIRS: Not available.

FRESH WATER: No water available at anchorage but can be supplied at Moa pier (Darsena).

AUTHORITY: Customs Delegation at this sub-port. Vessels can proceed directly to Punta Gorda. Port Authorities from Baracoa travel to Punta Gorda for clearance. Moa Port Doctor clears vessels at Punta Gorda. From Baracoa to Punta Gorda, following ways of transportation used: air, launch and overland, which takes 20 minutes, 5 hours and 4.5 hours respectively. No regular transportation.

AGENT: See "Moa".

CAIBARIEN: 22.32 N. 79.28 W.

LOCATION: This port is located on the North coast of Cuba: Lat. 22° 32′ N., Long. 79° 28′ W.

Port operations are effected at Cay Frances Anchorage, 16 miles from the City of Caibarien.

In rough weather, operations are generally suspended, because it is not possible for the lighters to remain alongside ship.

In spite of the fact that all cargo operations are effected by lighterage, this port is most efficient and very often surpasses the cargo rates of other ports.

PILOTAGE: Pilots board vessels 0.5 mile from Catalina buoy (entrance) of Cay Frances anchorage. Pilot station located at Cay Frances at place known as Punta del Asta. Usual means of communication is radiotelephone, which is available at Port Captain's Office in Cay Frances, close to pilot station. Advice also given by motor-launch.

Distance from point where Pilots board vessels to:

Inner anchorage (La Caldera)	–	2 miles
Outer anchorage (La Poza)	–	0.5 mile
Outer anchorage (Port Buoy)	–	at same place where Pilots board vessels.

ANCHORAGES: Cay Frances anchorage easily accessible, free of shoals and reefs. Bottoms at anchorage "Caldera" and "Poza" are mud and sand. Bottom at third anchorage (port buoy anchorage) is stone, but free of reefs.

Cay Frances Light, group occulting white, visible 8 miles away, stands on an iron skeleton structure 36 ft. high, on the Western end of the Cay.

Vessels can enter or sail Cay Frances anchorage with any length and with max. draft up to 35 ft. When vessels draw less than 20 ft. they proceed to inner anchorage (La Caldera): over 20 ft. and up to 26 ft. to the outer anchorage (La Poza); and those over 26 ft. proceed to third anchorage (port buoy).

Following regulations must be observed during vessels stay at Cay Frances Road:

(1) Vessels arriving with draft of 19 ft. 6 in. or less:

(a) All ships arriving with draft of 19 ft. 6in. or less must proceed to inner anchorage and remain in this anchorage until reaching draft of 20 ft. even keel.

(b) Any Master refusing proceed to inner anchorage with draft of 19 ft. 6 in. or less, incurs penalty of extra charge of about 7 cents on each bag of sugar delivered in port (payable to crew of sugar barges employed in transportation of cargo from shore warehouse to anchorage at Cay Frances).

(2) Shifting or changes of anchorages:

(a) Vessels must remain at place where official Pilot orders anchoring.

(b) Not permitted to shift or change from place indicated by official Pilot of the port without authorisation from Custom House Officer-in-charge on board the vessel. All shifts and changes to be done only under supervision and command of local Pilot.

(c) Master will notify Custom House Officer on board when shiftings or changes of anchorage places required.

In event aforementioned orders not followed or observed by Ship's Master and/or ship's officers, a penalty or fine minimum $500 (five hundred dollars) will be charged to the vessel, and will have to be paid by Master prior to departure from this port. Besides penalty, no cargo will be delivered to ship anchored in any other place, other than indicated by local Pilot.

Tidal variation averages 2 ft.

Vessels can enter during day and night-time.

RADIO: Means of communications between Caibarien and Cay Frances is radiotelephony.

Several tugboats operating at this port are also equipped with radiotelephony; likewise stevedores enterprise, Port Captaincy and the molasses reservoir (Ponton San Pascual).

The official radiotelephony hours of communication are: 0800 – 0900, 1100 – 1400 and 1600 hrs., but after these hours, other communications can be established, upon request.

At Caibarien there are the following means of communication: National wireless telegraphy, telegrams, long distance telephone and Post Office.

Mambisas Caibarien Agency is connected with the National Telex System and this is the best means of communication with this port.

Vessels navigating to Cuba can send their messages to Caibarien through "CLA" Havana Radio Station which relays the messages promptly to Caibarien.

Masters must send their ETA messages simultaneously to Mambisas Caibarien and Mambisas Havana.

Pilot VHF works on Channel 16.

TUGS/BARGES: It is not necessary to use tug for entering/sailing, but following tugboats used for towing barges.

Tug Name	*Length*	*Speed*	*H.P.*
Gonzalez Lines	75 ft.	8/9 knots	250
Cmdte. Fajordo	55 ft.	8/9 knots	300
Jose Marti	60 ft.	8/9 knots	180

BARGES: Following barges available:

Name	*Capacity Bags*	*Capacity Approx. Long Tons*
Transporte No. 1	2,860	328
Transporte No. 4	2,860	328
Transporte No. 3	2,860	328
Transporte No. 8	2,860	328
Transporte No. 10	2,860	328
Transporte No. 11	2,860	328
Patana Punta Alegre No. 1	2,860	328
Patana Cadagua	2,860	328
Patana Victoria	2,860	328
Patana Americana No. 2	3,640	417
Patana Miriam Lourdes	2,080	240
Lanchon Antonio	2,080	240
Lanchon Marcelo	2,080	240
Lanchon Emilio	2,080	240
Lanchon Armando	2,080	240
Lanchon Dolores	1,040	120
Lanchon Juanita	1,040	120
Lanchon Laura	845	97
Lanchon Marianela	845	97
Lanchon Gloria	715	82
Lanchon Elvira	680	78
	45,945	5,163

STEVEDORES: Sugar working periods: Monday to Friday 0700 to 1100 hrs. and 1300 to 1700 hrs. Saturdays 0700 to 1100 hrs. Sunday, no work is performed unless urgent.

Although bagged raw sugar is reported as an exportation product of the port, for the last 2 years no sugar has been exported through Caibarien.

Loading rate: About 1,000 bags of raw sugar per gang-period. For each gang, not less than 1,950 bags are placed alongside vessel for each 8 hours working period.

For vessel able to make faster reception, it is possible some days for about 3,000 bags to be loaded.

Bags per sling: 5 bags per sling loaded.

Work capacity: 2 vessels can be operated simultaneously.

General cargo: Only empty jute bags imported and discharging rate approx. 20 tons per gang hour.

TANKERS: Only blackstrap molasses exported by this port. When tankers arrive drawing less than 20 ft. or in ballast, they dock at Pontoon or Hulk *San Pascual*, proceeding generally to complete at another port.

On other occasions they are shifted from Pontoon (Hulk) *San Pascual*, to outer anchorage "La Poza" where they complete cargo which is delivered by barges.

Average pumping rate 55,000 gallons per hour.

MEDICAL: There is a hospital at Caibarien for sick crew members.

BUNKERS: No bunkers available.

FRESH WATER: No water available.

DUNNAGE: No wood available, paper available if requested well in advance.

REPAIRS: Minor repairs only. Repair shops at Caibarien, but due to distance from Caibarien to Cay Frances, it is difficult and expensive to perform repairs.

TRANSPORTATION: Transportation means to and from Caibarien are poor, although railroad and bus services are available.

Best means of transportation is by train or bus to Santa Clara and from there transportation is available to any place or city.

AUTHORITY: All port authorities located at Caibarien 16 miles from Cay Frances anchorage, where they travel by launch or motor-boat to clear vessels.

AGENT: Empresa Consignataria Mambisa, Agency Caibarien, Avenida 9 No. 601, Apartado No. 72, Caibarien, Prov. de Las Vilas. Telephone: 3706 (office) 3859 (night). Telex: 041224. Cable: Mambisas Caibarien.

As Caibarien has no air mail or air express service, all mail and parcels should be sent to the Havana main offices from where it will be relayed by the quickest means to Caibarien.

CARDENAS: 23.03 N. 81.12 W. (See Plan)

Cardenas is the Northernmost port of Cuba being in a large bay 9 miles wide N.W. to S.W. and from 6 to 10 miles long from West to East.

It is a shallow bay with muddy bottom.

PILOTAGE: Pilots board vessels in vicinity of Cayo Piedras.

Pilot station at Cardenas. Distance from where Pilot boards to the pier is 16 miles, and to Cayo Diana 6 miles.

APPROACHES: Entrance to port is effected between Mono Cay and Piedras Cay.

The channel head is located at a point almost equidistant to Blanco Cay and the end of Hicacos peninsula, but closer to the latter.

It is an artificial channel but it has no narrowness and no turns.

Its bottom is rock, sandy at the head and for the first mile, and muddy all the rest of its course.

In front of the pier the channel opens in the shape of a funnel forming around it the inner harbour or basin.

Approaching Cardenas, the most conspicuous points of visual orientation are:

Piedras Cay lighthouse which stands 78 ft. above high tide, a stone cylindrical construction on a white building, its white light visible up to a distance of 14 miles.

Southwestward of Piedras Cay the long ribbon of white sands of Varadero Beach can be seen, and in the background the hotels and buildings.

To the S.E. Diana Cay lighthouse, a 38 ft. high metal tower and the string of cays such as: Chalupa, Romero, Blanco, etc.

RESTRICTIONS: Considering that from the place where Pilots board the vessels up to the pier or vice-versa takes about 4 hours, including manoeuvres, vessels must commence manoeuvres to enter or sail from this port at least 3 hours before dusk. Vessels are allowed a maximum length of 560 ft., max. draft of 20 ft. 6 in. at any tide, and 22 ft. at high tide. Tidal variation averages 2 ft.

In case of large vessels, it is necessary to wait for slack water for crossing the channel stretch known as Buba Channel, about 2 miles long, between Buba and Diana Cays.

ANCHORAGES: *Bay Anchorage No. 1:* Located 1.25 miles Northward of pier, about a mile in extension and a draft of 15 ft.

Bay Anchorage No. 2: Located 2 miles Northward of pier, about a mile in extension and a draft of 15 ft.

Poza Diana Cay Anchorage: Located about 7 miles from pier, about 1.25 miles in extension, draft 30 ft.

Los Meritos Anchorage: Located about 12 miles from pier, about 1 mile in extension, draft 23 ft.

Piedras Cay Anchorage: Located 16 miles from pier in the open sea, unlimited swinging area, draft 40 ft.

RADIO: Vessels navigating to Cuba can communicate with Mambisas Cardenas through "CLA" Havana Radio Station which immediately relays the messages to Cardenas.

While navigating in Cuban waters approaching Cardenas, vessels can communicate by radiotelephone with "CLW" Cardenas Radio Station at 2760 kHz.

Masters must send their ETA messages simultaneously to Mambisas Cardenas and Mambisas Havana.

TUGS: Normally tug not required to assist berthing, but when vessels have to berth head to shore, assistance of tug is necessary.

BERTHING: The only place of operation at Cardenas is its pier.

It is of solid reinforced concrete construction having double standard railroad tracks along the length of pier, on each side. It is also well paved and trucking operations can be performed alone or in combination with railroad operation.

Railroad cars do not interfere with cargo operations, as once emptied they can be carried out by shifting them to the second track or by going around the pier by the opposite side.

Tankers discharging fuel can be operated at either side or at the pier head.

There are 3 fresh water intakes on each side and 1 at the head of the pier.

Pier is capable of operating 5 vessels at a time, that is: 4 regular size vessels, 2 at each side, and a tanker at the head.

Both sides of pier are of equal length and have same facilities, being at the N.W. and the S.W. sides.

Cardenas Pier:

Length 319 m. (1,014 ft.), width 80 m. (262 ft.), draft alongside 24 ft. Max. draft allowed for vessels' operations 20 ft. 6 in. at any tide, 22 ft. at high tide.

The dock has space to dock 4 vessels (2 at each side) and a small size vessel at the head of pier, but personnel available at present time is enough for working only 1 dry cargo vessel and a tanker vessel discharging fuel oil. Dredging of the port has recently been completed and there is a plan to increase port personnel

No operations at bay or anchorage performed at this port.

STEVEDORES: Export of refined sugar and alcohol. Port has the following auxiliary equipment: 1 shore crane, 3 fork lift trucks, 4 conventional tractors, 3 rail tractors.

Working periods: loading sugar from Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.; Sunday: no work performed.

When vessel does not achieve daily rate during regular hours, work is carried out from 1900 to 2300 hrs.

Raw sugar loading rate: about 1,138 bags (of the 220-pound type) loaded per 4 hours per gang. This is not a fixed rate but when exceeded stevedores to be paid extra. Bags per sling: 4 bags of raw sugar (of the 220-pound type) loaded per sling.

Refined sugar: about 2,500 bags (of the 100-pound type) or 2,272 bags of 50 kilos, loaded per 4 hours per gang period. This is not a fixed rate, but when it is exceeded an additional payment must be made. Bags per sling: 12 bags (of the 50-kilo type and 100–pound type) loaded per sling.

Bulk: Only grates are available for loading bulk sugar.

TANKERS: Discharge of fuel oil: There are 4 intakes at the pier:

Two at North side, 1 at the head and 1 at South side.

Pipe-lines 8 in. and all connections 6 in. in diameter.

MEDICAL: Cardenas General Hospital and a clinic.

FRESH WATER: Pier has 7 water intakes connected to a water reservoir which is supplied by tank-trucks and/or railroad tank-cars.

Delivery rate: 20 t.p.h.

Daily delivery rate dependent upon transportation available.

FUEL: Not available.

REPAIRS: No repair shop at this port.

DUNNAGE: No wood available. Paper available if requested well in advance.

TRANSPORTATION: Transportation to and from Cardenas is good.

To Havana there are scheduled bus departures about every 2 hours, to Varadero every 30 minutes, and also several departures to Sagua la Grande, Isabela and other nearby cities.

AUTHORITY: All port authorities located at Custom House building.

AGENT: Consignataria Mambisa, Agencia Cardenas, Calle 2 entre Cespedes y Ave. 2da., Apartado No. 2847, Cardenas, Prov. de Matanzas. Telephone: 306 (office); 4264 (night). Telex: 052168. Cables: Mambisas Cardenas.

All urgent mail and parcels should be sent to our main offices at Havana from where it will be relayed to Cardenas by the quickest means possible to ensure prompt delivery.

Ordinary and non-urgent mail or parcels can be sent directly to Mambisa's Cardenas Office.

CIENFUEGOS: 22.09 N. 80.27 W. (See Plan) (including sub-ports of Casilda (Port Trinidad) and Tunas de Zaza)

LOCATION: Cienfuegos Bay, by its natural characteristics, offers ample protection for vessels within port premises. It is about 10 miles long, from North to South and 3 miles wide, from East to West, surrounded by high ground and mountains.

The Coastal outline is rugged inside the bay, due to numerous points and creeks and at the widest part of the bay, to the N.W., is the city of Cienfuegos and some of the port's installations, and further, to the North of the city, the remainder and most modern of the port installations.

PILOTAGE: The Pilot boards the vessel at 0.5 miles S.W. of Los Colorados lighthouse at the following geographical position:

Lat. 22° 01′ 33″ N., Long. 80° 26′ 53″ W.

From this place to the different places of operation of the port there is a distance of 7 to 8 miles.

Pilot station is located at Jagua Castle, on the West coast of the bay, just in front of and to the West of Pasa Caballos Point.

Pilot service is available 24 hours daily and they have a 24 hours watch, and advice of arriving or sailing ships is announced by a semaphore station.

ENTRANCE TO PORT/CONDITIONS: Entrance to port is performed by a channel which begins between the points of Los Colorados and Sabanilla and runs for 3 miles up to La Milpa Point. From La Milpa the channel continues toward the interior of the bay firstly by the South and afterwards by the West of Carenas Cay up to the General Anchorage.

From the General Anchorage vessels can proceed either to the piers at the South of the port or to the North anchorage and the installations of the North Zone.

The bottom of the channel is muddy and its various depths are as follows:

From the head of the channel up to Las Milpas max. depth is 214 ft. at lighted buoy No. 3 and minimum of 68 ft. at the West of Pasa Caballos Point.

From La Milpa up to General Anchorage minimum is 48 ft. and from then on up to the North Anchorage minimum of 40 ft.

The channel has 2 sharp turns only, but adequate precautions must be taken when entering Cienfuegos harbour, always with Pilot on board, which is compulsory at all ports. The first turn of 68° is at Pasa Caballos Point and because this is the narrowest part of the channel where Tidal currents flow strongly, it is here where precautions should be exerted.

The second turn of 98° is at West of Carenas Cay, but due to the width of the channel at this point and the fact that tidal currents have no great effect, manoeuvres are easier at this turn.

No tugboat required for entering or sailing from this port and vessels with a length of 207 m. have entered without tugboat assistance but vessels from 207 m. up to a max. of 225 m. entering or sailing from Cienfuegos should take the following measures:

Only during daylight hours, during slack water and the assistance of 2 suitable tugboats. Vessels of 4,000 g.r.t. or larger can sail from the port only at slack water to avoid the risks of tidal currents at Pasa Caballos turn, but this measure does not apply to incoming vessels which can enter at any time.

The port of Cienfuegos can be entered at day or night time.

At the entrance to the port, at Los Colorados Point, there is a lighthouse also named Los Colorados which rises 83.1 ft. above high tide, located at Lat. 22° 02′ 04″ N., Long. 80° 26′ 29″ W.

The lighthouse is painted in a white-yellowish shade and flashes white light every 5 seconds visible 21.8 miles away.

ANCHORAGES: The bay of Cienfuegos has ample anchorage zones.

The most important are: General anchorage at about the middle of the bay and North anchorage, at the North part of the bay.

Regarding the capacity and conditions of Cienfuegos anchorages it can be said that they meet the requirements of the largest vessel which presently or in future could enter this port.

North Anchorage: Located on the North part of the bay, at the Zone N.W. of the city and South of Tricontinental Pier and Ramirez Cove.

This zone is located between: Lat. 22° 09′ and 22° 09′ 30″ N. and Long. 80° 28′ and 80° 28′ 30″ West.

Although the bottom is soft mud the anchors hold perfectly well and securely.

Minimum depth of anchorage is 40 ft. and it can accommodate several large vessels with sufficient swinging area. Vessels anchor with 3 shackles of chain.

At this place vessels await berth, bunker or water, etc. and also can discharge or load by means of barges.

General Anchorage: Located in the middle of the bay and covers a square space limited by Pt. Gorda and Jaragua Cove at the South and Pt. Majagua and Pt. Salinas at the North:

(Lat. 22° 07′ – 22° 08′ 15″ N., Long. 80° 27′ 15″ – 80° 28′ W.).

Minimum depth is 48 ft. Bottom is soft mud but in spite of this anchors hold well and securely. Usually vessels anchor with 3 shackles of chain.

At this anchorage vessels await berth, bunker, water, provisions, etc. and also can discharge or load by means of barges.

Quarantine and Explosives Anchorage: Located at 0.5 mile off Pt. Barril.

As indicated by its name, this anchorage is used in case of quarantine to vessel or when carrying explosive cargo. The bottom is soft mud having a depth of 50 ft. Vessels anchor at this anchorage with 3 shackles of chain.

ICP Submarine Pipe-line Anchorage (Formerly Standard Anchorage): Located on the West side of Pt. Majagua.

The submarine pipe-line is 2,900 ft. long from the intake up to the deposit tanks, 12 in. in diameter. The connection is 8 in. in diameter.

Vessels berth to 3 mooring buoys aft, using both anchors. Minimum depth at this place is 58 ft.

The only product handled is fuel oil, which averages a rate of discharge of 420 metric t.p.h.

Berthing operation performed only during daylight hours.

Fertilisers Plant Submarine Pipe-line Anchorage: Located at the South of Ramirez Cove.

A fuel oil pipe-line 2,310 m. long, 16 in. in diameter with a 10 in. connection. The naphtha pipe-line is 10 in. in diameter with a 10 in. connection.

Vessels berth to 3 mooring buoys aft and use starboard anchor of the ship. The official draft is 31 ft. even keel. The bottom is soft mud.

Vessels discharging naphtha must pump, after discharging same, about 200 tons of fresh water. Water must be taken at prior ports of call as delay may result to vessel if Cienfuegos water barge is not able to supply the water.

Average rates of discharge are:

Naphtha: 400 t.p.h. Fuel oil: 450 t.p.h.

Berthing operation to this place performed only during daylight.

Thermoelectric Plant Submarine Pipe-line Anchorage: Located on the North side of the North Anchorage.

Pipe-line is 14 in. in diameter and 6 in. connection.

Vessels berth to 3 mooring buoys aft and to another mooring buoy at the port side forward and use the starboard side anchor. Minimum depth is 38 ft.

Only product handled is fuel oil which can be discharged at an average rate of 500 t.p.h.

Berthing operation can be performed only during daylight hours.

MAX. SIZE: Max. length with which vessels can enter port is 700 ft. with draft up to 37 ft. making use of the best conditions, such as slack water, and daylight. Tidal variation about 1 ft. 6 in.

RADIO: Vessels navigating toward Cuba can communicate with Mambisas Cienfuegos Agency through "CLA" Havana radio station which relays the message to Cienfuegos immediately.

When navigating in Cuban waters and nearing Cienfuegos, vessels can communicate directly through "CLC" Cienfuegos radio station which immediately informs Mambisas Cienfuegos Agency of any message received and the Agency can answer through "CLC", which also have radiotelephony system.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisas Cienfuegos and Mambisas Havana.

There is complete telephone service: Local, long distance and International.

RCA System radiograms have national and international service.

There are also the Wireless Service, Government Public Telegraph Service and Post Office.

Our Agency can communicate with Havana and the rest of the parts by telex, this service being the most reliable and quickest of the means of communication.

Cienfuegos telex number is 042118, 042109.

BERTHING:

	Draft in ft. Fore	Draft in ft. Aft
Tricontinental Pier: East Side (Bulk Sugar)	32	33
West Side (General Cargo)	26	28
Pablo E. Guzman Pier: West Side (Discharge of clean petroleum products)	27	30
East Side: Out of use		
Molasses Terminal: Loading of molasses	33	33
ICP Submarine Pipe-line: Discharge of Fuel Oil	58	58
Olimpia Medina Pier: General Cargo	24.5	25.5
Fertilisers Plant Submarine Pipe-lines: Discharge of Naphtha & Fuel Oil	31	31
Thermoelectric Plant Submarine Pipe-line: Discharge of Fuel Oil	38	38
North Anchorage: Discharge/Loading of General Cargo	40	40
General Anchorage: Discharge/Loading of General Cargo	48	48
Quarantine and Explosives Anchorage:	50	50

Tricontinental Pier: Located on the North coast of the bay, at the West of Manaca Cove, in front of the city of Cienfuegos.

It is a solid construction of reinforced concrete, 206 m. (676 ft.) long and 43 m. (141 ft.) wide. The East side of the pier is specially conditioned for loading bulk raw sugar and has 2 cranes, mounted on rails, that run along the length of pier, each capable of loading 600 tonnes/p.h.

Although the length of the pier is 206 m., at the East side the berthing length is only 165 m., because at the shore end there are 2 resting bases for the cranes, where they remain when idle.

In direct line with the pier is the parabolical warehouse, which is capable of holding 90,000 tonnes of bulk raw sugar. Next to it is the receiving station of the plant, where a continuous flow of railroad hopper cars discharge the sugar coming from many sugar mills in Las Villas and Matanzas provinces.

The West side of the pier is being used as a general cargo discharging berth, but the future planning for this side is for discharge of bulk wheat, to supply the flour mill, now under construction.

Tricontinental Pier

East Side:

Berthing length: 542 ft., overall length: 666 ft.

Max. length of vessel to dock and operate: 615 ft.

Drafts: 32 ft. fore, 33 ft. aft.

Cargo handled this side: Loading of bulk raw sugar.

Fresh water available by pipe-line.

West Side:

Overall and berthing length: 666 ft.

Draft: 26 ft. fore, 28 ft. aft.

Cargo handled this side: Discharge and loading of general cargo.

Fresh water available by pipe-line.

Docking to this pier can be effected either in day or night-time because it is well lit.

All operations, except loading bulk raw sugar, must be effected by means of trucks because although railroad tracks reach the shore end of pier, there are no tracks alongside.

Vessels nominated to load bulk raw sugar at Cienfuegos, must arrive at Tricontinental pier clean and ready to load and any undesirable dunnage material must be discharged at other ports or piers, due to the fact that it has only sufficient personnel to attend the mechanical loading and there are no stevedores available.

Pablo E. Guzman Pier (Formerly Ferrocarril Pier): Located on the N.W. side of the city, between Pt. Arenas and Pt. Verde.

It is only used to discharge clean petroleum products and for supplying diesel oil bunker to vessels.

It is of steel and concrete construction with rubber and wood fenders.

Fixed light at pier permits night docking.

The bottom at both sides of pier is soft mud.

West Side:

Length: 300 ft.

Vessel's max. length for docking: 610 ft.

Width: 73 ft.

Draft: 27 ft. fore, 30 ft. aft.

Cargo handled by this side: Discharge of diesel oil, kerosene and gasoline*. Connection diameter: 8 in.

Discharging rate: About 400 t.p.h.

East Side: Out of use

*Although three different products are discharged, only one can be discharged at a time, as there is only one pipe-line to shore tanks.

Olimpia Medina Pier (Formerly Cacicedo Pier): Located on the South side of the city at Marsillan Cove.

Only one vessel can be worked, being of concrete construction with wooden/rubber fenders. The fenders are going to be replaced as at the present they are not suitable.

It has a fixed bearing light in order to dock vessels at night.

Cargoes can be handled either by trucks or railroad as the place is paved and has railroad tracks alongside.

Length: 383 ft. Width: 45 ft.
Draft: 24 ft. 6 in. fore, 25 ft. 6 in. aft.

The bottom alongside pier is soft mud.

Operations performed at this pier are usually loading or discharge of general cargo.

Also see "Anchorages".

TANKERS: Molasses Terminal Berth *(Formerly Naticorp Pier):* Located on the West coast of Pt. Majagua, this installation consists of a wooden narrow passage 1,804 ft. long ending at a steel platform along which runs the pipe-lines, one 16 in. and other 12 in., and a catwalk.

Loading of molasses is performed through three connections, diameter 8 in. each, but in the near future they are going to be replaced by 10 in. diameter connections.

Docking can be effected only during daylight hours.

Vessels berth to 4 solid dolphins, 2 mooring buoys aft, and 2 fore, across the head of the installation.

Draft: 33 ft. even keel (not official)(†).
Max. length: 610 ft., Loading rate: 350 t.p.h.

(†)This place has been dredged recently (Former draft 30 ft. – 30 ft. 6 in.) but new official draft has not been released at the moment of publication, and mentioned draft is only the result shown by previous experience. Also see "Anchorages".

STEVEDORES:

Mondays to Fridays: 0700 – 1100 hrs., 1300 – 1700 hrs.
Saturdays: 0700 – 1100 hrs.

Although the above are the official working hours of the port of Cienfuegos, frequently 3 shifts of 8 hours each are worked, commencing at 0640 hrs. Also on Sundays a shift is worked from 0640 to 1100 hrs. This is done whenever all conditions, including personnel and weather, are favourable.

The port can operate 9 ships simultaneously as follows:
1 Loading bulk raw sugar.
2 Loading or discharging general cargo (docked).
1 Loading or discharging general cargo (on anchorage).
1 Loading molasses.
4 Tanker vessels discharging petroleum products.

Through this port all kinds of cargoes are imported with the exception of bulk wheat and bulk fertilisers.

Exports: Bulk raw sugar, molasses and occasionally general cargo.

Coastal trade consists mainly of discharge of petroleum products, and other kinds of coastal trade cargoes are seldom handled by this port.

The following equipment is owned and operated by the port:
4 Tugboats: 2 – 150 h.p., 1 – 168 h.p., 1 – 120 h.p.
8 Cargo Barges: 3 – 100 tons, 3 – 130 tons, 1 – 150 tons, 1 – 180 tons.
1 Fuel Oil Barge: 240 tons.
1 Water Barge: 200 tons.
1 Floating Crane: 35 tons.

All bulk raw sugar is shipped by the Bulk Raw Sugar Shipping Plant by means of modern mechanical equipment and bulk raw sugar ex-bags is not shipped through this port.

MEDICAL: Two hospitals, General Hospital and Mutualist Clinic (formerly Sanatorio de la Colonia Espanola), where sick crew members can be hospitalised.

FUEL: Regular bunkers can be obtained at this port (whatever type of diesel oil or fuel oil may be stored in the shore tanks at the time of delivery).

Fuel oil is supplied to vessels by means of barge, capacity 240 tons which is towed to the place where ship is operating or berthed.

Diesel oil is supplied by docking at pier, by pipe-line.

If any tanker vessel is operating at "Pablo E. Guzman" pier, delivery must wait until tanker finishes operations and leaves pier.

Mixtures of fuel and diesel oil, IFO, (Intermediate fuel oil), cannot be obtained at this port.

FRESH WATER: *(Potable or for Boilers):* Delivered by means of barge, capacity 200 tons, which at the present time is in bad condition, having frequent breakdowns and is often out of operation. It is going to be replaced, but until such time water delivery by barge must be considered as only a possibility, not to be depended upon, so it is unreliable.

Water can be obtained at either side of Tricontinental Pier at an average rate of 10 t.p.h.

REPAIRS: Repair shop available, but can only carry out winch repairs and other light work.

SHIPMASTER'S REPORT: May 1979.

Documents:
1 Copy Maritime Declaration of Health.
1 Copy Clearance from Previous Port.
Derat Certificate or Exemption.
1 Copy Cargo or Ballast Manifest.
10 Copies Crew Lists.
5 Copies Personal Effects (including new clothing). All individual Crew Lists must have Christian names as well as Surnames – initials not sufficient.
3 Copies Provisions Lists. Meats and weights to be separated by countries i.e. Beef (Argentina) 200 lbs., Beef (U.K.) 400 lbs., etc.
4 Copies Stores Lists.
1 Copy Vaccination List. Apparently no vaccination necessary for Cuba.
4 Copies Currency Lists. All currency placed in Master's safe together with jewellery, valuables etc., and sealed.

N.B. Crew only allowed: 1 watch, 1 radio, 1 tape-recorder and 6 cassettes, remainder to be bonded.

Officials: On arrival ship is boarded by Doctor who gives pratique, after which ship is boarded and sealed by Customs and Immigration. After this the Customs Control Board, and the ship is searched from stem to stern.

There is also a search when the ship sails although the search is not so thorough and they only seem to be looking for stowaways.

Meat and fish room are sealed throughout stay but sanitary inspectors board every day (and charge 5 pesos per visit) to take out sufficient selected stores for the day.

Pilotage: Compulsory.

Anchorage: Safe anchorage inside the bay only. Outside the entrance the water is too deep. There is sufficient room for anchorage of 15 vessels. Depth 8 fathoms. The bottom is soft mud which gives very good holding ground.

Restrictions: There is a whirlpool in the entrance at "Pasa Caballos Turn" at various states of the tide when navigation is not possible during a rising tide. Sailing is only possible between HW and LW when the tide is ebbing.

Max. Size: Max. permissible draft 38 ft., tidal range about 1.5 ft., max. LOA 207 m.

Radio: The radio room is sealed throughout the stay.

VHF: VHF Radio in Pilots and Agents office. The Pilots all seem to speak English. There is no VHF on pilot launches, they were expecting new sets.

Tugs: One tug available, 1,200 h.p.

Berthing: Tricontinental East Pier: Max. draft 31 ft. forward, 33 ft. aft. However the berth is being dredged to 38 ft. Max. LOA 200 m. Length of pier 555 ft. Tidal range approximately 1.5 ft. Density 1022.

Vessel loaded bulk sugar and with full ballast (except No. 3 deep tank) vessel had 5 ft. clearance at the ship's side rail.

Bulk sugar loaded from conveyor belt on the shore which is said to have a very accurate weightometer incorporated.

Loading rate with one loader 400 tonnes p.h. and with two loaders 1,000 tonnes p.h.

The warehouse on the quay is said to hold 30,000 tonnes.

Work carried out throughout 24 hours.

The stowage factor of the bulk raw sugar was 43.8 cu. ft./metric tonne.

The berth is very well fendered, however the after mooring points were poor.

Fuel: Available. Grade not known.

Fresh Water: Available. Rate 10 t.p.h. Also available by water barge.

Medical: Two hospitals and doctor available. Vaccinations by the port doctor were said to be free but ship was charged by the Agents.

Repatriation: Possible.

Repairs: Engine work can be done with permission for immobilisation.

Shore Leave: Shore pass not to be in any way defaced or shore leave for that person will be stopped. Shore leave is only allowed between 1800 hrs. and 2400 hrs., and any person late back will be fined. Ship's pass and Seaman's Discharge Book is handed to guard at bottom of gangway who issues another pass. This has to be exchanged for another pass further up the dock where all money is counted, all valuables are written on pass, time ashore is entered on pass and then one is free to proceed to the town by bus. There is no seaman's mission or any places of recreation, etc.

The same procedure has to be gone through on the return to the vessel.

General: The spare propeller must be sighted before loading can commence.

Flags: Courtesy flag must be higher than house flag.

Lifeboat: Lifeboats can be swung out.

Painting: Punt can be used for shipside painting.

Stores: Fruit and eggs very cheap and plentiful and of good quality.

Refuse: Garbage must be in covered containers which are sprayed together with the ship's fridges, storerooms, galley and pantries on vessel's arrival.

Ratguards: Ratguards must be on all ropes throughout vessel's stay and must not be allowed to fall or blow off or vessel is fined. Many rats were seen in the dock area.

DUNNAGE: This port has conditions and facilities to supply dunnage materials, but specially in the case of wood dunnage, requisition must be placed at least 5 days before delivery date.

AUTHORITIES: All port authorities are located at port of Cienfuegos.

From Cienfuegos to Casilda and Tunas de Zaza, following transportation can be used: railroad, trucks, barges.

It takes from 2 to 5 hours, according to transport conditions, to travel from Cienfuegos to Casilda or Tunas de Zaza.

Distance, by sea, from Cienfuegos to Casilda 45 miles; to Tunas de Zaza 80 miles. Suggested that railroad or highway be used to travel from Cienfuegos to Casilda or Tunas de Zaza. There is daily omnibus and auto service from Cienfuegos to Casilda and Tunas de Zaza.

There is a daily flight Havana – Cienfuegos which arrives at Cienfuegos around 1130 hrs. and departs for Havana at about 1200 hrs.

Also a daily departure of passenger railroad service Cienfuegos – Havana.

Bus line Cienfuegos – Havana has scheduled departures every 2 hours.

Other bus lines have excellent service to Camaguey, Santa Clara and other cities.

Taxi service is available to any point within city limits or to any place or city and should be requested to our Cienfuegos Agency.

AGENT: Empresa Consignatarias Mambisas, Agencia Cienfuegos, Avenida 50 No. 2712, POB 420. *Tel.* 5718 – 6422 (Night: 6715). *Telex:* 042118, 042109. *Cables:* "Mambisas Cienfuegos".

Recommended that all correspondence or instructions be sent through Havana main office. Cienfuegos Agency attends ships that operate at Casilda and Tunas de Zaza. For any information concerning vessels operating at these sub-ports, Cienfuegos Agency should be contacted.

Mail should be sent by airmail, parcels and spare parts by air express.

Any mail or parcels received at Havana by our Main Office, destination Cienfuegos, are sent daily by air express to Cienfuegos Agency, which use the same method from Cienfuegos to Havana.

(a) SUB-PORT OF CASILDA: 21.45 N. 79.59 W. (See Plan)

LOCATION: The Port of Casilda is located on the South coast of Cuba. Lat. 21° 45′ N., Long. 79° 59′ West.

This is the shipping port for Trinidad, distance 3 miles from Casilda.

The town of Casilda and the port are situated on the North shore of a safe, landlocked small bay, shoal over its greater part.

PILOTAGE: Vessels should pick up Pilots at Cayo Blanco. Distance from point where Pilot boards vessels to pier is 9 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Jobabo channel is the main entrance to this port and runs East of Blanco Cay.

Channel bottom is soft mud and on its course has a difficult "S" shape turn where precautions should be taken, nevertheless tugboat is not required for entering or sailing manoeuvres.

Entrance to port can be effected only during daylight hours and Masters must take notice that if vessel arrives before daybreak and Pilot is required in order to anchor and wait for daylight, an extra charge will be incurred.

In the same manner, if vessel arrives at dusk, it is probable that she cannot enter port, because docking must take place during daylight hours.

ANCHORAGES: The port has several anchorages, such as: "La Poza", located at bay, 17 ft. draft; "Bajo del Medio", an area 2.5 square miles, draft 25 ft.; "Jobabo" 26 ft. draft.

Also N.E. of Blanco Cay there are anchorage areas, having 40 ft. draft, and more.

MAX. SIZE: Vessels can enter and sail with max. draft of 25 ft. and length up to 565 ft. Tidal variation about 2 ft.

RADIO: Vessels navigating to Cuba can send their messages via "CLA" Havana Radio Station, which immediately relays the message to our Cienfuegos Agency.

While navigating in Cuban waters, Masters can contact "CLC" Cienfuegos Radio Coastal Network, which also relays the messages promptly to Cienfuegos Agency, and can answer them by the same system.

Station "CLC" also has radiotelephony.

Masters must send their ETA messages simultaneously to Mambisas Cienfuegos and Mambisas Havana.

TUGS: None.

BERTHING: Casilda pier is built in the shape of an "L" the upright part of the "L" being the West side and the inferior part the South side.

Vessels docked at pier can be supplied limited quantities of fresh water and also, if necessary, electric power 110/220/440 volts.

Pier has railroad tracks along its length and at the paved West side trucking operations can be effected.

South side is not paved and is mostly used for operating tankers.

Coastal Pier No. 1: (East Side):

Length: 520 ft. Max. length permitted: 565 ft. Draft: 25 ft.

Cargoes handled on this side:

Importation: General cargo, wood pulp, lumber, caustic soda, etc.

Exportation: Bagged refined and raw sugar.

Coastal Trade: Occasionally general cargo.

Docking only during daylight hours.

Coastal Pier No. 2: (South Side):

Length: 390 ft. max. length permitted: 565 ft. Draft. 25 ft.

Cargoes handled by this side:

Importation: Fuel oil and crude oil, and occasionally diesel oil.

Exportation: Alcohol.

Coastal Trade: Fuel oil and crude oil, and occasionally diesel oil.

Two vessels can operate simultaneously at Casilda:

One at the West side of pier loading sugar or discharging dry cargo, and another at the South side discharging petroleum products or loading alcohol.

During dry spells it is possible to operate 2 dry cargo vessels, one on each side of pier, but this is not advisable as both vessels will be worked at half capacity because of limit of labour.

No operations at bay or anchorage performed at Casilda.

STEVEDORES: Working periods:

Monday to Friday 0600-1000 hrs., 1200-1600 hrs.; Saturday 0600-1000 hrs., 1200-1600 hrs.; Sunday when necessary, same periods.

Raw sugar loading rate: 1,200 sugar bags, loaded per gang per day. Bags per sling: 6 sugar bags per sling. Operation capacity: only one vessel can operate.

Refined sugar loading rate: 1,500 bags per gang per day. Bags per sling: 12 bags loaded per sling.

Shore crane: No shore crane available.

Bulk sugar equipment: no bulk sugar equipment available.

Warehouses: 2 warehouses with capacity for storage of 70,000 bags of sugar. No. 1 (at the pier) 40,000 bags (250 lb.). No. 2 (at the Real Street) 30,000 bags.

TANKERS: Fuel/Crude Oil: 1×8 in. diameter.

Diesel Oil: 1×6 in. diameter.

Alcohol: 1×5 in. diameter.

Also see "Berthing".

MEDICAL: Sick crew members can be sent to General Hospital.

FUEL/REPAIRS: Not available.

FRESH WATER: Vessels can be supplied with fresh water, delivered by means of electric turbine at the pier. Delivered at average of 30 t.p.h.

DUNNAGE: Wood dunnage is not available at Casilda. Paper dunnage is available if requested well in advance as there is a small stock in the port, and if vessel's requisition exceeds port's stock, difference can be brought from the paper mill nearby.

TRANSPORTATION: Transportation to or from Casilda is difficult.

Railroad system connects Casilda with Trinidad continuing to Cumbre, where it joins the Central railroad system, or to the city of Placetas, located on the Central highway system. From Cumbre railroad travel is available to any place in Cuba, likewise at Placetas by road.

There are also roads to Cienfuegos and Sancti Spiritus.

AUTHORITIES: Port Captain, Custom Authorities and Port Doctor travel from Trinidad to Casilda.

AGENT: If any information required regarding ships operating at Casilda, Cienfuegos Agency should be contacted. Agent in the port available, but difficult to contact. Telephone number 2077.

Crew mail or any other mail should be sent to Havana main office, from where it is sent to Cienfuegos.

(b) SUB-PORT OF TUNAS DE ZAZA: 21.37 N. 79.32 W. (See Plan)

LOCATION: Seaport of Sancti Spiritus. Port lies about 1.25 miles North of Point Ladrillo.

PILOTAGE: Pilot may board vessels either at Breton Channel or Tunas Channel.

Distance from point where Pilot boards vessel entering through Breton Channel to Tunas de Zaza anchorage is 8 miles. From place where Pilot boards vessel entering through Tunas Channel is 1.5 miles. Pilot station for Tunas Channel, located at Cayo Zaza de Fuera. For Breton Channel, entrance of Breton, that is, 8 miles from anchorage.

MAX. SIZE: Two channel entrances for this port; one through Breton Channel, which is with turns, but not dangerous. Vessels can enter or sail through this channel drawing up to 29 ft. The other one through Tunas Channel, has no turns. Vessels can enter and sail through this channel, drawing up to 22 ft. No length restrictions.

Tidal variation 1 ft. 6 in. Vessels can enter day and night.

RADIO: Via Radio Havana, for relay through Cienfuegos Agency.

TUGS: 3 tugs: *Arturo, Don Juan,* and *Tuinicu*, which tow up to 6 barges.

BERTHING: All operations are effected at anchorages.

Inner Anchorage: Located about 1.25 miles South-Westward of the town. Draft: From 24 ft. to 27 ft. Soft mud bottom.

(b) *Outer Anchorage:* Located South of Pt. Ladrillos. Draft: 30 ft. (load only up to 29 ft.). Soft mud bottom.

Only one vessel at a time can be handled.

There are 9 barges available for loading sugar with total loading capacity of 7,500 bags. Sugar loading rate: 1,500 bags per gang daily. Bags per sling: 6 sugar bags loaded per sling.

Bulk sugar equipment: None.

STEVEDORES: Working periods – loading sugar: Monday to Friday 0600-1000 hrs., 1200-1600 hrs.; Saturday 0600-1100 hrs., 1200-1600 hrs.; Sunday: when necessary.

MEDICAL: For sick crew members, there is a general hospital at Sancti Spiritus.

FUEL/REPAIRS: None.

FRESH WATER: No water available.

DUNNAGE: None.

TRANSPORTATION: There are two daily car services, and also road transportation is possible by bus but car service is preferable.

AUTHORITIES: There are Custom House and Captain of the Port Delegations at this sub-port. Customs also acts for Immigration. Port Doctor located at Zaza del Medio.

Vessels can proceed directly to this sub-port where they are visited by port authorities. Means of transportation used by port authorities to give entry is by launch service.

At this sub-port Custom House and Captain of the Port have delegations, but not port Doctor.

AGENT: Vessels operating at this sub-port are attended by personnel from Cienfuegos Agency.

Mail should be sent to Havana for forwarding to Tunas de Zaza.

GUANTANAMO: 19.59 N. 75.10 W. (See Plan)

LOCATION: Guantanamo is an ample, sheltered, landlocked bay of an approximate extension of 11 miles.

The mouth of the port is formed by 2 points: Point Leeward on the West side and Point Windward on the East side. Point Windward is round shaped, drab olive coloured and with arid cliffs, where, on a grey painted building is located a lighthouse, the white light of which flashes twice every 20 seconds and is visible up to a distance of 26 miles. Point Leeward is low, having a landing field.

For description purposes, Guantanamo Bay may be divided into what could be considered outer harbour and inner harbour. The outer harbour is rugged having a number of creeks with several cays, mostly in the centre. This outer harbour is almost entirely occupied by the United States of America Naval Base and it is convenient to make clear that the merchant vessels nominated for operations at Boqueron, located in the inner harbour, do not need any permit or authorisation of said Naval Base.

The inner harbour is most ample, practically free of cays and widening out forms 2 bays, separated by Point Manati. The bay located at the N.E. is known as Joa Bay.

Guantanamo City is located at a distance of 23 km. inland, in the most important coffee-growing district of Cuba.

Guaso River flows into the Northwestern extreme of Guantanamo Bay and Guantanamo River at St. Nicolas Point.

PILOTAGE: Pilots board vessels at distance of 1 mile from Buoy No. 1 at port entrance.

Distance from where Pilots board vessels to: General anchorage: 7.5 miles. "Boqueron" Pier: 7 miles.

RADIO: Vessels navigating toward Cuba can communicate with Mambisas Caimanera Agency through "CLA" Station at Havana and the message will be relayed to Caimanera by telegraph service.

Masters must send their ETA messages simultaneously to Mambisas Caimanera and Mambisas Havana.

At Caimanera there are the following services:

Telephone, local and long distance, telegraph and Post Office.

There is no telephone communication between Caimanera and Boqueron.

APPROACHES: Wide entrance channel with mud bottom and free from navigational hazards.

ANCHORAGES: Max. draft 25 ft. to 27 ft. Swinging area 400 m.

MAX. SIZE: Vessels can enter with max. draft up to 19 ft. and length 610 ft. (tankers), 500 ft. (cargo vessels). Tidal variation is from 1.5 ft. to 2.5 ft. depending on season.

TUGS: Not available.

BERTHING: The pier is a solid concrete construction 504 ft. long and 60 ft. wide.

Along the pier run 4 railway tracks of standard gauge.

Molasses is loaded at the North side only, but sugar can be loaded at both sides of the pier.

Although the draft at either side of pier is 22 ft., vessels load only up to 19 ft., owing to the draft of the port channel.

Boqueron Pier:

(a) North Side:
  Length: 504 ft. Draft: 22 ft.
Cargo handled: Molasses and bagged raw sugar.
(b) South Side:
  Length: 504 ft. Draft 22 ft.
Cargo handled: Bulk raw sugar.

Two vessels can operate simultaneously:

A tanker loading molasses at the North side of the pier, and another vessel loading sugar at the South side.

STEVEDORES: Sugar and molasses loading operations are carried out at this port.

Working periods loading raw sugar: From Monday to Friday 0700-1100 hrs., 1300-1700 hrs.; at night time whenever necessary. Saturday 0700-1100 hrs.; at night time whenever necessary. Sunday: abovementioned periods, whenever necessary.

Bagged sugar loading: 780 bags loaded per gang-period. Sugar bags per sling: 4 sugar bags per sling.

Capacity: Two vessels can load simultaneously at Boqueron Pier.

Raw sugar in bulk: Four complete sets of machines and 10 grates.

TANKERS: Molasses pumping rate average of about 35,000 gallons per hour.

MEDICAL: At Caimanera there is a modern hospital equipped for both medical and dental services, where crew members are attended when required.

In serious cases or when highly specialised medical care is required, the patients are sent by ambulance to Guantanamo Regional Hospital.

FRESH WATER: Can only be supplied by Boqueron Pier through 2.5 in. pipe-line. Delivery rate is 10 t.p.h. Vessel must furnish hoses.

FUEL/REPAIRS: Not available.

TRANSPORTATION: Transportation between Caimanera and Boqueron is effected only by means of launches.

Distance between Caimanera and Boqueron is 1.5 miles.

From Caimanera to Guantanamo, travelling could be effected either by railroad or paved highway and for both routes the distance is 23 km.

There are 3 daily scheduled trains and 14 modern bus departures, travelling time being approximately 40 minutes.

From Guantanamo to Havana there is a scheduled bus service with several departures daily. Travelling time from Guantanamo to Havana by bus is 16 hours. Also there is a daily departure at 1230 hrs. of an airway service Guatanamo/Santiago/Havana.

There is a very efficient service of minibuses for the transportation of travellers to and from the airport.

From Guantanamo to Santiago de Cuba there is also bus service with several departures daily, travelling time being 2 hours.

DUNNAGE: Although dunnage materials can be obtained at Guantanamo, if possible, it is preferable that vessel arrives supplied with same, because sometimes the requisition of the vessel may be higher than the port stock, and that could mean delays.

Whenever necessary to request dunnage materials at this port, the requisition should be made not less than 5 days in advance of vessel's arrival.

AUTHORITY: All Port Authorities are located at Caimanera where Mambisas Agency Office also is located. Caimanera lies across the bay, just in front of Boqueron Pier, at a distance of 1.5 miles.

AGENT: Empresa Consignataria Mambisa, Linea No. 9 entre Marina y Correos, Apartado No. 5, Caimanera, Guantanamo, Prov. de Oriente. Telephone: 9186, 99135 (Night). Telex: 062138. Cable: Mambisas Caimanera.

Agency VHF works on Channel 16.

Mail and Parcels: Must be sent to the Main Office at Havana, because vessels loading sugar at Guantanamo usually load their cargo in a very short time and all mail and parcels received would be sent to Guantanamo or a second loading port, whichever is deemed to ensure delivery.

HAVANA: 23.09 N. 82.21 W. (See Plan)

Havana is a natural, landlocked, well sheltered harbour and the most important port of the country owing to its port facilities and for being the capital.

PILOTAGE: Compulsory. For requesting Pilot, in daytime or at night, ships shall use signals established in International Signal Code, also they can direct light signal to Morro semaphore and make sound signals at intervals.

Pilot service is compulsory for all foreign ships more than 40 gross tons.

Master must inform Pilot: port of origin, illness of any person on board, or if ship is carrying explosive or easily inflammable materials, in which case the ship shall be anchored in special berths and shall be under control of port authorities.

Any ship in port requiring immediate Pilot services should either call telephone numbers: 62–3602 or 62–2896; or hoist "G" Flag, sound 2 prolonged blasts.

Pilots board vessels approximately 1 mile from port mouth, although in some cases, especially at night-time, they will go out about 3 miles to meet incoming vessels.

Pilot station located at San Pedro St. No. 2. Telephones: 62–3602 and 62–2896.

Distance from where Pilots board vessels up to port anchorage or wharves is about 1 mile.

APPROACHES: The port is entered through a straight channel with Morro Castle to the East, La Punta Castle to the West.

The bottom is muddy, with no narrowness, but at the entrance there is a strong current which is to be taken into consideration in the entry manoeuvres of any vessel.

Port can be entered to or sailed from, either in day or night time and it is not necessary to wait for slack or favourable tide, except tankers drawing 37 ft. which can enter only at high tide.

While approaching Havana the most remarkable points of visual orientation are its tall buildings and Morro Castle, located on the East side of the entrance.

ANCHORAGES: There is an ample anchorage zone area where loading and discharging operations are performed.

MAX. SIZE: Max. draft in channel at low tide is 12.8 m. Max. draft in main anchorage is 10.06 m., minimum depth throughout the bay (except the refinery) is 10.06 m. Tankers can enter drawing up to 11.28 m., as they take special course once they are inside bay. Tidal variation about 45 cm.

RADIO: Vessels navigating to Cuba can communicate with Mambisas Havana through "CLA" Havana Radiotelegraphy Station which relays messages immediately by telex.

While approaching Havana vessels can communicate by VHF radiotelephony with:

Mambisas Agency: Channel 12.
Pilots: Channel 16.

Both, Agency and Pilots, are on the air 24 hours of the day.

Masters must send their ETA messages to Mambisas Havana.

The following means of communication are available at Havana:

Cable: C.L.A. International, R.C.A., Western Union.
Telephone: Local, long distance and international.
Telex: Local, National telex system and international.
Airmail and Air Express: National and international.

At the main office in Havana there are two telex machines, which is the quickest means of communication available.

TUGS: Supplied by Port Authority.

BERTHING: The port is divided into numerous docks, which are detailed below.

Andres Gonzalez Lines Dock: This dock is used for the discharge of fertilisers in bulk and coal. It is 332.2 m. long with drafts that vary from 5.18 m. to 9.14 m. There are railway connections and an overhead discharge crane.

Sierra Maestra Terminal:

Pier	*Length of Pier* (m.)	*Max. draft with which vessels may perform operations* (m.)
Pier No. 1 (North Side)	201.8	9.14 – 10.06
Pier No. 1 (South Side)	201.8	9.14 – 10.06
Pier No. 2 (North Side)	201.8	9.14 – 10.06
Pier No. 2 (South Side)	183.5	9.14 – 10.06
Pier No. 3 (North Side)	190.5	9.14 – 10.06
Pier No. 3 (South Side)	171.3	9.14 – 10.06

There is one warehouse at each of these piers and all have rail connections. The terminal is used for loading and discharging general cargo.

Margarito Iglesias Terminal:

Pier	*Length of Pier* (m.)	*Max. draft with which vessels may perform operations* (m.)
Pier No. 1 (North Side)	135	6.10
Pier No. 1 (South Side)	135	6.10
Pier No. 2 (North Side)	135	6.10
Pier No. 2 (South Side)	135	6.10
Pier No. 3 (North Side)	135	5.49
Pier No. 3 (South Side)	135	5.49

Both these general cargo piers have a warehouse, each with a capacity of 22,304 cu.m.

All piers have rail connections. The terminal is used for loading and discharging of general cargo.

Havana Central Pier: This pier, which is used for discharging and loading general cargo, is on the North side. Length 132.3 m., width 60.95 m. Depth alongside 9.45 m. at Bay end or East side, 8.84 m. at centre and 7.92 m. at its West shore end. On South side, length 146.3 m., width 60.95 m. Depth alongside 9.75 m. at the Bay end or East side of the pier, 7.92 m. at the centre and 5.79 m. at its West or shore end. Pier has a sheltered warehouse capacity of 21,285 cu.m. and a railroad siding connected with main track.

Aracelio Iglesias Terminal: This terminal used in the discharge and loading of general cargo, consists of a dock and a pier. The dock is 174.6 m. long and 13.41 m. wide and depth alongside ranges from 6.10 m. to 7.92 m. Dock has one sheltered warehouse with capacity of 110,463 cu.m. Pier (North side), length 157.8 m., width 31.70 m., depth 11.28 m. at the East or Bay end, 9.14 m. at centre and 7.31 m. at shore or West end.

Pier (South side), length 152.1 m., width 31.70 m. with depth alongside of 10.36 m. at East or Bay end, 10.36 m. at the centre and 8.23 m. at the West or shore end.

Pier has a sheltered warehouse with a capacity of 30,880 cu.m.

Both dock and pier have railroad siding connecting with the main track.

Juan Manuel Diaz Terminal: The terminal used in discharge and loading of general cargo consists of two docks and one pier. Dock No. 3: Length 158.8 m., width 17.07 m. with depth alongside of 6.40 m. at the N.E. end, 6.70 m. at the centre and 7.92 m. at S.W. end. Dock has a sheltered warehouse with a capacity of 50,230 cu.m. Pier (North side) length 152.4 m., width 38.10 m., depth alongside 10.67 m. at the Bay end or East side, 9.14 m. at centre and 6.10 m. at the West or shore end. Pier (South side), length 161.5 m., width 38.10 m. with depth alongside of 10.36 m. at Bay end or East side, 9.14 m. at centre and 7.31 m. at the shore or West end. Dock No. 2: Length 146.6 m., width 9.45 m. and depth alongside 6.40 m. at N.E. end, 6.70 m. at centre and 7.92 m. at S.W. end. Pier has sheltered warehouse with capacity of 39,821 cu.m. while Dock No. 2 has a sheltered warehouse with capacity of 112,471 cu.m. Both docks and pier have railroad sidings connecting with main track.

La Coubre Dock: No longer in operation.

Tallapiedra Dock: This dock used in discharge of lighters, has a length of 138.1 m., depth alongside 4.27 m. at N.E. end, 5.73 m. at centre and 4.57 m. at the S.W. end.

Antonio Guiterras Dock: This dock, used in the discharge of lighters of heavy lifts, from vessels performing operations in Bay, is 258.1 m. long, depths alongside (from Tallapiedra Pier No. 2) 7.92 m., 6.40 m., 5.49 m. and 3.35 m. If no lighter is used, vessels drawing up to 7.01 m. only can berth at this dock.

Osvaldo Sanchez Docks: These docks used chiefly in discharge of lumber. Dock No. 1 (formerly Atares), is 130.5 m. in length, 9.14 m. wide with depth alongside 6.70 m. at N.E., 7.01 m. in centre and 7.31 m. at the S.W. end. Dock No. 2 (formerly Vaccaro) is 155.7 m. long, 9.14 m. wide with depths alongside of 7.92 m., 6.40 m., 3.66 m. and 5.18 m. These docks have sheltered warehouses. There are no sidings.

Melones Dock: This dock has installation for discharge of fuel oil as well as an overhead crane for discharge of fertilisers and coal. Dock length 218.8 m., width 10.67 m. Depth alongside 5.49 m. at the N.E. end, 3.96 m. in centre, 3.05 m. at the S.E. end. Not in operation at present due to shallow draft. No sidings. Storage in open.

Puerto Pesquero de la Habana: Consists of Pote Dock, Hacendados Pier and Dock which have the following facilities.

Dock	*Length* (m.)
No. 1	259.9
No. 2	153.9
No. 3	224.9
No. 4	157.5
No. 5	157.5

Drafts: Minimum 7.31 m. Maximum 7.92 m.

Haiphong Terminal: (Formerly Maritima). This dock is used for the discharge and loading of general cargo. Length of dock 532.5 m., width 21.94 m. and depth alongside 9.75 m. to 10.67 m., along entire length of dock. This dock has 2 large warehouses and sidings, although at present only trucking operations are performed. It has 12 gantry cranes with a maximum lifting capacity of about 12 tons and berthing space for 3 average sized vessels, but in the near future will have two additional berths.

Manuel Porto Pena Terminal: Terminal consists of the following docks:

Manuel Porto Pena (formerly Burrus): Dock used for discharge of bulk shipments of grain. Equipped with elevator and silos having storage capacity of approximately 20,000 tons. Permitted discharge rate of approximately 1,200 tons per day. Length of dock, 167.6 m., width 7.92 m. and depths alongside 7.92 m. and 9.29 m.

Manuel Porto Pena No. 1: This dock used in discharge and loading of general cargo and sugar is 96 m. in length and 10.67 m. wide with depths alongside from 7.01 m. to 8.23 m. Dock has one sheltered warehouse and railroad sidings.

Manuel Porto Pena No. 2: This dock is used for loading and discharging sugar and general cargo. Length 136.2 m., width 10.88 m. with depth alongside of 7.92 m. at S.E. end, 7.62 m. at centre and 8.23 m. at the N.W. end. No warehouse, but is equipped with railroad sidings and has installations for discharge of fuel oil.

Manuel Porto Pena No. 3: This dock used for discharge and loading of general cargo is 201 m. in length and 9.14 m. wide, with depth alongside 9.75 m.

Turcios Lima (Grain Silo Dock). Installation for discharge of bulk shipments of grain. There are 36 grain silos and 18 part silos with a total capacity of 30,000 tons. Unloading rate 100 t.p.h. This dock has 1 sheltered warehouse and railroad sidings, and installations for the discharge of fuel oil and gasoline.

Manuel Porto Pena Berth No. 17: Length 170 m., depth 10 m.

Extractora de Aceite Berth: This dock is not in use at present.

Quinto de Regla Pier: This pier used mainly for loading of sugar. Pier (South side) 189.6 m. long, 10.36 m. wide with depth alongside 8.23 m. at S.W. or Bay end, 7.62 m. at the centre and 5.18 m. at the S.E. end. Pier (North side), length 104.5 m. width 16.46 m., depth alongside 8.53 m. at N.W. or Bay end, 7.92 m. at centre and 6.70 m. at the N.E. end. Pier has railroad sidings.

Fresser Pier: This pier has installations for loading molasses. Pier (South side), 141.7 m. in length, 9.14 m. in width with depth alongside 8.23 m. at S.W. or Bay end, 7.62 m. at the centre and 7.01 m. at S.E. end. Pier (North side), 124.1 m. in length, 9.14 m. in width with depths alongside of 6.70 m. at N.W. or Bay end, 7.92 m. at the centre and 7.62 m. at West end. This side of pier used only for docking purposes.

Edificios No. 1 and No. 2: These docks used in discharge of fertilisers also have installations for loading/unloading molasses.

Edificio No. 1 Dock: Length of dock 157.2 m., width 7.62 m. with depths alongside 6.40 m. – 6.70 m. of water throughout whole dock.

Edificio No. 2 Dock: Length 115.8 m., with 32.91 m. with depth alongside 5.79 m. at N.E. end, 4.27 m. at the centre and 4.27 m. at S.W. end. No operations are performed at this dock due to its shallow draft. Sheltered warehouses with a total capacity of 64,645 cu.m.

Fertiliser processing plant.

Facilidades Maritimas Dock: This dock used chiefly for loading of molasses and discharge of tallow and chemical products, has length of 248 m., width 7.92 m. and depth alongside 7.62 m. at N.E. or Bay end, 7.92 m. at centre and 7.01 m. at S.E. end. Dock has railroad sidings and is suitable for docking.

Nico Lopez Pier Nos. 1 and 2: (Minimum depth at LW 11.12 m.). These piers are used exclusively in discharging fuel oil, gasoline, etc., and are operated by oil refineries. Pier No. 1 (North side), length 313 m., depth alongside 10.97 m. at Eastern or shore end, 10.67 m. at centre and 10.36 m. at West or Bay end. Pier No. 2 (South side), length 313 m., depth alongside 10.97 m. at East or shore end, 10.67 m. at centre and 10.36 m. at West or Bay end. Pier No. 2 (North side), length 301.7 m. with depth alongside of 10.67 m. at East or shore end, 10.97 m. at the centre and 11.58 m. at the West or Bay end.

CONTAINER/RO-RO FACILITIES: Available.

EQUIPMENT: As the port of Havana owns and operates a large number of auxiliary equipment, only the most important of those are listed here:

Four floating cranes: (1×100 tons) (3×35 tons) lifting capacity.

40 shore cranes: ranging from 30 tons to 5 tons lifting capacity.

Six cargo barges: 125/150 tons cargo capacity.

Nine tugboats: (1×1,200 h.p.) (1×860 h.p.) (1×540 h.p.) and remaining 6 are from 325 to 165 h.p.

STEVEDORES: Monday to Friday: working periods 0700 – 1300 hrs. and 1300 – 1900 hrs., although if necessary, 2 additional periods of 6 hours each may be worked. Saturday: Same as above. Sundays: No work performed.

Raw Sugar: Approximately 1,400 bags of raw sugar loaded per gang period. Six raw sugar bags loaded per sling. Loading raw sugar on 3 vessels simultaneously.

Refined Sugar: Approximately 3,800 bags of refined sugar (of 50 kg.) loaded per gang period. 12–15 bags loaded per sling.

General cargo: Approximate average discharging rate per gang hour:

General cargo about		10.0 tons
Bagged merchandise	up to 51 kg.	16.0 tons
Bagged merchandise	up to 92 kg.	17.0 tons
Bagged merchandise	more than 92 kg.	19.0 tons
Wood		8.4 tons
Fertilisers:		
Superphosphate		9.9 tons
Simple Superphosphate		8.1 tons
Ammonium		9.0 tons
Potash		9.9 tons
Muriate (Chloride)		10.5 tons
Sulphur		10.3 tons
Phosphoric Rock		11.9 tons
Triple Phosphate		8.0 tons
Sodium Silicate		9.0 tons
Ferromanganese		9.0 tons

Floating Cranes:

Pablo Sandoval	100 tons – boom 51 m.
Frank Pais	25 tons – boom 10 m.
Matilde	6 tons– boom 9 m.

TANKERS: Average pumping rate of molasses is about 60,000 gallons per hour. Average pumping rate of fuel variable, from 3,000 up to 15,000 b.p.h. Also see "Berthing".

TELEPHONES: May be installed on board at Master's request.

MEDICAL: Crew members requiring medical attention are treated at "Commander Fajardo" Hospital where they can be hospitalised if necessary.

Those cases requiring dental care are treated at "10 de Octubre" Dental Clinic.

FIRE PRECAUTIONS: Port of Havana has a fire extinguishing ship, kept on permanent watch duty by Safety Corp. who can be reached through telephone number 6–0777.

AIRPORT: Jose Marti International Airport is 15 km. from the port.

HOLIDAYS: Liberation Day (January 1st), Labour Day (May 1st), Day of National Rebellion (July 26th), Commemoration of Wars of Independence (October 10th). July 25th and 27th are also holidays.

FUEL: Vessels can be supplied with bunkers at Havana, and following types are available:

Regular diesel oil, regular fuel oil, I.F.O. mixtures (intermediate fuel oil).

Diesel oil is supplied by a 350 ton capacity barge, and fuel oil by a 1,500 ton capacity vessel which is towed to piers or anchorage in order to fulfill deliveries. This vessel also delivers the I.F.O. mixtures and is named 'Playa Colorada'.

I.F.O. mixtures are prepared at the following viscosity degrees: 50 – 200 – 400 – 600 – 800 – 1,000 and 1,500 maximum. (Redwood International Scale, at 100°F).

I.F.O. mixtures are only available at the port of Havana.

Note to Chief Engineers: It is advisable when ordering I.F.O. mixtures to specify always maximum and minimum allowable viscosity of the product.

FRESH WATER: Vessels can be supplied with fresh water by barge in the bay. Six barges available with capacities of 350, 200, 320, 350, and 60 tons. Average rate of delivery about 100 t.p.h.

REPAIRS: Reliable repair shop (Tel: 62.0009).

DRY DOCK: Dry dock operated by Empresa de Talleres Maritimos, an operating unit of Empresa de Navegacion Mambisa. Berthing capacity 134 m. in length and 27.73 m. width, and can handle vessels up to 7.01 m. draft.

East Lateral: Length 194.4 m., width 11.58 m., depth alongside 10.06 m. at Bay end, 8.84 m. at centre and 5.49 m. at shore end.

West Lateral: Length 225.5 m., width 11.58 m., draft 7.01 m. at Bay end, 7.62 m. at centre and 6.10 m. at shore end.

DUNNAGE: Dunnage materials are available at this port but must be requested 3 days in advance of intended delivery.

DEVELOPMENTS: There is a plan to build a new terminal for discharge of bulk cargoes such as fertilisers, coal, etc. between the area comprised by the piers Quinto de Regla and Facilida des Maritimas (Aguilera).

Under this plan, Quinto pier and Chemical dock will cease to operate, and Facilidades Maritimas (Aguilera) dock will be shortened in its actual length (814 ft.).

Construction of container terminal to be completed.

GENERAL: (1) The port of Havana is approachable 24 hours a day, and dock Pilots keep permanent watch duty on their stations located in surroundings of harbour channel, very close to beacon marker of Pila de Neptuno.

(2) Any ship approaching port in daytime shall hoist national flag, merchant flag, and quarantine flag, not lowering the latter until granted "pratique" by doctors in charge of sanitary inspection. At night she shall show only quarantine lights as prescribed by International Sanitary Regulation.

(3) In case of emergency, ships at anchor shall immediately contact land through Official Radiophone Station CLT, available 24 hours a day, through 2260 kHz. In very urgent cases, CLT can be contacted through 2182 kHz CLT services are free of charge.

(4) Ships moored to piers standing off pier heads at night must keep visible red light at the ship's extremity facing the sea.

(5) Every moored ship must strengthen its lines on first warning from Port Authorities when deemed necessary due to bad weather.

(6) Small boats belonging to ships are not authorised to be used for crew or passengers' service within port limits unless otherwise duly authorised by Harbour Master.

(7) When berthing, ratguards must be placed on all mooring ropes.

(8) Port provides boats to dispose of ship's wastes. Services provided free of charge and can be requested through ship's Agent.

SHIPMASTER'S REPORT: November 1978.

Pilotage: Compulsory. Advise Agent of vessel's ETA. Pilot boards 1 to 0.5 miles N.W. of Pta. Barloventa.

Restrictions: Vessel is able to enter and leave during hours of darkness and at any stage of the tide.

Max. Size: Max. draft for cargo vessel 33 ft. and for tankers 37 ft.

Tugs: There are 3 large tugs and 7 small tugs available (145–860 h.p.). Vessel is able to dock and undock without the assistance of tugs.

Radio: Havana Radio "CLA".

VHF: Port Authority and Pilot operate on Channel 13. Agent on Channel 12.

Fresh Water: Available.

Repairs: Facilities available.

Fuel: Bunker fuel oil and diesel oil available.

Medical: Doctor and hospital available.

Facilities: Laundry services available, telex available but unreliable. Groceries and meat available but in limited quantity.

Berthing: Terminal Sierra Naestra Berth No. 3 South:

Position of berth: Lat. 23° 08′ 25″ N., Long. 82° 20′ 42″ W. Distance from entrance 1 mile. Max. size of vessel that can berth LOA 520 ft., beam no restriction. Max. draft 29 ft. Least depth of water in channel from sea to berth 40 ft. Range of tide 1.5 ft. Vessel is able to dock and undock at any stage of the tide day or night.

Bulk Handling Facilities: Two grain silos available.

Cranes: 1 quay equipped with 12 cranes, capacity unknown. 4 floating cranes available, 1×100 tons, 3×75 tons capacity.

Special Cargo Handling Facilities: Ro/Ro facilities available. There are facilities for handling palletised cargo and containers, also there is a reasonable amount of storage space for containers.

Stevedores: Stevedores are allocated by Port Authority and the vessel has no say in the number of gangs supplied. There are a limited amount of steel barges.

Density: 1014.

General: On arrival, vessel waited 2 hours outside for a Pilot then entered harbour where we waited another two and a half hours for a ship to sail, no ship sailed and no other reason given for delay.

Docked starboard side to Sierra Maestra No. 3 South depth 24 ft. forward, 37 ft. aft, 1 tug pushing. Pilots good.

Officials boarded shortly after arrival, following documents required:

Port Health:	1 Health declaration. 3 Crew lists. 1 Vaccination list. All vaccination books.
Immigration:	All discharge books. (To be inspected) 5 Crew lists.
Customs:	3 Personal declarations. (In detail) Cargo plan. 5 Crew lists. Cargo Manifests. Pornography in bond.
Agriculture:	2 Crew lists. 1 Provisions list. (Comprehensive) Cargo plan.

Personal declaration must include watches, cameras, radios, tape recorders, presents, new clothes and money all of which must be placed under seal. One watch and 1 radio allowed to be retained by each Crew member and 1 camera by Master. Advisable to have all above collected prior to arrival.

Vessels normally searched by police and anything found, i.e., watch, radio, money, new clothes and cameras, etc., confiscated whether declared or not. To the surprise of officials this vessel was not searched.

All crew are issued with a shore pass with the exception of the Master. Shore leave extends from 0800 hrs. to 2400 hrs., extension may be obtained but only on special request to the Agent. Shore passes must show the money issued and must be signed by the Master.

On going ashore money and other articles are checked together with watches, jewellery and lighters, etc., and entered on the pass. Should any shortage or excess be found on return a fine will be imposed. On return money remaining is entered on the pass and anyone taking ashore more than the amount shown on the pass will have it confiscated (this actually happened in Isobela).

Communications outside Cuba are difficult, telexes are accepted by Agents but certainly not always sent the day handed in.

Incoming telexes can be delayed up to 6 days. Telephone calls may be made but usually take 3 to 5 hours by which time offices in Europe are closed. In an emergency British Embassy will transmit urgent messages via direct radio link. Embassy most pleasant and helpful. As will be seen by foregoing, it is essential that schedule made with Portishead and Charterers informed to send all messages via this station.

Stevedores very co-operative but due to uncertainty of transport and information on number of gangs, time of completion was uncertain until last day. All discharge was direct to trucks.

Agriculture Department demand that all garbage be placed in plastic bags with neck tied (they supply bags if none on board and charge vessel). Bags collected twice weekly and shore labour do all handling. All meats except New Zealand and Australian sealed. Daily issue of New Zealand and Australian meats given and fridges resealed, any other meats required must be purchased ashore.

Fuel oil, diesel oil and fresh water available by barge but time of delivery uncertain therefore water must be ordered well in advance of requirement. Agents advised fuel would arrive Thursday morning, eventually arrived Monday night. Diesel oil had arrived prior to the fuel with no advice given to the vessel that vessel was bunkering at all.

Fresh vegetables in very limited supply, though Chandler seemed keen to sell meats.

Repair firm and dock exist but after being promised labour for 3 days and none arriving repairs cancelled.

SHIPMASTER'S REPORT: April 1979.

Documents:

12 Crew Lists	3 Currency Declarations
3 Store Lists	3 Vaccination Lists
3 Declarations	

Points of note:

(a) Anchorage is very close to coast and in cable area, recommend drifting about 5 miles from coast.

(b) Contact made via Morro Signal Station, VHF Channel 16.

(c) Pilot boards about 1 mile from entrance and they do not appear to work at night.

(d) The port is heavily polluted.

(e) When we sailed we had to wait for 5 hours till a tug was available.

(f) The vessel may lower its gangway for the Pilot to leave but it then must be raised until Port Officials arrive.

(g) All crew must be sighted by Immigration and are handed their discharge books.

(h) All cameras, gifts, items purchased during voyage and not in use, extra radios, watches, etc., and "magazines" must be placed in bond. All except the "magazines" should be declared.

(i) All currency must be declared and placed in safe and sealed. If cash purchases made from Chandler, e.g. Cigars, they must be paid for with Canadian or U.S. dollars. The Customs attend with Chandler and open safe for correct amount to be removed.

(j) Cuban pesos issued by Agent and any not used must be returned. Each person is issued with a card and the amount drawn is entered, then each time they return from shore the Immigration guard enters the amount remaining.

(k) Immigration guard issues passes. He is always on duty, crew member hands his discharge book to him and he gives him a pass. This pass has the time that he must be back onboard by, normally 2400 hrs., extensions may be obtained by advising Agent 24 hours in advance. Fines may be imposed for returning late. On return the guard takes the pass and discharge book is returned.

(l) Port Health insist that all rubbish be put in polythene bags and these bags put in bins with lids. The port maintains a garbage disposal service which attends on request.

(m) All meat, if not of New Zealand, Australian, Canadian or American origin must be placed under seal.
(n) The Agent can be contacted by VHF. Call "Mambisa" on Channel 12, office hours only.
(o) Postal service not recommended as very slow.
(p) Berthed at Turcios Lima. 33 ft. alongside. The discharger has two heads and moves the length of the berth. Wheat was discharged at an average of 60 tonnes per hour. Work was on a 24 hour basis.
(q) All hatches were inspected even though only one was to be discharged.
(r) The vessel was not searched but we were told that it could happen at anytime during our stay.
(s) The Officials who attended this vessel were all very friendly and helpful.

SHIPMASTER'S REPORT: December 1983.
Documents:
10 copies Crew List.
3 copies Stores List.
2 copies Deck and Engine Stores.
Personal Declaration Forms (1 copy plus 1 per individual crew member.)
Currency Declaration List.
Drugs List.

Accommodation ladder required for boarding officials.
Pilotage: Compulsory. ETAs should be sent via Agent 72, 48 and 24 hours prior to arrival. Pilot boards at entrance to harbour.
Anchorages: Only available inside harbour.
Vessels await entrance instructions 5 miles North of Morro Light.
Restrictions: Vessels may dock/undock day or night, at any stage of tide.
Max. Size: Max. length 280 m., draft 32 ft.
Radio: Havana Radio.
VHF: Havana Radio – Channels 16, 13 and 11. Pilots – Channels 16 and 11. Port Authority – Channel 16. Agents – Channel 16 and 10.
Tugs: 7 tugs of various sizes available.
Berthing: Vessel loading potatoes; berth 2.1 miles from Harbour entrance. Max. LOA 575 ft., max. beam 80 ft. Max. draft – for'd 22 ft., aft 32 ft. Nature of bottom at berth was mud. Depth in channel 33 ft.
There are no fenders on the quays at Havana. Ensure that there are ample fenders on board.
Cranes: No cranes at cargo quay. 1 floating crane available, capacity 175 tons.
Bulk Cargo Facilities: Silos available for grain. Grabs available for handling coal/coke.
Specialised Cargo Handling Facilities: Facilities available for Ro/Ro vessels.
Equipment to handle palletised/break bulk/20 ft. – 40 ft.containers available. Ample storage areas for containers, etc.
Steel lighters available for work at anchorage.
Stevedores: Satisfactory work carried out by stevedores.
Medical: Doctor and hospital facilities available.
Fresh Water: Available.
Fuel: Bunker fuel oil, diesel and lubricating oils are available.
Consuls: Majority of nations are represented.
Repairs: Can be undertaken.
Surveyors: Lloyds' and Salvage Surveyors available.
Services: Laundry service, telex, limited supply of fresh provisions, groceries and meats available.
All international telephone calls had to be made through the Merchant Seaman's Club. ADD S.M.R.

AUTHORITIES: Ministry of Transport.
All port authorities located at Custom House building. Means of transportation used by authorities to clear vessel is launch. Each authority has its own launch for these services.
AGENT: Empresa Consignataria Mambisa, Agencia Havana, Lamparilla No. 2, P.O. Box No. 1785, Havana, Cuba. Telephone: 61 – 1159 (day and night), 61 – 6706 – Agency Export Dept., 61 – 9068 – Agency Clearance Dept. Cable: Mambisas Habana. Telex: 511576.
Agency VHF works on Channel 12.

ISABELA DE SAGUA: 22.52 N. 80.00 W.

(See Plan)

Although the port of Isabela is not located in a bay and lies on a small peninsula oriented S.W./N.E., it is a fairly protected harbour because a barrier of cays, lined from N.W. to S.E., forms a protective levee against the roughness of the sea and the force of the winds.

Behind the port and town of Isabela, to the S.E., and as if splitting the small peninsula in two, Sagua La Grande river flows into the sea.

Isabela is mostly a sugar shipping port but also handles a rather important amount of import cargoes.

In the vicinity of Isabela, besides several sugar mills, there are an Electro-Chemical Industry and a very important foundry.

PILOTAGE: Pilots board vessels about 1 or 2 miles out from Nos. 1 and 2 buoys. Pilot station located at Custom House building, Isabela de Sagua. Distance from place where Pilots board vessels to anchorage is 7 miles.

From seaward by stages, the bottom is sandy, coral reef and hard rock, mud and rock under mud, mud and clay.

Turns in channel are not dangerous but there are narrows with dangerous currents.

ANCHORAGES: *Inner Anchorage No. 1:* This anchorage is located about 300 m. N.W. from the piers and can be considered part of the manoeuvring basin.
Bottom is soft mud but anchors hold well with 3 shackles of chain.
Draft allowed: 24 ft. or 25 ft. depending upon vessel's length.
Swinging area: About 250 m.
Vessels load or discharge at this anchorage by means of barges.
Inner Anchorage No. 2: This anchorage is located close to and South of Palomo Cay.
Bottom is soft and mud but anchors hold well with 3 shackles of chain.
Draft allowed: 4.4 m.
Swinging area: Unlimited.
Several vessels can be accommodated.
Vessels load or discharge at this anchorage by means of barges but it is chiefly used for vessels awaiting berth.
Outer Anchorage: Located East of Del Cristo Cay and about 8 miles from the port of Isabela, and also known as Ingles Anchorage.
Bottom is mud and coral reefs but anchors hold well with 3 or 4 shackles of chain.
This anchorage is marked with a well lighted buoy.
Vessels can load safely up to 32 ft. 8 in. draft.
Loading or discharging is effected by means of barges.
Operations can be performed at this anchorage when there are good weather conditions.
RESTRICTIONS: Entry and sailing only during daylight due to lack of lights in channel.
MAX. SIZE: Max. draft 23 ft. Max. length 500 ft. Tidal variation about 2.5 ft.
PORT EQUIPMENT: 3 Tugboats (250 h.p. each). 1 Water launch (30 tons capacity). 6 Barges (200 tons cargo capacity each). 1 Transportation Launch.
BERTHING: Isabela operation places (piers) are located on the North coast of the peninsula previously mentioned.
Formerly 4 piers were operated by the port but due to shallowness alongside Begueristain pier, nowadays the latter is used only for small craft and barges drawing 10 ft. maximum. Another berth, Garcia pier, is out of service undergoing repairs, the date of completion of which has not yet been determined.
Amezaga Pier: This consists of a solid concrete well paved construction.
As double standard gauge railroad tracks run along the length of pier, operations can be performed either by railroad or trucks, or a combination of both.
Although it has 2 sides, only the Eastern is used for vessel operations, because at the West side the depth alongside is 9 ft. only.
East Side: Length 324 ft., draft allowed 24 ft. 0 in. (7.32 m.), width 35 ft.
Cargo handled by this pier: General cargo, bagged cargoes, bagged raw and refined sugar, etc.
Alfert Pier: Draft allowed 21 ft. (6.4 m.) Ship's max. length 557 ft. (170 m.).
This pier consists of an all-hardwood construction not in good condition, needing repairs, which are taking place.
It has standard gauge railroad tracks connecting with the main tracks and is not suitable for trucking operations.
East Side: Length 450 ft., Width 30 ft., draft allowed 21 ft. 6 in. (6.40 m.).
Tanker information: Molasses: 2 × 8 in. diameter connections.
Loading rate: 200 t.p.h.
Cargoes handled by this side: General cargo, molassses, bagged sugar.
West Side: Length 450 ft., width 30 ft., draft 21 ft. 6 in. (6.40 m.).
No operations performed at this side due to shallowness alongside.
Beguiristain Pier: Max. vessel's length 525 ft. (160 m.), Draft. (West side) 18 ft. (5.40 m.).
Length 540 ft., width 30 ft.
East side of this pier is out of service due to shallowness alongside.
STEVEDORES: Raw Sugar loading rate: 1,300 bags of raw sugar (of 250-lb. type) loaded per 4 hour-gang period, or 1,490 (of 220-lb. type). From 4 to 5 bags loaded per sling. From lighters, 5 bags.
Refined Sugar: 2,360 bags of refined sugar (50 kg.) are loaded per 4 hour-gang period. 12 bags loaded per sling.
Operational capacity: Three vessels can be operated simultaneously.
Equipment for bulk sugar: Twelve grates available but trimming performed with shovellers.
Loading Raw Sugar – Working periods: From Monday to Friday 0700–1100 hrs., 1300–1700 hrs. Saturday 0700–1100 hrs.
General cargo operations occasionally performed at this port, for which above periods apply.
TANKERS: Molasses average pumping rate 40,000 g.p.h.; alcohol average pumping rate 70-77,000 g.p.h. No fuel oil or ammonium discharging operations performed.
FUEL: Not available.
REPAIRS: Minor repairs can be effected at Isabela de Sagua, larger repairs to be effected at Sagua la Grande, where two repair shops available: Fundicion Marfarlane Nacionalizada and Talleres Esponda Nacionalizado.
MEDICAL: Crew members requiring medical or dental care are treated at Sagua La Grande Hospital, where they can be hospitalised if necessary. At Isabela there is only a Polyclinic.
DUNNAGE: Dunnage material, specially wood dunnage, is difficult to obtain at Isabela.
Paper dunnage can be obtained if ordered well in advance.
TRANSPORTATION: Means of transportation to and from Isabela are: train, bus or car.
From Isabela to Sagua La Grande is a distance of about 17 km. by road or train.
From Sagua La Grande to Santa Clara is a distance of about 50 km. by road.
From Santa Clara there are numerous means of communications to any place or city in Cuba.
There are bus lines Sagua/Cardenas, Sagua/Havana, Sagua/Santa Clara, Sagua/Isabela.

FRESH WATER: Fresh water supplied by barge water-tug up to max. 40–60 tons daily depending on efficiency of aqueduct. Capacity of barge 30 tons. Delivery rate 60 tons per day. Water can be supplied at any pier or inner anchorage.

SHIPMASTER'S REPORT: November, 1978.
Pilotage: Pilot boards 1.5 miles N.E. Cayo Cristo lighthouse in position Lat. 23° 02′ N., Long. 79° 59.4′ W. Pilotage is compulsory. ETA should be sent to vessel's Agent.
Max. Size: Max. LOA 606 ft. Max. beam 75 ft. Max. draft 23 ft. I would suggest the max. size as being 520 ft. LOA, 70 ft. beam and 22 ft. max. draft. Tidal range 2 ft.
Tugs: 3 tugs available each approx. 140 h.p.
Radio: Havana Radio "CLA".
VHF: Not available.
Documents: 8 crew lists. 1 vaccination list, health declaration, 4 currency lists (crew and ships). (Also see "General").
Consuls: Nearest are in Havana.
Medical: Doctor and hospital available in Sagua La Grande at a distance of 10 miles from the port.
Berthing: Espg. De Amezuga Berth: Position Lat. 22° 56′ 54″ N., Long. 80° 00′ 40″ W. Distance from berth to entrance 7 miles. Max. size of vessel that can be safely berthed, LOA 520 ft., beam 70 ft. and deepest draft 22 ft. Least depth of water in channel from sea to berth 25 ft. Vessel able to dock and undock at any stage of the tide also vessel able to dock and undock during hours of darkness at times. Special bulk facilities handled at the port include Molasses. There are no quay cranes, Ro/Ro facilities or floating cranes.
Stevedores: Believe there are a total of 8 gangs available for working of general cargo. There are steel and wooden dumb barges available (length 75 ft., beam 30 ft.).
Density: 1004.
General: Documents required: 3 Manifests (Crew Declarations); 8 Crew Lists; 4 Bonded Stores Lists; 4 Provision and Meats Lists; 4 Currency Lists (Crew and Ship's); Certificate of Sanitary/Veterinary Inspection (from last Cuban port); 1 Stowage Plan; Cargo Manifest.

Seals may be opened coastwise but advise not to, with exception of meats.

All conditions as Havana except shore leave only 1800 – 2200 hrs., except Master, extension granted for officers to 2400 hrs. if requested via Agent.

Only chandler 70 miles away.

Fresh water available at 8 t.p.h. (amount may be limited) but must be ordered immediately on arrival if required. We did not order until the last day as we believed we were bound for a U.S.A. Gulf Port, it took 8 hours to hook up and a lot of pressure on Agent.

Berth unsuitable for this size of vessel though using mooring buoys vessel lay securely moored. Concrete pier with wooden fendering slightly dilapidated in places but quite adequate. Pier 320 ft. long and 4 ft. high. Stern secured to 2 mooring buoys, one each quarter, distance approx. 200 ft., but buoy moorings are believed to be suspect. No cargo can be worked at No. 5 except by lighters. Harbour Master states largest vessel suitable for this berth 120 m. LOA. Depth alongside by soundings 22 ft. Forward, 26 ft. aft. Pilots good.

Gangway must be used, as companion ladder will not reach quay.

Channel requires local knowledge but it is well buoyed.

Cargo discharge depends on supply of trucks. Can only work one truck at each hatch therefore to speed up discharge last day two gangs No. 4 discharged into lighter offshore.

AUTHORITY: All port authorities located at port of Isabela de Sagua.

When vessels at anchorage awaiting berthing, authorities transported by tug-boat for clearing purposes.

AGENT: Empresa Consignataria Mambisa, Agencia Isabela de Sagua, P.O.Box 18, Isabela de Sagua, Prov. de Las Villas. Tel: 698122 (office) 698130 (night). Telex: 041222. Cable: Mambisas Sagua La Grande.

Pilot VHF works on Channel 16.

Cables, messages should be addressed "Mambisas Sagua la Grande", but recommended be sent through main office "Mambisas Havana". ETAs should be sent simultaneously to both.

JUCARO: 21.37 N. 78.51 W.
(including the sub-ports of Boca Grande, Palo Alto and Santa Maria)

APPROACHES: Vessels proceeding to Jucaro sub-ports must call first at Jucaro for Port Authority's clearance.

Tidal variation 1 ft. 6 in. It is not necessary to await slack water before entering. Recommended that *(a)* vessels arriving from Cuban ports situated to the East of Jucaro, such as Caibarien, Puerto Padre, Manati, Vita, Banes, Antilla, Sagua de Tanamo, Moa, Baracoa, etc., or from foreign ports, should enter Jucaro Port through Breton Channel, and *(b)* all vessels not exceeding 22 ft. draft proceeding from those Cuban ports situated to the West of Jucaro, such as Havana, Mariel, Matanzas, Cardenas, Isabela de Sagua and Cienfuegos, should enter Jucaro port through Tunas Channel.

DOCUMENTS:
10 Crew Lists.
10 Passenger Lists (if passengers on board only).
10 Manifests of Cargo (or ballast).
4 Customs Crew Declaration (including currency).
4 Ship's Provision Stores, including bonded and narcotics.
1 Health Declaration,
1 Vaccination List.
Clearance from Last Port.
Derat Certificate.

PILOTAGE: Pilots board vessels which enter through Breton Channel at Buoy No. 2, which is situated to East of channel entrance, 21° 08′ 18″ N. 79° 30′ 24″ W. with water depth 33 ft. Through this channel vessels can enter drawing up to 29 ft. with max. length 800 ft. Bottom is coral reef. There are dangerous turns at "pasa" of Baandra until Ana Maria Cays have been passed.

For vessels which enter through Tunas Channel, Pilots board at No. 2 Buoy which is situated to East of Channel entrance, Lat. 21° 31′ N., Long. 79° 41′ 21″ W. Through this channel vessels can enter drawing up to 22 ft.

No pilot station. Pilots are to be notified of vessel's arrival 24 hours in advance. Distance from place where Pilots board vessels to Jucaro anchorage is 50 miles.

From Jucaro Anchorage to:

Boca Grande Sub-port	– 14 miles
Palo Alto Sub-port	– 5 miles
Santa Maria Sub-port	– 24 miles

RESTRICTIONS: Vessels can enter and sail through both channels day and night.

ANCHORAGES: Loading places, ex-lighters. Three anchorages (very good holding ground), namely, No. 1 Anchorage – 6 miles from the port at South of Obispo Cay, depth 24 ft. No. 2 Anchorage – 7 miles from the port at S.E. of Obsipo Cay, depth 27 ft. No. 3 Anchorage: Anchorage 8 miles from the port and 1 mile to Eastward of No. 2 anchorage, depth 30 ft.

RADIO: Call "Jucaro Radio" on 2182 kHz, will answer on 2760 kHz.

VHF: Pilot boat, Port Captain and Agency equipped with VHF and work on Channel 16.

LOADING: This port only exports bagged refined sugar in 100 kilos jute bags or 50 kilos cotton bags, molasses and fresh fruits.

Fuel oil is discharged either imported or by coastal trade.

Working periods: Monday to Friday 0600 – 1000 hrs., 1200 – 1600 hrs.; Saturday 0600 – 1000 hrs., 1200 – 1600 hrs. It is possible to work overtime, also possible to work Sundays and holidays, if required.

Work carried out on a piece-work basis, and at an average of 2,000 bags per gang-period. 6 sugar bags loaded per sling.

Refined sugar: Work is carried out on a piece-work basis and loading rate averaged about 4,000 bags of the 50 kilo type and 2,000 of the 100 kilo type per gang-period.

Sugar in bulk: Venezuela and Ecuador sugar mills have 5 thrower machines each for distributing sugar in vessels' hatches. Loading carried out by cutting sugar bags through grates placed on vessels' hatches.

Shore cranes: None.

TANKERS: Average pumping rate of molasses 20,000 g.p.h.

FUEL/REPAIRS: Not available.

FRESH WATER: No water available.

OPENING/CLOSING HATCHES: By crew.

PROVISIONS: Available, but expensive.

TRANSPORTATION: Distance between Jucaro Port and its sub-ports:

To Santa Maria	– 31 miles
To Boca Grande	– 15 miles
To Palo Alto	– 9 miles

Motor launches are used between port and sub-ports, and take 4.5 hours, 2.5 hours and 1.25 hours between Jucaro and Santa Maria, Boca Grande, and Palo Alto respectively.

By automobile, 3.5 hours to Santa Maria and 2 hours to Boca Grande. No highway from Jucaro to Palo Alto.

MEDICAL: There are two hospitals at Ciego de Avila where sick crew members can receive attention. Distance between Jucaro and Ciego de Avila is 27 km.

SHIPMASTER'S REPORT: 1977.

Lines to the barges to be provided with rat-guards.

Very strict regulations concerning crew declaration of effects, currency and pornography.

All personal effects of crew members will be sealed by Customs, even their used clothes, allowing them out only a couple of clothes changes, one carton of cigarettes and one bottle of spirits.

Advisable to instruct crew members to declare all currency and not to try to take any money ashore. They could not use or change it and could run into a great deal of trouble.

Vessel's deck, engine and accommodation will be searched by Port Authority party.

Cholera vaccination available on request.

Shore leave for crew allowed only from 1800 to 2200 hrs.

No kind of restrictions for the Master, whose shore leave is unlimited. Strict Customs regulations do not affect him.

No amenities available ashore.

Loading of oranges fast if available. About 200 tons per gang shift.

Pre-cooling of cargo chambers is not required. Oranges stowed in two tiers of four cartons with battens in between. Maximum height of eight cartons. Stowage factor about 95.

AUTHORITY: Custom House, Captain of the Port and Immigration, located at Jucaro. Port doctor located at Ciego de Avila.

AGENT: Empresa Consignataria Mambisa,
Agencia Nuevitas,
P.O. Box No. 350,
Puerto Tarafa, Nuevitas,
Prov. de Camaguey.
Telephone: 2779, 2107 (office),
3190 (night).
Telex: 3190.
Cable: Mambisas Nuevitas.

Mambisas Nuevitas Agency also attends at the port of Nuevitas.

Jucaro and Boca Grande are attended by Nuevitas Agency personnel.

Any information about vessels operating at Jucaro or Boca Grande should be requested from our main offices at Havana or to Nuevitas Agency because it is extremely difficult to communicate directly with the Agent attending the vessel. Agents at Jucaro and Boca Grande communicate periodically with Nuevitas Agency which relays the information to our main office.

SUB-PORT OF BOCA GRANDE:

SHIPMASTER'S REPORT: Port will not be operational after 1977.

LOCATION: About 15 miles East of Jucaro.

APPROACHES: See "Jucaro".

PILOTAGE: See "Jucaro". Distance from place where Pilots board vessels to Boca Grande is 64 miles. Entrance channel: same as for Jucaro. Tidal variation 1 ft. 6 in.

ANCHORAGES: Anchorage No. 1: Located 3 miles off Boca Grande Firth. Draft 24 ft. Anchorage No. 2: Located 5 miles off Boca Grande Firth. Draft 30 ft. Both these anchorages have soft mud bottom.

Kind of cargoes handled. Importation, fuel oil. Exportation, bagged refined sugar, molasses. Coastal trade, discharge of fuel oil.

LOADING: At present only refined sugar is exported. All sugar-loading operations are carried out at anchorage by means of lighters. Following lighters available:

Barges	Capacity (50 kg. bags)	Capacity (100 kg. bags)
Ana	4,900	2,500
Loretto	4,400	2,100
Mascot	4,400	2,100
F 55	4,400	2,100
Trusco 89	5,100	2,980
Angel	3,440	1,700

Working Periods: Monday to Friday 0600/1000 hrs., 1200/1600 hrs.; Saturday 0600/1000 hrs, 1200/1600 hrs. When working is performed on Sundays, same periods apply.

Work is performed on a piece-work basis, and average loading rate is about 2,000 bags, basis 6 bags per sling, and 100 kilo bags. Only one vessel can be worked at a time.

TUGS: Three tugs available.

TANKERS: Discharging operations at No. 1 or No. 2 anchorages. Discharging rate approximately 20,000 g.p.h.

There are also steel barges for transportation of molasses and/or sugar:

Guanales:	100 ft.×30 ft.×7 ft. Sugar capacity: 1,600 bags. Molasses capacity: 65,000 gallons.
Loreto:	100 ft.×30 ft.×7 ft. Sugar capacity: 1,600 bags. Molasses capacity: 65,000 gallons.

Each of these barges has 4 tanks measuring 15 ft.×36 ft.×7 ft. Capacity: 3,780 cu.ft. or 28,274 gallons each tank. Total capacity: 113,100 gallons. Each barge can load a max. of 400 tons of molasses and each is equipped with steam pump.

COMMUNICATIONS: Launch transportation. It takes 2.5 hours for travelling from Boca Grande to Jucaro or Santa Maria. Captain of the Port's radio-telephone is used as means of communication.

All communication and instructions for vessels operating at this sub-port must be given to Nuevitas Agency.

MANZANILLO: 20.20 N. 77.12 W. (See Plan)
(and sub-ports of Ceiba Hueca, Media Luna, Niquero and Pilon (Ensenada de Mora).)

PILOTAGE: Pilots board vessels at Cabo Cruz. Pilot station located at Cabo Cruz and Pilots communicate with Manzanillo by means of radio-telephone. Distance from place where Pilots board vessels up to Manzanillo through Madrona Channel is 68 miles. Through Palomino Channel (Coloradas de Fuera) is 55 miles.

APPROACHES: *(a)* Madrona Channel: This channel has sharp and narrow turns. Bottom is of soft mud. Max. draft with which vessels can enter through this channel is 33 ft. Channel has depth not less than 35 ft. Vessels must wait for slack or favourable tide to proceed through this channel. No tug is necessary.

(b) Palomino Channel: This channel has turns, but they are less sharp and less narrow than those of Madrona Channel. Bottom is of soft mud. Max. draft with which vessels can enter through this channel is 20 ft. No tug is necessary.

The average tidal variation is 1 ft. 6 in.

RESTRICTIONS: Due to present conditions of channel lights and distance, it is suggested that vessels enter and sail only during daylight.

ANCHORAGES: Inside harbour: No. 1, draft 24 ft. Distance from shore 1 mile. Use: sugar/general cargo.

Outside harbour: No. 2, draft 29–30 ft. No. 3, draft 33 ft. Distance from shore 1.5 miles to 2 miles. Use: sugar/general cargo. Although about 40 ft. depth at this anchorage, it is limited to 33 ft. which is official draft of the entrance channel. Vessels have been loaded at this anchorage up to 33 ft. 6 in. draft.

ICP Submarine Pipe-Line Anchorage: The submarine pipe-line anchorage is located as follows:

Lat.: 20° 21′ 12″ N. – Long.: 77° 10′ 21″ W.

There is no limitation to the length of vessels operating at this place and maximum official draft is 28 ft.

Distance from shore is about 2 miles and the means of transportation are the tugboats of the stevedore enterprise Terminales Mambisas.

The vessel is secured to 4 buoys and the mooring is performed by Terminales Mambisas tugboats and personnel.

The pipe-line is 8 in. (203 mm.) in diameter and connection is 6 in. (152 mm.).

The cargo handled is: Discharge of kerosene, gasoline and diesel oil.

The prevailing winds are those of the first quadrant.

EQUIPMENT: The port has 6 barges of 200 tons cargo capacity, 2 of 140 tons and 1 of 100 tons, this last one having a derrick capable of lifting up to 2 tons.

There are 3 tugboats servicing the port:

"Punta Morrillo" the biggest and most powerful, capable of towing 5 barges, "Aracelio Iglesias" and "Cdte. Turcios Lima" which can tow 3 barges each.

These tugboats are also used to transport shore/vessel personnel from shore to anchorage or vice versa.

There are no cranes or pay loaders in the port.

LOADING: Sugar-loading operations performed at anchorage by lighters.

At sugar mill "La Demajagua", town of Calicito, at a distance of 2 km. from the sugar mill, there is a small pier with a draft of 10 ft. where the barges are loaded with bagged raw sugar for vessels operating at Manzanillo.

At sugar mill "Francisco Castro Ceruto", town of Campechuela, at 500 m. from the sugar mill there is a pier with a draft of 12 ft. where barges are loaded with bagged raw sugar for vessels operating at Manzanillo or Ceiba Hueca.

For the discharge of barges with import cargoes the coastal pier of Manzanillo Fishing Port is used, about 3 km. distance from the city.

Bulk cargoes are not handled by this port except the discharge of petroleum products.

Docks are suitable for reception and handling of import and export cargo (bulk cargo excepted). They have railroad tracks of non-standard gauge, which connect with warehouses.

Sugar and general cargo: Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 raw-sugar bags loaded per gang per day of 8 hours.

DISCHARGING: Rates:

Bagged cargo (of 100 lb.)	approx. 25 t.p.h.
Bagged cargo (of 200 lb.)	approx. 35 t.p.h.
Iron	approx. 7 t.p.h.
Wood	approx. 8 t.p.h.
Jute bags	approx. 15 t.p.h.

FUEL/FRESH WATER: Not available.

REPAIRS: Mechanic and foundry shop under control of Industry Ministry, where light repairs of machine parts can be performed.

TRANSPORTATION: Distance from Manzanillo to:

Ceiba Hueca:	15 miles by sea, 32 km. by highway
Media Luna:	23 miles by sea, 45 km. by highway
Niquero:	45 miles by sea, 79 km. by highway
Pilon:	90 miles by sea, 130 km. by paved highway, which reaches up to 15 km. from Niquero whereafter a dirt road must be used to reach Pilon. Dirt road distance of 40 km. During rain season a jeep is used to travel by this road.

Car is used to travel from Manzanillo to above sub-ports, and takes: to Ceiba Hueca 1 hour; to Media Luna 1 hour; to Niquero 2 hours and to Pilon 3 hours (in rainy season about 5 hours).

Daily car services from Manzanillo to Niquero; to Pilon there are trucks specially prepared for this service.

COMMUNICATIONS: There is direct communication between Manzanillo and its sub-ports by telephone or telegraph.

In Manzanillo there is a long distance telephone service, radiograms, telegrams and Post Office.

Ocean-going vessels navigating to Cuba can communicate by radiotelegraphy, contacting "CLA Havana" station, which relays the messages to Manzanillo by telex.

Vessels navigating in Cuban waters can communicate any message by means of radiotelephony, contacting "CLM Coastal Network", Manzanillo. CLM station relays the messages to Manzanillo Agency by direct telephone call.

The Manzanillo Agency is connected to the National Telex System and the Manzanillo number is 02321. This is the quickest method of communication with Manzanillo Agency.

ETA messages should be given simultaneously to "Mambisas Manzanillo" and "Mambisas Havana".

MEDICAL: There is a hospital at Manzanillo where sick crew members can receive attention.

DUNNAGE: Vessels nominated for loading sugar in Manzanillo or any of its sub-ports must arrive supplied with wood dunnage because in the Manzanillo Jurisdiction it is extremely difficult to obtain wood dunnage.

Dunnage paper can be supplied if requested in advance.

AUTHORITIES: All Port Authorities, Custom House, Immigration Port Doctor, Port Captain are located at Manzanillo.

Vessels can proceed directly to any of the sub-ports, where Manzanillo Port Authorities travel to give clearance, but advance information must be given to these Authorities for the corresponding permit, as Manzanillo regulations provide that vessels must enter Manzanillo as Custom Official Port.

AGENT: Empresa Consignataria Mambisa, Calle Bateria No. 2, Manzanillo, Prov. de Oriente. Cable Address: Mambisas Manzanillo. Telex: 063121 – Tel: 2533, 2535 (Office); 2535 (Night).

(a) SUB-PORT OF CEIBA HUECA: (See Plan)

Vessels may proceed direct to sub-ports (see Manzanillo under "Authorities").

PILOTAGE: Pilots board vessels at Cabo Cruz. Distance from place where Pilots board vessels up to Ceiba Hueca pier is about 42 miles.

APPROACHES: See Manzanillo information. For operations at Ceiba Hueca it should be noted that the pier has a depth of only 19 ft. towards the sea end for loading. Tidal variation about 1 ft. 6 in.

BERTHING: A motor-boat is required to assist in handling lines to pier and buoys. Boat is brought from Manzanillo.

LOADING: As Ceiba Hueca pier is in bad condition, it is only used currently to dock small tankers (325 ft. length) to discharge fuel oil, or to load molasses (max. 500 ft. length) across the head of the pier, securing ship to 2 mooring buoys port side and 2 starboard side.

(a) *Indio Diaz Machado Pier* (Formerly Ceiba Hueca Pier):
Length 130 m. (426 ft.), draft 19 ft.
Discharge of fuel oil: Connection 8 in. diameter.
Loading of molasses: Pipe-line 16 in., 2 connections 8 in. each.

(b) *Ceiba Hueca Anchorage:* Located at 1 mile N.W. of pier.
Max. draft allowed is 33 ft.
The bottom at anchorage is soft mud.

Two vessels can be operated simultaneously: One loading sugar and another discharging fuel or loading molasses at the pier.

There is railroad of non-standard gauge from the sugar mill warehouse to the dock platforms.

Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

2,000 bags are loaded per gang-period. 6 bags per sling.

TANKERS: Vessels are loaded with molasses at Ceiba Hueca pier and average pumping rate is 25,000/30,000 g.p.h. Tankers with fuel oil are also operated.

FUEL/REPAIRS: Not available.

FRESH WATER: Vessels can be supplied. Delivery made through pipe-line alongside vessel. Average delivery rate is about 1 t.p.h. (due to low pressure).

MEDICAL: Crew members requiring medical attention are treated at the Polyclinic of the nearby town of Campechuela.

When hospitalisation or specialised medical care is required, patients are sent to Manzanillo Hospital.

COMMUNICATIONS: Government telegraph communication between Manzanillo and Ceiba Hueca up to 1800 hrs. however, there is a telephone line which communicates by means of relay with "La Demajagua" sugar mill, which has direct telephone communication with Manzanillo. This communication is only during sugar-mill office hours, and it is very poor due to above relay.

SHIPMASTER'S REPORT: October, 1984. (see Plan).

Vessel loaded sugar in Bulk.

A new berth (constructed 1981) consisting of the following:

1. A long passage way from land to seaward having a length of about 500 m. containing the belt which carries the sugar.

2. Seven square dolphins 5 m.×5 m. constructed of cement with rubber fenders and 1 bollard on each. Distance between the first and seventh dolphins is about 250 m.

3. One semi-circle cement construction about 40 m. length containing the movable conveyor.

The conveyor has a capacity of about 500 tonnes/p.h. – 600 tonnes/p.h. Loading operations can be done only into 3 cargo holds and then vessel has to shift by means of warping. No tug available or shore mooring men. It is best to leave a seaman ashore for any rope moving.

The berth is affected by strong Northeasterly – Southeasterly winds and precautions must be taken during vessel's shifting.

Max. sailing draft allowed 32 ft. The channel is marked with 3 pairs of buoys. No night mooring or unmooring. All other details as per "Guide to Port Entry".

AGENT: Vessels operating at this sub-port attended by Manzanillo Agency Personnel.

(b) SUB-PORT OF MEDIA LUNA: (See Plan)

Vessels may proceed direct. (See Manzanillo under "Authorities").

PILOTAGE: Pilots board vessels at Cabo Cruz. Distance from place where Pilots board vessels to Media Luna is about 38 miles.

APPROACHES: See "Manzanillo".

MAX. SIZE: Max. draft for vessels to enter and carry out loading operations at this sub-port is 33 ft. Tidal variation 1 ft. 6 in.

LOADING: Loading operations are carried out at anchorage where vessels can load up to 33 ft. Barges and tug-boats are used from Manzanillo.

Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 bags are loaded per gang-period. Vessels can only work with 3 or 4 gangs. Only one vessel can work at a time.

TANKERS: No facilities.

FUEL/FRESH WATER/REPAIRS: Not available.

MEDICAL: There is a hospital and also a polyclinic at Media Luna where sick crew members receive medical or dental care.

Whenever hospitalisation or specialised medical care is required, patients are sent to Manzanillo Hospital.

COMMUNICATIONS: There is direct telephone service with Manzanillo, also telegraph and post office.

AUTHORITIES: See "Manzanillo".

(c) SUB-PORT OF NIQUERO: (See Plan)

Vessels may proceed direct. (See Manzanillo under "Authorities").

PILOTAGE: Pilots board vessels at Cabo Cruz. Distance from place where Pilots board vessels to Niquero Pier is 15 miles. Tidal variation 1 ft. 6 in.

LOADING: Pier length 400 ft. – 450 ft., depth up to 23 ft. (North and South sides). There are railroad tracks of different gauges and sidings for shifting of flat cars.

Working periods: Monday to Friday 0700 – 1100 hrs.,1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 bags loaded per gang-period. 6 bags loaded per sling.

Although Niquero pier has two sides for docking, sugar mill can only supply sugar for working 1 vessel at a time unless overtime be worked at both sugar mill, warehouse and pier.

FRESH WATER: Can be delivered at pier by means of tank cars, capacity 8 tons. About 5 – 6 tank cars can be delivered daily but operation has to be performed outside loading hours.

FUEL/REPAIRS: Not available.

TANKERS: No facilities.

MEDICAL: All crew members requiring medical or dental attention are treated at Niquero Hospital, where they can be hospitalised if necessary.

COMMUNICATIONS: Long-distance telephone communication between Manzanillo and Niquero sugar-mill office. Distance from sugar-mill office to pier is about 5 km.

AGENT/AUTHORITIES: See "Manzanillo".

(d) SUB-PORT OF PILON (ENSENADA DE MORA): (See Plan)

Vessels may proceed direct to sub-ports (see Manzanillo under "Authorities").

PILOTAGE: Pilot boards vessel at Cabo Cruz.

APPROACHES: From Cabo Cruz to Pilon mouth entrance is open sea. From Pilon mouth to the pier is through channel, with rocky bottom and turns.

ANCHORAGES: Permitted draft up to 23 ft.

MAX. SIZE: Max. draft permitted for vessels entering and sailing harbour is 20 ft. Tidal variation 1 ft. 6 in. Cargo vessel 450 ft. – 470 ft. length, tankers 500 ft. length.

LOADING: Berth length 150 m., depth 20 ft. (presently in bad condition). Sugar and molasses loading are performed at this berth. There is a railroad track of non-standard gauge between the sugar mill and the berth.

Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

2,000 bags of sugar loaded per gang per day of 8 hours. 6 bags loaded per sling. In cases when winches are slow, the number of bags per sling is increased. Only one vessel can operate at this berth at a time.

TANKERS: Molasses average pumping rate is 25,000 – 30,000 g.p.h. One connection 8 in. diameter, 12 in. pipe-line.

FUEL: Not available.

FRESH WATER: Can be delivered at berth by pipe-line. Average delivery rate about 1 t.p.h.

MEDICAL: Medical attention and dental care rendered at Pilon Hospital.

COMMUNICATIONS: Government telegraph at Pilon. Also local telephone between sugar-mill office and Niquero, where there is Inalambrica system.

AGENT/AUTHORITY: See "Manzanillo".

MARIEL: 23.01 N. 82.46 W. (See Plan)
(and sub-ports of Cabanas, Bahia Honda and Santa Lucia)

PILOTAGE: Pilots board vessels about 1 mile from entrance of port. Vessels proceeding to sub-ports of Cabanas and Bahia Honda must pick up Pilot at same place. Pilot station located at 84 street, 5/a and 7/a, Barrio Boca. No telephone communication.

Distance from position where Pilots board vessels to:

Pier of Unit No. 1	– 1.25 miles
Anchorage	– 2.50 miles
Pier of Unit No. 2	– 2.75 miles

APPROACHES: Entrance channel where buoy No. 1 is situated is over a sand bank with 50–55–60 ft. depth. No. 3 buoy situated in 32 ft. of water on rocky bottom, but having close by a depth of 95 ft. No. 5 buoy situated in 30 ft. of water on sand having close by a depth of 33 ft. max. This channel is 328 ft. wide (approx.).

ANCHORAGES: General anchorage – swing area 450 m., depth 29 ft.

Punta Gorda anchorage – swing area 340 m., depth 36 ft.

Cargo operations do not take place at anchorages.

RESTRICTIONS: Vessels can enter and sail during day and night hours, but this should be checked in each case prior to vessel's arrival as on occasions the buoys are missing.

MAX. SIZE: Max. draft with which vessels can enter and sail through channel is 30 ft. and max. length of 610 ft. Tidal variation 16 in. Also see "Berthing".

BERTHING: All places of operation at this port are located on the East coast of the bay: Unit No. 1 close to the port entrance; Cement Plant pier located just in front of Pt. Gorda and Unit No. 2 located at the North of the town of Mariel.

All operations at Mariel piers are effected by means of trucks.

(a) *Unit No. 1, Berth No. 2 (N.W.):* Length 134 ft., max. draft allowed 22 ft. Used mostly for general cargo and bulk fertiliser.

(b) *Cement Plant Pier:* Length: 544 ft. Draft: Vessels with a length under 500 ft. can dock with a draft of 29 ft. even keel.

This pier is used only to discharge fuel oil destined either for the Cement or the Thermoelectric Plants.

Vessels over 500 ft. and up to 610 ft. can enter with a draft of 27 ft. fore and 29 ft. aft. Assistance of a large tugboat (850 h.p.) or 2 smaller ones is necessary for vessels exceeding 532 ft. and up to 610 ft. length.

Tanker information: Fuel Oil: 1×8 in. diameter.

(c) *Unit No. 2:* This installation is located at the North side of the town of Mariel.

It consists of 3 berthing spaces, that is, a pier 607 ft. long by 267 ft. wide, built of concrete, but earth filled and not properly paved.

Berth No. 5 (N.E.): Draft: 21 ft. fore and 23 ft. aft. Length: 607 ft.
Berth No. 6 (N.W.): Draft: 25 ft. fore and 27 ft. aft. Length 267 ft.
Berth No. 7 (S.E.): Draft 29 ft. even keel – Length: 607 ft.
Cargo handled by this unit: Bulk fertilisers, general cargo and lumber.
Water available by tank-truck.

(d) A new plant for shipping bulk raw sugar is operating at new pier, draft 30 ft.

STEVEDORES: Working periods: Monday to Saturday 0700 – 1300 hrs., 1300 – 1900 hrs., 1900 – 0100 hrs.

Raw sugar: 845 bags loaded per gang-period. 9 bags per sling. Only one sugar vessel can operate at a time.

General cargo: discharging rate: from 6 to 9 tons per gang hour.
Bagged merchandise: about 13 tons (100 lb. bag type).
Iron: about 18 tons (fluctuates according to type of iron).
Wood: 12 tons (approx.).
Fertilisers: Muriate of potash: 10 to 13 tons.
Sulphate of ammonia: 8 to 10 tons.
Superphosphate simple: 15 to 18 tons.

Shore cranes: There is one caterpillar (PH movable crane with boom of 80 ft. length, and which can lift 12 tons).

FUEL/REPAIRS: Not available.

FRESH WATER: Can be supplied at Unit No. 2 berth by means of tank-truck with capacity of 5 tons. In dry season supplied only during night time.

MEDICAL: No hospital. Crew members requiring medical attention are sent to Havana.

TRANSPORTATION: Distance from Mariel to:
Cabanas (anchorage): 25 km. 45 minutes by car.
Cabanas (pier): 57 km. 1 hour 47 minutes by car.
Bahia Honda: 73 km. 2 hours by car.
Santa Lucia: 250 km. 4 hours by car.

Car is hired for transportation to above sub-ports. There is daily transportation only between Mariel and Cabanas anchorage.

AUTHORITIES: Located at Mariel as follows:
Customs House and Immigration: Ave. 65. 126 Street and 128 Street.
Captain of the Port: Playa "La Boca" at the entrance of the port.
Port Doctor: 128 Street. Ave. 67. and Litoral.

AGENT: Consignataria, Mambisa, Agencia Mariel, Ave. 65 No. 12411 entre 124 y 126, Apartado No. 5, Mariel. *Tel:* 92305, 92183 (office), 922326 (night). *Telex:* 05740. *Cable:* "Mambisas Mariel".

Pilot Works VHF on Channel 16.

Mariel Agency also attends the ports of Bahia Honda, Cabanas and Santa Lucia.

(a) SUB-PORT OF CABANAS: (See Plan)

Vessels assigned to Cabanas do not have to enter Mariel for clearance, but must pick up Pilot at Mariel port entrance.

PILOTAGE: See "Mariel".

Distance from position where Pilots board vessels to Cabanas is 12 miles.

APPROACHES: Entrance channel has sandy bottom on Eastern side, and rocky bottom on Western. It is about 70 m. wide.

ANCHORAGES: Excellent anchorage is available about 620 m. S.E. of Pt. Mangle, with draft well above port's operations draft.

This is a very desirable anchorage as it offers protection in all weathers.

There is another anchorage about 4.5 miles distant from Gloria Rock.

MAX. SIZE: Max. draft permitted for entry and sailing is 19 ft., and max. length 574 ft. Tidal variation 1 ft. 4 in.

RESTRICTIONS: Vessels should enter and sail only during daylight.

BERTHING: Present name: ECA "Pablo de la Torriente Brau". Former name: "Almacenes de Cabanas". Length 360 ft. (max. length permitted 450 ft.), depth 20 ft.

This dock is commonly known as "Orozo Dock", which is used in shipments of raw sugar. There are railroad tracks of standard gauge.

If for any reason a tugboat is required, tugboat 'Caharata' is available, if requested in advance.

LOADING: Working periods: raw sugar: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

845 bags are loaded per gang-period. 6 bags loaded per sling.

FUEL/FRESH WATER/REPAIRS: Not available.

MEDICAL: Crew members requiring medical care are attended at Cabanas Polyclinic. In those cases requiring hospitalisation or specialised medical treatment, they are sent to Havana.

AGENT/AUTHORITIES: See "Mariel". There is a Port Captain and Immigration at Cabanas.

(b) SUB-PORT OF BAHIA HONDA: (See Plan)

Vessels assigned to load at Bahia Honda do not have to enter Mariel for clearance, but must pick up Pilot at Mariel port entrance.

PILOTAGE: See "Mariel". Distance from position where Pilots board vessels to Bahia Honda is 21 miles.

APPROACHES: The entrance channel has sandy bottom on Eastern side, and rocky bottom on Western and is approximately 150 m. wide up to Corojal Anchorage.

RESTRICTIONS: Entry and sailing only during daylight and necessary to await favourable tide.

ANCHORAGES: Draft 28 ft. Swing area 300 m. Max. length permitted 623 ft. Anchorage used for completion of sugar loading by means of barges that are brought from Havana.

MAX. SIZE: Length 450 ft. and max. ship draft for proceeding up to Corojal anchorage is 28 ft. Tidal variation 1 ft. 4 in.

BERTHING: Dock: "Central Harlem" (formerly "Bahia Honda"):

Length 260 ft., draft 19 ft. Dock is commonly known as Sugar Dock of Harlem Sugar Mill. It has railroad track of standard gauge.

LOADING: Sugar working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

845 bags of raw sugar are loaded per gang-period as minimum (more than the above stipulated amount is always loaded). Only one vessel can load at a time.

BUNKERS/WATER/DUNNAGE/REPAIRS: No facilities.

MEDICAL: Crew members requiring medical care are attended at Bahia Honda Polyclinic. Those cases requiring hospitalisation or specialised medical treatment are sent to Havana.

AGENT/AUTHORITY: See "Mariel".

(c) SUB-PORT OF SANTA LUCIA: 22° 44′ N. 83° 59′ W.

Vessels assigned to Santa Lucia do not have to enter Mariel for clearance, nor to pick up Pilot.

PILOTAGE: Pilots board vessels at Pasa Honda, 2 miles off the phosphorescent buoy. No pilot station. Advice of ships' arrival is given to Custom House Delegation by cable. Distance from place where Pilots board vessels up to first anchorage is 4 miles.

APPROACHES: Channel approximately 200 m. width, rocky bottom. It has two turns with dangerous narrows. Tidal variation averages 18 in.

LOADING: There are the following anchorages:

1st Anchorage: Has depth of 30 ft., but vessels are limited for sailing to max. draft of 15 ft., and length 500 ft.

2nd Anchorage: Has depth of 20 ft., but vessels are limited for sailing to max. draft of 18 ft.

3rd Anchorage: Open sea without draft limitation.

Working periods: Work is performed all day (during daylight) including Saturday and Sunday.

Average loading rate is about 900 tons daily, but rate might be improved in the following cases:

1. Vessels with more than 3 hatches available.
2. Vessels with booms (not of the crane type) since loading is performed by grabs which are to be rigged in order to perform quick loading.
3. Provided only one vessel performs operations (2 vessels may be loaded simultaneously but above rate cannot be complied with).

Loading at this sub-port is by means of grabs rigged to vessel's boom. In cases where vessel has no booms, but cranes, the loading is carried out very slowly as buckets are used in such cases, and having to shovel mineral into buckets delays loading operations.

There are 6 barges for loading mineral with a capacity of 150 tons each.

TUGS: 2 tugs, *Adis* and *Julita* which can tow 2 barges each.

FUEL/FRESH WATER/REPAIRS: Not available.

MEDICAL: Crew members requiring medical care are attended at Santa Lucia Polyclinic. Those cases requiring hospitalisation or specialised medical treatment are sent to Pinar del Rio Hospital, distance 80 km. from Santa Lucia.

AGENT/AUTHORITIES: See "Mariel".

Port Authorities use launches for clearing vessels. Agents use a car to travel from Mariel to Santa Lucia which takes 4 hours.

There are Custom House and Port Captain Delegations at the sub-port of Santa Lucia.

MATANZAS: 23.03 N. 81.34 W. (See Plan)

Matanzas Bay is open and most ample, being about 5 miles long and 2.75 miles wide.

Its waters are deep and only start losing depth at about 150 yds. from shore; for this reason it is most suitable to accommodate large vessels, regardless of length or draft.

Occasionally the prevailing winds affect and interfere with docking and undocking manoeuvres.

Within bay limits, 3 rivers flow:

San Juan and Yumuri Rivers, which empty into the South-Western extreme of the bay, after crossing the city of Matanzas; and Canimar which drains into the S.E. of the bay.

PILOTAGE: Pilots board vessels about 3 miles after passing the port entrance, in front of Electrical Plant and close to Empresa Consolidada del Petroleo Pier (Texas). Pilot station located at Reynold Garcia Pier (Terminal Maritima). Tel. number 2688.

Distance from place where Pilots board vessels to:

I.C.P. (Texas) Pier	
Reynold Garcia Pier (Terminal Maritima)	– 200 m.
Juan A. Morales Bayona (Cubadist)	– 300 m.
Jose Luis Dubrocq (formerly Fomento)	– 500 m.
Frank Pais (Armour)	

APPROACHES: There are three entrance channels:
(i) North Channel: 50 ft. minimum depth with muddy bottom.
(ii) South Channel: 80 ft. minimum depth with rocky bottom.
(iii) Middle Channel: 22 ft. maximum draft. Because of the limited draft of this channel, it is seldom used.

The most remarkable points of visual orientation while approaching Matanzas are:

Point Maya Lighthouse, which rises 58 ft. above high tide, flashing white light visible up to 13 miles away, located on the East side of the port mouth.

To the West the Pan de Matanzas mountain and to the East the mountain range known as Tetas de Camarioca, 7 miles inland, with three distinct summits.

While entering the port at night-time, on the West side of the entrance, there is a huge brightly illuminated building of a tannery which can be used as a landmark to determine where to pick up Pilot, as the location is 700 m. after sailing past the building.

Tidal variation at this port averages 1 ft. 6 in.

RESTRICTIONS: Vessels can enter or sail at night but Port Authorities should be advised in advance.

ANCHORAGES:
Indio Anchorage: depth 17 ft.; swing area 120 m.
South Anchorage: depth 30 ft.; swing area 230 m.
Del Medio Anchorage: depth 27 ft.; swing area 200 m.
West Anchorage: depth 21 ft.; swing area 150 m.
North Anchorage: depth 25 ft.; swing area 150 m.
Casacajales Anchorage: depth over 30 ft.

BERTHING: At Matanzas Port there are 5 separate berthing installations of which Jesus Menendez Pier, formerly known as Texas Pier, has been out of use for some time.

All port installations are located on the N.W. shore of the bay.

Jose Luis Dubrocq Pier was enlarged and rebuilt in 1970 and all piers and the bay have been recently dredged, these works having been completed at the beginning of 1973.

Jesus Menendez Pier (formerly Texas Pier): Length 794 ft., draft 28 ft. Used to discharge fuel oil.

Presently no operations are performed at this pier due to the bad condition of its solid dolphins. Pier itself is in good condition and may be used as soon as solid dolphins are replaced.

Frank Pais Pier (formerly Armour Pier): It is a solid construction of concrete and stones.

Although it has two sides, only the West side is used, the East side being out of use. Length 350 ft., draft 22 ft.

Cargo handled by this pier: Only coastal trade discharge of: Fuel oil, diesel oil, gasoline, kerosene and occasionally cement or general cargo.

Reynold Garcia Pier (formerly Terminal Maritima Pier): The pier is of solid concrete construction at the entrance of which the pilot station and the stevedores' office are located.

North Side: Length 450 ft., draft 32 ft. Cargo handled by this side: Exportation: Bagged refined sugar, dextrana, rayon, liqueurs, etc. Import: Occasionally dry cargo (general cargo), liquid ammonia.

South Side: At this side of pier are the mechanical installations of the bulk raw sugar shipping plant. Length 529 ft., draft 32 ft.

Cargo handled by this side: Exportation: Bulk raw sugar, occasionally bagged refined sugar, dextrana, rayon, liqueurs, etc. Importation: Can be used if no sugar is scheduled to be shipped.

Morales Bayona Pier (formerly Cubadist Pier): It is a steel and concrete construction, consisting of a long narrow passage along which run the molasses and water pipe-lines, and a catwalk.

At this installation tankers berth to 2 solid dolphins and 2 mooring buoys fore and aft. Max. length permitted to vessels 615 ft., draft 32 ft.

Cargo handled by this pier: Exportation of molasses and alcohol.

Jose Luis Dubrocq Pier (formerly Fomento Maritimo Pier):

Section No. 1: Recently enlarged and rebuilt; at this time 2 heavy overhead cranes are being installed for discharging of bulk fertilisers. This installation is a coastal pier. Length 600 ft., draft 32 ft.

Cargo handled by this Section: Import: General cargo, bulk fertilisers, bagged cargoes, lumber, etc. Export: General cargo.

Section No. 2: Length 532 ft., draft 27 ft.

Cargo handled by this Section: Similar to Section No. 1.

Trucking operations are usual at this pier.

STEVEDORES: Monday to Friday: 0700 – 1100 hrs., 1300 – 1700 hrs. Saturday: 0700 – 1100 hrs. Sundays: No work performed unless in special cases.

Raw sugar: 855 raw-sugar bags loaded per gang-period. 5 bags loaded per sling.

Refined sugar: 2,004 refined-sugar bags (50 kg. type) are loaded per gang-period (797 of 100 kg. type).

12 bags of 50 kg. type per sling; 6 bags of 100 kg. type.

General cargo: average rate of discharge of other kinds of cargo varies depending on the type.

Average rate of fertiliser discharge about 11 tons per gang-hour.

Crane: one steam crane with a boom of 60 ft. which can lift about 40 tons. Crane is mounted on railroad tracks and is used only at Jose Luis Dubrocq pier.

Bulk sugar: The installation of bulk sugar throwers operated by Empresa Consolidada del Azucar, at Reynold Garcia Pier, is by system of conveyor and distribution crane which runs from Parabolicos warehouses up to the end of the pier. A special structure protects the conveyor.

The crane runs on special rail throughout the pier (fore and aft) stopping at each vessel's hold. In cases where the vessel has projecting superstructure, she has to be separated from the pier.

Average loading rate is about 350 t.p.h., depending on the type of vessel. On vessels without tweendecks, an average of 43 t.p.h. has been attained.

Weights of shipment estimated on draft and information provided by Master. Notations are entered in Bill of Lading declaring quantity as subject to amount discharged at destination, which is supervised by Cuban Producers' Representative.

TANKERS: Discharge of fuel oil: 1 connection 6 in. diameter.

Discharge of gasoline/kerosene/diesel oil: 1 connection 6 in. diameter.

Alcohol: Pipe-lines 10 in. diameter, 2 connections 8 in. diameter.

Molasses: Pipe-lines 12 in. diameter, 4 connections 8 in. in diameter.

FRESH WATER: Water available by pipe-line only while docked to the underlisted piers:

Reynold Garcia: Delivery rate: From 7 to 10 t.p.h.
Morales Bayona: Delivery rate: From 10 to 12 t.p.h.
Jose Luis Dubrocq: Delivery rate: From 5 to 7 t.p.h.

FUEL: No bunkers available.

REPAIRS: Can be performed by Cearra y Trabazo.

COMMUNICATIONS: Long-distance telephone, Corporacion Inalambrica Cubana, Press wireless, Government telegraph, postal communication, railroad and buses.

Vessels can communicate through CLA via Cardenas and/or Havana.

MEDICAL: Following hospitals where sick crew members can receive attention: Civil Hospital, Army Hospital, Clinica Moderna, Clinica Villar, Clinica Matanzas.

DEVELOPMENTS: Specialised fertiliser unloading equipment to be introduced at the port.

AUTHORITIES: Located as follows:

Port Doctor: Milanes St. No. 2. Tel. 2672 (home tel. 2338).
Immigration: Santa Teresa St. No. 19. Tel. 2695.
Port Captain: Muelle del Real. Tel. 2469.
Custom House: Versalles St. e/Navia and Riech St. Tel. 2269 (home tel. 2339). (Chief of Custom House watching services.)

AGENT: Empresa Consignataria Mambisa, Agencia Matanzas, Milanes No. 28002, Apartado No. 245, Matanzas. Telephone: 2519 and 3079 (office), 3081 (night). Telex: 52132. Cable: Mambisas Matanzas.

Ocean going vessels navigating to Cuba can communicate with the Matanzas Agency by radiotelegraphy, contacting "CLA" Havana Station, which relays the messages immediately to Matanzas.

The Matanzas Agency is connected to the National Telex System and its number is 05232. This is the quickest method of communication with Matanzas Agency.

Masters must send their ETA messages simultaneously to Mambisas Matanzas and Mambisas Havana.

Matanzas Agency VHF works on Channel 16 during office hours.

NUEVA GERONA (Isla de Pinos): 21.58 N. 82.56 W. (See Plan)

Isla de Pinos is the largest island of Los Canarreos Archipelago, located on the South coast of Cuba, just in front of Batabano Gulf and the boundary between Pinar del Rio and Havana provinces.

Isla de Pinos is 54 km. long from North to South and 58 km. from East to West. (2,200 sq. km.). The North coast is 229 km. long and the South coast 98 km.

Nueva Gerona Anchorage lies in front of the mouth of Las Casas River.

PILOTAGE: Pilots board vessels at Punta Frances. Distance from place where Pilots board vessels to loading berth is about 34 miles. No pilot station. Chief Pilot is located at No. 3 St. Mo. 612 e/ 6 and 8 Streets, Nueva Gerona, Isla de Pinos.

APPROACHES: Entrance channel or passage from the Gulf to the bank is about 2 miles wide. Bottom throughout the 34 miles is mud (from entrance to anchorage in front of Las Casa River). No dangerous turns or narrows.

RESTRICTIONS: Entry and sailing only during daylight.

ANCHORAGES: Gerona Anchorage: Located just in front and close to the mouth of Las Casas river. Draft 19 ft. No limitations regarding length. Swing area is 600 ft.

Loading of fruits at anchorage is performed only when shipment is effected in vessels whose draft does not permit them to enter through the river.

Auxiliary equipment for exportation of fruits: 2 barges, 1 tugboat.

Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

Whenever sufficient cargo is supplied by the packing plant, the loading rates should be about 120 tons per gang in 8 hours.

MAX. SIZE: Max. draft up to which vessels can load out of the river is 19 ft. Tidal variation 1 ft.

BERTHING: Nueva Gerona Pier: Located about 2 miles up river. Length 200 ft. Max. length allowed to vessels, 90 m. (295 ft.). Draft 14 ft. 6 in.

FUEL/REPAIRS: Not available.

FRESH WATER: Available only at berth.

MEDICAL: General hospital "Heroes de Baire", where sick crew members can receive attention.

COMMUNICATIONS: There are telephone, telegraph and cable (Inalambrica) communications, also air postal service.

AUTHORITIES: Port Authorities are located at Nueva Gerona.

It is strongly recommended that when vessels are assigned to this port, all measures be taken for perfect co-ordination between Agents, Pilots and Port Authorities, and Masters should give ETAs in advance.

SUB-AGENT: Empresas Nacional de Cabotaje, Calle 31 y 22 (Terminal Maritime), Nueva Gerona, Isla de Pinos. Tel.: 2467, 3300. Telex: 054118. Cable: Mambisas – Nueva Gerona.

NUEVITAS: 21.33 N. 77.16 W. (including sub-ports of Pastelillo, Puerto Tarafa, and Bufadero): (See Plan)

The port lies on a peninsula orientated from West to East, and all port installations are located on the North of said peninsula: Tarafa on the Western extreme, Bufadero and Cement Pier at about 0.5 miles East of Tarafa, and Pastelillo at the Eastern extreme.

The city of Nuevitas is located about 4.5 km. to the S.W. of Tarafa.

The city spreads widely from the shores of Guincho Bay.

Neuvitas Bay has an extension of 57 square miles, but despite its extension, owing to its geographical configuration, is fairly well sheltered and can accommodate vessels of large tonnage. Bottom of the bay is mostly hard mud, but there are areas of sand and others where it is sandy/muddy.

(a) SUB-PORT OF PASTELILLO: (See Plan)

PILOTAGE: Pilots board vessels at Punta Practicos, 1 mile from buoy No. 1.

The following are the distances from the place where Pilot boards the vessel up to: Pastelillo: 8 miles; Bufadero: 10 miles; Tarafa: 10.75 miles.

Pilot station is located at Nuevitas and usual means of communications with it are telephone or car.

APPROACHES: Entrance to or sailing from this port is only effected at slack water in order to avoid tidal currents.

Usually entrance or sailing from port is performed during daylight hours but incoming vessels, which have advised their ETA well in advance and draw 30 ft. or less can enter during night-time at slack water, if all the navigational signals and marks are in good order. If any lighted buoy is out of service, night entrance or sailing are not performed.

Channel bottom is rocky/sandy along most of its entire course but if crossing the channel with official draft allowed to vessels, there are no difficulties regarding draft as there is ample depth.

Limitations as to draft and length to enter to or sail from Nuevitas are as follows: draft 33 ft., length 650 ft.

Limitations as to draft for crossing the bay interior channels are:

Entrance channel up to Botijuela Anchorage:	35 ft.
La Estrella Channel up to Pastelillo:	33 ft.
Channel between Pastelillo and Tarafa:	26 ft. 6 in.

ANCHORAGES: *La Poza Anchorage:* Located near Pt. Practicos. Geographical position: Lat. 21° 36′ 46″ N., Long. 77° 05′ 11″ W. Limitations: Draft 38 ft., length none. Swinging area: Unlimited. Can accommodate one vessel. Distance from shore: 400 m.

Botijuela Anchorage: Located S.E. of Ballenato Grande Cay. Geographical position: Lat. 21° 31′ 34″ N., Long. 77° 10′ 39″ W. Limitations: Draft 35 ft., length 650 ft. Swinging area: 400 m. Can accommodate 15 average type vessels. Distance from shore: 2 miles.

Pastelillo Anchorage: Located East of Pastelillo. Geographical Position: Lat. 21° 32′ 34″ N., Long. 77° 12′ 38″ W. Limitations: Draft 20 ft., length 500 ft. Swinging area: 200 m. Can accommodate 2 vessels. Distance from shore: 0.25 miles.

Guincho Anchorage: Located East of Pt. Guincho. Geographical Position: Lat. 21° 31′ 57″ N., Long. 77° 14′ 00″ W. Limitations: Draft 16 ft., length 250 ft. Swinging area: 100 m. Can accommodate 1 small vessel. Distance from shore: 1.25 miles.

Tarafa Anchorage: Located to the N.W. of "D" pier. Geographical position: Lat. 21° 34′ 30″ N. Long. 77° 14′ 45″ W. Limitations: Draft 22 ft., length 525 ft. Can accommodate 1 vessel. Distance from shore: 400 m.

MAX. SIZE: Up to 575 ft. length – 33 ft. draft. Up to 610 ft. length – 31 ft. draft. Tidal variation 1 ft. 6 in.

BERTHING: *Pastelillo Pier:* North Side: Length 458 ft., width 55 ft., max. draft 33 ft.

Depths alongside from shore end to pier head: 31 – 35 – 37 – 37 – 37 – 36 – 37 ft.

Cargo handled by this side: General cargo, equipment, machinery, bagged raw and refined sugar, molasses, etc.

South Side: Length 458 ft., width 55 ft., max. draft 33 ft.

Depths alongside from shore end to pier head: 24 – 33 – 34 – 33 – 36 ft.

It is well cared for and recently underwent complete repairs, being the topping-off berth for sugar and molasses loading of the port, as well as the deep draft berth for vessels with import cargoes.

Petroleum products (fuel oil, diesel oil, gasoline and kerosene) for the use of the whole Camaguey province, are discharged at this pier.

The pier has railroad sidings connecting with the main tracks but is not suitable for trucking operations.

STEVEDORES: Working periods: Monday to Friday, 0700–1300 hrs., 1300–1900 hrs.; Saturday, 0700–1300 hrs., 1300–1900 hrs.; Sunday, no work is performed.

Raw Sugar: loading rate: max. 1,800 bags per gang in 6 hours. Minimum fixed rate 975 bags in 4 hours or equivalent in 6 hours. 6 bags loaded per sling.

Loading Capacity: 2 sugar vessels can perform sugar loading operations simultaneously.

Refined Sugar: this type of shipment is not regularly performed.

Loading rate: 3,300 bags of 100 lb. each are loaded per gang in a 6-hour period.

General Cargo: discharging rate is about 11 to 12 t.p.h.

EQUIPMENT: The port owns and operates the following equipment: 6 fork lift trucks; 7 tractors; 3 trailers; 6 tow motors; 5 shore cranes (from 5 to 20 tons lifting capacity); 2×300 ton capacity cargo barges; 1 (1,200 h.p.) tugboat.

TANKERS: Molasses pumping rate about 85,000 g.p.h.

FUEL: Currently the only bunkers available at Nuevitas are Regular Fuel Oil, which is the type of fuel oil stored at shore tanks.

Deliveries are effected only at Pastelillo Pier by pipe-line gravity from the deposit tanks and due to the method used, are slow.

Bunkers must be requested well in advance.

FRESH WATER: Can be supplied at No. 4 pier. Delivered by means of railroad tank cars, each with capacity of approximately 34 tons. Delivery rate about 20 t.p.h.

REPAIRS: Repair Shop "Boga" incorporated in the Industry Ministry.

MEDICAL: There is a municipal hospital where sick crew members can receive attention.

COMMUNICATIONS: Vessels navigating to Cuba can communicate with Mambisas Nuevitas Agency through "CLA" Havana Radio Station which relays the message promptly to Nuevitas.

When navigating in Cuban Waters nearing Nuevitas, vessels can communicate directly with "CLK" Coastal Radio Network Nuevitas by radiotelegraphy at 500 kHz, general call, 446 kHz, for working. Radiotelephony frequency 2760 or 2182.

This Coastal Network Station rapidly relays any message to Mambisas Nuevitas Agency.

Masters must send their ETA messages simultaneously on VHF Channel 16 to Mambisas Nuevitas and Mambisas Havana.

SHIPMASTER'S REPORT: August 1985.

See "Sub-port of Tarafa".

AUTHORITIES: Located at Nuevitas.

Authorities travel from Nuevitas to clear the vessels for whichever of the 3 berths they may have been assigned, i.e. Pastelillo, Tarafa or Bufadero.

Means of transportation for port authorities from Nuevitas to the loading/discharging berths is automobile or launches.

AGENT: Empresa Consignataria Mambisa, Agency Nuevitas, P.O.Box No. 350, Puerto Tarafa, Nuevitas, Prov. de Camaguey. Telephone: 2779, 2107 (office), 3109 (night). Telex: 031151. Cable: Mambisas Nuevitas.

Mambisas Nuevitas Agency also attends the port of Jucaro and sub-port of Boca Grande.

(b) SUB-PORT OF TARAFA: (See Plan)

PILOTAGE: See "Pastelillo". Distance from place where Pilots board vessels to Tarafa is about 10.75 miles.

APPROACHES: See "Pastelillo".

RESTRICTIONS: Vessels can enter or sail only during daylight and should wait for slack water.

BERTHING: *Tarafa Terminal:* This terminal consists of 3 solid concrete piers, each with railroad sidings connecting with the main tracks and also suitable for trucking operations.

It is capable of operating 7 vessels simultaneously: 6 average size vessels and 1 medium or small.

Cargo handled at Tarafa Terminal: General cargo, equipment, machinery, bagged cargoes, fresh and canned fruits, sugar, etc.

Tarafa Pier "B": North Side: Length 480 ft., width 65 ft., max. draft 19 ft.

Depths alongside from shore end to pier head: 19 – 23 – 25 – 25 – 25 – 28 ft.

South Side: Length 480 ft., width 65 ft., max. draft 19 ft.

Depths alongside from shore end to pier head: 14 – 21 – 20 – 22 – 22 – 24 – 25 ft.

Tarafa Pier "C": North Side: Length 437 ft., width 61 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 26 – 25 – 26 – 29 – 31 ft.

South Side: Length 437 ft., width 61 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 23 – 23 – 25 – 25 – 25 – 26 – 27 ft.

Tarafa Pier "D": North Side: Length 768 ft., width 65 ft., max. draft 27 ft.

Depths alongside from shore end to pier head: 28 – 29 – 31 – 32 – 33 – 34 – 33 – 34 ft.

South Side: Length 477 ft., width 65 ft., max. draft 26 ft.

Depths alongside from shore end to pier head: 19 – 27 – 29 – 29 – 30 – 30 – 29 – 28 ft.

STEVEDORES: Working periods – raw sugar, loading rate, refined sugar, general cargo, etc., same as for Pastelillo. 6 sugar vessels can operate simultaneously. No crane available.

FUEL: No bunkers usually supplied at this terminal, but in special cases bunkers have been supplied at Pier "B".

FRESH WATER: Can be supplied at Pier "B", "C", and "D".

SHIPMASTER'S REPORT: March 1980.

General Cargo: There are 3 piers for handling general cargo, all in the same place at Tarafa. All about the same length, and ships can moor both sides.

Fresh Water: Fresh water can be supplied at anchorage and at all piers by barges (about 200 tons).

Agent: The Agent "Mambisas" has an office just outside the gate (large green house) and listens on VHF Channel 12 from 0900 – 1100 hrs. and 1500 – 1700 hrs.

SHIPMASTER'S REPORT: November 1981.

Pilotage: Compulsory. 12 hours' notice required.

Restrictions: Vessel can enter and leave port during hours of darkness. Vessel can only enter and leave at slack water due to narrow entrance.

Max. Size: Length 511 ft., beam 70 ft., max. draft 24 ft.

Tugs: Available and should be used.

Radio: CLK.

VHF: Pilot on Channels 16 and 13. Port Authority on Channel 13. Agent on Channel 12.

Consuls: None.

Services: The following services are available: Fresh water, fresh provisions in small quantities, laundry service, telex, bunker fuel oil, diesel oil, lubricating oil, doctor and hospital.

Agents: Nearest Agent in Havana.

Berthing: Location: Lat. 21° 34′ N., Long. 76° 14.5′ W.

Vessel berthed at Berth B. Distance from entrance to berth 12 miles. Least depth of water in channel from sea to berth 8 m. Max. tidal range at berth 1 m. Nature of bottom mud. Density 1025.

Facilities Available: Limited bulk handling facilities, no ro-ro, no floating cranes. Equipment available for handling palletised cargoes. No facilities for handling containers.

Anchorage: The anchorage is 6 miles from the berth. Vessels with draft of over 20 ft. have to anchor in channel.

Barges: Fresh water barge available.

Tankers: Tanker terminal available.

SHIPMASTER'S REPORT: December 1983.

Documents: See Havana "Shipmaster's Report: December 1983".

Pilotage: Compulsory. 24 hours' notice should be given via Agent. Pilot boards at No. 1 Buoy (entrance to bay).

Distance from entrance to berth is 12 miles through a very narrow channel with sharp bends. This channel may only be transited at slack water during daylight.

Charted depth in channel was 4 fathoms but we found at least 30 ft. Tidal range 0.5 m. Currents of 2 – 4 knots are experienced 2 hours after HW or LW.

Anchorages: Available in centre of bay at Lat. 21° 31′ N. Long. 77° 11.5′ W.

Restrictions: See "Pilotage".

Max. Size: Max. LOA 650 ft., max. draft in channel 33 ft.

Radio: Neuvitas.

VHF: Pilot and Port Authority use Channel 16.

Tugs: At least 3 tugs available.

Berthing: Vessel berthed at Tarafa "B" pier (Lat. 21° 34.2′ N., Long. 77° 14.7′ W.). This vessel (length 575 ft.) was very much the maximum size for this pier. Max. draft at East end – 19 ft. Mean tidal range at berth was 18 in.

Nuevitas has 3 piers for receiving and exporting general cargoes. The 3 piers are "B", "C", "D", with berths on North and South sides of each. Lengths of piers are said to be "B" 480 ft., "C" 437 ft. and "D" 766 ft. The South side of "B" Pier is silted up limiting the draft to about 17 ft.

We were offered "C" Berth 437 ft. which I rejected as being unsafe for this size of vessel. The Pilot and Port Officials agreed with me.

The vessel berthed North side of "B" Pier. Only 470 ft. of pier was usable as heavy boulders and mud extended from the East end of the berth consequently 110 ft. of the vessel overlapped the jetty into the stream where a current of from 1 to 2 knots can be experienced. Every use was made of bollards and horn cleats on the quay, some of which were very dubiously secured to the wharf. All available leads on the vessel were used, even so there are no means or facilities for breasting the stern in. During a heavy squall the ship was about 12 ft. off the jetty.

"D" Berth is the only suitable berth for this size of vessel. Unfortunately it is used only for receiving bulk fertiliser.

Other berths off the Port are only used for the export of sugar and cargoes moved by rail trucks.

Vessel must depart berth 2 hours prior to slack water in order to transit channel at slack water.

Cranes: None.

Bulk Cargo Facilities: "D" Pier is for discharge of bulk fertiliser; ship's gear used.

Stevedores: Available and satisfactory.

Medical: Doctor and hospital facilities available.

Fresh Water: Available.

Fuel: Limited quantities of bunker fuel, diesel and lubricating oils available.

Consuls: Nearest at Havana.

Dry Docks: None.

Surveyors: Salvage Surveyor available.

Airport: Local airport.

Services: Telex facilities. Limited supplies of fresh provisions, groceries and meats.

SHIPMASTER'S REPORT: February 1984.

We recently loaded a cargo of bagged sugar in Nuevitas, Cuba. Thanks to your publication, all crew had made out complete Personal Effects lists, and most of their valuables had been placed in cases and placed in the bond.

On berthing, I was presented with a set of Customs Regulations which stated what had to be placed in bond during the ship's stay in Cuba. This says (in English) Quote: "On arrival Cuban port all Masters of any ships must put under transit room that not be of personal use so as toys, guns, ammunitions, spirits, cigarettes, narcotics and kinds of pornographic pictures". No mention is made of cameras.

The day after berthing, the ship was searched by the Port Captain, who confiscated two cameras belonging to crew members, even though these had been declared. According to the Agent in Cuba, these people had no right to take these articles, and he was certain he would get them back. However, despite numerous requests and letters, they were not returned on sailing.

The above may prove of assistance to other ships.

See "Shipmaster's Comments" in "General" before first port.

SHIPMASTER'S REPORT: August 1985.

Notices: The required notices and ETA messages were sent to "Mambisas – Havana" and once the loading port was declared contact was established with "Mambisas – Nuevitas" – the local Agents, all messages were then directed through them.

Response of Havana Radio (CLA) on HF was poor, all messages had to be sent through U.S. coast stations, however, once the vessel was in MF range all traffic was directed through Havana Radio and the local station Nuevitas Radio (CLK).

Approaches: 2 hours prior to time of arrival the vessel was informed by the Pilots (on VHF) that the Pilot would board at 1130 hrs. which meant a delay of 2 hours. We went up close to the Pilot Boarding Ground to register and report the time of arrival and then went out to drift. We then sent message to Agents to tender Notice of Readiness on Master's behalf with time to be stated as 0930 hrs. (it was a Saturday).

All entrances to the bay are made when tide is slack at No. 1 Buoy, ETA to be timed accordingly. Pilots prefer to enter between Slack Water and Flood Tide. All sailings are timed for 1 hour before Slack Water, the idea is to be at No. 1 Buoy at Slack Water.

Limitations: If draft less than 30 ft. then vessel can enter and leave the port by day or night provided the above conditions are met. If draft is more than 30 ft. then the vessel can enter and leave the port at HW – Slack Tide by day only. Max. draft 33 ft. There is a strong currrent in the channel and at the neck of the bay of up to 4 – 5 knots.

Anchorages: No safe anchorage with good holding ground is available outside the bay near the entrance, so it is advisable to drift. Vessel must be well out as there is a strong set. Pilots advise that if it is necessary to anchor then the vessel can anchor in a position bearing 000° (T) 4 cables from Pta-de-Cos Practicos, but for an hour or so only.

We understand that if a vessel has to anchor for longer periods then one can anchor on the Great Bahama Bank as shown (see "Plan"). Vessels have been known to anchor here for hatch cleaning, etc. I personally feel it is not a very good proposition. Inside the bay there are good and safe anchorages available. There is no safe anchorage off Pastelillo Pier. Off Tarafa there is an anchorage to the N.W., max. draft 22 ft., it is used only as a temporary holding ground during manoeuvres.

Pilotage: Pilots board 1 mile North of No. 1 Buoy. Pilots and tugs communicate – using walkie-talkie. If wind is more than Force 4, the Master has to issue a letter before Pilots undertake any docking/undocking operations, especially if in light draft and with high windage area.

Tugs: This port has experienced many tug breakdowns and delays. We were given to understand that on one occasion (March 1985) all docking and undocking operations were delayed for 6 days, all for the want of one tug. At some berths Pilots require 2 tugs.

For our departure from Pastelillo Pier, we were also delayed due to tug breakdown. Master had to request the Port Officials for special permission and only after overnight consultation and delay did they permit undocking with one tug, provided the Master issued a written request. This was done and the vessel undocked.

Density: We observed a dock water density of 1027 at both Tarafa and Pastelillo. This high figure is due to the fact that the area had experienced an unusually long dry season. As per the Surveyors average figure is 1023 – 1024.

Berths at sub-port of Tarafa: There are 3 piers 'B', 'C' and 'D' with berths on each side designated North and South berths.

Pier 'B' is generally used for reefer and smaller general cargo vessels.

Pier 'C' is used for sugar and general cargo.

Pier 'D' is used for fertiliser and other bulk cargoes.

Official drafts and depths are not to be relied upon as there is heavy silting at all berths mainly attributed to the bulk operations.

We berthed at Pier 'C' – South berth, starboard side to, head in, with the stern protruding well out beyond the pier. This is due to the progressive silting at the forward end. Depths at this pier were sounded and are as per plan (see "Plan"). Max. draft at Pier 'C' – South berth as per the Pilots is 24 ft. forward and 26 ft. aft. Vessel can load up to 25 ft. 03 in. max. (aft) and sail at any state of tide. If over this draft vessel must sail at HW only.

If draft exceeds 25 ft. 03 in. when transiting the Tarafa-Pastelillo Channel one tug is required to assist the vessel to round the bend at No. 41 Buoy.

Max. draft allowed in the Tarafa-Pastelillo Channel is 27 ft. at HW. For docking/undocking Pilots require 2 tugs but use only one. This is mainly due to the lack of manoeuvring space when there is a vessel at the adjacent berth.

Berths at sub-port of Pastelillo: The berths at this pier are considered the topping-up berths. Generally vessels load part cargo at Tarafa and then shift to Pastelillo.

There are 2 berths at this pier designated North and South. The North Berth is for tankers and the South Berth is for sugar loaders. Cargo to this berth is fed by rail road.

The knuckle on the Southern side has been badly damaged and has some irregular blocks of concrete and steel jutting out, necessitating extreme caution during the approach and positioning of the vessel.

We berthed at Pastelillo – South Berth, starboard side to, head in. The berthing operation can be a little tricky, especially if there is a slight wind, this is made more so by the channel which turns sharply at the head of the pier.

The official maximum draft allowed at this berth is 33 ft. Hand lead soundings showed depths in excess of 36 ft., on the off-shore side and 33 ft. on the in-shore side.

With a draft of 30 ft. a vessel can undock at any state of tide, by day or night. However, with a draft in excess of 30 ft. undocking is during the day only, with the max. draft of 33 ft. only during the daytime and at high tide.

Tidal restrictions for departure from the bay still apply, so the vessel may be required to anchor in the bay to await tidal conditions. Pilots and Port Officials require 2 tugs for all docking/undocking operations at Pastelillo.

Documents:

Crew List	9 copies	Any format.
List of Ports of Call	4 copies	Any format.
Declaration of Health	1 copy	Special format.
Vaccination List	4 copies	Any format.
Foreign Currency Declaration	4 copies	Any format.
Narcotics List	4 copies	Any format.
Firearms & Weapons List	4 copies	Any format.
Cargo/Ballast Manifest	4 copies	Any format.
Stores List, Deck, Eng., Radio, Catering	5 copies	Any format.
Provisions List	6 copies	Any format.
Bonded Stores List	6 copies	Any format.
Personal Property Declaration	2 copies	Special format.
Currency Card	1 copy	Special format.
Shore Pass	2 copies	Special format.

Vessel should make a fairly detailed declaration of ship stores with special attention to electrical, electronic equipment and new (unused) items.

Crew Personal Property Declaration has to be *very detailed* with all items listed. All new items and those not in use should be packed up in a bag and put away in a spare cabin. This spare cabin is sealed by the Customs.

Each crew member is allowed: 1 bottle of alcohol, 1 carton of cigarettes, 1 watch, 1 radio. Beer is not considered a bonded item. No cameras allowed for the crew.

The Master is permitted to keep: 5 bottles of alcohol, 5 cartons of cigarettes and 1 camera. (We had kept the Polaroid camera out of bond to use during cargo operations).

The Customs seal can be opened upon request every 5 days for a fresh issue to the crew.

Inspections: Pratique, Veterinary, Agriculture, Sanitary, Harbour Master (Ministry of Interior – Guards), Customs:

Pratique: Doctor and assistant board the vessel with the Pilot when inward bound. They clear the vesel and issue the Free Pratique chit.

Veterinary: A veterinarian from the Institute of Veterinary Medicine will inspect the holds and dunnage wood and see if spaces are fit to load sugar. Also if the wood is free of termites. He will then issue a "Fit to Load Sugar" Certificate. The Veterinary Inspector will also check the meat room to see if all the meat onboard is clean and fit for consumption.

He will be looking out for the stamp of approval. Chinese sausages are not permitted. If any non-approved items are found then the meat room will be sealed and they will board every day to enable removal of rations for 24 hours. The charge for this service is CPeso 5/– per visit.

Agriculture: An Inspector from the Department of Agriculture will board the vessel to check the dry provisions and the vegetable room. They will take samples of fruit, garlic, some vegetables away for testing and they may recommend some items to be sealed up in plastic bags. It is advisable to keep dry-fish 'ikkan billis' and preserved Chinese vegetables well out of sight.

Sanitary: Inspector from the Department of Public Hygiene will check the galley, all cabin stores in the accommodation and on deck, also check the garbage drums, etc. They are mainly looking out for mosquitoes, as there was a very severe epidemic of malaria resulting in a large number of deaths. The Sanitary Inspector will board every 5 days.

Harbour Master (Ministry of Interior Guards): They can search the vessel at any time, for any reason, any number of times. They searched our vessel twice on arrival and prior to departure. The shore passes are issued by them. Everyone is expected to stand-by their cabins during the initial and final search. They appeared to be looking out for 'literature' objectionable to the government, and stowaways. This Department will issue a "Permission to Sail" Certificate.

Customs: The Customs Officials are mainly looking for US$ and Cuban Pesos in excess of the declared amount. Any *news items* or any item they *feel* is in excess of personal requirement will be confiscated whether declared or not, if found in the cabin. All crew should be advised to keep only the bare minimum and all other items should be put away to be sealed. Currency Declaration cards for all crew are given by them. Customs will, prior to departure, issue a "Clearance".

Agents: Empresa Cosignataria Mambisa – Nuevitas are the local Agents with the main office in Havana. The Agents board the vessel on arrival and thereafter every day. They can be contacted on VHF (call – Mambisa) Channel 12 and 16 between 0800–1130 hrs. and 1400–2100 hrs. The office is located very close to the main gate at Tarafa. Working hours are up to 1700 hrs. However, there is an Agent on duty until 2100 hrs. All telex messages are sent through Havana. International telephone calls can be made from the Agent's office. Even with 24 hours prior notice there are delays. Agents are attentive and helpful.

Shipchandler: There is one company, arranged through the Agents. The chandler supplies fresh and dry provisions and dunnage material. The chandler claimed to have fresh vegetables, fresh fruit, meats, etc. Prices of seasonal local fruits and vegetables are very reasonable. When the order was placed they were able to supply only one or two items as all fresh vegetables and fruits were out of stock.

Medical: Arranged through the Agent. The Protocol Officer will take the crew member to the local hospital, for medical attention. Cost Cuban Pesos 20/– per consultation, transport and medication extra.

Fresh Water: Available by barge. We did not take water at this port.

Shore Leave: The crew is permitted to go ashore any time. There is no curfew in force. While at Tarafa the most convenient mode of transportation to and from town is by bus. Taxis are available but difficult to come by. From Pastelillo the crew is not allowed to go ashore, by road transport. Boat service has to be arranged. Pastelillo-Tarafa is a 40 minute ride one way, cost per round trip is C. Peso 46/–. However, if anyone is to go to the doctor then the Agent will arrange a car and boat service is not required.

General: The crew should be warned against Black Market transactions in US Dollars as there are plain clothes policemen on the look-out. Crew are permitted to take US$ ashore but they must be changed at a bank. Apparently the incidence of STD (sexually transmitted diseases) is quite high and the crew should be warned accordingly. There were some indications that drugs are quite freely available and in use, so one must be more vigilant as some of the crew may be tempted or misled. At the time when the vessel called the exchange rate was 1US$ = 0.96 Cuban Peso.

Stevedores: The regular working periods at this port are:

Monday to Friday	0630 hrs. to 1350 hrs.	1st shift.
	1420 hrs. to 2140 hrs.	2nd shift.
Saturday	0630 hrs. to 1350 hrs.	1st shift only.
Sunday and Holidays	No work.	

The above are the times of regular work. However, cargo can be worked on Saturday 2nd shift and Sunday if required. Stevedore Supervisor will enquire, as to the number of gangs vessel requires to work. Vessel must ensure that at no time to commit less than 4 workable hooks as per Charter Party. Sometimes they bring less gangs to suit the availability of cargo. Ship's crew are to rig derricks but stevedores will assist. Opening and closing hatches by ship's crew. Stevedores are fast and efficient, did not experience any problems.

The 2 areas to be wary are:

(a) Stacking of bags when the head room decreases, in the under coaming spaces.

(b) Covering up all the steel work, and the top tier with kraft paper.

At Tarafa sugar in bags is fed to the wharf by covered wagons and also on trucks.

The average weight of cargo per wagon is 57 tonnes. Usually there are 12 bags per sling and 1 sling per lift. If there is sufficient supply of cargo and wagons, one gang can average 2,400 – 3,000 bags per shift. Provided the rate is maintained, on a 4 gang/2 shift basis the total lifting per day can be in the region of 19,000 – 24,000 bags which is 1,880 tonnes – 2,300 tonnes per day.

At Pastelillo the sugar is fed to the wharf by rail wagons only. Here the normal system is 6 bags per sling and 2 slings per lift. Due to the height of the wharf and the positioning of the rail tracks the production at this pier is much greater than at Tarafa.

The above figures are on the basis of regular supply of sugar and wagons. During our stay there were times when cargo had to be stopped or slowed down and the number of gangs reduced due to non-availability of cargo. The production figures for our port stay are as follows:

	Tarafa	*Pastelillo*
Time alongside	4 days 22 hrs. 18 min.	5 days 20 hrs. 36 m.
Time workable as per port working hours after berthing (Sundays & Holidays inc. if worked)	3 days 23 hrs. 50 min. (10 shifts)	3 days 13 hrs. 14 min. (12 shifts)
Deductions from workable time		
– Rain	0 days 00 hrs. 35 min.	—
– Preparing for loading	0 days 01 hr. 30 min.	—
– Waiting for cargo	—	0 days 11 hrs. 50 min.
– Waiting for shifting/sailing	—	0 days 16 hrs. 00 min.
Time actually worked	02 days 21 hrs. 45 min.	02 days 09 hrs. 24 min.
Total cargo lifted	81,530 bags	60,167 bags
Total gangs worked	35	24
Cargo/gang/shift	2,329 bags	2,507 bags
Average cargo/day of 24 hours (basic time alongside)	1,620 tonnes/day	1,006 tonnes/day

Tally: Tally by shore personnel quite accurate and in addition independent tally by ship staff (used deck cadets, and crew when more than 4 working gangs). Did not experience any serious discrepancy.

Vessel must instruct ship's tally cadet and shore tally clerk to compare figures at the end of each wagon or truck, and note any discrepancy before commencing the next wagon or truck. This way there is no squabbling at the end of the day when the figures are presented to the Chief Officer and there appears some large and mysterious discrepancy. Due to the presence of the ship's staff the shore tally personnel are more attentive.

Cargo Condition: The general cargo condition was satisfactory as could be judged from the appearance of the bags and by feel. Some of the bags were wet and or stained. There were also some bags which were hard when touched. All wet, stained, torn, seeping and hard bags were rejected. The rejected bags were re-loaded onto the wagons. Ship's staff on tally duty checked and rejected the bags. There is an organisation called Empressa Cubana de Control short 'Cubacontrol'. Surveyors/checkers from Cubacontrol check the cargo quantity and quality. They have one representative per gang and in addition there is one person who collects samples at random. From experience gained on the voyage, we noted that this cargo is prone to heavy sweating. There is considerable amount of inherent moisture and heat in the sugar crystals/granules.

Cargo Weight: The cargo of granulated raw brown sugar in bags is fed to this port from 5 factories. In spite of standardisation there is a difference in bag weight and condition. The rail wagons are weighed, at random, before and after handling to obtain the cargo weight and thus the average bag weight. This average is used to compute the cargo quantity being loaded. The averages range from as low as 94.1 kg./bag to 101.9 kg./bag. For our shipment the general average bag weight worked out at 98.993 kg./bag. The shippers Cubazucar (local representative Marcos Allen) advised that from past experience *all* sugar ships to China have experienced a shortfall per the receivers. To safeguard their interest the shippers request a Draft Survey on Shipper's Account. The Draft Survey was carried out by Cubacontrol.

By shore tally cargo quantity worked out to 14,020.072 tonnes gross, 13,879.755 tonnes net.

By draft survey cargo quantity worked out to be 13,903.395 tonnes gross.

B/L was signed on basis of shore tally weight, gross and net. Freight basis net weight. Master had requisitioned/nominated for 14,020 tonnes of cargo. Issued Letter of Protest and Right to Claim Deadfreight.

Dunnaging Material: Laying of dunnage done by stevedore gangs, separate dunnage men employed per working hatch.

Flat dunnage wood is very difficult to obtain and when available, is very expensive. It is customary to use cardboard cartons and kraft paper. Transportation charges are unreasonably high so it is advisable to order your requirement in large amounts. However, returning is not permitted.

Flat dunnage wood at CPeso 110.2/cu.m. + 18% and transport
– None ordered

Cardboard cartons 122 cm.×61 cm.×0.35 cm. at CPeso 350 per bundle of 100 pieces
– Total used 12 bundles

Kraft paper 122 cm. wide ×100 m. per roll at CPeso 16 per roll
– Total used 107 rolls

We had 12 cu.m. of flat dunnage left over from the previous voyage, this was used in the lower holds – double dunnage, i.e. fore and aft and athwartships, this was then covered with kraft paper. Where no wooden dunnage was used cartons were placed which were then covered with kraft paper before cargo was loaded. All steel surfaces were covered with kraft paper to prevent contact with the bags. The top tier was covered with kraft paper. In the square of the hatch the top tier was covered with kraft paper and then with cardboard cartons.

Stowage Factor: The smaller holds (1 & 3) gave a stowage factor of 48 – 48.5 cu.ft./long ton whereas the larger holds had a stowage factor of 46.7 – 47.7 cu.ft./long ton. The average stowage factor for the full laod worked out to be 47.5 cu.ft./long ton.

No. 3 Hold – Tween deck had some empty space – 13,457 cu.ft. (i.e. additional 284 tonnes)

No. 4 Hold – Tween deck had empty space – 3,200 cu.ft. (i.e. additional 68 tonnes) which with the stowage factor obtained gives a possible full load of 14,372 tonnes after making due allowances for bunkers, etc.

Sealing of Hatches: On completion of loading each hatch was sealed in the presence of the Ministry of Interior Guards and Customs. The sealing was carried out by Cubacontrol the locally based recognised company, in the absence of a P&I correspondent. The services of Cubacontrol for the sealing were ordered through the Agents on Owner's Account.

All hatch covers, hatchways and ventilators were closed and sealed using copper wire and snap-on seals. In all 24 seals were used. The Surveyors issued a Certificate and Plan on completion of sealing with all the seal locations and numbers.

AUTHORITIES: See "Pastelillo".

(c) SUB-PORT OF BUFADERO:

PILOTAGE: See "Pastelillo". Distance from place where Pilots board vessels to Bufadero is 10 miles.
APPROACHES: See "Pastelillo".
RESTRICTIONS: Vessels drawing over 25 ft. 3 in. should await high tide for shifting to anchorage.

For entering/sailing, vessels should wait for slack water and only during daylight.
MAX. SIZE: Max. draft with which vessels can enter/sail to/from Bufadero is officially up to 25 ft. 3 in. but actually up to 25 ft. 6 in. Length 600 ft. Tidal variation 1 ft. 6 in.
BERTHING: Pier, length 557 ft.; draft, North side, 25 ft.; draft, South side, 25 ft.

This pier is only used for molasses and fuel oil. Average pumping rate of molasses is 70,000 g.p.h. Only South side is in operation.

Cement Dock: This is a concrete coastal dock where bulk cement is shipped by means of silo-trucks. It is located West and close to Bufadero Pier. Length 275 ft., width 31 ft. Depths alongside from East to West: 14 – 16 – 18 – 16 – 16 ft.
FUEL/FRESH WATER/REPAIRS: Not available.
AUTHORITIES: See "Pastelillo".

PUERTO PADRE-Cayo Juan Claro: 21.17 N. 76.32 W. (and sub-port of Manati) **(See Plan)**

It is a safe, sheltered and ample port, situated at one of the richest and important sugar cane zones of the nation.

In the neighbourhood of the port there are 2 sugar producing colossus: Antonio Guiteras sugar mill, 8 km. away and Jesus Menendez sugar mill, distance 18 km. Both of these mills are among the biggest and most modern in Cuba.

The port itself is located on the West coast of Cayo Juan Claro and is named Puerto Carupano.

Cayo Juan Claro is connected with the mainland at its extreme Southern tip by a narrow gauge railroad and parallel to the tracks runs a road recently built.

Both the railroad and the road communicates with the city of Puerto Padre, sugar mills of Antonio Guiteras and Jesus Menendez.

Cayo Juan Claro and Cayo Puerco, divide the bay into two parts. The part located at the West is Puerto Padre bay and that at the East is known as Chaparra Bay.
PILOTAGE: Pilots board vessels at entrance, not less than 1 mile from mouth of port. Distance from place where Pilots board vessels to pier is about 2.5 miles.
APPROACHES: Funnel-shaped at entry. 2 turns, but the one to take into consideration when manoeuvring vessels over 525 ft. is "Careneoro" turn. Vessels with a length of 565 ft. have entered this port. Bottom is rocky in entrance channel and muddy in bay.
RESTRICTIONS: Vessels can enter only during daylight and must wait for slack water for entering/sailing due to current in the channel.
MAX. SIZE: Vessels can sail with max. draft of 25 ft. up to length of 500 ft. Over 500 ft. length with draft up to 24 ft. Max. length permitted 557 ft. Tidal variation 2 ft. 3 in.
ANCHORAGES: *Official Anchorage:* Located at Puerto Padre Bay at following position: Lat. 21° 14′ 46″ N., Long. 76° 33′ 34″ W.

Max. length permitted 170 m.

Vessels usually anchor by 3 or 4 shackles of chain but there is enough swinging area for 8 or 9 shackles.

Draft allowed to vessels 25 ft. Anchorage bottom is mud and shells.

Quarantine Anchorage: Located East of Cayo Juan Claro at Chaparra Bay, about 2 miles from the piers.

Max. length permitted is 170 m. and depth is over the port official draft.

Vessels usually anchor by 3 or 4 shackles of chain, but there is enough swinging area for 10 shackles. Anchorage bottom is mud and shells.
BERTHING: Pier Nos. 1 and 2 are located on the West side of Cayo Juan Claro.

Salt Mill Pier is located on the East coast of the entrance channel, just in front of Pt. Gracia, and about 1.75 miles from Pier Nos. 1 and 2.

(a) Pier No. 1 (Formerly known as Sugar Pier): It is a coastal pier built entirely of hard wood.

Two narrow gauge railroad tracks run along the length of the pier.

Loaded cars enter by the North end of pier and after discharging are taken out by the South end.

Trucks can operate at this pier, but are not used for sugar cargoes.
Length 523 ft., max. length permitted to vessels 557 ft. Width 32 ft.
Draft 27 ft. – 28 ft.
Cargo handled by this pier:
Importation: Occasionally general cargo or jute bales.
Coastal trade: Occasionally general cargo.
Water available by railroad tank-cars.
Berthing operation performed only during daylight hours.

(b) Pier No. 2 (Formerly known as Molasses and Oil Pier): It is a steel and hard wood construction 271 ft. long, of which 235 ft. corresponds to a passage 7 ft. wide along which run the pipe-lines and a catwalk, ending in a platform 36 ft.×36 ft.

Vessels operating at this pier, berth across it, forming a "T" shape.
Length 271 ft., max. length permitted 557 ft. Draft 26 ft. – 28 ft. Width 7 ft.
Platform 36 ft.×36 ft.
Cargo handled by this pier:
Export: Molasses.
Coastal trade: Discharge of fuel oil.
Berthing operation performed only during daylight hours.

(c) La Salina Pier: Located at the entrance channel East coast, just in front of Pt. Gracia.

It is a small coastal pier built to ship coastal trade cargo of salt.
Berthing length 44 ft. Width 22 ft. Max. length allowed 192-200 ft. Draft 12 ft.
STEVEDORES: Working periods: Monday to Friday 0700 – 1100 hrs., 1300 – 1700 hrs.; Saturday 0700 – 1100 hrs.

Raw sugar: loading rate max. 1,430 raw sugar bags loaded per gang period. Minimum is 650 bags. 5 bags loaded per sling. Only one vessel can operate at a time. Empty jute bags have been discharged and average discharge rate is about 45 metric tons per gang period. No crane available.

Sugar in bulk: 5 thrower machines for loading sugar in bulk.
TANKERS: Molasses average pumping rate 50,000 g.p.h. Fuel oil, discharging rate 45,000 g.p.h. Gas oil discharging rate 35,000 g.p.h.

Puerto Padre Pier No. 2: Fuel Oil: One connection 8 in. diameter. Diesel Oil: One connection 8 in. diameter. Molasses: Two connections 8 in. diameter.
FUEL: Not available.
FRESH WATER: Can be supplied at No. 1 pier by pipe-line. Delivery rate 17 t.p.h.
REPAIRS: Port has no repair shop, but in event winch damage or any other light repairs, this work can be carried out at the Sugar Mill "Central Antonio Guiteras" Repair Shop.
MEDICAL: General Hospital at Puerto Padre where sick crew members can receive attention.
IMPROVEMENT OF PORT FACILITIES: At the present time new deposit tanks for petroleum products are being built to increase greatly the port storage.

Also a water reservoir and an above ground tank will be built, and in the future it will be possible to supply water by pipe-line to vessels docked at Pier No. 2.
TRANSPORTATION: Distance from Cayo Juan Claro where all cargo operations are performed to Puerto Padre is 3 miles. Means of transportation between Puerto Padre and Cayo Juan Claro: motor-boat, railroad, and automobile.

From Puerto Padre to Cayo Juan Claro it takes: by motor boat 30 minutes; by automobile 5 minutes; railroad 20 minutes.
COMMUNICATIONS: Means of communications available at Puerto Padre: telephone, cable (Inalambrica), telegraph and postal service. Vessels can communicate with Puerto Padre via CLA Havana.
AUTHORITIES: Port Doctor and Custom House are located at Puerto Padre. Immigration at Chaparra. Port Captain at Cayo Juan Claro.
AGENT: Office Address: Calle 3 No. 12, Cayo Juan Claro, P.O.Box 38, Central "Antonio Guteras, Tel.: 52565 (Puerto Padre), 210-2 (office), 108-2 (night). Cable: Mambisas Puerto Padre. Telex: 024118.

Agency works VHF on Channel 16.

Postal Address: Empresa Consignataria Mambisa, Agencia Puerto Padre, Apartado No. 38, Central Antonio Guiteras, Delicias, Prov. de Oriente.

Puerto Padre Agency personnel also attends the port of Manati.

SUB-PORT OF MANATI: 21.24 N. 76.48 W. **(See Plan)**

The Port of Manati lies on an arm in the sea, through the centre of which runs a narrow and deep channel, leading to the shallow bay of Sabanalamar or Manati.

This arm in the sea is about 3 miles long and 800 m. wide at the entrance mouth, between Pt. Roma and Pt. Jesus, and 700 m. at its end, when it reaches Sabanalamar Bay.

Manati is located on the West coast of the arm in the sea, at about 2.5 miles from Pt. Roma and 0.5 miles from the end of it.

The port of Manati exports the production of sugar mill Argelia Libre formerly known as Manati.
PILOTAGE: Pilots board vessels about 1 mile from entrance. No pilot station. Pilots located at Manati and ETA notice to be given to them well in advance. Distance from place where Pilots board vessels to pier is about 3 miles.
APPROACHES: Narrow channel, very deep (minimum depth 38 ft.) Bottom is irregular, parts where it is sandy and others rocky.
RESTRICTIONS: Not necessary to await slack water for entry/sailing; but considering large tonnage of vessels presently entering port for topping-off, if there is a strong current Pilots wait until current loses strength in order to avoid accidents. Vessels can enter and sail only during daylight.
ANCHORAGES: Swing area 600 ft. (approx.). Owing to reduced space, this anchorage is not safe for anchoring vessels drawing over 26 ft.
MAX. SIZE: Incoming vessels draft limitations:

	Vessel length	*Max. draft*
Liberty type vessels	442 ft.	30 ft.
Vessels up to	500 ft.	26 ft.
Vessels up to	525 ft.	20 ft.
Vessels up to	560 ft.	17 ft.

In some exceptional cases 560 ft. length vessels have entered this port but it is advisable to nominate this type of vessels to operate at any other suitable ports because at Manati the max. advisable length allowed to vessels is 525 ft.

Tidal variation, 2 ft. 6 in.
BERTHING: Manati Pier has the shape of an "L" and projects from the West coast of the arm of sea toward the centre of it seeking the border of the deep channel.

It goes straight out and then turns Northward in a 90° angle.

The 90° angle constitutes its South end, and from there to the head of pier, or North end, it is 465 ft. long, having at this end a fixed red light.

As is clear by the above description, pier has an East and a West side, but only the East side is used because the West side does not have enough water to operate vessels.

It is a hard wood construction supported by concrete piles. Bottom alongside pier is soft (mud and sand) along three-quarters of its length from North to South except at the South end where it becomes shallow, hard and rocky, which renders worthless about 70 ft. of docking space.

Pier has double standard railroad tracks and a single narrow gauge track. It is not possible to operate trucks at this pier.

Manati Pier (Also known as La Gloria Pier): Length 465 ft. Max. length allowed 525 ft. Max. draft 30 ft. 6 in.

Tanker Information: Molasses: 2 connections 8 in. in diameter. Fuel Oil: 1 connection 8 in. in diameter.

STEVEDORES: Loading sugar: working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs., 1300–1700 hrs. When necessary, work is performed at night. Sunday is also worked when required. 1,040 sugar bags loaded per gang period; 6 sugar bags loaded per sling. Only one vessel can operate at a time. No refined sugar operations performed. No shore crane available. Sugar mill has 5 grates and 3 machines for spreading sugar in hatches.

TANKERS: Molasses pumping rate 25-30,000 g.p.h. Fuel oil pumping rate at average of 1,700 b.p.h.

FUEL: Not available.

FRESH WATER: Supplied by pipe-line at pier. Pipe-line 2 in. in diameter and delivery at an average rate of 15 – 16 t.p.h. Amount that can be delivered depends on supply at sugar mill. Supply not to be depended upon.

REPAIRS: Sugar mill repair shop for minor repairs. Welder available.

MEDICAL: Crew members requiring medical attention are treated at Manati Polyclinic, but the majority of cases are treated at Argelia Libre Hospital, where there is also a Dental Clinic.

Cases requiring surgical or specialised treatments are sent to Lenin Hospital at Holguin.

COMMUNICATIONS: Long-distance telephone communication between Manati and Puerto Padre; although difficult owing to fact that there are only two lines from Manati and they are almost always congested. There are some occasions when an entire day is spent trying to obtain communication without result. Victoria de las Tunas telephone operator serves on occasions as "relay".

Vessels cannot communicate by radio with this port.

AUTHORITIES: Under Cuban Custom laws and regulations, Manati is a sub-port of Puerto Padre, therefore all Authorities are located at Puerto Padre, nevertheless vessels nominated for operations at Manati can proceed directly to the port, where authorities clear the vessels.

AGENT: Manati is attended by Mambisas Puerto Padre Agency personnel and there is no office at Manati, however, the Agent attending a vessel at Manati can be reached at Minaz office, tel. 146. At night and for urgent matters he can be reached at Manati Chief Pilot tel. 144-15.

SANTA CRUZ DEL SUR: 20.42 N. 77.59 W.
(and sub-ports of Manopla and Guayabal): (See Plan)

PILOTAGE: Pilots board vessels close to buoy indicating entrance channel (Cuatro Reales) between "La Ceiba" bank and Carapacho Cay Lighthouse. Distance from place where Pilots board vessels (Cuatro Reales Channel) to Santa Cruz anchorage is 11 miles.

APPROACHES: Entrance channel has depth of 45 ft. Bottom is mud, gravel and loose sand. In the narrowest part of channel is a turn of about 20 degrees.

RESTRICTIONS: Vessels cannot enter/sail at night. Not necessary to wait for slack water for entering/sailing.

ANCHORAGES: No. 1, 24 ft.; No. 2, 26 ft.; No. 3, 36 ft.; No. 4, 40 ft. Sugar-loading operations were performed at anchorages. There were 10 barges available which are presently operating at the sub-port of Santa Maria (Jucaro). Similarly, the tugs which were used at this port are at present operating at Jucaro.

MAX. SIZE: Vessels can enter/sail through channel with any draft and length subject official draft of the port which is 35 ft. Tidal variation 1 ft. 5 in.

LOADING: Raw sugar: working times: Monday to Friday 0600–0800 hrs., 0830–1100 hrs., 1200–1530 hrs.; Saturday 0600–0800 hrs., 0830–1030 hrs.; Sunday: when it has been necessary, work has been performed.

Loading rate: 1,950 bags loaded per gang period. 6 bags loaded per sling. Only 1 vessel can operate at a time. No crane available.

Refined sugar – no operations performed.

Raw sugar in bulk – no sugar in bulk is shipped by this port. Bulk sugar is shipped by the sub-port of Guayabal.

TANKERS: No tankers operate at Santa Cruz del Sur proper.

COMMUNICATIONS: Long-distance telephone communication with Guayabal can be established through San Francisco Sugar Mill. Telegraph can also be used. There is no telephone or telegraph communication beteen Santa Cruz and Manopla.

At Santa Cruz del Sur there are long-distance telephone, Government telegraph and postal service. Vessels can communicate with Santa Cruz by telegraph via Radio Havana.

MEDICAL: No hospital. The nearest hospital where sick crew members can be attended to is located at Camaguey, 80 km. from Santa Cruz.

FUEL/WATER/REPAIRS: Not available.

TRANSPORTATION: Distance from Santa Cruz del Sur to Manopla: 14 miles; Guayabal: 14 miles. From Santa Cruz to Manopla by sea 1.5 hours; by road 1 hour. To Guayabal by sea 3 hours; by road 2.5 hours.

No daily transportation between Santa Cruz and its sub-ports. Launch or automobile are to be hired for this purpose.

AUTHORITIES: Port Authorities are located at this port. Launch services are used by Port Authorities to clear vessels.

AGENT: Empresa Consignatarias Mambisas, Calle Carretera No. 255, P.O.Box 49, Santa Cruz del Sur, Camaguey. Tel. 2547 (night 2141). Telex 031285 Cables: "Mambisas Santa Cruz del Sur".

(a) SUB-PORT OF MANOPLA:

PILOTAGE: After Pilot boards vessel at Cuatro Reales Channel, vessel proceeds to Santa Cruz for clearance, thence takes another Pilot and proceeds to sub-port of Manopla, 14 miles distant from Santa Cruz.

APPROACHES: See Santa Cruz. Entrance channel to sub-port of Manopla – Canal de Media Luna, Canal de los Bayameses, where vessels anchor, is a mile wide, bottom soft mud. No dangerous turns. Vessels of any length can enter and the anchorage depth is 24–40 ft. Official permitted draft 35 ft. Vessels can enter/sail only during daylight. Not necessary to wait for slack water for entering/sailing. Tidal variation 1 ft. 6 in.

LOADING: Anchorage No. 1: 26 ft.; No. 2: 40 ft. Loading sugar operations were performed at above anchorages by means of barges. The following barges and tugboats were available:

Macareno No. 1	– capacity: 329 metric tons, 2,870 bags of raw sugar or 75,000 gallons of molasses.
Macareno No. 2	– capacity: 329 metric tons, 2,870 bags of raw sugar or 75,000 gallons of molasses.
Eulalia	– capacity: 269 metric tons, 2,350 bags of raw sugar. Has no tanks.
Miguelito	– capacity: 269 metric tons, 2,340 bags of raw sugar. Has no tanks.
Josefa	– capacity: 269 metric tons, 2,340 bags of raw sugar or 48,000 gallons of molasses.

Tug: *Fox* – length 66 ft., breadth 14 ft., 165 h.p. Tows the fleet of barges utilised at Manopla.

TANKERS: Average pumping rate of molasses 20,000 g.p.h.

COMMUNICATIONS: No long-distance telephone communication. There is telegraph service which works up to 1800 hrs.

FUEL/WATER/REPAIRS: Not available.

AUTHORITIES: See "Santa Cruz".

(b) SUB-PORT OF GUAYABAL: (See Plan)

PILOTAGE: After Pilots board vessels at Cuatro Reales Channel, they proceed directly to sub-port of Guayabal (a distance of 27 miles), where Customs clearance takes place. Also see "Shipmaster's Report".

APPROACHES: Dredged channel 2,474 m. in length, 60 m. in width with average depth of 30 ft.

ANCHORAGES: Suitable for vessels with draft up to 40 ft.

MAX. SIZE: Official draft for the port is 35 ft., but Pilots advise max. draft with which vessels may sail from the berth is 32 ft. 6 in. at HW, with max. length 510 ft.

BERTHING: The West side of the pier is specially designed for loading bulk raw sugar mechanically and is the deepest side where vessels can be loaded up to 32 ft. 6 in. for sailing at high tide or up to 30 ft. 6 in. to sail at any time.

It must be understood that such draft of 32 ft. 6 in. is given only for sailing loaded, but does not indicate that an arriving vessel with 32 ft. 6 in. draft can dock, even at high tide.

This situation is originated by the dimensions of the manoeuvring area around the pier.

Max. draft allowable for vessels arriving to complete cargo at Guayabal (molasses, alcohol, or sugar) at the West side of pier is 27 ft.

A tanker nominated for discharging fuel oil at Guayabal must arrive with a max. draft of 30 ft. 6 in. to be docked at the West side, bow facing shore, and must discharge until a draft of 27 ft. or less is attained, in order to turn around and sail out.

At the East side of the pier vessels can dock bow facing shore, with max. draft of 24 ft. fore and 27 ft. aft.

Vessels nominated to load bulk raw sugar at Guayabal must arrive clean and ready to load.

Any undesirable material or any remaining dunnage materials, must be discharged at a previous port, because at Guayabal the only available personnel are those operating the equipment of the Bulk Raw Sugar Terminal and no stevedores are available.

When jute bales or any other cargo is discharged at Guayabal, stevedores from other ports are used.

The pier is a solid and well maintained construction of concrete.

Guayabal Pier:

(a) West. Length 508 ft., max. draft allowed 32 ft. 6 in. (for sailing high tide), 30 ft. 6 in. (for sailing any tide), max length of vessel 200 m.

On this side is where the equipment for loading bulk sugar operates. The boom of the equipment can reach out up to 10.36 m. (34 ft.), from the outer edge of the pier.

Vessels loading bulk raw sugar can be supplied with water at a rate of 5 t.p.h. as long as the loading equipment is working and 10 t.p.h. when it is not working.

Cargoes handled by this side: Bulk raw sugar, molasses and alcohol.

Occasionally: Fuel oil, jute bales and spare parts for sugar mills.

(b) East. Length 508 ft., max draft allowed 24 ft. fore and 27 ft. aft (bow facing shore), max. length 200 m.

STEVEDORES: Sugar loading in bulk. Loading of molasses and alcohol takes place frequently. Fuel oil and general cargo discharge.

Working Hours: Monday to Friday: 0600–0800 hrs., 0830–1100 hrs.,1200–1530 hrs.

Saturday: 0600–0800 hrs., 0830–1030 hrs.

Sunday: When it has been necessary, work has been performed.

Sugar in bulk – at pier there is an installation operated by electric motor control which moves a convex-shaped conveyor and transports the bulk sugar from warehouse to the vessel. 2 thrower machines, 600 and 400 t.p.h. respectively. Average loading rate about 250 t.p.h. although occasionally average of 400 tons has been obtained. There is some time lost on account of shifting the crane. Occasionally shovellers are required, and work continues 24 hours a day.

General cargo – it is not customary to receive general cargo at this sub-port, although on occasion bales of empty jute bags have been received, destined to neighbouring sugar mills. At present there are no facilities for discharge of general cargo, and no shore cranes available.

TANKERS: Shipment of molasses and alcohol is quite frequent. Vessels discharging fuel oil may berth with max. draft of 27 ft. without touching bottom, which is of soft mud.

COMMUNICATIONS: Communications between Guayabal and Santa Cruz del Sur are rather poor.

By means of relays Guayabal/Amancio Rodriguez/Camaguey, telephone communication may be obtained with Havana and other Cuban ports, but owing to the relay system necessary to obtain communication, it is of dubious value in urgent matters.

Radiograms (RCA) can be sent/received by means of telephone call Guayabal – Camaguey.

In the Bulk Sugar Terminal there is telex, but due to limitations of lines it is frequent to encounter difficulties to obtain communication.

ETA messages from Masters should be sent Mambisas Santa Cruz del Sur and Mambisas Habana, simultaneously.

FUEL/REPAIRS: Not available.

FRESH WATER: Supplied at pier by pipe-line at average rate of delivery 10 t.p.h.

SHIPMASTER'S REPORT: 1978.

Pilotage: Pilots are arranged by the Agent at Santa Cruz del Sur, (Mambisas). The boarding station shown on charts and mentioned in Pilot Books is now non-existent. Instead the Pilot comes direct from Santa Cruz when a ship is expected and boards the vessel between No. 2 Buoy and No. 4 Buoy South of the entrance to Cuatro Reales Channel. Vessel then proceeds to Guayabal, where it is necessary to anchor off the port for clearance.

Approaches: The navigable width of the approach channel, is at present 50 m., the buoys being moved accordingly, with an average depth of 32 ft. The centre alignment of the approach channel is 011.5° T. This is indicated by two fixed leading marks. The forward one, a metal pole with a yellow triangle mark, apex up, at night a fixed red light. The rear mark is a yellow triangle apex up, attached to the top of a water tank (on a framework tower) at night a fixed green light. This leading line leads "down" the Eastern side of the one and only jetty, along the top of the elevated (roofed-over) conveyor belt.

Documents/Customs:

Crew Declaration (Manifest)	6 copies
Steward's store list	6 copies
Deck/Engine store list	6 copies
Maritime Declaration of Health	3 copies
Dangerous drugs list	6 copies
Slop chest/Bonded stores	6 copies
Explosives list (Distress Rockets, etc.)	6 copies
List of foreign currency	5 copies
List of ship's equipment, i.e. films, binoculars, T.V.s, sextant, etc.	4 copies

All foreign currency, cameras, dangerous drugs, and crew presents to take home were all sealed up in the bond locker along with its contents. Meat room sealed up. Although all our meat is of Australian or New Zealand origin, some of the lamb had a USA wrapper on it which made it American meat and this is not acceptable in Cuba. As far as I can understand the meat from Australia, New Zealand, Japan, USSR, only is acceptable in Cuba.

SHIPMASTER'S REPORT: April 1984.

Vessel loaded raw sugar in bulk:

Documents:

9 copies Crew List.#
3 copies Animal List.
2 copies List of Ports.
4 copies Narcotics.
4 copies Arms and Ammunition.
5 copies Provisions.
3 copies Store List.
3 copies Bonded List.
1 copy Vaccination.
4 copies Crew Currency.*
4 copies Total Currency.+
2 copies Crew's Effects.†

Notes:

#On sailing they requested another 6 Crew Lists.

*Crew Currency List – With all paper money that every crew has in his possession also the coins.

+Total Currency List – With the total amounts of foreign currency held by crew and vessel. i.e. US Dollar 4,525.00; German Mark 150.00; Greek Drachmas 25,500; Japanese Yen 15,000, etc., including total coins.

† Crew's Effects – Vessel is provided with special forms. Each form in duplicate is to be filled for each crew member.

Pilots: Pilot comes aboard at Canal de Cuatro Reales. Same Pilot berths the vessel and remains on board until loading completed to unberth and sail the ship.

Approaches: Dredged channel. Vessels can sail at high water with draft up to 32 ft. No night sailing, berthing or unberthing.

Max. Size: Vessels of about 210 m. length are handled.

Berth: Works in progress to lengthen the berth by about 40 m. Up until now the first 20 m. are in preparation.

Max. draft alongside West side of Pier, 35 ft. aft and 33 ft. for'd.

Equipment: 1 convex-shaped conveyor with trimmer machine. Average loading rate 600/650 tonnes/p.h. 24 hours continuous working. The boom extends about 35 ft. and is about 30 ft. – 32 ft. above sea level.

Sugar in bulk loading at about 300,000 tonnes per month. No sugar loaded in bags.

Fresh Water: Available ex-wharf, rate about 3 t.p.h. at a cost of about US$2.70 per ton.

Doctor: Crew must go to another town, but usually no transportation, except emergencies.

Repatriation: Possible. Crew will travel by boat to Santa Cruz del Sur (about 3 hours), and then by car to Havana (about 12 hours), where the International Airport is located.

Ship Chandler: Comes from another port, charging about US$100.00 for transportation.

Population: Population of this port about 1,500.

AUTHORITIES: Port Captain and Immigration's Delegations at Guayabal. Customs delegate travels from Santa Cruz to Guayabal to conduct clearance. Distance 24 miles (by sea) from Guayabal to Santa Cruz. By road 60 km. Time 3 hours by sea and 2 hours by road.

AGENT: Postal Address; Empresa Consignataria Mambisa, Agencia Guayabal, Apartado No. 49, Santa Cruz del Sur, Prov. de Camaguey.

Office Address: Guayabal Bulk Sugar Terminal, 3rd Floor, Tel: No. 2547, 2141 (night). Telex: 031285. Cables: Mambisas Santa Cruz del Sur.

SANTIAGO DE CUBA: 19.50 N. 75.52 W. (See Plan)

PILOTAGE: Pilots board vessels 1 mile from mouth of port. Pilot station located in small Cay at entrance of bay known as Gramma Cay (formerly Smith Cay). Launch service is only means of communication available between Santiago de Cuba and Gramma Cay. Pilots also have office located at Custom House building with telephone communication. Distance from place where Pilots board vessels to: Piers 5 miles; Anchorage 4.5 miles; Refinery Pier 2.5 miles.

APPROACHES: The entrance, up to a distance of 0.5 mile, has a rock bottom. Thereafter, for a distance of 1 mile muddy bottom, and remaining 2.5 miles is soft mud. There are some turns, and the channel and entrance to the port are narrow.

RESTRICTIONS: Vessels can enter and sail only during daylight from 0600 to 1800 hrs.

ANCHORAGES: *Inner Anchorage:* Located from the North of Ratones Cay up to the West of Buoy No. 20. Can accommodate several vessels.

Limitations to vessels: Draft 30 ft., length 702 ft.

Outer Anchorage: Located West of Pt. Gorda and just in front of refinery piers. Can accommodate 1 or 2 vessels and is used mainly by tankers. Max. draft: 36 ft. Max. length allowed 702 ft.

Also see "Shipmasters' Reports".

MAX. SIZE: Vessels with a length of 702 ft. and a draft of 36 ft. can enter up to the refinery, provided they arrive during early morning hours. Tidal variation 1 ft. 3 in.

BERTHING:

Luis F. Mena Gil Dock (Formerly Malecon): This installation comprises the whole zone known as Malecon del Puerto and consists, mainly, of a docking area 1,345 ft. long, which, being able to operate three vessels, are regarded as West, Centre, and East berths, but there is no mark or boundary between any of the berths.

West of the Western berth is under construction, but already in operation, a new berth, temporarily known as Western extreme berth and, East of the Eastern berth is a berthing space for barges.

This dock is built of concrete, and was rebuilt and paved recently. As standard gauge railroad tracks run along the length of dock, operations can be performed either by railroad or trucks, or a combination of both.

The particulars of each berth are:

Western Extreme Berth: (New Berth): (Known as Malecon Extremo Oeste):

Max. length allowed: 100 m. Draft: 18 ft.

Cargo handled at this berth: general cargo, cement, etc.

Western Berth: (Known as Malecon Oeste):

Draft allowed: 24 ft. fore, 25 ft. aft.

Cargo handled at this berth: bagged raw sugar, general cargo and occasionally lubricating oil.

Centre Berth: (Known as Malecon Centro):

Draft allowed: For Loading: 28 ft., leaving pier at high tide. Under these conditions, vessels rest in 1 ft. of almost liquid mud but this does not interfere with sailing manoeuvres.

For Docking Loaded: 27 ft. even keel. Cargo handled at this berth: bagged raw sugar, general and heavy cargoes.

Eastern Berth: (Known as Malecon Este):

Draft allowed: 23 ft. fore, 26 ft. aft.

Cargo handled at this berth: light general cargo, molasses and petroleum products.

Ferrocarril Pier: This pier out of use since 1972 but rebuilt recently. It is a concrete construction ending in a small platform but vessels do not moor directly to the dock but to 4 solid dolphins; first and last dolphins being 400 ft. apart. Vessels are also secured to belaying cleats situated on shore.

This installation is used for shipping molasses but there is a possibility that pipe-lines for petroleum by-products will be installed, although this has not been confirmed.

Length: 240 ft. Draft allowed: 26 ft.

Rolando Roca Pacheco Pier (Formerly La Maritima): This pier is a complete concrete construction, (both platform and pilings) rebuilding of which was finished in 1973; the installation is in very good condition in all respects, permitting truck and trailer operations alongside vessel, as well as railroad operations, because tracks cross just in front of the pier shore entrance.

North Side: Length: 650 ft. Max. length allowed: 600 ft.

Draft allowed: 25 ft. fore, 26 ft. aft.

Cargo handled at this side: General cargo.

South Side: Length: 650 ft. Max. length allowed: 600 ft.

Draft allowed: 26 ft. fore, 27 ft. aft.

Cargo handled at this side: General cargo.

Romero Pier: This pier is a concrete construction, and although in rather fair condition, needs repairs.

All cargo handled at this pier is on the basis of a trucking operation only.

It is used chiefly for coastal trade vessels but also by medium size vessels, such as refrigerated ships.

East Side: Length: 492 ft. Max. length allowed: 400 ft.

Draft allowed: 14 ft. fore, 19 ft aft.

Cargo handled at this side: general cargo, bagged cement, etc.

West Side: Length 492 ft. Max. length allowed: 400 ft.

Draft allowed: 20 ft. fore, 23 ft. aft.

Cargo handled at this side: General cargo, bagged cement, refrigerated cargo such as lard, butter, frozen fish, etc.

Frank Pais Pier (Formerly La Molinera): This installation consists of a long narrow passage, at the end of which the vessel is berthed across the installation to 4 solid dolphins. It is used for the discharge of bulk grain (wheat and maize) by mechanical means through conveyors and pipe-lines.

There is no limitation as to length of vessels. Draft allowed: 30 ft.

Cement Plant Pier (Known as Muelle del Cemento): This berth is a coastal pier that can accommodate one vessel.

It is used only for loading cement, either by silos/truck depending upon whether bulk or bagged cement is involved. This installation is well paved and all operations are performed by means of trucks.

As the pier is not long enough, there are solid dolphins at each end of pier, in order to berth securely vessels up to 460 ft. long.

Length: 290 ft. Max. length allowed: 460 ft.

Draft allowed: 22 ft. fore, 23 aft.

Refinery Pier: This pier is located at a small peninsula on the West coast of the bay, its orientation being from North to South and therefore its sides are West and East.

It is a solid, well cared for, concrete construction, having similar facilities at both sides.

Length: 789 ft. Max. length allowed: 702 ft.

Depth: 40 ft. Max. draft allowed: 36 ft.

STEVEDORES: Working periods: Monday to Friday 0700–1300 hrs., 1300–1900 hrs.; Saturday the same; Sunday worked only if vessel completing cargo.

Raw Sugar: Loading rate about 1,200 bags loaded per gang period; 6 bags loaded per sling. 2 vessels can load sugar simultaneously.

General Cargo – approximate discharging rates:

General cargo	7–8 tons per gang hour
Bagged cargo	15 tons per gang hour
Iron	7 tons per gang hour
Wood	3 standards
Fertilisers	15 tons per gang hour

Shore Crane – there is movable crane with boom of 75 ft. length and lifting capacity about 19 tons.

Bulk sugar – 5 thrower machines available.

EQUIPMENT: One floating crane: 35 tons lifting capacity; 10 shore cranes: ranging from 16 to 5 tons lifting capacity; 40 tractors; 21 fork lift trucks: 70 h.p.; 13 trucks.

Besides, there are several tugboats ranging from 1,200 to 150 h.p., also several cargo barges and other minor port auxiliary equipment not listed.

TANKERS: Average pumping rate: Molasses 30,000 g.p.h. Fuel oil 13,000 b.p.h.

COMMUNICATIONS: Radio telegrams, radiotelephony, telegraph and telephones. R.C.A., Inalambrica. All-American, Prewi, radio and Government telegraph. Also air, railroad and bus services.

Vessels can communicate with Santiago de Cuba through CLM and RCA.

MEDICAL: Sick crew members can be attended at Santiago Provincial Hospital.

FUEL: Fuel oil and diesel oil available. Delivery rate about 7,000 b.p.h.

FRESH WATER: Can be supplied docked/anchored.

REPAIRS: Following repair shops: Joaquin Lamas, Giron.

DEVELOPMENTS: Since 1973 all port facilities admitting repair or rebuilding are included in a plan in order to improve port facilities.

Through this plan several installations have already been rebuilt and others are undergoing repairs.

This plan also includes the installation of water pipe-lines to all piers where possible, in order to supply the vessels while operating.

Luis F. Mena Gil Wharf will be the first to have water installation to supply vessels.

There is a plan for the dredging of the port in the very near future.

SHIPMASTER'S REPORT: April 1979.

Also see "Shipmaster's Report" from Havana dated April 1979.

Documents:

12 Crew Lists.
5 Store Lists.
5 Declarations.
5 Currency Declarations.
5 Vaccination Lists.

These were all required even though the vessel had only come from Havana. Also a large number of transit documents were issued in Havana for entry here. Bond and safe seals may be opened whilst vessel at sea.

Points of Note:

a. No anchorage, recommend drifting about 5 miles from coast.
b. See Havana Report.
c. See Havana Report.
d. Port reasonably free of pollution, but large amount of construction in progress in harbour area.
e. No tugs appeared when we berthed.
f. At grain elevator shore gangway used.
g. No crew inspection.
h. See Havana Report.
i. See Havana Report.
j. See Havana Report.
k. Same system as Havana but shore leave from 1800 to 2200 hrs., and travel to town by launch. Also only allowed in area shown on pass. In this port fines are imposed for being late back or going outside area of pass. First time 25 peso, second time 50 peso and third time pass revoked. Only ten persons allowed ashore at any one time and a list of those going ashore must be presented to the Immigration guard before 1000 hrs. that day.

On Saturday and Sunday 16 persons are allowed ashore till 2400 hrs. and 2300 hrs. respectively.

l. See Havana Report.
m. See Havana Report.
n. As Havana, except Channel 16.
o. See Havana Report.
p. Berthed at grain elevator. 30 ft. alongside. The discharger has 2 heads and is fixed, the ship has to be warped up and down the quay. Wheat discharged at average 50 tonnes p.h. Work on a 24 hour basis.
q. All hatches again inspected.
r. As Havana, vessel was searched here 4 days after arrival. The search was carried out by the police and was very thorough. It included checks on money and goods declared and under seal. The radio room was sealed at the time.
s. See Havana Report.
t. Customs issue may be obtained every 3 days if required. I believe this applies in Havana as well.
u. In light of this vessel's experience I would advise any vessel proceeding to Cuba to carry at least one month's reserve provisions.

SHIPMASTER'S REPORT: April 1981.

VHF: Santiago Pilots and the Agents "Mambisas Santiago" are both available on VHF Channel 16 at all hours.

Restrictions: There are no restrictions as to the times for entry and departure of vessels. Pilots are available 24 hours and I believe it has been so for the last two years.

Awaiting Pilot: Owing to the large depths, bad holding ground (rocky bottom) and frequent fresh winds, it is not advisable to anchor outside the harbour entrance. This was my opinion which the local Pilots have confirmed and have definitely advised against anchoring. If there is any delay in embarking the Pilot, the vessel should keep steaming.

ADD S.N.R.

AUTHORITIES: Located at Custom House building.

AGENT: Empresa Consignataria Mambisa, Agencia Santiago de Cuba, Avenida Jesus Menendez No. 658, Apartado No. 522, Santiago de Cuba, Prov. de Oriente. Tel: 22834 – Night: 4524. Telex: 061120, 061238. Cable: Mambisas Santiago de Cuba.

Agency VHF works on Channel 16.

TANAMO: 20.44 N. 75.20 W. (See Plan)

LOCATION: Tanamo Bay is moderately ample, landlocked, having numerous cays dispersed within. High ground surrounds the bay, except by the East and S.E. It is 3.5 miles long by 1.25 miles wide.

Tanamo is mainly a sugar shipping port, but also exports molasses and receives coastal trade shipments of fuel oil.

Tanamo exports the production of Frank Pais sugar mill, formerly Tanamo. At about 12 km. from the port are the town of Cayo Mambi and Frank Pais sugar mill.

PILOTAGE: Pilot boards about 1 mile from entrance. Pilot station located at entrance of port mouth. Usual means of communication is by launch. Distance from place where Pilots board vessels to: Punta Gorda Dock: 5 miles; Cayo Mambi Dock: 7 miles.

ENTRANCE TO PORT/CONDITIONS/LIMITATIONS: Entrance to port is effected through a channel in the form of an "S" with turns up to 90°.

The bottom is rock and sand, its maximum width being 175 m., located between the shoals at both sides of the entrance, and its minimum width 160 m., located in the vicinity of Pt. Gitana.

Channel tends to narrow in the middle of its course and it is here where precautions should be exerted, because it is considered dangerous. In its deepest part the channel is 162 ft. deep, and its minimum depth is 66 ft.

Limitations as to length and draft of vessels to enter to or sail from this port are those imposed by the place of operation, Punta Gorda Pier:

Draft 19 ft. fore, 22 ft. aft, length 535 ft.

Due to the strong tidal currents it is necessary to wait for slack water, to enter to or sail from this port, which can be effected only in daylight.

Vessels up to 500 ft. length do not require tugboat assistance, but from 500 ft. up to 535 ft. tugboat assistance is required.

Due to pier's length, vessels nominated to load sugar should not exceed a length of 450 ft.

ANCHORAGES: Del Medio Cay Anchorage:

Located at about 500 m. West of Bruja Cay.

Draft 28 ft., max. length allowed 535 ft.

Swinging area: About 350 m.

Soft mud bottom but anchors hold well.

It is sheltered from the winds, except those from the S.E.

In the rainy season, when rivers overflow, currents can be felt.

BERTHING: The place of operation at Tanamo is the pier, located on the West coast of the bay at a small town named Punta Gorda. Pier is built of concrete but is not well cared for and is in need of repairs. Some wooden aggregate at South side of pier crumbled away and interferes with loading No. 1 hatch of vessels. Stern hatches are loaded first, and afterwards the vessel is run astern in order to load No. 1 hatch.

Pier has double narrow gauge railroad tracks at each side.

Sides of the pier are North and South.

Punta Gorda Pier: Length 357 ft., max. length allowed 450 ft.

Drafts: South Side: 19 ft. fore, 22 ft. aft.
North Side: 14 ft. fore, 19 ft. aft.

STEVEDORES: Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.; Sunday no work performed.

Raw sugar: 975 sugar bags loaded per gang period. 6 sugar bags loaded per sling.

Refined sugar: 1,875 bags of 100 lb., loaded per gang period. 12 bags of 100-lb. type loaded per sling.

General Cargo: Working periods same as for sugar.

There is berthing space for 2 vessels, but due to lack of port personnel, it is advisable to operate only 1 vessel at a time.

TANKERS: Molasses average pumping rate: 20,000 g.p.h. Fuel oil average pumping rate: 11,750 b.p.h.

Tanker vessels up to 535 ft. can enter and operate at pier.

Fuel oil: 1 connection 12 in. in diameter.

Molasses: 1 connection 8 in. in diameter.

FRESH WATER: Can be supplied at Punta Gorda, delivery by pipe-line at rate of 5 t.p.h.

FUEL/REPAIRS: Not available.

COMMUNICATIONS: Only means of communication at Tanamo is telephone service. However this service is not to be depended upon and it is advisable to notify Antilla Agency well in advance of any instructions or changes pertaining to vessel's operations.

TRANSPORTATION: Transportation means to and from Tanamo are rather poor. Transportation between Tanamo and Antilla (and other nearby ports) is performed by car.

Last 4 km. of road to reach Tanamo are embankment roads in very bad condition which can be transited only by jeep or truck.

There is a rail car service up to Cayo Mambi.

Best advisable means of travelling is to travel to Nicaro by road and from there fly to Santiago or Havana.

MEDICAL: There is no hospital at Tanamo. Crew members requiring medical care are treated at Cayo Mambi. If specialised treatment or hospitalisation is required, patients are sent to Mayari Hospital or Lenin Hospital at Holguin.

AUTHORITIES: Under Cuban Customs laws and regulations, Tanamo is a sub-port of Antilla. Some of the Authorities have delegations at Cayo Mambi, others are located outside of Tanamo, but if ETA message is given sufficiently in advance, all Authorities travel to Tanamo, where they wait to clear the vessel.

AGENT: Tanamo is attended by Antilla Agency personnel.

VITA (sub-port of Gibara – Oriente Province): 21.05 N. 75.57 W. (See Plan)

LOCATION: Vita is a small, sheltered, landlocked bay on the North coast of Oriente province.

Vessels within its premises are well protected against all kinds of weather.

This port handles the export of the production of Rafael Freyre sugar mill, formerly Santa Lucia. As it is close to the town of Santa Lucia and due to the former name of the sugar mill, this port is also known as Santa Lucia Oriente.

PILOTAGE: Pilots board vessels 3 miles from entrance channel. Pilot station located at Vita. Interior telephone communication. Distance from place where Pilots board vessels to dock: 5 miles.

APPROACHES: Owing to narrowness of channel, turns may be considered as dangerous for vessels over 450 ft. length.

While approaching Vita, on the East side of port entrance, Pt. Barlovento lighthouse can be seen, located: Lat. 21° 06′ 01.1″ N., Long. 75° 57′ 39.4″ W., 45 ft. high, above high tide, white light of which flashes twice every 6 secs., visible up to 10 miles away.

RESTRICTIONS: Entry and sailing only during daylight.

MAX. SIZE: Max. draft with which vessels can enter/sail is 27 ft. at high tide and 26 ft. at low tide. Tidal variation averages 2.9 ft. Max. length 500 ft. (although vessels with length of 550 ft. have entered this port).

ANCHORAGES: Vita anchorage is located at about 190 m. from the pier, but as there is insufficient swinging area, it is only recommended as suitable for medium sized vessels.

BERTHING: The pier is located at a village named Vita on a peninsula which projects from the South shore of Vita bay.

The pier lies across the end of the mentioned peninsula, orientated from East to West; the berthing space is the North side since the South side is partially attached to shore.

Along the length of the pier and connected to Rafael Freyre sugar mill, runs single narrow gauge railroad tracks.

Vita Pier: Length 300 ft. Max. length allowed: 500 ft. Draft allowed: 26 ft.

Importation: Jute bales, bagged fertilisers.

Exportation: Bagged raw sugar, molasses.

Coastal Trade: Discharge of fuel oil.

Only 1 vessel can be operated.

STEVEDORES: Working periods: Monday to Friday 0700–1100 hrs., 1300–1700 hrs.; Saturday 0700–1100 hrs.

800–1,100 sugar bags loaded per gang period. Four sugar bags are loaded per sling.

TANKERS: Average pumping rate (molasses) 25,000 g.p.h.

MEDICAL: Crew members requiring medical attention are treated at Santa Lucia Hospital.

In cases where surgical or specialised medical treatment is required patients are sent to Gibara Hospital or Lenin Hospital at Holguin.

FUEL/REPAIRS/DUNNAGE: Not available.

FRESH WATER: Can only be supplied in exceptional cases. Delivery by 2-in. diameter pipe, by gravity. Delivery average 3 t.p.h. Recommended that Masters always check availability in advance.

COMMUNICATIONS: Means of communication of Vita are telephone and telegraph.

Telegraph service is slow for urgent matters. Telephone service at Vita is irregular due to bad lines and, sometimes, it is very difficult to establish communication.

These facts must be taken into consideration when a vessel is operating at Vita, because orders to Vita or information from the port almost always takes 2 or 3 days to reach destination.

Vessels navigating to Cuba can communicate with Antilla Agency through "CLA" Havana Radio Station which relays the message promptly to Antilla.

Vessels cannot communicate directly with Vita.

Masters must send their ETA messages simultaneously to Mambisas Antilla and Mambisas Habana.

TRANSPORTATION: Transportation to and from Vita is difficult and best advisable means is by car or to travel to the city of Holguin, from where transportation is available to any place or city of Cuba by bus, train or airway.

AUTHORITIES: All Port Authorities are located at nearby towns, but travel to Vita in order to clear vessels.

Under Cuban Custom laws and regulations, Vita is a sub-port of Gibara.

AGENT: The port of Vita is temporarily attended by Mambisas Antilla Agency personnel.

NOTES

FAMAGUSTA: 35.07 N. 33.57 E. (See Plan)

DOCUMENTS:
1 Arrival Declaration Form.
1 Maritime Declaration of Health.
4 Crew Lists.
4 Passenger Lists.
1 List of Ship's Stores.
1 Personal Declaration of Crew (wines, spirits, tobacco, cigarettes, cigars, jewellery, cameras, watches, arms and ammunition, etc.)
1 Appointment of Agent Form.
1 Cargo Manifest (If not forwarded by airmail).
1 Dangerous Cargo List.

PILOTAGE: Masters to cable ETA 24 hours before arrival to Agents so as to enable them to arrange berthing and pilotage. Pilotage is compulsory for ships in excess of 300 g.r.t.

In normal weather conditions Pilot boards vessel at Turning Buoy or at anchorage. In rough weather conditions, Pilot may advise Master to proceed to entrance of Outer Harbour, where Pilot will board the vessel. Communications between pilot stations and vessels approaching port and/or anchored at roadstead by VHF Channel 16.

Pilot Boat: Open motor launches, light grey colour, flying Pilot's flag, light and sound signals for Pilot.

Requirements: International signals apply.

ANCHORAGES: Vessels not berthing on arrival, to anchor at roadstead; East of flashing buoy (Lat. 35° 08′ 55″ N., Long. 33° 56′ 06″ E.) which marks the entrance to the channel.

Exposed to: N.E., E. and S.E. winds. In case of very bad weather, a safe anchorage to be sought further North, near Boghaz area.

Small vessels may anchor within the breakwater in depth of 5.5 m. to 7.3 m.

RESTRICTIONS: Passenger vessels (Vessels built to carry more than 12 passengers) allowed to enter port up to 2300 hrs., provided such vessels will be at Turning Buoy by that time and also if berth space is available.

Cargo vessels allowed to berth until sunset provided berth space is available.

No tide restrictions, but for vessels entering Inner Basin max. draft 22 ft. and for Outer Basin max. draft 30 ft.

MAX. SIZE:
Inner Harbour: Max. permissible draft 6.7 m. (22 ft.)
Max. permissible LOA 131 m. (430 ft.)
Outer Harbour: Max. permissible draft 9.15 m. (30 ft.)
Max. permissible LOA 220 m. (722 ft.)

Height of quay above sea level is 1.8 m.

The approach channel to the Outer Harbour is 10.30 m. deep and mean width of entrance 183 m. Range of tide: 0.45 m.

HEALTH: Pratique is required only at first port of call in Northern Cyprus. Pratique is granted either before or after berthing as appropriate.

RADIO/VHF: "Northern Cyprus Radio" R/T 2182, VHF Channel 16. Famagusta Pilots equipped with VHF radio-telephone operating on Channel 16 and 14 during office hours.

TUGS: 3 tugs, 150 h.p., 410 h.p. and 630 h.p. available. 1×1,200 h.p. tug to be in service late 1986. Tugs join vessel at entrance of Outer Basin and ship's lines are used. Use of tugs is at the discretion of Pilot. No charges made for the use of first tug. If more than one tug is required they may be hired on hourly basis.

BERTHING: According to rotation of ships with exception of passenger and citrus ships. Vessels may berth alongside between 0600 hrs. and sunset, unberthing of ships between 0600 hrs. and midnight including weekends and official holidays.
Inner Harbour Quay: Length: 540 m.
Outer Harbour Quay: Length: 655 m.

Ro-Ro vessels may berth either bows on or stern to the quay.

CRANES: A floating crane lifting 60 tons at 20 m. 21 mobile cranes of different lifting capacities.

STEVEDORES: Gangs to be ordered by 1500 hrs. previous day. For Saturday and Sunday work, gangs to be ordered by 1500 hrs. Friday. It is also possible to apply for gangs during the weekdays a.m. and/or p.m. subject to gangs available.

Average rate of discharge: General cargo, 10 – 15 tons, bagged cargo, 15 – 20 t.p.h. per gang.

Working hours weekdays 0800 – 1200 hrs., 1300 – 1700 hrs., overtime work until 2300 hrs. is possible, but with extra charge.

MEDICAL: Advisable for Masters to include in ETA message to Agents if any medical attention required; hospital and private clinic facilities available. Inoculations or vaccinations according to prevailing circumstances.

DENSITY/TIDE: Mediterranean salt sea water. Difference of 1 ft. – 2 ft. between low and high water.

FRESH WATER: Water hydrants installed alongside quay, both at Inner and Outer Basins and delivery through hoses; rate of delivery 10 – 15 tonnes per hydrant per hour.

Note: Certain limitations to quantities deliverable can be possible during Summer months (June-September) owing to general shortage of water.

FUEL: No bunkering facilities alongside quay. Limited fuel deliveries to vessels alongside quay can be made by lorry tankers of 8 – 10 tons each.

GANGWAY/DECK WATCHMEN: Not obligatory, but may be used if Master requires.

OPENING/CLOSING HATCHES: Carried out by ship's crew; stevedores on board are sometimes willing to assist but they are not obliged to do so.

CUSTOMS ALLOWANCES: 200 cigarettes or 250 grams tobacco, and 0.75 cl. spirits, 0.75 cl. wine per man per week.

For reasons of administrative convenience, issues of high duty goods for use by crew on board is being made every week.

The Master, Chief Officer and the Chief Steward of ocean going vessels may be granted more quantities of the above high duty goods as may be considered reasonable by Customs Authorities, on request.

The above allowances are in force in all Northern Cyprus ports.

CARGO GEAR: Mostly supplied by shore stevedores or other contractors against payment. Any gear supplied by the vessel should be certified to the effect that it is tested and found to be suitable for the purpose used.

IDENTIFICATION CARDS: Passports and/or Seaman's Books are accepted by the Police and Immigration Authorities.

On ship's arrival, passports and/or Seaman's Books are retained by the Immigration Authorities against the issue of Landing Cards which are used until the ship's departure when the passports and/or Seaman's Books are returned to the Master.

REPAIRS: Minor repairs for deck and engine can be carried out at local workshop. Cement boxes and plating both above and underwater can be carried out.
DRY DOCKS: No dry docks. 2 slipways operate at South end of port and can take vessels up to 500 tons burden.
SURVEYORS:
(1) Cargo surveyors available.
(2) Refet L. Egemen & Co., Nicosia. Sub-Agent of Catoni Agents, Mersin, Turkey, who are the representative of Lloyd's in Mersin, Turkey (for insurance purposes but not for classification).
AIRPORT: Ercan Airport, 30 miles from Famagusta. Connections to U.K. and Middle East countries via Turkish airports.
TIME: GMT plus 2 hours.
HOLIDAYS: Recurrent official port and Customs holidays:

First weekday of January, 23rd April, 1st May, 19th May, 20th July, 1st August, 30th August, 29th October, 15th November, Ramazan Bairam (1st, 2nd and 3rd days), Kourban Bairam (1st, 2nd, 3rd and 4th days), Birthday of Prophet.

All ports closed for work with the exception of shipping traffic on New Year's Day and on 1st May.
POLICE/AMBULANCE/FIRE: Police Headquarters Tel: 036-65310, 036-65321. Ambulance Tel: 036-65328, 036-62876. Fire Brigade Tel: 036-65389.
EMERGENCY CO-ORDINATION CENTRE: Not specially available, but Famagusta pilot station Tel: 036-65388, 036-64790 and/or Port Headquarters Tel: 036-62626, 036-62627, 036-62951 may be of assistance.
TELEPHONES: Public telephone boxes available on the quayside.
GENERAL: Flag of Northern Cyprus to be hoisted on mast from 0800 hrs. to Sunset.

Landing of dogs or other animals not allowed. Disposal of garbage and waste strictly prohibited both in port and territorial waters. Garbage and waste are collected by the municipality against a nominal fee, through Agents.

Charts: Relevant Admiralty Publications: B.A. Chart 847, 851, List of Lights Vol. E., Mediterranean Pilot Vol. V., Tide Tables Vol. I. (European Waters).

Free Port: Part of the Outer Harbour is being used as a Free Port, adjacent to which is the Industrial Free Zone with a maximum development area of 554,964 sq.m.

The Free Port and Zone is managed by the Free Port Manager who is responsible to the Board of Directors and function under the auspices of the Ministry of Trade and Industry.

Directorate: Tel: 036-66164, 036-64775. Telex: 57140 Mslb Tk.
SERVICES: Compass adjusting; radar repairs; scraping and painting ship's sides.
BANKS: Messrs., Midland Bank (Overseas Branch) Ltd., in the U.K. is the official correspondent of the following local Banks:

Name	*Address*	*Telex:*
Turkish Bank Ltd.	Famagusta	57138 Trba Tk 57103 Otaf Tk
Is Bank (A.S.)	Famagusta	57179 Isbm Tk
Credit Bank Ltd.	Famagusta	57246 Kklb Tk

STORING: See "Prelims".
1. Vessel can be stored by barge or truck.
2. No regulations concerning barge storing. Customs Stores Regulations applicable.
3. Trucks can proceed alongside at the berth from a close distance of 2 ft. from the edge of the quay walls.
4. Fork lift trucks can be used on the jetty to handle storing.
5. Customs storage charges in force.
6. Local Riggers can be employed to assist with storing.

SHORE LEAVE: All crew member allowed ashore after free pratique granted. Each crew member to carry Landing Card.
REGULATIONS: Authority is required from Harbour Master: for immobilising engine for cleaning or repairs whilst vessel alongside quay; for lowering lifeboats; for using ship's radio; for sailing (Port and Customs Clearances are required).

Ships berth by rotation according to time of arrival. However, passenger and cruising vessels as well as ferryboats can berth (maximum 2 berths) on priority.
DELAYS: Delays in berthing are very seldom. Slight congestion of 1 or 2 days during citrus export season.
AUTHORITY: Ministry of Communications & Works, Department of Ports, Famagusta, Northern Cyprus.

Postal Address: The Director of the Department of Ports, Famagusta (Gazi Magosa) via Mersin 10, Turkey. *Tel:* 036-62626, 036-62627, 036-62951. *Contact:* Ergun Demirciler, Director of Ports.

Harbour Master's Office: *Tel:* 036-65388, 036-64790.

Also see "General".

GEMIKONAGI (Xeros): 35.08 N. 32.50 E. (See Plan)

DOCUMENTS: See "Famagusta".
PILOTAGE: Not available, but obtainable from Famagusta Port if Master considers necessary. Guidance to the moorings given by the harbour launches.
ANCHORAGES: Anywhere 1 mile offshore between Vouni Palace and Pendayia Hospital, which is exposed to West and North winds.
RESTRICTIONS: None, but advance notice should be given by cable.
HEALTH: See "Famagusta".
RADIO/VHF: "Northern Cyprus Radio" R/T 2182, VHF Channel 16. A new VHF station to be installed mid-1986.
TUGS: Not available. One motor launch available for assisting in mooring operations.
BERTHING:
Xeros Pier: Lat. 35° 08′ 16″ N., Long. 32° 49′ 14″ E. Length 400 ft., depth of water on the far end of the jetty 11 ft. Jetty equipped with an electric crane of 5 tons lifting capacity.
Iron Jetty: Lat. 35° 08′ 18″ N., Long. 32° 50′ 10″ E. Jetty installed with conveyor and extends 433 m. into sea. Installation suitable for ore loading, depth of water alongside pierhead about 10 fathoms. Ships berth on the far end of the jetty with supporting lines run to the mooring buoys, also using their anchor and/or anchors according to the prevailing weather conditions.
STEVEDORES: Arranged by shippers.
FRESH WATER: Not available.
FUEL: Not available.
CUSTOMS ALLOWANCES: See "Famagusta".
AIRPORT: Ercan Airport 53 miles from port.
TIME: GMT plus 2 hours.
HOLIDAYS: See "Famagusta".
POLICE/AMBULANCE/FIRE: Police Headquarters Tel: 07717-322. Ambulance Tel: 07717-351. Fire Brigade Tel: 071-42200.
SHORE LEAVE: Crew members allowed ashore.
REGULATIONS: Ship's boat may be lowered and used with the permission of the Officer-in-Charge.
DELAYS: Very seldom.
GENERAL: Flag of Northern Cyprus to be hoisted from 0800 hrs. to sunset.
AUTHORITY: Officer-in-Charge, Port and Customs Department.
Tel: 07717-340, 07717-334.

KALECIK (Gastria Bay): 35.19 N. 33.59 E. (See Plan)

DOCUMENTS: See "Famagusta".
PILOTAGE: Not compulsory. If required, supplied from Famagusta.
ANCHORAGES: Anywhere within the limits of Gastria Bay. Occasional storms mainly from North, N.E. and N.W. directions. No hazards or sandbars exist. Vessels can approach from any direction as there is no approach channel.
NAVIGATION AIDS: Soon after the construction of the installations it was deemed necessary to establish a lighthouse in the vicinity of Cape Elia.

Characteristics:
Name: Cape Elia Lighthouse.
Place: 10 nautical miles N.E. of Famagusta.
Position: Lat. 35° 19.5′ N., Long. 34° 02.8′ E.
Characteristics of Light: Fl. 10 secs.
Range of Light: 15 nautical miles.
Period and Phase: Fl. 1 sec., ec. 9 secs.
Arc of Visibility: 360°.
Colour and Peculiarity of Lighthouse: Concrete tower with horizontal black and white stripes.
Height in metres of building from base to vane: 11 m.
Height in metres of centre of lantern above MHWS: 31 m.

RESTRICTIONS: None, but advance notice should be given by cable.
HEALTH: See "Famagusta".
RADIO/VHF: No radio or VHF facilities at this port. Ships calling at Kalecik should communicate with Northern Cyprus Radio or Famagusta Pilot Station.
TUGS: Not required. Private mooring boats available to assist in the mooring operations.
BERTHING: Concrete Pier with a conveyor belt and crane operated by Boghaz Industry & Mining Co. Ltd. and solely used for exportation of cement, etc. Lat. 35° 19′ N., Long. 34° 00.1′ E.

Length of the pier 42 m. At a distance of 44 m. from the far end of the pier there is a dolphin used for mooring purposes. Ships of 100 m. LOA may have a safe berth alongside. Depth of the water alongside the pier is 6.0 m. Installation suitable for unloading and/or loading of bulk and bagged cargoes with a maximum hourly rate of 250 tons.
STEVEDORES: Privately arranged by the Shippers.
MEDICAL: See "Famagusta".
TANKERS: Tanker terminal with underwater pipe-lines extending 410 m. into the sea. Operated by Cyprus Turkish Petroleum Products Co. Ltd. Lat. 35° 19.1′ N., Long. 33° 59.4′ E.

Ships moored between two buoys which have a distance of 160 m. from one to the other, also using anchors. Max. depth 9.0 m.
DENSITY: 1025.
FRESH WATER: Not available.
FUEL: Not available.
CUSTOMS ALLOWANCES: See "Famagusta".
CARGO GEAR: Ship's gear.
IDENTIFICATION CARDS: See "Famagusta."
REPAIRS: Minor deck and engine repairs may be carried out by local workshops.
DRY DOCKS: No dry docks.
AIRPORT: Ercan Airport 50 miles from port.
TIME: GMT plus 2 hours.
HOLIDAYS: See "Famagusta".
POLICE/AMBULANCE/FIRE: See "Famagusta".
TELEPHONES: Available at the nearby installations.
GENERAL: Flag of Northern Cyprus to be hoisted on mast from 0800 hrs. to sunset.
SERVICES: See "Famagusta".
SHORE LEAVE: All crew members allowed ashore after Free Pratique granted.
REGULATIONS: Authority is required from the Harbour Master Famagusta for using ship's radio. For sailing, Port and Customs Clearances are required.
DELAYS: No delays.
AUTHORITY: Harbour Master and Senior Pilot – Famagusta.
Tel: 036-65388, 036-64790.

KYRENIA: 35.20 N. 33.19 E. (See Plan)

DOCUMENTS: See "Famagusta".

ANCHORAGES: N.W. of the entrance light (Lat. 35° 20′ 18″ N., Long. 33° 19′ 24″ E.) 0.5 miles off and in an approx. depth of 12 – 13 fathoms. Exposed to N.W. and Easterly winds.

RESTRICTIONS: Breakwater Harbour.

Channel: The approach channel 5.5 m. deep and decreasing to 3.0 m. from the lighthouse towards the basin.

Depth within the basin: 3.2 m.

Depth alongside the quay walls: 3.0 m.

MAX. SIZE: Max. permissible draft 2.6 m. (8.5 ft.). Max. permissible LOA: 35 m.

HEALTH: See "Famagusta".

RADIO/VHF: R/T 2182 and VHF Channel 16 (office hours only).

TUGS: A small tug of 150 h.p. and a motor launch of 80 h.p. available.

BERTHING: See "Developments".

FRESH WATER: Available.

FUEL: By tanker lorries.

DRY DOCKS: A slipway in the Eastern corner of the basin suitable for slipping small pleasure craft with a max. length of 10.0 m. (All minor repairs may be carried out).

CUSTOMS ALLOWANCES: See "Famagusta".

AIRPORT: Ercan Airport, 25 miles from port.

TIME: GMT plus 2 hours.

HOLIDAYS: See "Famagusta".

POLICE/AMBULANCE/FIRE: Police Headquarters Tel: 081-52125, 081-52014, 081-52015. Ambulance Tel: 081-52266. Fire Brigade Tel: 081-52111.

TELEPHONES: No arrangements exist for placing telephones on board.

SERVICES: Compass adjusting, radar repairs, scraping and painting ship's sides.

SHORE LEAVE: All crew members allowed ashore after Free Pratique granted.

IDENTIFICATION CARDS: See "Famagusta".

REGULATIONS: Authority required from Harbour Master for cleaning or repairs of the vessel, for lowering lifeboats, for using ship's radio. For sailing, Port and Customs Outward Clearances are required.

GENERAL: Kyrenia Harbour is mainly used by yachts and small fishing boats. However the port may be used by small passenger ferry boats and hydrofoils during the Summer i.e. 16th April to 1st November. Very little cargo, exception fish and fruit, passes through this port. No facilities for cargo operations.

Flag of the Northern Cyprus to be hoisted on mast from 0800 hrs. to sunset.

Landing of dogs or other animals not allowed. Disposal of garbage and waste strictly prohibited both in port and territorial waters. Garbage and waste are collected by the municipality against a nominal fee, through Agents.

Relevant Admiralty publications: B.A. Charts 2632, 237, 2074, 2606. Mediterranean Pilot: Vol. V. List of Lights: Vol. E.

DEVELOPMENTS: Construction of new Kyrenia Port, East of the existing port with a quay of max. length of 300 m. (max. depth approx. 8.0 m.) providing berthing facilities for Ro-Ro and motor ferries and at least two landing stages for hydrofoils, has already been started and it is anticipated that the new harbour will be operational by April 1987.

AUTHORITY: Harbour Master, Kyrenia. *Tel:* 081-52100.

LARNACA: 34.55 N. 33.39 E. (See Plan)

PORT LIMITS: The port limits are: That part of the coastline and the territorial waters of Cyprus contained within a line drawn 089° to the high seas from Livadhia Church Belfry and a line drawn 089° from Mosque (Hala Sultan Tekke) on Admiralty Chart No. 851 of 8th August, 1941.

DOCUMENTS:

4 Crew Lists.
4 Passenger Lists.
4 Transit Passenger Lists for passenger ships only.
1 Arrival Declaration.
1 Crew Declaration for dutiable goods.
3 Stores List (cigarettes, spirits, etc.).
2 Manifests (Customs Forms).
1 Customs General Declaration.
1 Fire Arms Declaration.
1 Health Declaration.
1 Cargo Gear Declaration.

PILOTAGE: Ships are not allowed to enter the port or berth at the mooring buoys outside the breakwater port without Pilot, unless permission is granted by the Port Authority. Pilot boards vessel at roadstead. Master must give 24 hours notice of ETA to vessel's Agents to enable them inform the Port Manager in time. Pilot boats are off-white in colour with words "Larnaca Pilots" written on the sides in blue letters. Pilot may be contacted on VHF Channels 16/14 during office hours 0730 – 1330 hrs. and Channel 14 at any other time during port operations. Pilot's telegraphic address is "Port Manager, Larnaca Cyprus". Tel: 041-53563.

ANCHORAGES: Open roadstead.

Prohibited Anchorage:

Positions of Prohibited Anchorage:

1. Lat. 34° 54′ 39″ N., Long. 33° 38′ E.
2. Lat. 34° 54′ 16.8″ N., Long. 33° 41′ E.
3. Lat. 34° 52′ 48″ N., Long. 33° 38′ E.
4. Lat. 34° 52′ 48″ N., Long. 33° 41′ E.

Positions of Prohibited Anchorage obstruction of the Port Entrance:

1. Lat. 34° 55′ 21″ N., Long. 33° 37′ 49″ E.
2. Lat. 34° 55′ 21″ N., Long. 33° 40′ 18″ E.
3. Lat. 34° 55′ 55″ N., Long. 33° 39′ 03″ E.
4. Lat. 34° 55′ 55″ N., Long. 33° 40′ 37″ E.

RESTRICTIONS: See "Max. Size" and "Berthing". Rise of tide up to 1.5 ft.

MAX. SIZE: For berthing in the port, vessels must not exceed 600 ft. LOA. However, vessels of few feet in excess may receive berthing permission if vessel's manoeuvrability and prevailing weather conditions permit.

The port is being dredged to 10.0 m. Max. draft allowed 9.4 m. The height of the quay above sea level is 2.30 m.

Tankers discharge outside port at mooring buoys. Draft up to 32 ft. Max. LOA 600 ft.

HEALTH: Pratique is required at Cyprus first port of call only. Pratique is granted either before or after berthing as appropriate.

RADIO: Cables sent through "Cyprus Radio", call sign: 5BA.

RADAR/VHF: Port Manager Larnaca and Pilot service on VHF Channel 16.

TUGS: Port Authority tugs join vessels outside breakwater using ship's lines. 3 tugs available.

BERTHING: Vessels may berth inside port between 0600 hrs. and midnight, but may unberth and sail until midnight. Cargo vessels are allowed to berth during night-time provided berth space is available and vessel will immediately operate with at least 1 gang.

Quay length: (a) Main quay 666 m. and (b) Floating pontoon quay 200 m.

Ro-Ro ramp available in Northwestern basin of the port.

Warehouse Space: 18,000 sq.m.

Container and General Cargo paved Stacking Areas: 150,000 sq.m.

Equipment: 1×45 tonne heavy duty crane on rails with articulated jib, especially designed and equipped to handle containers. 1×35 ton level luffing crane. 8×5 – 16 ton mobile cranes. 4×15 – 40 ton fork-lift trucks for container handling. 17×2 – 8 ton fork lift trucks. 36×10 – 40 ton trailers and 5 tractors.

BRIDGES: None.

STEVEDORES: 24 hours notice of ETA to Agent is required to enable him arrange gangs.

MEDICAL: It is necessary for Agents to receive advance notice of at least 2 – 3 hours before vessel's arrival. Hospital facitlites constantly available. Inoculations or vaccinations are required according to prevailing circumstances.

TANKERS: Diameter of discharge lines up to 12 in. Max. draft 32 ft. Discharging takes place at mooring buoys outside port. Position of buoys Lat. 34° 54.75′ N., Long. 33° 39′ E. No slop discharge facilities.

Buoy berths outside port:

Oil Tankers Berths:

Cyprus Petroleum Refinery: Berth: LOA 214 m. Max. draft 11.6 m. Depth of water 13.7 m.

Petrolina: Stern discharge facilities only. LOA 214 m. Max. draft 11 m. Depth of water 13 m. Slop tank 2,000 tonnes.

Gas Tankers Berths:

Mobil: Pipe diameters: 3 in. for liquid, 2 in. for vapour. Depth of water 13 m. LOA 110 m.

Cinergas: Pipe diameters: 4 in. for liquid, 2 in. for vapour. LOA 110 m. Depth of water 9 m. Draft 8.5 m.

Central Gas: Pipe diameters: 3 in. for liquid, 2 in. for vapour. LOA 110 m. Depth of water 6.5 m. Draft 6 m.

DENSITY: 1025.

FRESH WATER: Facilities available on quay. Delivery by hoses at about 50 t.p.h.

FUEL: All types provided by special bunkering vessels at berths and roadstead and by tanker lorries at the quay.

FIRE PRECAUTIONS: No tankers are allowed in the port. Vessels and operators must comply with internationally applicable regulations concerning explosives and dangerous goods.

CONSULS: Italy, Sweden, Denmark, Portugal, Finland.

REPAIRS: Minor repairs and overhauls may be carried out.

DRY DOCKS: Not available.

SURVEYORS: Lloyd's, Bureau Veritas, Registro Italiano Navale, Germanischer Lloyd.

GANGWAY/DECK WATCHMEN: Not necessary but available.

HATCHES: Opened and closed by crew.

CUSTOMS ALLOWANCES: 50 grams tobacco or 40 cigarettes, and 0.25 litres spirits, 0.25 litres wines, per man per day.

For reasons of administrative convenience, issues of high duty goods for use by Crew on board will be made every 3 days, beginning with the first day of the ship's arrival in Cyprus waters. For each member of the Crew (other than the Master, the Chief Officer and the Chief Steward) each issue will consist of, 120 cigarettes or an equivalent quantity of other tobacco goods. 1 bottle of spirits, and 3 bottles of wine.

Each issue for the Master, the Chief Officer and the Chief Steward of ocean-going vessels will consist of: 200 cigarettes, 2 bottles of spirits and reasonable quantity of wine they may request.

Concessions to Crew landing from ship. On coming ashore, for a short period, 50 grams of tobacco, or 40 cigarettes per day or part thereof.

The above allowances are in force for all Cyprus ports.

CARGO GEAR: Load or discharge may be effected either by ship's or shore gear. 35 ton heavy lift crane available.

REPATRIATION: Facilities are available.

AIRPORT: Larnaca International Airport 3 miles from Larnaca Port. Daily flights to Europe and Middle East.

TIME: GMT plus 2 hours. Summertime – GMT plus 3 hours (last Sunday in March to last Sunday in September).

HOLIDAYS: Every Sunday; 1st January; 6th January; 25th March; 1st May; 28th October; 29th October; Good Friday; Saturday following Good Friday; Easter Monday; First Day of Kurban Bairam; Birthday of Prophet; First Day of Ramazan Bairam; Christmas Day; Boxing Day.

Work can be arranged on any holiday other than New Year's Day, Christmas Day, and Easter Sunday.

POLICE/AMBULANCE/FIRE: Dial 199.

EMERGENCY CO-ORDINATION CENTRE: Port Manager Tel: 53563. Res. Tel: 52171/55542/57043. Marine Police Tel: 52001.

TELEPHONES: Line available for placing telephone on board.

SERVICES: Compass adjusting; Radar; Radio telephones; Gyro compass repairs; hull scraping and engine repairs.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Shore leave passes are issued. Seaman's Book or Passport required whilst ashore.

REGULATIONS: Port Manager's permission is required for: immobilising engine, cleaning or repairs whilst vessel alongside quay, lowering lifeboats and use of ship's radio. Port and Customs clearance required before departure. Cyprus flag to be hoisted on mast from 0800 hrs. to sunset. Landing of dogs or other animals not allowed; also discharging of fruits, vegetables and eggs unless authorised by Produce Inspection Office. Disposal of garbage and waste strictly prohibited both in port and Cyprus waters.

DELAYS: According to prevailing circumstances but normally no delays.

GENERAL: Weather conditions permit entrance and working of ships all the year round.

Garbage collection and disposal service available to vessels.

AUTHORITY: Cyprus Ports Authority, 23 Crete Street, P.O. Box 2007, Nicosia, Cyprus. *Tel:* 50100. *Telex:* 2833 CYPA. *Cables:* Cyports. *Contact:* The General Manager.

Larnaca Port, Larnaca, Cyprus. *Tel:* 041-53563 or 53405. *Telex:* 2833 Cypa. *Cables:* Port Manager, Larnaca. *Contact:* Port Manager.

AGENT: Gulf Agency Co. (Cyprus) Ltd., P.O.Box 546, Larnaca, Cyprus. Tel: 21897/8. Telex: 3967 Gaship Cy. Cables: Gacship, Larnaca.

LATCHI: 35.03 N. 32.27 E.

DOCUMENTS: See "Limassol".

ANCHORAGE: 0.5 miles North of Mavroli Pier, depth 10 fathoms.

MAX. SIZE: No restrictions on size.

HEALTH: All necessary action to obtain pratique made by Agent in the event of any suspected disease on board, necessary action and precautions taken by Health Authorities.

RADIO: Cyprus Radio – call sign 5BA on 500 or radio telephone 2182.

TUGS: None available.

BERTHING: Mavroli Pier in Khrysokhou Bay, in position 35° 03′ 15″ N. 32° 27′ 10″ E. bearing 072° approximately 3.2 miles from Latchi. Necessary to have Cyprus flag, and to have gangway and not a rope ladder for Authorities and stevedores to board.

STEVEDORES: ETA advice required order arrange gangs at least 24 hours. Loading rate 2,000 tons per day. Loading from 6 barges, average capacity 45 tons each.

MEDICAL: Agent to receive 24 hours notice. Hospital facilities available at Ktima, 24 miles from Terminal at Limni. Each member of crew to possess valid vaccination certificate.

DENSITY: 1025.

FRESH WATER: None available.

FUEL: Not available.

GANGWAY/DECK WATCHMEN: Unnecessary.

OPENING/CLOSING HATCHES: Done by the crew.

CUSTOMS ALLOWANCES: See "Limassol".

IDENTIFICATION CARDS: Required.

CONSULS: No consuls at Terminal.

REPAIRS: No repairs can be carried out.

REPATRIATION: Can be arranged through Larnaca International Airport.

AIRPORT: Larnaca Airport 70 miles away, served by regular airlines.

TIME: GMT plus 2 hours. Permanent.

HOLIDAYS: See "Limassol".

POLICE/AMBULANCE/FIRE: Such services arranged through Agent.

TELEPHONES: No arrangements exist for placing on board.

SHORE LEAVE: Landing permits obtainable from local Police Authorities by lodging passports or seamen's books.

AUTHORITY: Cyprus Ports Authority, Nicosia. *Contact:* General Manager.

LIMASSOL: 34.40 N. 33.03 E.

DOCUMENTS:

1 Arrival Declaration.
4 Crew Lists.
4 Passenger Lists (the latter in case of passenger vessels).
4 Transit Passenger Lists.
1 Fire Arms Declaration.
1 Stores Declaration.
1 Declaration signed by each member of Crew stating dutiable goods in their possession.
1 Form of appointment of Agent.
1 Maritime Declaration of Health.

PILOTAGE: Ships are not allowed to enter the port or to berth at the mooring buoys outside the breakwater port without Pilot, unless permission is granted by the Port Authority. Pilot boards vessel at roadstead. Master must give 24 hour's notice of ETA to vessel's Agents to enable them inform the Port Manager in time. Pilot's Telegraphic Address is Port Manager, Limassol, Cyprus. Tel.: 051-65246.

ANCHORAGE: No specific boundary but ships usually anchor about 0.5 mile S.E. of lighter basin entrance where depth is 8 fathoms or S.S.E. of the entrance to the new breakwater port.

RESTRICTIONS: See "Max. Size" and "Berthing". Rise of tide up to 1.8 ft.

MAX. SIZE: *Old Port:* Vessels berthing must not exceed 265 ft. LOA and 14 ft. draft.

New Breakwater Port: Depth alongside 11 m. Max. draft 10.5 m. No LOA limit on ships entering and berthing. The height of quay above sea level is 2.30 m.

HEALTH: Pratique is required at first Cyprus port of call only. Pratique is granted either before or after berthing as appropriate.

RADIO: Cables sent through "Cyprus Radio", call sign: 5BA.

RADAR/VHF: No port radar service. Port Manager and Pilots equipped with VHF radiotelephone operating on Channels 16 and 10 during office hours only.

TUGS: Port Authority tugs join vessels outside breakwater using ships' lines. 2 tugs, 1,320 h.p. and 750 h.p.

BERTHING: Vessels may berth inside port between 0600 hrs. and sunset, but may unberth and sail until midnight. Cargo vessels are allowed to berth during night-time provided berth space is available and vessels will immediately operate with at least 1 gang.

Quay Length: 1,280 m. Ro-Ro vessels can discharge/load on the quays.

Warehousing Space: 40,700 sq.m.

Paved Yard for Containers (full and empty): 300,000 sq.m.

Paved Stacking Area for General Cargo: 111,000 sq.m.

Grain Silo: Modern, (recently built) with a 30,000 tonnes storage capacity, connected with the quay via an overhead conveyor belt.

Equipment: 60 ton floating crane. 35 ton level luffing crane. 36 ton mobile container crane on pneumatic tyres. Twenty 3-16 ton and four 45-60 ton mobile cranes. Four 7-15 ton fork lifts and seven 32 ton van carriers for container handling. Eighty-eight 3-60 ton fork lifts for general cargo handlng. One hundred and fourteen 3-25 ton trailers, fifteen tractors and other auxiliary equipment.

2×40 ton gantry cranes for container handling at the East Quay.

STEVEDORES: 24 hours notice of ETA to Agent is required to enable him arrange gangs.

MEDICAL: It is necessary for Agent to receive advance notice of at least 2–3 hours before vessel's arrival. Hospital facilities constantly available. Inoculations or vaccinations are required according to prevailing circumstances.

TANKERS: Not allowed to berth in the port. No slop discharge facilities.

FRESH WATER: Facilities available on quay.

FUEL: All types provided by special bunkering vessels at berths and roadstead and by tanker lorries at the quay.

FIRE PRECAUTIONS: No tankers are allowed in the port. Vessels and operations must comply with internationally applicable regulations concerning explosives and dangerous goods.

CONSULS: Belgium, Holland, Italy and France.

REPAIRS: A floating dock 66 m. long and 18 m. wide capable of lifting a 1,200 tons light ship is in operation.

SURVEYORS: Lloyds, Bureau Veritas, Registro Italiano Navale, Germanischer Lloyd.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: By crew or stevedores.

CUSTOMS ALLOWANCES: 50 grams tobacco or 40 cigarettes, and 0.25 litres spirits, 0.25 litres wines, per man per day.

For reasons of administrative convenience, issues of high duty goods for use by crew on board will be made every 3 days, beginning with the first day of the ship's arrival in Cyprus waters. For each member of the crew (other than the Master, the chief officer and the chief steward) each issue will consist of, 120 cigarettes or an equivalent quantity of other tobacco goods, 1 bottle of spirits and 3 bottles of wine. Each issue for the Master, the chief officer and the chief steward of ocean-going vessels will consist of: 200 cigarettes, 2 bottles of spirits and reasonable quantity of wine they may request. Concessions to crew landing from ship. On coming ashore, for a short period, 50 grams of tobacco, or 40 cigarettes per day or part thereof.

CARGO GEAR: Load or discharge may be effected either by ship or shore gear. 35 tons heavy lift crane, 36 ton mobile container crane on pneumatic tyres and 60 tons floating crane available.

REPATRIATION: Facilities available for effecting crew changes and arranging any necessary repatriations. Usually arranged with Agent.

AIRPORT: Larnaca International Airport served by regular lines, situated 43 miles from Limassol.

TIME: GMT plus 2 hours. Summertime GMT plus 3 hours in force from last Sunday in March to last Sunday in September.

HOLIDAYS: Every Sunday; 1st January; 6th January; 25th March; 1st May; 28th October; 29th October; Good Friday; Easter Monday; First Day of Kurban Bairam; Birthday of Prophet; First Day of Ramazan Bairam; Christmas Day; Boxing Day. Work can be arranged on any holiday other than New Year's Day, Christmas Day, and Easter Sunday.

POLICE/AMBULANCE/FIRE: Tel: Police 75611; Ambulance 63111, Fire Brigade 52191 or 999.

TELEPHONES: Available on request, for placing on board.

SERVICES: Compass adjusting, servicing of radar, R/T, echo sounders.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Shore leave passes are issued. Seaman's Book or Passport required whilst ashore.

SHIP SUPPLY SERVICES:

1. Brasal Off-Shore Services Limited, P.O.Box 1518, Limassol.
2. Vasos Aivaliotis Limited, 4 Ermou Street, P.O.Box 110, Limassol.
3. Messrs. Thesseas Savva, 118 Franklin Roosevelt Avenue, P.O.Box 114, Limassol.
4. Mercury Divers Company Limited, P.O.Box 114, Limassol.

REGULATIONS: Port Manager's permission is required for: immobilising engine, cleaning or repairs whilst vessel alongside quay, lowering lifeboats and use of ship's radio. Port and Customs clearance required before departure. Cyprus flag to be hoisted on mast from 0800 hrs. to sunset. Landing of dogs or other animals not allowed; also discharging of fruits, vegetables and eggs unless authorised by Produce Inspection Office. Disposal of garbage and waste strictly prohibited both in port and Cyprus waters.

DELAYS: According to prevailing circumstances but normally no delays.
GENERAL: Weather conditions permit entrance and working of ships all the year round.

AGENT: Gulf Agency Co. (Cyprus) Ltd., P.O.Box 1141, Limassol, Cyprus. Tel: 68222/8. Telex: 2817 and 2744 ("Gacship Cy"). Cables: "Gacship", Limassol.

MONI: 34.42 N. 33.11 E. **(See Plan)**

DOCUMENTS:
3 Crew Lists.
4 Passenger Lists.
1 Arrival Declaration.
1 Crew Declaration.
1 Store List (for cigarettes, spirits, etc).
2 Manifests.(Custom forms).

PILOTAGE: Compulsory for berthing. The tanker berth is situated in open roadstead. Pilot available through Harbour Master at Limassol. (8.5 miles).
RESTRICTIONS: Docking in daylight only. Sailing possible at any time.
MAX. SIZE: Tankers up to 600 ft. length with max. draft 40 ft.
HEALTH: Pratique granted by Health Authorities after boarding on arrival. No pratique necessary when vessel arrives from another port in Cyprus.
RADIO: Communication by Walkie-talkie
TUGS: None available or required.
BERTHING: Electricity Authority of Cyprus. Three conventional buoy mooring for tanker discharging fuel oil to Moni Power Station. Depth of water 18.20 m. – 30.48 m.

Cyprus Cement Factory. Depth of water 9.75 m.
MEDICAL: Necessary for agent to receive advance notice of medical attention required. Hospital facilities available.
TANKERS: Flange at end of flexible line is ASA 300 – 15 in. OD. (12×1 in. holes. 13 in. P.C.D.). Hose connection made on port side. No slop facilities available. Terminal crew connect and disconnect hoses. Ship's gangway required. Distance to shore tanks 3,950 ft. Max. pressure 135 p.s.i.

Loading signals – 1 blast, stop pumping. 2 blasts start pumping.
DENSITY: 1025
FRESH WATER: Not available.
FUEL: Not available.
REPAIRS: Light machine shop.
CUSTOMS ALLOWANCES: See "Larnaca".
IDENTIFICATION CARDS: When on shore leave, seamen's books required.
TIME: GMT plus 2 hours. No changes during the year.
SHIP SUPPLY SERVICES:

1. Brasal Off-Shore Services Limited, P.O.Box 1518, Limassol.
2. Vasos Aivaliotis Limited, 4 Ermou Street, P.O.Box 110, Limassol.
3. Messrs. Thesseas Savva, 118 Franklin Roosvelt Avenue, P.O.Box 114, Limassol.
4. Mercury Divers Company Limited, P.O.Box 114, Limassol.

AUTHORITY: Electricity Authority of Cyprus (Headquarters), P.O.Box 4506, Nicosia, Cyprus. *Tel:* (02) 462001 (Nicosia). *Telex:* 2432 Grid Cy. *Cables:* Grid Nicosia. *Contact:* The General Manager.

Moni Power Station, Electricity Authority of Cyprus, P.O.Box 471, Limassol, Cyprus. *Contact:* Power Station Manager.

VASSILIKO BAY: 34.43 N. 33.19 E.

LOCATION: 13.5 miles due East of Limassol and 1.5 miles West of Zyghi (Lat. 34° 42′ 46″ N., Long. 33° 18′ 37″ E.)
PILOTAGE: Pilots available for berthing and shifting operations. Can be contacted on VHF Channel 16, working frequency 12. Owners or Master of vessel must give by cable/radio ("Helco Nicosia" or "Vascem Nicosia" 48) notice of vessel's ETA 24 hours in advance. Message of ETA must also include:

(a) Name/call sign of vessel.
(b) Nationality.
(c) Length, draft, gross and n.r.t.

Tugs available from Larnaca port. 12 hours' notice in advance is required.
MAX. SIZE: Vessel's LOA, 150 m.; Breadth, no restriction; Draft 8.40 m.
HEALTH: For Pratique, vessel must cable name and nationality, last port of call, number of crew and passengers, and condition of health on board. For vessels calling first at another port in Cyprus, Pratique is automatic.
RADIO: "Cyprus Radio".
BERTHING: Length of quay, 540 m. Depth at LW, 9 m.
LOAD/DISCHARGE: Can be effected by shore equipment and/or ship's own gear.

Bulk cargoes (i.e. Pyrites, Cement, Copper, Chrome, Ore, Gypsum Rock, Phosphate Rocks, Coal, etc.) and liquid chemical cargoes (i.e. Liquid Ammonia, Sulphuric Acid).
CRANES: 3 mobile cranes of 30 tonnes SWL capacity each are constantly available. Services of an 80 tonne mobile crane can be also secured on request.
SPECIALISED CARGO-HANDLING FACILITIES: Facilities for Roll-on/Roll-off traffic and for handling liquid chemicals are available.
TANKERS: One pipe-line to buoy berth, depth of water, 12.19 m. Position of buoys, Lat. 34° 42′ 42″ N., Long. 33° 18′ 42″ E.
FRESH WATER: Available.
FUEL: Full bunkering facilities available, provided by tank tankers or a small tanker.
OPENING/CLOSING HATCHES: Ship's crew.
REPATRIATION: Crew changes and repatriation facilities available.
AIRPORT: Distance 35 miles; served by regular operators.
TIME: GMT plus 2 hours.
HOLIDAYS: 1st January, 6th January, 25th February, 25th March, 1st April, 12th April, 13th April, 15th April, 1st May, 3rd June, 15th August, 1st October, 28th October, 24th December, 25th December, 26th December.

Port workers will abstain from work on 1st January, 13th April, 14th April, 15th April, 1st May, 15th August and 25th December, but they may normally work on overtime basis during the rest of the holidays.
AUTHORITY: Vassiliko Cement Works Ltd., Headquarters, P.O.Box 2281, Nicosia, Cyprus. *Tel:* 42005-10 (Nicosia). *Telex:* 2039 Vascem Cy. *Cable:* Vascem, Nicosia.

NOTES

Please also advise Shipping Guides Ltd.

Denmark

GENERAL (See Plan)

CUSTOMS ALLOWANCES: For use on board during the stay in Denmark a total of 40 cigarettes or 40 grammes of tobacco, 0.25 litres of alcohlic liquors and 0.25 litres of wine can be released per member of the crew a day.

Tobacco may be released for 5 days' consumption at a time, i.e. 200 cigarettes, alcoholic liquors and wine may be released for 3 or 4 days' consumption, i.e. 1 bottle containing 0.25 or 1.0 litres.

ROUTEING: A routeing system has been established, so ships with a draft up to 17 m. (55.77 ft.) can pass the Great Belt. Ships bound for the Baltic are restricted to a draft of 15 m. (49.21 ft.) owing to shallow waters N.E. of Gedser.

For the passage through Danish waters by ships with a d.w.t. of more than 40,000 tons or with a draft of 13 m. or more, we would like to draw your attention to the "IMO–recommendation of Nov. '75 on navigation through the entrances to the Baltic Sea", and to the radio reporting system established by the Danish Ministry of Commerce.

ROUTE "T" (17 metres Transitroute) – THE SOUND – RADIO REPORTING SERVICE (Shippos): With the object of ensuring the safety of navigation of large ships passing through Danish waters and also of reducing the risk of oil pollution resulting from the grounding and collision of tankers, the Danish Government has established a transitroute between Skagen and the area N.E. of Gedser with a minimum depth of water of 17 m. The route is named "Route T".

The route is marked by lightbuoys and lights, the Decca coverage is good and Danish Pilot assistance is available. Portable Decca equipment can be hired for use during the passage through Danish waters and can be taken on board at the pilot stations Skagen or Allinge (Bornholm). Under ice conditions Danish icebreakers, as far as possible, render a free assistance to shipping.

In spite of the good buoyage, navigation through Danish waters presents, however, in certain areas difficulties to large ships on account of narrow waters, sharp bends, strong currents and shallow depths. Furthermore there is an intensive East and Westbound ferry traffic in Store Baelt, particularly in the area immediately South of Sprogo.

Therefore a radio reporting service (SHIPPOS) has been established the rules of which are given in the following.

The Inter-Governmental Maritime Organisation (IMO) has adopted a recommendation on navigation through the entrances to the Baltic Sea according to which ships with a deadweight-tonnage of over 40,000 tons or with a draft of 13 m. or more shall fulfil certain conditions about equipment, navigation, etc.

IMO has furthermore adopted a recommendation according to which certain tankers shall use Pilot when navigating in the Sound.

The Baltic Sea States have established a radio position reporting system which provisionally with a trial period of two years is in force from the 1st July, 1981. This system forms an integral part of the Danish SHIPPOS-system, which means that ships in Danish waters shall only send reports according to the SHIPPOS-system.

Ships to which the Baltic system apply and which

1. are navigating in the Baltic Sea Area East of the SHIPPOS-reporting line of "MOEN",
2. pass the line Stevns Klint – Falsterbo, or
3. arrive at or depart from harbours on the Swedish West coast, in the Federal Republic of Germany (Baltic coast) and in the German Democratic Republic

shall send reports according to the rules of the Baltic radio position reporting system, which are published in the Danish Notices to Mariners.

Rules concerning radio reporting service in Danish waters – SHIPPOS:

1. With the objects of ensuring the safety of navigation and of reducing the risk of pollution of Danish coasts and waters as may result from grounding or collision of oil tankers, gas carriers and chemical tankers a reporting service has been established for the purposes mentioned below:

   a. To inform shipping about large ships' movements, so that smaller ships can take into account the limited manoeuvrability of those and in order to avoid the risk of large ships meeting one another in areas difficult to pass.
   b. To inform ships about navigational hazards en route and deviations from normal conditions of current, water level, and wave height.
   c. To notify the ferry traffic South of Sprogo about the passage of large ships.
   d. To facilitate the authorities early and effective pollution combatting action in case of an accident.
   e. To notify the authorities immediately about any deficiency which could affect safe navigation and the marine and coastal environment, and about ships' observation of considerable pollution.

2. The reporting service applies to:

   a. all ships of 20,000 tons gross tonnage and above,
   b. all ships with a draft of 13 m. and more,
   c. all loaded chemical tankers of 1,600 tons gross tonnage and above, and
   d. all loaded gas carriers of 1,600 tons gross tonnage and above.

3. Messages to the reporting service shall be sent over a Danish coast radio station as telegrams addressed to SHIPPOS Aarhus.

The transmission of reports from ships is free of charge.

Information about position of large ships, mentioned under 2, a. or b., participating in the radio reporting service will be broadcast over VHF as "SHIPPOS INFORMATION" by the coast radio stations Lyngby Radio and Skagen Radio.

The broadcast will include information about actual water levels and serial numbers of Navigational Warnings in force for Route T.

The broadcast will be preceded by an announcement over Channel 16, informing about the Channel used for the broadcast.

The information will be broadcast every third hour according to the table below, preferably by using the mentioned Channels. Other Channels might be used, which – if occasion should arise – will appear from the preceding announcement on Channel 16.

Position of VHF-station	*VHF-Channel*	*Time GMT*	*Serviced by*
Skagen	4	0220, 0520, 0820, etc.	Skagen Radio
Laeso	2		
Arnholt	7	0205, 0505, 0805, etc.	Lyngby Radio
Fornaes	5		
Rosnaes	2		
Langeland	5	0220, 0520, 0820, etc.	Lyngby Radio
Hyldager	25		
Mon	2		

4. Ships which are **inward bound** en route to a Danish port or to the Baltic Sea shall when passing the latitude through Skagen Rev (57° 45′ N.) send a *Sailing Plan* (see "Drafting of Messages") to "SHIPPOS Aarhus".

During their voyage ships shall send *Position Reports* (see "Drafting of Messages") when passing the following latitudes (reporting lines) (see "Plan"):

   a. 56° 45′ N.
   b. 56° 00′ N.
   c. 55° 40′ N.
   d. 54° 40′ N. (West of Gedser)
   e. When passing Sundet N.
   f. When passing the position of Mon S.E. Lightvessel.

Ships **outward bound** (from the Baltic Sea) shall when passing the position of Mon S.E. Lightvessel send a *Sailing Plan* and during their voyage send *Position Reports* when passing the reporting lines mentioned above under a.–e.

5. Ships which en route through Danish waters do not pass the latitude through Skagens Rev or the position of Mon S.E. Lightvessel shall in sufficient time before passing first reporting line during the voyage send a *Sailing Plan* to "SHIPPOS Aarhus".

6. Upon **arrival** at a Danish port and when passing the latitude of Skagens Rev outward bound ships shall send a *Final Report* (see "Drafting of Messages") to "SHIPPOS Aarhus".

7. About two hours before **departure** from a Danish port ships shall send a *Sailing Plan* to "SHIPPOS Aarhus".

8. If destination is changed, or if after transmission of a report **changes** occur which result in a time difference of more than 30 minutes from the estimated time of passing the next reporting line, or – for ships en route to a Danish port – the estimated time of arrival, the ship shall as soon as possible send a *Change Report* (see "Drafting of Messages") to "SHIPPOS Aarhus".

9. If during the voyage through Danish waters deficiencies occur, which might reduce the normal and safe manoeuvring capabilities of the ship, or a situation arises, which can endanger the marine environment and the adjacent areas, ships shall as soon as possible send an *Incident Report* (see "Drafting of Messages") to "SHIPPOS Aarhus". An Incident Report shall also be sent when observing a considerable pollution by oil or another substance, which is considered to be harmful to the marine and coastal environment.

10. Due to the intense East- and Westbound ferry traffic in Store-Baelt South of Sprogo the following special rules apply for ships of 20,000 tons gross tonnage and above and for ships with a draft of 13 m. and more when navigating in this area:

About one hour before passing the ferry route the ferries shall if possible be informed thereof on VHF. The call shall be made on Channel 16 and the information should be sent on Channel 10 or another available Channel (see "Drafting of Messages").

Ships which cannot operate VHF are requested to inform "SHIPPOS Aarhus" two hours before passing the ferry route about the estimated time of the passing.

Upon receipt of such information the ferries will endeavour to navigate so that risk of collision, as far as possible, does not arise. If, nevertheless, risk of collision does arise, the International Regulations for Preventing Collisions at Sea must always be applied.

This special rule can also apply for ships with a draft of 10 m. and more regardless of tonnage.

Drafting of messages:

1. Messages transmitted in accordance with the Rules concerning radio reporting service in Danish waters shall be sent over a Danish coast radio station as telegrams addressed to SHIPPOS Aarhus.

To ensure brevity of messages and to reduce the possibilities of mistakes the following designations shall be used for reporting lines (see "Plan"):

Latitude 57° 45′ N.: SKAGEN
Latitude 56° 45′ N.: ANHOLT W. or ANHOLT E.
Latitude 56° 00′ N.: HATTER
Latitude 55° 40′ N.: ASNAES
Latitude 54° 40′ N.: KELDSNOR or ALS
The line Nakkehoved – Kullen: SUNDET N.
Position of Mon SE. Lightvessel: MOEN

Positions, other than the above mentioned, shall be given in latitude and longitude or by stating name of port.

2. All messages shall begin with the word BAREP ("BALTIC REPORT") as the first word in the text.

The messages shall be drafted according to the following format:

Information	*Designator*	*Text*
Code-word		BAREP
Type of Report	A	(a 2-letter group:) "SP" (Sailing Plan) "PR" (Position Report) "FR" (Final Report) "CR" (Change Report) "IR" (Incident Report)
Ship	B	(Name/Call sign)
Date/Time (GMT)	C	(a 6-digit group giving day of month – first two digits – hours and minutes – next four digits – suffixed by "ZULU") (e.g. 041330Z)
Position	D	(reporting line) (name of departure port) or (name of arrival port)
	X	(a 4-digit group giving latitude in degrees and minutes suffixed by "N" and a 4-digit group giving longitude in degrees and minutes suffixed by "X") (e.g. 5610N 1230E)
True course	F	(a 3-digit group)
Speed in knots	G	(a 2-digit group)
Route information	H	(intended route) (e.g. "Route T", "via Sundet" or "West of Samso")
Destination and ETA (GMT)	I	(destination port and a 6-digit group as under "C" suffixed by "ZULU")
Estimated time (GMT) of passing next reporting line and its designation	K	(a 6-digit group as under "C" suffixed by "ZULU" and reporting line)
Miscellaneous:	L	
Cargo		"CARGO" (general type and amount of cargo)
Draft		"DRAFT" (draft in metres)
Pilot		"PILOT" (if Pilot is on board)
IMO-certificate (only when transporting chemicals or liquefied gas in bulk)		"IMO" (if ship is in possession of a certificate of acceptance according to the IMO-code for the construction and equipment of ships carrying dangerous chemicals in bulk and liquefied gases in bulk)
Deficiencies		"DEFICIENCIES" (1. deficiencies which can reduce normal manoeuvring capabilities 2. accidents which might cause pollution 3. spill of oil or other harmful substances 4. observation of considerable pollution)

3. The different types of reports shall contain information according to the following table:

Type of report	A	B	C	D/E	F	G	H	I	K	L: Cargo	L: Draft	L: Pilot	L: IMO	L: Deficiencies
SP	XX	XX	XX	XX	—	XX	XX	XX	XX	XX	XX	XX	XX	X
PR	XX	XX	XX	XX	X	—	X	—	XX	—	—	X	—	X
FR	XX	XX	XX	XX	—	—	—	—	—	—	—	X	—	X
CR	XX	XX	XX	XX	X	X	X	X	X	—	—	—	—	X
IR	XX	XX	XX	XX	—	—	—	—	—	XX	—	XX	XX	XX

XX = always to be included
X = to be included if appropriate

4. *Sailing Plan* ("SP") shall be sent

(a) when passing latitude 57° 45′ N. ("SKAGEN") inward bound,

(b) when passing the position of Mon SE. Lightvessel ("MOEN") outward bound (leaving the Baltic Sea),

(c) in sufficient time before passing the first reporting line during the voyage if passage has not taken place as mentioned under (a) or (b), and (d) about 2 hours before departure from a Danish port.

Specimen Message 8:

FERRYLEADER THIS IS SPICA = EXPECT TO PASS SPROGO AT 0830 =

Pilotage within Route T: Pilots performing pilotage duties through Route T (the 17 m. Transit Route) and to Bornholm, can be obtained at Skagens Rev.

For vessels entering Danish waters from the North Sea/Skagerrak Pilots can be ordered from "SKAWPILOT", Skagen, via a coast radio station. The following details are to be given:

1. Name and call sign.
2. ETA position from where pilotage is required.
3. Gross tonnage and draft.
4. Sea speed.
5. Pilotage requirements.

Pilots should be ordered 12 hours prior to ETA Skagens Rev and the message should be confirmed or corrected 3 hours prior to ETA Skagens Rev.

The pilot station keeps a continuous watch on VHF, Channel 16.

Pilots performing pilotage duties through Route T to Skagen can be obtained at Allinge on Bornholm.

For vessels entering Danish waters from the Baltic Sea the Pilots can be ordered from Dragor Pilot Station via a coast radio station. The details to be given are mentioned under 1 – 5 above.

Pilots should be ordered 18 hours prior to ETA Bornholm and the message should be confirmed or corrected 3 hours prior to ETA Bornholm.

Pilots will board vessels either East or West of Hammerodde Lighthouse depending on the weather.

The Pilots have been instructed to act in accordance with the rules of navigation as given in the IMO recommendation on navigation through the entrances to the Baltic Sea and to report on ships not fulfilling the conditions about equipment, signals etc., which are given in the recommendation.

The Pilots have furthermore been instructed, that it may be necessary for ships with a draft of 13 m. or more to anchor owing to the weather and sea conditions and to the sea level, and that ships with a draft of more than 15 m. under normal conditions will not be able to pass through the entrances to the Baltic Sea.

Anchorages: If anchoring is considered necessary the following anchorages should be preferred:

(a) Off Skagen.
(b) Off Sjaellands Rev.
(c) N.W. of Rosnaes.
(d) Off Romso.
(e) Off Keldsnor.

Furthermore anchoring is possible in most places along the route depending on the draft of the ship.

It must be emphasized, that for ships with a draft of 13 m. or more anchoring may be necessary owing to the weather and sea conditions in relation to the size and draft of the ship and to the sea level.

Electronic position-fixing equipment: IMO recommends that ships with a draft of 13 m. (42 ft. 7 in.) or more when navigating through the entrances to the Baltic Sea should have on board suitable electronic position-fixing equipment.

With proper notice (a minimum of 24 hours) ships not fitted with such equipment can rent a portable Decca receiver on application to Racal-Decca Navigator Aktieselskab, Kalvebod Brygge 20, 1560 Kobenhavn V., Danmark. Tel: (01) 12 83 10. Telegram: DECCAMAR.

The Decca receiver can be installed when passing Skagen or Bornholm.

The installation time is about 1 hour and the receiver can be installed by day and night.

The pilot station will assist with the arrangement and will also on request give information about fees for hire.

The Decca receiver can be delivered fitted for one of the following voltages:

DC: 24 v./32 v., 110 v. and 220 v.; AC: 85-260 v., 40-440 Hz.

It is quite important when requesting rent of Decca receiver to state the voltage available on board.

The receiver can remain on board until the ship again leaves Danish waters at Skagen, or it can be dismounted in a port in Denmark, Sweden, Finland or the Federal Republic of Germany.

Payment for rent and installation is to be settled through Racal-Decca Navigator Aktieselskab.

Recommendation on navigation through the entrances to the Baltic Sea:

The assembly,

Being aware of the close relationship between safety of navigation and the prevention of pollution from ships,

Being also aware of the urgent need to protect the vulnerable Baltic Sea area which has been designated a special area against pollution,

Noting that the navigation of large ships through the entrances to the Baltic Sea area constitutes, due to risk of grounding or collision, a potential danger of pollution of the entrances and due to the strong sea-current also pollution of the entire Baltic area,

Noting also that this passage at several places will be difficult to navigate,

Taking note of

Resolution 5: Intentional Pollution of the Sea and Accidental Spillages adopted by the International Conference on Marine Pollution, London 1973,

Resolution A. 159 (ES. IV): Recommendation on Pilotage and

Resolution A. 156 (ES. IV): Recommendation on the Carriage of Electronic Position-Fixing Equipment.

Recommends the following,

(a) That ships over 40,000 d.w.t. when passing through the entrances to the Baltic Sea, in view of the fact that 17 m. is the max. obtainable depth without dredging in the area North-East of Gedser and that the charted depths, even under normal conditions, may be decreased by as much as 2 m. due to unknown and moving obstructions, should:

(i) not pass the area unless they have a draft with which it is safe to navigate through it taking into account the possibility of depths being as much as 2 m. less than charted as mentioned above, additionally taking into account the possible changes in the indicated depth of water due to meteorological or other effects,

(ii) participate in the radio position reporting system operated by the Government of Denmark,

(iii) in certain areas in Store-Baelt (Hatterrev, Vengeancegrund and in the narrow route East of Langeland) when constrained by their draft show the signal prescribed in Rule 28 in the International Regulations for Preventing Collisions at Sea, 1972,

(b) That ships with a draft of 13 m. or more should furthermore:

(i) be equipped with a VHF radiotelephone installation, fitted with appropriate frequencies,

(ii) have on board suitable electronic fixing equipment to make use of hyperbolic systems which will provide sufficient fixing accuracy for navigating in this area.

(iii) use for the passage the pilotage services locally established by the coastal States.

(iv) be aware that anchoring may be necessary owing to the weather and sea conditions in relation to the size and draft of the ship and to the sea level and in this respect take special account of the information available from the Pilot and from radio navigation information services in the area.

(c) That a routeing system be established so that ships referred to and complying with the recommendations contained in paragraphs (a) and (b) above can safely navigate into the Baltic.

Recommendation on the use of pilotage services in the Sound:

The assembly,

Recalling Article 16(i) of the Convention on the Inter-Governmental Maritime Organisation concerning the functions of the Assembly,

Being aware of the close relationship between the safety of navigation and the prevention of pollution from ships,

Being also aware of the urgent need to protect the vulnerable Baltic Sea area, which has been designated a special area, against pollution,

Noting that the navigation of large oil tankers and chemical tankers and gas carriers through the Sound as an entrance to the Baltic Sea area constitutes, due to the risk of grounding or collision, a potential danger of pollution of the Sound, and also, due to the strong sea-current, a potential danger for pollution of the entire Baltic Sea area.

Noting also that at several places this passage is difficult to navigate,

Bearing in mind:

(a) Resolution 5 on International Pollution of the Sea and Accidental Spillages, adopted by the International Conference on Marine Pollution, 1973,

(b) Resolution A. 159 (ES. IV) on pilotage,

(c) MSC/Circ. 158 of 5 April 1974 on control of movements of chemical tankers and gas carriers,

(d) Resolution A. 339 (IX) on Navigation through the Entrances to the Baltic Sea,

Recommends that oil tankers in loaded condition with a draft of 7 m. or more, and all loaded chemical tankers and gas carriers, irrespective of size, when navigating in the part of the Sound which is limited by a line connecting Svinbadan Lighthouse and Hornbaek Harbour and a line connecting Skanor Harbour and Aflandshage (the Southernmost point of the Amager Island), should use the pilotage services established by the Governments of Denmark and Sweden.

PILOTAGE: Notice to all Masters Entering the Baltic Sea concerning Deep-sea Pilotage:

The IMO recommends that ships which wish to avail themselves of Deep-sea Pilots in the area of the Baltic should only take Deep-sea Pilots licensed by a Pilotage Authority of a Baltic coastal state, i.e. Denmark, Finland, the German Democratic Republic, the Federal Republic of Germany, the Polish People's Republic, Sweden and the Union of Soviet Socialist Republics (IMO-Resolution A.480 (XII)).

Such licensed Deep-sea Pilots are in possession of a red identity card.

The Pilotage Authorities of the Baltic coastal states draw special attention to the following rule which came into force on 1st January, 1983:

Deep-sea pilotage in the Baltic Sea Area shall be performed by Deep-sea Pilots from the respective ports of departure of the Baltic coastal states only, including the Kiel-Holtenau Locks, the Sound and the Belts. A Deep-sea Pilot shall disembark from a ship at the first port of call and shall return home as soon as possible.

If the ship wants further advice by a Deep-sea pilot it is the responsibility of the local Pilotage Authority of that port to supply such a Deep-sea Pilot.

AABENRAA: 55.02 N. 09.26 E. (See Plan)

LOCATION: Aabenraa is situated on the East Coast of Jylland (Jutland) in the Aabenraa Fjord.

DOCUMENTS: Crew list, passenger list, tobacco list, stores list, loadline certificate (all vessels above 150 g.r.t.), safety equipment (all cargo vessels of 500 g.r.t. and over), derat, tonnage and nationality, clearance from last port of call, cargo documents.

PILOTAGE: Telegraphic address: "Pilot – Aabenraa". Short notice about 2–4 hours – VHF Channel 16. Small red motor-boat flying international pilot flag. Normally located middle of Aabenraa Fjord.

Larger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

ANCHORAGES: Aabenraa Fjord or Road. Depths: about 75 ft. – 80 ft.

RESTRICTIONS: See "General" before first port.

MAX. SIZE: Depth of water in the Channel, at the Sonderjyllandskajen and at the Oil Jetty 11.0 m. Max. length at the Oil Jetty 200 m. No restriction on beam. Max. length at Sonderjyllandskajen 250 m. No breadth restriction.

Depth of water in dry cargo basins from 4.0 m. to 8.5 m. Max. length 200 m. No breadth restrictions. No tide – occasionally low water of 3 ft. – 5 ft. in heavy gales from West. Entry day or night.

HEALTH: In event of disease or fever on board, vessel's Agent to be informed before arrival.

RADIO: Blavand Radio or Lyngby Radio.

VHF: The port is equipped with Channels 12, 13 and 16.

TUGS: There are no tugs stationed in the port, however, tugs of 1,400 h.p. – 3,600 h.p. available at 24 hrs. notice.

BERTHING: There are 3 basins, a dry cargo pier and a tanker berth.

Sydhavn: 340 m. quay, depth 4.0 m.

Gammelhavn: 680 m. quay, depth 7.5 m.

Nyhavn: 600 m. quay, depth: First 160 m., 8.5 m. Next 140 m., 7.5 m. Remaining 300 m., 6.5 m. – 6.75 m.

Sonderjyllandskajen: 250 m. quay, depth 11 m.

Oil Jetty: "T"-head with breasting dolphins, depth 11 m.

For the port the mean water-level is 0.0. Extreme high water level is plus 1.5 m. and extreme low water is minus 1.4 m. due to strong North/Easterly gales and strong South/Westerly gales. There are no currents except in connection with the tide. The port can be entered day and night, and is generally open for navigation throughout the year and in case of ice-difficulties during Winter, state-owned icebreakers will keep the port open for navigation.

DENSITY: Average water density in port area 1015.

CRANES: 1 electrical coal/coke/grain/gravel crane – 5.5 tons.

1 mobile crane – lifting capacity 30 tons.
3 mobile cranes – lifting capacity 23 tons.
1 mobile crane – lifting capacity 11 tons.
1 auto crane – lifting capacity 30 tons
1 front loader
1 fork lift – 4 tons capacity

Tractors and similar modern machinery also available.

STEVEDORES: Stevedores arranged by Agent.

MEDICAL: 12 hours notice required to arrange for doctor to come on board. Hospital in Aabenraa.

TANKERS: Load/discharge connection 6 in. or 8 in. Also see "Berthing". Facilities for dirty ballast available.

FRESH WATER: Day and night from shore line, 25 – 30 t.p.h.

FUEL: All grades available by barge or truck. Minimum 24 hours notice.

GANGWAY/DECK WATCHMAN: Can be arranged.

OPENING/CLOSING HATCHES: By crew.

CUSTOMS ALLOWANCES: See "General" before first port.

IDENTIFICATION CARDS: Not needed.

CONSULS: German (F.R.); Finnish; Norwegian; Swedish; British.

REPAIRS: All types of deck and engine repair are possible.

DRY DOCK: Shipyard with floating dock of 600 tons lifting capacity.

SURVEYORS: Lloyd's and N.V. available.

REPATRIATION: Facilities exist for effecting crew changes.

AIRPORT: Skrydstrup. Distance from airport is 25 km. Airport is served by regular airlines.

TIME: Local time is GMT plus 1 hour.

POLICE/AMBULANCE/FIRE: Dial "000".

TELEPHONES: Available for placing on board at the Sonderjyllandskajen.

SHORE LEAVE: Crew members allowed ashore.

DELAYS: Normally no delay except during severe Winters due to ice between mid December and end March.

AUTHORITY: Aabenraa Havnevaesen, Havnekontoret, 6200 Aabenraa. *Tel:* (National) 04-622514, (International) 454-622514.

AALBORG: 57.03 N. 09.55 E. (See Plan)

DOCUMENTS:

Ship's Register.
Load-line Certificate. (All vessels over 150 g.r.t.)
Road Safety Certificate.
Safety Equipment Certificate.
Derat Certificate or Exemption.
1 Crew List.
Stores List.
Crew Personal Effects List.
Cargo Manifest or Bills of Lading.

PILOTAGE: Compulsory at Hals Bar for ships drawing more than 5 m. Pilot boards at Hals Bar Light. Pilot boat equipped with VHF Channel 16. The Western entrance at Logstor is only navigable in daylight for vessels under 4 m. draft.

Larger vessels usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

Also see "Bridges".

ANCHORAGE: Vessels may anchor in Limfjord or Aalborg Roads, depths 9 m. – 15 m.

RESTRICTIONS: The port is situated in Limfjord, 16 miles from entrance at Hals. Controlling factor is depth at Hals Bar. 10.4 m. MLW. Night entry permitted. Also see "General" before first port and "Bridges".

MAX. SIZE: Max. draft for crossing Hals Bar 9.5 m.

HEALTH: Pratique granted by Customs Officers who bring Health Declaration for Masters to complete. In event of suspected disease or fever on board radio details to Agent before arrival.

RADIO: Radio stations to be used: Skagen and Lyngby, Port Authority, Pilot Station. Tugs and Bridges can be contacted on VHF Channel 16.

TUGS: Eight tugs available from 250 h.p. to 2,000 h.p. Not compulsory except through bridges for vessels over 1,500 d.w.t.

BERTHING: Aalborg on North and South sides of Limfjord. Total quayage 11.5 km., whereof public quays 10.1 km. All main quays suitable for vessels able to cross Hals Bar. Depths alongside 7.5 m. to 10.0 m.

Rordal Cement factory wharf, depth 7.5 m. – 9.3 m.

Nefo Coal Pier, depth 10.0 m. owned by Nordjylands Electric Co. and managed by Elsam. Max. LOA 260 m., max. draft 9.5 m. 2×12 ton cranes. Discharge rate for coal 10,000 tonnes per day.

BRIDGES: Two lift bridges cross Western end of Aalborg harbour. Horizontal opening 30 m. Only vessels bound for Lindholm Pier are affected.

Close South East of the power station is an overhead power cable (vertical clearance 50 m.) which spans the fjord. Pilotage is compulsory for vessels over 800 g.r.t.

MEDICAL: Doctors, hospital facilities available.

FRESH WATER: Supplied by pipe-line at all berths.

FUEL: All grades available.

DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally by crew with assistance of stevedores.

IDENTIFICATION CARDS: Not required.

CONSULS:

Belgium	Tel. (08)	13 23 33
Brazil	"	13 12 33
Finland	"	13 30 33
France	"	12 09 00

Sweden	"	12 00 51
United Kingdom	"	13 12 33

REPAIRS: All hull and machinery repairs can be effected.

DRY DOCKS: One dry dock for vessels up to 119 m. long. Three floating docks max. capacity 20,000 tons (80,000 d.w.t.).

CUSTOMS ALLOWANCES: See "General" before first port.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours (April – September).

HOLIDAYS: New Year's Day; Maundy Thursday; Good Friday; Easter Monday; Prayer Day; Ascension Day; Whit Monday; Christmas Day; Boxing Day. Half-holidays; May 1st, June 5th and December 24th.

REPATRIATION: Aalborg Soefarts Service (Seamen's Service) Tel: (08) 17 12 12.

POLICE/AMBULANCE/FIRE: Tel: 000

TELEPHONES: Installed by request at certain quays.

SHORE LEAVE: No restrictions.

AIRPORT: Situated 3 miles from town centre.

DEVELOPMENTS: Aalborg has considerable areas under development for industry. In connection with this, preparations are being made for the building of new public harbour facilities. On the South bank of the fjord the Port Authority has available a 3.2 km stretch of coast with an area of approx. 206 hectares. This area is in connection with a new industrial and residential district of approx. 400 hectares. According to present plans approx. 7,000 m. of new quayage can be built here. Investments are estimated at 350 mill. Kr. Factories within the electronic and textile sectors are already established here and a continuous expansion goes on. On the site a special harbour with a quayage of 660 m. and depth 8.5 m. with facilities for unit load ships as well as conventional cargo ships, with warehouses and administration blocks etc. was constructed during 1972 as base port for the Royal Greenland Trade Department's routes calling at all ports in Greenland. Enterprises undertaking construction, repairs and maintenance of oil rigs etc., for offshore activities have also settled on this site. (See "Plan" – East Harbour).

AUTHORITY: Port of Aalborg Authority, 104 Vesterbro, DK-9000 Aalborg, Denmark. *Tel:* (08) 122777. *Telex:* 69933 Aalbhv Dk. *Contact:* J. E. Kruhoffer, General Manager. H. Plougheld, Harbour Master.

AEROSKOBING: 54.54 N. 10.25 E. (See Plan)

DOCUMENTS: See "Copenhagen".

PILOTAGE: Contact using VHF Channel 16, Tel: (09) 521253.

MAX. SIZE: Length 70 m., beam 17 m., draft 4.5 m.

HEALTH: See "Copenhagen".

RADIO: Lyngby Radio OXZ.

VHF: Harbour Master/Pilot Channel 16.

TUGS: Not compulsory, pilot boat assists if necessary. Larger tugs can be ordered on request.

BERTHING: 3 berths available.

CRANES: 1 mobile crane available.

STEVEDORES: Ordered by Agents.

MEDICAL: Doctors and hospital facilities available.

FRESH WATER: Available.

FUEL: Available.

FIRE PRECAUTIONS: Normal fire precautions.

CONSULS: None.

REPAIRS: Small repairs possible.

DRY DOCKS: None, however there is one slipway for vessels up to 350 tons.

GANGWAY/DECK WATCHMEN: Not necessary.

HATCHES: Opening/closing carried out by crew.

AIRPORT: Local airport 9 km. away, with private connections to Copenhagen. Nearest commercial airport at Odense.

TIME: GMT plus 1 hour; Summertime (March – September) GMT plus 2 hours.

HOLIDAYS: Normal Danish holidays.

POLICE/AMBULANCE/FIRE: Dial 000.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Not required.

BANKS: Den Danske Bank and Sydfynsk Discontobank.

STORING: By truck alongside.

AUTHORITY: Harbour Master L. Andersen. *Tel:* 45-9-521253.

AGENT: W. Nielsen & Co., P.O.Box 20, DK 5970, Aeroskobing. Tel: 45-9-521150. Telex: 50583. Cables: Williamco.

ARHUS: 56.09 N. 10.13 E. (See Plan)

DOCUMENTS:

Ship's Register.

Derat Certificate.

Load Line Certificate (all vessels above 150 g.r.t.).

Radio and Equipment Safety Certificates (all cargo vessels on 500 g.r.t. and above).

Customs Passport from last port of call.

Spirits and Tobacco List specifying stock in hand for ship and crew.

PILOTAGE: Harbour Pilotage compulsory for:

a) Tankers of 1,500 d.w.t. or above.

b) Tankers loaded with inflammable liquids with flash point below 23°C.

c) Tankers loaded with, or have unclean tanks which have recently contained, dangerous liquid chemicals listed in IMO's "Code for the construction and equipment of ships carrying dangerous chemicals in bulk", and

d) Non gasfree gas tankers.

There are exceptions for frequent callers.

Harbour Pilot normally boards 1-2 miles outside port.

Larger vessels usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

Vessels leaving harbour or changing berth should report at least 15 minutes in advance, to the pilot station on Channel 16 or 12, or to the harbour office. If the movement is delayed, a further report should be sent 10 minutes in advance.

ANCHORAGE: Anchorage in roads – good holding ground. Nature of bottom: clay.

RESTRICTIONS: No restrictions. Night entry permitted. Also see "General" before first port.

MAX. SIZE: Oil port 36 ft. General cargo port up to 33 ft. Container terminal up to 36 ft. Eastern Division 39 ft. Coal terminal 44 ft. No tide.

HEALTH: Necessary formalities carried out by Customs on arrival.

RADIO: Radio stations to be used: Skagen and Lyngby. Pilot station and tugs can be contacted on VHF Channel 12 and 13 – emergency 16.

TUGS: 3 tugs available. Call by VHF.

CARGO HANDLING FACILITIES: 7 cranes for coal, fertilisers, sulphur, ore, etc.; max. capacity per crane, 300 t.p.h. 9 cargo handling cranes up to 2.5 tons and 9 cranes up to 5 tons. 3 mobile cranes up to 4 tons.

Container Terminal: Minimum depth of water 10 m. (33 ft.). Max. depth of water 11 m. (36 ft.). Total quay length 816 m. (2,677 ft.). 4 gantry container cranes up to 40 tons. Fork lifts up to 40 tons.

Multi-Terminal: Quay length 450 m. depth 12 m. Facilities for bulk, break bulk, container & Ro/Ro cargoes. 1×50 tonne crane. 2 multi-purpose cranes (25 tonnes on hook and 12 tonnes on grab).

Roll-on/Roll-off: 1 movable and 4 solid Roll-on/Roll-off berths. Fork lifts up to 40 tons. Several berths for liquid chemicals and LPG carriers.

Private Cranes: Coal terminal: Length 450 m. depth 13.5 m. 2 gantry cranes, combined capacity 1,000 t.p.h. 4 travelling cranes on carriage bridges for handling of coal, coke, fertiliser, and broken stone, etc., capacities 5 – 7.5 tons. 1 travelling crane on fixed bridge for handling of sand, stone and gravel, etc., capacity 90 t.p.h. 2 travelling cranes on carriage bridges for handling of general cargo, capacity 1.5 tons. One floating crane up to 20 tons.

Private Suction Plants, etc.: 4 grain suction plants, capacities of 60 –100 t.p.h. 1 grain elevator, capacity of 35 t.p.h. 4 grain loading pipes. 6 cup elevators for copra and soya beans (80 t.p.h. each). 4 suction elevators for copra and soya beans (125 t.p.h. each). 1 loading pipe for copra and soya beans.

Arhus Stevedore Company:

	No.	*Capacity* (tons)
Fork trucks with telescopic yoke for top lifting of containers	10 1	40 30
Fork trucks with top-lift for empty containers	8	12.5
Fork trucks	25	3-7
Electric pallet lifters	5	3
Shovel trucks for stowing	6	
Terminal tractors with appurtenant swan's necks	17	
Terminal Carriages	43	

STEVEDORES: Available. Ordered by Agents.

Normal Working Hours: Mondays/Fridays 0700 – 1630 hrs. Work on Saturdays, Sundays and Holidays is on full overtime terms only.

Meal Hours: 0830 – 0900 hrs. and 1200 – 1300 hrs.

Shifts: Labour can be employed Mondays/Fridays at 0700 hrs. and at 1000 hrs., although the 0700 hr. shift is by far the best supported.

On Fridays and on a day preceding a holiday labour can also be employed at 1300 hrs. (for overtime work generally).

Furthermore labour can be transferred from a completing vessel to another job within normal working hours provided certain union regulations are observed. Crew is not allowed to load, discharge or run the winches under normal circumstances.

Overtime: Can be worked round the clock against overtime pay. The rates for the first 3 hours are plus approximately 50% and all following hours plus 100%.

First shift is from 0700 – 2100 hrs. and next from 2100 – 0700 hrs. the following morning.

Week-end Work: Can be ordered as late as Friday 1300 hrs. (deadline) but ordering during Thursday gives a far better position for making a good arrangement.

MEDICAL: All medical services possible. Call Pilots if medical attendance required aboard.

TANKERS: Discharge lines: 4 in., 6 in., 8 in., 10 in. and 12 in. Quay 201 – 203, max. oil discharging 1,200 cu.m./hr. Quay 202 and 124, 1,000 cu.m./hr., and quay 120, 800 cu.m./hr. Berth 313 depth 12.0 m.

FRESH WATER: Most berths supply by shore installations, otherwise barge.

FUEL: All grades available.

FIRE PRECAUTIONS: Tankers discharging: Fire watch. Special harbour fire fighting on tugs.

DECK WATCHMEN: Available, but not compulsory.

OPENING/CLOSING HATCHES: Normally by crew with assistance of stevedores.

IDENTIFICATION CARDS: Not required.

CONSULS: Belgium, Tel: (06) 19.95.22; Brazil, Tel: (06) 12.88.88; Finland (06) 29.21.00; France (06) 11.22.22; Germany (F.R.) (06) 12.32.11; Greece (06) 27.12.66; Iceland (06) 13.40.00; Italy (06) 16.77.88; Japan (06) 12.58.55; Netherlands (06) 12.81.88; Norway (06) 14.41.11; Spain (06) 12.46.44; Sweden (06) 27.32.33. United Kingdom (06) 17.66.33.

REPAIRS: Most repairs and overhauls possible. See "Dry Docks".

DRY DOCKS: Dannebrog Vaerft A.S. The shipyard possesses a large repair section and specializes, among other things, in extending ships and in undertaking comprehensive re-building. But all kinds of ships' repairs and overhauls of machinery are performed in its modern workshops. It employs a staff of 500–600, and it has recently invested in new cranes, floating docks, and workshops.

Dock No. 1 has a lifting capacity of 19,000 tons. Dock size – 190 m.× 25 m.

Dock No. 2 has a lifting capacity of 4,000 tons. Dock size – 110 m.×22.8 m.

There is also one minor slipway in the Port of Arhus, and the city possesses many service workshops which are available to ships needing installations or repairs of electronic or mechanical equipment in either the engine room, the catering department, or on deck.

REPATRIATION: Arhus Sofarts Service. Tel: (06) 19.13.33.

AIRPORT: 32 km. from port.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summertime (April to October).

HOLIDAYS: 5 day week, but loading and discharging can be effected on Saturdays and Sundays on payment of overtime. See "Copenhagen".

POLICE/AMBULANCE/FIRE: Tel: "000".

TELEPHONES: At several piers.

SHORE LEAVE: No restrictions.

DEVELOPMENTS: The container terminal is to be dredged to 12.0 m.

AUTHORITY: Port of Arhus Authority, P.O.Box 130, Europaplads 2, DK-8100, Arhus C, Denmark. *Tel:* (06) 13.33.33. International + 456.13.33.33. *Contact:* K. Schmidt, Port Director.

ASNAES: 55.40 N. 11.05 E. (See Plan)

PORT LIMITS: When boarded by Harbour Pilot at the Firth of Kalundborg; or when at anchorage at the Firth waiting for berth.

DOCUMENTS:

Ship's Register.

Load Line Certificate.

Safety Radio Certificate.

Safety Equipment Certificate.

Derat or Exemption Certificate.

Construction Certificate.

Certificate of Insurance or other financial security in respect of civil liability for oil pollution damage.

2 Crew Lists.

Tobacco and Spirit List covering all goods on board belonging to crew, officers, Master, ship's bar or passengers.

Cargo Manifest or Bill of Lading.

PILOTAGE: Pilotage not compulsory. Harbour Pilot boards at entrance of Kalundborg Firth; bigger ships usually take Pilot by Skaw light vessel about 130 miles from Kalundborg. Skaw as well as Harbour Pilots listening on VHF Channel 16.

Pilots to be ordered by ETA–telegram to Agents at least 24 hours in advance.

ANCHORAGE: Large vessels anchor in 16 m. of water outside between Roesnaes and Asnaes; S.W. to N.W. winds cause swell, but holding ground is good.
RESTRICTIONS: No entry restrictions; arrival day and night and no tide with normal winds. Also see "General" before first port.
MAX. SIZE: Oil Berth: depth alongside: 13 m.

Old Coal berth: Depth alongside: 11 m. Length of quay: 285 m.

New Coal Berth: Depth alongside: 13 m. Length of quay: 216 m. However, vessels with length of 290 m. acceptable as there are dolphins between the Oil Berth and the New Coal Berth.

Ash Berth: Depth alongside: 8.0 m.
HEALTH: No special restrictions as to Free Pratique, which will be granted by authorities on arrival.
RADIO: Lyngby Radio.
VHF: Channel 16 to pilot station (also Skaw Pilot).
RADAR: No radar installations.
TUGS: At Firth of Kalundborg – 2/3 miles from port – ships' lines to be used.
BERTHING: One oil berth: length 200 m. (a further length of ships at about 100 m. acceptable for berthing alongside the dolphins). Max. safe arrival draft: 41 ft. (12.5 m.).

Old Coal Berth: length 285 m. Max. safe arrival draft: 35 ft. (10.67 m.). 4 cranes available.

New Coal Berth: length of quay: 216 m. (See "Max. Size"). Max. safe arrival draft: 12.67 m. 2 cranes available.

Ash Berth: Safe draft 25 ft. (7.65 m.). Loading only, by pipe-line from 6,000 cu.m. silo.
DENSITY: Brackish – about 1011.
STEVEDORES: Private stevedores to be ordered through receivers – coal discharge rate: about 700 t.p.h.

New Coal Berth: Discharge rate about 850 t.p.h.
MEDICAL: All medical and hospital facilities available. No advance notice necessary.
TANKERS: 2 discharge hoses (a possibility of 3) of 8 in. each. Average discharge rate 3,000 t.p.h., max. back pressure 14 kg. Also see "Berthing".
FRESH WATER: Available by pipe-line at the berth. Rate 10 t.p.h.
FUEL: Available by barge or truck.
CONSULS: Swedish and Norwegian at Kalundborg. Others at Copenhagen.
REPAIRS: All types of smaller repairs can be carried out.
DRY DOCKS: No dry dock available.
SURVEYORS: Messrs. Caleb Brett has a local office in Kalundborg SGS Inspection (Danmark) A/S has office in Copenhagen.
GANGWAY/DECK WATCHMEN: Not recommended.
HATCHES: Opening/closing hatches to be carried out by crew.
AIRPORT: Nearest at Copenhagen (100 Km.).
CUSTOMS ALLOWANCES: See "General" before first port.
REPATRIATION: All repatriation can be arranged normally via Copenhagen 100 km. from Kalundborg.
TIME: GMT plus 1 hour (from Late September– Late March). GMT plus 2 hours (from Late March–Late September).
HOLIDAYS: Saturday/Sunday normally no work, also no work on holidays declared as official Danish holidays.
POLICE/AMBULANCE/FIRE: 0–0–0 all alarms.
TELEPHONES: No telephone connection on board.
EMERGENCY CO-ORDINATION CENTRE:
Radio: VHF Channel 16 Lyngby Radio – will contact the Authorities involved.
BANKS: Kjoebenhavns Handelsbank A/S, Holmens Kanal 12, 1091 Copenhagen K. Telex: 12186 HACO DK.

A/S Den Danske Bank, Holmens Kanal 12, 1092 Copenhagen K. Telex: 15880 DDBFX DK.

Privatbanken A/S, Boersgade 4, 1215 Copenhagen K. Telex: 27196 PRIVCO DK.
STORING: See "Prelims".
1. Vessel can be stored from barge and truck.
2. No restrictions – can be stored during discharging.
3. Trucks can proceed alongside.
4. Fork lift trucks can be used on the Jetty.
5. No special customs' regulations except: spirits and tobacco, and other goods under bond to be declared to Customs before unloading/loading.
6. Local riggers can be employed.

SERVICES: No tank-cleaning facilities; all other services to ships can be arranged through specialists from Copenhagen.
SHORE LEAVE: No restrictions for shore leave.
IDENTIFICATION CARDS: Shore passes necessary.
AUTHORITY: *Owners of the Port:* Isefjordvaerket I/S, Parallelvej 19, 2800 Lyngby. *Telex:* 37500. *Tel:* 2-883200.
Local Office: Asnaes Power Station, Asnaesvej, 4400 Kalundborg. *Tel:* 3-511500.

ASSENS: 55.15 N. 09.53 E. (See Plan)

LOCATION: On West side of Funen in Little Belt. Open all year except in severe weather when Little Belt may be frozen.
DOCUMENTS:

Customs Declaration for Ships, Form G25.
Maritime Declaration of Health, Z2 Ln 00-146.
Master's Declaration, Arrival, P650-010 (3/79).
Ice-Breaker Dues, Form G92 (only from 15th December – 31st March).
Crew List.
All Forms can be obtained from the Agent.

PILOTAGE: Not compulsory. Pilot requires 4 hours' notice. Pilot boarding points are 1 – 2 miles North or South of Assens. If necessary, Pilot can board in Little Belt.
ANCHORAGES: In the Roads North of Assens and S.W. of Assens.
MAX. SIZE: Vessels up to 130 m. LOA, max. draft 7 m. and max. beam 20 m. No tides.
RADIO: Lyngby Radio (OXZ).
VHF: There is a VHF station at the pilot station, Channel 16.
RADAR: There is radar in the tug used by the Pilot.
TUGS: There is a small tug, for larger tugs 6 hours' notice to be given. Ship's lines are used.
BERTHING: Loading/discharging normally takes place in the Northern Basin, depth 7 m., which is served by railway. The total length of quays is 400 m., made up of 100 m. on the North side, 170 m. on the East side and 130 m. on the South Side.
CRANES: 2 mobile cranes each max. 32 tons.
STEVEDORES: Working hours 0700 – 1600, Monday to Friday. Overtime by arrangement.
MEDICAL: Full hospital facilities available without prior notice.
FRESH WATER: Good quality potable water available in unlimited quantities.
FUEL: Can be delivered, if sufficient notice given.
REPAIRS: Most types of repairs can be undertaken at the shipyard.
DRY DOCKS: One floating dock for ships up to 1,350 tons, max. length 80 m. and 15 m. beam. 1 slipway for ships up to 300 tons, max. length 60 m. and 9.5 m. beam.
GANGWAY/DECK WATCHMEN: Not necessary.
HATCHES: Opening/closing done by crew.
CUSTOMS ALLOWANCES: See "General" before first port.
AIRPORT: Odense, 50 km. away. Daily connections to Copenhagen.
TIME: GMT plus 1 hour; Summertime GMT plus 2 hours from March to September.
HOLIDAYS: Usual Danish holidays.
POLICE/AMBULANCE/FIRE: Dial 000.
TELEPHONES: Available aboard vessels.
STORING: See "Prelims".

1. Vessels can be stored by truck.
3. Yes.
4. Yes.

SHORE LEAVE: Permitted.
DELAYS: Normally no delays.
AUTHORITY: Assens Havn, Harbour Office, Ndr. Havnevej 3, DK-5610 Assens. *Tel:* (09) 713165-713580. *Contact:* N. Hald-Andersen, Harbour Master.
AGENT: A. Fage-Pedersen A/S, Strandgade 19, DK5610, Assens. Tel: 09-711200. Telex: 50301 (Fage DK). Cables: Shipping.

BANDHOLM: 54.50 N. 11.30 E. (See Plan)

DOCUMENTS:

1 Crew List.
1 Passenger List.
1 Stores List.
1 Manifest or Bill of Lading.

PILOTAGE: Not compulsory. Pilot boards vessel at Sea Buoy off Vejroe from pilot vessel, hull painted green and "LODS" on each side of the hull. Pilot ordered through Agent, telephone 03–88 80 11 four hours prior arrival at Sea Buoy. VHF Channel 16. Telephone number of Pilot Station 03-89 49 75/03-89 41 52 day/night.
ANCHORAGE: Near Sea Buoy off Vejroe.
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Length 100 m.(approx), draft 5.10 m.
HEALTH: Normal quarantine rules.
RADIO: Lyngby Radio or Kiel Radio.
TUGS: None.
BERTHING: Sheltered harbour with 366 m. of stone quays available and easily accessible. Depth of water at entrance 5.10 m. Depth at old quays, 4.4 m. At new quay 244 m. there is 5.8 m. average depth. Electric coal crane to discharge 60 t.p.h with grab. Average daily rates: Coal and coke 500 – 1,000 tons. Grain elevator, loading or discharging capacity 110 t.p.h. storage capacity 25,000 tons.
STEVEDORES: Ordered by Agent. Working hours Monday to Friday 0700 – 1600 hrs. Saturday no work.
MEDICAL: Doctors, hospital facilities available.
FRESH WATER: Supplied from quay installations.
FUEL: Available.
OPENING/CLOSING HATCHES: Carried out by crew.
GANGWAY/DECK WATCHMEN: Not necessary.
CUSTOMS ALLOWANCES: See "General" before first port.
IDENTIFICATION CARDS: Not required.
REPAIRS: Small deck and engine repairs possible.
AIRPORT: Maribo Airport, about 15 km. away.
TIME: GMT plus 1 hour.
HOLIDAYS: See "Copenhagen".
POLICE/AMBULANCE/FIRE: Dial 0-0-0 and ask for Police, Ambulance or Fire Brigade.
TELEPHONE: Not available on board vessels.
SHORE LEAVE: Allowed.
GENERAL: Tide normally 1 ft.
AUTHORITY: Harbour Master.
AGENT: Alfr. Hovmand, Shipbroker, Havnepladsen 6, Bandholm, DK-4930 Maribo. Tel: 03-88 80 11. Telex: 40256 Hoban Dk. Cables: "Hovmandship, Maribo".

COPENHAGEN: 55.42 N. 12.37 E. (See Plan)

DOCUMENTS:
1 Crew List.
2 Passenger Lists.
1 List giving stock of stores and provisions.

Customs Officers bring form to be signed by Captain indicating that no epidemic diseases are on board. Formal Bill of Health signed by Danish Consul in port of departure is not necessary.

ARRIVAL: Before a vessel enters the port, its national flag shall be hoisted and the anchors shall be ready to drop. If the vessel is to pass any of the bridges or the lock, outboard davits, etc. shall be taken in.

All vessels shall notify their entry, departure or shifting (of berth) in advance and in ample time to the Port of Copenhagen's Traffic Control Centre by telephone 45 1 14 43 40 or by calling via VHF, Channels 12 or 16. When making such notification, the vessel's name, port of registration and the location from which it is to come or to which it is to sail shall be declared.

Passage through the Port of Copenhagen is forbidden, under the penalty of a fine – cf. Section 70 of these Regulations – to vessels which are not to discharge and load in the port, unless the vessels can pass under both Knippelsbro and Langebro without opening (i.e. raising) of these bridges.

PILOTAGE: Telegr. address: Coppilot-Copenhagen. Tel. 01 38 67 00. Pilotage not compulsory. ETA minimum 1 hour. VHF Channel 16. Pilot boats painted red. "Pilot" painted in white on side. Pilot flag "G" (white light) – VHF. Pilot comes on board at Middelgrund Fort (Pilot for Drogden at the same place). Pilot boards by ship's ladder.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA–telegrams to Skawpilot Skagen, at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

ANCHORAGE: Depth 11 m., 1 mile North of Middelgrund Fort.

RESTRICTIONS: See "General" before first port.

MAX. SIZE: Limited by draft only. Depths in the port, 10 m.; in the Oil Harbour, 10.5 m.; at the Oil Pier, 12.0 m.

HEALTH: See "Documents". If fear of suspected disease or fever: yellow flag – VHF.

RADIO: Lyngby Radio: OXZ. VHF Channel 16 to all installations. ETA cables to Agents and receivers, preferably by Lyngby Radio.

RADAR/VHF: No port radar. VHF Channel 16.

TUGS: Towage not compulsory. Tugs join ships at entrance to port. Ship's hawsers only.

BRIDGES: Larger ships must take Pilot and tugs to pass the bridges down to the South Harbour.

The Knippelsbro and Langebro and Sjaellandsbroen will be closed experimentally for passage as follows:

	Knippelsbro/Langebro	*Sjaellandsbroen*
Monday –	0000 – 0550 hrs.	0000 – 0600 hrs.
Friday	0615 – 0655 hrs.	0615 – 0655 hrs.
	0735 – 0900 hrs.	0735 – 0900 hrs.
	1500 – 1800 hrs.	1500 – 1800 hrs.
		2000 – 2400 hrs.
Saturday	0000 – 0655 hrs.	0000 – 0600 hrs.
	0735 – 0900 hrs.	0615 – 0655 hrs.
	1200 – 1230 hrs.	0735 – 0900 hrs.
	1300 – 1330 hrs.	1200 – 1230 hrs.
	1800 – 2400 hrs.	1300 – 1330 hrs.
		2000 – 2400 hrs.
Sundays and	0000 – 0800 hrs.	
Holidays	1200 – 1800 hrs.	
	2000 – 2400 hrs.	
15th May –		0000 – 0600 hrs.
15th September		1000 – 1700 hrs.
		2000 – 2400 hrs.
16th September –		0000 – 0700 hrs.
14th May		1000 – 1700 hrs.
		1800 – 2400 hrs.
Constitution Day 5th June	1200 – 1300 hrs.	1200 – 1300 hrs.
Christmas Eve 24th December and New Year's Eve 31st December	1800 – 2400 hrs.	1800 – 2400 hrs.

CONTAINER TERMINAL: At the Levant quay in the free port. Quay length 665 m., depth alongside 10 m. 2 Container cranes capacity 32 tons, also two luffing cranes of 50 tons and 5 tons capacity for general cargo. Horizontal handling by two straddle carriers and a number of front loaders.

STEVEDORES: ETA earliest possible by VHF and not later than noon on the day before loading or discharging is intended to be commenced.

MEDICAL: No advance notice necessary. Hospitals available.

TANKERS: 10/12 berths according to size.

Provestens Oil Harbour: depth at		
	Quay 1:	10.5 m.
	Quay 2:	9.1 m.
	Quay 3:	9.1 m.
	Quay 4:	10.5 m.
	Quay 5:	10.5 m.
	Oil Pier North:	6.0 m.
	Oil Pier East:	12.0 m.

Length and beam unimportant. Slop barge available.

FRESH WATER: From quay or water boat.

FUEL: All grades available. At bunker station, no notice required, delivery 24 hours a day. By lighter in port or in roads; 10 hours notice preferred.

FIRE PRECAUTIONS: Ready hawsers fore and aft. No engine repairs.

GANGWAY/DECK WATCHMEN: Deemed unnecessary.

OPENING/CLOSING HATCHES: To be opened by ship's crew.

CERTIFICATES: To be on board:
Ship's Register.
Radio Safety Certificate.
Safety Equipment Certificate.
International Load Line Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: See "General" before first port.

IDENTIFICATION CARDS: Not necessary except in Oil Harbour, where the Port Authority deliver the cards.

REPAIRS: All types of repairs possible.

DRY DOCKS: Respective lengths, 787 ft. 5 in., 712 ft. 11 in. and 478 ft.

REPATRIATION: Facilities exist for changing crew and arranging any necessary repatriation.

AIRPORT: 6 miles from centre. Direct lines for all parts of the world.

TIME: GMT plus 1 hour.

HOLIDAYS: New Year's Day (January 1st); Maundy Thursday; Good Friday; Easter Monday; Prayer Day; Ascension Day; Whit Monday; Christmas Day (December 25th); Boxing Day (December 26th).

Half Holidays: Labour Day (May 1st); Constitution Day (June 5th); Christmas Eve (December 24th).

Working Hours: 0700 – 1630 with 2 half-hour meal breaks.

Overtime work on Saturday and Sunday should be ordered by 1130 hrs. on Friday.

The working hours vary slightly from port to port as some start at 0730 and others at 0800 hrs., but a 42.5 hour week is common to all.

POLICE/AMBULANCE/FIRE: Call "000".

TELEPHONES: In many berths telephones can be placed on board ships.

GENERAL: Customs Authorities supervision of ship's provisions and bonded stores is carried out in the Free Port in the same way as in Customs Port. In this connection the Free Port is not a Free Port.

SERVICES: All services available (tank cleaning, discharge of tank washings, compass adjusting etc.).

SHORE LEAVE: No restrictions.

AUTHORITY: Port of Copenhagen Authority, P.O.Box 2083, Nordre Toldbod 7, DK-1259 Copenhagen K. *Tel:* (01) 144340. *Telex:* 15439. *Cables:* "Copenport". *Contact:* Harbour Master.

ENSTED: 55.01 N. 09.26 E. (See Plan)

Also refer to "Aabenraa".

DOCUMENTS: See "Aabenraa".

PILOTAGE: See "Aabenraa".

ANCHORAGES: See "Aabenraa".

BERTHING:

Oil Terminal: Largest vessels which can be accommodated at the Oil Pier: (Berth No. 1).

Length overall	350 m.
Beam	no limits
Water depth	18 m.
Bow/centre	165 m.
Max. height water-level/manifold	26.5 m.

Coal Terminal: Largest vessels which can be accommodated at the Deep Sea Coal Berth:

Max. Length Overall	350 m.
Max. Beam	No restriction.
Water Depth	18 m.
Discharging facilities for coal	1×40 ton unloading crane and 1× continuous unloader (1,550 cu.m./hour)
Total outturn/24 hours	40,000 tonnes
Height from water level to hatchcoaming	20 m.
Outlay of cranes from quay side to centre grab	38 m.
Max. distance between centre of cranes (grabs)	285 m.

HEALTH: In event of disease or fever on board, vessels Agent to be informed before arrival.
RADIO: Blaavand or Lyngby Radio.
TUGS: Large vessels may require towage assistance on entering and leaving Ensted Harbour. 24 hours notice is required to call a Svitzer tug.
VHF: Pilot on Channels 12 and 16.
STEVEDORES: To be informed by Agent.
DENSITY: 1015.
MEDICAL: A few hours notice required to arrange for doctor to come on board. Hospital in Aabenraa.
TIDE: No tide – arriving and sailing day and night.
FRESH WATER: Fresh water from shore line 5 t.p.h.
FUEL: Available by barge or truck.
OPENING/CLOSING HATCHES: By crew.
CONSULS: Norway, Germany F.R., Finland, Sweden and United Kingdom.
REPAIRS: All types of deck and engine repairs are possible.
REPATRIATION: Facilities exist for effecting crew changes.
AIRPORT: Skrydstrup. The distance from airport is 25 km. Airport is served by regular airlines via Copenhagen.
POLICE/AMBULANCE/FIRE: Telephone number 000.
SHORE LEAVE: Crew members are allowed ashore.
TELEPHONES: Available for placing on board.
AUTHORITY: Soenderjyllands Hoejspaendingsvaek, Flensborgvej 185, DK. 6200 Aabenraa. *Tel:* (International +45) 4 624231. *Telex:* 52140 SHDK. *Contact:* N. E. Pedersen, Habour Master.

ESBJERG: 55.28 N. 08.26 E. (See Plan)

DOCUMENTS:
Tonnage Certificate.
Derat or Exemption Certificate.
1 Crew List.
1 Crew Personal Effects List.
1 Master's Declaration.
1 Stores List.
Cargo Manifest or Bill of Lading.
Dangerous Cargo List.

PILOTAGE: Advance notice of 12 hours prior to ETA pilot station at "Graadyb Barre" is required. This ETA to be confirmed/altered 3 hours prior to actual time of arrival.

Message can be given via coast radio station "Blaavand Radio" (OXB) or via Port Authority's VHF – watch is kept on Channel 16. (Tel: (05) 129200).

Cable address: "Pilotstation Esbjerg".

Telephone: 05-121065.

Two pilot vessels, painted orange, with "PILOT" painted in white on sides stationed in the port of Esbjerg. One is a 78 g.r.t. vessel and one is a fast launch.

Both vessels equipped with VHF Channel 16 and carrying signals as prescribed. Pilot boards outside Graadyb Barre, at buoy No. 2. Vessels awaiting Pilot or high tide should anchor approximately 1 mile West of buoy No. 2. Large vessels wait 2 miles from buoy No. 2.

Pilot is not compulsory except for tankers over 500 d.w.t. and when tugs are assisting in berthing.

ANCHORAGES: There are anchorage areas West of buoy No. 2 (depth 35 ft. at MLWST).
RESTRICTIONS: No ice to impede navigation. No ice dues charged. Also see "General" before first port.
MAX. SIZE: Pilot Restrictions: Max. draft accepted: 31 ft. 02 in.

Entry to port is through a dredged channel over Graadyb Barre, width 200 m., depth 9.3 m. at MLWST.

Tide: Difference between normal high water and normal low water is 4 ft. (approx.). Max. current 2.5 knots – 3 knots.

RADIO: Blaavand Radio, call sign OXB. In position Lat: 55° 33′ N., Long: 08° 06′ E.
TUGS: Tugs join vessel at Esbjerg Roads. Ship's own hawsers must always be used. 3 tugs available of 625, 1,160 and 3,150 h.p.
BERTHING:

	Approach at MLWST	*Berth at MLWST*
Trafikhavn	31 ft.	22 ft.–35 ft.
Foergehavn	28 ft.	15 ft.
Outer Foergehavn for Roll-on/Roll-off vessels	31 ft.	22 ft.–28 ft.
Dokhavn	22 ft.	22 ft.
Englandskaj	31 ft.	25 ft.
Osterhavn	31 ft.	22 ft.–35 ft.
Osterhavn – New Berth (when entering max. draft 31 ft. LOA 705 ft.)	31 ft.	35 ft.
Sonderhavn	31 ft.	35 ft.
Fishery Harbour – Consumption	15 ft.	15 ft.–17 ft.
Fishery Harbour – Industrial Fish	22 ft.	17 ft.–22 ft.

For berthing in Trafikhavn with vessels of (approx.) 5,000 g.r.t. or more and for berthing in Sonderhavn with vessels of 10,000 g.r.t. or more. The Pilots require "Slack Water" – i.e. high or low water.

Max. draft for berthing on high water: 31 ft. 02 in.
Max. draft for berthing on low water: 26 ft. 00 in.

CARGO HANDLING: The Port of Esbjerg has no specially equipped berths besides the tanker berths, and container terminals for lift-on/lift-off equipped with one travelling gantry crane 32 tons, but private companies own suction plants for discharge/loading of feeding stuffs. Furthermore, mobile cranes also with grabs and stationary coal cranes are available. Container terminals for Roll-on/Roll-off. Vessels with own gear can however be handled successfully, at different berths. 22 mobile cranes, capacity between 5 and 180 tons, 86 trucks, capacity between 1.5 and 42 tons, 4 bobcats, 1,200 trailers 20 and 40 ft., and 30 tugmasters.
STEVEDORES: Gangs are mustered daily at 0700, and 1000 hrs. ETA should be given to above hours to ensure that gang(s) are available on arrival. Working hours are from 0700 to 1630 and meal hours are 0830–0900 and 1200–1300. No work on Saturdays. Overtime can be arranged.
MEDICAL: Medical attention can be arranged at any time. Modern hospital facilities available.
TANKERS:
Trafikhavn: Depth in approaches to oil berths in Trafikhavn MLWST 31 ft. (MHWST 36 ft.)

New Oil berth No. 101: Depth alongside old oil berth No. 101 MLWST 35 ft. (MHWST 40 ft.)

Old Oil berth No. 102: Depth alongside new oil berth No. 102 MLWST 25 ft. (MHWST 30 ft.)

The length between the outer point of No. 101 and the opposite outer point of No. 102 is 1,200 ft.

Osterhavn: Depth in approaches to oil berth in Osterhavn MLWST 31 ft. (MHWST 36 ft.). Max. draft 31 ft. 2 in.

Powerstation Vestkraft No. 506: Depth alongside Powerstation Vestkraft No. 506 MLWST 35 ft. (MHWST 40 ft.).

Under normal weather conditions Pilot states to be able to berth tankers with a LOA of max. 735 ft.

FRESH WATER: Can be delivered at all berths. Rate 20 t.p.h.
FUEL: All viscosities available by road tanker. Marine Gas Oil also by tanker vessel. 4 hours should be given, always during office hours.
FIRE PRECAUTIONS: A fire watch is necessary when loading/discharging oil and petrol, if flash point is under 50°C.
GANGWAY/DECK WATCHMEN: Watchman is not essential, but advisable.
OPENING/CLOSING HATCHES: This can be done by members of ship's crew, or by stevedores at an additional charge of 8%.
IDENTIFICATION CARDS: Not necessary.
CONSULS:

CUSTOMS ALLOWANCES: See "General" before first port.
REPAIRS: All types of deck and engine repairs can be effected.
DRY DOCKS: No dry docks, but slipways: Slipway No. 1 for trawlers, own weight max. 125 tons; Slipway No. 2 for vessels, own weight max. 250 tons; No. 3 – 500 tons; No. 4 – 750 tons.
REPATRIATION: Ample facilities for effecting crew changes and arranging repatriations.
AIRPORT: 8 km. from centre of town. Daily flights to Copenhagen.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer (6th April – 28th September).
HOLIDAYS: New Year's Day (Jan. 1); Maundy Thursday; Good Friday; Easter Day; Day after Easter Day; the 4th Friday after Easter; Ascension Day; Whit Sunday and Whit Monday; Christmas Day and Boxing Day. Permission to load/discharge on these days obtainable.
POLICE/AMBULANCE/FIRE: In case of emergency, dial "000" and ask for: Brand (fire), Politi (police), or Ambulance. Regular Tel. numbers are: Police 12 46 66; Ambulance and Fire Dept. (Falck/Zonen) 12 82 99.
TELEPHONES: Possible to have telephones installed on board.
SERVICES: No tank-cleaning equipment available. For discharge of tank washings apply to Port Master's Office Tel. 12 92 00. Compass adjusting can be effected.
SHORE LEAVE: Normally granted.
DEVELOPMENTS Extension of the Harbour towards the East, and modernisation of Trafikhavn, Sonderhavn and Fishery Harbour. Extension of Lo-Lo Terminal.
AUTHORITY: Port of Esbjerg Authority, Hulvejen, P.O. Box 2, DK–6701 Esbjerg, Denmark. *Tel:* (05) 12 41 44. *Contact:* B. O. Juhl, Deputy Manager. Aa Fischer, Port Captain. V. V. Leisner, General Manager.
AGENT: J. Lauritzen EFTF., Amerikavej 1, P.O. Box 100, DK-6700 Esbjerg. Tel. (45–5) 12 31 33. Telex 54133 and 54155. Cables: "Lauritzen".

FREDERICIA: 55.33 N. 09.45 E. (See Plan)

DOCUMENTS:
1 copy Bill of Lading for all cargo (manifests are not required).
1 copy Manifests for Dangerous Cargo.
2 copies Crew List.
2 copies List of Dutiable Goods.
2 copies Stores Lists.

PILOTAGE: Three Pilots available for docking purposes and for through traffic to any place in Denmark or the Baltic. Pilots have a 24-hour watch and are located on the top floor of the KFK grain silo in the West Harbour. Can be contacted day or night over VHF radio Channel 16, working 12 and 13, or Tel. 05-920959. Pilotage is compulsory for tankers carrying chemicals or LPG and for all other tankers above 2,500 d.w.t.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

Shipmaster's Report: June 1985.

Pilot may be taken onboard near buoy in position Lat. 55° 34.8′ N., Long. 9° 50.8′ E.

ANCHORAGE: To avoid hindrances to docking or undocking ships, ships of over or about 4,000 d.w.t. are requested to anchor off Trellenes. Smaller ships will find good anchoring conditions in Strib Bugt.

RESTRICTIONS: Day and night entry possible, least depth in the approach channel is 15.0 m. Also see "General" before first port.

MAX. SIZE:

	Max. draft acceptable
Kastels Harbour	11.70 m.
Old Harbour	5.3 m. to 7.20 m.
Shipyard Harbour	2.80 m.
Dock Entrance	4.60 m.
West Harbour	6.70 m. to 8.70 m.
Mollebugt Harbour	8.70 m. to 11.70 m.

Also see "Tankers".

HEALTH: See "Copenhagen".

RADIO: VHF Channel 16.

TUGS: Tugboats from Svitzer's Salvage Enterprise is stationed in Fredericia, but any amount of tugs are available, when ordered previously.

BERTHING:

Mollebugt Harbour: Quays Nos. 24, 25, 26 and 27 Length 610 m., depth 9 m. – 12 m.

Facilities for container traffic and Ro/Ro traffic. 40 ton gantry crane and 3×25-ton gantry crane with hook and grab, max. capacity 300 t.p.h. 2 mobile cranes, capacity 6 to 36 tons. Railtracks. Facilities for temporary storage of goods. Modern quayside warehouses.

Gas, Oil & Chemicals Harbour: Quays Nos. 18, 19, 20, 41 and 42 for tankers. Quays Nos. 18 & 19, length 90 m., depth 7 m. in berth. Equipped for loading and discharging gas tankers.

Quay No. 20 – 15 m. depth in berth. Hydraulically operated hose handling gear for discharging petrol and oil products. 10 in. and 12 in. ASA. Connection range between + 0.4 and 18.5 m. above MWL.

Quay No. 22 – New quay under construction. Depth alongside 14 m.

Quay No. 23 – 7.5 m. depth in berth. Equipped for discharging liquid chemical products. 4 in. DIN hoses.

Quay No. 41 – 10 m. depth in berth. Equipped for loading and discharging petrol and oil products.

Quay No. 42 – 15 m. depth in berth. Equipped for loading and discharging petrol, oil products and crude oil.

West Harbour: Quays Nos. 13 to 17. Length 670 m., depth 7 m. – 9 m. in berth.

Facilities for container traffic, Ro/Ro traffic. 25-ton gantry crane with hook and grab, max. capacity: 300 t.p.h. 6-ton gantry crane with hook and grab, max. capacity: 150 t.p.h. 2 mobile cranes, capacity 6 to 36 tons. 2 gantry cranes* 5-tons. Suction plant* available for discharging feedstuffs – max. capacity: 80 t.p.h. Railtracks. Facilities for temporary storage of goods. Bulk terminal for loading feedstuff max. capacity 300 t.p.h.

Modern quayside freezing and storage facilities.

Shipyard Harbour: Quays Nos. 8 to 12. Length 500 m., depth 5.0 m. – 6.5 m. in berth. Modern repair and equipment piers with workshops. Slipways available for 75-ton and 1,000 ton light displacement. Floating dock 80 m. × 14.5 m. max. capacity: 1,200 ton light displacement. Floating dock 150 m. × 23.05 m. max. capacity: 8,000 tons light displacement. Dry dock facilities 110 m. × 22 m., 5.1 m. access depth. Average docking/sailing time: 45 mins.

Old Harbour: Quays Nos. 6 & 7. Length 200 m., depth 5.6 m. – 7.5 m. in berth. Mobile cranes, capacity: 6 to 36 tons. Suction plant* available for discharging grain – max. capacity 60 t.p.h. Facilities for discharging liquid chemical products. Railtracks. Facilities for temporary storage of goods.

Kastels Harbour: Quays Nos. 1 & 2. Length 450 m., depth 12 m. in berth. Mobile cranes, capacity: 6 to 36 tons. Loading facilities for bulk fertiliser* – max. capacity: 400 t.p.h. Grab crane* – max. capacity: 300 t.p.h. Siwertell worm conveyor – max. capacity: 600 t.p.h. Facilities for loading and discharging liquid chemical products and ammonia. Railtracks. Facilities for temporary storage of goods. Preference for vessels destined for the Superfos Company.

* Private.

CARGO HANDLING FACILITIES: The Port possesses all types of modern facilities for loading and discharging. Crane facilities include a 40 ton gantry crane, 4 grab cranes with a max. capacity of 300 t.p.h. and a number of grab and hook cranes and mobile cranes with capacities ranging from 6 to 36 tons. There are ample facilities for container and ro/ro traffic. The suction plant* is capable of handling up to 80 t.p.h. and the Siwertell worm conveyor equipment* has a max. capacity of 400 t.p.h. In addition, there are modern facilities for handling liquid chemicals, gas, petrol and oil products and bitumen. There are also facilities for handling fertiliser* – max. 250 t.p.h. The Port has a rail network freeze/cold stores*, approximately 6,000 sq.m. modern warehouse space and ample facilities for temporary quayside storage.

* Private.

STEVEDORES: Ordinary working hours Monday to Friday: 0700 – 0830 hrs., 0900 – 1200 hrs., 1230 – 1600 hrs. Night gangs on week days must be ordered no later than 1230 hrs. the same day. Working overtime weekends is possible, but gangs must be ordered no later than Friday 1230 hrs. Average output per 8-hour day, loading or unloading general cargo, is 200 tons per gang.

MEDICAL: Hospitals available.

TANKERS:

	Berth 18 (liquid gas)	*Berth 20*	*Berth 23 (Chemicals)*

Jetty I – Chicksan arms – for vessels discharging bitumen and other special products, and for loading fuel-oil, gas-oil, gasoline, diesel fuel, and LPG.

Jetty II – Curacao hosehandling gear – for vessels discharging and loading crude, fuel-oil-handling subject to size of vessel.

Pilotage: Pilotage is compulsory for tankers carrying chemicals or LPG, and for all other tankers above 2,500 d.w.t.

Dirty Ballast Reception: Oily ballast reception facilities available – maximum quantity 5,500 cu.m.

Restrictions: Height from normal water level to hose connections must not exceed 15.90 m. during discharging and ballasting.

Communication: The port is equipped with VHF station – Channels 16, 12 and 13.

FUEL: Available.

FRESH WATER: Available ex wharf. Rate 10–50 t.p.h.

GANGWAY/DECK WATCHMEN: Available upon request.

OPENING/CLOSING HATCHES: Stevedores or crew.

CERTIFICATES:

Ship's Register.
Load Line Certificate.
Radio Safety Certificate.
International Safety Certificate.
Derat Certificate.

CUSTOMS ALLOWANCES: See "General" before first port.

IDENTIFICATION CARDS: Required.

CONSULS: Finland, France, Iceland, Netherlands, Norway, and Sweden.

REPAIRS: All repairs undertaken with modern equipment. Also see "Berthing – Shipyard Harbour".

DRY DOCKS: Length 354 ft., breadth 72 ft. Max. depth at Dock gate 16 ft. 06 in. Slipway available for ships up to 1,000 tons, light displacement (divers available). Also see "Berthing – Shipyard Harbour".

AIRPORT: At Billund and Beldringe 35 miles from Fredericia.

REPATRIATION: All facilities exist.

TIME: GMT plus 1 hour in Winter and GMT plus 2 hours in Summer (late March – late September).

HOLIDAYS: See "Copenhagen".

POLICE/FIRE/AMBULANCE: Police 921577; Ambulance 932222; Fire 921166; Emergency 000.

TELEPHONES: Both oil piers have telephones in the watchmen's room but for local calls only.

SHORE LEAVE: Allowed.

DEVELOPMENTS: See "Berthing" – Quay No. 22.

AUTHORITY: Port of Fredericia, Vesthavnsvej 33, 7000 Fredericia. *Tel:* 05-920255/05-927900. *Contact:* P. E. Skoett, Port Director. P. Tophoj, Harbour Master.

FREDERIKSHAVN: 57.28 N. 10.33 E. (See Plan)

DOCUMENTS: Ship's papers, 2 Crew Lists, 1 Passenger List, 2 Bills of Lading, 1 Manifest, 1 Customs declaration of tobacco and spirits for Officers and crew, 1 Customs declaration (TOLDPAS) if arrived from port in EEC or Scandinavia.

PILOTAGE: Call the Pilot either over the coast radio station "Skagen Radio", call sign "OXP", telephone 445566. Pilot outside the harbour boards at the buoy 1.7 miles S.E. of the harbour entrance. The pilot boat is a small blue and red painted motorboat. ETA required as soon as possible.

ANCHORAGE: In the roads South of the red leading lights in 10 m. water depth. Good holding ground. At the entrance to the fishing harbour between the pierheads for a width of 50 m. on each side of the heads, anchoring is prohibited (submarine cable).

RESTRICTIONS: Vessels coming from or entering the naval base and the fishing harbour must wait for ships entering or leaving the commercial harbour. Maximum speed Frederikshavn L/B – to harbour 12 knots, in outer basin – 7 knots, Harbour – 3 knots. Entering the Naval Base without special permission prohibited. Ships entering the harbour must if necessary wait outside for ships leaving the harbour. Also see "General" before first port.

MAX. SIZE: Max. length about 200 m., depth in harbour 8 m. Tide about 0.3 m.
HEALTH: Use international quarantine signals. If suspected disease or fever on board cable the Agent to arrange everything to obtain pratique as soon as possible.
RADIO: Nearest coast radio station "Skagen Radio", call sign "OXP".
VHF: The harbour office is fitted with VHF Channels 16, 12 and 13. Watch kept day and night. Vessels must call the Harbour Office before entry and leaving.
TUGS: Tugs join vessel outside the harbour between the buoy and the harbour entrance. Only the ship's line to be used.
BERTHING: No special requirement for berthing in the harbour, but several big ferries are running in and out during day and night and sailing after a time schedule. Vessels must call the harbour office, VHF Channel 16, for permission to enter and before leaving the berth.
BULK HANDLING FACILITIES: One grain berth, with 8 m. depth alongside, equipped with suction pipe capacity 60 t.p.h. approx.

Ferry berths in Harbour, depth 6.4 m. to 8 m., equipped for handling containers and Roll-on/Roll-off traffic.
TANKERS: Oil quay max. depth 8 m., Hoses 8 in. diameter. Reducing pieces may be necessary. Slop water discharging and cleaning can be done by oil-separator. Tankers max. draft 8 m.
DENSITY: 1,020 (approx.).
STEVEDORES: ETA advices are required before 0900 hrs. in order to arrange gangs for discharge/loading the same day.
MEDICAL: No special requirement is necessary for medical attention. The town has all ordinary medical and hospital facilities.
FRESH WATER: Supplied by water hydrants on all quays.
FUEL: All kinds of fuel are available and no advance notice is necessary.
FIRE PRECAUTIONS: No smoking and no open fire if discharging oil.

Fire watchman from the Harbour Authority required if discharging gas, dangerous chemicals and ammunitions, etc. Besides the watchman, the Harbour Authority will require restricted access to vessel.
GANGWAY/DECK WATCHMEN: Not compulsory but available if required.
OPENING/CLOSING HATCHES: Ship's crew open and close the hatches. If necessary the longshoremen can do it for extra pay.
CUSTOMS ALLOWANCES: See "General" before first port.
CONSULS:

Finland	Tel. 421466	Norway	Tel. 422299
France	„ 422155	Sweden	„ 422922
Germany F.R.	„ 420011	Iceland	„ 425333

REPAIRS: Three steel shipyards and one wood shipyard doing all types of repairs.
SURVEYORS: Cargo Inspector – B. K. Mortensen, Ahaven 17. Tel: 08-425064.
DRY DOCKS: Four dry docks, two floating docks and two small slips. Dimensions of largest dry dock: length 212 m., breadth 32.2 m. and depth 7 m. Largest floating dock: length 129 m., breadth 28 m., depth 6.5 m., capacity 7,500 tons.
REPATRIATION: Agent will arrange repatriation. All facilities for changing crew.
AIRPORT: Aalborg Airport, 60 km. from port, several daily flights to Copenhagen.
TIME: Local time GMT plus 1 hour.
HOLIDAYS: Weekends, Easter, Whitsun, Christmas, New Year and two Danish holidays in the Spring.
POLICE/AMBULANCE/FIRE: Police, Tel. 08-421444; Ambulance, Tel. 08-422222; Fire, Tel. 08-420801; in emergency dial 000.
SERVICES: Separating of slop water, compass adjusting, oil bunkering, repairing all kinds of navigation instruments and provisions.
STORING: (See "Prelims"). All stores available. Fork lift trucks can assist. Trucks can proceed alongside at berth. Local riggers can be employed. No difficulties with paperwork (Customs).
BANKS: National and local.
SHORE LEAVE: After clearing inwards, crew members are allowed ashore without special permission.
AUTHORITY: Havnekontoret, Langerak 2, DK-9900 Frederikshavn. *Tel:* 08-421740, 08-420298. *Contact:* Captain B. K. Mortensen, Port Captain.

GEDSER: 54.34 N. 11.56 E. (See Late Plans)

LOCATION: Gedser is situated on the Southern extremity of the island of Falster.
PORT LIMITS: A line drawn between the two outer pier heads defines the limit of the harbour.
DOCUMENTS: Customs Declaration, Crew Lists, Passenger Lists, Ship's Log and Safety Certificates.
APPROACHES: Three entrance channels lead to the harbour, the main channel (Rodsand Rende) has a width of 150 m. and a depth of 6.2 m. (20.3 ft.). The harbour can be entered by day and night.
PILOTAGE: It is recommended that all vessels over 500 tons use a Pilot. Requests for a Pilot must be made at least 6 hours before arrival to Guldborgsund Pilot Office in Nykobing (Falster) over Lyngby Radio or VHF Channel 16.
RADIO: Lyngby Radio.
BERTHING: Gedser Harbour is considered a ferry harbour where De Danske Statsbaner (Danish State Railways), Deutsche Bundesbahn (West German Railways) and Deutsche Reichsbahn (East German Railways), have first priority to the harbour and Rodsand Rende.
MEDICAL: Full hospital facilities in Nykobing (Falster). Doctor in Gedser. Tel: (03) 879440.
DENSITY: 1010 – 1014.
FRESH WATER: Available.
CUSTOMS ALLOWANCES: EEC Rules apply.
REPATRIATION: Hourly bus connections to Nykobing (Falster) with daily train connections from Nykobing (Falster) to Copenhagen.
AIRPORT: Kastrup Airport at Copenhagen.
TIME: GMT plus 1 hour.
POLICE/AMBULANCE/FIRE: Police in Gedser. Tel: (03) 879021. Ambulance and Fire Brigade in Nykobing (Falster). Tel: (03) 851807.
TELEPHONES: There are no arrangements for placing telephones on board.There is a post and telegraph office close by the harbour.
SHORE LEAVE: Possible for crew members with valid passport or visa. There is no need for identity cards.
GENERAL: *Tides and Currents:* Tidal range 0.3 m. Winds from N.E. can raise water level by 1.8 m.; winds from S.W. can lower water level by 1.5 m.

Lifeboat Station: A lifeboat is stationed by the harbour.
AUTHORITY: Danske Statsbaner, Baneomrade Naestved, 4700 Naestved. *Tel:* (03) 724500, Ext. 241.

Harbour Master, Gedser. *Tel:* (03) 879145 ext. 30 or (03) 855012.

GRENAA: 56.25 N. 10.56 E. (See Plan)

PORT LIMITS: A Line drawn between the outer breakwater heads.
DOCUMENTS:

2 Crew Lists.
2 Passenger Lists.
1 Crew Personal Effects List.
1 Ship's Bonded Stores List.
1 Stores List.
1 Animal/Pets List.
1 Health Certificate.
Ship's Log.
Last Port Clearance.
1 Bill of Lading.
1 Cargo Manifest.

Safety certificates: Construction, Equipment, Load Line, Radio and Oil Pollution Prevention.
PILOTAGE: Pilotage is not compulsory except for laden tankers with hazardous liquid chemicals or tankers with uncleaned tanks which have carried hazardous liquid chemicals.

The pilotage regulations do not apply to Masters who have been to Grenaa Harbour at least 5 times in the last 6 months.

Ships approaching Grenaa Harbour should be aware of the "Kalkgrunden" a limestone reef just outside the harbour entrance, stretching Easterly for approximately 7 cables and with 1 m. depth.

Notice of ETA and request for Pilot must be made to the Agent and/or to the pilot station with 24 hours and 12 hours notice.

There are telex facilities. VHF Channel 16 is continuously watched and ETA may be confirmed or adjusted on this frequency.

Pilot boat is 8 m. LOA, white upperwork and orange hull with the word "PILOT" on each side.

The usual international signals may be displayed by vessels requiring a Pilot.

The usual pilot boarding point is 0.5 miles N.E. of harbour entrance.
BUOYAGE: IALA "System A".
ANCHORAGE: Anchorage is best North of the harbour with depth of 7 m. to 9 m. The holding ground is fine hard sand.
RESTRICTIONS: No restrictions, except that larger vessels should not approach the Easterly breakwater head closer than 80 m. in the area East and Southeast of this.

Also be aware of the "Kalkgrunden" (see "Pilotage).
MAX. SIZE: Vessels up to 100 m. LOA, 14 m. breadth and draft 6.2 m.
HEALTH: Normally Free Radio Pratique will be granted.
RADIO: Lyngby Radio (OXZ) is the long range area station.
VHF: At the harbour office, open for communications on Channel 16 each week-day between 0800 hrs. and 1200 hrs.

A continuous watch is maintained at the pilot station on Channel 16.
RADAR: There is no Port Control Radar but the pilot boats are radar equipped.
TUGS: No tugs available.
BERTHING: There are 6 general cargo berths.

Nos. 31, 32 and 33: Length 210 m., depth 6.5 m.
No. 34: Length 110 m., depth 6.5 m.
No. 41: Length 80 m., depth 7.2 m.
No. 42: Length 125 m., depth 7.2 m.
Sydhamn: Length 176 m., depth 4.5 m.

Bulk and general cargo is handled at Nos. 31, 32, 33, 41 and 42, whereas container and Ro-Ro handled at No. 34 Berth.
CRANES: There are 2 mobile cranes of 32 tonnes each and 2 container forklifts of 25 tonnes and 42 tonnes.
BRIDGES: There are no bridges or other restrictions to prevent access to the port.
STEVEDORES: Working hours from 0700 – 1600 hrs., Monday to Friday. Evening and night shift as well as week-end labour can be arranged.
MEDICAL: Full hospital facilities available without prior notice.
TANKERS: *Oil Pier:*

North Side: Length 140 m., depth 6.50 m.
South Side: Length 140 m., depth 6.50 m.

Slop discharge facilities in accordance with the Helsinki Convention.
DENSITY: 1018 (average).
FRESH WATER: Good potable water available in limited quantities at a rate of 10 t.p.h.

FUEL: All kinds of fuel can be delivered by road. Longest possible notice is desirable.
CONSULS: Vice-Consulates exist for Norway and Sweden.
REPAIRS: There are 2 shipyards as well as an engine building factory with repair facilities.
DRY DOCKS: No dry docks, but 5 slipways, where up to 300 tonnes deadweight is available.
SURVEYORS: Lloyd's sub-agent. Agents from other Classification Societies and Surveyors can be brought from Aarhus at short notice.
GANGWAY/DECK WATCHMEN: Gangway and deck watchmen not necessary, but can be arranged.
OPENING/CLOSING HATCHES: Normally handled by ship's crew.
CUSTOMS ALLOWANCES: See "General" before first port.
CARGO GEAR: Ship's gear or mobile cranes/conveyors from shore.
REPATRIATION: 25 km. to Tirstrup Airport with international flights to London and domestic scheduled flights to Copenhagen with international connections.

Railway connection to Aarhus.

Ferry connection to Zealand (Hundested) and Sweden (Varberg and Helsingborg).

All facilities exist for changing of crew and repatriation of seamen.

Repatriation and change of crew can be arranged on the Roads for ships passing Grenaa en route to and from the Baltic. See "Ship Supply Service".

TIME: Local time is European Standard Time, GMT plus 1 hour. Summertime is used.
HOLIDAYS: *Official Holidays:* New Year's Eve (half day), New Year's Day, Maundy Day, Good Friday, Easter, Whitsun, Labour Day (half day), Ascension Day, Constitution Day (5th June, half day), Christmas Eve (half day) Christmas Day.

Work can be arranged except Christmas Day and Good Friday.

POLICE/AMBULANCE/FIRE: Emergency 000; Police 321011; Ambulance 322222; Fire 320812.
TELEPHONES: There are no arrangements for placing telephones on board.
SERVICES: A Compass Adjuster resides at the Port. Decca and Radio repairs possible.

Facilities for reception of Oil, oily mixtures, sewage, garbage, etc., exist in accordance with the Helsinki Convention.

SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: No identification cards required.
REGULATIONS: No unusual regulations for the port.
DELAYS: No delays can normally be expected.
BANKS: All major Danish banks are present in Grenaa.
EMERGENCY CO-ORDINATION CENTRE: Danish Coast Guard, S.O.K. Kystværnsvej, Aarhus. *Tel:* 06-131822. Outside office hours – 123099.
STORING: Vessel can be stored by truck alongside. Local Riggers can be employed to assist with storing.
SHIP SUPPLY SERVICES: Storing possible on Roads at Buoy No. 4 in position: Lat. 56° 25′ N., Long. 11° 06′ E. Contact: shipbroker G. Ostergaard I/S. Telex: 63489 Broker Dk. Tel: (06) 32.02.44.
AUTHORITY: Harbour Master, Grenaa Harbour, Nordhavnsvej 1, DK-8500 Grenaa, Denmark. *Tel:* 06-321204. *Cables:* Harbourmaster, Grenaa. *Contact:* J. A. Ovesen, Harbour Master or E. Stein Laursen, Assistant Harbour Master.

GULFHAVN: 55.12 N. 11.16 E. (See Plan)

DOCUMENTS:
- Ship's Register.
- Load Line Certificate.
- Safety Radio-telephone Certificate.
- Derat Certificate or Exemption Certificate.
- Exact list of tobacco, cigarettes and spirits showing the vessel's and the crew's supply on arrival.
- Bill of Lading (if vessel is carrying cargo).
- Copy of the crew list is required by Kuwait Petroleum Refining (Denmark) A/S.

PILOTAGE: 3 Pilots and pilot vessel available. Pilot acts as Berthing Master. May be requested to board vessels at any place in the proximity of Gulfhavn.

Pilot vessel equipped with VHF Channels 6, 10, 12, 16 of which Channel No. 6 used for ship-to-ship communication. Pilot station also equipped with VHF Channels 12, 13 and 16. Pilot can be contacted at the station on Channel 16.

A vessel's ETA should be communicated by Master to Agent, 72, 48 and 24 hours prior to arrival. Agent will keep Refinery advised and make necessary arrangement with Pilot.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance. Skawpilot listening on VHF Channel 16.

ANCHORAGES: Korsor: Roads: depth 20 m. (65.6 ft.). Bottom sand, good holding ground. Width of area about 2 square nautical miles.

Gulfhavn Roads: depth 30 m. (98.4 ft.). Bottom clay. Good holding ground. Width 0.5 nautical miles. Length 1.5 nautical miles.

Power cables running between Zealand and Agersoe Island (marked on charts) must be avoided.

RESTRICTIONS: See "General" before first port.
MAX. SIZE: Max. draft at normal tide is 15.5 m.
VHF: Call sign "Gulfhavn" Channels 12, 14 and 16, on 16, 24 hours a day.
TUGS: None available locally. If required 24 hours notice must be given. Pilot will advise if weather conditions demand use of tugs (in good time).
BERTHING: Oil pier is a T-shaped structure on which 4 berths provide – 1 berth for 120,000 d.w.t. tankers, 1 for 30,000 d.w.t. tankers, 1 for 5,000 d.w.t. tankers and 1 for smaller vessels up to 500 d.w.t.

Depths alongside:		
	Berth 1	16.0 m. (52.5 ft.)
	Berth 2	12.0 m. (39.4 ft.)
	Berth 3	7.5 m. (24.6 ft.)
	Berth 4	4.5 m. (14.8 ft.)

Adequate lifting facilities to assist in hose connecting and handling of necessary hose equipment should be ready on arrival. Refinery representative will board on arrival and discuss discharging/loading operation.

Berth No. 1

Berth 1 is equipped with mechanically operated Woodfield hose-handling structure. The booms are 12.2 m. (40 ft.) long. Berth is primarily equipped for handling incoming crude, but can be used for other purposes (gasoils, intermediate and heavy fuels) when not being occupied by crude vessels.

The booms are arranged in the following sequence of product handling:

Boom No.	*Size of booms and contents*
1	10 in. Ballast water
2	12 in. Crude oil
3	12 in. Crude oil
4	12 in. Crude oil
5	8 in. Intermediate and heavy fuel

The sequence is from South to North or from right to left as you face the shore.

The distance from Danish Mean Sea Level to the highest position of centre line of manifold is 17.0 m. (55.8 ft.).

In addition to the oil products handled on Berth No. 1 there are the following other connections on the pier:

Size of connection	*Contents*
6 in.	Ballast water
6 in.	Gas oil
6 in.	Intermediate and heavy fuel
4 in.	Tetra methyl lead

A hydraulic gangway is installed at No. 1 Berth.

Berth No. 2

Berth No. 2 is equipped with mechanically operated hose-handling structure (Woodfield). The booms are 9.1 m. (30 ft.) long.

The booms are arranged in the following sequence of product handling:

Boom No.	*Size of booms and contents*
1	10 in. Ballast water and crude oil
2	10 in. Intermediate and heavy fuel
3	12 in. Intermediate and heavy fuel
4	10 in. Diesel fuel
5	10 in. Diesel fuel
6	10 in. Gasoline
7	10 in. Gasoline – Naphtha

The sequence is similar to Berth No. 1, i.e., South to North.

The distance from Danish Mean Sea Level to the highest position of centre line of manifold is 15 m. (49.2 ft.).

In addition to the oil products handled on Berth No. 2, there are the following other connections on the pier:

Size of connection	*Contents*
6 in.	Intermediate and heavy fuel
6 in.	Gas oil
6 in.	Ballast water
6 in.	Kero and Jet fuel
6 in.	Naphtha
6 in.	Light virgin naphtha
6 in.	Gasoline
6 in.	Gasoline – FCC components

In addition to the oil products handled on Berth No. 2 and No. 3, Berth Nos. 3 and 4 can also handle L.P.G. (liquid petroleum gas). All connections on Berth Nos. 3 and 4 are 6 in. Berth No. 3 also handles Bitumen (Asphalt).

Mooring: If wires are used for mooring, polypropylene tails are required.

MEDICAL: Hospital at Slagelse. Tel: Slagelse (03) 52 19 00.
DENSITY: Ranges between 1023 and 1007, dependent on season and weather conditions.
FRESH WATER: Available at all 4 berths. Limited to 160 tons. Supplied with a pumping rate of 20 t.p.h.
FUEL: Bunker fuel available at all 4 berths. 24 hours' notice required.
FIRE PRECAUTIONS: The harbour is not equipped with fire-fighting vessel. Fire-fighting equipment is stationed on quay.
GANGWAY/DECK WATCHMEN: Available if required.
IDENTIFICATION CARDS: Required by crew.
CONSULS:

Finnish Consulate: (Mr. Sv. Mogensen) 10 Oernumvej, DK-4220 Korsoer, Tel. (03) 57 00 13.

Norwegian Consulate: (Mr. G. Sjelle) Jens Baggesensgade 35, DK-4220 Korsoer, Tel. (03) 57 00 06.

German (F.R.) Consulate: (Mrs. K. Poulsen) Batterivej 7, Korsoer, DK-4220. Tel. (03) 57 05 86.

All other consulates are situated in the Copenhagen area.

REPAIRS: Small deck and engine repairs can be carried out on request with permission.
REPATRIATION: Facilities exist via Agent.
AIRPORT: Copenhagen 120 km. away.
TIME: GMT plus 1 hour.
POLICE/AMBULANCE/FIRE: Police Skelskor (03) 59 61 00; Ambulance Skelskor (03) 59 47 07; Fire Refinery 222.
TELEPHONES: A public telephone box situated at the foot of the jetty.
SHORE LEAVE: Allowed, but personnel not allowed to walk in refinery area. Transport will be arranged from ship to refinery entrance upon request.
AUTHORITY: Korsoer Toldkontrol.

Kuwait Petroleum Refining (Danmark) A/S, Gulfhavn, 4230 Skaelskor, Denmark. *Tel:* (03) 59 49 00. *Telex:* 40033. *Cables:* Kupdanref. *Contact:* E. W. Davies, Refinery Manager.

HADERSLEV: 55.15 N. 09.29 E.

DOCUMENTS: See "Copenhagen".
PILOTAGE: Aarosund Pilot station.
ANCHORAGES: Aarosund.
RESTRICTIONS: Impossible to enter Haderslev by night since there are no lights in the fjord. Also see "General" before first port.
MAX. SIZE: Length 110 m.; width 17 m.; depth 4.9 m.
HEALTH: See "Copenhagen".
RADIO: Lyngby Radio.
TUGS: None available.
MEDICAL: Advance notice required if hospital facilities are required.
FRESH WATER: Fresh water from quay.
FUEL: Available by lorry.
GANGWAY/DECK WATCHMEN: Not required.
OPENING/CLOSING HATCHES: Carried out by the crew.
CUSTOMS ALLOWANCES: See "General" before first port.
IDENTIFICATION CARDS: Not needed.
CONSULS: Swedish, French, Belgian.
REPAIRS: Small repairs available.
REPATRIATION: No facilities.
AIRPORT: 15 km. from Haderslev.
TIME: GMT plus 1 hour.
HOLIDAYS: Discharging can be arranged on holidays.
POLICE/AMBULANCE/FIRE: Police, 045 2 2525; Ambulance, 000; Fire, 000.
TELEPHONES: No facilities.
SHORE LEAVE: Allowed.
AUTHORITY: J. C. Hansen, Ved Havnen 15, Box 11, 6100 Haderslev, Denmark. *Tel:* (04) 522404/522405. *Telex:* 51-596. *Cables:* Maltsand. *Contact:* J. C. Hansen.

HELSINGOR (Elsinore): 56.02 N. 12.37 E. (See Plan)

DOCUMENTS:
1 Cargo Manifest.
2 Crew and Passenger Lists.
2 Tobacco Lists.
2 Stores Lists.
Measurement Certificate or Registry Certificate.

PILOTAGE: Cable address: "Soundpilot". Telex: 27515 Sundet Dk. Tel: 01-386700. VHF: Channels 16, 13 and 12. Address: The Sound Pilot Station, Marmorvej 1, Frihavnen, DK-2100 Copenhagen, Denmark.

For vessels entering The Sound from Kattegat, Pilots can be ordered from "Soundpilot" via coast radio.

The following details are to be given:
1. Name and call sign.
2. ETA position from where pilotage is required.
3. Gross tonnage and draft.
4. Sea speed.
5. Pilotage requirements.

Pilots perform pilotage duties to all ports in The Sound, through The Sound and to any Baltic port. There are some exceptions to ports of Soviet Union.

Pilots should be ordered 6 hours prior to ETA Buoy "M1" and the message should be confirmed or corrected 1 hour prior to ETA "M1".

Pilot cutter, orange hull and superstructure, "Pilot" painted on superstructure.

Boarding by Buoy "M1".

ANCHORAGE: South of the port, in the roads of Helsingor, depths from 19 m. to 25 m. with sand or loose clay bottom.
RESTRICTIONS: Following signals are given from the lighthouse situated on the head of the Southern pier: prohibition to sail is signalled by red rapid flashes in the harbour direction and green flashes out towards the approaches. Entering and sailing prohibition is signalled by red rapid flashes both sides. "Vessels moving in the harbour" is signalled by yellow flashes out towards the approaches, yellow in towards the harbour. Ship departing waits for ship entering. When a vessel gives signal to enter (1 long whistle or blast) it is regarded as an entering vessel.
MAX. SIZE: Up to 21 ft. 06 in. draft. Also see "General" before first port.
RADIO: Harbour Office of Helsingor call VHF Channel 16, shift to Channels 12 or 13 for working.
TUGS: Tugs come from Copenhagen at 2–3 hours notice.
BERTHING: Vessels berthed in order of arrival.
MEDICAL: Hospital and medical facilities available.
FUEL: Not available.
FRESH WATER: Approx. 15 tons of fresh water per hour delivered through 1.5 in. hoses at the berths.
WATCHMEN: Not required.
CUSTOMS ALLOWANCES: See "General" before first port.
IDENTIFICATION CARDS: Crew need passports.
REPAIRS: Helsingor Reparationsvaerft A/S (Elsinore Repair Yard Ltd.) undertake all forms of repair work.
DRY DOCKS: Dock No. 1: 155 m. long, 21.5 m. wide, 6.4 m. depth. Dock No. 2: 116 m. long, 16.5 m. wide, 5.5 m. depth.
AIRPORT: 1 hour by car to Copenhagen International Airport.
TIME: GMT plus 1 hour.
HOLIDAYS: Work can be performed all the year round.
POLICE/FIRE/AMBULANCE: Police Tel. 02.211448; Ambulance/Fire Tel. 02.222222.
TELEPHONES: Telephones are only available on board in particular circumstances.
SHORE LEAVE: Crew are free to go ashore.
AUTHORITY: Helsingor Havnekontor, Sophie Brahesgade 1, 3000 Helsingor. *Tel:* 02 210515. *Contact:* G Oldenburg Jorgensen, Harbour Master.

HOLBAEK: 55.43 N., 11.43 E. (See Plan)

PILOTAGE: Hundested Pilotage Authority.
MAX. SIZE: Max. draft 5.6 m.
VHF: Channel 16.
TUGS: Available.
STEVEDORES: Working hours: 0700 – 1600 Monday to Friday. No weekend work.
MEDICAL: Services available.
FRESH WATER: Available.
FUEL: Available.
CONSULS: Norway (at Kalundborg).
REPAIRS: Possible.
DRY DOCKS: No facilities.
CUSTOMS ALLOWANCES: Kalundborg Custom House is the authority.
REPATRIATION: Facilities available.
AIRPORT: Nearest airport at Copenhagen (Kastrup).
AUTHORITY: Holbaek Port Authority, P.O.Box 120, 4300 Holbaek, Denmark. *Tel:* 03/43 01 61. *Contact:* Aage Hyrup, Harbour Master.

HORSENS: 55.52 N. 09.52 E. (See Plan)

DOCUMENTS:
Crew List
List of Tobacco.
Manifest (for Agents and Stevedores).
Bills of Lading (for Agent's use).
Ship's papers:
International Load Line Certificate.
Certificate of Register (international letter of measurement).
Derat Certificate.
Radio Safety Certificate.

PILOTAGE: Pilot station is situated at Juelsminde. Normally pilot boat will be located South of Lillegrund.
VHF: Channels 6, 12 and 16. Advance notice of 2 hours required.
ANCHORAGE: No special anchorages at the firth; vessels may anchor where safe navigation permits – attention is called to cable area at Hjarno Sound.
RESTRICTIONS: See "General" before first port.
MAX. SIZE: Max. length, approx. 500 ft.; max. breadth, approx. 70 ft.; max. draft, approx. 22 ft. A dredged channel 32 m. wide and 6.9 m. deep leads to the harbour.
HEALTH: Inform Agent or Port Authorities in advance in event of any suspected disease or fever on board. Normally no necessary procedure to obtain pratique. Pratique is automatic after calling at another Danish port.
RADIO: VHF at Harbour office, Channels 9, 12, 13 and 16.
TUGS: Tug "Vitus" stationed in the harbour.
STEVEDORES: For working Monday morning ETA must be given Friday during office hours. Otherwise ETA must be given the day before work to commence. One suction apparatus for discharging grain. Normally the cargo is handled by shore cranes. There are 2 coal cranes and 5 piece-goods cranes available.
MEDICAL: No advance notice required. Hospital facilities available.
TANKERS: Discharge lines diameter: 6 in. and 8 in. Four berths for tankers, 1 at Esso with 5.6 m. of water alongside, 1 at DAK with 6.9 m. of water, 1 at KH with 6.9 m. of water and 1 at Nynas Johnson.
FRESH WATER: Delivered alongside from shore connections.
FUEL: All types of light fuel available.
GANGWAY/DECK WATCHMEN: No service of watchmen necessary.
OPENING/CLOSING HATCHES: Normally carried out by crew, but can be done by stevedores.
CUSTOMS ALLOWANCES: See "General" before first port.
IDENTIFICATION CARDS: Not needed.
CONSULS: Finland, 05-623433; Norway, 05-624666; Sweden, 05-624411; France, 05-623288.
REPAIRS: No shipyard – only small repairs can be carried out.
REPATRIATION: No special facilities for effecting crew changes exist.
AIRPORT: Distance from airport about 50 km., with regular airlines.
TIME: GMT plus 1 hour.
POLICE/AMBULANCE/FIRE: Dial 000. Fire alarms placed around the port.
TELEPHONES: Not available on board vessels.
SHORE LEAVE: Allowed.
DELAYS: No delays can normally be expected. Larger ships with big draft may expect delay during nights with poor visibility. They have to wait for daylight in order to enter port through dredged channel.
AUTHORITY: Havnemesteren, Havnen 45, 8700–Horsens. *Tel:* 05-621014. *Contact:* Jorgen M. Olsen, Harbour Master.

AGENT: Wilh. Chr. Bech Rederi- & Skibsmaeglerforretning. Jens Hjernoesvej 22, dk–8700 Horsens. Phone: 5–62 65 66. After office hours: 5–64 35 50 – 64 48 10 – 61 24 88. Telegrams: "Brokerbech". Telex: 61616. FAX: 5–611288.

KALUNDBORG: 55.41 N. 11.06 E. (See Plan)

Also see Port of Asnaes.
(A) KALUNDBORG HARBOUR.
(B) DANSK ESSO A/S OIL TERMINAL.

(A) KALUNDBORG HARBOUR.

DOCUMENTS:
Ship's Register.
Load Line Certificate.
Safety Radio Certificate.
Safety Equipment Certificate.
Safety Construction Certificate.
Derat Certificate or exemption.
Bill of Lading (if cargo).
Crew List.

Customs need a Tobacco and Spirit List, showing the vessel's and the crew's supply by arrival.

PILOTAGE: Not compulsory. Pilot station situated at Kalundborg, telegram: Kalundborg Pilot, Tel: Kalundborg 03.51.20.42. Green vessel carrying international signal flag or lights for Pilot. Contact by VHF Channels 16, 12 and 6. Pilot is taken on board at the entrance of Kalundborg Fjord.

Bigger ships usually take Pilot by Skaw L/V. Pilots to be ordered by ETA-telegrams to "Skawpilot Skagen", at least 12 hours in advance, Skawpilot listening on VHF Channel 16.

ANCHORAGE: Large vessels anchor in 42 ft. of water outside between Rosnaes and Asnaes; S.W. to N.W. winds cause swell but holding ground is good. Small vessels anchor between Gisselore Point and Harbour, from where channel leads to harbour.

Tankers: The anchorage is approximately 4 – 5 miles W.N.W. of the Oil Pier. Particulars regarding the anchorage will be given by the Pilot.

RESTRICTIONS: *Tankers:* Depth in channel and at entrance 39 ft. 4 in., entrance width 131 ft. Also see "General" before first port and "Section B".

Kalundborg Harbour: Depth of Entrance Canal: 10.0 m. Bottom width of Entrance Canal: 100 m.

MAX. SIZE: See "Berthing" and "Section B".

HEALTH: Pratique granted by Customs Officers who bring Health Declaration for Masters to complete. In event of suspected disease or fever on board radio details to Agent before arrival.

RADIO: *Arrival Message:* The Masters of deep-sea vessels are requested to advise their Agents of their ETA 72 hours in advance, and again 24 hours before ETA. For other vessels operating in Scandinavian waters, a 24 hours ETA notice will be required. For coastal traffic in Danish waters, ETA is required when departing for Kalundborg. If there should be any significant change in the ETA over 2 hours, additional advice is required.

VHF: Harbour office on Channel 16 (0700 – 1600 hrs.).

TUGS: Available, normally join vessel off harbour, often using vessel's lines. If tug's lines are used, an extra charge will be made.

Tankers: See "Section B".

BERTHING:

Kalundborg Harbour:

West Harbour: Length 400 m., width 60 m., depth 6 m. Quay I: Length 250 m., depth 6.0 m. Quay II: Length 125 m., depth 6.0 m. Quay III: Length 80 m., depth 6.0 m.

East Harbour: Length 260 m., width 130 m., depth 7 m. – 8 m. Quay VI: Length 240 m., depth 8.0 m. Quay VII: Length 170 m., depth 7.0 m. Quay VIII: Length 70 m., depth 7.0 m. Quay IX: Length 280 m., depth 7.0 m. Quay X: Length 245 m., depth 8.0 m.

South Harbour: Oil Quay: Length 170 m., depth 9.5 m. Quay XII: Oil and General Cargo, length 350 m., depth 10 m. Quay Nos. II-X and XII equipped with ramps.

Railway on quays in the East and the South Harbour. One crane (privately operated), capacity 40 to 60 t.p.h.

CRANES: The following cranes are available from the Port Authorities:

1. One Coles mobile crane (with hook).
Carrying capacity in hook is 1.5 – 7.5 tons with 7.62 m. and 3.05 m. jib respectively.

2. One P.P.M. 25.01 mobile crane (lattice crane).
Carrying capacity with 4 m. jib: 21 tons. Lift height 9 m.
Carrying capacity with 6 m. jib: 12 tons. Lift height 19 m.
Carrying capacity with 17 m. jib: 2.5 tons. Lift height 12 m.
The crane can be mounted with a 1,500 litre prehensile scoop to unload grain, gravel, fertiliser, etc.

3. One 10-ton 12/25-ton gantry rocker crane.
Lift height above rails 22 m. in hook operation.
Carrying capacity with 20 m. jib (13.5 m. from quayside): 12 tons.
Carrying capacity with 13 m. jib (6.5 m. from quayside): 25 tons.
Mounted with 5,000 litre prehensile scoop: 6 tons excluding weight of scoop with 20 m. jib.

4. One P.P.M. 23.09 mobile crane (telescope).
Carrying capacity with 4 m. jib: 15.2 tons. Lift height 14.5 m.
Carrying capacity with 6 m. jib: 8.7 tons. Lift height 20.0 m.
Carrying capacity with 15 m. jib: 2.3 tons. Lift height 21.5 m.

5. One 12-ton 14/25 tons gantry rocker crane.
Lift height above trails 25 m. in hook operation.
Carrying capacity with 28 m. jib (18.5 m. from quayside): 14 tons.
Carrying capacity with 18 m. jib (14.5 m. from quayside): 25 tons.
Mounted with 6,000 litre prehensile scoop: 7 tons excluding weight of scoop with 28 m. jib (18.5 m. from quayside).

Also see "Berthing".

TANKERS: See "Section B".
